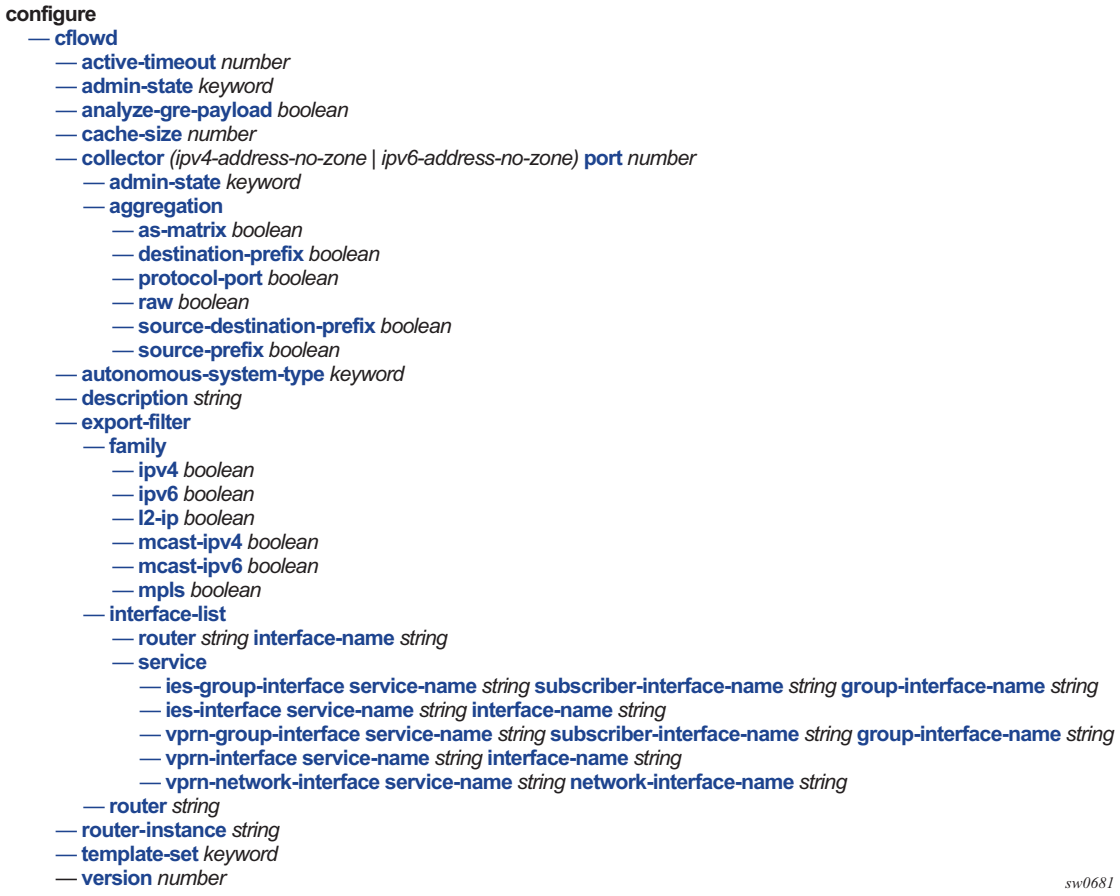
40 vrrp Commands 4885
41 Standards and Protocol Support 4899

1 MD-CLI Command Reference

This document describes the commands available in the MD-CLI that can be used to manage the router.

For a list of unsupported features by platform and chassis, refer to the SR OS 16.0.R*x* Software Release Notes, part number 3HE 14220 000*x* TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.



Note: This guide generically covers Release 16.0.R*x* content and may contain some content that will be released in later maintenance loads. Refer to the SR OS 16.0.R*x* Software Release Notes, part number 3HE 14220 000*x* TQZZA, for information on features supported in each load of the Release 16.0.R*x* software.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode made available. For information about using the MD-CLI, see the *MD-CLI User Guide*.

1.1 MD-CLI Tree Hierarchy

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in Figure 1.

Figure 1 **MD-CLI Configuration Tree Example**

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Command names are linked to their command descriptions. Some commands require one or more key commands to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

— **collector (***ipv4-address-no-zone* **|** *ipv6-address-no-zone***) port** *number*

The command description indicates the required syntax for each command. See MD-CLI Command Descriptions for more information.

collector [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)
- string
- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click on the command or parameter name from the MD-CLI tree to be linked to the command description.

— **summary-only** *boolean*
— **autonomous-system** *number*

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a pipe (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

— **indirect (***ipv4-address-no-zone* **|** *ipv6-address-no-zone***)**

1.2 MD-CLI Command Descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

— **log**
    — **accounting-policy** *number*

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

Table 1 describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 1 **Command Descriptions Fields**

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Context	Full configuration path to the command
Description	Summary description of the element
String Length	For string elements, the range of the number of characters allowed
Range	For number elements, the range of allowed values
Default	Default value for the element
Units	Base unit type of the element
Options	Enumerated values allowed for the element
Reference	Reference to an element instance in the configuration, needed before the configuration is considered valid
Min./Max. Elements	For lists and leaf-lists, the minimum or maximum number of instances for this element
Introduced	Release in which the element was introduced
Notes	Information about special attributes of the element, including whether the element is: • a key for an element • mandatory • ordered by user (instead of by the system) • part of a choice of elements

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *MD-CLI User Guide*.

Note: Some SR OS features are platform-specific, and therefore, the feature commands may not be available or visible on all platforms.

All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

1.3 Operational Root and Global Commands

The commands in Table 2 are available at the operational root level of the MD-CLI hierarchy.

Table 2 **Operational Root Commands**

Command	Description
admin	Enter the administrative context for system operations
clear	Clear statistics or reset operational state
configure	Enter the configuration context
environment	Enter the environment configuration context
show	Show operational information
tools	Enter the tools context for troubleshooting and debugging

The global commands in Table 3 are available at from various levels of the MD-CLI hierarchy.

Table 3 **Global Commands**

Command	Description
back	Move back one or more levels
delete	Delete an element from the candidate datastore
edit-config	Enter a candidate configuration mode
exec	Execute commands from a file

Table 3 **Global Commands (Continued)**

Command	Description
exit	Return to the previous context or to the operational root
history	Show the most recently entered commands
logout	Exit the CLI session
pwc	Show the present working context
quit-config	Leave the candidate configuration mode
top	Move to the top level of the context
tree	Show the command tree under the present working context

Table 4 lists configuration commands that are available in configuration mode.

Table 4 **Configuration Commands**

Command	Description
commit	Commit changes to the running datastore
compare	Show changes between datastores
discard	Discard changes in the candidate datastore
info	Show the running configuration from the present working context
load	Load a configuration from a file
rollback	Rollback to a previous configuration
update	Update the candidate baseline
validate	Validate changes in the candidate datastore

1.4 Environment Commands

The following portion of the MD-CLI command tree displays commands related to the **environment** variables under the context **configure system management-interface cli md-cli**.

```
— environment
    — command-completion
        — enter boolean
```

- **space** *boolean*
- **tab** *boolean*

— **console**
- **length** *number*
- **width** *number*

— **message-severity-level**
- **cli** *keyword*

— **more** *boolean*

— **progress-indicator**
- **admin-state** *keyword*
- **delay** *number*
- **type** *keyword*

— **prompt**
- **context** *boolean*
- **newline** *boolean*
- **timestamp** *boolean*
- **uncommitted-changes-indicator** *boolean*

— **time-display** *keyword*

Table 5 provides a brief description of the **environment** commands.

Table 5 **Environment Commands**

Environment command	Description
enter *boolean*	Use command completion for Enter. Default is **true**.
space *boolean*	Use command completion for Spacebar. Default is **true**.
tab *boolean*	Use command completion for Tab. Default is **true**.
length *number*	Number of lines displayed in the console window. Range is 24 to 512. Default is 24.
width *number*	Number of columns displayed in the console window. Range is 50 to 512. Default is 80.
cli *keyword*	Message type to display. If set to **warning**, INFO messages are suppressed. Default is **info**.
more *boolean*	Use pagination for the output text. Default is **true**.
admin-state *keyword*	Administrative state of the progress indicator. Default is **enable**.
delay *number*	Delay interval before the progress indicator is displayed. Default is 500 ms.

Table 5 **Environment Commands (Continued)**

Environment command	Description
type *keyword*	Progress indicator type. Current mandatory type is **dots**.
context *boolean*	Show the current context in the first prompt line. Default is **true**.
newline *boolean*	Use a blank line before the first prompt line. Default is **true**.
timestamp *boolean*	Show the time before the first prompt line. Default is **false**.
uncommitted-changes-indicator *boolean*	Show the change indicator (*) in the first prompt line. Default is **true**.
time-display *keyword*	Show the time (if **timestamp** is set to **true**) as UTC or local (as defined in **configure system time**). Default is **local**.

1.5 MD-CLI Admin Commands

The following tree shows the available commands in the administrative branch in the MD-CLI. The **admin** commands are available only in the operational mode of the MD-CLI, or can be executed with **/admin** from a configuration branch.

```
— admin
    — disconnect
        — session-id session-id
    — reboot
        — [card] keyword
        — now
    — redundancy
        — force-switchover
            — now
    — save
        — [url] string
    — show
        — configuration
    — support-mode
```

Table 6 describes the available commands in the MD-CLI **admin** tree.

Table 6 **MD-CLI Admin Commands**

Admin command	Description
disconnect session-id *session-id*	Disconnect a user from a session, identified by a session identifier. The session identifiers can be obtained from the **show system management-interface datastore-locks detail** command.
reboot [**card**] [(**active** | **standby** | **upgrade**)] [**now**]	Reboot the active or standby CPM, or force an upgrade of the system boot ROMs. The **now** option forces a reboot immediately without an interactive confirmation.
redundancy force-switchover [**now**]	Force a switchover to the standby CPM card. The primary CPM reloads its software images and becomes the secondary CPM. The **now** option forces the switchover immediately.
save [[**url**] *string*]	Save the running configuration to a configuration file. If a filename is not specified, the location is derived from bof.cfg. **Note**: Classic CLI **admin save** is blocked when the management interface configuration mode is **model-driven**.
show configuration	Show the current running configuration.
support-mode	Enable the **shell** and **kernel** commands. **Note**: To disable this command, log out of the CLI session, or disable in the classic CLI using **admin no enable-tech**.

Note: Other CLI commands such as **clear**, **show**, and **tools**, are available in the MD-CLI. These commands are the same as in the classic CLI and are described in the appropriate SR OS documentation guides.

2 aaa Commands

configure
- **aaa**
  - **diameter**
    - **node** *string*
      - **connection-timer** *number*
      - **description** *string*
      - **ipv4-source-address** *ipv4-unicast-address*
      - **ipv6-source-address** *ipv6-unicast-address*
      - **origin-realm** *string*
      - **peer index** *number*
        - **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **admin-state** *keyword*
        - **connection-timer** *number*
        - **destination-host** *string*
        - **preference** *number*
        - **watchdog-timer** *number*
      - **python-policy** *string*
      - **router-instance** *string*
    - **peer-policy** *string*
      - **applications**
        - **gx** *boolean*
        - **gy** *boolean*
        - **nasreq** *boolean*
      - **connection-timer** *number*
      - **description** *string*
      - **ipv4-source-address** *ipv4-unicast-address*
      - **ipv6-source-address** *ipv6-unicast-address*
      - **origin-host** *string*
      - **origin-realm** *string*
      - **peer** *string*
        - **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **admin-state** *keyword*
        - **connection-timer** *number*
        - **destination-host** *string*
        - **destination-realm** *string*
        - **preference** *number*
        - **statistics**
        - **transaction-timer** *number*
        - **transport**
          - **port-number** *number*
        - **watchdog-timer** *number*
      - **proxy**
        - **admin-state** *keyword*
        - **local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **mcs-peer**
          - **address** *string*
          - **sync-tag** *string*
        - **router-instance** *string*
        - **statistics**
      - **python-policy** *string*

- **role** *keyword*
- **router-instance** *string*
- **transaction-timer** *number*
- **vendor-support** *diam-vendor-support*
- **watchdog-timer** *number*

radius
- **acct-on-off-group** *string*
  - **description** *string*
- **coa-port** *number*
- **isa-policy** *string*
  - **accounting**
    - **include-attributes**
      - **acct-delay-time** *boolean*
      - **acct-triggered-reason** *boolean*
      - **called-station-id** *boolean*
      - **calling-station-id** *boolean*
      - **circuit-id** *boolean*
      - **class** *boolean*
      - **dhcp-options** *boolean*
      - **dhcp-vendor-class-id** *boolean*
      - **frame-counters** *boolean*
      - **framed-ip-address** *boolean*
      - **framed-ip-netmask** *boolean*
      - **framed-ipv6-prefix** *boolean*
      - **hardware-timestamp** *boolean*
      - **ipv6-address** *boolean*
      - **mac-address** *boolean*
      - **multi-session-id** *boolean*
      - **nas-identifier** *boolean*
      - **nas-ip-address** *boolean*
      - **nas-port** *boolean*
      - **nas-port-id** *boolean*
      - **nas-port-type** *boolean*
      - **nat-inside-service-id** *boolean*
      - **nat-outside-ip-address** *boolean*
      - **nat-outside-service-id** *boolean*
      - **nat-port-range-block** *boolean*
      - **nat-subscriber-string** *boolean*
      - **octet-counters** *boolean*
      - **proxied-subscriber-data** *boolean*
      - **release-reason** *boolean*
      - **remote-id** *boolean*
      - **rssi** *boolean*
      - **session-time** *boolean*
      - **subscriber-id** *boolean*
      - **toserver-dhcp6-options** *boolean*
      - **ue-creation-type** *boolean*
      - **user-name** *boolean*
      - **wlan-ssid-vlan** *boolean*
      - **xconnect-tunnel-home-address** *boolean*
      - **xconnect-tunnel-local-ipv6-address** *boolean*
      - **xconnect-tunnel-remote-ipv6-address** *boolean*
      - **xconnect-tunnel-service** *boolean*
      - **xconnect-tunnel-type** *boolean*

- **nat-periodic-update**
  - **interval** *number*
  - **rate-limit** (*number* | *keyword*)
- **update-triggers**
  - **address-state** *boolean*
- **authentication**
- **include-attributes**
  - **called-station-id** *boolean*
  - **calling-station-id** *boolean*
  - **circuit-id** *boolean*
  - **dhcp-vendor-class-id** *boolean*
  - **framed-ip-address** *boolean*
  - **ipv6-address** *boolean*
  - **mac-address** *boolean*
  - **nas-identifier** *boolean*

    - **monitor** *string*
    - **oper-state-change**
      - **group** *string*
  - **description** *string*
  - **python-policy** *string*
  - **servers**
    - **access-algorithm** *keyword*
    - **buffering**
      - **acct-interim**
        - **lifetime** *number*
        - **max** *number*
        - **min** *number*
      - **acct-stop**
        - **lifetime** *number*
        - **max** *number*
        - **min** *number*
    - **health-check**
      - **down-timeout** *number*
      - **test-account**
        - **admin-state** *keyword*
        - **interval** *number*
        - **password** *encrypted-leaf*
        - **user-name** *string*
    - **hold-down-time** *number*
    - **ipv6-source-address** *ipv6-address*
    - **retry-count** *number*
    - **router-instance** *string*
    - **server** *number*

- **server-name** *string*
- **source-address** *ipv4-address*
- **stickiness** *boolean*
- **timeout** *number*

- **wpp**
  - **portal-group** *string*
    - **admin-state** *keyword*
    - **description** *string*
    - **portal** *string* **name** *string*

2.1 aaa Command Descriptions

aaa

Context	**configure**
Description	Enter the aaa context
Introduced	16.0.R1

diameter

Context	**configure aaa**
Description	Enter the diameter context
Introduced	16.0.R1

node [origin-host] *string*

Context	**configure aaa diameter**
Description	Enter the node context
Max. Elements	32
Introduced	16.0.R1

[origin-host] *string*

Context	**configure aaa diameter node** *string*
Description	Origin-host name.
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a list key

connection-timer *number*

Context	**configure aaa diameter node** *string*
Description	The value of the connection-timer that determines how frequent connection will be attempted towards a peer without an active transport connection.
Range	1 to 1000
Default	30
Units	seconds
Introduced	16.0.R1

description *string*

Context	**configure aaa diameter node** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R1

ipv4-source-address *ipv4-unicast-address*

Context	**configure aaa diameter node** *string*
Description	Source address used to connect to IPv4 peers.
Introduced	16.0.R1

ipv6-source-address *ipv6-unicast-address*

Context	**configure aaa diameter node** *string*
Description	Source address used to connect to IPv6 peers.
Introduced	16.0.R1

origin-realm *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa diameter node** *string*
Description	Origin-realm name.
String Length	1 to 80
Introduced	16.0.R1

peer index *number*

Context	**configure aaa diameter node** *string*
Description	Enter the peer context
Max. Elements	5
Introduced	16.0.R1

index *number*

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Index of this peer within the Node.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Address of the peer.
Introduced	16.0.R1

admin-state *keyword*

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Administrative state of the Diameter peer.
Default	disable
Options	enable, disable
Introduced	16.0.R1

connection-timer *number*

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	The value of the connection-timer that determines how frequent connection will be attempted towards a peer without an active transport connection.
Range	1 to 1000
Units	seconds
Introduced	16.0.R1

destination-host *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Destination-host name
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is mandatory

preference *number*

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Preference of this peer, lower is more preferred.
Range	1 to 100
Default	50
Introduced	16.0.R1

watchdog-timer *number*

Context	**configure aaa diameter node** *string* **peer index** *number*
Description	Value of the watchdog timer.
Range	1 to 1000
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure aaa diameter node** *string*
Description	Python policy applied to incoming and outgoing Diameter messages.
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

router-instance *string*

Context	**configure aaa diameter node** *string*
Description	Router in which this node connects to its peers.
Default	Base
Introduced	16.0.R1

peer-policy [name] *string*

Context	**configure aaa diameter**
Description	Enter the peer-policy context
Max. Elements	32
Introduced	16.0.R4

[name] *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Diameter peer policy name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

applications

Context	**configure aaa diameter peer-policy** *string*
Description	Enter the applications context
Introduced	16.0.R4

gx *boolean*

Context	**configure aaa diameter peer-policy** *string* **applications**
Description	Advertise Gx application support in CER messages
Default	false
Introduced	16.0.R4

gy *boolean*

Context	**configure aaa diameter peer-policy** *string* **applications**
Description	Advertise Gy application support in CER messages
Default	false
Introduced	16.0.R4

nasreq *boolean*

Context	**configure aaa diameter peer-policy** *string* **applications**
Description	Advertise NASREQ application support in CER messages
Default	false
Introduced	16.0.R4

connection-timer *number*

Context	**configure aaa diameter peer-policy** *string*
Description	Frequency of attempts to open a TCP connection to each configured peer in the Diameter peer policy
Range	1 to 1000
Default	30
Units	seconds
Introduced	16.0.R4

description *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

ipv4-source-address *ipv4-unicast-address*

Context	**configure aaa diameter peer-policy** *string*
Description	Diameter peer policy IPv4 source address
Introduced	16.0.R4

ipv6-source-address *ipv6-unicast-address*

Context	**configure aaa diameter peer-policy** *string*
Description	IPv6 source address for all Diameter messages sent to IPv6-reachable peers
Introduced	16.0.R4

origin-host *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Origin-Host AVP sent in CER and all application-based messages
String Length	1 to 80
Introduced	16.0.R4

origin-realm *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Origin-Realm AVP sent in CER and all application-based messages
String Length	1 to 80
Introduced	16.0.R4

peer [peer-name] *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Enter the peer context
Max. Elements	5
Introduced	16.0.R4

[peer-name] *string*

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Name of peer in Diameter peer policy
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure aaa diameter peer-policy** *string* **peer** *string*

Description IPv4 or IPv6 address of the Diameter peer

Introduced 16.0.R4

admin-state *keyword*

Context **configure aaa diameter peer-policy** *string* **peer** *string*

Description Administrative state of the peer

Default disable

Options enable, disable

Introduced 16.0.R4

connection-timer *number*

Context **configure aaa diameter peer-policy** *string* **peer** *string*

Description Peer connection timer

Range 1 to 1000

Units seconds

Introduced 16.0.R4

destination-host *string*

Context **configure aaa diameter peer-policy** *string* **peer** *string*

Description Name of Destination-Host AVP sent in CCR-i/u and RAA messages

String Length 1 to 80

Introduced 16.0.R4

destination-realm *string*

Context **configure aaa diameter peer-policy** *string* **peer** *string*

Description Name of Destination-Realm AVP sent in CCR-i/u and RAA messages

String Length 1 to 80

Introduced 16.0.R4

preference *number*

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Peer preference of this Diameter peer policy (lower is more preferred)
Range	1 to 100
Default	50
Introduced	16.0.R4

statistics

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Enter the statistics context
Introduced	16.0.R4

transaction-timer *number*

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Timeout value for the Base Diameter messages (DWR, CER, DPR), where action is taken upon expiration
Range	1 to 1000
Units	seconds
Introduced	16.0.R4

transport

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Enter the transport context
Introduced	16.0.R4

port-number *number*

Context	**configure aaa diameter peer-policy** *string* **peer** *string* **transport**
Description	Transport protocol port number used toward policy peer
Range	1 to 65535
Default	3868
Introduced	16.0.R4

watchdog-timer *number*

Context	**configure aaa diameter peer-policy** *string* **peer** *string*
Description	Time between consecutive watchdog messages
Range	1 to 1000
Units	seconds
Introduced	16.0.R4

proxy

Context	**configure aaa diameter peer-policy** *string*
Description	Enter the proxy context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure aaa diameter peer-policy** *string* **proxy**
Description	Administrative state of Diameter proxy
Default	disable
Options	enable, disable
Introduced	16.0.R4

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure aaa diameter peer-policy** *string* **proxy**
Description	Source IP address on which Diameter proxy listens for client connections
Introduced	16.0.R4

mcs-peer

Context	**configure aaa diameter peer-policy** *string* **proxy**
Description	Enter the mcs-peer context
Introduced	16.0.R1

address *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa diameter peer-policy** *string* **proxy mcs-peer**
Description	IPv4 or IPv6 address of the Multi-Chassis Synchronization (MCS) peer
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R4
Notes	This element is mandatory

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa diameter peer-policy** *string* **proxy mcs-peer**
Description	Synchronization tag shared by Multi-Chassis Synchronization (MCS) peers
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is mandatory

router-instance *string*

Context	**configure aaa diameter peer-policy** *string* **proxy**
Description	Routing context associated with Diameter proxy
Introduced	16.0.R4

statistics

Context	**configure aaa diameter peer-policy** *string* **proxy**
Description	Enter the statistics context
Introduced	16.0.R4

python-policy *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Name of python policy for Diameter messages received or transmitted on Diameter peers
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

role *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa diameter peer-policy** *string*
Description	Client or proxy role of a Diameter peer policy
Default	client
Options	client, proxy
Introduced	16.0.R4

router-instance *string*

Context	**configure aaa diameter peer-policy** *string*
Description	Diameter peer policy router
Default	Base
Introduced	16.0.R1

transaction-timer *number*

Context	**configure aaa diameter peer-policy** *string*
Description	Diameter peer policy transaction timer
Range	1 to 1000
Default	30
Units	seconds
Introduced	16.0.R4

vendor-support *diam-vendor-support*

Context	**configure aaa diameter peer-policy** *string*
Description	Vendor support announced in the capability exchange
Default	three-gpp
Options	vodafone, three-gpp
Introduced	16.0.R4

watchdog-timer *number*

Context	**configure aaa diameter peer-policy** *string*
Description	Time between consecutive watchdog messages
Range	1 to 1000
Default	30
Units	seconds
Introduced	16.0.R4

radius

Context	**configure aaa**
Description	Enter the radius context
Introduced	16.0.R4

acct-on-off-group [name] *string*

Context	**configure aaa radius**
Description	Enter the acct-on-off-group context
Max. Elements	32
Introduced	16.0.R4

[name] *string*

Context	**configure aaa radius acct-on-off-group** *string*
Description	Accounting on/off group name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure aaa radius acct-on-off-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

coa-port *number*

Context	**configure aaa radius**
Description	Radius CoA port
Range	1647 | 1700 | 1812 | 3799
Default	3799
Introduced	16.0.R4

isa-policy [name] *string*

Context	**configure aaa radius**
Description	Enter the isa-policy context
Max. Elements	8
Introduced	16.0.R4

[name] *string*

Context	**configure aaa radius isa-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

accounting

Context	**configure aaa radius isa-policy** *string*
Description	Enter the accounting context
Introduced	16.0.R4

include-attributes

Context	**configure aaa radius isa-policy** *string* **accounting**
Description	Enter the include-attributes context
Introduced	16.0.R4

acct-delay-time *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Acct-Delay-Time attribute
Default	false
Introduced	16.0.R4

acct-triggered-reason *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include Alc-Acct-Triggered-Reason attribute
Default	false
Introduced	16.0.R4

called-station-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Called-Station-Id attribute
Default	false
Introduced	16.0.R4

calling-station-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Calling-Station-Id attribute
Default	false
Introduced	16.0.R4

circuit-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Circuit-Id attribute
Default	false
Introduced	16.0.R4

class *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**
Description Include the Class attribute
Default false
Introduced 16.0.R4

dhcp-options *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**
Description Include the Alc-ToServer-Dhcp-Options attribute
Default false
Introduced 16.0.R4

dhcp-vendor-class-id *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**
Description Include the Alc-DHCP-Vendor-Class-Id attribute
Default false
Introduced 16.0.R4

frame-counters *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**
Description Include the Acct-Input-Packets and Acct-Output-Packets attributes
Default false
Introduced 16.0.R4

framed-ip-address *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**
Description Include the Framed-IP-Address attribute
Default false
Introduced 16.0.R4

framed-ip-netmask *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Framed-IP-Netmask attribute
Default	false
Introduced	16.0.R4

framed-ipv6-prefix *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Framed-IPv6-Prefix attribute
Default	false
Introduced	16.0.R4

hardware-timestamp *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Event-Timestamp attribute
Default	false
Introduced	16.0.R4

ipv6-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the IPv6-Address attribute
Default	false
Introduced	16.0.R4

mac-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Client-Hardware-Addr attribute
Default	false
Introduced	16.0.R4

multi-session-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Acct-Multi-Session-Id attribute
Default	false
Introduced	16.0.R4

nas-identifier *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAS-Identifier attribute
Default	false
Introduced	16.0.R4

nas-ip-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAS-IP-Address attribute
Default	false
Introduced	16.0.R4

nas-port *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAS-Port attribute
Default	false
Introduced	16.0.R4

nas-port-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAS-Port-Id attribute
Default	false
Introduced	16.0.R4

nas-port-type *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAS-Port-Type attribute
Default	false
Introduced	16.0.R4

nat-inside-service-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAT inside service ID in Alc-Serv-Id attribute
Default	false
Introduced	16.0.R4

nat-outside-ip-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Nat-Outside-Ip-Addr attribute
Default	false
Introduced	16.0.R4

nat-outside-service-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the NAT outside service ID in the Alc-Serv-Id attribute
Default	false
Introduced	16.0.R4

nat-port-range-block *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Nat-Port-Range attribute
Default	false
Introduced	16.0.R4

nat-subscriber-string *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Subsc-ID-Str attribute
Default	false
Introduced	16.0.R4

octet-counters *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Acct-Input-Octets and Acct-Output-Octets attributes
Default	false
Introduced	16.0.R4

proxied-subscriber-data *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include subscriber data as RADIUS attributes that are passed into RADIUS accounting messages
Default	false
Introduced	16.0.R4

release-reason *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the reason of NAT release in the Acct-Terminate-Cause attribute
Default	false
Introduced	16.0.R4

remote-id *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Remote-Id attribute
Default	false
Introduced	16.0.R4

rssi *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**

Description Include the Alc-RSSI attribute

Default false

Introduced 16.0.R4

session-time *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**

Description Include the Acct-Session-Time attribute

Default false

Introduced 16.0.R4

subscriber-id *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**

Description Include the Alc-Subsc-ID-Str attribute

Default false

Introduced 16.0.R4

toserver-dhcp6-options *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**

Description Include the Alc-ToServer-Dhcp6-Options attribute

Default false

Introduced 16.0.R4

ue-creation-type *boolean*

Context **configure aaa radius isa-policy** *string* **accounting include-attributes**

Description Include the Alc-Wlan-Ue-Creation-Type attribute

Default false

Introduced 16.0.R4

user-name *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the User-Name attribute
Default	false
Introduced	16.0.R4

wlan-ssid-vlan *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the per-SSID VLAN tag in Alc-Wlan-SSID-VLAN attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-home-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-local-ipv6-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Xconnect-Tunnel-Local-Ipv6 attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-remote-ipv6-address *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the cross-connect tunnel remote IPv6 address attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-service *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Xconnect-Tunnel-Service attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-type *boolean*

Context	**configure aaa radius isa-policy** *string* **accounting include-attributes**
Description	Include the Alc-Xconnect-Tunnel-Type attribute
Default	false
Introduced	16.0.R4

nat-periodic-update

Context	**configure aaa radius isa-policy** *string* **accounting**
Description	Enter the nat-periodic-update context
Introduced	16.0.R4

interval *number*

Context	**configure aaa radius isa-policy** *string* **accounting nat-periodic-update**
Description	Interval for periodic RADIUS Interim-Update messages
Range	1 to 72
Units	hours
Introduced	16.0.R4

rate-limit (*number* | *keyword*)

Context	**configure aaa radius isa-policy** *string* **accounting nat-periodic-update**
Description	Rate limit for periodic RADIUS Interim-Update messages
Range	1 to 100000
Default	unlimited
Units	packets per second
Options	unlimited
Introduced	16.0.R4

update-triggers

Context **configure aaa radius isa-policy** *string* **accounting**

Description Enter the update-triggers context

Introduced 16.0.R4

address-state *boolean*

Context **configure aaa radius isa-policy** *string* **accounting update-triggers**

Description Send an Interim-Update when DHCP/DHCP6/SLAAC state is created or removed

Default false

Introduced 16.0.R4

authentication

Context **configure aaa radius isa-policy** *string*

Description Enter the authentication context

Introduced 16.0.R4

include-attributes

Context **configure aaa radius isa-policy** *string* **authentication**

Description Enter the include-attributes context

Introduced 16.0.R4

called-station-id *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the Called-Station-Id attribute

Default false

Introduced 16.0.R4

calling-station-id *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the Calling-Station-Id attribute

Default false

Introduced 16.0.R4

circuit-id *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Agent-Circuit-Id attribute
Default	false
Introduced	16.0.R4

dhcp-vendor-class-id *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Dhcp-Vendor-Class-Id attribute
Default	false
Introduced	16.0.R4

framed-ip-address *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Framed-IP-Address attribute
Default	false
Introduced	16.0.R4

ipv6-address *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Alc-Ipv6-Address attribute
Default	false
Introduced	16.0.R4

mac-address *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Alc-Client-Hardware-Addr attribute
Default	false
Introduced	16.0.R4

nas-identifier *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the NAS-Identifier attribute

Default false

Introduced 16.0.R4

nas-ip-address *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the NAS-IP-Address attribute

Default true

Introduced 16.0.R4

nas-port *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the NAS-Port attribute

Default false

Introduced 16.0.R4

nas-port-id *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the NAS-Port-Id attribute

Default false

Introduced 16.0.R4

nas-port-type *boolean*

Context **configure aaa radius isa-policy** *string* **authentication include-attributes**

Description Include the NAS-Port-Type attribute

Default false

Introduced 16.0.R4

remote-id *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Agent-Remote-Id attribute
Default	false
Introduced	16.0.R4

toserver-dhcp-options *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Alc-ToServer-Dhcp-Options attribute
Default	false
Introduced	16.0.R4

toserver-dhcp6-options *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Alc-ToServer-Dhcp6-Options attribute
Default	false
Introduced	16.0.R4

wlan-ssid-vlan *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the per-SSID VLAN ID in Alc-Wlan-SSID-VLAN attribute
Default	false
Introduced	16.0.R4

xconnect-tunnel-home-address *boolean*

Context	**configure aaa radius isa-policy** *string* **authentication include-attributes**
Description	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Default	false
Introduced	16.0.R5

description *string*

Context	**configure aaa radius isa-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

nas-ip-address-origin *keyword*

Context	**configure aaa radius isa-policy** *string*
Description	NAS-IP-Address attribute
Default	system-ip
Options	system-ip, isa-ip
Introduced	16.0.R4

password *encrypted-leaf*

Context	**configure aaa radius isa-policy** *string*
Description	Password used in the RADIUS access requests
String Length	1 to 42
Introduced	16.0.R4

python-policy *string*

Context	**configure aaa radius isa-policy** *string*
Description	Python policy used for modifying RADIUS messages
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

servers

Context	**configure aaa radius isa-policy** *string*
Description	Enter the servers context
Introduced	16.0.R4

access-algorithm *keyword*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	Algorithm that accesses the RADIUS servers
Options	direct, round-robin, hash-based
Introduced	16.0.R4

router-instance *string*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	The routing instance
Introduced	16.0.R1

server [index] *number*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	Enter the server context
Max. Elements	10
Introduced	16.0.R4

[index] *number*

Context	**configure aaa radius isa-policy** *string* **servers server** *number*
Description	RADIUS server index that determines sequence in which servers are queried for auth requests
Range	1 to 10
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure aaa radius isa-policy** *string* **servers server** *number*
Description	Administrative state of the ISA RADIUS server
Default	disable
Options	enable, disable
Introduced	16.0.R4

ip-address *ipv4-unicast-address*

Context **configure aaa radius isa-policy** *string* **servers server** *number*

Description Destination IP address to reach RADIUS server

Introduced 16.0.R4

purpose

Context **configure aaa radius isa-policy** *string* **servers server** *number*

Description Enter the purpose context

Introduced 16.0.R4

accounting

Context **configure aaa radius isa-policy** *string* **servers server** *number* **purpose**

Description Enter the accounting context

Introduced 16.0.R4

udp-port *number*

Context **configure aaa radius isa-policy** *string* **servers server** *number* **purpose accounting**

Description ISA RADIUS server accounting UDP port

Range 1 to 65535

Default 1813

Introduced 16.0.R4

authentication

Context **configure aaa radius isa-policy** *string* **servers server** *number* **purpose**

Description Enter the authentication context

Introduced 16.0.R4

udp-port *number*

Context	**configure aaa radius isa-policy** *string* **servers server** *number* **purpose authentication**
Description	ISA RADIUS server authentication UDP port
Range	1 to 65535
Default	1812
Introduced	16.0.R4

coa

Context	**configure aaa radius isa-policy** *string* **servers server** *number* **purpose**
Description	Enter the coa context
Introduced	16.0.R4

udp-port *number*

Context	**configure aaa radius isa-policy** *string* **servers server** *number* **purpose coa**
Description	ISA RADIUS server change of authorization UDP port
Range	1 to 65535
Default	3799
Introduced	16.0.R4

secret *encrypted-leaf*

Context	**configure aaa radius isa-policy** *string* **servers server** *number*
Description	Shared secret to authenticate messages and encrypt attributes to or from this server
String Length	1 to 114
Introduced	16.0.R4

source-address-range *ipv4-unicast-address*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	Starting source address of RADIUS messages; end depends on number of ISAs in the system
Introduced	16.0.R4

timeout *number*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	Timeout for a response from the RADIUS server
Range	1 to 90
Default	5
Units	seconds
Introduced	16.0.R4

total-tries *number*

Context	**configure aaa radius isa-policy** *string* **servers**
Description	Maximum number of tries toward the same RADIUS server
Range	1 to 10
Default	3
Introduced	16.0.R4

user-name

Context	**configure aaa radius isa-policy** *string*
Description	Enter the user-name context
Introduced	16.0.R4

format *keyword*

Context	**configure aaa radius isa-policy** *string* **user-name**
Description	How user is represented when contacting RADIUS server
Default	mac
Options	mac, mac-ip, dhcp-vendor, circuit-id
Introduced	16.0.R4

mac-format *keyword*

Context	**configure aaa radius isa-policy** *string* **user-name**
Description	How the MAC address gets formatted
Options	alu, ieee
Introduced	16.0.R4

l2tp-accounting-policy [name] *string*

Context	**configure aaa radius**
Description	Enter the l2tp-accounting-policy context
Max. Elements	32
Introduced	16.0.R4

[name] *string*

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	Name for L2TP RADIUS accounting policy
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-type

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	Enter the accounting-type context
Introduced	16.0.R4

session *boolean*

Context	**configure aaa radius l2tp-accounting-policy** *string* **accounting-type**
Description	Enable/disable per session accounting
Default	true
Introduced	16.0.R4

tunnel *boolean*

Context	**configure aaa radius l2tp-accounting-policy** *string* **accounting-type**
Description	Enable/disable per tunnel accounting
Default	true
Introduced	16.0.R4

acct-tunnel-connection-fmt *string*

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	Accounting tunnel connection ASCII specification
String Length	1 to 253
Default	%n
Introduced	16.0.R4

description *string*

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

include-radius-attribute

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	Enter the include-radius-attribute context
Introduced	16.0.R4

calling-station-id *boolean*

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute**
Description	Include the calling station ID attribute
Default	false
Introduced	16.0.R4

nas-identifier *boolean*

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute**
Description	Include the NAS-Identifier attribute
Default	false
Introduced	16.0.R4

nas-port

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute**
Description	Enter the nas-port context
Introduced	16.0.R4

bit-spec *binary-specification*

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute nas-port**
Description	RADIUS NAS-Port attribute
String Length	1 to 255
Introduced	16.0.R4
Notes	This element is mandatory

nas-port-id

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute**
Description	Enter the nas-port-id context
Introduced	16.0.R4

prefix-string *string*

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute nas-port-id**
Description	Specifies NAS-Port-Id prefix string
String Length	1 to 8
Introduced	16.0.R4

suffix *keyword*

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute nas-port-id**
Description	Specifies NAS-Port-Id suffix
Options	circuit-id, remote-id
Introduced	16.0.R4

nas-port-type

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute**
Description	Enter the nas-port-type context
Introduced	16.0.R4

type (*keyword* | *number*)

Context	**configure aaa radius l2tp-accounting-policy** *string* **include-radius-attribute nas-port-type**
Description	Value for RADIUS NAS-Port-Type attribute
Range	0 to 255
Default	rfc-aligned
Options	rfc-aligned
Introduced	16.0.R4

radius-server-policy *string*

Context	**configure aaa radius l2tp-accounting-policy** *string*
Description	RADIUS server policy
Reference	configure **aaa radius server-policy** *string*
Introduced	16.0.R4

route-downloader [name] *string*

Context	**configure aaa radius**
Description	Enter the route-downloader context
Max. Elements	1
Introduced	16.0.R4

[name] *string*

Context	**configure aaa radius route-downloader** *string*
Description	Route downloader name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure aaa radius route-downloader** *string*
Description	Administrative state of this Route Downloader
Default	disable
Options	enable, disable
Introduced	16.0.R4

base-user-name *string*

Context	**configure aaa radius route-downloader** *string*
Description	Prefix of the username used by this route downloader
String Length	1 to 32
Introduced	16.0.R4

default-metric *number*

Context	**configure aaa radius route-downloader** *string*
Description	Default metric of this route downloader
Range	0 to 254
Default	2
Introduced	16.0.R4

default-tag *number*

Context	**configure aaa radius route-downloader** *string*
Description	Default tag of this route downloader
Range	0 to 4294967295
Default	0
Introduced	16.0.R4

description *string*

Context	**configure aaa radius route-downloader** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

download-interval *number*

Context	**configure aaa radius route-downloader** *string*
Description	Configure the download interval of this route-downloader
Range	1 to 1440
Default	720
Units	minutes
Introduced	16.0.R4

max-routes *number*

Context	**configure aaa radius route-downloader** *string*
Description	Maximum routes imported by this route downloader
Range	1 to 200000
Default	200000
Introduced	16.0.R4

password *encrypted-leaf*

Context	**configure aaa radius route-downloader** *string*
Description	Route downloader password
String Length	1 to 70
Introduced	16.0.R4

radius-server-policy *string*

Context	**configure aaa radius route-downloader** *string*
Description	Radius server policy used by this route downloader
Reference	configure **aaa radius server-policy** *string*
Introduced	16.0.R4

retry-interval

Context	**configure aaa radius route-downloader** *string*
Description	Enter the retry-interval context
Introduced	16.0.R4

max *number*

Context	**configure aaa radius route-downloader** *string* **retry-interval**
Description	Specifies the maximum duration of the retry interval. This duration grows exponentially after each sequential failure
Range	1 to 1440
Default	20
Units	minutes
Introduced	16.0.R4

min *number*

Context	**configure aaa radius route-downloader** *string* **retry-interval**
Description	Specifies the minimum duration of the retry interval. This duration grows exponentially after each sequential failure.
Range	1 to 1440
Default	10
Units	minutes
Introduced	16.0.R4

server-policy [name] *string*

Context	**configure aaa radius**
Description	Enter the server-policy context
Max. Elements	32
Introduced	16.0.R4

[name] *string*

Context	**configure aaa radius server-policy** *string*
Description	RADIUS script policy name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

acct-on-off

Context	**configure aaa radius server-policy** *string*
Description	Enter the acct-on-off context
Introduced	16.0.R4

monitor *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa radius server-policy** *string* **acct-on-off**
Description	monitor a group
Reference	configure **aaa radius acct-on-off-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

oper-state-change

Context	**configure aaa radius server-policy** *string* **acct-on-off**
Description	Enter the **oper-state-change** context
Introduced	16.0.R4

group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure aaa radius server-policy** *string* **acct-on-off oper-state-change**
Description	Change of operational state for a group
Reference	configure **aaa radius acct-on-off-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

description *string*

Context	**configure aaa radius server-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

python-policy *string*

Context	**configure aaa radius server-policy** *string*
Description	Python policy to modify the RADIUS messages
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

servers

Context	**configure aaa radius server-policy** *string*
Description	Enter the servers context
Introduced	16.0.R4

access-algorithm *keyword*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Algorithm to access the set of RADIUS servers
Options	direct, round-robin, hash-based
Introduced	16.0.R4

buffering

Context	**configure aaa radius server-policy** *string* **servers**
Description	Enter the buffering context
Introduced	16.0.R4

acct-interim

Context	**configure aaa radius server-policy** *string* **servers buffering**
Description	Enter the acct-interim context
Introduced	16.0.R4

lifetime *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-interim**
Description	Time when an accounting message can be in the retransmission buffer
Range	1 to 25
Units	hours
Introduced	16.0.R4
Notes	This element is mandatory

max *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-interim**
Description	Maximum time between retries to send RADIUS accounting interim update message
Range	1 to 3600
Units	seconds
Introduced	16.0.R4
Notes	This element is mandatory

min *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-interim**
Description	Minimum time between retries to send RADIUS accounting interim update message
Range	1 to 3600
Units	seconds
Introduced	16.0.R4
Notes	This element is mandatory

acct-stop

Context	**configure aaa radius server-policy** *string* **servers buffering**
Description	Enter the acct-stop context
Introduced	16.0.R4

lifetime *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-stop**
Description	Time when an accounting message can be in the retransmission buffer
Range	1 to 25
Units	hours
Introduced	16.0.R4
Notes	This element is mandatory

max *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-stop**
Description	Max time between retries to send RADIUS accounting stop message
Range	1 to 3600
Units	seconds
Introduced	16.0.R4
Notes	This element is mandatory

min *number*

Context	**configure aaa radius server-policy** *string* **servers buffering acct-stop**
Description	Minimum time between retries to send RADIUS accounting stop message
Range	1 to 3600
Units	seconds
Introduced	16.0.R4
Notes	This element is mandatory

health-check

Context	**configure aaa radius server-policy** *string* **servers**
Description	Enter the health-check context
Introduced	16.0.R4

down-timeout *number*

Context	**configure aaa radius server-policy** *string* **servers health-check**
Description	Time to wait for a reply message from the RADIUS server before the server is declared out-of-service
Range	1 to 340
Units	seconds
Introduced	16.0.R4

test-account

Context	**configure aaa radius server-policy** *string* **servers health-check**
Description	Enter the test-account context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure aaa radius server-policy** *string* **servers health-check test-account**
Description	Administrative state of health check state
Default	disable
Options	enable, disable
Introduced	16.0.R4

interval *number*

Context	**configure aaa radius server-policy** *string* **servers health-check test-account**
Description	Time for health check
Range	1 to 60
Default	3
Units	seconds
Introduced	16.0.R4

password *encrypted-leaf*

Context	**configure aaa radius server-policy** *string* **servers health-check test-account**
Description	Password for health check
String Length	1 to 114
Introduced	16.0.R4

user-name *string*

Context	**configure aaa radius server-policy** *string* **servers health-check test-account**
Description	Username for health check
String Length	1 to 64
Introduced	16.0.R4

hold-down-time *number*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Hold time before re-using a RADIUS server that was down
Range	30 to 86400
Default	30
Units	seconds
Introduced	16.0.R4

ipv6-source-address *ipv6-address*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Source address for IPv6 RADIUS datagrams
Introduced	16.0.R4

retry-count *number*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Number of retries for contacting the RADIUS server
Range	1 to 256
Default	3
Introduced	16.0.R4

router-instance *string*

Context	**configure aaa radius server-policy** *string* **servers**
Description	RADIUS routing instance
Introduced	16.0.R1

server [server-index] *number*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Enter the server context
Max. Elements	32
Introduced	16.0.R4

[server-index] *number*

Context	**configure aaa radius server-policy** *string* **servers server** *number*
Description	RADIUS server index
Range	1 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

server-name *string*

Context	**configure aaa radius server-policy** *string* **servers server** *number*
Description	RADIUS server name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is mandatory

source-address *ipv4-address*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Source address of RADIUS messages
Introduced	16.0.R4

stickiness *boolean*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Stickiness to a host in a multi server application
Default	true
Introduced	16.0.R4

timeout *number*

Context	**configure aaa radius server-policy** *string* **servers**
Description	Time until the next retry to the RADIUS server
Range	1 to 340
Default	5
Units	seconds
Introduced	16.0.R4

wpp

Context	**configure aaa**
Description	Enter the wpp context
Introduced	16.0.R1

portal-group [group-name] *string*

Context	**configure aaa wpp**
Description	Enter the portal-group context
Introduced	16.0.R1

[group-name] *string*

Context	**configure aaa wpp portal-group** *string*
Description	Portal group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure aaa wpp portal-group** *string*
Description	Administrative state of the portal group
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure aaa wpp portal-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

portal [router-instance] *string* **name** *string*

Context	**configure aaa wpp portal-group** *string*
Description	Enter the portal context
Max. Elements	8
Introduced	16.0.R1

[router-instance] *string*

Context	**configure aaa wpp portal-group** *string* **portal** *string* **name** *string*
Description	Router on which the portal is configured
Introduced	16.0.R1
Notes	This element is part of a list key

name *string*

Context	**configure aaa wpp portal-group** *string* **portal** *string* **name** *string*
Description	Portal name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

3 bfd Commands

configure
- — **bfd**
  - — **bfd-template** *string*
    - — **echo-receive** *number*
    - — **multiplier** *number*
    - — **receive-interval** *number*
    - — **transmit-interval** *number*
    - — **type** *keyword*

3.1 bfd Command Descriptions

bfd

Context	**configure**
Description	Enter the bfd context
Introduced	16.0.R1

bfd-template [name] *string*

Context	**configure bfd**
Description	Enter the bfd-template context
Introduced	16.0.R1

[name] *string*

Context	**configure bfd bfd-template** *string*
Description	BFD template name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

echo-receive *number*

Context	**configure bfd bfd-template** *string*
Description	Echo receive interval
Range	100 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure bfd bfd-template** *string*
Description	Detect multiplier used for a BFD session
Range	3 to 20
Default	3
Introduced	16.0.R1

receive-interval *number*

Context	**configure bfd bfd-template** *string*
Description	Receive interval
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure bfd bfd-template** *string*
Description	Transmit interval
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure bfd bfd-template** *string*
Description	Local termination point for the BFD session
Options	cpm-np
Introduced	16.0.R1

4 bmp Commands

configure
- — **bmp**
  - — **admin-state** *keyword*
  - — **station** *string*
    - — **admin-state** *keyword*
    - — **connection**
      - — **connect-retry** *number*
      - — **local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
      - — **router-instance** *string*
      - — **station-address**
        - — **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - — **port** *number*
      - — **tcp-keepalive**
        - — **admin-state** *keyword*
        - — **keep-count** *number*
        - — **keep-idle** *number*
        - — **keep-interval** *number*
    - — **description** *string*
    - — **family**
      - — **evpn** *boolean*
      - — **ipv4** *boolean*
      - — **ipv6** *boolean*
      - — **l2-vpn** *boolean*
      - — **label-ipv4** *boolean*
      - — **label-ipv6** *boolean*
      - — **mcast-ipv4** *boolean*
      - — **mcast-ipv6** *boolean*
      - — **mcast-vpn-ipv4** *boolean*
      - — **mcast-vpn-ipv6** *boolean*
      - — **vpn-ipv4** *boolean*
      - — **vpn-ipv6** *boolean*
    - — **initiation-message** *string*
    - — **report-local-routes** *boolean*
    - — **stats-report-interval** *number*

4.1 bmp Command Descriptions

bmp

Context	**configure**
Description	Enter the bmp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure bmp**
Description	Administrative state of the BGP Monitoring Protocol operation
Default	disable
Options	enable, disable
Introduced	16.0.R1

station [name] *string*

Context	**configure bmp**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure bmp station** *string*
Description	BMP monitoring station name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure bmp station** *string*
Description	Administrative state of the BMP monitoring station
Default	disable
Options	enable, disable
Introduced	16.0.R1

connection

Context	**configure bmp station** *string*
Description	Enter the connection context
Introduced	16.0.R1

connect-retry *number*

Context	**configure bmp station** *string* **connection**
Description	Maximum time between connection attempts
Range	1 to 65535
Default	120
Units	seconds
Introduced	16.0.R1

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure bmp station** *string* **connection**
Description	Local IP address to communicate with the BMP monitoring station
Introduced	16.0.R1

router-instance *string*

Context	**configure bmp station** *string* **connection**
Description	Router instance used to reach the BMP station.
Default	Base
Introduced	16.0.R1

station-address

Context **configure bmp station** *string* **connection**

Description Enter the station-address context

Introduced 16.0.R1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure bmp station** *string* **connection station-address**

Description IP address of the BMP monitoring station

Introduced 16.0.R1

port *number*

Context **configure bmp station** *string* **connection station-address**

Description Port of the BMP monitoring station

Range 1 to 65535

Introduced 16.0.R1

tcp-keepalive

Context **configure bmp station** *string* **connection**

Description Enter the tcp-keepalive context

Introduced 16.0.R1

admin-state *keyword*

Context **configure bmp station** *string* **connection tcp-keepalive**

Description Administrative state of TCP keepalive

Default disable

Options enable, disable

Introduced 16.0.R1

keep-count *number*

Context	**configure bmp station** *string* **connection tcp-keepalive**
Description	Number of missed keepalives before the TCP connection is declared down
Range	3 to 100
Default	4
Introduced	16.0.R1

keep-idle *number*

Context	**configure bmp station** *string* **connection tcp-keepalive**
Description	Time until the first TCP keepalive probe is sent.
Range	1 to 100000
Default	600
Units	seconds
Introduced	16.0.R1

keep-interval *number*

Context	**configure bmp station** *string* **connection tcp-keepalive**
Description	Time between two TCP keepalive probes
Range	1 to 100000
Default	15
Units	seconds
Introduced	16.0.R1

description *string*

Context	**configure bmp station** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

family

Context	**configure bmp station** *string*
Description	Enter the family context
Introduced	16.0.R1

evpn *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type evpn.
Default	false
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support IPv4 address family
Default	true
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support IPv6 address family
Default	false
Introduced	16.0.R1

l2-vpn *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type l2-vpn.
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support labeled IPv4 address family
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support labeled IPv6 address family
Default	false
Introduced	16.0.R1

mcast-ipv4 *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type mcast-ipv4.
Default	false
Introduced	16.0.R1

mcast-ipv6 *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type mcast-ipv6.
Default	false
Introduced	16.0.R1

mcast-vpn-ipv4 *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type mcast-vpn-ipv4.
Default	false
Introduced	16.0.R1

mcast-vpn-ipv6 *boolean*

Context	**configure bmp station** *string* **family**
Description	Enable/disable family type mcast-vpn-ipv6.
Default	false
Introduced	16.0.R1

vpn-ipv4 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure bmp station** *string* **family**
Description	Support VPN IPv6 address family
Default	false
Introduced	16.0.R1

initiation-message *string*

Context	**configure bmp station** *string*
Description	Free form initiation message for a type 0 TLV to be sent to the BMP monitoring station
String Length	1 to 255
Introduced	16.0.R1

report-local-routes *boolean*

Context	**configure bmp station** *string*
Description	Allow local route reporting to the BMP monitoring station
Default	false
Introduced	16.0.R1

stats-report-interval *number*

Context	**configure bmp station** *string*
Description	Frequency of statistics reporting messages sent to the BMP monitoring station
Range	15 to 65535
Units	seconds
Introduced	16.0.R1

5 call-trace Commands

configure
- **call-trace**
  - **location** *keyword*
    - **admin-state** *keyword*
    - **size-limit** (*number* | *keyword*)
  - **max-files-number** *number*
  - **primary-cf** *keyword*
  - **trace-profile** *string*
    - **applications**
      - **connectivity-management** *boolean*
      - **ludb** *boolean*
      - **msap** *boolean*
      - **python** *boolean*
      - **radius-acct** *boolean*
      - **radius-auth** *boolean*
    - **description** *string*
    - **events** *keyword*
    - **output**
      - **debug**
      - **live**
        - **fqdn** *string*
        - **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **port** *number*
        - **router-instance** *string*
      - **local-storage**
    - **size-limit** *number*
    - **time-limit** *number*

5.1 call-trace Command Descriptions

call-trace

Context	**configure**
Description	Enter the call-trace context
Introduced	16.0.R1

location [location-type] *keyword*

Context	**configure call-trace**
Description	Enter the location context
Introduced	16.0.R1

[location-type] *keyword*

Context	**configure call-trace location** *keyword*
Description	ID of the compact flash card to be used
Options	cf1, cf2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure call-trace location** *keyword*
Description	Administrative state of this compact flash card for storage of call trace log files
Default	enable
Options	enable, disable
Introduced	16.0.R1

size-limit (*number* | *keyword*)

Context	**configure call-trace location** *keyword*
Description	Maximum cumulative size of all local call trace log files stored on the given compact flash card
Range	1 to 65536
Default	1000
Options	unlimited
Introduced	16.0.R1

max-files-number *number*

Context	**configure call-trace**
Description	Maximum number of all call trace log files stored on all compact flash cards
Range	1 to 1024
Default	200
Introduced	16.0.R1

primary-cf *keyword*

Context	**configure call-trace**
Description	Compact flash card to be used as primary local storage location to save the call trace log files
Default	cf1
Options	cf1, cf2
Introduced	16.0.R1

trace-profile [name] *string*

Context	**configure call-trace**
Description	Enter the trace-profile context
Introduced	16.0.R1

[name] *string*

Context	**configure call-trace trace-profile** *string*
Description	Unique name for the call trace profile
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

applications

Context	**configure call-trace trace-profile** *string*
Description	Enter the applications context
Introduced	16.0.R1

connectivity-management *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for connectivity protocols
Default	true
Introduced	16.0.R1

ludb *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for local user database lookups
Default	true
Introduced	16.0.R1

msap *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for MSAP creation events
Default	true
Introduced	16.0.R1

python *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for Python script execution
Default	true
Introduced	16.0.R1

radius-acct *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for messages and events related to RADIUS-based accounting
Default	true
Introduced	16.0.R1

radius-auth *boolean*

Context	**configure call-trace trace-profile** *string* **applications**
Description	Allow tracing for messages and events related to RADIUS authentication
Default	true
Introduced	16.0.R1

description *string*

Context	**configure call-trace trace-profile** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

events *keyword*

Context	**configure call-trace trace-profile** *string*
Description	Events to include in the captured trace
Options	public-only, all
Introduced	16.0.R1

output

Context	**configure call-trace trace-profile** *string*
Description	Enter the output context
Introduced	16.0.R1

debug

Context	**configure call-trace trace-profile** *string* **output**
Description	Trace log generated by a call trace job to be decoded as test and sent to debug logging
Introduced	16.0.R1
Notes	This element is part of a choice

live

Context	**configure call-trace trace-profile** *string* **output**
Description	Enter the **live** context
Introduced	16.0.R1

fqdn *string*

Context	**configure call-trace trace-profile** *string* **output live**
Description	Fully qualified domain name of the live output destination
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure call-trace trace-profile** *string* **output live**
Description	IP address of the live output destination
Introduced	16.0.R1
Notes	This element is part of a choice

port *number*

Context	**configure call-trace trace-profile** *string* **output live**
Description	TCP IP port
Range	1 to 65536
Default	29770
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure call-trace trace-profile** *string* **output live**
Description	Router instance or VPRN service name
Default	Base
Introduced	16.0.R1
Notes	This element is part of a choice

local-storage

Context	**configure call-trace trace-profile** *string* **output**
Description	Default destination for output
Introduced	16.0.R1
Notes	This element is part of a choice

size-limit *number*

Context	**configure call-trace trace-profile** *string*
Description	Maximum data volume generated by a single call trace job to the output
Range	1 to 1000
Default	10
Units	megabytes
Introduced	16.0.R1

time-limit *number*

Context	**configure call-trace trace-profile** *string*
Description	Maximum time for a single call trace job
Range	1 to 604800
Default	86400
Introduced	16.0.R1

6 card Commands

configure
- **card** (*iom-card-slot* | *cpm-card-slot*)

6.1 card Command Descriptions

card [slot-number] (*iom-card-slot* | *cpm-card-slot*)

Context	**configure**
Description	Enter the card context
Introduced	16.0.R1

[slot-number] (*iom-card-slot* | *cpm-card-slot*)

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	IOM slot within a chassis
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Administrative state of the I/O module
Default	enable
Options	enable, disable
Introduced	16.0.R1

capability *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	I/O module for SR or ESS operation
Default	ess
Options	sr, ess
Introduced	16.0.R1

card-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Card type
Options	iom3-xp, imm48-1gb-sfp, imm48-1gb-tx, imm8-10gb-xfp, imm4-10gb-xfp, iom-xp, imm5-10gb-xfp, iom-c4-xp, imm1-100gb-cfp, imm12-10gb-sf+, iom3-xp-b, xcm-x20, imm48-1gb-sfp-b, imm3-40gb-qsfp, imm40-10gb-sfp, xcm-x16, imm4-100gb-cxp, iom3-xp-c, iom-xp-b, iom4-e, iom-a, xcm-x16w, imm-1pac-fp3, imm-2pac-fp3, iom4-e-hs, imm48-1gb-sfp-c, imm4-100gb-cfp4, iom-e, iom-v, iom4-e-b, iom-sar-hm, xcm2-x20, iom-1, xcm-14s, imm40-10gb-sfp-ptp, iom5-e, xcm-7s, xcm-1s, xcm-2s
Introduced	16.0.R1

fail-on-error *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Set the Operational State of the card to Failed when an error is detected
Default	false
Introduced	16.0.R1

fp [fp-number] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Enter the fp context
Introduced	16.0.R1

[fp-number] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Forwarding plane within a specific IOM card
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

dist-cpu-protection

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Enter the dist-cpu-protection context
Introduced	16.0.R1

dynamic-enforcement-policer-pool *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **dist-cpu-protection**
Description	Number of policers reserved for use as dynamic enforcement policers on forwarding plane
Range	1000 to 32000
Introduced	16.0.R1

egress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Enter the egress context
Introduced	16.0.R1

hs-fixed-high-thresh-delta *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress**
Description	High threshold delta on forwarding plane
Range	0 to 65536
Introduced	16.0.R1

hs-pool-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress**
Description	HS pool policy
Reference	configure **qos hs-pool-policy** *string*
Introduced	16.0.R1

wred-queue-control

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress**
Description	Enter the wred-queue-control context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress wred-queue-control**
Description	Administrative state of WRED queue control
Default	disable
Options	enable, disable
Introduced	16.0.R1

buffer-allocation *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress wred-queue-control**
Description	Configure the WRED queue aggregate buffer allocation which will be set aside for WRED queue buffer pools
Range	0.01 to 99.99
Default	25.00
Units	percent
Introduced	16.0.R1

reserved-cbs *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress wred-queue-control**
Description	Configure the buffers within the WRED pool that will be set aside for WRED queues operating within their configured CBS thresholds.
Range	0.01 to 99.99
Default	25.00
Units	percent
Introduced	16.0.R1

slope-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **egress wred-queue-control**
Description	Egress WRED queue control slope policy for forwarding plane
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

hi-bw-mcast-src

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Enter the hi-bw-mcast-src context
Introduced	16.0.R1

alarm *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **hi-bw-mcast-src**
Description	Raise an alarm when more than one high bandwidth multicast traffic taps share a plane
Default	false
Introduced	16.0.R1

default-paths-only *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **hi-bw-mcast-src**
Description	Allocate only the two default paths (one high priority and one low priority) to dedicated MSFPs
Default	false
Introduced	16.0.R1

group *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **hi-bw-mcast-src**
Description	Logical MSFP group of the MDA
Range	0 to 32
Default	0
Introduced	16.0.R1

ingress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Enter the ingress context
Introduced	16.0.R1

access

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress**
Description	Enter the access context
Introduced	16.0.R1

queue-group [queue-group-name] *string* instance-id *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access**
Description	Enter the queue-group context
Introduced	16.0.R1

[queue-group-name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Queue group name
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

instance-id *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Instance ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Accounting policy for the FP ingress queue group
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Collect statistics on FP ingress queue group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

policer-control-policy

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Enter the policer-control-policy context
Introduced	16.0.R1

overrides

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy**
Description	Enter the overrides context
Introduced	16.0.R1

max-rate (*number* | *keyword*)

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides**
Description	Maximum rate override
Units	kilobps
Introduced	16.0.R1

priority-mbs-thresholds

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides**
Description	Enter the priority-mbs-thresholds context
Introduced	16.0.R1

min-threshold-separation (*number* | *keyword*)

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds**
Description	Minimum threshold separation override
Units	bytes
Introduced	16.0.R1

priority [level] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds**
Description	Enter the priority context
Introduced	16.0.R1

[level] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds priority** *number*
Description	MBS contribution size override
Units	bytes
Introduced	16.0.R1

policy-name *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-control-policy**
Description	Policer control policy
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

policer-overrides

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number*
Description	Enter the policer-overrides context
Introduced	16.0.R1

policer [policer-id] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides**
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*
Description	Policer identifier
Reference	configure **qos queue-group-templates ingress queue-group** *string* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*
Description	CBS parameter override
Units	bytes
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*

Description MBS parameter override

Units bytes

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*

Description Size of each packet handled by the policer

Range -32 to 31

Introduced 16.0.R1

rate

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string* **rate**

Description CIR rate

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string* **rate**

Description PIR rate

Introduced 16.0.R1

stat-mode *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress access queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*
Description	Stat mode for the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

mcast-path-management

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress**
Description	Enter the mcast-path-management context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress mcast-path-management**
Description	Administrative state of ingress multicast path management
Default	disable
Options	enable, disable
Introduced	16.0.R1

bandwidth-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress mcast-path-management**
Description	Bandwidth policy associated with the MDA or forwarding plane for ingress multicast path management
Reference	configure **multicast-management bandwidth-policy** *string*
Introduced	16.0.R1

network

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress**
Description	Enter the network context
Introduced	16.0.R1

queue-group [queue-group-name] *string* **instance-id** *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network**
Description	Enter the queue-group context
Introduced	16.0.R1

[queue-group-name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*
Description	Queue group name
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

instance-id *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*
Description	Instance ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*
Description	Accounting policy for the FP ingress queue group
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*
Description	Collect statistics on FP ingress queue group
Default	false
Introduced	16.0.R1

description *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

policer-control-policy

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

max-rate (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides**

Description Maximum rate override

Units kilobps

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R1

min-threshold-separation (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds**

Description Minimum threshold separation override

Units bytes

Introduced 16.0.R1

priority [level] *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R1

[level] *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds priority** *number*

Description Priority level

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy overrides priority-mbs-thresholds priority** *number*

Description MBS contribution size override

Units bytes

Introduced 16.0.R1

policy-name *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-control-policy**
Description	Policer control policy
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

policer-overrides

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number*
Description	Enter the policer-overrides context
Introduced	16.0.R1

policer [policer-id] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-overrides**
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*
Description	Policer identifier
Reference	configure **qos queue-group-templates ingress queue-group** *string* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-overrides policer** *string* **rate**

Description CIR rate

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-overrides policer** *string* **rate**

Description PIR rate

Introduced 16.0.R1

stat-mode *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number* **ingress network queue-group** *string* **instance-id** *number* **policer-overrides policer** *string*
Description	Stat mode for the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

ingress-buffer-allocation *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Ingress buffer pool percentage for forwarding plane
Range	20.00 to 80.00
Default	50.00
Units	percent
Introduced	16.0.R1

init-extract-prio-mode *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Scheme to select initial drop priority of extracted control plane traffic
Default	uniform
Options	uniform, l3-classify
Introduced	16.0.R1

policy-accounting *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Number of stats resources for policy accounting for the forwarding plane
Range	1000 to 128000
Introduced	16.0.R1

stable-pool-sizing *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **fp** *number*
Description	Use a stable buffer pool allocation environment for all default port buffer pools on an FP
Default	false
Introduced	16.0.R1

level *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Functional level of I/O module for slot
Options	unrestricted, he, er, cr, he1200g+, er1200g+, cr1200g+, he400g, er400g, cr400g
Introduced	16.0.R1

mcm [mcm-slot] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Enter the mcm context
Introduced	16.0.R1

[mcm-slot] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mcm** *number*
Description	Unique odd value for MCM slot within a specific IOM card
Range	1 | 3 | 5 | 7 | 9 | 11 | 13 | 15
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mcm** *number*
Description	Administrative state of MCM
Default	enable
Options	enable, disable
Introduced	16.0.R1

mcm-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mcm** *number*
Description	MCM configuration for slot
Options	mcm-xp
Introduced	16.0.R1

mda [mda-slot] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Enter the mda context
Introduced	16.0.R1

[mda-slot] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	MDA slot
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Enter the access context
Introduced	16.0.R1

egress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access**
Description	Enter the egress context
Introduced	16.0.R1

pool [name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress**
Description	Enter the pool context
Introduced	16.0.R1

[name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string*
Description	Unique pool name for MDA
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string*
Description	Configure amber alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

red-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string*
Description	Configure red alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

resv-cbs

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R3

amber-alarm-action

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string* **resv-cbs**

Description Enter the amber-alarm-action context

Introduced 16.0.R3

max *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the maximum percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/step must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default. This value must not be more than resv-cbs.

Range 1 to 100

Units percent

Introduced 16.0.R3

step *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the step-size percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/max must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default.

Range 1 to 100

Units percent

Introduced 16.0.R3

cbs *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string* **resv-cbs**
Description	Configure the percentage of pool size reserved for CBS. For network, the default value is computed as the sum of the CBS request by the entities using the pool. For access, the default value is 30%.
Range	0 to 100
Units	percent
Introduced	16.0.R3

slope-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access egress pool** *string*
Description	Configure the slope policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R3

ingress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access**
Description	Enter the ingress context
Introduced	16.0.R1

pool [name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress**
Description	Enter the pool context
Introduced	16.0.R1

[name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string*
Description	Unique pool name for MDA
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string*
Description	Configure amber alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

red-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string*
Description	Configure red alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

resv-cbs

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R3

amber-alarm-action

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string* **resv-cbs**
Description	Enter the amber-alarm-action context
Introduced	16.0.R3

max *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the maximum percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/step must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default. This value must not be more than resv-cbs.

Range 1 to 100

Units percent

Introduced 16.0.R3

step *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the step-size percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/max must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default.

Range 1 to 100

Units percent

Introduced 16.0.R3

cbs *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string* **resv-cbs**

Description Configure the percentage of pool size reserved for CBS. For network, the default value is computed as the sum of the CBS request by the entities using the pool. For access, the default value is 30%.

Range 0 to 100

Units percent

Introduced 16.0.R3

slope-policy *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **access ingress pool** *string*

Description Configure the slope policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R3

admin-state *keyword*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description Administrative state of MDA

Default enable

Options enable, disable

Introduced 16.0.R1

atm

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description Enter the atm context

Introduced 16.0.R1

mode *keyword*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **atm**

Description Mode of operation

Options max8k-vc, max16k-vc

Introduced 16.0.R1

clock-mode

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description Enter the clock-mode context

Introduced 16.0.R1

mode *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **clock-mode**
Description	Clock mode
Options	adaptive, differential
Introduced	16.0.R1

timestamp-freq *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **clock-mode**
Description	Differential timestamp frequency
Range	19940 | 77760 | 103680
Introduced	16.0.R1

egress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Enter the egress context
Introduced	16.0.R1

hsmda-aggregate-queue-burst

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress**
Description	Enter the hsmda-aggregate-queue-burst context
Introduced	16.0.R1

high-burst-increase *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress** **hsmda-aggregate-queue-burst**
Description	High burst increase
Range	0 to 65536
Units	bytes
Introduced	16.0.R1

low-burst-multiplier *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress hsmda-aggregate-queue-burst**

Description Low burst multiplier

Range 1 to 65536

Introduced 16.0.R1

hsmda-pool-policy *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress**

Description Egress HSMDA pool policy

Reference configure **qos hsmda-pool-policy** *string*

Introduced 16.0.R1

egress-xpl

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description Enter the egress-xpl context

Introduced 16.0.R1

threshold *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress-xpl**

Description Threshold value for egress XPL errors

Range 1 to 1000000

Default 1000

Units xpl errors

Introduced 16.0.R1

window *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **egress-xpl**

Description Time interval to measure frequency of egress XPL errors against threshold value

Range 1 to 1440

Default 60

Units minutes

Introduced 16.0.R1

fail-on-error *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Set the Operational State of the MDA to Failed when threshold of egress XPL errors is reached
Default	false
Introduced	16.0.R1

ingress-xpl

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Enter the ingress-xpl context
Introduced	16.0.R1

threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **ingress-xpl**
Description	Threshold value for ingress XPL errors
Range	1 to 1000000
Default	1000
Units	xpl errors
Introduced	16.0.R1

window *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **ingress-xpl**
Description	Time interval to measure frequency of ingress XPL errors against threshold value
Range	1 to 1440
Default	60
Units	minutes
Introduced	16.0.R1

level *keyword*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description Functional level of MDA for slot

Options unrestricted, he2400g, he1600g, he1200g, er2400g, er1600g, er1200g, cr2400g, cr1600g, cr1200g, he2400g+, er2400g+, cr2400g+, he3600g, er3600g, cr3600g, he3600gdd, er3600gdd, cr3600gdd, he4800g, er4800g, cr4800g, he4800g+, er4800g+, cr4800g+

Introduced 16.0.R1

mda-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*

Description MDA configuration for slot

Options m60-10/100eth-tx, m1-oc192, m1-10gb, m20-100eth-sfp, m4-choc3-as-sfp, c8-10/100eth-tx, c1-1gb-sfp, c8-chds1, c4-ds3, m10-1gb+1-10gb, isa-tunnel, c2-oc12/3-sfp, c1-choc3-ces-sfp, m1-choc12-as-sfp, m12-chds3-as, m4-chds3-as, isa-aa, m4-choc3-ces-sfp, m1-choc3-ces-sfp, m4-10gb-xp-xfp, m2-10gb-xp-xfp, c5-1gb-xp-sfp, c1-1gb-xp-sfp, m1-10gb-xp-xfp, m10-1gb-xp-sfp, m20-1gb-xp-sfp, m20-1gb-xp-tx, m1-choc12-ces-sfp, imm24-1gb-xp-sfp, imm24-1gb-xp-tx, imm4-10gb-xp-xfp, imm2-10gb-xp-xfp, isa-video, imm5-10gb-xp-xfp, m48-1gb-xp-tx, isa-bb, icm2-10gb-xp-xfp, isa-ms, isa-ms-e, imm1-100gb-xp-cfp, imm12-10gb-xp-sf+, vsm-cca-xp, imm3-40gb-xp-qsfp, m10-1gb-hs-sfp-b, m16-oc12/3-sfp-b, m16-atmoc3-sfp-b, m4-atmoc12/3-sf-b, m4-oc48-sfp-b, m1-10gb-hs-xfp-b, cx20-10g-sfp, cx2-100g-cfp, p10-10g-sfp, p1-100g-cfp, c2-oc12/3-sfp-b, m2-oc192-xp-xfp, m12-1gb-xp-sfp, m12-1gb+2-10gb-xp, p3-40g-qsfp, p1-100g-tun, p6-10g-sfp, x40-10g-sfp, m40-10g-sfp, x4-100g-cxp, cx6-40g-qsfp, m4-100g-cxp, p20-1gb-sfp, p-isa2-ms, p-isa2-ms-e, isa2-aa, isa2-tunnel, isa2-bb, x4-100g-cfp2, cx72-1g-csfp, p160-1gb-csfp, maxp1-100gb-cfp, ma4-10gb-sfp+, maxp10-10gb-sfp+, me10-10gb-sfp+, ma2-10gb-sfp+12-1gb-sfp, maxp6-10gb-sfp+1-40gb-qsfp+, ma44-1gb-csfp, ma20-1gb-tx, me1-100gb-cfp2, m4-100g-cfp4, p1-100g-tun-b, maxp1-100gb-cfp2, maxp1-100gb-cfp4, isa-ms-v, isa-aa-v, isa-tunnel-v, isa-bb-v, m20-v, me-isa2-ms, me-isa2-ms-e, me40-1gb-csfp, me2-100gb-cfp4, me6-10gb-sfp+, isa2-video, me2-100gb-qsfp28, i6-10/100eth-tx, x2-100g-tun, i2-sdi, i2-cellular, me12-10/1gb-sfp+, me6-100gb-qsfp28, x6-400g-cfp8, me2-100gb-ms-qsfp28, x40-10g-sfp-ptp, m40-10g-sfp-ptp, x24-100g-qsfp28, me12-100gb-qsfp28, i1-wlan, s36-400gb-qsfpdd, s36-100gb-qsfp28

Introduced 16.0.R1

named-pool-mode

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description Enter the named-pool-mode context
Introduced 16.0.R1

egress

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **named-pool-mode**
Description Enter the egress context
Introduced 16.0.R1

named-pool-policy *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **named-pool-mode egress**
Description Configure the named pool policy.
Reference configure **qos named-pool-policy** *string*
Introduced 16.0.R3

ingress

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **named-pool-mode**
Description Enter the ingress context
Introduced 16.0.R1

named-pool-policy *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **named-pool-mode ingress**
Description Configure the named pool policy.
Reference configure **qos named-pool-policy** *string*
Introduced 16.0.R3

network

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description Enter the network context
Introduced 16.0.R1

egress

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network**
Description	Enter the egress context
Introduced	16.0.R1

pool [name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress**
Description	Enter the pool context
Introduced	16.0.R1

[name] *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string*
Description	Unique pool name for MDA
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string*
Description	Configure amber alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

red-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string*
Description	Configure red alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

resv-cbs

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string*

Description Enter the resv-cbs context

Introduced 16.0.R3

amber-alarm-action

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string* **resv-cbs**

Description Enter the amber-alarm-action context

Introduced 16.0.R3

max *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the maximum percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/step must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default. This value must not be more than resv-cbs.

Range 1 to 100

Units percent

Introduced 16.0.R3

step *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the step-size percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/max must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default.

Range 1 to 100

Units percent

Introduced 16.0.R3

cbs *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string* **resv-cbs**

Description Configure the percentage of pool size reserved for CBS. For network, the default value is computed as the sum of the CBS request by the entities using the pool. For access, the default value is 30%.

Range 0 to 100

Units percent

Introduced 16.0.R3

slope-policy *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network egress pool** *string*

Description Configure the slope policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R3

ingress

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network**

Description Enter the ingress context

Introduced 16.0.R1

pool [name] *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress**

Description Enter the pool context

Introduced 16.0.R1

[name] *string*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string*

Description Unique pool name for MDA

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

amber-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string*
Description	Configure amber alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

red-alarm-threshold *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string*
Description	Configure red alarm threshold allowed on over-subscription.
Range	1 to 1000
Units	percent
Introduced	16.0.R3

resv-cbs

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R3

amber-alarm-action

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string* **resv-cbs**
Description	Enter the amber-alarm-action context
Introduced	16.0.R3

max *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the maximum percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/step must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default. This value must not be more than resv-cbs.

Range 1 to 100

Units percent

Introduced 16.0.R3

step *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string* **resv-cbs amber-alarm-action**

Description Configure the step-size percentage for the reserved CBS size of the pool. When set to a value of zero (0), the adaptive CBS sizing is disabled. To enable adaptive CBS sizing, both this leaf and amber-alarm-action/max must be set to non-default values. Adaptive CBS sizing can only be enabled when resv-cbs is non-default.

Range 1 to 100

Units percent

Introduced 16.0.R3

cbs *number*

Context **configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string* **resv-cbs**

Description Configure the percentage of pool size reserved for CBS. For network, the default value is computed as the sum of the CBS request by the entities using the pool. For access, the default value is 30%.

Range 0 to 100

Units percent

Introduced 16.0.R3

slope-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress pool** *string*
Description	Configure the slope policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R3

queue-policy *string*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **network ingress**
Description	Network-queue policy
Reference	configure **qos network-queue** *string*
Introduced	16.0.R1

power-priority-level *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Power priority value, lower value has higher priority
Range	1 to 200
Default	150
Introduced	16.0.R1

reset-on-recoverable-error *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Reset MDA for fatal memory parity error on a Q-chip of the MDA, regardless of fail-on-error setting
Default	false
Introduced	16.0.R1

sync-e *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Synchronous Ethernet
Options	true, false
Introduced	16.0.R1

upgrade [upgrade-index] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number*
Description	Enter the upgrade context
Introduced	16.0.R4

[upgrade-index] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **upgrade** *number*
Description	The unique value which identifies the functional upgrade number on this MDA on the system.
Range	1 to 6
Introduced	16.0.R4
Notes	This element is part of a list key

path *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **mda** *number* **upgrade** *number*
Description	Provisions the functional level upgrade path of the MDA for this slot.
Options	cr1200g-cr1600g, cr1600g-cr2400g, er1200g-er1600g, er1600g-er2400g, he1200g-he1600g, he1600g-he2400g, cr1200g-er1200g, er1200g-he1200g, cr1600g-er1600g, er1600g-he1600g, cr2400g-er2400g, er2400g-he2400g, any2400g-2400g+, cr3600g-cr4800g, er3600g-er4800g, he3600g-he4800g, cr3600g-er3600g, er3600g-he3600g, cr4800g-er4800g, er4800g-he4800g, any3600g-3600gdd, any4800g-4800g+
Introduced	16.0.R4
Notes	This element is mandatory

named-pool-mode *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Create a default network and access pool for ingress and egress, shared by queues on all ports
Default	false
Introduced	16.0.R1

reset-on-recoverable-error *boolean*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Reset card for fatal memory parity error on a Q-chip of the card, regardless of fail-on-error setting
Default	false
Introduced	16.0.R1

upgrade [upgrade-index] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Enter the upgrade context
Introduced	16.0.R4

[upgrade-index] *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **upgrade** *number*
Description	The unique value which identifies the functional upgrade number on this card on the system.
Range	1 to 6
Introduced	16.0.R4
Notes	This element is part of a list key

path *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **upgrade** *number*
Description	Provisions the functional level upgrade path of the I/O module for this slot.
Options	cr-er, er-he, cr400g-cr1200g+, er400g-er1200g+, he400g-he1200g+, cr-er1200g+, er-he1200g+
Introduced	16.0.R4
Notes	This element is mandatory

virtual-scheduler-adjustment

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*)
Description	Enter the virtual-scheduler-adjustment context
Introduced	16.0.R1

internal-scheduler-weight-mode *keyword*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment**
Description	Internal scheduler weight mode
Default	auto
Options	auto, force-equal, offered-load, capped-offered-load
Introduced	16.0.R1

interval

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment**
Description	Enter the interval context
Introduced	16.0.R1

rate-calculation-minimum

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment interval**
Description	Enter the rate-calculation-minimum context
Introduced	16.0.R1

fast-queue *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment interval rate-calculation-minimum**
Description	Default minimum rate calculation time for fast queues
Range	0.01 to 1000.00
Default	100.00
Units	percent
Introduced	16.0.R1

slow-queue *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment interval rate-calculation-minimum**
Description	Default minimum rate calculation time for slow queues
Range	0.01 to 1000.00
Default	100.00
Units	percent
Introduced	16.0.R1

scheduler-run-minimum *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment interval**
Description	Minimum time of the scheduler run
Range	0.01 to 1000.00
Default	100.00
Units	percent
Introduced	16.0.R1

task-scheduling *decimal-number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment interval**
Description	Task scheduling interval
Range	0.01 to 1000.00
Default	100.00
Units	percent
Introduced	16.0.R1

slow-queue-threshold-rate *number*

Context	**configure card** (*iom-card-slot* | *cpm-card-slot*) **virtual-scheduler-adjustment**
Description	Rate of the slow queue threshold
Range	0 to 1000000
Default	1000
Units	kilobps
Introduced	16.0.R1

7.1 cflowd Command Descriptions

cflowd

Context	**configure**
Description	Enter the cflowd context
Introduced	16.0.R1

active-timeout *number*

Context	**configure cflowd**
Description	Maximum time before an active flow is exported
Range	1 to 600
Default	30
Units	minutes
Introduced	16.0.R1

admin-state *keyword*

Context	**configure cflowd**
Description	Administrative state of Cflowd sampling
Default	enable
Options	enable, disable
Introduced	16.0.R1

analyze-gre-payload *boolean*

Context	**configure cflowd**
Description	Perform Cflowd analysis on the inner IP packet within a GRE packet
Default	false
Introduced	16.0.R1

cache-size *number*

Context	**configure cflowd**
Description	Maximum number of active flows in the flow cache table
Range	1000 to 1500000
Units	flows
Introduced	16.0.R1

collector [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Context	**configure cflowd**
Description	Enter the collector context
Max. Elements	8
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	IP address of a remote Cflowd collector host to receive the exported Cflowd data
Introduced	16.0.R1
Notes	This element is part of a list key

port *number*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	UDP port number on the remote Cflowd collector host to receive the exported Cflowd data
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	Administrative state of this Cflowd collector
Default	enable
Options	enable, disable
Introduced	16.0.R1

aggregation

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Description Enter the aggregation context

Introduced 16.0.R1

as-matrix *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Base aggregation data on autonomous system (AS) information

Default false

Introduced 16.0.R1

destination-prefix *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Aggregate data based on the destination prefix information

Default false

Introduced 16.0.R1

protocol-port *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Aggregate flows based on the IP protocol, source port number, and destination port number

Default false

Introduced 16.0.R1

raw *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Export flow data without aggregation

Default false

Introduced 16.0.R1

source-destination-prefix *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Aggregate data based on the source and destination prefix information

Default false

Introduced 16.0.R1

source-prefix *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **aggregation**

Description Aggregate flows based on the source prefix information

Default false

Introduced 16.0.R1

autonomous-system-type *keyword*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Description Basis of the AS information included in flow data

Default origin

Options origin, peer

Introduced 16.0.R1

description *string*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

export-filter

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Description Enter the export-filter context

Introduced 16.0.R1

family

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter**

Description Enter the family context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**

Description Filter IPv4 flow data from being sent to the associated collector

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**

Description Filter IPv6 flow data from being sent to the associated collector

Default false

Introduced 16.0.R1

l2-ip *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**

Description Filter Layer 2 IP flow data from being sent to the associated collector

Default false

Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**

Description Filter multicast IPv4 flow data from being sent to the associated collector

Default false

Introduced 16.0.R1

mcast-ipv6 *boolean*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**
Description	Filter multicast IPv6 flow data from being sent to the associated collector
Default	false
Introduced	16.0.R1

mpls *boolean*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter family**
Description	Filter MPLS flow data from being sent to the associated collector
Default	false
Introduced	16.0.R1

interface-list

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter**
Description	Enter the interface-list context
Introduced	16.0.R1

router [router-name] *string* **interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list**
Description	Enter the router context
Introduced	16.0.R1

[router-name] *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list router** *string* **interface-name** *string*
Description	The administrative name for this router
Reference	configure **router** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list router** *string* **interface-name** *string*
Description	Router interface name.
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

service

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list**
Description	Enter the service context
Introduced	16.0.R1

ies-group-interface service-name *string* **subscriber-interface-name** *string* **group-interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service**
Description	Enter the ies-group-interface context
Introduced	16.0.R1

service-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service ies-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	ies service name
Reference	configure **service ies** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

subscriber-interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service ies-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	ies subscriber-interface name
Reference	configure **service ies** *service-name* **subscriber-interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

group-interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service ies-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	ies group-interface name
Reference	configure **service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ies-interface service-name *string* **interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service**
Description	Enter the ies-interface context
Introduced	16.0.R1

service-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service ies-interface service-name** *string* **interface-name** *string*
Description	ies service name
Reference	configure **service ies** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service ies-interface service-name** *string* **interface-name** *string*
Description	ies interface name
Reference	configure **service ies** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

vprn-group-interface service-name *string* **subscriber-interface-name** *string* **group-interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service**
Description	Enter the vprn-group-interface context
Introduced	16.0.R1

service-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	vprn service name
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

subscriber-interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	vprn subscriber-interface name
Reference	configure **service vprn** *service-name* **subscriber-interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

group-interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-group-interface service-name** *string* **subscriber-interface-name** *string* **group-interface-name** *string*
Description	vprn group-interface name
Reference	configure **service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

vprn-interface service-name *string* **interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service**
Description	Enter the vprn-interface context
Introduced	16.0.R1

service-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-interface service-name** *string* **interface-name** *string*
Description	vprn service name
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-interface service-name** *string* **interface-name** *string*
Description	vprn interface name
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

vprn-network-interface service-name *string* **network-interface-name** *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service**
Description	Enter the vprn-network-interface context
Introduced	16.0.R1

service-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-network-interface service-name** *string* **network-interface-name** *string*
Description	vprn service name
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

network-interface-name *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter interface-list service vprn-network-interface service-name** *string* **network-interface-name** *string*
Description	vprn network-interface name
Reference	configure **service vprn** *service-name* **network-interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

router [router-instance] *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter**
Description	Enter the router context
Introduced	16.0.R1

[router-instance] *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number* **export-filter router** *string*
Description	Router instance ID
Introduced	16.0.R1
Notes	This element is part of a list key

router-instance *string*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	Router context for the flow data for this Cflowd collector
Default	management
Introduced	16.0.R1

template-set *keyword*

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	Template set for this Cflowd collector
Options	not-applicable, basic, mpls-ip, l2-ip, mpls-transport
Introduced	16.0.R1

version *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure cflowd collector** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*
Description	Flow data collector version
Range	5 | 8 to 10
Introduced	16.0.R1
Notes	This element is mandatory

enhanced-distribution *boolean*

Context	**configure cflowd**
Description	Include ingress port ID in the hashing algorithm used to distribute Cflowd sample traffic
Default	false
Introduced	16.0.R1

export-mode *keyword*

Context	**configure cflowd**
Description	Export mode for flow data
Default	automatic
Options	automatic, manual
Introduced	16.0.R1

inactive-timeout *number*

Context	**configure cflowd**
Description	Time before the flow is considered inactive
Range	10 to 600
Default	15
Units	seconds
Introduced	16.0.R1

inband-collector-export-only *boolean*

Context	**configure cflowd**
Description	Export the traffic to all collectors only via in-band interfaces
Default	false
Introduced	16.0.R1

overflow *number*

Context	**configure cflowd**
Description	Percentage of entries to remove from Cflowd cache when the maximum number of entries is exceeded
Range	1 to 50
Default	1
Units	percent
Introduced	16.0.R1

rate *number*

Context	**configure cflowd**
Description	Rate at which traffic is sampled and sent for Cflowd analysis
Range	1 to 10000
Default	1000
Units	packets
Introduced	16.0.R1

template-retransmit *number*

Context	**configure cflowd**
Description	Time to resend template information
Range	10 to 600
Default	600
Units	seconds
Introduced	16.0.R1

use-vrtr-if-index *boolean*

Context	**configure cflowd**
Description	Export flow data using virtual router interface indexes
Default	false
Introduced	16.0.R1

8 chassis Commands

configure
- — **chassis** *keyword* **chassis-number** *number*
  - — **monitor-filter-door** *boolean*
  - — **peq** *number*
    - — **admin-state** *keyword*
    - — **input-power-mode** *number*
    - — **peq-type** *keyword*
  - — **power-connection-module** *number*
    - — **pcm-type** *keyword*
  - — **power-shelf** *number*
    - — **admin-state** *keyword*
    - — **description** *string*
    - — **power-module** *number*
      - — **admin-state** *keyword*
      - — **power-module-type** *keyword*
    - — **power-shelf-type** *keyword*
  - — **power-supply** *number*
    - — **power-supply-type** *keyword*

8.1 chassis Command Descriptions

chassis [chassis-class] *keyword* **chassis-number** *number*

Context	**configure**
Description	Enter the chassis context
Introduced	16.0.R1

[chassis-class] *keyword*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Functional use of the physical chassis
Options	router
Introduced	16.0.R1
Notes	This element is part of a list key

chassis-number *number*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Unique index to identify this physical chassis
Range	1 to 100
Introduced	16.0.R1
Notes	This element is part of a list key

monitor-filter-door *boolean*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	The value of monitor-filter-door specifies whether or not a filter door open or missing condition will be monitored by the system.
Default	false
Introduced	16.0.R1

peq [peq-slot] *number*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Enter the peq context
Introduced	16.0.R1

[peq-slot] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **peq** *number*
Description	Unique identifier index for a power supply tray in the chassis
Range	1 to 31
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure chassis** *keyword* **chassis-number** *number* **peq** *number*
Description	Administrative state of PEQ
Default	enable
Options	enable, disable
Introduced	16.0.R1

input-power-mode *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **peq** *number*
Description	Input power mode of the PEQ
Range	60 | 80
Units	amperes
Introduced	16.0.R1

peq-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure chassis** *keyword* **chassis-number** *number* **peq** *number*
Description	APEQ type
Options	apeq-dc-2000, apeq-dc-2200-2800, apeq-ac-3000, apeq-hvdc-3000, apeq-dc-4275, apeq-ac-4400
Introduced	16.0.R1

power-connection-module [pcm-slot] *number*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Enter the power-connection-module context
Introduced	16.0.R1

[pcm-slot] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-connection-module** *number*
Description	Unique identifier index for a power control module in the chassis
Range	1 to 12
Introduced	16.0.R1
Notes	This element is part of a list key

pcm-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure chassis** *keyword* **chassis-number** *number* **power-connection-module** *number*
Description	PCM type
Options	dual, quad
Introduced	16.0.R1

power-shelf [power-shelf-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Enter the power-shelf context
Introduced	16.0.R1

[power-shelf-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number*
Description	Unique identifier index for a power shelf in chassis
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number*
Description	Administrative state of the power shelf
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

power-module [power-module-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number*
Description	Enter the power-module context
Introduced	16.0.R1

[power-module-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number* **power-module** *number*
Description	Unique identifier index for a power shelf in chassis
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number* **power-module** *number*
Description	Administrative state of the power module
Default	enable
Options	enable, disable
Introduced	16.0.R1

power-module-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number* **power-module** *number*
Description	Power module type
Options	ps-b-ac/hv-6000, ps-a-dc-4400, ps-a-dc-6000
Introduced	16.0.R1

power-shelf-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure chassis** *keyword* **chassis-number** *number* **power-shelf** *number*
Description	Power shelf type
Options	ps-a10-shelf-dc, ps-b10-shelf-ac/hv, ps-a4-shelf-dc, ps-b3-shelf-ac/hv
Introduced	16.0.R1

power-supply [power-supply-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number*
Description	Enter the power-supply context
Introduced	16.0.R1

[power-supply-id] *number*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-supply** *number*
Description	Unique identifier index for a power supply tray in the chassis
Range	1 to 31
Introduced	16.0.R1
Notes	This element is part of a list key

power-supply-type *keyword*

Context	**configure chassis** *keyword* **chassis-number** *number* **power-supply** *number*
Description	Power supply type
Default	auto
Options	none, dc-single, ac-single, ac-multiple, auto, dc-multiple
Introduced	16.0.R1

9 connection-profile Commands

configure
- — **connection-profile** *number*
  - — **description** *string*
  - — **member** *string*

9.1 connection-profile Command Descriptions

connection-profile [connection-profile-id] *number*

Context	**configure**
Description	Enter the connection-profile context
Introduced	16.0.R1

[connection-profile-id] *number*

Context	**configure connection-profile** *number*
Description	Identifier of this connection profile
Range	1 to 8000
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure connection-profile** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

member [encap-value] *string*

Context	**configure connection-profile** *number*
Description	Enter the member context
Max. Elements	16
Introduced	16.0.R1

[encap-value] *string*

Context	**configure connection-profile** *number* **member** *string*
Description	VPI and VCI values of this connection profile member
Introduced	16.0.R1
Notes	This element is part of a list key

10 connection-profile-vlan Commands

configure
- — **connection-profile-vlan** *number*
  - — **description** *string*
  - — **qtag-range** *number*
    - — **end** *number*

10.1 connection-profile-vlan Command Descriptions

connection-profile-vlan [connection-profile-id] *number*

Context	**configure**
Description	Enter the connection-profile-vlan context
Introduced	16.0.R1

[connection-profile-id] *number*

Context	**configure connection-profile-vlan** *number*
Description	The identifier of this vlan connection-profile.
Range	1 to 8000
Introduced	16.0.R3
Notes	This element is part of a list key

description *string*

Context	**configure connection-profile-vlan** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

qtag-range [start] *number*

Context	**configure connection-profile-vlan** *number*
Description	Enter the qtag-range context
Max. Elements	32
Introduced	16.0.R3

[start] *number*

Context	**configure connection-profile-vlan** *number* **qtag-range** *number*
Description	Specifies the start vlan range of this connection profile.
Range	1 to 4094
Introduced	16.0.R3
Notes	This element is part of a list key

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure connection-profile-vlan** *number* **qtag-range** *number*
Description	Specifies the end vlan range of this connection profile.
Range	1 to 4094
Introduced	16.0.R3

11 eth-cfm Commands

configure
- **eth-cfm**
  - **domain** *admin-name*
    - **association** *admin-name*
      - **auto-mep-discovery** *boolean*
      - **bridge-identifier** *service-name*
        - **id-permission** *keyword*
        - **mhf-creation** *keyword*
        - **mip-ltr-priority** *number*
        - **vlan** *number*
      - **ccm-hold-time**
        - **down** *number*
      - **ccm-interval** *keyword*
      - **facility-id-permission** *keyword*
      - **icc-based** *string*
      - **integer** *number*
      - **ma-index** *number*
      - **remote-mep** *number*
        - **remote-mac** *mac-unicast-address*
      - **string** *string*
      - **vid** *number*
      - **vpn-id** *string*
    - **dns** *string*
    - **format** *keyword*
    - **level** *number*
    - **mac** *string*
    - **md-index** *number*
    - **name** *string*

11.1 eth-cfm Command Descriptions

eth-cfm

Context **configure**

Description Enter the eth-cfm context

Introduced 16.0.R1

domain [md-admin-name] *admin-name*

Context **configure eth-cfm**

Description Enter the domain context

Introduced 16.0.R1

[md-admin-name] *admin-name*

Context **configure eth-cfm domain** *admin-name*

Description Unique domain name

Introduced 16.0.R1

Notes This element is part of a list key

association [ma-admin-name] *admin-name*

Context **configure eth-cfm domain** *admin-name*

Description Enter the association context

Introduced 16.0.R1

[ma-admin-name] *admin-name*

Context **configure eth-cfm domain** *admin-name* **association** *admin-name*

Description Unique domain association name

Introduced 16.0.R1

Notes This element is part of a list key

auto-mep-discovery *boolean*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Enable the ability to auto-discover remote MEPs in the network
Default	false
Introduced	16.0.R1

bridge-identifier [bridge-name] *service-name*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Enter the bridge-identifier context
Max. Elements	1
Introduced	16.0.R1

[bridge-name] *service-name*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **bridge-identifier** *service-name*
Description	Bridge name for this association
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

id-permission *keyword*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **bridge-identifier** *service-name*
Description	Sender ID TLV information to include for installed MEPs and MIPs
Default	none
Options	none, chassis
Introduced	16.0.R1

mhf-creation *keyword*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **bridge-identifier** *service-name*
Description	MIP method of creation
Default	none
Options	none, default, explicit, static
Introduced	16.0.R1

mip-ltr-priority *number*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **bridge-identifier** *service-name*
Description	Priority of the Linktrace Response Message (ETH-LTR) from a MIP
Range	0 to 7
Default	7
Introduced	16.0.R1

vlan *number*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **bridge-identifier** *service-name*
Description	VLAN ID for the default domain index
Range	1 to 4094
Introduced	16.0.R1

ccm-hold-time

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Enter the ccm-hold-time context
Introduced	16.0.R1

down *number*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **ccm-hold-time**
Description	Additional time before a MEP declares a fault, in CCM timeout conditions
Range	1 to 1000
Units	centiseconds
Introduced	16.0.R1

ccm-interval *keyword*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	CCM transmission interval for all MEPs in the association
Options	10ms, 100ms, 1s, 10s, 60s, 600s
Introduced	16.0.R1

facility-id-permission *keyword*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Sender ID TLV information for facility base MEPs
Default	none
Options	none, chassis
Introduced	16.0.R1

icc-based *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Format type applicable to Y.1731 context of the maintenance association
String Length	8 to 13
Introduced	16.0.R1
Notes	This element is part of a choice

integer *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Format type of the maintenance association
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

ma-index *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	The index to the Maintenance Association (MA) table.
Range	1 to max
Introduced	16.0.R1

remote-mep [mep-id] *number*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Enter the remote-mep context
Introduced	16.0.R1

[mep-id] *number*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **remote-mep** *number*
Description	Remote MEP ID
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

remote-mac *mac-unicast-address*

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name* **remote-mep** *number*
Description	Remote MAC Address for transmitting CFM packets to remote MEPs
Introduced	16.0.R1

string *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Format type for the string of the maintenance association
String Length	1 to 45
Introduced	16.0.R1
Notes	This element is part of a choice

vid *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Primary VLAN ID
Range	0 to 4094
Introduced	16.0.R1
Notes	This element is part of a choice

vpn-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name* **association** *admin-name*
Description	Primary VPN ID
String Length	0 to 15
Introduced	16.0.R1
Notes	This element is part of a choice

dns *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	Domain name like text string derived from a DNS name
String Length	1 to 43
Introduced	16.0.R1
Notes	This element is part of a choice

format *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	Maintenance domain name not to be provided
Options	none
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	Maintenance Domain Level (MD Level)
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

mac *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	Maintenance domain MAC name
String Length	13 to 23
Introduced	16.0.R1
Notes	This element is part of a choice

md-index *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	The index of the Maintenance Domain (MD)
Range	1 to max
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure eth-cfm domain** *admin-name*
Description	Maintenance domain name as an ASCII string
String Length	1 to 43
Introduced	16.0.R1
Notes	This element is part of a choice

12.1 filter Command Descriptions

filter

Context	**configure**
Description	Enter the filter context
Introduced	16.0.R1

dhcp-filter [filter-id] *number*

Context	**configure filter**
Description	Enter the dhcp-filter context
Introduced	16.0.R1

[filter-id] *number*

Context	**configure filter dhcp-filter** *number*
Description	Unique DHCP filter policy ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

default-action

Context	**configure filter dhcp-filter** *number*
Description	Enter the default-action context
Introduced	16.0.R1

bypass-host-creation

Context	**configure filter dhcp-filter** *number* **default-action**
Description	Host creation options to bypass
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter dhcp-filter** *number* **default-action**
Description	DHCP host creation when the filter entry is matched
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure filter dhcp-filter** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure filter dhcp-filter** *number*
Description	Enter the entry context
Max. Elements	10
Introduced	16.0.R1

[entry-id] *number*

Context	**configure filter dhcp-filter** *number* **entry** *number*
Description	DHCP filter entry index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure filter dhcp-filter** *number* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

bypass-host-creation

Context	**configure filter dhcp-filter** *number* **entry** *number* **action**
Description	Host creation options to bypass
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter dhcp-filter** *number* **entry** *number* **action**
Description	DHCP host creation when the filter entry is matched
Introduced	16.0.R1
Notes	This element is part of a choice

option

Context	**configure filter dhcp-filter** *number* **entry** *number*
Description	Enter the option context
Introduced	16.0.R1

absent

Context	**configure filter dhcp-filter** *number* **entry** *number* **option**
Description	Require the absence of related option
Introduced	16.0.R1
Notes	This element is part of a choice

match

Context	**configure filter dhcp-filter** *number* **entry** *number* **option**
Description	Enter the **match** context
Introduced	16.0.R1

exact *boolean*

Context	**configure filter dhcp-filter** *number* **entry** *number* **option match**
Description	Use an exact match pattern (not partial)
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

hex *string*

Context	**configure filter dhcp-filter** *number* **entry** *number* **option match**
Description	Matching pattern for the filtered option
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

invert *boolean*

Context	**configure filter dhcp-filter** *number* **entry** *number* **option match**
Description	Invert (partial) matching criteria
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure filter dhcp-filter** *number* **entry** *number* **option match**
Description	Matching pattern for the filtered option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

number *number*

Context	**configure filter dhcp-filter** *number* **entry** *number* **option**
Description	Number for DHCP or DHCPv6 option to filter on
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

present

Context	**configure filter dhcp-filter** *number* **entry** *number* **option**
Description	Require the presence of related option
Introduced	16.0.R1
Notes	This element is part of a choice

dhcp6-filter [filter-id] *number*

Context	**configure filter**
Description	Enter the dhcp6-filter context
Introduced	16.0.R1

[filter-id] *number*

Context	**configure filter dhcp6-filter** *number*
Description	Unique DHCP filter policy ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

default-action

Context	**configure filter dhcp6-filter** *number*
Description	Enter the default-action context
Introduced	16.0.R1

bypass-host-creation

Context	**configure filter dhcp6-filter** *number* **default-action**
Description	Enter the **bypass-host-creation** context
Introduced	16.0.R1

na *boolean*

Context	**configure filter dhcp6-filter** *number* **default-action bypass-host-creation**
Description	Bypass the DHCPv6 NA host creation
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

pd *boolean*

Context	**configure filter dhcp6-filter** *number* **default-action bypass-host-creation**
Description	Bypass the DHCPv6 PD host creation
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter dhcp6-filter** *number* **default-action**
Description	Drop DHCPv6 message (do not process)
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure filter dhcp6-filter** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure filter dhcp6-filter** *number*
Description	Enter the entry context
Max. Elements	10
Introduced	16.0.R1

[entry-id] *number*

Context	**configure filter dhcp6-filter** *number* **entry** *number*
Description	DHCP filter entry index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure filter dhcp6-filter** *number* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

bypass-host-creation

Context	**configure filter dhcp6-filter** *number* **entry** *number* **action**
Description	Enter the **bypass-host-creation** context
Introduced	16.0.R1

na *boolean*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **action bypass-host-creation**
Description	Bypass the DHCPv6 NA host creation
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

pd *boolean*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **action bypass-host-creation**
Description	Bypass the DHCPv6 PD host creation
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter dhcp6-filter** *number* **entry** *number* **action**
Description	Drop DHCPv6 message (do not process)
Introduced	16.0.R1
Notes	This element is part of a choice

option

Context	**configure filter dhcp6-filter** *number* **entry** *number*
Description	Enter the option context
Introduced	16.0.R1

absent

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option**
Description	Require the absence of related option
Introduced	16.0.R1
Notes	This element is part of a choice

match

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option**
Description	Enter the **match** context
Introduced	16.0.R1

exact *boolean*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option match**
Description	Use an exact match pattern (not partial)
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

hex *string*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option match**
Description	Matching pattern for the filtered option
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

invert *boolean*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option match**
Description	Invert (partial) matching criteria
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option match**
Description	Matching pattern for the filtered option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

number *number*

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option**
Description	Number for DHCP or DHCPv6 option to filter on
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

present

Context	**configure filter dhcp6-filter** *number* **entry** *number* **option**
Description	Require the presence of related option
Introduced	16.0.R1
Notes	This element is part of a choice

gre-tunnel-template [gre-tunnel-template-name] *string*

Context	**configure filter**
Description	Enter the gre-tunnel-template context
Max. Elements	1023
Introduced	16.0.R1

[gre-tunnel-template-name] *string*

Context	**configure filter gre-tunnel-template** *string*
Description	GRE tunnel template identifier
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure filter gre-tunnel-template** *string*
Description	The description of the filter gre tunnel template configuration.
String Length	1 to 80
Introduced	16.0.R3

ipv4

Context **configure filter gre-tunnel-template** *string*
Description Enter the ipv4 context
Introduced 16.0.R1

destination-address [address] *ipv4-address*

Context **configure filter gre-tunnel-template** *string* **ipv4**
Description Enter the destination-address context
Max. Elements 32
Introduced 16.0.R1

[address] *ipv4-address*

Context **configure filter gre-tunnel-template** *string* **ipv4 destination-address** *ipv4-address*
Description Destination IP address
Introduced 16.0.R1
Notes This element is part of a list key

gre-key (*keyword* | *number*)

Context **configure filter gre-tunnel-template** *string* **ipv4**
Description GRE key
Introduced 16.0.R1

skip-ttl-decrement *boolean*

Context **configure filter gre-tunnel-template** *string* **ipv4**
Description Decrement TTL
Default false
Introduced 16.0.R1

source-address *ipv4-address*

Context	**configure filter gre-tunnel-template** *string* **ipv4**
Description	Source IP address of the GRE encapsulated
Default	0.0.0.0
Introduced	16.0.R1

ip-filter [filter-name] *filter-name*

Context	**configure filter**
Description	Enter the ip-filter context
Introduced	16.0.R1

[filter-name] *filter-name*

Context	**configure filter ip-filter** *filter-name*
Description	Name of the object to associate
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

chain-to-system-filter *boolean*

Context	**configure filter ip-filter** *filter-name*
Description	Chain filter policy to the active IPvX system filter policy
Default	false
Introduced	16.0.R1

default-action *keyword*

Context	**configure filter ip-filter** *filter-name*
Description	Action for packets that do not match any entry
Default	drop
Options	drop, accept
Introduced	16.0.R1

description *string*

Context	**configure filter ip-filter** *filter-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

embed

Context	**configure filter ip-filter** *filter-name*
Description	Enter the embed context
Introduced	16.0.R1

filter [name] *string* **offset** *number*

Context	**configure filter ip-filter** *filter-name* **embed**
Description	Enter the filter context
Introduced	16.0.R1

[name] *string*

Context	**configure filter ip-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	ID of the filter to insert
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1
Notes	This element is part of a list key

offset *number*

Context	**configure filter ip-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097150
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ip-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R1

flowspec offset *number*

Context	**configure filter ip-filter** *filter-name* **embed**
Description	Enter the flowspec context
Introduced	16.0.R1

offset *number*

Context	**configure filter ip-filter** *filter-name* **embed flowspec offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097151
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ip-filter** *filter-name* **embed flowspec offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R1

group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed flowspec offset** *number*
Description	Interface group ID for an external configured set of flowspec rules
Range	0 to 16383
Introduced	16.0.R1

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed flowspec offset** *number*
Description	Virtual router for an external configured set of flowspec rules
Introduced	16.0.R1
Notes	This element is mandatory

openflow [of-switch] *string* **offset** *number*

Context	**configure filter ip-filter** *filter-name* **embed**
Description	Enter the openflow context
Introduced	16.0.R3

[of-switch] *string*

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Openflow switch which contains the flowtable to be inserted in the parent filter.
Reference	configure **openflow of-switch** *string*
Introduced	16.0.R4
Notes	This element is part of a list key

offset *number*

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097150
Introduced	16.0.R2
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R2

grt

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Global routing context.
Introduced	16.0.R3
Notes	This element is part of a choice

sap *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Sap context.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R4
Notes	This element is part of a choice

system

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	System context.
Introduced	16.0.R3
Notes	This element is part of a choice

vpls *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Vpls context.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R4
Notes	This element is part of a choice

vprn *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Vprn context.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R4
Notes	This element is part of a choice

entry [entry-id] *number*

Context	**configure filter ip-filter** *filter-name*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Secondary index for this entry
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

accept

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Accept regular routing to forward a packet that matches this entry
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Drop a packet matching this entry
Introduced	16.0.R1
Notes	This element is part of a choice

drop-when

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the drop-when context
Introduced	16.0.R1

extracted-traffic

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when**

Description Drop traffic extracted to CPM

Introduced 16.0.R1

Notes This element is part of a choice

packet-length

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when**

Description Enter the **packet-length** context

Introduced 16.0.R1

eq *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length**

Description Value to compare against 'equal' condition for entry match criteria

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length**

Description Value to compare against 'greater than' condition for entry match criteria

Range min to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length**

Description Value to compare against 'less than' condition for entry match criteria

Range 1 to max

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length range**

Description Upper bound value

Range 1 to max

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when packet-length range**

Description Lower bound value

Range min to 65534

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

pattern

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when**

Description Enter the pattern context

Introduced 16.0.R1

expression *string*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action drop-when pattern**

Description Expression to be matched.

String Length 1 to 8

Introduced 16.0.R1

Notes This element is mandatory

mask *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Expression mask.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

offset-type *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Offset type.
Options	layer-3, layer-4, data, dns-qtype
Introduced	16.0.R1
Notes	This element is mandatory

offset-value *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Offset value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

ttl

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when**
Description	Enter the **ttl** context
Introduced	16.0.R1

eq *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl**
Description	Value to compare against 'equal' condition for entry match criteria
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl**
Description	Value to compare against 'greater than' condition for entry match criteria
Range	min to 254
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl**
Description	Value to compare against 'less than' condition for entry match criteria
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action drop-when ttl range**
Description	Lower bound value
Range	min to 254
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

fc *keyword*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action**

Description Class name to be forwarded for matching packets

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

forward

Context **configure filter ip-filter** *filter-name* **entry** *number* **action**

Description Enter the **forward** context

Introduced 16.0.R1

bonding-connection *bonding-connection-index*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action forward**

Description Connection ID over which packet is forwarded in a bonding context, if connection is available

Range 1 to 2

Introduced 16.0.R1

Notes This element is part of a choice

esi-l2

Context **configure filter ip-filter** *filter-name* **entry** *number* **action forward**

Description Enter the **esi-l2** context

Introduced 16.0.R1

esi-value *ethernet-segment-id*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l2**

Description ID of first ESI identified appliance in Nuage service chain

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

vpls *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l2**
Description	Specifies the identifier of the VPLS used for VPN/DC connectivity.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R3
Notes	This element is mandatory This element is part of a choice

esi-l3

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **esi-l3** context
Introduced	16.0.R1

esi-value *ethernet-segment-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the ethernet segment identifier (ESI) of the first ESI identified appliance in Nuage service chain.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sf-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the IP address of the service function toward which traffic is steered.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vas-interface *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	VRI index of VPRN RVPLS interface for VPN DC connectivity
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vprn *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the routing context used for route lookup.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

gre-tunnel *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	GRE tunnel template ID that sets the location where an encapsulated matching packet is transported
Reference	configure **filter gre-tunnel-template** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

lsp *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	LSP that is specified to forward a packet matching this entry
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

next-hop

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **next-hop** context
Introduced	16.0.R1

interface-name *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop**
Description	Local interface that forwards the packet matchin this entry
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

nh-ip

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop**
Description	Enter the **nh-ip** context
Introduced	16.0.R1

address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip**
Description	Specifies the IP address of the nexthop to which the packet should be forwarded if it hits this filter entry.
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

indirect *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip**
Description	Allow next hop to be indirectly reachable
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

nh-ip-vrf

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop**
Description	Enter the **nh-ip-vrf** context
Introduced	16.0.R1

address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	Specifies the IP address of the nexthop to which the packet should be forwarded if it hits this filter entry.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

indirect *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	Allow next hop to be indirectly reachable
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

redirect-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Next hop or forward next hop router that forwards a packet that matches this entry
Reference	configure **filter redirect-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is part of a choice

sap

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sap** context
Introduced	16.0.R1

sap-id *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sdp

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sdp** context
Introduced	16.0.R1

sdp-bind-id *sdp-bind-id*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward sdp**
Description	A packet matching the entry will be forwarded using the specified SDP.
String Length	3 to 16
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward sdp**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vprn-target

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **vprn-target** context
Introduced	16.0.R1

adv-prefix *ipv4-prefix*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Advertised IP prefix for target destination
Introduced	16.0.R1
Notes	This element is part of a choice

bgp-nh *ipv4-address*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Target BGP next hop IP address
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

lsp *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	LSP that is specified to forward a packet matching this entry
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

vprn *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Specifies the routing context used for route lookup.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

gtp-local-breakout

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Break out matching traffic locally from a GTP tunnel for GTP-subscriber-hosts, or forward for other entities
Introduced	16.0.R1
Notes	This element is part of a choice

http-redirect

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the **http-redirect** context
Introduced	16.0.R1

allow-override *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action http-redirect**
Description	Override http-redirect by a RADIUS VSA
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

url *http-redirect-url*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action http-redirect**
Description	URL that is used for redirecting
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

ignore-match

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Ignore match criteria for the entry
Introduced	16.0.R1
Notes	This element is part of a choice

nat

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the **nat** context
Introduced	16.0.R1

nat-policy *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action nat**
Description	NAT policy name when action is NAT
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is part of a choice

rate-limit

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the rate-limit context
Introduced	16.0.R1

packet-length

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Enter the **packet-length** context
Introduced	16.0.R1

eq *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length**
Description	Value to compare against 'equal' condition for entry match criteria
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length**
Description	Value to compare against 'greater than' condition for entry match criteria
Range	min to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length**
Description	Value to compare against 'less than' condition for entry match criteria
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit packet-length range**
Description	Lower bound value
Range	min to 65534
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

pattern

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Enter the pattern context
Introduced	16.0.R1

expression *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Expression to be matched.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

mask *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Expression mask.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

offset-type *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Offset type.
Options	layer-3, layer-4, data, dns-qtype
Introduced	16.0.R1
Notes	This element is mandatory

offset-value *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Offset value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

pir (*number* | *keyword*)

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Peak information rate
Introduced	16.0.R1
Notes	This element is mandatory

ttl

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Enter the **ttl** context
Introduced	16.0.R1

eq *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl**
Description	Value to compare against 'equal' condition for entry match criteria
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl**
Description	Value to compare against 'greater than' condition for entry match criteria
Range	min to 254
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl**
Description	Value to compare against 'less than' condition for entry match criteria
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action rate-limit ttl range**
Description	Lower bound value
Range	min to 254
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

reassemble

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Forward matching packets to reassembly function
Introduced	16.0.R1
Notes	This element is part of a choice

remark

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the remark context
Introduced	16.0.R1

dscp *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action remark**
Description	Destination SAP
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is mandatory

secondary

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Enter the secondary context
Introduced	16.0.R1

forward

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary**

Description Enter the **forward** context

Introduced 16.0.R1

next-hop

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward**

Description Enter the **next-hop** context

Introduced 16.0.R1

nh-ip-vrf

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward next-hop**

Description Enter the **nh-ip-vrf** context

Introduced 16.0.R1

address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**

Description Specifies the IP address of the nexthop to which the packet should be forwarded if it hits this filter entry.

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

indirect *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**

Description Allow next hop to be indirectly reachable

Default false

Introduced 16.0.R1

Notes This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sap

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward**
Description	Enter the **sap** context
Introduced	16.0.R1

sap-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

sdp

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward**

Description Enter the **sdp** context

Introduced 16.0.R1

sdp-bind-id *sdp-bind-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward sdp**

Description A packet matching the entry will be forwarded using the specified SDP.

String Length 3 to 16

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

vpls *string*

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary forward sdp**

Description VPLS the sdp-bind-id belongs to.

Reference configure **service vpls** *service-name*

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

remark

Context **configure filter ip-filter** *filter-name* **entry** *number* **action secondary**

Description Enter the remark context

Introduced 16.0.R1

dscp *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action secondary remark**
Description	Destination SAP
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is mandatory

tcp-mss-adjust

Context	**configure filter ip-filter** *filter-name* **entry** *number* **action**
Description	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-pbr *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	PBR that has an effect when this filter is applied on egress
Options	true, true-with-l4lb
Introduced	16.0.R1

filter-sample *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Sample matching traffic if IP interface is set to cflowd ACL mode
Default	false
Introduced	16.0.R1

interface-sample *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Sample matching traffic if IP interface is set to cflowd interface mode
Default	true
Introduced	16.0.R1

log *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context	**configure filter ip-filter** *filter-name* **entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Specifies the DSCP to be matched on the packet.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R5

dst-ip

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-ip**
Description	IP address to match
Introduced	16.0.R1
Notes	This element is part of a choice

ip-prefix-list *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-ip**
Description	IP prefix list as match criterion for IP address
Reference	configure **filter match-list ip-prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv4-address*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-ip**
Description	Mask as an AND to the IP address
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the **dst-port** context
Introduced	16.0.R5

eq *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port**
Description	Equal to specified value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port**
Description	Greater than specified value
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port**
Description	Less than specified value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port**
Description	Parameter port-list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

fragment *keyword*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	If not default, matches fragmented/unfragmented packets as per value of the object.
Options	false, true
Introduced	16.0.R5

icmp

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the icmp context
Introduced	16.0.R1

code *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match icmp**
Description	ICMP code value to match. ICMP code and ICMP type must both be set to enable ICMP matching.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

type *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match icmp**
Description	ICMP type value to match. ICMP code and ICMP type must both be set to enable ICMP matching.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

ip-option

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the ip-option context
Introduced	16.0.R1

mask *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match ip-option**
Description	Mask that is ANDed with ip-option value in the packet header
Range	1 to 255
Default	255
Introduced	16.0.R1

type *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match ip-option**
Description	Specific IP option to match
Introduced	16.0.R1
Notes	This element is mandatory

multiple-option *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	If enabled, matches multiple options as per the value of the object.
Introduced	16.0.R5

option-present *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Matches the presence of IP options in the IPv4 packet. Padding and EOOL are also considered as IP options. Up to six IP options are matched against.
Introduced	16.0.R5

port

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the **port** context
Introduced	16.0.R5

eq *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port**
Description	Equal to specified value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port**
Description	Greater than specified value
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port**
Description	Less than specified value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port**
Description	Parameter port-list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

protocol (*number* | *keyword*)

Context **configure filter ip-filter** *filter-name* **entry** *number* **match**

Description IP protocol to match.

Introduced 16.0.R5

src-ip

Context **configure filter ip-filter** *filter-name* **entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-ip**

Description IP address to match

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-ip**

Description IP prefix list as match criterion for IP address

Reference configure **filter match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-ip**

Description Mask as an AND to the IP address

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure filter ip-filter** *filter-name* **entry** *number* **match**

Description Enter the **src-port** context

Introduced 16.0.R5

eq *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-port**

Description Equal to specified value

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-port**

Description Greater than specified value

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-port**

Description Less than specified value

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

port-list *string*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match src-port**

Description Parameter port-list as match criterion

Reference configure **filter match-list port-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

range

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match src-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match src-port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match src-port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

src-route-option *boolean*

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	This leaf specifies, when enabled, that this filter should match if a (strict or loose) source route option is present/not present at any location within the IP header, as per the value of this object.
Introduced	16.0.R5

tcp-flags

Context	**configure filter ip-filter** *filter-name* **entry** *number* **match**
Description	Enter the tcp-flags context
Introduced	16.0.R1

ack *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP ACK as per value of the ACK TCP flag bit

Introduced 16.0.R1

cwr *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP CWR as per value of the CWR TCP flag bit

Introduced 16.0.R1

ece *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP ECE as per value of the ECE TCP flag bit

Introduced 16.0.R1

fin *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP FIN as per value of the FIN TCP flag bit

Introduced 16.0.R1

ns *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP NS as per value of the NS TCP flag bit

Introduced 16.0.R1

psh *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP PSH as per value of the PSH TCP flag bit

Introduced 16.0.R1

rst *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP RST as per value of the RST TCP flag bit

Introduced 16.0.R1

syn *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP SYN as per value of the SYN TCP flag bit

Introduced 16.0.R1

urg *boolean*

Context **configure filter ip-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP URG as per value of the URG TCP flag bit

Introduced 16.0.R1

pbr-down-action-override *keyword*

Context **configure filter ip-filter** *filter-name* **entry** *number*

Description Action when PBR or PBF target for this entry is not available

Options drop, forward, filter-default-action

Introduced 16.0.R1

sticky-dest (*number* | *keyword*)

Context **configure filter ip-filter** *filter-name* **entry** *number*

Description Time before action with available PBR or PBF destination and highest priority

Units seconds

Introduced 16.0.R1

filter-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name*
Description	IP filter ID
Range	1 to 65535
Introduced	16.0.R1

scope *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ip-filter** *filter-name*
Description	Scope of this filter definition
Default	template
Options	exclusive, template, embedded, system
Introduced	16.0.R1

subscriber-mgmt

Context	**configure filter ip-filter** *filter-name*
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

host-specific-entry

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt**
Description	Enter the host-specific-entry context
Introduced	16.0.R1

credit-control

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry**
Description	Enter the credit-control context
Introduced	16.0.R1

range

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control range**

Description Upper bound of range for entries from Credit Control

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

start *number*

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control range**

Description Lower bound of range for entries from Credit Control

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

filter-rule

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry**

Description Enter the filter-rule context

Introduced 16.0.R1

range

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule range**
Description	Upper bound of range for filter-rule entries from RADIUS/Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule range**
Description	Lower bound of range for subscriber host filter-rule entries from RADIUS/Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

watermark

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry**
Description	Enter the watermark context
Introduced	16.0.R1

high *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry watermark**
Description	High watermark for host-specific entries, to raise a table full alarm
Range	0 to 100
Default	95
Introduced	16.0.R1

low *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt host-specific-entry watermark**
Description	Low watermark for host-specific entries, to clear a table full alarm
Range	0 to 100
Default	90
Introduced	16.0.R1

shared-entry

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt**

Description Enter the shared-entry context

Introduced 16.0.R1

filter-rule

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry**

Description Enter the filter-rule context

Introduced 16.0.R1

range

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule range**

Description Upper bound of range for shared-filter rules from RADIUS

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

start *number*

Context **configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule range**

Description Lower bound of range for shared filter-rules from RADIUS

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

pcc-rule

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry**
Description	Enter the pcc-rule context
Introduced	16.0.R1

range

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule**
Description	Enter the range context
Introduced	16.0.R1

end *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule range**
Description	Upper bound of range for pcc-rule filter entries from Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule range**
Description	Lower bound of range for pcc-rule filter entries from Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

watermark

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry**
Description	Enter the watermark context
Introduced	16.0.R1

high *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry watermark**
Description	Limit of RADIUS shared filters before generating high watermark notification
Range	1 to 8000
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure filter ip-filter** *filter-name* **subscriber-mgmt shared-entry watermark**
Description	Limit of RADIUS or Diameter shared filters before clearing high watermark notification
Range	0 to 7999
Introduced	16.0.R1
Notes	This element is mandatory

ipv6-filter [filter-name] *filter-name*

Context	**configure filter**
Description	Enter the ipv6-filter context
Introduced	16.0.R1

[filter-name] *filter-name*

Context	**configure filter ipv6-filter** *filter-name*
Description	Name of the object to associate
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

chain-to-system-filter *boolean*

Context	**configure filter ipv6-filter** *filter-name*
Description	Chain filter policy to the active IPvX system filter policy
Default	false
Introduced	16.0.R1

default-action *keyword*

Context	**configure filter ipv6-filter** *filter-name*
Description	Action for packets that do not match any entry
Default	drop
Options	drop, accept
Introduced	16.0.R1

description *string*

Context	**configure filter ipv6-filter** *filter-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

embed

Context	**configure filter ipv6-filter** *filter-name*
Description	Enter the embed context
Introduced	16.0.R1

filter [name] *string* **offset** *number*

Context	**configure filter ipv6-filter** *filter-name* **embed**
Description	Enter the filter context
Introduced	16.0.R1

[name] *string*

Context	**configure filter ipv6-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	ID of the filter to insert
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1
Notes	This element is part of a list key

offset *number*

Context	**configure filter ipv6-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097150
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ipv6-filter** *filter-name* **embed filter** *string* **offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R1

flowspec offset *number*

Context	**configure filter ipv6-filter** *filter-name* **embed**
Description	Enter the flowspec context
Introduced	16.0.R1

offset *number*

Context	**configure filter ipv6-filter** *filter-name* **embed flowspec offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097151
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ipv6-filter** *filter-name* **embed flowspec offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R1

group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed flowspec offset** *number*
Description	Interface group ID for an external configured set of flowspec rules
Range	0 to 16383
Introduced	16.0.R1

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed flowspec offset** *number*
Description	Virtual router for an external configured set of flowspec rules
Introduced	16.0.R1
Notes	This element is mandatory

openflow [of-switch] *string* **offset** *number*

Context	**configure filter ipv6-filter** *filter-name* **embed**
Description	Enter the openflow context
Introduced	16.0.R3

[of-switch] *string*

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Openflow switch which contains the flowtable to be inserted in the parent filter.
Reference	configure **openflow of-switch** *string*
Introduced	16.0.R4
Notes	This element is part of a list key

offset *number*

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Offset of the inserted entries
Range	0 to 2097150
Introduced	16.0.R2
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Administrative state of this embedding
Default	enable
Options	enable, disable
Introduced	16.0.R2

grt

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Global routing context.
Introduced	16.0.R3
Notes	This element is part of a choice

sap *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Sap context.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R4
Notes	This element is part of a choice

system

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	System context.
Introduced	16.0.R3
Notes	This element is part of a choice

vpls *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Vpls context.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R4
Notes	This element is part of a choice

vprn *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **embed openflow** *string* **offset** *number*
Description	Vprn context.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R4
Notes	This element is part of a choice

entry [entry-id] *number*

Context	**configure filter ipv6-filter** *filter-name*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Secondary index for this entry
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

accept

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Accept regular routing to forward a packet that matches this entry
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Drop a packet matching this entry
Introduced	16.0.R1
Notes	This element is part of a choice

drop-when

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the drop-when context
Introduced	16.0.R1

extracted-traffic

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when**

Description Drop traffic extracted to CPM

Introduced 16.0.R1

Notes This element is part of a choice

hop-limit

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when**

Description Enter the **hop-limit** context

Introduced 16.0.R1

eq *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit**

Description Value to compare against 'equal' condition for entry match criteria

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit**

Description Value to compare against 'greater than' condition for entry match criteria

Range min to 254

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit**

Description Value to compare against 'less than' condition for entry match criteria

Range 1 to max

Introduced 16.0.R1

Notes This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when hop-limit range**
Description	Lower bound value
Range	min to 254
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

pattern

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when**
Description	Enter the pattern context
Introduced	16.0.R1

expression *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Expression to be matched.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

mask *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Expression mask.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

offset-type *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Offset type.
Options	layer-3, layer-4, data, dns-qtype
Introduced	16.0.R1
Notes	This element is mandatory

offset-value *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when pattern**
Description	Offset value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

payload-length

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when**
Description	Enter the **payload-length** context
Introduced	16.0.R1

eq *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length**
Description	Value to compare against 'equal' condition for entry match criteria
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length**
Description	Value to compare against 'greater than' condition for entry match criteria
Range	min to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length**
Description	Value to compare against 'less than' condition for entry match criteria
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action drop-when payload-length range**
Description	Lower bound value
Range	min to 65534
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

fc *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Class name to be forwarded for matching packets
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

forward

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the **forward** context
Introduced	16.0.R1

bonding-connection *bonding-connection-index*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Connection ID over which packet is forwarded in a bonding context, if connection is available
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a choice

esi-l2

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **esi-l2** context
Introduced	16.0.R1

esi-value *ethernet-segment-id*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l2**
Description	ID of first ESI identified appliance in Nuage service chain
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l2**
Description	Specifies the identifier of the VPLS used for VPN/DC connectivity.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R3
Notes	This element is mandatory This element is part of a choice

esi-l3

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **esi-l3** context
Introduced	16.0.R1

esi-value *ethernet-segment-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the ethernet segment identifier (ESI) of the first ESI identified appliance in Nuage service chain.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sf-ip *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the IP address of the service function toward which traffic is steered.
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

vas-interface *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	VRI index of VPRN RVPLS interface for VPN DC connectivity
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

vprn *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward esi-l3**
Description	Specifies the routing context used for route lookup.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

gre-tunnel *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	GRE tunnel template ID that sets the location where an encapsulated matching packet is transported
Reference	configure **filter gre-tunnel-template** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

lsp *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	LSP that is specified to forward a packet matching this entry
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

next-hop

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **next-hop** context
Introduced	16.0.R1

nh-ip

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop**
Description	Enter the **nh-ip** context
Introduced	16.0.R1

address *ipv6-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip**
Description	IPv6 address of next hop for packet if it matches filter entry
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

indirect *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip**
Description	Allow next hop to be indirectly reachable
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

nh-ip-vrf

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop**
Description	Enter the **nh-ip-vrf** context
Introduced	16.0.R1

address *ipv6-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	IPv6 address of next hop for packet if it matches filter entry
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

indirect *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	Allow next hop to be indirectly reachable
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward next-hop nh-ip-vrf**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

redirect-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Next hop or forward next hop router that forwards a packet that matches this entry
Reference	configure **filter redirect-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is part of a choice

sap

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sap** context
Introduced	16.0.R1

sap-id *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sdp

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sdp** context
Introduced	16.0.R1

sdp-bind-id *sdp-bind-id*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward sdp**
Description	A packet matching the entry will be forwarded using the specified SDP.
String Length	3 to 16
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward sdp**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vprn-target

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **vprn-target** context
Introduced	16.0.R1

adv-prefix *ipv6-prefix*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Advertised IP prefix for target destination
Introduced	16.0.R1
Notes	This element is part of a choice

bgp-nh *ipv4-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Target BGP next hop IP address
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

lsp *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	LSP that is specified to forward a packet matching this entry
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

vprn *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action forward vprn-target**
Description	Specifies the routing context used for route lookup.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

http-redirect

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the **http-redirect** context
Introduced	16.0.R1

allow-override *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action http-redirect**
Description	Override http-redirect by a RADIUS VSA
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

url *http-redirect-url*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action http-redirect**
Description	URL that is used for redirecting
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

ignore-match

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Ignore match criteria for the entry
Introduced	16.0.R1
Notes	This element is part of a choice

nat

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the **nat** context
Introduced	16.0.R1

nat-policy *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action nat**
Description	NAT policy name when action is NAT
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is part of a choice

nat-type *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action nat**
Description	NAT type to assign when action is NAT
Options	dslite, nat64
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

rate-limit

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the rate-limit context
Introduced	16.0.R1

hop-limit

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit**

Description Enter the **hop-limit** context

Introduced 16.0.R1

eq *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit**

Description Value to compare against 'equal' condition for entry match criteria

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit**

Description Value to compare against 'greater than' condition for entry match criteria

Range min to 254

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit**

Description Value to compare against 'less than' condition for entry match criteria

Range 1 to max

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit hop-limit range**
Description	Lower bound value
Range	min to 254
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

pattern

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Enter the pattern context
Introduced	16.0.R1

expression *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Expression to be matched.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

mask *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Expression mask.
String Length	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

offset-type *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Offset type.
Options	layer-3, layer-4, data, dns-qtype
Introduced	16.0.R1
Notes	This element is mandatory

offset-value *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit pattern**
Description	Offset value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

payload-length

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Enter the **payload-length** context
Introduced	16.0.R1

eq *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length**
Description	Value to compare against 'equal' condition for entry match criteria
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length**
Description	Value to compare against 'greater than' condition for entry match criteria
Range	min to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length**
Description	Value to compare against 'less than' condition for entry match criteria
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length range**
Description	Upper bound value
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit payload-length range**
Description	Lower bound value
Range	min to 65534
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

pir (*number* | *keyword*)

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action rate-limit**
Description	Peak information rate
Introduced	16.0.R1
Notes	This element is mandatory

remark

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the remark context
Introduced	16.0.R1

dscp *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action remark**
Description	Destination SAP
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is mandatory

secondary

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Enter the secondary context
Introduced	16.0.R1

forward

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary**
Description	Enter the **forward** context
Introduced	16.0.R1

next-hop

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward**
Description	Enter the **next-hop** context
Introduced	16.0.R1

nh-ip-vrf

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward next-hop**
Description	Enter the **nh-ip-vrf** context
Introduced	16.0.R1

address *ipv6-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**
Description	IPv6 address of next hop for packet if it matches filter entry
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

indirect *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**
Description	Allow next hop to be indirectly reachable
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward next-hop nh-ip-vrf**
Description	Specifies the routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sap

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward**
Description	Enter the **sap** context
Introduced	16.0.R1

sap-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

sdp

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward**

Description Enter the **sdp** context

Introduced 16.0.R1

sdp-bind-id *sdp-bind-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward sdp**

Description A packet matching the entry will be forwarded using the specified SDP.

String Length 3 to 16

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

vpls *string*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary forward sdp**

Description VPLS the sdp-bind-id belongs to.

Reference configure **service vpls** *service-name*

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

remark

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary**

Description Enter the remark context

Introduced 16.0.R1

dscp *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action secondary remark**
Description	Destination SAP
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is mandatory

tcp-mss-adjust

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **action**
Description	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-pbr *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	PBR that has an effect when this filter is applied on egress
Options	true, true-with-l4lb
Introduced	16.0.R1

filter-sample *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Sample matching traffic if IP interface is set to cflowd ACL mode
Default	false
Introduced	16.0.R1

interface-sample *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Sample matching traffic if IP interface is set to cflowd interface mode
Default	true
Introduced	16.0.R1

log *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context	**configure filter ipv6-filter** *filter-name* **entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Specifies the DSCP to be matched on the packet.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R5

dst-ip

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-ip**
Description	IP address to match
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-prefix-list *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-ip**
Description	IP prefix list as match criterion for IP address
Reference	configure **filter match-list ipv6-prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv6-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-ip**
Description	Mask as an AND to IPv6 address
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the **dst-port** context
Introduced	16.0.R5

eq *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port**
Description	Equal to specified value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port**
Description	Greater than specified value
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port**
Description	Less than specified value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port**
Description	Parameter port-list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

extension-header

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the extension-header context
Introduced	16.0.R1

ah *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match extension-header**
Description	Match a packet as per the existence of an AH Extension Header
Introduced	16.0.R1

esp *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match extension-header**
Description	Match a packet as per the existence of an Encapsulation security payload extension header
Introduced	16.0.R1

hop-by-hop *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match extension-header**
Description	If Enabled, matches a Hop-By-Hop options Extension Header as per value of the object.
Introduced	16.0.R1

routing-type0 *boolean*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match extension-header**
Description	Match a packet as per the existence of a routing Extension Header
Introduced	16.0.R1

flow-label

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the flow-label context
Introduced	16.0.R1

mask *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match flow-label**
Description	Flow label mask for this policy IP filter entry
Range	1 to 1048575
Default	1048575
Introduced	16.0.R1

value *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match flow-label**
Description	Flow label as match criterion
Range	0 to 1048575
Introduced	16.0.R1
Notes	This element is mandatory

fragment *keyword*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	If not default, matches fragmented/unfragmented packets as per value of the object.
Options	false, true, first-only, non-first-only
Introduced	16.0.R5

icmp

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the icmp context
Introduced	16.0.R1

code *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match icmp**
Description	ICMP code value to match. ICMP code and ICMP type must both be set to enable ICMP matching.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

type *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match icmp**
Description	ICMP type value to match. ICMP code and ICMP type must both be set to enable ICMP matching.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

next-header (*number* | *keyword*)

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	IPv6 next header to match. Because the match criteria only pertains to the last next-header, the following values are not accepted: 0, 43, 44, 50, 51, and 60.
Introduced	16.0.R5

port

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the **port** context
Introduced	16.0.R5

eq *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port**
Description	Equal to specified value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port**
Description	Greater than specified value
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port**
Description	Less than specified value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port**
Description	Parameter port-list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

src-ip

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-ip**
Description	IP address to match
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-prefix-list *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-ip**
Description	IP prefix list as match criterion for IP address
Reference	configure **filter match-list ipv6-prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv6-address*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-ip**
Description	Mask as an AND to IPv6 address
Introduced	16.0.R1
Notes	This element is part of a choice

src-port

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match**
Description	Enter the **src-port** context
Introduced	16.0.R5

eq *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port**
Description	Equal to specified value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port**
Description	Greater than specified value
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port**
Description	Less than specified value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port**
Description	Parameter port-list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port range**
Description	Lower bound port to match
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter ipv6-filter** *filter-name* **entry** *number* **match src-port range**
Description	Lower bound port to match
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

tcp-flags

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match**

Description Enter the tcp-flags context

Introduced 16.0.R1

ack *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP ACK as per value of the ACK TCP flag bit

Introduced 16.0.R1

cwr *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP CWR as per value of the CWR TCP flag bit

Introduced 16.0.R1

ece *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP ECE as per value of the ECE TCP flag bit

Introduced 16.0.R1

fin *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP FIN as per value of the FIN TCP flag bit

Introduced 16.0.R1

ns *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP NS as per value of the NS TCP flag bit

Introduced 16.0.R1

psh *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP PSH as per value of the PSH TCP flag bit

Introduced 16.0.R1

rst *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP RST as per value of the RST TCP flag bit

Introduced 16.0.R1

syn *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP SYN as per value of the SYN TCP flag bit

Introduced 16.0.R1

urg *boolean*

Context **configure filter ipv6-filter** *filter-name* **entry** *number* **match tcp-flags**

Description Match TCP URG as per value of the URG TCP flag bit

Introduced 16.0.R1

pbr-down-action-override *keyword*

Context **configure filter ipv6-filter** *filter-name* **entry** *number*

Description Action when PBR or PBF target for this entry is not available

Options drop, forward, filter-default-action

Introduced 16.0.R1

sticky-dest (*number* | *keyword*)

Context **configure filter ipv6-filter** *filter-name* **entry** *number*

Description Time before action with available PBR or PBF destination and highest priority

Units seconds

Introduced 16.0.R1

filter-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name*
Description	IPv6 filter identifier
Range	1 to 65535
Introduced	16.0.R1

scope *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter ipv6-filter** *filter-name*
Description	Scope of this filter definition
Default	template
Options	exclusive, template, embedded, system
Introduced	16.0.R1

subscriber-mgmt

Context	**configure filter ipv6-filter** *filter-name*
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

host-specific-entry

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt**
Description	Enter the host-specific-entry context
Introduced	16.0.R1

credit-control

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry**
Description	Enter the credit-control context
Introduced	16.0.R1

range

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control range**

Description Upper bound of range for entries from Credit Control

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

start *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry credit-control range**

Description Lower bound of range for entries from Credit Control

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

filter-rule

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry**

Description Enter the filter-rule context

Introduced 16.0.R1

range

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule range**
Description	Upper bound of range for filter-rule entries from RADIUS/Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry filter-rule range**
Description	Lower bound of range for subscriber host filter-rule entries from RADIUS/Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

watermark

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry**
Description	Enter the watermark context
Introduced	16.0.R1

high *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry watermark**
Description	High watermark for host-specific entries, to raise a table full alarm
Range	0 to 100
Default	95
Introduced	16.0.R1

low *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt host-specific-entry watermark**

Description Low watermark for host-specific entries, to clear a table full alarm

Range 0 to 100

Default 90

Introduced 16.0.R1

shared-entry

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt**

Description Enter the shared-entry context

Introduced 16.0.R1

filter-rule

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry**

Description Enter the filter-rule context

Introduced 16.0.R1

range

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule**

Description Enter the range context

Introduced 16.0.R1

end *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule range**

Description Upper bound of range for shared-filter rules from RADIUS

Range 1 to 2097151

Introduced 16.0.R1

Notes This element is mandatory

start *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry filter-rule range**
Description	Lower bound of range for shared filter-rules from RADIUS
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

pcc-rule

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry**
Description	Enter the pcc-rule context
Introduced	16.0.R1

range

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule**
Description	Enter the range context
Introduced	16.0.R1

end *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule range**
Description	Upper bound of range for pcc-rule filter entries from Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry pcc-rule range**
Description	Lower bound of range for pcc-rule filter entries from Diameter
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is mandatory

watermark

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry**

Description Enter the watermark context

Introduced 16.0.R1

high *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry watermark**

Description Limit of RADIUS shared filters before generating high watermark notification

Range 1 to 8000

Introduced 16.0.R1

Notes This element is mandatory

low *number*

Context **configure filter ipv6-filter** *filter-name* **subscriber-mgmt shared-entry watermark**

Description Limit of RADIUS or Diameter shared filters before clearing high watermark notification

Range 0 to 7999

Introduced 16.0.R1

Notes This element is mandatory

log [log-id] *number*

Context **configure filter**

Description Enter the log context

Introduced 16.0.R1

[log-id] *number*

Context **configure filter log** *number*

Description Filter log identifier

Range 101 to 199

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure filter log** *number*
Description	Administrative state of filter logging
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure filter log** *number*
Description	Text description
String Length	0 to 80
Introduced	16.0.R1

destination

Context	**configure filter log** *number*
Description	Enter the destination context
Introduced	16.0.R1

memory

Context	**configure filter log** *number* **destination**
Description	Enter the **memory** context
Introduced	16.0.R1

max-entries *number*

Context	**configure filter log** *number* **destination memory**
Description	Maximum number of memory entries that the log can store
Range	1 to 50000
Default	1000
Introduced	16.0.R1
Notes	This element is part of a choice

stop-on-full *boolean*

Context	**configure filter log** *number* **destination memory**
Description	Stop logging when maximum number of memory entries is reached or wrap-around is used
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

syslog

Context	**configure filter log** *number* **destination**
Description	Enter the **syslog** context
Introduced	16.0.R1

summary

Context	**configure filter log** *number* **destination syslog**
Description	Enter the **summary** context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure filter log** *number* **destination syslog summary**
Description	Administrative state of the summarization of filter log entries
Default	disable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

summary-crit *keyword*

Context	**configure filter log** *number* **destination syslog summary**
Description	Summary for filter log entries
Default	src-addr
Options	src-addr, dst-addr
Introduced	16.0.R1
Notes	This element is part of a choice

syslog-id *string*

Context	**configure filter log** *number* **destination syslog**
Description	ID of the Syslog server definition for filter logs
Reference	configure **log syslog** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

mac-filter [filter-name] *filter-name*

Context	**configure filter**
Description	Enter the mac-filter context
Introduced	16.0.R1

[filter-name] *filter-name*

Context	**configure filter mac-filter** *filter-name*
Description	Name of the object to associate
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

default-action *keyword*

Context	**configure filter mac-filter** *filter-name*
Description	Action for packets that do not match any entry
Default	drop
Options	drop, accept
Introduced	16.0.R1

description *string*

Context	**configure filter mac-filter** *filter-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

embed

Context	**configure filter mac-filter** *filter-name*
Description	Enter the embed context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure filter mac-filter** *filter-name*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Secondary index for this entry
Range	1 to 2097151
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

accept

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action**
Description	Accept regular routing to forward a packet that matches this entry
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action**
Description	Drop a packet matching this entry
Introduced	16.0.R1
Notes	This element is part of a choice

forward

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action**
Description	Enter the **forward** context
Introduced	16.0.R1

esi-l2

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **esi-l2** context
Introduced	16.0.R1

esi-value *ethernet-segment-id*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward esi-l2**
Description	ID of first ESI identified appliance in Nuage service chain
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward esi-l2**
Description	Specifies the identifier of the VPLS used for VPN/DC connectivity.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R3
Notes	This element is mandatory This element is part of a choice

sap

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sap** context
Introduced	16.0.R1

sap-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sdp

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward**
Description	Enter the **sdp** context
Introduced	16.0.R1

sdp-bind-id *sdp-bind-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward sdp**
Description	A packet matching the entry will be forwarded using the specified SDP.
String Length	3 to 16
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action forward sdp**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

http-redirect

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action**
Description	Enter the **http-redirect** context
Introduced	16.0.R1

url *http-redirect-url*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action http-redirect**
Description	URL that is used for redirecting
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

ignore-match

Context **configure filter mac-filter** *filter-name* **entry** *number* **action**

Description Ignore match criteria for the entry

Introduced 16.0.R1

Notes This element is part of a choice

rate-limit

Context **configure filter mac-filter** *filter-name* **entry** *number* **action**

Description Enter the rate-limit context

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure filter mac-filter** *filter-name* **entry** *number* **action rate-limit**

Description Peak information rate

Introduced 16.0.R1

Notes This element is mandatory

secondary

Context **configure filter mac-filter** *filter-name* **entry** *number* **action**

Description Enter the secondary context

Introduced 16.0.R1

forward

Context **configure filter mac-filter** *filter-name* **entry** *number* **action secondary**

Description Enter the **forward** context

Introduced 16.0.R1

sap

Context **configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward**

Description Enter the **sap** context

Introduced 16.0.R1

sap-id *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	A packet matching the entry will be forwarded using the specified SAP.
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward sap**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sdp

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward**
Description	Enter the **sdp** context
Introduced	16.0.R1

sdp-bind-id *sdp-bind-id*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward sdp**
Description	A packet matching the entry will be forwarded using the specified SDP.
String Length	3 to 16
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

vpls *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **action secondary forward sdp**
Description	VPLS the sdp-bind-id belongs to.
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

description *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

log *string*

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dot1p

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the dot1p context
Introduced	16.0.R1

mask *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match dot1p**
Description	Value of 802.1P mask to use as a MAC filter match criterion
Range	1 to 7
Default	7
Introduced	16.0.R1

priority *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match dot1p**
Description	Value of 802.1P priority to use as a MAC filter match criterion
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

dst-mac

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the dst-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match dst-mac**
Description	MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match dst-mac**
Description	MAC address mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

etype *etype-value*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Ethernet type
String Length	5 to 6
Introduced	16.0.R1

frame-type *keyword*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	MAC frame as match criteria
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Introduced	16.0.R1

inner-tag

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the inner-tag context
Introduced	16.0.R1

mask *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match inner-tag**
Description	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Range	1 to 4095
Default	4095
Introduced	16.0.R1

tag *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match inner-tag**
Description	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Range	0 to 4095
Introduced	16.0.R1
Notes	This element is mandatory

isid

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the isid context
Introduced	16.0.R1

range

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match isid**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match isid range**
Description	Highest value of 24-bit service instance identifier for the service matching this entry
Range	0 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match isid range**
Description	Lowest value of 24-bit service instance identifier for the service matching this entry
Range	0 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

value *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match isid**
Description	Lowest value of 24-bit service instance identifier for the service matching this entry
Range	0 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

llc-dsap

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the llc-dsap context
Introduced	16.0.R1

dsap *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match llc-dsap**
Description	DSAP value
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

mask *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match llc-dsap**
Description	Destination SAP mask
Range	1 to 255
Default	255
Introduced	16.0.R1

llc-ssap

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the llc-ssap context
Introduced	16.0.R1

mask *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match llc-ssap**
Description	Source SAP mask
Range	1 to 255
Default	255
Introduced	16.0.R1

ssap *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match llc-ssap**
Description	Source or destination SAP value
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

outer-tag

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the outer-tag context
Introduced	16.0.R1

mask *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match outer-tag**
Description	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Range	1 to 4095
Default	4095
Introduced	16.0.R1

tag *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match outer-tag**
Description	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Range	0 to 4095
Introduced	16.0.R1
Notes	This element is mandatory

snap-oui *keyword*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Parameter snap-oui as a MAC filter match criteria
Options	zero, non-zero
Introduced	16.0.R1

snap-pid *number*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Parameter snap-pid as a MAC filter match criteria
Range	0 to 65535
Introduced	16.0.R1

src-mac

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match**
Description	Enter the src-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match src-mac**
Description	MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure filter mac-filter** *filter-name* **entry** *number* **match src-mac**
Description	MAC address mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

pbr-down-action-override *keyword*

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Action when PBR or PBF target for this entry is not available
Options	drop, forward, filter-default-action
Introduced	16.0.R1

sticky-dest (*number* | *keyword*)

Context	**configure filter mac-filter** *filter-name* **entry** *number*
Description	Time before action with available PBR or PBF destination and highest priority
Units	seconds
Introduced	16.0.R1

filter-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name*
Description	MAC filter ID
Range	1 to 65535
Introduced	16.0.R1

scope *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name*
Description	Scope of this filter definition
Default	template
Options	exclusive, template, embedded, system
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter mac-filter** *filter-name*
Description	MAC filter policy
Default	normal
Options	normal, isid, vid
Introduced	16.0.R1

match-list

Context	**configure filter**
Description	Enter the match-list context
Introduced	16.0.R1

ip-prefix-list [prefix-list-name] *string*

Context	**configure filter match-list**
Description	Enter the ip-prefix-list context
Introduced	16.0.R1

[prefix-list-name] *string*

Context	**configure filter match-list ip-prefix-list** *string*
Description	Prefix list name that is used for this prefix list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

apply-path

Context	**configure filter match-list ip-prefix-list** *string*
Description	Enter the apply-path context
Introduced	16.0.R1

bgp-peers [criterion-index] *number*

Context	**configure filter match-list ip-prefix-list** *string* **apply-path**
Description	Enter the bgp-peers context
Introduced	16.0.R1

[criterion-index] *number*

Context	**configure filter match-list ip-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Value of the enumerating BGP peers autogeneration configuration within list
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

group *regular-expression-not-all-spaces*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ip-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Regular expression to match against the base router BGP instance group configuration
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

neighbor *regular-expression-not-all-spaces*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ip-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Regular expression to match against the base router BGP instance neighbor configuration
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ip-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Target routing instance
Default	Base
Introduced	16.0.R1

description *string*

Context	**configure filter match-list ip-prefix-list** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

prefix [ip-prefix] *ipv4-prefix*

Context	**configure filter match-list ip-prefix-list** *string*
Description	Enter the prefix context
Max. Elements	8192
Introduced	16.0.R1

[ip-prefix] *ipv4-prefix*

Context	**configure filter match-list ip-prefix-list** *string* **prefix** *ipv4-prefix*
Description	Add IP prefix to the list.
Introduced	16.0.R3
Notes	This element is part of a list key

prefix-exclude [ip-prefix] *ipv4-prefix*

Context	**configure filter match-list ip-prefix-list** *string*
Description	Enter the prefix-exclude context
Max. Elements	512
Introduced	16.0.R1

[ip-prefix] *ipv4-prefix*

Context	**configure filter match-list ip-prefix-list** *string* **prefix-exclude** *ipv4-prefix*
Description	Add IP prefix to the list.
Introduced	16.0.R3
Notes	This element is part of a list key

ipv6-prefix-list [prefix-list-name] *string*

Context	**configure filter match-list**
Description	Enter the ipv6-prefix-list context
Introduced	16.0.R1

[prefix-list-name] *string*

Context	**configure filter match-list ipv6-prefix-list** *string*
Description	Prefix list name that is used for this prefix list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

apply-path

Context	**configure filter match-list ipv6-prefix-list** *string*
Description	Enter the apply-path context
Introduced	16.0.R1

bgp-peers [criterion-index] *number*

Context	**configure filter match-list ipv6-prefix-list** *string* **apply-path**
Description	Enter the bgp-peers context
Introduced	16.0.R1

[criterion-index] *number*

Context	**configure filter match-list ipv6-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Value of the enumerating BGP peers autogeneration configuration within list
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

group *regular-expression-not-all-spaces*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ipv6-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Regular expression to match against the base router BGP instance group configuration
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

neighbor *regular-expression-not-all-spaces*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ipv6-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Regular expression to match against the base router BGP instance neighbor configuration
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter match-list ipv6-prefix-list** *string* **apply-path bgp-peers** *number*
Description	Target routing instance
Default	Base
Introduced	16.0.R1

description *string*

Context	**configure filter match-list ipv6-prefix-list** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure filter match-list ipv6-prefix-list** *string*
Description	Enter the prefix context
Max. Elements	8192
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure filter match-list ipv6-prefix-list** *string* **prefix** *ipv6-prefix*
Description	Add IPv6 prefix to the list.
Introduced	16.0.R3
Notes	This element is part of a list key

prefix-exclude [ipv6-prefix] *ipv6-prefix*

Context	**configure filter match-list ipv6-prefix-list** *string*
Description	Enter the prefix-exclude context
Max. Elements	512
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure filter match-list ipv6-prefix-list** *string* **prefix-exclude** *ipv6-prefix*
Description	Add IPv6 prefix to the list.
Introduced	16.0.R3
Notes	This element is part of a list key

port-list [port-list-name] *string*

Context	**configure filter match-list**
Description	Enter the port-list context
Max. Elements	1024
Introduced	16.0.R1

[port-list-name] *string*

Context	**configure filter match-list port-list** *string*
Description	Port list name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure filter match-list port-list** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

port [value] *number*

Context	**configure filter match-list port-list** *string*
Description	Enter the port context
Introduced	16.0.R1

[value] *number*

Context	**configure filter match-list port-list** *string* **port** *number*
Description	Port value
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

range start *number* **end** *number*

Context	**configure filter match-list port-list** *string*
Description	Enter the range context
Introduced	16.0.R1

start *number*

Context	**configure filter match-list port-list** *string* **range start** *number* **end** *number*
Description	Highest value for TCP/UDP port range
Range	0 to 65534
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure filter match-list port-list** *string* **range start** *number* **end** *number*
Description	Highest value for TCP/UDP port range
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

md-auto-id

Context	**configure filter**
Description	Enter the md-auto-id context
Introduced	16.0.R1

filter-id-range

Context	**configure filter md-auto-id**
Description	Enter the filter-id-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter md-auto-id filter-id-range**
Description	Upper value of the ID range, must be greater than or equal to start value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure filter md-auto-id filter-id-range**
Description	Lower value of the ID range, must be less than or equal to end value
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

redirect-policy [redirect-policy-name] *string*

Context	**configure filter**
Description	Enter the redirect-policy context
Introduced	16.0.R1

[redirect-policy-name] *string*

Context	**configure filter redirect-policy** *string*
Description	Redirect policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter redirect-policy** *string*
Description	Administrative state of the policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure filter redirect-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination [destination-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure filter redirect-policy** *string*
Description	Enter the destination context
Introduced	16.0.R1

[destination-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address and type of destination
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Administrative state of the destination
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ping-test

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the ping-test context
Introduced	16.0.R1

drop-count *number*

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **ping-test**
Description	Number of consecutive requests that fail before destination is declared unreachable
Range	1 to 60
Default	3
Introduced	16.0.R1

hold-down *number*

Context **configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **ping-test**

Description Time for the system to be held down if this test has marked it unreachable

Range 0 to 86400

Default 0

Units seconds

Introduced 16.0.R1

interval *number*

Context **configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **ping-test**

Description Time between consecutive requests which are sent to the far end host

Range 1 to 60

Default 1

Units seconds

Introduced 16.0.R1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **ping-test**

Description The value indicates the source IP address to use in the ping test. The value should be a router local address to make sure the reply reaches the CPM.

Introduced 16.0.R1

timeout *number*

Context **configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **ping-test**

Description Time required to receive a response from the far end host

Range 1 to 60

Default 1

Units seconds

Introduced 16.0.R1

priority *number*

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Priority for this destination
Range	1 to 255
Default	100
Introduced	16.0.R1

unicast-rt-test

Context	**configure filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the unicast-rt-test context
Introduced	16.0.R1

notify-dest-change *boolean*

Context	**configure filter redirect-policy** *string*
Description	The value of the object indicates whether to send tFilterRPActiveDestChangeEvent notification for this redirect policy active destination changes.
Default	false
Introduced	16.0.R1

router-instance *string*

Context	**configure filter redirect-policy** *string*
Description	Routing context to use for route lookup
Introduced	16.0.R1

sticky-dest (*number* | *keyword*)

Context	**configure filter redirect-policy** *string*
Description	Time required by system before applying the current best destination as active destination
Units	seconds
Introduced	16.0.R1

redirect-policy-binding [binding-name] *string*

Context	**configure filter**
Description	Enter the redirect-policy-binding context
Max. Elements	16
Introduced	16.0.R1

[binding-name] *string*

Context	**configure filter redirect-policy-binding** *string*
Description	The redirect-policy-binding identifier.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

binding-operator *keyword*

Context	**configure filter redirect-policy-binding** *string*
Description	The value of the this object indicates the logical operator to use when combining result of different destinations' tests.
Default	and
Options	and, or
Introduced	16.0.R1

redirect-policy [redirect-policy-name] *string*

Context	**configure filter redirect-policy-binding** *string*
Description	Enter the redirect-policy context
Introduced	16.0.R1

[redirect-policy-name] *string*

Context	**configure filter redirect-policy-binding** *string* **redirect-policy** *string*
Description	The redirect-policy identifier.
Reference	configure **filter redirect-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

destination [destination-address] *string*

Context	**configure filter redirect-policy-binding** *string* **redirect-policy** *string*
Description	Enter the destination context
Min. Elements	1
Introduced	16.0.R1

[destination-address] *string*

Context	**configure filter redirect-policy-binding** *string* **redirect-policy** *string* **destination** *string*
Description	IP address and type of the destination.
Reference	configure **filter redirect-policy** *string* **destination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

system-filter

Context	**configure filter**
Description	Enter the system-filter context
Introduced	16.0.R1

ip [ip-filter] *string*

Context	**configure filter system-filter**
Description	Enter the ip context
Max. Elements	1
Introduced	16.0.R1

[ip-filter] *string*

Context	**configure filter system-filter ip** *string*
Description	The name of the IPv4 filter policy to be selected as the active system filter policy
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R3
Notes	This element is part of a list key

ipv6 [ipv6-filter] *string*

Context	**configure filter system-filter**
Description	Enter the ipv6 context
Max. Elements	1
Introduced	16.0.R1

[ipv6-filter] *string*

Context	**configure filter system-filter ipv6** *string*
Description	The name of the IPv6 filter policy to be selected as the active system filter policy
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R3
Notes	This element is part of a list key

13 fwd-path-ext Commands

configure
- **fwd-path-ext**
  - **fpe** *number*
    - **application**
      - **pw-port** *boolean*
      - **sub-mgmt-extension** *boolean*
      - **vxlan-termination**
        - **router-instance** *string*
    - **description** *string*
    - **path**
      - **pxc** *string*
      - **xc-lag-a** *string*
      - **xc-lag-b** *string*
  - **sdp-id-range**
    - **end** *number*
    - **start** *number*

13.1 fwd-path-ext Command Descriptions

fwd-path-ext

Context	**configure**
Description	Enter the fwd-path-ext context
Introduced	16.0.R1

fpe [fpe-id] *number*

Context	**configure fwd-path-ext**
Description	Enter the fpe context
Introduced	16.0.R1

[fpe-id] *number*

Context	**configure fwd-path-ext fpe** *number*
Description	FPE used to associate the application with a PXC
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

application

Context	**configure fwd-path-ext fpe** *number*
Description	Enter the application context
Introduced	16.0.R1

pw-port *boolean*

Context	**configure fwd-path-ext fpe** *number* **application**
Description	Use FPE to set up FPE PW cross-connect
Default	false
Introduced	16.0.R1

sub-mgmt-extension *boolean*

Context	**configure fwd-path-ext fpe** *number* **application**
Description	Reserve FPE for hybrid access bonding
Default	false
Introduced	16.0.R1

vxlan-termination

Context	**configure fwd-path-ext fpe** *number* **application**
Description	Enter the vxlan-termination context
Introduced	16.0.R1

router-instance *string*

Context	**configure fwd-path-ext fpe** *number* **application vxlan-termination**
Description	Routing context that provides reachability to the tunnel configured
Default	Base
Introduced	16.0.R1

description *string*

Context	**configure fwd-path-ext fpe** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

path

Context	**configure fwd-path-ext fpe** *number*
Description	Enter the path context
Introduced	16.0.R1

pxc *string*

Context	**configure fwd-path-ext fpe** *number* **path**
Description	Cross connect port identifier associated with this entry
Reference	configure **port-xc pxc** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

xc-lag-a *string*

Context	**configure fwd-path-ext fpe** *number* **path**
Description	LAG identifier A value
Reference	configure **lag** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

xc-lag-b *string*

Context	**configure fwd-path-ext fpe** *number* **path**
Description	LAG identifier B value
Reference	configure **lag** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

sdp-id-range

Context	**configure fwd-path-ext**
Description	Enter the sdp-id-range context
Introduced	16.0.R1

end *number*

Context	**configure fwd-path-ext sdp-id-range**
Description	End of range
Range	1 to 32767
Introduced	16.0.R1

start *number*

Context	**configure fwd-path-ext sdp-id-range**
Description	Start of range
Range	1 to 32767
Introduced	16.0.R1

  - **public-tcp-mss-adjust** (*number* | *keyword*)
  - **replay-window** *number*
  - **sp-reverse-route** *keyword*

14.1 ipsec Command Descriptions

ipsec

Context	**configure**
Description	Enter the ipsec context
Introduced	16.0.R1

ike-policy [id] *number*

Context	**configure ipsec**
Description	Enter the ike-policy context
Max. Elements	2048
Introduced	16.0.R1

[id] *number*

Context	**configure ipsec ike-policy** *number*
Description	The unique identifier of an IKE policy.
Range	1 to 2048
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure ipsec ike-policy** *number*
Description	The IKE policy description.
String Length	1 to 80
Introduced	16.0.R1

dpd

Context	**configure ipsec ike-policy** *number*
Description	Enter the dpd context
Introduced	16.0.R1

interval *number*

Context	**configure ipsec ike-policy** *number* **dpd**
Description	The DPD interval.
Range	10 to 300
Default	30
Units	seconds
Introduced	16.0.R1

max-retries *number*

Context	**configure ipsec ike-policy** *number* **dpd**
Description	The maximum number of retires before the peer is determined dead.
Range	2 to 5
Default	3
Introduced	16.0.R1

reply-only *boolean*

Context	**configure ipsec ike-policy** *number* **dpd**
Description	Reply to DPD keep alive requests only.
Default	false
Introduced	16.0.R1

ike-transform *string*

Context	**configure ipsec ike-policy** *number*
Description	IKE transform for this IKE policy.
Reference	configure **ipsec ike-transform** *number*
Max. Elements	4
Introduced	16.0.R1

ike-version-1

Context	**configure ipsec ike-policy** *number*
Description	Enter the **ike-version-1** context
Introduced	16.0.R1

auth-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-1**
Description	The authentication method used with this IKE policy for the remote peer.
Default	psk
Options	psk, plain-psk-xauth
Introduced	16.0.R1
Notes	This element is part of a choice

ike-mode *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-1**
Description	The mode of operation, which determines the number of messages used to IKE establish the session.
Default	main
Options	main, aggressive
Introduced	16.0.R1
Notes	This element is part of a choice

own-auth-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-1**
Description	The authentication method used with this IKE policy for its own side.
Default	symmetric
Options	symmetric
Introduced	16.0.R1
Notes	This element is part of a choice

ph1-responder-delete-notify *boolean*

Context	**configure ipsec ike-policy** *number* **ike-version-1**
Description	Sending a delete message to the peer, as a responder, when an IKEv1 phase 1 is expired or removed
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

ike-version-2

Context	**configure ipsec ike-policy** *number*
Description	Enter the **ike-version-2** context
Introduced	16.0.R1

auth-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	The authentication method used with this IKE policy for the remote peer.
Default	psk
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap
Introduced	16.0.R1
Notes	This element is part of a choice

auto-eap-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	The auto Extensible Authentication Protocol (EAP) method for remote peer used with this IKE policy. It is only meaningful when the auth-method equals to 'auto-eap-radius'.
Default	cert
Options	psk, cert, psk-or-cert
Introduced	16.0.R1
Notes	This element is part of a choice

ikev2-fragment

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	Enter the **ikev2-fragment** context
Introduced	16.0.R1

mtu *number*

Context	**configure ipsec ike-policy** *number* **ike-version-2 ikev2-fragment**
Description	The MTU size of the IKEv2 fragmentation.
Range	512 to 9000
Default	1500
Units	octets
Introduced	16.0.R1
Notes	This element is part of a choice

reassembly-timeout *number*

Context	**configure ipsec ike-policy** *number* **ike-version-2 ikev2-fragment**
Description	The maximum number of seconds to wait to receive all fragments of an IKEv2 message for reassembly.
Range	1 to 5
Default	2
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

own-auth-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	The authentication method used with this IKE policy for its own side.
Default	symmetric
Options	symmetric, psk, cert, eap-only
Introduced	16.0.R1
Notes	This element is part of a choice

own-auto-eap-method *keyword*

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	The auto Extensible Authentication Protocol (EAP) method used with this IKE policy on its own side.
Default	cert
Options	psk, cert
Introduced	16.0.R1
Notes	This element is part of a choice

send-idr-after-eap-success *boolean*

Context	**configure ipsec ike-policy** *number* **ike-version-2**
Description	Add the IDr payload in the last IKE authentication response after the EAP success.
Default	true
Introduced	16.0.R4
Notes	This element is part of a choice

ipsec-lifetime *number*

Context	**configure ipsec ike-policy** *number*
Description	The Phase 1 lifetime for this IKE transform
Range	1200 to 31536000
Default	3600
Introduced	16.0.R1

limit-init-exchange

Context	**configure ipsec ike-policy** *number*
Description	Enter the limit-init-exchange context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure ipsec ike-policy** *number* **limit-init-exchange**
Description	Limits the number of in-progress initial IKE exchanges to one per IPsec tunnel.
Default	enable
Options	enable, disable
Introduced	16.0.R1

reduced-max-exchange-timeout (*number* | *keyword*)

Context	**configure ipsec ike-policy** *number* **limit-init-exchange**
Description	The maximum timeout for the in-progress initial IKE exchange. The value of 'disabled' means that there is no reduction of the current exchange timeout which is 120 seconds.
Range	2 to 60
Default	2
Units	seconds
Options	none
Introduced	16.0.R1

lockout

Context	**configure ipsec ike-policy** *number*
Description	Enter the lockout context
Introduced	16.0.R1

block (*number* | *keyword*)

Context	**configure ipsec ike-policy** *number* **lockout**
Description	The maximum time period that the system drops IKE packets after the maximum number of consecutive failed authentication attempts reaches failed-attempts within duration minutes.
Range	1 to 1440
Default	10
Units	minutes
Options	infinite
Introduced	16.0.R1

duration *number*

Context	**configure ipsec ike-policy** *number* **lockout**
Description	The maximum duration that the system can afford failed-attempts number of failed authentication attempts from the same remote client.
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1

failed-attempts *number*

Context	**configure ipsec ike-policy** *number* **lockout**
Description	The maximum number of consecutive failed authentication attempts from the same remote client.
Range	1 to 64
Default	3
Introduced	16.0.R1

max-port-per-ip *number*

Context	**configure ipsec ike-policy** *number* **lockout**
Description	The maximum number of port that can be lockout under the same IP address.
Range	1 to 32000
Default	16
Introduced	16.0.R1

match-peer-id-to-cert *boolean*

Context	**configure ipsec ike-policy** *number*
Description	Checking whether the IKE peer's ID matches the peer's certificate when performing certificate authentication.
Default	false
Introduced	16.0.R1

nat-traversal

Context **configure ipsec ike-policy** *number*

Description Enter the nat-traversal context

Introduced 16.0.R1

force *boolean*

Context **configure ipsec ike-policy** *number* **nat-traversal**

Description Force NAT-T to be enabled.

Default false

Introduced 16.0.R1

force-keep-alive *boolean*

Context **configure ipsec ike-policy** *number* **nat-traversal**

Description Send the keep alive packets only when behind a NAT.

Default true

Introduced 16.0.R1

keep-alive-interval *number*

Context **configure ipsec ike-policy** *number* **nat-traversal**

Description The keep alive interval for NAT-T.

Range 120 to 600

Units seconds

Introduced 16.0.R1

pfs

Context **configure ipsec ike-policy** *number*

Description Enter the pfs context

Introduced 16.0.R1

dh-group *keyword*

Context	**configure ipsec ike-policy** *number* **pfs**
Description	The new Diffie-Hellman (DH) group used when each time the SA(Security Association) key is renegotiated.
Default	group-2
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R1

relay-unsolicited-cfg-attribute

Context	**configure ipsec ike-policy** *number*
Description	Enter the relay-unsolicited-cfg-attribute context
Introduced	16.0.R1

internal-ip4-address *boolean*

Context	**configure ipsec ike-policy** *number* **relay-unsolicited-cfg-attribute**
Description	IPv4 address attribute.
Default	false
Introduced	16.0.R1

internal-ip4-dns *boolean*

Context	**configure ipsec ike-policy** *number* **relay-unsolicited-cfg-attribute**
Description	IPv4 DNS attribute.
Default	false
Introduced	16.0.R1

internal-ip4-netmask *boolean*

Context	**configure ipsec ike-policy** *number* **relay-unsolicited-cfg-attribute**
Description	IPv4 netmask attribute.
Default	false
Introduced	16.0.R1

internal-ip6-address *boolean*

Context	**configure ipsec ike-policy** *number* **relay-unsolicited-cfg-attribute**
Description	IPv6 address attribute.
Default	false
Introduced	16.0.R1

internal-ip6-dns *boolean*

Context	**configure ipsec ike-policy** *number* **relay-unsolicited-cfg-attribute**
Description	IPv6 DNS attribute.
Default	false
Introduced	16.0.R1

ike-transform [id] *number*

Context	**configure ipsec**
Description	Enter the ike-transform context
Max. Elements	4096
Introduced	16.0.R1

[id] *number*

Context	**configure ipsec ike-transform** *number*
Description	The unique identifier of an IKE transform.
Range	1 to 4096
Introduced	16.0.R1
Notes	This element is part of a list key

dh-group *keyword*

Context	**configure ipsec ike-transform** *number*
Description	The Diffie-Hellman (DH) group for this IKE transform.
Default	group-2
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R1

ike-auth-algorithm *keyword*

Context	**configure ipsec ike-transform** *number*
Description	The authentication algorithm for this IKE transform.
Default	sha-1
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc
Introduced	16.0.R1

ike-encryption-algorithm *keyword*

Context	**configure ipsec ike-transform** *number*
Description	The encryption algorithm for this IKE transform.
Default	aes-128
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Introduced	16.0.R1

isakmp-lifetime *number*

Context	**configure ipsec ike-transform** *number*
Description	The Phase 1 lifetime for this IKE transform
Range	1200 to 31536000
Default	86400
Introduced	16.0.R1

ipsec-transform [id] *number*

Context	**configure ipsec**
Description	Enter the ipsec-transform context
Max. Elements	2048
Introduced	16.0.R1

[id] *number*

Context	**configure ipsec ipsec-transform** *number*
Description	IPsec transform ID.
Range	1 to 2048
Introduced	16.0.R1
Notes	This element is part of a list key

esp-auth-algorithm *keyword*

Context	**configure ipsec ipsec-transform** *number*
Description	The authentication algorithm for this IPsec transform.
Default	sha-1
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Introduced	16.0.R1

esp-encryption-algorithm *keyword*

Context	**configure ipsec ipsec-transform** *number*
Description	The encryption algorithm for this IPsec transform.
Default	aes-128
Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Introduced	16.0.R1

ipsec-lifetime *number*

Context	**configure ipsec ipsec-transform** *number*
Description	The Phase 2 lifetime for this IPsec transform.
Range	1200 to 31536000
Introduced	16.0.R1

pfs-dh-group *keyword*

Context	**configure ipsec ipsec-transform** *number*
Description	The Diffie-Hellman (DH) group for this IPsec transform.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R1

show-ipsec-keys *boolean*

Context	**configure ipsec**
Description	Show IPsec IKE and ESP keys.
Default	false
Introduced	16.0.R1

tunnel-template [id] *number*

Context	**configure ipsec**
Description	Enter the tunnel-template context
Max. Elements	2048
Introduced	16.0.R1

[id] *number*

Context	**configure ipsec tunnel-template** *number*
Description	The unique identifier of a tunnel template.
Range	1 to 2048
Introduced	16.0.R1
Notes	This element is part of a list key

clear-df-bit *boolean*

Context	**configure ipsec tunnel-template** *number*
Description	Whether to clear Do not Fragment (DF) bit in the outgoing IPv4 packets.
Default	false
Introduced	16.0.R1

description *string*

Context	**configure ipsec tunnel-template** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

encapsulated-ip-mtu *number*

Context	**configure ipsec tunnel-template** *number*
Description	The Maximum Transmission Unit (MTU) size for ESP and IKE packets.
Range	512 to 9000
Units	octets
Introduced	16.0.R1

icmp6-generation

Context	**configure ipsec tunnel-template** *number*
Description	Enter the icmp6-generation context
Introduced	16.0.R1

pkt-too-big

Context	**configure ipsec tunnel-template** *number* **icmp6-generation**
Description	Enter the pkt-too-big context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure ipsec tunnel-template** *number* **icmp6-generation pkt-too-big**
Description	Adminstrative state of the generation of ICMPv6 Packet Too Big messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

interval *number*

Context	**configure ipsec tunnel-template** *number* **icmp6-generation pkt-too-big**
Description	The duration of the interval used when limiting the number of ICMPv6 Packet Too Big messages sent.
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

message-count *number*

Context	**configure ipsec tunnel-template** *number* **icmp6-generation pkt-too-big**
Description	The maximum number of ICMPv6 messages that can be sent during the period specified by 'interval'.
Range	10 to 1000
Default	100
Introduced	16.0.R1

ip-mtu *number*

Context	**configure ipsec tunnel-template** *number*
Description	The MTU size for payload packets.
Range	512 to 9000
Units	octets
Introduced	16.0.R1

ipsec-transform *string*

Context	**configure ipsec tunnel-template** *number*
Description	IPsec transform for this tunnel template.
Reference	configure **ipsec ipsec-transform** *number*
Max. Elements	4
Introduced	16.0.R1

private-tcp-mss-adjust *number*

Context	**configure ipsec tunnel-template** *number*
Description	The Maximum Segment Size (MSS) adjust for the TCP traffic in a tunnel which is sent from the private network to the public network.
Range	512 to 9000
Units	octets
Introduced	16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Context	**configure ipsec tunnel-template** *number*
Description	The MSS adjust for the TCP traffic in a tunnel which is sent from the public network to the private network.
Range	512 to 9000
Units	octets
Options	auto
Introduced	16.0.R1

replay-window *number*

Context	**configure ipsec tunnel-template** *number*
Description	The size of the anti-replay window for the template.
Range	32 | 64 | 128 | 256 | 512
Introduced	16.0.R1

sp-reverse-route *keyword*

Context	**configure ipsec tunnel-template** *number*
Description	Whether system will use peer signaled traffic selector to create a reverse route in private service.
Default	none
Options	none, use-security-policy
Introduced	16.0.R1

15 isa Commands

configure
- — **isa**
  - — **lns-group** *number*
    - — **admin-state** *keyword*
    - — **description** *string*

    - — **description** *string*
    - — **log**
      - — **suppress-lsn-events** *boolean*
      - — **suppress-lsn-sub-blocks-free** *boolean*
    - — **mda** *slot-mda*
    - — **radius-accounting-policy** *string*
    - — **redundancy**
      - — **active-mda-limit** *number*
      - — **intra-chassis**
        - — **active-active**
          - — **failed-mda-limit** *number*
        - — **active-standby**
        - — **l2aware-bypass**
    - — **scaling-profile** *keyword*
    - — **session-limits**
      - — **reserved** *number*
      - — **upnp-mappings** *number*
      - — **watermarks**
        - — **high** *number*
        - — **low** *number*
  - — **tunnel-group** *number*
    - — **admin-state** *keyword*
    - — **backup** *slot-mda*
    - — **description** *string*
    - — **ipsec-responder-only** *boolean*
    - — **isa-scale-mode** *keyword*
    - — **multi-active**
      - — **active-isa-number** *number*
      - — **isa** *slot-mda*
    - — **primary** *slot-mda*
    - — **reassembly**
      - — **max-wait-time** *number*
    - — **stats-collection**
      - — **isa-dp-cpu-usage** *boolean*
  - — **video-group** *number*
    - — **ad-insert** *boolean*
    - — **admin-state** *keyword*
    - — **analyzer** *boolean*
    - — **description** *string*
    - — **fcc-server** *boolean*

- **local-rt-server** *boolean*
- **mda** *slot-mda*
- **resv-ret** *number*
- **rt-client** *boolean*
- **stream-selection** *boolean*
- **watermark**
  - **bandwidth**
    - **fcc** *number*
    - **ret** *number*
    - **total** *number*
  - **session**
    - **fcc** *number*
    - **ret** *number*
    - **total** *number*

- **wlan-gw-group** *number*
  - **active-iom-limit** *number*
  - **active-mda-limit** *number*
  - **admin-state** *keyword*
  - **description** *string*
  - **iom** *string*
  - **mda** *slot-mda*
  - **nat**
    - **log**
      - **suppress-lsn-events** *boolean*
      - **suppress-lsn-sub-blocks-free** *boolean*
    - **lsn** *boolean*
    - **radius-accounting-policy** *string*
    - **session-limits**
      - **reserved** *number*
      - **upnp-mappings** *number*
      - **watermarks**
        - **high** *number*
        - **low** *number*
  - **port-policy** *string*
  - **redundancy** *keyword*
  - **tunnel-port-policy** *string*
  - **watermarks**
    - **mark** *keyword*
      - **high** *number*
      - **low** *number*

15.1 isa Command Descriptions

isa

Context	**configure**
Description	Enter the isa context
Introduced	16.0.R1

lns-group [id] *number*

Context	**configure isa**
Description	Enter the lns-group context
Introduced	16.0.R1

[id] *number*

Context	**configure isa lns-group** *number*
Description	Tunnel group ID
Range	1 to 4
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure isa lns-group** *number*
Description	Administrative state of the ISA LNS group
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure isa lns-group** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

mda [mda-id] *slot-mda*

Context	**configure isa lns-group** *number*
Description	Enter the mda context
Max. Elements	6
Introduced	16.0.R1

[mda-id] *slot-mda*

Context	**configure isa lns-group** *number* **mda** *slot-mda*
Description	MDA ID for the ISA LNS group
Introduced	16.0.R1
Notes	This element is part of a list key

drain *boolean*

Context	**configure isa lns-group** *number* **mda** *slot-mda*
Description	Specifies the draining state of the MDA
Default	false
Introduced	16.0.R1

port-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa lns-group** *number*
Description	Port policy for the ISA LNS group
Reference	configure **port-policy** *string*
Introduced	16.0.R1

nat-group [id] *number*

Context	**configure isa**
Description	Enter the nat-group context
Max. Elements	4
Introduced	16.0.R1

[id] *number*

Context	**configure isa nat-group** *number*
Description	Nat-group identifier
Range	1 to 4
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure isa nat-group** *number*
Description	Administrative state of the NAT group
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure isa nat-group** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

log

Context	**configure isa nat-group** *number*
Description	Enter the log context
Introduced	16.0.R1

suppress-lsn-events *boolean*

Context	**configure isa nat-group** *number* **log**
Description	Suppress the generation of Large Scale NAT (LSN) events when RADIUS accounting is enabled
Default	true
Introduced	16.0.R1

suppress-lsn-sub-blocks-free *boolean*

Context	**configure isa nat-group** *number* **log**
Description	Suppress the LSN Free blocks and NAT pool block allocation notifications
Default	false
Introduced	16.0.R4

mda [mda-id] *slot-mda*

Context	**configure isa nat-group** *number*
Description	Enter the mda context
Max. Elements	14
Introduced	16.0.R1

[mda-id] *slot-mda*

Context	**configure isa nat-group** *number* **mda** *slot-mda*
Description	MDA ID for ISA NAT group
Introduced	16.0.R1
Notes	This element is part of a list key

radius-accounting-policy *string*

Context	**configure isa nat-group** *number*
Description	RADIUS accounting policy for ISA group
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

redundancy

Context	**configure isa nat-group** *number*
Description	Enter the redundancy context
Introduced	16.0.R1

active-mda-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number* **redundancy**
Description	Number of active MS-ISAs in the NAT group
Range	1 to 14
Introduced	16.0.R1

intra-chassis

Context	**configure isa nat-group** *number* **redundancy**
Description	Enter the **intra-chassis** context
Introduced	16.0.R4

active-active

Context	**configure isa nat-group** *number* **redundancy intra-chassis**
Description	Enter the **active-active** context
Introduced	16.0.R4

failed-mda-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number* **redundancy intra-chassis active-active**
Description	Maximum allowable number of failed MS-ISAs in the nat-group
Range	1 to 2
Introduced	16.0.R4
Notes	This element is part of a choice

active-standby

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number* **redundancy intra-chassis**
Description	Active-standby intra-chassis NAT redundancy model
Introduced	16.0.R4
Notes	This element is part of a choice

l2aware-bypass

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number* **redundancy intra-chassis**
Description	L2-aware-bypass NAT redundancy model
Introduced	16.0.R4
Notes	This element is part of a choice

scaling-profile *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number*
Description	The ISA scaling profile identifier
Default	profile1
Options	profile1, profile2
Introduced	16.0.R1

session-limits

Context	**configure isa nat-group** *number*
Description	Enter the session-limits context
Introduced	16.0.R1

reserved *number*

Context	**configure isa nat-group** *number* **session-limits**
Description	Number of sessions reserved for prioritized sessions
Range	1 to 6291456
Introduced	16.0.R1

upnp-mappings *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa nat-group** *number* **session-limits**
Description	Maximum number of Universal Plug and Play mappings per member
Range	1 to 524288
Default	524288
Introduced	16.0.R1

watermarks

Context	**configure isa nat-group** *number* **session-limits**
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure isa nat-group** *number* **session-limits watermarks**
Description	High watermark of the number of sessions for each MDA in this NAT ISA group
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure isa nat-group** *number* **session-limits watermarks**
Description	Low watermark of the number of sessions for each MDA in this NAT ISA group
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

tunnel-group [id] *number*

Context	**configure isa**
Description	Enter the tunnel-group context
Introduced	16.0.R1

[id] *number*

Context	**configure isa tunnel-group** *number*
Description	The unique identifier of the tunnel group.
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure isa tunnel-group** *number*
Description	The administrative state of the ISA tunnel group.
Default	disable
Options	enable, disable
Introduced	16.0.R1

backup *slot-mda*

Context	**configure isa tunnel-group** *number*
Description	The backup IPsec ISA to be used for this tunnel group.
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure isa tunnel-group** *number*
Description	The user-provided description for ISA tunnel group.
String Length	1 to 80
Introduced	16.0.R1

ipsec-responder-only *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa tunnel-group** *number*
Description	The IPsec tunnel responds the requests only and does not initiate exchanges with the peer.
Default	false
Introduced	16.0.R1

isa-scale-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa tunnel-group** *number*
Description	The set of supported scaling modes for each ISA in this group.
Options	tunnel-limit-2k, tunnel-limit-32k, tunnel-limit-8
Introduced	16.0.R1
Notes	This element is mandatory

multi-active

Context	**configure isa tunnel-group** *number*
Description	Enter the **multi-active** context
Introduced	16.0.R1

active-isa-number *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa tunnel-group** *number* **multi-active**
Description	The number of active ISAs to be used by this tunnel group to load-balance IPsec traffic.
Range	1 to 16
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

isa [isa-id] *slot-mda*

Context	**configure isa tunnel-group** *number* **multi-active**
Description	Enter the **isa** context
Introduced	16.0.R1

[isa-id] *slot-mda*

Context	**configure isa tunnel-group** *number* **multi-active isa** *slot-mda*
Description	The ISA associated with this tunnel group.
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

primary *slot-mda*

Context	**configure isa tunnel-group** *number*
Description	The primary IPsec ISA to be used for this tunnel group.
Introduced	16.0.R1
Notes	This element is part of a choice

reassembly

Context	**configure isa tunnel-group** *number*
Description	Enter the reassembly context
Introduced	16.0.R1

max-wait-time *number*

Context	**configure isa tunnel-group** *number* **reassembly**
Description	The maximum number of milliseconds to wait to receive all fragments of a particular IPsec or GRE packet for reassembly. The value of this leaf must be a multiple of 100 milliseconds.
Range	1 to 5000
Units	milliseconds
Introduced	16.0.R1

stats-collection

Context	**configure isa tunnel-group** *number*
Description	Enter the stats-collection context
Introduced	16.0.R1

isa-dp-cpu-usage *boolean*

Context	**configure isa tunnel-group** *number* **stats-collection**
Description	Collect the historical data-plane CPU usage statistics.
Default	false
Introduced	16.0.R1

video-group [video-group-id] *number*

Context	**configure isa**
Description	Enter the video-group context
Max. Elements	4
Introduced	16.0.R1

[video-group-id] *number*

Context	**configure isa video-group** *number*
Description	Video group identifier
Range	1 to 4
Introduced	16.0.R1
Notes	This element is part of a list key

ad-insert *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Enable the ad insert server for the group
Default	false
Introduced	16.0.R1

admin-state *keyword*

Context	**configure isa video-group** *number*
Description	Administrative state of a video group
Default	disable
Options	enable, disable
Introduced	16.0.R1

analyzer *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Enable video analyzer for all streams on video group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure isa video-group** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fcc-server *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Allow FCC server capability for the group
Default	false
Introduced	16.0.R1

local-rt-server *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Enable the local RET server for the group
Default	false
Introduced	16.0.R1

mda [mda-id] *slot-mda*

Context	**configure isa video-group** *number*
Description	Enter the mda context
Max. Elements	6
Introduced	16.0.R1

[mda-id] *slot-mda*

Context	**configure isa video-group** *number* **mda** *slot-mda*
Description	MDA identifier
Introduced	16.0.R1
Notes	This element is part of a list key

resv-ret *number*

Context	**configure isa video-group** *number*
Description	Egress bandwidth reserved for retransmission for all ISAs within a video group
Range	0 to 10500
Units	megabps
Introduced	16.0.R1

rt-client *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Allow client capability for retransmission
Default	true
Introduced	16.0.R1

stream-selection *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa video-group** *number*
Description	Allow stream selection for the group
Default	false
Introduced	16.0.R1

watermark

Context	**configure isa video-group** *number*
Description	Enter the watermark context
Introduced	16.0.R1

bandwidth

Context	**configure isa video-group** *number* **watermark**
Description	Enter the bandwidth context
Introduced	16.0.R1

fcc *number*

Context	**configure isa video-group** *number* **watermark bandwidth**
Description	FCC watermark parameters based on the bandwidth
Range	1 to 99
Default	90
Introduced	16.0.R1

ret *number*

Context	**configure isa video-group** *number* **watermark bandwidth**
Description	RET watermark parameters based on the bandwidth
Range	1 to 99
Default	90
Introduced	16.0.R1

total *number*

Context **configure isa video-group** *number* **watermark bandwidth**

Description Total watermark parameters based on the bandwidth

Range 1 to 99

Default 90

Introduced 16.0.R1

session

Context **configure isa video-group** *number* **watermark**

Description Enter the session context

Introduced 16.0.R1

fcc *number*

Context **configure isa video-group** *number* **watermark session**

Description FCC watermark parameters based on the session

Range 1 to 99

Default 90

Introduced 16.0.R1

ret *number*

Context **configure isa video-group** *number* **watermark session**

Description RET watermark parameters based on the session

Range 1 to 99

Default 90

Introduced 16.0.R1

total *number*

Context **configure isa video-group** *number* **watermark session**

Description Total watermark parameters based on the session

Range 1 to 99

Default 90

Introduced 16.0.R1

wlan-gw-group [id] *number*

Context	**configure isa**
Description	Enter the wlan-gw-group context
Max. Elements	1
Introduced	16.0.R1

[id] *number*

Context	**configure isa wlan-gw-group** *number*
Description	Unique value which to identify the WLAN-GW group within a chassis in system
Range	1 to 4
Introduced	16.0.R1
Notes	This element is part of a list key

active-iom-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number*
Description	Number of WLAN-GW IOMs used as active IOMs
Range	1 to 7
Introduced	16.0.R1

active-mda-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number*
Description	ISAs that can be active to use by the WLAN-GW group at the same time
Range	1 to 14
Introduced	16.0.R1

admin-state *keyword*

Context	**configure isa wlan-gw-group** *number*
Description	Administrative state of a WLAN gateway group
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure isa wlan-gw-group** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

iom [slot-number] *string*

Context	**configure isa wlan-gw-group** *number*
Description	Enter the iom context
Introduced	16.0.R1

[slot-number] *string*

Context	**configure isa wlan-gw-group** *number* **iom** *string*
Description	IOM slot to use in the WLAN-GW group
Reference	configure **card** (*iom-card-slot* | *cpm-card-slot*)
Introduced	16.0.R1
Notes	This element is part of a list key

mda [mda-id] *slot-mda*

Context	**configure isa wlan-gw-group** *number*
Description	Enter the mda context
Introduced	16.0.R1

[mda-id] *slot-mda*

Context	**configure isa wlan-gw-group** *number* **mda** *slot-mda*
Description	MDA slot value
Introduced	16.0.R1
Notes	This element is part of a list key

nat

Context	**configure isa wlan-gw-group** *number*
Description	Enter the nat context
Introduced	16.0.R1

log

Context	**configure isa wlan-gw-group** *number* **nat**
Description	Enter the log context
Introduced	16.0.R1

suppress-lsn-events *boolean*

Context	**configure isa wlan-gw-group** *number* **nat log**
Description	Suppress the generation of Large Scale NAT (LSN) events when RADIUS accounting is enabled
Default	true
Introduced	16.0.R1

suppress-lsn-sub-blocks-free *boolean*

Context	**configure isa wlan-gw-group** *number* **nat log**
Description	Suppress the LSN Free blocks and NAT pool block allocation notifications
Default	false
Introduced	16.0.R4

lsn *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number* **nat**
Description	Use Large Scale NAT
Default	true
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure isa wlan-gw-group** *number* **nat**
Description	RADIUS accounting policy for ISA group
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

session-limits

Context	**configure isa wlan-gw-group** *number* **nat**
Description	Enter the session-limits context
Introduced	16.0.R1

reserved *number*

Context	**configure isa wlan-gw-group** *number* **nat session-limits**
Description	Number of sessions reserved for prioritized sessions
Range	1 to 6291456
Introduced	16.0.R1

upnp-mappings *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number* **nat session-limits**
Description	Maximum number of Universal Plug and Play mappings per member
Range	1 to 524288
Default	524288
Introduced	16.0.R1

watermarks

Context	**configure isa wlan-gw-group** *number* **nat session-limits**
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure isa wlan-gw-group** *number* **nat session-limits watermarks**
Description	High watermark of the number of sessions for each MDA in this NAT ISA group
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure isa wlan-gw-group** *number* **nat session-limits watermarks**
Description	Low watermark of the number of sessions for each MDA in this NAT ISA group
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

port-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number*
Description	Base port configuration for WLAN-GW group ports that take part in per-UE QoS processing
Reference	configure **port-policy** *string*
Introduced	16.0.R1

redundancy *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number*
Description	Hardware unit subject to redundancy
Default	iom
Options	iom, mda
Introduced	16.0.R1

tunnel-port-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure isa wlan-gw-group** *number*
Description	
Reference	configure **port-policy** *string*
Introduced	16.0.R1

watermarks

Context	**configure isa wlan-gw-group** *number*
Description	Enter the watermarks context
Introduced	16.0.R1

mark [entity] *keyword*

Context	**configure isa wlan-gw-group** *number* **watermarks**
Description	Enter the mark context
Introduced	16.0.R1

[entity] *keyword*

Context	**configure isa wlan-gw-group** *number* **watermarks mark** *keyword*
Description	Entity to be monitored
Options	user-equipment, bridge-domain, radius-proxy-client
Introduced	16.0.R1
Notes	This element is part of a list key

high *number*

Context	**configure isa wlan-gw-group** *number* **watermarks mark** *keyword*
Description	High watermark for the WLAN-GW group
Range	1 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure isa wlan-gw-group** *number* **watermarks mark** *keyword*
Description	Low watermark for the WLAN-GW group
Range	0 to 99
Introduced	16.0.R1
Notes	This element is mandatory

16 lag Commands

configure
- — **lag** *number*

16.1 lag Command Descriptions

lag [lag-index] *number*

Context	**configure**
Description	Enter the lag context
Introduced	16.0.R1

[lag-index] *number*

Context	**configure lag** *number*
Description	LAG index
Range	1 to 800
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure lag** *number*
Description	Enter the access context
Introduced	16.0.R1

adapt-qos

Context	**configure lag** *number* **access**
Description	Enter the adapt-qos context
Introduced	16.0.R1

include-egr-hash-cfg *boolean*

Context	**configure lag** *number* **access adapt-qos**
Description	Factor explicitly configured hashing into the egress buffering and rate distribution
Default	false
Introduced	16.0.R1

mode *keyword*

Context	**configure lag** *number* **access adapt-qos**
Description	QoS adaptation mode
Options	link, distribute, port-fair
Introduced	16.0.R1

bandwidth *number*

Context	**configure lag** *number* **access**
Description	Administrative bandwidth applied to this LAG
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

booking-factor *number*

Context	**configure lag** *number* **access**
Description	Booking factor against the administrative bandwidth
Range	1 to 1000
Default	100
Introduced	16.0.R1

per-fp-egr-queuing *boolean*

Context	**configure lag** *number* **access**
Description	Per FP egress queuing
Default	false
Introduced	16.0.R1

per-fp-ing-queuing *boolean*

Context	**configure lag** *number* **access**
Description	Per-fp-ing-queuing to be set if no port members exists in the LAG
Default	false
Introduced	16.0.R1

per-fp-sap-instance *boolean*

Context	**configure lag** *number* **access**
Description	SAP instance allocation on a LAG
Default	false
Introduced	16.0.R1

admin-state *keyword*

Context	**configure lag** *number*
Description	Administrative state of LAG
Default	disable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure lag** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

ipv4

Context	**configure lag** *number* **bfd-liveness**
Description	Enter the ipv4 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Administrative state of micro-BFD sessions for this address family
Default	disable
Options	enable, disable
Introduced	16.0.R1

bfd-on-distributing-only *boolean*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Restrict micro-BFD sessions to links in LACP state distributing
Default	false
Introduced	16.0.R1

local-ip-address *ipv4-unicast-address*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	BFD source address
Introduced	16.0.R1

max-admin-down-time (*number* | *keyword*)

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Maximum time to behave as if the micro-BFD session was up while the remote end is down
Range	0 to 3600
Default	0
Units	seconds
Options	infinite
Introduced	16.0.R1

max-setup-time (*number* | *keyword*)

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Maximum time to behave as if the micro-BFD session was up while it is actually still being set up
Range	0 to 60000
Default	infinite
Units	milliseconds
Options	infinite
Introduced	16.0.R1

multiplier *number*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Number of BFD messages to miss before the micro-BFD session goes down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive-interval *number*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Receive timer for micro-BFD session over the associated LAG links
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

remote-ip-address *ipv4-unicast-address*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	BFD destination address
Introduced	16.0.R1

transmit-interval *number*

Context	**configure lag** *number* **bfd-liveness ipv4**
Description	Transmit timer for micro-BFD session over the associated LAG links
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

ipv6

Context	**configure lag** *number* **bfd-liveness**
Description	Enter the ipv6 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Administrative state of micro-BFD sessions for this address family
Default	disable
Options	enable, disable
Introduced	16.0.R1

bfd-on-distributing-only *boolean*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Restrict micro-BFD sessions to links in LACP state distributing
Default	false
Introduced	16.0.R1

local-ip-address *ipv6-unicast-address*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	BFD source address
Introduced	16.0.R1

max-admin-down-time (*number* | *keyword*)

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Maximum time to behave as if the micro-BFD session was up while the remote end is down
Range	0 to 3600
Default	0
Units	seconds
Options	infinite
Introduced	16.0.R1

max-setup-time (*number* | *keyword*)

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Maximum time to behave as if the micro-BFD session was up while it is actually still being set up
Range	0 to 60000
Default	infinite
Units	milliseconds
Options	infinite
Introduced	16.0.R1

multiplier *number*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Number of BFD messages to miss before the micro-BFD session goes down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive-interval *number*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Receive timer for micro-BFD session over the associated LAG links
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

remote-ip-address *ipv6-unicast-address*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	BFD destination address
Introduced	16.0.R1

transmit-interval *number*

Context	**configure lag** *number* **bfd-liveness ipv6**
Description	Transmit timer for micro-BFD session over the associated LAG links
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

soft-reset-extension *boolean*

Context	**configure lag** *number* **bfd-liveness**
Description	Extend BFD timers during soft reset
Default	true
Introduced	16.0.R1

description *string*

Context	**configure lag** *number*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dynamic-cost *boolean*

Context	**configure lag** *number*
Description	Allow OSPF or ISIS costing of a LAG based on available aggregated, operational bandwidth
Default	false
Introduced	16.0.R1

encap-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure lag** *number*
Description	Encapsulation type
Options	null, dot1q, qinq
Introduced	16.0.R1

eth-cfm

Context	**configure lag** *number*
Description	Enter the eth-cfm context
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure lag** *number* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the alarm-notification context

Introduced 16.0.R1

fng-alarm-time *number*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**

Description Time to expire before a Fault Notification Generation (FNG) alarm

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

fng-reset-time *number*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**

Description Time to expire before a Fault Notification Generation (FNG) alarm is reset

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

ccm *boolean*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate CCM messages

Default false

Introduced 16.0.R1

ccm-ltm-priority *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

csf

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the csf context
Introduced	16.0.R1

multiplier *decimal-number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Enter the test-pattern context
Introduced	16.0.R1

crc-tlv *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Generate a CRC checksum
Default	false
Introduced	16.0.R1

pattern *keyword*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Test pattern for eth-test frames
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1

facility-fault *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Allow the facility MEP to move from alarming only to network actionable function
Default	false
Introduced	16.0.R1

grace

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the grace context
Introduced	16.0.R1

eth-ed

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**
Description	Enter the eth-ed context
Introduced	16.0.R1

max-rx-defect-window *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Transmission priority for ETH-ED PDUs
Range	0 to 7
Introduced	16.0.R1

rx-eth-ed *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Receive and process ETH-ED PDUs
Default	true
Introduced	16.0.R1

tx-eth-ed *boolean*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Transmit ETH-ED PDUs
Default	false
Introduced	16.0.R1

eth-vsm-grace

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP

Default true

Introduced 16.0.R1

low-priority-defect *keyword*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Lowest priority defect that is allowed to generate a fault alarm

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

mac-address *mac-unicast-address*

Context **configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description MAC address for the MEP

Introduced 16.0.R1

one-way-delay-threshold *number*

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

vlan (*number* | *keyword*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure lag** *number* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique VLAN ID for a specific VLAN
Default	none
Introduced	16.0.R1

hold-time-down *number*

Context	**configure lag** *number*
Description	Delay time between detecting that a LAG is down and reporting to higher levels
Range	1 to 2000
Units	deciseconds
Introduced	16.0.R1

lacp

Context	**configure lag** *number*
Description	Enter the lacp context
Introduced	16.0.R1

administrative-key *number*

Context	**configure lag** *number* **lacp**
Description	LACP key
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

mode *keyword*

Context	**configure lag** *number* **lacp**
Description	Mode in which LACP operates
Default	passive
Options	passive, active
Introduced	16.0.R1

system-id *mac-address*

Context	**configure lag** *number* **lacp**
Description	System identifier for the system
Default	00:00:00:00:00:00
Introduced	16.0.R1

system-priority *number*

Context	**configure lag** *number* **lacp**
Description	System priority value
Range	0 to 65535
Introduced	16.0.R1

lacp-mux-control *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure lag** *number*
Description	Machine control to us in a LAG with LACP in active or passive modes
Default	coupled
Options	coupled, independent
Introduced	16.0.R1

lacp-xmit-interval *keyword*

Context	**configure lag** *number*
Description	Time for periodic transmission
Default	fast
Options	slow, fast
Introduced	16.0.R1

lacp-xmit-stdby *boolean*

Context	**configure lag** *number*
Description	Allow LACP message transmission on standby links
Default	true
Introduced	16.0.R1

link-map-profile [link-map-profile-id] *number*

Context	**configure lag** *number*
Description	Enter the link-map-profile context
Introduced	16.0.R1

[link-map-profile-id] *number*

Context	**configure lag** *number* **link-map-profile** *number*
Description	Link map profile to control LAG ports
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure lag** *number* **link-map-profile** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failure-mode *keyword*

Context	**configure lag** *number* **link-map-profile** *number*
Description	Failure mode of LAG link profile
Default	per-link-hash
Options	per-link-hash, discard
Introduced	16.0.R1

link [port-id] *string*

Context	**configure lag** *number* **link-map-profile** *number*
Description	Enter the link context
Introduced	16.0.R1

[port-id] *string*

Context	**configure lag** *number* **link-map-profile** *number* **link** *string*
Description	Port associated with the link map profile
Reference	configure **lag** *number* **port** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

port-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure lag** *number* **link-map-profile** *number* **link** *string*
Description	Type of the associated port for this entry
Options	primary, secondary
Introduced	16.0.R1
Notes	This element is mandatory

mac-address *mac-address*

Context	**configure lag** *number*
Description	Static MAC address for the LAG
Default	00:00:00:00:00:00
Introduced	16.0.R1

mode *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure lag** *number*
Description	Port mode of the LAG
Default	network
Options	access, network, hybrid
Introduced	16.0.R1

per-link-hash

Context	**configure lag** *number*
Description	Enter the per-link-hash context
Introduced	16.0.R1

weighted

Context	**configure lag** *number* **per-link-hash**
Description	Enter the weighted context
Introduced	16.0.R1

auto-rebalance *boolean*

Context	**configure lag** *number* **per-link-hash weighted**
Description	Automatically rebalance existing SAPs, subscribers, or interfaces when new links are added to a LAG
Default	false
Introduced	16.0.R1

port [port-id] *string*

Context	**configure lag** *number*
Description	Enter the port context
Introduced	16.0.R1

[port-id] *string*

Context	**configure lag** *number* **port** *string*
Description	Identifier to uniquely identify the port in the LAG
Reference	configure **port** *port*
Introduced	16.0.R1
Notes	This element is part of a list key

priority *number*

Context	**configure lag** *number* **port** *string*
Description	Priority of the port in the LAG
Range	1 to 65535
Default	32768
Introduced	16.0.R1

sub-group (*number* | *keyword*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure lag** *number* **port** *string*
Description	Subgroup of the port in the LAG
Range	1 to 8
Default	1
Options	auto-iom, auto-mda
Introduced	16.0.R1

port-threshold

Context	**configure lag** *number*
Description	Enter the port-threshold context
Introduced	16.0.R1

action *keyword*

Context	**configure lag** *number* **port-threshold**
Description	Action to take if the number of operational links is equal or below a threshold level
Default	down
Options	down, dynamic-cost, static-cost
Introduced	16.0.R1

cost *number*

Context	**configure lag** *number* **port-threshold**
Description	Cost of the LAG if the action is equal to static-cost. The cost can be used by IGP such as OSPF and ISIS.
Range	1 to 16777215
Introduced	16.0.R3

value *number*

Context	**configure lag** *number* **port-threshold**
Description	Number of operational links for the LAG at or below which the configured action is invoked
Range	0 to 63
Introduced	16.0.R1

port-type *keyword*

Context	**configure lag** *number*
Description	Port type of the LAG
Default	standard
Options	standard, hsmda, hs
Introduced	16.0.R1

port-weight-speed *number*

Context	**configure lag** *number*
Description	Speed corresponding to a port weight unit
Range	1 | 10
Units	gigabps
Introduced	16.0.R1

selection-criteria

Context	**configure lag** *number*
Description	Enter the selection-criteria context
Introduced	16.0.R1

mode *keyword*

Context	**configure lag** *number* **selection-criteria**
Description	Criteria to select the active subgroup
Default	highest-count
Options	highest-count, highest-weight, best-port
Introduced	16.0.R1

slave-to-partner *boolean*

Context	**configure lag** *number* **selection-criteria**
Description	Use slave-to-partner for selection criteria
Default	false
Introduced	16.0.R1

subgroup-hold-time (*number* | *keyword*)

Context	**configure lag** *number* **selection-criteria**
Description	Time to delay when switching to a newly selected active sub-group from the existing active sub-group
Range	0 to 2000
Default	0
Units	deciseconds
Options	infinite
Introduced	16.0.R1

standby-signaling *keyword*

Context	**configure lag** *number*
Description	Way of signaling a member port to the remote side
Default	lacp
Options	lacp, power-off
Introduced	16.0.R1

weight-threshold

Context	**configure lag** *number*
Description	Enter the weight-threshold context
Introduced	16.0.R1

action *keyword*

Context	**configure lag** *number* **weight-threshold**
Description	Action to take if the number of active links in the LAG is at or below the threshold value
Default	down
Options	down, dynamic-cost, static-cost
Introduced	16.0.R1

cost *number*

Context	**configure lag** *number* **weight-threshold**
Description	Cost of the LAG if the action is equal to static-cost. The cost can be used by IGP such as OSPF and ISIS.
Range	1 to 16777215
Introduced	16.0.R3

value *number*

Context	**configure lag** *number* **weight-threshold**
Description	Integer threshold number of operational links for the LAG
Range	0 to 63
Introduced	16.0.R1

17 log Commands

configure

17.1 log Command Descriptions

log

Context	**configure**
Description	Enter the log context
Introduced	16.0.R1

accounting-policy [policy-id] *number*

Context	**configure log**
Description	Enter the accounting-policy context
Introduced	16.0.R1

[policy-id] *number*

Context	**configure log accounting-policy** *number*
Description	Accounting policy unique ID
Range	1 to 99
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log accounting-policy** *number*
Description	Administrative state of this policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

collection-interval *number*

Context	**configure log accounting-policy** *number*
Description	Accounting collection interval
Range	1 to 120
Units	minutes
Introduced	16.0.R1

custom-record

Context **configure log accounting-policy** *number*
Description Enter the custom-record context
Introduced 16.0.R1

aa-specific

Context **configure log accounting-policy** *number* **custom-record**
Description Enter the aa-specific context
Introduced 16.0.R1

from-sub-counters

Context **configure log accounting-policy** *number* **custom-record aa-specific**
Description Enter the from-sub-counters context
Introduced 16.0.R1

flows-active-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description Include the active flows
Default false
Introduced 16.0.R1

flows-admitted-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description Include the admitted flows
Default false
Introduced 16.0.R1

flows-denied-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description Include the denied flows
Default false
Introduced 16.0.R1

forwarding-class *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**

Description Include forwarding class

Default false

Introduced 16.0.R1

max-throughput-octet-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**

Description Include maximum throughput as measured in octet count

Default false

Introduced 16.0.R1

max-throughput-packet-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**

Description Include maximum throughput as measured in packet count

Default false

Introduced 16.0.R1

max-throughput-timestamp *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**

Description Include timestamp of the maximum throughput

Default false

Introduced 16.0.R1

octets-admitted-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**

Description Include the admitted octets count

Default false

Introduced 16.0.R1

octets-denied-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description	Include the denied octets count
Default	false
Introduced	16.0.R1

packets-admitted-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description	Include the admitted packets count
Default	false
Introduced	16.0.R1

packets-denied-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific from-sub-counters**
Description	Include the denied packets count
Default	false
Introduced	16.0.R1

sub-attributes

Context	**configure log accounting-policy** *number* **custom-record aa-specific**
Description	Enter the sub-attributes context
Introduced	16.0.R1

app-service-options *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific sub-attributes**
Description	Include application service options
Default	false
Introduced	16.0.R1

sub-counters

Context **configure log accounting-policy** *number* **custom-record aa-specific**

Description Enter the sub-counters context

Introduced 16.0.R1

long-duration-flow-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific sub-counters**

Description Include the long duration flow count

Default false

Introduced 16.0.R1

medium-duration-flow-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific sub-counters**

Description Include the medium duration flow

Default false

Introduced 16.0.R1

short-duration-flow-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific sub-counters**

Description Include the short duration flow count

Default false

Introduced 16.0.R1

total-flow-duration *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific sub-counters**

Description Include the total flow duration count

Default false

Introduced 16.0.R1

total-flows-completed-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific sub-counters**
Description	Include the total of completed flows count
Default	false
Introduced	16.0.R1

to-sub-counters

Context	**configure log accounting-policy** *number* **custom-record aa-specific**
Description	Enter the to-sub-counters context
Introduced	16.0.R1

flows-active-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the active flows
Default	false
Introduced	16.0.R1

flows-admitted-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the admitted flows
Default	false
Introduced	16.0.R1

flows-denied-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the denied flows
Default	false
Introduced	16.0.R1

forwarding-class *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**

Description Include forwarding class

Default false

Introduced 16.0.R1

max-throughput-octet-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**

Description Include maximum throughput as measured in octet count

Default false

Introduced 16.0.R1

max-throughput-packet-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**

Description Include maximum throughput as measured in packet count

Default false

Introduced 16.0.R1

max-throughput-timestamp *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**

Description Include timestamp of the maximum throughput

Default false

Introduced 16.0.R1

octets-admitted-count *boolean*

Context **configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**

Description Include the admitted octets count

Default false

Introduced 16.0.R1

octets-denied-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the denied octets count
Default	false
Introduced	16.0.R1

packets-admitted-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the admitted packets count
Default	false
Introduced	16.0.R1

packets-denied-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record aa-specific to-sub-counters**
Description	Include the denied packets count
Default	false
Introduced	16.0.R1

queue [id] *number*

Context	**configure log accounting-policy** *number* **custom-record**
Description	Enter the queue context
Introduced	16.0.R1

[id] *number*

Context	**configure log accounting-policy** *number* **custom-record queue** *number*
Description	Custom record queue ID
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

e-counters

Context **configure log accounting-policy** *number* **custom-record queue** *number*

Description Enter the e-counters context

Introduced 16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**
Description	Include the out-profile octets discarded count
Default	false
Introduced	16.0.R1

out-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**
Description	Include the out-of-profile octets forwarded count
Default	false
Introduced	16.0.R1

out-profile-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**
Description	Include the out-profile packets discarded count
Default	false
Introduced	16.0.R1

out-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **e-counters**
Description	Include the out-of-profile packets forwarded count
Default	false
Introduced	16.0.R1

i-counters

Context	**configure log accounting-policy** *number* **custom-record queue** *number*
Description	Enter the i-counters context
Introduced	16.0.R1

all-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the all octets offered count
Default	false
Introduced	16.0.R1

all-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include all packets offered count
Default	false
Introduced	16.0.R1

high-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the high octets discarded count
Default	false
Introduced	16.0.R1

high-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the high octets offered count
Default	false
Introduced	16.0.R1

high-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the high packets discarded count
Default	false
Introduced	16.0.R1

high-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the high packets offered count
Default	false
Introduced	16.0.R1

in-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the in-profile octets forwarded count
Default	false
Introduced	16.0.R1

in-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the in-profile packets forwarded count
Default	false
Introduced	16.0.R1

low-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the low octets discarded count
Default	false
Introduced	16.0.R1

low-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the low octets offered count
Default	false
Introduced	16.0.R1

low-packets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**

Description Include the low packets discarded count

Default false

Introduced 16.0.R1

low-packets-offered-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**

Description Include the low packets offered count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

uncoloured-octets-offered-count *boolean*

Context **configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**

Description Include the uncolored octets offered count

Default false

Introduced 16.0.R1

uncoloured-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record queue** *number* **i-counters**
Description	Include the uncolored packets offered count
Default	false
Introduced	16.0.R1

ref-aa-specific-counter

Context	**configure log accounting-policy** *number* **custom-record**
Description	Enter the ref-aa-specific-counter context
Introduced	16.0.R1

any *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-aa-specific-counter**
Description	Report a change to any counter
Default	false
Introduced	16.0.R1

ref-override-counter

Context	**configure log accounting-policy** *number* **custom-record**
Description	Enter the ref-override-counter context
Introduced	16.0.R1

all

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter**
Description	All referenced override counters
Introduced	16.0.R1
Notes	This element is part of a choice

e-counters

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter**
Description	Enter the e-counters context
Introduced	16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the out-profile octets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the out-profile packets discarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter e-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

i-counters

Context **configure log accounting-policy** *number* **custom-record ref-override-counter**

Description Enter the i-counters context

Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**

Description Include the all octets offered count

Default false

Introduced 16.0.R1

all-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include all packets offered count
Default	false
Introduced	16.0.R1

high-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the high octets discarded count
Default	false
Introduced	16.0.R1

high-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the high packets discarded count
Default	false
Introduced	16.0.R1

in-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the in-profile octets forwarded count
Default	false
Introduced	16.0.R1

in-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the in-profile packets forwarded count
Default	false
Introduced	16.0.R1

low-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the low octets discarded count
Default	false
Introduced	16.0.R1

low-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the low packets discarded count
Default	false
Introduced	16.0.R1

out-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the out-of-profile octets forwarded count
Default	false
Introduced	16.0.R1

out-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter i-counters**
Description	Include the out-of-profile packets forwarded count
Default	false
Introduced	16.0.R1

id *number*

Context	**configure log accounting-policy** *number* **custom-record ref-override-counter**
Description	Override counter identity
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a choice

ref-queue

Context **configure log accounting-policy** *number* **custom-record**
Description Enter the ref-queue context
Introduced 16.0.R1

all

Context **configure log accounting-policy** *number* **custom-record ref-queue**
Description All referenced queues
Introduced 16.0.R1
Notes This element is part of a choice

e-counters

Context **configure log accounting-policy** *number* **custom-record ref-queue**
Description Enter the e-counters context
Introduced 16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description Include the in-profile octets discarded count
Default false
Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description Include the in-profile octets forwarded count
Default false
Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description	Include the in-profile packets discarded count
Default	false
Introduced	16.0.R1

in-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description	Include the in-profile packets forwarded count
Default	false
Introduced	16.0.R1

out-profile-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description	Include the out-profile octets discarded count
Default	false
Introduced	16.0.R1

out-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description	Include the out-of-profile octets forwarded count
Default	false
Introduced	16.0.R1

out-profile-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description	Include the out-profile packets discarded count
Default	false
Introduced	16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue e-counters**
Description Include the out-of-profile packets forwarded count
Default false
Introduced 16.0.R1

i-counters

Context **configure log accounting-policy** *number* **custom-record ref-queue**
Description Enter the i-counters context
Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description Include the all octets offered count
Default false
Introduced 16.0.R1

all-packets-offered-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description Include all packets offered count
Default false
Introduced 16.0.R1

high-octets-discarded-count *boolean*

Context **configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description Include the high octets discarded count
Default false
Introduced 16.0.R1

high-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the high octets offered count
Default	false
Introduced	16.0.R1

high-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the high packets discarded count
Default	false
Introduced	16.0.R1

high-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the high packets offered count
Default	false
Introduced	16.0.R1

in-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the in-profile octets forwarded count
Default	false
Introduced	16.0.R1

in-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the in-profile packets forwarded count
Default	false
Introduced	16.0.R1

low-octets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the low octets discarded count
Default	false
Introduced	16.0.R1

low-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the low octets offered count
Default	false
Introduced	16.0.R1

low-packets-discarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the low packets discarded count
Default	false
Introduced	16.0.R1

low-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the low packets offered count
Default	false
Introduced	16.0.R1

out-profile-octets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the out-of-profile octets forwarded count
Default	false
Introduced	16.0.R1

out-profile-packets-forwarded-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the out-of-profile packets forwarded count
Default	false
Introduced	16.0.R1

uncoloured-octets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the uncolored octets offered count
Default	false
Introduced	16.0.R1

uncoloured-packets-offered-count *boolean*

Context	**configure log accounting-policy** *number* **custom-record ref-queue i-counters**
Description	Include the uncolored packets offered count
Default	false
Introduced	16.0.R1

id *string*

Context	**configure log accounting-policy** *number* **custom-record ref-queue**
Description	Queue ID
Reference	configure **log accounting-policy** *number* **custom-record queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

significant-change *number*

Context	**configure log accounting-policy** *number* **custom-record**
Description	Significant change required to generate the record
Range	0 to max
Introduced	16.0.R1

default *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure log accounting-policy** *number*
Description	Default accounting policy for all objects that do not have an accounting policy
Default	false
Introduced	16.0.R1

description *string*

Context	**configure log accounting-policy** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination

Context	**configure log accounting-policy** *number*
Description	Enter the destination context
Introduced	16.0.R1

file *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log accounting-policy** *number* **destination**
Description	Unique file identifier when creating a log or accounting file
Reference	configure **log file** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

null

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log accounting-policy** *number* **destination**
Description	Destination not specified for records of an accounting policy.
Introduced	16.0.R1
Notes	This element is part of a choice

include-system-info *boolean*

Context	**configure log accounting-policy** *number*
Description	Include system information in accounting policy records
Default	false
Introduced	16.0.R1

record *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log accounting-policy** *number*
Description	Accounting record type that is forwarded to configured accounting file
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber,

custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress, combined-mpls-lsp-egress, combined-ldp-lsp-egress, saa, video, aa-performance, complete-ethernet-port, extended-service-ingress-egress, complete-network-ing-egr, aa-partition, complete-pm, aa-admit-deny

Introduced 16.0.R1

app-route-notifications

Context **configure log**

Description Enter the app-route-notifications context

Introduced 16.0.R1

cold-start-wait *number*

Context **configure log app-route-notifications**

Description Time delay before notifying specific CPM applications for available route

Range 1 to 300

Introduced 16.0.R1

route-recovery-wait *number*

Context **configure log app-route-notifications**

Description Time delay before notifying specific CPM applications after route recovery or change

Range 1 to 100

Introduced 16.0.R1

event-damping *boolean*

Context **configure log**

Description Allow event damping algorithm to suppress QoS or filter change events

Default true

Introduced 16.0.R1

event-handling

Context **configure log**

Description Enter the event-handling context

Introduced 16.0.R1

handler [name] *string*

Context	**configure log event-handling**
Description	Enter the handler context
Max. Elements	1500
Introduced	16.0.R1

[name] *string*

Context	**configure log event-handling handler** *string*
Description	File ID to use when creating a log, or accounting file
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-handling handler** *string*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-handling handler** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-handling handler** *string*
Description	Enter the entry context
Max. Elements	1500
Introduced	16.0.R1

[id] *number*

Context	**configure log event-handling handler** *string* **entry** *number*
Description	Index of an event entry in parent EHS Event Handler
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-handling handler** *string* **entry** *number*
Description	Administrative state of EHS event
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-handling handler** *string* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

min-delay *number*

Context	**configure log event-handling handler** *string* **entry** *number*
Description	Minimum delay between subsequent executions of the script policy
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

script-policy

Context	**configure log event-handling handler** *string* **entry** *number*
Description	Enter the script-policy context
Introduced	16.0.R1

name *string*

Context **configure log event-handling handler** *string* **entry** *number* **script-policy**
Description Name combined with value of owner to launch the script policy
Reference configure **system script-control script-policy** *string* **owner** *string*
Introduced 16.0.R1

owner *string*

Context **configure log event-handling handler** *string* **entry** *number* **script-policy**
Description Name combined with value of owner to launch the script policy
Default TiMOS CLI
Reference configure **system script-control script-policy** *string* **owner** *string*
Introduced 16.0.R1

event-trigger

Context **configure log**
Description Enter the event-trigger context
Introduced 16.0.R1

adp event *keyword*

Context **configure log event-trigger**
Description Enter the adp context
Introduced 16.0.R1

event *keyword*

Context **configure log event-trigger adp event** *keyword*
Description Specific log event as a trigger for one or more EHS handlers
Options tmnxDiscoveryEndNotify, tmnxDiscoveryCellularReq
Introduced 16.0.R1
Notes This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger adp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger adp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger adp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger adp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger adp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context **configure log event-trigger adp event** *keyword* **entry** *number*

Description Enter the debounce context

Introduced 16.0.R1

time *number*

Context **configure log event-trigger adp event** *keyword* **entry** *number* **debounce**

Description Time within which specific event must occur for EHS to trigger response

Range 1 to 604800

Units seconds

Introduced 16.0.R1

value *number*

Context **configure log event-trigger adp event** *keyword* **entry** *number* **debounce**

Description Number of event occurrences within specific time for EHS to trigger response

Range 2 to 15

Introduced 16.0.R1

description *string*

Context **configure log event-trigger adp event** *keyword* **entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

filter *string*

Context **configure log event-trigger adp event** *keyword* **entry** *number*

Description Log filter for EHS event trigger entry

Reference configure **log filter** *number*

Introduced 16.0.R1

handler *string*

Context	**configure log event-trigger adp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

application-assurance event *keyword*

Context	**configure log event-trigger**
Description	Enter the application-assurance context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger application-assurance event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxBsxIsaAaGrpFailureV2, tmnxBsxIsaAaGrpFailureClearV2, tmnxBsxIsaAaGrpNonRedundantV2, tmnxBsxIsaAaGrpSwitchover, tmnxBsxIsaAaGrpFlowFull, tmnxBsxIsaAaGrpFlowFullClear, tmnxBsxIsaAaSubLoadBalance, tmnxBsxIsaAaGrpCapCostThres, tmnxBsxIsaAaGrpCapCostThresClear, tmnxBsxAaSubscribersUnassigned, tmnxBsxAaSubscriberAcctDataLoss, tmnxBsxAaSubPolResExceeded, tmnxBsxAaSubPolResExceededClear, tmnxBsxIsaAaGrpFlowSetup, tmnxBsxIsaAaGrpFlowSetupClear, tmnxBsxIsaAaGrpPacketRate, tmnxBsxIsaAaGrpPacketRateClear, tmnxBsxIsaAaGrpBitRate, tmnxBsxIsaAaGrpBitRateClear, tmnxBsxTransIpPolAaSubCreated, tmnxBsxTransIpPolAaSubDeleted, tmnxBsxTransIpPolRadCoAAudit, tmnxBsxTransIpPolRadCoAError, tmnxBsxTransIpPolRadDiscError, tmnxBsxTransIpPolDhcpAddWarning, tmnxBsxTransIpPolDhcpDelWarning, tmnxBsxIsaAaGrpFmSbWaSBufOvld, tmnxBsxIsaAaGrpFmSbWaSBufOvldClr, tmnxBsxIsaAaGrpToSbWaSBufOvld, tmnxBsxIsaAaGrpToSbWaSBufOvldClr, tmnxBsxIsaAaGrpOvrldCutthru, tmnxBsxIsaAaGrpOvrldCutthruClr, tmnxBsxTransitIpPersistenceWarn, tmnxBsxAarpInstOperStateChanged, tmnxBsxAarpInstStateChanged, tmnxBsxRadApFailure, tmnxBsxRadApServOperStateChange, tmnxBsxMobileSubModifyFailure, tmnxBsxRadApIntrmUpdateSkipped, tmnxBsxHttpUrlParamLimitExceeded, tmnxBsxUrlFilterOperStateChange, tmnxBsxSubModifyFailure, tmnxBsxDnsIpCacheFull, tmnxBsxDnsIpCacheFullClear, tmnxBsxUrlListUpdate, tmnxBsxUrlListFailure, tmnxBsxIsaAaTimFileProcFailure, tmnxBsxStatTcaThreshCrossed, tmnxBsxStatTcaThreshCrossedClear, tmnxBsxStatPolcrTcaThreshCrossed, tmnxBsxStatPolcrTcaThreshCrClear, tmnxBsxStatFtrTcaThreshCrossed,

tmnxBsxStatFtrTcaThreshCrClear, tmnxBsxStatFtrEnTcaThreshCrossed, tmnxBsxStatFtrEnTcaThreshCrClear, tmnxBsxTransIpPolDiamGxError, tmnxBsxDatapathCpuUsage, tmnxBsxDatapathCpuUsageClear, tmnxBsxTcpValTcaCrossed, tmnxBsxTcpValTcaCrossedClear, tmnxBsxSubQuarantined, tmnxBsxSubQuarantinedClear

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure log event-trigger application-assurance event** *keyword*

Description Administrative state of EHS event

Default disable

Options enable, disable

Introduced 16.0.R1

description *string*

Context **configure log event-trigger application-assurance event** *keyword*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

entry [id] *number*

Context **configure log event-trigger application-assurance event** *keyword*

Description Enter the entry context

Introduced 16.0.R1

[id] *number*

Context **configure log event-trigger application-assurance event** *keyword* **entry** *number*

Description ID of a trigger entry in the parent EHS event trigger

Range 1 to 1500

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger application-assurance event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

aps event *keyword*

Context	**configure log event-trigger**
Description	Enter the aps context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger aps event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	apsEventSwitchover, apsEventModeMismatch, apsEventChannelMismatch, apsEventPSBF, apsEventFEPLF, tApsModeMismatchClear, tApsChannelMismatchClear, tApsPSBFClear, tApsFEPLFClear, tApsLocalSwitchCommandSet, tApsLocalSwitchCommandClear, tApsRemoteSwitchCommandSet, tApsRemoteSwitchCommandClear, tApsMcApsCtlLinkStateChange, tApsChanTxLaisStateChange, tApsPrimaryChannelChange
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger aps event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger aps event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger aps event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger aps event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger aps event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context **configure log event-trigger aps event** *keyword* **entry** *number*
Description Enter the debounce context
Introduced 16.0.R1

time *number*

Context **configure log event-trigger aps event** *keyword* **entry** *number* **debounce**
Description Time within which specific event must occur for EHS to trigger response
Range 1 to 604800
Units seconds
Introduced 16.0.R1

value *number*

Context **configure log event-trigger aps event** *keyword* **entry** *number* **debounce**
Description Number of event occurrences within specific time for EHS to trigger response
Range 2 to 15
Introduced 16.0.R1

description *string*

Context **configure log event-trigger aps event** *keyword* **entry** *number*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

filter *string*

Context **configure log event-trigger aps event** *keyword* **entry** *number*
Description Log filter for EHS event trigger entry
Reference configure **log filter** *number*
Introduced 16.0.R1

handler *string*

Context	**configure log event-trigger aps event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

atm event *keyword*

Context	**configure log event-trigger**
Description	Enter the atm context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger atm event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tAtmTcSubLayerDown, tAtmTcSubLayerClear, atmVclStatusChange, atmVplStatusChange, atmVtlStatusChange, atmIfcStatusChange, tAtmPlcpSubLayerDown, tAtmPlcpSubLayerClear, tAtmEpOutOfPeerVpiOrVciRange, tAtmMaxPeerVccsExceeded, tAtmMaxPeerVpcsExceeded, tAtmIlmiLinkStatusChange, atmIlmiPeerVclStatusChange, atmIlmiPeerVplStatusChange
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger atm event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger atm event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger atm event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger atm event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger atm event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger atm event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

auto-prov event *keyword*

Context	**configure log event-trigger**
Description	Enter the auto-prov context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger auto-prov event** *keyword*
Description	Events for auto-prov module.
Options	autoNodeProv
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger auto-prov event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger chassis event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger chassis event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger chassis event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger chassis event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

debug event *keyword*

Context	**configure log event-trigger**
Description	Enter the debug context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger debug event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	traceEvent
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger debug event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger debug event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger debug event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger debug event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger debug event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger debug event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger debug event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger debug event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

elmi event *keyword*

Context	**configure log event-trigger**
Description	Enter the elmi context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger elmi event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxElmiIfStatusChangeEvent, tmnxElmiEVCStatusChangeEvent
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger elmi event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger elmi event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger elmi event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger elmi event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

ering event *keyword*

Context	**configure log event-trigger**
Description	Enter the ering context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger ering event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxEthRingPathFwdStateChange, tmnxEthRingApsPrvsnRaiseAlarm, tmnxEthRingApsPrvsnClearAlarm
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger ering event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger ering event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger ering event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context **configure log event-trigger ering event** *keyword* **entry** *number*

Description ID of a trigger entry in the parent EHS event trigger

Range 1 to 1500

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure log event-trigger ering event** *keyword* **entry** *number*

Description Administrative state of the EHS event trigger entry

Default enable

Options enable, disable

Introduced 16.0.R1

debounce

Context **configure log event-trigger ering event** *keyword* **entry** *number*

Description Enter the debounce context

Introduced 16.0.R1

time *number*

Context **configure log event-trigger ering event** *keyword* **entry** *number* **debounce**

Description Time within which specific event must occur for EHS to trigger response

Range 1 to 604800

Units seconds

Introduced 16.0.R1

value *number*

Context **configure log event-trigger ering event** *keyword* **entry** *number* **debounce**

Description Number of event occurrences within specific time for EHS to trigger response

Range 2 to 15

Introduced 16.0.R1

description *string*

Context	**configure log event-trigger ering event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger ering event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger ering event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

eth-cfm event *keyword*

Context	**configure log event-trigger**
Description	Enter the eth-cfm context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger eth-cfm event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	dot1agCfmFaultAlarm, tmnxDot1agCfmMepLbmTestComplete, tmnxDot1agCfmMepLtmTestComplete, tmnxDot1agCfmMepEthTestComplete, tmnxDot1agCfmMepDMTestComplete, tmnxDot1agCfmMepAisStateChanged, tmnxDot1agCfmMipEvaluation, tmnxDot1agCfmMepSLMTestComplete, tmnxDot1agCfmMepCsfStateChanged, tmnxDot1agCfmMepFcltyFaultRaise, tmnxDot1agCfmMepFcltyFaultClear
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger eth-cfm event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger eth-cfm event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger eth-cfm event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context **configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description Enter the debounce context
Introduced 16.0.R1

time *number*

Context **configure log event-trigger eth-cfm event** *keyword* **entry** *number* **debounce**
Description Time within which specific event must occur for EHS to trigger response
Range 1 to 604800
Units seconds
Introduced 16.0.R1

value *number*

Context **configure log event-trigger eth-cfm event** *keyword* **entry** *number* **debounce**
Description Number of event occurrences within specific time for EHS to trigger response
Range 2 to 15
Introduced 16.0.R1

description *string*

Context **configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

filter *string*

Context **configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description Log filter for EHS event trigger entry
Reference configure **log filter** *number*
Introduced 16.0.R1

handler *string*

Context	**configure log event-trigger eth-cfm event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

etun event *keyword*

Context	**configure log event-trigger**
Description	Enter the etun context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger etun event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxEthTunnelApsCfgRaiseAlarm, tmnxEthTunnelApsCfgClearAlarm, tmnxEthTunnelApsPrvsnRaiseAlarm, tmnxEthTunnelApsPrvsnClearAlarm, tmnxEthTunnelApsNoRspRaiseAlarm, tmnxEthTunnelApsNoRspClearAlarm, tmnxEthTunnelApsSwitchoverAlarm
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger etun event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger etun event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger etun event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger etun event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger etun event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger etun event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger etun event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger etun event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Introduced	16.0.R1

description *string*

Context	**configure log event-trigger igmp-snooping event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger igmp-snooping event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger igmp-snooping event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

ip event *keyword*

Context	**configure log event-trigger**
Description	Enter the ip context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger ip event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	clearRTMError, ipEtherBroadcast, ipDuplicateAddress, ipArpInfoOverwritten, fibAddFailed, qosNetworkPolicyMallocFailed, ipArpBadInterface, ipArpDuplicateIpAddress, ipArpDuplicateMacAddress, ipAnyDuplicateAddress
Introduced	16.0.R1
Notes	This element is part of a list key

Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger lldp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	lldpRemTablesChange, tmnxLldpRemEntryPeerAdded, tmnxLldpRemEntryPeerUpdated, tmnxLldpRemEntryPeerRemoved, tmnxLldpRemManAddrEntryAdded, tmnxLldpRemManAddrEntryRemoved
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger lldp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger lldp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger lldp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger lldp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

lmp event *keyword*

Context	**configure log event-trigger**
Description	Enter the lmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger lmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxLmpVRtrTeLinkPropMismatch, tmnxLmpVRtrTeLinkPropMismatchClr, tmnxLmpVRtrDbLinkPropMismatch, tmnxLmpVRtrDbLinkPropMismatchClr, tmnxLmpVRtrControlChannelState, tmnxLmpVRtrTeLinkState
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger lmp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger lmp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger lmp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context **configure log event-trigger lmp event** *keyword* **entry** *number*
Description ID of a trigger entry in the parent EHS event trigger
Range 1 to 1500
Introduced 16.0.R1
Notes This element is part of a list key

admin-state *keyword*

Context **configure log event-trigger lmp event** *keyword* **entry** *number*
Description Administrative state of the EHS event trigger entry
Default enable
Options enable, disable
Introduced 16.0.R1

debounce

Context **configure log event-trigger lmp event** *keyword* **entry** *number*
Description Enter the debounce context
Introduced 16.0.R1

time *number*

Context **configure log event-trigger lmp event** *keyword* **entry** *number* **debounce**
Description Time within which specific event must occur for EHS to trigger response
Range 1 to 604800
Units seconds
Introduced 16.0.R1

value *number*

Context **configure log event-trigger lmp event** *keyword* **entry** *number* **debounce**
Description Number of event occurrences within specific time for EHS to trigger response
Range 2 to 15
Introduced 16.0.R1

description *string*

Context	**configure log event-trigger lmp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger lmp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger lmp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

logger event *keyword*

Context	**configure log event-trigger**
Description	Enter the logger context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger logger event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	started, tmnxLogTraceError, tmnxLogSpaceContention, tmnxLogAdminLocFailed, tmnxLogBackupLocFailed, tmnxLogFileRollover, tmnxLogFileDeleted, tmnxClear, tmnxTestEvent, tmnxLogEventThrottled, tmnxSysLogTargetProblem, tmnxLogAccountingDataLoss, tmnxStdEventsReplayed, tmnxLogOnlyEventThrottled, tmnxLogEventOverrun, tmnxLogOnlyEventOverrun
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger logger event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger logger event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger logger event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger logger event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger logger event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger logger event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

macsec event *keyword*

Context	**configure log event-trigger**
Description	Enter the macsec context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger macsec event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxMacsecConfiguredPortCA, tmnxMacsecUnconfiguredPortCA, tmnxMacsecEnabledPort, tmnxMacsecDisabledPort, tmnxMacsecMaxPeerLimitExceeded, tmnxMkaSessionEstablished, tmnxMkaPskRollover, tmnxMkaSessionEnded
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger macsec event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger macsec event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger macsec event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger macsec event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

mc-redundancy event *keyword*

Context	**configure log event-trigger**
Description	Enter the mc-redundancy context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger mc-redundancy event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxMcRedundancyPeerStateChanged, tmnxMcRedundancyMismatchDetected, tmnxMcRedundancyMismatchResolved, tmnxMcPeerSyncStatusChanged, tmnxMcSyncClientAlarmRaised, tmnxMcSyncClientAlarmCleared, tmnxSrrpSubnetMismatch, tmnxSrrpSubnetMismatchCleared, tmnxSrrpInstanceIdMismatch, tmnxSrrpSapMismatch, tmnxSrrpSapTagMismatch, tmnxSrrpRedIfMismatch, tmnxSrrpDualMaster, tmnxMcLagInfoLagChanged, tmnxSrrpSystemIpNotSet, tmnxMcRingOperStateChanged, tmnxMcRingInbCtrlOperStateChgd, tmnxMcRingNodeLocOperStateChgd, tmnxMcSyncClockSkewRaised, tmnxMcSyncClockSkewCleared, tmnxSrrpDuplicateSubIfAddress, tmnxMcPeerRingsOperStateChanged, tmnxSrrpTrapNewMaster, tmnxSrrpBecameBackup, srrpPacketDiscarded, tmnxSrrpBfdIntfSessStateChgd, tmnxMcPeerEPBfdSessionOpen, tmnxMcPeerEPBfdSessionClose, tmnxMcPeerEPBfdSessionUp, tmnxMcPeerEPBfdSessionDown, tmnxMcPeerEPOperDown, tmnxMcPeerEPOperUp, tmnxMCEPSessionPsvModeEnabled, tmnxMCEPSessionPsvModeDisabled, tMcPeerIPsecTnlGrpMasterStateChg, tMcPeerIPsecTnlGrpProtStatusChg, tmnxMcOmcrStatFailedChanged, tmnxMcOmcrClientNumEntriesHigh, tmnxSrrpOperDownInvalidMac, tmnxSrrpOperDownInvalidMacClear
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger mld-snooping event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sapMldSnpgGrpLimitExceeded, sdpBndMldSnpgGrpLimitExceeded, sapMldSnpgMcsFailure
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mld-snooping event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mld-snooping event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger mld-snooping event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger mld-snooping event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

mpls event *keyword*

Context	**configure log event-trigger**
Description	Enter the mpls context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger mpls event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	mplsXCUp, mplsXCDown, mplsTunnelUp, mplsTunnelDown, mplsTunnelRerouted, mplsTunnelReoptimized, vRtrMplsStateChange, vRtrMplsIfStateChange, vRtrMplsLspUp, vRtrMplsLspDown, vRtrMplsLspPathUp, vRtrMplsLspPathDown, vRtrMplsLspPathRerouted, vRtrMplsLspPathResignaled, vRtrMplsP2mpInstanceUp, vRtrMplsP2mpInstanceDown, vRtrMplsS2lSubLspUp, vRtrMplsS2lSubLspDown, vRtrMplsS2lSubLspRerouted, vRtrMplsS2lSubLspResignaled, vRtrMplsLspPathSoftPreempted, vRtrMplsLspPathLstFillReoptElig, vRtrMplsP2mpInstanceResignaled, vRtrMplsResignalTimerExpired, vRtrMplsLspPathMbbStatusEvent, vRtrMplsLspSwitchStbyFailure, vRtrMplsLspActivePathChanged, vRtrMplsXCBundleChange, vRtrMplsNodeInIgpOverload
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mpls event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mpls event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger mpls event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger mpls event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

mpls-tp event *keyword*

Context	**configure log event-trigger**
Description	Enter the mpls-tp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger mpls-tp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrMplsTpLspRevertMismatchAlarm, vRtrMplsTpLspRevertMismatchClear, vRtrMplsTpLspPtTypeMismatchAlarm, vRtrMplsTpLspPtTypeMismatchClear, vRtrMplsTpLspActivePathUp, vRtrMplsTpLspActivePathChange
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mpls-tp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mpls-tp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger mpls-tp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger mpls-tp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

msdp event *keyword*

Context	**configure log event-trigger**
Description	Enter the msdp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger msdp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	msdpEstablished, msdpBackwardTransition, tmnxMsdpNgActSrcLimExcd, tmnxMsdpNgPeerActSrcLimExcd, tmnxMsdpNgRPFFailure, tmnxMsdpNgSourceSrcActMsgsExcd, tmnxMsdpNgGroupSrcActMsgsExcd
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger msdp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger msdp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger msdp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger msdp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

nat event *keyword*

Context	**configure log event-trigger**
Description	Enter the nat context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger nat event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxNatPlL2AwBlockUsageHigh, tmnxNatIsaMemberSessionUsageHigh, tmnxNatPlLsnMemberBlockUsageHigh, tmnxNatL2AwSubIcmpPortUsageHigh, tmnxNatL2AwSubUdpPortUsageHigh, tmnxNatL2AwSubTcpPortUsageHigh, tmnxNatL2AwSubSessionUsageHigh, tmnxNatPlBlockAllocationLsn, tmnxNatPlBlockAllocationL2Aw, tmnxNatResourceProblemDetected, tmnxNatResourceProblemCause, tmnxNatPlAddrFree, tmnxNatPlLsnRedActiveChanged, tmnxNatPcpSrvStateChanged, tmnxNatMdaActive, tmnxNatLsnSubBlksFree, tmnxNatDetPlcyChanged, tmnxNatMdaDetectsLoadSharingErr, tmnxNatIsaGrpOperStateChanged, tmnxNatIsaGrpIsDegraded, tmnxNatLsnSubIcmpPortUsgHigh, tmnxNatLsnSubUdpPortUsgHigh, tmnxNatLsnSubTcpPortUsgHigh, tmnxNatLsnSubSessionUsgHigh, tmnxNatInAddrPrefixBlksFree, tmnxNatFwd2EntryAdded, tmnxNatDetPlcyOperStateChanged, tmnxNatDetMapOperStateChanged, tmnxNatFwd2OperStateChanged, tmnxNatVrtrOutDnatOnlyRoutesHigh, tmnxNatMapRuleChange, tmnxNatMaxNbrSubsOrHostsExceeded, tmnxNatNbrSubsOrHostsBelowThrsh
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger ospf event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger ospf event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

pcap event *keyword*

Context	**configure log event-trigger**
Description	Enter the pcap context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger pcap event** *keyword*
Description	Events for PCAP module
Options	tmnxPcapFileError, tmnxPcapBufferFull, tmnxPcapReadWriteFailure, tmnxPcapSoftwareFailure
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger radius event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger radius event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger radius event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger radius event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger radius event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger radius event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger radius event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

rip event *keyword*

Context	**configure log event-trigger**
Description	Enter the rip context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger rip event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	ripPacketDiscarded, vRtrRipAuthTypeMismatch, vRtrRipAuthTypeFailure, vRtrRipInstanceShuttingDown, vRtrRipInstanceRestarted, vRtrRipInstanceExpLmtReached, vRtrRipInstanceExpLmtWarning, vRtrRipInstanceRtsExpLmtDropped, vRtrRipPeerBfdDown
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger rip event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger rip event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger rip event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context **configure log event-trigger rip event** *keyword* **entry** *number*

Description ID of a trigger entry in the parent EHS event trigger

Range 1 to 1500

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure log event-trigger rip event** *keyword* **entry** *number*

Description Administrative state of the EHS event trigger entry

Default enable

Options enable, disable

Introduced 16.0.R1

debounce

Context **configure log event-trigger rip event** *keyword* **entry** *number*

Description Enter the debounce context

Introduced 16.0.R1

time *number*

Context **configure log event-trigger rip event** *keyword* **entry** *number* **debounce**

Description Time within which specific event must occur for EHS to trigger response

Range 1 to 604800

Units seconds

Introduced 16.0.R1

value *number*

Context **configure log event-trigger rip event** *keyword* **entry** *number* **debounce**

Description Number of event occurrences within specific time for EHS to trigger response

Range 2 to 15

Introduced 16.0.R1

description *string*

Context	**configure log event-trigger rip event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger rip event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger rip event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

ripng event *keyword*

Context	**configure log event-trigger**
Description	Enter the ripng context
Introduced	16.0.R3

event *keyword*

Context	**configure log event-trigger ripng event** *keyword*
Description	Events for RIPng module.
Options	tmnxRipNgPacketDiscarded, tmnxRipNgAuthTypeMismatch, tmnxRipNgAuthFailure, tmnxRipNgInstShuttingDown, tmnxRipNgInstRestarted, tmnxRipNgInstExpLmtReached, tmnxRipNgInstExpLmtWarning, tmnxRipNgInstRtsExpLmtDropped, tmnxRipNgIfUcastAddrNotUsed, tmnxRipNgPeerBfdDown
Introduced	16.0.R3
Notes	This element is part of a list key

Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger sflow event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger sflow event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

snmp event *keyword*

Context	**configure log event-trigger**
Description	Enter the snmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger snmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	coldStart, warmStart, authenticationFailure, linkDown, linkUp, risingAlarm, fallingAlarm, snmpdError
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger snmp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger snmp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger snmp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger snmp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

stp event *keyword*

Context	**configure log event-trigger**
Description	Enter the stp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger stp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	topologyChangeSapMajorState, newRootSap, topologyChangeVcpState, newRootVcpState, topologyChangeSapState, receivedTCN, newRootBridge, unacknowledgedTCN, higherPriorityBridge, sapEncapPVST, sapEncapDot1d, tmnxSvcTopoChgSdpBindMajorState, tmnxSvcNewRootSdpBind, tmnxSvcTopoChgSdpBindState, tmnxSvcSdpBindRcvdTCN, tmnxSvcSdpBindRcvdHigherBriPrio, tmnxSvcSdpBindEncapPVST, tmnxSvcSdpBindEncapDot1d, tmnxNewCistRegionalRootBridge, tmnxNewMstiRegionalRootBridge, tmnxStpRootGuardViolation, tmnxStpMeshNotInMstRegion, tmnxSapStpExcepCondStateChng, tmnxSdpBndStpExcepCondStateChng, sapActiveProtocolChange, tmnxSvcSdpActiveProtocolChange, vcpActiveProtocolChange, topologyChangePipMajorState, topologyChangePipState, tmnxPipStpExcepCondStateChng, pipActiveProtocolChange
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger vrrp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

vrtr event *keyword*

Context	**configure log event-trigger**
Description	Enter the vrtr context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger vrtr event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxVRtrMidRouteTCA, tmnxVRtrHighRouteTCA, tmnxVRtrHighRouteCleared, tmnxVRtrMcastMidRouteTCA, tmnxVRtrMcastMaxRoutesTCA, tmnxVRtrMcastMaxRoutesCleared, tmnxVRtrMaxArpEntriesTCA, tmnxVRtrMaxArpEntriesCleared, tmnxVRtrMaxRoutes, tmnxVRtrBfdMaxSessionOnSlot, tmnxVRtrBfdPortTypeNotSupported, tmnxVRtrIPv6MidRouteTCA, tmnxVRtrIPv6HighRouteTCA, tmnxVRtrIPv6HighRouteCleared, tmnxVRtrStaticRouteCPEStatus, tmnxVRtrManagedRouteAddFailed, tmnxVRtrFibOccupancyThreshold, tmnxVRtrInetAddressAttachFailed, tmnxVRtrSingleSfmOverloadStateCh, tmnxVRtrGrtExportLimitReached, tmnxVRtrGrtRoutesExpLimitDropped, tmnxVRtrIfLdpSyncTimerStart, tmnxVRtrIfLdpSyncTimerStop, tmnxVRtrGrtV6ExportLimitReached, tmnxVRtrGrtV6RoutesExpLimDropped, tmnxVRtrStaticRouteStatusChanged, tmnxVRtrBfdSessExtDown, tmnxVRtrBfdSessExtUp, tmnxVRtrBfdSessExtDeleted, tmnxVRtrBfdSessExtProtChange, tmnxVRtrBfdExtNoCpmNpResources, tmnxVRtrDnsFault, tmnxVRtrMacAcctLimitReached, tmnxVRtrMacAcctLimitCleared, tmnxVRtrNgBfdSessDown, tmnxVRtrNgBfdSessUp, tmnxVRtrNgBfdSessDeleted, tmnxVRtrNgBfdSessProtChange, tmnxVRtrNgBfdNoCpmNpResources, tmnxVRtrNHRvplsARPHighUsage, tmnxVRtrNHRvplsARPExhaust, tmnxVRtrNHRvplsARPHighUsageClr, tmnxVRtrArpLmt, tmnxVRtrArpThresholdExceeded, tmnxVRtrIpv6NbrLmt, tmnxVRtrIpv6NbrThresholdExceeded, tmnxVRtrIfIgnorePortState, tmnxVRtrPdnAddrMismatch, tmnxVRtrPdnAddrMismatchCleared, tmnxVRtrLeakExportLimitReached, tmnxVRtrLeakExportLimitDropped
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger vrtr event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger vrtr event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger vrtr event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger vrtr event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

wlan-gw event *keyword*

Context	**configure log event-trigger**
Description	Enter the wlan-gw context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger wlan-gw event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxWlanGwResrcProblemDetected, tmnxWlanGwResrcProblemCause, tmnxWlanGwTuQosProblem, tmnxWlanGwGrpOperStateChanged, tmnxWlanGwIomActive, tmnxWlanGwMgwConnected, tmnxWlanGwMgwRestarted, tmnxWlanGwNumMgwHi, tmnxWlanGwMgwStateChanged, tmnxWlanGwQosRadiusGtpMismatch, tmnxWlanGwSubIfRedActiveChanged, tmnxWlanGwDsmGtpTunnelSetupFail, tmnxWlanGwSubIfPmStartD6cFailed, tmnxWlanGwSubIfPmNewPlReqFailed, tmnxWlanGwSubIfPmAddNewPlFailed, tmnxWlanGwSubIfPmCrIntObjFailed, tmnxWlanGwSubIfPmPoolTimeout, tmnxWlanGwSubIfPmPoolUsageLow, tmnxWlanGwSubIfPmLsQryRtryFailed, tmnxWlanGwGtpMessageDropped, tmnxWlanGwSubIfPmPoolPartialUse, tmnxWlanGwBdCreated, tmnxWlanGwBdDeleted, tmnxWlanGwUeCreationFail, tmnxWlanGwUeReplacement, tmnxWlanGwGrpMemberUsageHigh
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger wlan-gw event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger wlan-gw event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger wlan-gw event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger wlan-gw event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

wpp event *keyword*

Context	**configure log event-trigger**
Description	Enter the wpp context
Introduced	16.0.R1

event *keyword*

Context	**configure log event-trigger wpp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxWppPortalStatChanged, tmnxWppHostAuthenticationFailed, tmnxWppPortalUnreachable, tmnxWppPortalGroupStatChanged
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger wpp event** *keyword*
Description	Administrative state of EHS event
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger wpp event** *keyword*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure log event-trigger wpp event** *keyword*
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	ID of a trigger entry in the parent EHS event trigger
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	Administrative state of the EHS event trigger entry
Default	enable
Options	enable, disable
Introduced	16.0.R1

debounce

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	Enter the debounce context
Introduced	16.0.R1

time *number*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number* **debounce**
Description	Time within which specific event must occur for EHS to trigger response
Range	1 to 604800
Units	seconds
Introduced	16.0.R1

value *number*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number* **debounce**
Description	Number of event occurrences within specific time for EHS to trigger response
Range	2 to 15
Introduced	16.0.R1

description *string*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

filter *string*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	Log filter for EHS event trigger entry
Reference	configure **log filter** *number*
Introduced	16.0.R1

handler *string*

Context	**configure log event-trigger wpp event** *keyword* **entry** *number*
Description	Event handler for EHS event trigger entry
Reference	configure **log event-handling handler** *string*
Introduced	16.0.R1

file [file-id] *number*

Context	**configure log**
Description	Enter the file context
Introduced	16.0.R1

[file-id] *number*

Context	**configure log file** *number*
Description	File ID when creating a log or accounting file
Range	1 to 99
Introduced	16.0.R1
Notes	This element is part of a list key

compact-flash-location

Context	**configure log file** *number*
Description	Enter the compact-flash-location context
Introduced	16.0.R1

backup *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log file** *number* **compact-flash-location**
Description	Log file location
Default	cf-unspecified
Options	cf-unspecified, cf1, cf2, cf3, cf4
Introduced	16.0.R1

primary *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log file** *number* **compact-flash-location**
Description	Log file location
Default	cf-unspecified
Options	cf-unspecified, cf1, cf2, cf3, cf4
Introduced	16.0.R1

description *string*

Context	**configure log file** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

retention *number*

Context	**configure log file** *number*
Description	Minimum time that a file is retained on the media
Range	1 to 500
Default	12
Units	hours
Introduced	16.0.R1

rollover *number*

Context	**configure log file** *number*
Description	Frequency at which a new log or accounting file is created
Range	5 to 10080
Default	1440
Units	minutes
Introduced	16.0.R1

filter [filter-id] *number*

Context	**configure log**
Description	Enter the filter context
Introduced	16.0.R1

[filter-id] *number*

Context	**configure log filter** *number*
Description	Identification number for an event log filter
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

default-action *keyword*

Context	**configure log filter** *number*
Description	Default action for the event filter
Options	drop, forward
Introduced	16.0.R1

description *string*

Context	**configure log filter** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure log filter** *number*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure log filter** *number* **entry** *number*
Description	Identification number for an event log filter parameter
Range	1 to 999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context	**configure log filter** *number* **entry** *number*
Description	Action for this event filter entry
Options	drop, forward
Introduced	16.0.R1

description *string*

Context	**configure log filter** *number* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context	**configure log filter** *number* **entry** *number*
Description	Enter the match context
Introduced	16.0.R1

application

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the application context
Introduced	16.0.R1

eq *keyword*

Context	**configure log filter** *number* **entry** *number* **match application**
Description	Application to match
Options	application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, ripng, openflow, sflow, rpki, gmpls, lmp, calltrace, satellite, ldap, pppoe-clnt, adp, mgmt-core, macsec, pcap, mobile-gateway, mobile-pdn, mobile-pdn-cups, mobile-profile, mobile-profile-cups, mobile-serving, auto-prov
Introduced	16.0.R1
Notes	This element is part of a choice

neq *keyword*

Context	**configure log filter** *number* **entry** *number* **match application**
Description	Application to be filtered out
Options	application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, ripng, openflow, sflow, rpki, gmpls, lmp, calltrace, satellite, ldap, pppoe-clnt, adp, mgmt-core, macsec, pcap, mobile-gateway, mobile-pdn, mobile-pdn-cups, mobile-profile, mobile-profile-cups, mobile-serving, auto-prov
Introduced	16.0.R1
Notes	This element is part of a choice

event

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the event context
Introduced	16.0.R1

eq *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Log event message to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

gte *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

lte *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

neq *number*

Context	**configure log filter** *number* **entry** *number* **match event**
Description	Log event message to filter out
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

message

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the message context
Introduced	16.0.R1

eq *string*

Context	**configure log filter** *number* **entry** *number* **match message**
Description	Log event message to match
String Length	1 to 400
Introduced	16.0.R1
Notes	This element is part of a choice

neq *string*

Context	**configure log filter** *number* **entry** *number* **match message**
Description	Log event message to be filtered out
String Length	1 to 400
Introduced	16.0.R1
Notes	This element is part of a choice

regexp *boolean*

Context	**configure log filter** *number* **entry** *number* **match message**
Description	String comparison to determine if the log event matches the value of pattern
Default	false
Introduced	16.0.R1

severity

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the severity context
Introduced	16.0.R1

eq *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level to match
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

gt *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

gte *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

lt *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

lte *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

neq *keyword*

Context	**configure log filter** *number* **entry** *number* **match severity**
Description	Log event severity level to filter out
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Notes	This element is part of a choice

subject

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the subject context
Introduced	16.0.R1

eq *string*

Context	**configure log filter** *number* **entry** *number* **match subject**
Description	Log event subject string to match
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

neq *string*

Context	**configure log filter** *number* **entry** *number* **match subject**
Description	Log event subject string to filter out
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

regexp *boolean*

Context	**configure log filter** *number* **entry** *number* **match subject**
Description	String comparison to determine if the log event matches the value of subject
Default	false
Introduced	16.0.R1

vrtr-name

Context	**configure log filter** *number* **entry** *number* **match**
Description	Enter the vrtr-name context
Introduced	16.0.R3

eq *string*

Context	**configure log filter** *number* **entry** *number* **match vrtr-name**
Description	Specifies the log event router context name to be matched.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a choice

neq *string*

Context	**configure log filter** *number* **entry** *number* **match vrtr-name**
Description	Specifies the log event router context name to be filtered out.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a choice

regexp *boolean*

Context	**configure log filter** *number* **entry** *number* **match vrtr-name**
Description	String comparison to determine if the log event matches the value of router instance
Default	false
Introduced	16.0.R3

log-events

Context	**configure log**
Description	Enter the log-events context
Introduced	16.0.R1

adp event *keyword*

Context	**configure log log-events**
Description	Enter the adp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events adp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxDiscoveryEndNotify, tmnxDiscoveryCellularReq
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events adp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events adp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events adp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events adp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events adp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events adp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events adp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

application-assurance event *keyword*

Context	**configure log log-events**
Description	Enter the application-assurance context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events application-assurance event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxBsxIsaAaGrpFailureV2, tmnxBsxIsaAaGrpFailureClearV2, tmnxBsxIsaAaGrpNonRedundantV2, tmnxBsxIsaAaGrpSwitchover, tmnxBsxIsaAaGrpFlowFull, tmnxBsxIsaAaGrpFlowFullClear, tmnxBsxIsaAaSubLoadBalance, tmnxBsxIsaAaGrpCapCostThres, tmnxBsxIsaAaGrpCapCostThresClear, tmnxBsxAaSubscribersUnassigned, tmnxBsxAaSubscriberAcctDataLoss, tmnxBsxAaSubPolResExceeded, tmnxBsxAaSubPolResExceededClear, tmnxBsxIsaAaGrpFlowSetup, tmnxBsxIsaAaGrpFlowSetupClear, tmnxBsxIsaAaGrpPacketRate, tmnxBsxIsaAaGrpPacketRateClear, tmnxBsxIsaAaGrpBitRate, tmnxBsxIsaAaGrpBitRateClear, tmnxBsxTransIpPolAaSubCreated, tmnxBsxTransIpPolAaSubDeleted, tmnxBsxTransIpPolRadCoAAudit, tmnxBsxTransIpPolRadCoAError, tmnxBsxTransIpPolRadDiscError, tmnxBsxTransIpPolDhcpAddWarning, tmnxBsxTransIpPolDhcpDelWarning, tmnxBsxIsaAaGrpFmSbWaSBufOvld, tmnxBsxIsaAaGrpFmSbWaSBufOvldClr, tmnxBsxIsaAaGrpToSbWaSBufOvld, tmnxBsxIsaAaGrpToSbWaSBufOvldClr, tmnxBsxIsaAaGrpOvrldCutthru, tmnxBsxIsaAaGrpOvrldCutthruClr, tmnxBsxTransitIpPersistenceWarn, tmnxBsxAarpInstOperStateChanged, tmnxBsxAarpInstStateChanged, tmnxBsxRadApFailure, tmnxBsxRadApServOperStateChange, tmnxBsxMobileSubModifyFailure, tmnxBsxRadApIntrmUpdateSkipped, tmnxBsxHttpUrlParamLimitExceeded, tmnxBsxUrlFilterOperStateChange, tmnxBsxSubModifyFailure, tmnxBsxDnsIpCacheFull, tmnxBsxDnsIpCacheFullClear, tmnxBsxUrlListUpdate, tmnxBsxUrlListFailure, tmnxBsxIsaAaTimFileProcFailure, tmnxBsxStatTcaThreshCrossed, tmnxBsxStatTcaThreshCrossedClear, tmnxBsxStatPolcrTcaThreshCrossed, tmnxBsxStatPolcrTcaThreshCrClear, tmnxBsxStatFtrTcaThreshCrossed,

	tmnxBsxStatFtrTcaThreshCrClear, tmnxBsxStatFtrEnTcaThreshCrossed, tmnxBsxStatFtrEnTcaThreshCrClear, tmnxBsxTransIpPolDiamGxError, tmnxBsxDatapathCpuUsage, tmnxBsxDatapathCpuUsageClear, tmnxBsxTcpValTcaCrossed, tmnxBsxTcpValTcaCrossedClear, tmnxBsxSubQuarantined, tmnxBsxSubQuarantinedClear
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events application-assurance event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events application-assurance event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events application-assurance event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events application-assurance event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events application-assurance event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events application-assurance event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events application-assurance event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

aps event *keyword*

Context	**configure log log-events**
Description	Enter the aps context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events aps event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	apsEventSwitchover, apsEventModeMismatch, apsEventChannelMismatch, apsEventPSBF, apsEventFEPLF, tApsModeMismatchClear, tApsChannelMismatchClear, tApsPSBFClear, tApsFEPLFClear, tApsLocalSwitchCommandSet, tApsLocalSwitchCommandClear, tApsRemoteSwitchCommandSet, tApsRemoteSwitchCommandClear, tApsMcApsCtlLinkStateChange, tApsChanTxLaisStateChange, tApsPrimaryChannelChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events aps event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events aps event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events aps event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events aps event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events aps event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events aps event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events aps event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

atm event *keyword*

Context	**configure log log-events**
Description	Enter the atm context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events atm event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tAtmTcSubLayerDown, tAtmTcSubLayerClear, atmVclStatusChange, atmVplStatusChange, atmVtlStatusChange, atmIfcStatusChange, tAtmPlcpSubLayerDown, tAtmPlcpSubLayerClear, tAtmEpOutOfPeerVpiOrVciRange, tAtmMaxPeerVccsExceeded, tAtmMaxPeerVpcsExceeded, tAtmIlmiLinkStatusChange, atmIlmiPeerVclStatusChange, atmIlmiPeerVplStatusChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events atm event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events atm event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events atm event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events atm event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events atm event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events atm event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events atm event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

auto-prov event *keyword*

Context	**configure log log-events**
Description	Enter the auto-prov context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events auto-prov event** *keyword*
Description	Events for auto-prov module.
Options	autoNodeProv
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events auto-prov event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events auto-prov event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context **configure log log-events auto-prov event** *keyword*
Description Severity level associated with event type
Default minor
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1

specific-throttle *boolean*

Context **configure log log-events auto-prov event** *keyword*
Description Use parameters that throttle this specific event
Default false
Introduced 16.0.R1

specific-throttle-interval *number*

Context **configure log log-events auto-prov event** *keyword*
Description Duration of the event specific throttling interval
Range 1 to 1200
Introduced 16.0.R1

specific-throttle-limit *number*

Context **configure log log-events auto-prov event** *keyword*
Description Times that this event can be logged within the specific throttle interval
Range 1 to 20000
Introduced 16.0.R1

throttle *boolean*

Context **configure log log-events auto-prov event** *keyword*
Description Throttle log events of this type
Default true
Introduced 16.0.R1

bfd event *keyword*

Context	**configure log log-events**
Description	Enter the bfd context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events bfd event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxBfdOnLspSessDown, tmnxBfdOnLspSessUp, tmnxBfdOnLspSessDeleted, tmnxBfdOnLspSessProtChange, tmnxBfdOnLspSessNoCpmNpResources, tmnxBfdOnLspSessNoTailResources
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events bfd event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events bfd event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events bfd event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events bfd event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events bfd event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events bfd event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events bfd event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

bgp event *keyword*

Context	**configure log log-events**
Description	Enter the bgp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events bgp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sendNotification, receiveNotification, bgpInterfaceDown, bgpConnNoKA, bgpConnNoOpenRcvd, bgpRejectConnBadLocAddr, bgpRemoteEndClosedConn, bgpPeerNotFound, bgpConnMgrTerminated, bgpTerminated, bgpNoMemoryPeer, bgpVariableRangeViolation, bgpCfgViol, tBgpPeerGRStatusChange, tBgpNgEstablished, tBgpNgBackwardTransition, tBgpPeerNgHoldTimeInconsistent, tBgpFlowspecUnsupportdComAction, tBgp4RouteInvalid, tBgp4PathAttrInvalid, tBgp4WithdrawnRtFromUpdateError, tBgp4UpdateInvalid, tBgpGeneral, tBgpFibResourceFailPeer, tBgpReceivedInvalidNlri, tBgpMaxNgPfxLmt, tBgpMaxNgPfxLmtThresholdReached, tBgpInstanceDynamicPeerLmtReachd, tBgpPGDynamicPeerLmtReached, bgpEstablishedNotification, bgpBackwardTransNotification, tBgp4PathAttrDiscarded, tmnxBmpSessionStatusChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events bgp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events bgp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events bgp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events bgp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events bgp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events bgp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events bgp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

calltrace event *keyword*

Context	**configure log log-events**
Description	Enter the calltrace context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events calltrace event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxCallTraceMaxFilesNumReached, tmnxCallTraceLocSizeLimitReached, calltraceDebugEvent
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events calltrace event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events calltrace event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events calltrace event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events calltrace event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events calltrace event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events calltrace event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events calltrace event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

cflowd event *keyword*

Context	**configure log log-events**
Description	Enter the cflowd context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events cflowd event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxCflowdCreateFailure, tmnxCflowdStateChange, tmnxCflowdFlowCreateFailure, tmnxCflowdPacketTxFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events cflowd event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events cflowd event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events cflowd event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events cflowd event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events cflowd event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events cflowd event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events cflowd event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

chassis event *keyword*

Context	**configure log log-events**
Description	Enter the chassis context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events chassis event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxEqCardFailure, tmnxEqCardInserted, tmnxEqCardRemoved, tmnxEqWrongCard, tmnxEnvTempTooHigh, tmnxEqPowerSupplyInserted, tmnxEqPowerSupplyRemoved, tmnxRedPrimaryCPMFail, tmnxChassisNotificationClear, tmnxEqSyncIfTimingHoldover, tmnxEqSyncIfTimingHoldoverClear, tmnxEqSyncIfTimingRef1Alarm, tmnxEqSyncIfTimingRef1AlarmClear, tmnxEqSyncIfTimingRef2Alarm, tmnxEqSyncIfTimingRef2AlarmClear, tmnxEqFlashDataLoss, tmnxEqFlashDiskFull, tmnxPeSoftwareVersionMismatch, tmnxPeSoftwareLoadFailed, tmnxPeBootloaderVersionMismatch, tmnxPeBootromVersionMismatch, tmnxPeFPGAVersionMismatch, tmnxEqSyncIfTimingBITSAlarm, tmnxEqSyncIfTimingBITSAlarmClear, tmnxEqCardFirmwareUpgraded, tmnxChassisUpgradeInProgress, tmnxChassisUpgradeComplete, tmnxChassisHiBwMcastAlarm, tmnxEqMdaCfgNotCompatible, tmnxCpmCardSyncFileNotPresent, tmnxEqMdaXplError, tmnxEqCardPChipError, tmnxEqCardSoftResetAlarm, tmnxEqMdaSyncENotCompatible, tmnxIPsecIsaGrpActiveIsaChgd, tmnxEqCardPChipMemoryEvent, tmnxIPsecIsaGrpUnableToSwitch, tmnxIPsecIsaGrpTnlLowWMark, tmnxIPsecIsaGrpTnlHighWMark, tmnxIPsecIsaGrpTnlMax, tmnxEqSyncIfTimingRef1Quality, tmnxEqSyncIfTimingRef2Quality, tmnxEqSyncIfTimingBITSQuality, tmnxEqSyncIfTimingBITS2Quality,

Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events chassis event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events chassis event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events chassis event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events chassis event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events chassis event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events chassis event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events chassis event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

debug event *keyword*

Context	**configure log log-events**
Description	Enter the debug context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events debug event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	traceEvent
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events debug event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events debug event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events debug event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events debug event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events debug event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events debug event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events debug event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

dhcp event *keyword*

Context	**configure log log-events**
Description	Enter the dhcp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events dhcp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	svcDHCPLseStateRestoreProblem, sapDHCPLeaseEntriesExceeded, sapDHCPLseStateOverride, sapDHCPSuspiciousPcktRcvd, sapDHCPLseStatePopulateErr, sdpBindDHCPLeaseEntriesExceeded, sdpBindDHCPLseStateOverride, sdpBindDHCPSuspiciousPcktRcvd, sdpBindDHCPLseStatePopulateErr, tmnxVRtrDHCPSuspiciousPcktRcvd, sapStaticHostDynMacConflict, sapDHCPProxyServerError, tmnxVRtrDHCPIfLseStatesExceeded, sdpBindDHCPProxyServerError, tmnxVRtrDHCP6RelayLseStExceeded, tmnxVRtrDHCP6ServerLseStExceeded,

	tmnxVRtrDHCP6LseStateOverride, tmnxVRtrDHCP6RelayReplyStripUni, tmnxVRtrDHCP6IllegalClientAddr, tmnxVRtrDHCP6AssignedIllegSubnet, tmnxVRtrDHCP6ClientMacUnresolved, sapDHCPLseStateMobilityError, sdpBindDHCPLseStateMobilityErr, svcDHCPMiscellaneousProblem, sapStatHost6DynMacConflict
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events dhcp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events dhcp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events dhcp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events dhcp event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events dhcp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events dhcp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events dhcp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

dhcps event *keyword*

Context	**configure log log-events**
Description	Enter the dhcps context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events dhcps event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxDhcpSvrSubnetMinFreeExc, tmnxDhcpSvrHostConflict, tmnxDhcpSvrPoolUnknown, tmnxDhcpSvrLeaseNotOwner, tmnxDhcpSvrDeclineStaticAddr, tmnxDhcpSvrMsgTooLong, tmnxDhcpsFoStateChange, tmnxDhcpsFoLeaseUpdateFailed, tmnxDhcpSvrUserDbUnknown, tmnxDhcpSvrMaxLeasesReached, tmnxDhcpSvrNoSubnetFixAddr, tmnxDhcpSvrLeaseDefaultTimers, tmnxDhcpSvrPoolMinFreeExc, tmnxDhcpSvrSubnetDepleted, tmnxDhcpSvrPoolDepleted, tmnxDhcpSvrIntLseConflict, tmnxDhcpSvrLeaseModify, tmnxDhcpSvrLeaseCreate, tmnxDhcpSvrLeaseDelete, tmnxLudbDhcpGroupIfTooLong, tmnxLudbPppoeGroupIfTooLong, tmnxDhcpSvrNoContFreeBlocks,

	tmnxDhcpsPoolFoStateChange, tmnxDhcpsPoolFoLeaseUpdateFailed, tmnxDhcpSvrPlThTooLowV6, tmnxDhcpSvrPlThDepletedV6, tmnxDhcpSvrPfxThTooLowV6, tmnxDhcpSvrPfxThDepletedV6, tmnxDhcpsLeaseOfferedExpired, tmnxDhcpsAddrAllocationFailure, tmnxDhcpsPacketDropped
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events dhcps event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events dhcps event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events dhcps event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events dhcps event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events dhcps event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events dhcps event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events dhcps event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

diameter event *keyword*

Context	**configure log log-events**
Description	Enter the diameter context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events diameter event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxDiamPolicyPeerStateChange, tmnxDiamAppSessionFailure, tmnxDiamSessionEvent, tmnxDiamPpPrxMcLocStateChanged, tmnxDiamMessageDropped, tmnxDiamNdPeerStatActiveChanged
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events diameter event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events diameter event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events diameter event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events diameter event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events diameter event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events diameter event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events diameter event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

dynsvc event *keyword*

Context	**configure log log-events**
Description	Enter the dynsvc context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events dynsvc event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxDynSvcSapFailed
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events dynsvc event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events dynsvc event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events dynsvc event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events dynsvc event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events dynsvc event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events dynsvc event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events dynsvc event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

efm-oam event *keyword*

Context	**configure log log-events**
Description	Enter the efm-oam context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events efm-oam event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxDot3OamPeerChanged, tmnxDot3OamLoopDetected, tmnxDot3OamLoopCleared, dot3OamThresholdEvent, dot3OamNonThresholdEvent, tmnxDot3OamSdThresholdEvent, tmnxDot3OamThresholdEventClr, tmnxDot3OamNonThresholdEventClr
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events efm-oam event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events efm-oam event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events efm-oam event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events efm-oam event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events efm-oam event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events efm-oam event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events efm-oam event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

elmi event *keyword*

Context	**configure log log-events**
Description	Enter the elmi context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events elmi event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxElmiIfStatusChangeEvent, tmnxElmiEVCStatusChangeEvent
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events elmi event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events elmi event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events elmi event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events elmi event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events elmi event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events elmi event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events elmi event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ering event *keyword*

Context	**configure log log-events**
Description	Enter the ering context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ering event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxEthRingPathFwdStateChange, tmnxEthRingApsPrvsnRaiseAlarm, tmnxEthRingApsPrvsnClearAlarm
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ering event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ering event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ering event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ering event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ering event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ering event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ering event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

eth-cfm event *keyword*

Context	**configure log log-events**
Description	Enter the eth-cfm context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	dot1agCfmFaultAlarm, tmnxDot1agCfmMepLbmTestComplete, tmnxDot1agCfmMepLtmTestComplete, tmnxDot1agCfmMepEthTestComplete, tmnxDot1agCfmMepDMTestComplete, tmnxDot1agCfmMepAisStateChanged, tmnxDot1agCfmMipEvaluation, tmnxDot1agCfmMepSLMTestComplete, tmnxDot1agCfmMepCsfStateChanged, tmnxDot1agCfmMepFcltyFaultRaise, tmnxDot1agCfmMepFcltyFaultClear
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events eth-cfm event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events eth-cfm event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

etun event *keyword*

Context	**configure log log-events**
Description	Enter the etun context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events etun event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxEthTunnelApsCfgRaiseAlarm, tmnxEthTunnelApsCfgClearAlarm, tmnxEthTunnelApsPrvsnRaiseAlarm, tmnxEthTunnelApsPrvsnClearAlarm, tmnxEthTunnelApsNoRspRaiseAlarm, tmnxEthTunnelApsNoRspClearAlarm, tmnxEthTunnelApsSwitchoverAlarm
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events etun event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events etun event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events etun event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events etun event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events etun event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events etun event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events etun event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

filter event *keyword*

Context	**configure log log-events**
Description	Enter the filter context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events filter event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tIPFilterPBRPacketsDrop, tFilterSubInsSpaceAlarmRaised, tFilterSubInsSpaceAlarmCleared, tFilterSubInsFltrEntryDropped, tFilterBgpFlowSpecProblem, tFilterApplyPathProblem, tFilterRadSharedFltrAlarmRaised, tFilterRadSharedFltrAlarmClear, tFilterEmbeddingOperStateChange, tFilterEmbedOpenflowOperStateChg, tFilterOpenflowRequestRejected, tFilterEmbedFlowspecOperStateChg, tFilterEmbedVsdOperStateChg, tFilterRPActiveDestChangeEvent
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events filter event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events filter event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events filter event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events filter event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events filter event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events filter event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events filter event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

gmpls event *keyword*

Context	**configure log log-events**
Description	Enter the gmpls context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events gmpls event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrGmplsLspPathStateChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events gmpls event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events gmpls event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events gmpls event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events gmpls event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events gmpls event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events gmpls event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events gmpls event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

gsmp event *keyword*

Context	**configure log log-events**
Description	Enter the gsmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events gsmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxAncpIngRateMonitorEvent, tmnxAncpIngRateMonitorEventL, tmnxAncpEgrRateMonitorEvent, tmnxAncpEgrRateMonitorEventL, tmnxAncpShcvDisabledEvent, tmnxAncpShcvDisabledEventL, tmnxAncpSesRejected, tmnxAncpStringRejected
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events gsmp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events gsmp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events gsmp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events gsmp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events gsmp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events gsmp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events gsmp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

igh event *keyword*

Context	**configure log log-events**
Description	Enter the igh context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events igh event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxIfGroupHandlerProtoOprChange, tmnxIfGroupHdlrMbrProtoOprChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events igh event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events igh event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events igh event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events igh event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events igh event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events igh event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events igh event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

igmp event *keyword*

Context	**configure log log-events**
Description	Enter the igmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events igmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrIgmpIfRxQueryVerMismatch, vRtrIgmpIfCModeRxQueryMismatch, vRtrIgmpMaxGrpsLimitExceeded, vRtrIgmpMcacPlcyDropped, vRtrIgmpHostInstantiationFail, vRtrIgmpHostMaxGrpsLimitExceeded, vRtrIgmpHostMcacPlcyDropped, vRtrIgmpHostCModeRxQueryMismatch, vRtrIgmpHostRxQueryVerMismatch, vRtrIgmpHostMaxSrcsLimitExceeded, vRtrIgmpMaxSrcsLimitExceeded, vRtrIgmpGrpIfSapMaxGrpsLimExceed, vRtrIgmpGrpIfSapMaxSrcsLimExceed, vRtrIgmpGrpIfSapMcacPlcyDropped,

vRtrIgmpGrpIfSapCModeRxQueryMism, vRtrIgmpGrpIfSapRxQueryVerMism, vRtrIgmpHostMaxGrpSrcsLimitExcd, vRtrIgmpMaxGrpSrcsLimitExceeded, vRtrIgmpGrpIfSapMaxGrpSrcLimExcd, vRtrIgmpHostQryIntervalConflict, vRtrIgmpNotifyNumOfIPsecIfLowWm, vRtrIgmpNotifyNumOfIPsecIfHighWm, vRtrIgmpNotifyNumOfIPsecIfMaxRch

Introduced 16.0.R1

Notes This element is part of a list key

generate *boolean*

Context **configure log log-events igmp event** *keyword*

Description Generate log events of this type and increment the event counter

Default true

Introduced 16.0.R1

repeat *boolean*

Context **configure log log-events igmp event** *keyword*

Description The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.

Default false

Introduced 16.0.R1

severity *keyword*

Context **configure log log-events igmp event** *keyword*

Description Severity level associated with event type

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

specific-throttle *boolean*

Context **configure log log-events igmp event** *keyword*

Description Use parameters that throttle this specific event

Default false

Introduced 16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events igmp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events igmp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events igmp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

igmp-snooping event *keyword*

Context	**configure log log-events**
Description	Enter the igmp-snooping context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sapIgmpSnpgGrpLimitExceeded, sapIgmpSnpgMcacPlcyDropped, sdpBndIgmpSnpgGrpLimitExceeded, sdpBndIgmpSnpgMcacPlcyDropped, sapIgmpSnpgMcsFailure, sapIgmpSnpgSrcLimitExceeded, sdpBndIgmpSnpgSrcLimitExceeded, sdpBndIgmpSnpgGrpSrcLimitExceed, sapIgmpSnpgGrpSrcLimitExceeded, eMplsIgmpSnpgMfibFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events igmp-snooping event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ip event *keyword*

Context	**configure log log-events**
Description	Enter the ip context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ip event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	clearRTMError, ipEtherBroadcast, ipDuplicateAddress, ipArpInfoOverwritten, fibAddFailed, qosNetworkPolicyMallocFailed, ipArpBadInterface, ipArpDuplicateIpAddress, ipArpDuplicateMacAddress, ipAnyDuplicateAddress
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ip event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ip event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ip event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ip event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ip event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ip event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ip event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ipsec event *keyword*

Context	**configure log log-events**
Description	Enter the ipsec context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ipsec event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tIPsecRUTnlFailToCreate, tIPsecRUSAFailToAddRoute, tIPsecBfdIntfSessStateChgd, tIPsecRadAcctPlcyFailure, tIPSecTrustAnchorPrfOprChg, tIPsecTunnelEncapIpMtuTooSmall, tIPsecRuTnlEncapIpMtuTooSmall, tmnxSecNotifCmptedCertHashChngd, tmnxSecNotifCmptedCertChnChngd, tmnxSecNotifSendChnNotInCmptChn, tmnxIPsecTunnelOperStateChange, tmnxIPsecGWOperStateChange, tIPsecRUTnlRemoved
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ipsec event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ipsec event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ipsec event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ipsec event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ipsec event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ipsec event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ipsec event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

isis event *keyword*

Context	**configure log log-events**
Description	Enter the isis context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events isis event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrIsisSpbNbrMultAdjExists, vRtrIsisSpbNbrMultAdjExistsClear, vRtrSpbEctFidCfgChg, tmnxIsisDatabaseOverload, tmnxIsisManualAddressDrops, tmnxIsisCorruptedLSPDetected, tmnxIsisMaxSeqExceedAttempt, tmnxIsisIDLenMismatch, tmnxIsisMaxAreaAddrsMismatch, tmnxIsisOwnLSPPurge, tmnxIsisSequenceNumberSkip, tmnxIsisAutTypeFail, tmnxIsisAuthFail, tmnxIsisVersionSkew, tmnxIsisAreaMismatch, tmnxIsisRejectedAdjacency, tmnxIsisLSPTooLargeToPropagate, tmnxIsisOrigLSPBufSizeMismatch, tmnxIsisProtoSuppMismatch, tmnxIsisAdjacencyChange, tmnxIsisCircIdExhausted, tmnxIsisAdjRestartStatusChange, tmnxIsisLdpSyncTimerStarted, tmnxIsisLdpSyncExit, tmnxIsisExportLimitReached, tmnxIsisExportLimitWarning, tmnxIsisRoutesExpLmtDropped, tmnxIsisFailureDisabled, tmnxIsisSidError, tmnxIsisSidNotInLabelRange, tmnxIsisRejectedAdjacencySid, tmnxIsisLSPPurge, tmnxIsisPfxLimitOverloadWarning, tmnxIsisAdjBfdSessionSetupFail, tmnxIsisSrgbBadLabelRange, tmnxIsisCircMtuTooLow, tmnxIsisRejectedAdjacencySet
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events isis event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events isis event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events isis event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events isis event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events isis event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events isis event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events isis event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

l2tp event *keyword*

Context	**configure log log-events**
Description	Enter the l2tp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events l2tp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxL2tpPeerUnreachable, tmnxL2tpIsaMdaVRtrStateChange, tmnxL2tpLnsSePppSessionFailure, tmnxL2tpTunnelBlacklisted, tmnxL2tpTunnelSelBlacklistFull, tmnxL2tpLnsPppNcpFailure, tmnxL2tpApFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events l2tp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events l2tp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events l2tp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events l2tp event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events l2tp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events l2tp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events l2tp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

lag event *keyword*

Context	**configure log log-events**
Description	Enter the lag context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events lag event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	DynamicCostOn, DynamicCostOff, LagPortAddFailed, LagSubGroupSelected, LagPortAddFailureCleared, LagStateEvent, tLagMemberStateEvent, tmnxLagBfdMemStateChanged
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events lag event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events lag event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events lag event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events lag event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events lag event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events lag event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events lag event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ldap event *keyword*

Context	**configure log log-events**
Description	Enter the ldap context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ldap event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxLdapOperStateChange, tmnxLdapServerOperStateChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ldap event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ldap event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ldap event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ldap event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ldap event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ldap event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ldap event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ldp event *keyword*

Context	**configure log log-events**
Description	Enter the ldp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ldp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrLdpStateChange, vRtrLdpGroupIdMismatch, vRtrLdpNgIpv4InstStateChange, vRtrLdpNgIpv6InstStateChange, vRtrLdpNgIfStateChange, vRtrLdpNgInetIfStateChange, vRtrLdpNgTargPeerStateChange, vRtrLdpNgSessionStateChange, vRtrLdpNgSessMaxFecThresChanged, vRtrLdpNgSessMaxFecLimitReached, vRtrLdpNgResourceExhaustion, vRtrLdpNgAddrFecCommMismatch
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ldp event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ldp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ldp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ldp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ldp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ldp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ldp event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

li event *keyword*

Context	**configure log log-events**
Description	Enter the li context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events li event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sbiBootLiConfig, sourceEnabled, sourceDisabled, destinationEnabled, destinationDisabled, sourceSapChange, sourceSubscriberChange, tMirrorSourceIPFltrChangeReject, tMirrorSourceMacFltrChangeReject, tMirrorSourceFilterAssignReject, tMirrorDestinationChangeReject, tMirrorSourceFilterOverruled, tMirrorSourceFilterAssignWarn, tMirrorFilterAssignToSapWarn, tMirrorFilterAssignToSdpWarn, tMirrorFilterAssignToItfWarn, tMirrorSourceLiFilterChanged, tMirrorSourceLiSubProblem, tMirrorSourceIPv6FltrChangeRej, tMirrorLiNatLsnSubOperStateCh, tMirrorLiNatL2awSubOperStateCh, tMirrorLiNat64SubOperStateCh, tMirrorLiX2Alarm, cli_user_login, cli_user_logout, cli_user_login_failed, cli_user_login_max_attempts, ftp_user_login, ftp_user_logout, ftp_user_login_failed, ftp_user_login_max_attempts, ssh_user_login, ssh_user_logout, ssh_user_login_failed, ssh_user_login_max_attempts, cli_user_io, snmp_user_set, cli_config_io, cli_unauth_user_io, cli_unauth_config_io, grpc_user_login, grpc_user_logout, grpc_user_login_failed, grpc_user_login_max_attempts, host_snmp_attempts, radiusFailed, ssiSaveConfigSucceeded, ssiSaveConfigFailed, tmnxConfigModify, tmnxConfigCreate, tmnxConfigDelete, tmnxStateChange, ssiSyncConfigOK, ssiSyncConfigFailed, tmnxClear
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events li event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events li event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events li event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events li event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events li event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events li event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events li event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

lldp event *keyword*

Context	**configure log log-events**
Description	Enter the lldp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events lldp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	lldpRemTablesChange, tmnxLldpRemEntryPeerAdded, tmnxLldpRemEntryPeerUpdated, tmnxLldpRemEntryPeerRemoved, tmnxLldpRemManAddrEntryAdded, tmnxLldpRemManAddrEntryRemoved
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events lldp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events lldp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events lldp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events lldp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events lldp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events lldp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events lldp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

lmp event *keyword*

Context	**configure log log-events**
Description	Enter the lmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events lmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxLmpVRtrTeLinkPropMismatch, tmnxLmpVRtrTeLinkPropMismatchClr, tmnxLmpVRtrDbLinkPropMismatch, tmnxLmpVRtrDbLinkPropMismatchClr, tmnxLmpVRtrControlChannelState, tmnxLmpVRtrTeLinkState
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events lmp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events lmp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events lmp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events lmp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events lmp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events lmp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events lmp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

logger event *keyword*

Context	**configure log log-events**
Description	Enter the logger context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events logger event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	started, tmnxLogTraceError, tmnxLogSpaceContention, tmnxLogAdminLocFailed, tmnxLogBackupLocFailed, tmnxLogFileRollover, tmnxLogFileDeleted, tmnxClear, tmnxTestEvent, tmnxLogEventThrottled, tmnxSysLogTargetProblem, tmnxLogAccountingDataLoss, tmnxStdEventsReplayed, tmnxLogOnlyEventThrottled, tmnxLogEventOverrun, tmnxLogOnlyEventOverrun
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events logger event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events logger event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events logger event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events logger event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events logger event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events logger event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events logger event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

macsec event *keyword*

Context	**configure log log-events**
Description	Enter the macsec context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events macsec event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxMacsecConfiguredPortCA, tmnxMacsecUnconfiguredPortCA, tmnxMacsecEnabledPort, tmnxMacsecDisabledPort, tmnxMacsecMaxPeerLimitExceeded, tmnxMkaSessionEstablished, tmnxMkaPskRollover, tmnxMkaSessionEnded
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events macsec event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events macsec event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events macsec event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events macsec event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events macsec event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events macsec event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events macsec event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mc-redundancy event *keyword*

Context	**configure log log-events**
Description	Enter the mc-redundancy context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxMcRedundancyPeerStateChanged, tmnxMcRedundancyMismatchDetected, tmnxMcRedundancyMismatchResolved, tmnxMcPeerSyncStatusChanged, tmnxMcSyncClientAlarmRaised, tmnxMcSyncClientAlarmCleared, tmnxSrrpSubnetMismatch, tmnxSrrpSubnetMismatchCleared, tmnxSrrpInstanceIdMismatch, tmnxSrrpSapMismatch, tmnxSrrpSapTagMismatch, tmnxSrrpRedIfMismatch, tmnxSrrpDualMaster, tmnxMcLagInfoLagChanged, tmnxSrrpSystemIpNotSet, tmnxMcRingOperStateChanged, tmnxMcRingInbCtrlOperStateChgd, tmnxMcRingNodeLocOperStateChgd, tmnxMcSyncClockSkewRaised, tmnxMcSyncClockSkewCleared, tmnxSrrpDuplicateSubIfAddress, tmnxMcPeerRingsOperStateChanged,

	tmnxSrrpTrapNewMaster, tmnxSrrpBecameBackup, srrpPacketDiscarded, tmnxSrrpBfdIntfSessStateChgd, tmnxMcPeerEPBfdSessionOpen, tmnxMcPeerEPBfdSessionClose, tmnxMcPeerEPBfdSessionUp, tmnxMcPeerEPBfdSessionDown, tmnxMcPeerEPOperDown, tmnxMcPeerEPOperUp, tmnxMCEPSessionPsvModeEnabled, tmnxMCEPSessionPsvModeDisabled, tMcPeerIPsecTnlGrpMasterStateChg, tMcPeerIPsecTnlGrpProtStatusChg, tmnxMcOmcrStatFailedChanged, tmnxMcOmcrClientNumEntriesHigh, tmnxSrrpOperDownInvalidMac, tmnxSrrpOperDownInvalidMacClear
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mc-redundancy event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mcpath event *keyword*

Context	**configure log log-events**
Description	Enter the mcpath context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mcpath event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxMcPathSrcGrpBlkHole, tmnxMcPathSrcGrpBlkHoleClear, tmnxMcPathAvailBwLimitReached, tmnxMcPathAvailBwValWithinRange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mcpath event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mcpath event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mcpath event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mcpath event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mcpath event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mcpath event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mcpath event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mgmt-core event *keyword*

Context	**configure log log-events**
Description	Enter the mgmt-core context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	none, mdConfigChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mgmt-core event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mgmt-core event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mirror event *keyword*

Context	**configure log log-events**
Description	Enter the mirror context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mirror event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sourceEnabled, sourceDisabled, destinationEnabled, destinationDisabled, sourceIpFilterChange, sourceMacFilterChange, sourceSapChange, sourceSubscriberChange, tMirrorSourceIpv6FilterChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mirror event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mirror event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mirror event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mirror event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mirror event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mirror event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mirror event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mld event *keyword*

Context	**configure log log-events**
Description	Enter the mld context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mld event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrMldIfRxQueryVerMismatch, vRtrMldIfCModeRxQueryMismatch, vRtrMldMaxGrpsLimitExceeded, vRtrMldMcacPlcyDropped, vRtrMldHostInstantiationFail, vRtrMldHostMaxGrpsLimitExceeded, vRtrMldHostMcacPlcyDropped, vRtrMldHostCModeRxQueryMismatch, vRtrMldHostRxQueryVerMismatch, vRtrMldHostMaxSrcsLimitExceeded, vRtrMldMaxSrcsLimitExceeded, vRtrMldGrpIfSapMaxGrpsLimExceed, vRtrMldGrpIfSapMaxSrcsLimExceed, vRtrMldGrpIfSapMcacPlcyDropped, vRtrMldGrpIfSapCModeRxQueryMism, vRtrMldGrpIfSapRxQueryVerMism, vRtrMldHostMaxGrpSrcsLimitExcd, vRtrMldMaxGrpSrcsLimitExceeded, vRtrMldGrpIfSapMaxGrpSrcLimExcd, vRtrMldHostQryIntervalConflict
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mld event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mld event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mld event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mld event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mld event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mld event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mld event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mld-snooping event *keyword*

Context	**configure log log-events**
Description	Enter the mld-snooping context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sapMldSnpgGrpLimitExceeded, sdpBndMldSnpgGrpLimitExceeded, sapMldSnpgMcsFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mld-snooping event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mld-snooping event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

mpls event *keyword*

Context	**configure log log-events**
Description	Enter the mpls context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mpls event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	mplsXCUp, mplsXCDown, mplsTunnelUp, mplsTunnelDown, mplsTunnelRerouted, mplsTunnelReoptimized, vRtrMplsStateChange, vRtrMplsIfStateChange, vRtrMplsLspUp, vRtrMplsLspDown, vRtrMplsLspPathUp, vRtrMplsLspPathDown, vRtrMplsLspPathRerouted, vRtrMplsLspPathResignaled, vRtrMplsP2mpInstanceUp, vRtrMplsP2mpInstanceDown, vRtrMplsS2lSubLspUp, vRtrMplsS2lSubLspDown, vRtrMplsS2lSubLspRerouted, vRtrMplsS2lSubLspResignaled, vRtrMplsLspPathSoftPreempted, vRtrMplsLspPathLstFillReoptElig, vRtrMplsP2mpInstanceResignaled, vRtrMplsResignalTimerExpired, vRtrMplsLspPathMbbStatusEvent, vRtrMplsLspSwitchStbyFailure, vRtrMplsLspActivePathChanged, vRtrMplsXCBundleChange, vRtrMplsNodeInIgpOverload
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mpls event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mpls event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mpls event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mpls event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mpls event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mpls event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mpls event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

mpls-tp event *keyword*

Context	**configure log log-events**
Description	Enter the mpls-tp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrMplsTpLspRevertMismatchAlarm, vRtrMplsTpLspRevertMismatchClear, vRtrMplsTpLspPtTypeMismatchAlarm, vRtrMplsTpLspPtTypeMismatchClear, vRtrMplsTpLspActivePathUp, vRtrMplsTpLspActivePathChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events mpls-tp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events mpls-tp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

msdp event *keyword*

Context	**configure log log-events**
Description	Enter the msdp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events msdp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	msdpEstablished, msdpBackwardTransition, tmnxMsdpNgActSrcLimExcd, tmnxMsdpNgPeerActSrcLimExcd, tmnxMsdpNgRPFFailure, tmnxMsdpNgSourceSrcActMsgsExcd, tmnxMsdpNgGroupSrcActMsgsExcd
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events msdp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events msdp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events msdp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events msdp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events msdp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events msdp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events msdp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

nat event *keyword*

Context	**configure log log-events**
Description	Enter the nat context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events nat event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxNatPlL2AwBlockUsageHigh, tmnxNatIsaMemberSessionUsageHigh, tmnxNatPlLsnMemberBlockUsageHigh, tmnxNatL2AwSubIcmpPortUsageHigh, tmnxNatL2AwSubUdpPortUsageHigh, tmnxNatL2AwSubTcpPortUsageHigh, tmnxNatL2AwSubSessionUsageHigh, tmnxNatPlBlockAllocationLsn, tmnxNatPlBlockAllocationL2Aw, tmnxNatResourceProblemDetected, tmnxNatResourceProblemCause, tmnxNatPlAddrFree, tmnxNatPlLsnRedActiveChanged, tmnxNatPcpSrvStateChanged, tmnxNatMdaActive, tmnxNatLsnSubBlksFree, tmnxNatDetPlcyChanged, tmnxNatMdaDetectsLoadSharingErr, tmnxNatIsaGrpOperStateChanged, tmnxNatIsaGrpIsDegraded, tmnxNatLsnSubIcmpPortUsgHigh, tmnxNatLsnSubUdpPortUsgHigh, tmnxNatLsnSubTcpPortUsgHigh, tmnxNatLsnSubSessionUsgHigh, tmnxNatInAddrPrefixBlksFree, tmnxNatFwd2EntryAdded, tmnxNatDetPlcyOperStateChanged, tmnxNatDetMapOperStateChanged, tmnxNatFwd2OperStateChanged, tmnxNatVrtrOutDnatOnlyRoutesHigh, tmnxNatMapRuleChange, tmnxNatMaxNbrSubsOrHostsExceeded, tmnxNatNbrSubsOrHostsBelowThrsh
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events nat event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events nat event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events nat event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events nat event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events nat event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events nat event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events nat event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

ntp event *keyword*

Context	**configure log log-events**
Description	Enter the ntp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ntp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxNtpAuthMismatch, tmnxNtpNoServersAvail, tmnxNtpServersAvail, tmnxNtpOperChange, tmnxNtpServerChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ntp event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ntp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ntp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ntp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ntp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ntp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ntp event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

oam event *keyword*

Context	**configure log log-events**
Description	Enter the oam context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events oam event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxOamPingProbeFailedV3, tmnxOamPingTestFailedV3, tmnxOamPingTestCompletedV3, tmnxAncpLoopbackTestCompleted, tmnxAncpLoopbackTestCompletedL, tmnxOamTrPathChange, tmnxOamTrTestFailed, tmnxOamTrTestCompleted, svcIdInvalid, svcIdWrongType, tmnxOamLdpTtraceAutoDiscState, tmnxOamLdpTtraceFecProbeState, tmnxOamLdpTtraceFecDisStatus, tmnxOamLdpTtraceFecPFailUpdate, tmnxOamSaaThreshold, tmnxOamDiagTestCompleted, tmnxTwampSrvInactivityTimeout, tmnxTwampSrvMaxConnsExceeded, tmnxTwampSrvPfxMaxConnsExceeded, tmnxTwampSrvMaxSessExceeded, tmnxTwampSrvPfxMaxSessExceeded, tmnxOamPmThrRaise, tmnxOamPmThrClear
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events oam event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events oam event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events oam event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events oam event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events oam event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events oam event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events oam event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

openflow event *keyword*

Context	**configure log log-events**
Description	Enter the openflow context
Introduced	16.0.R3

event *keyword*

Context	**configure log log-events openflow event** *keyword*
Description	Events for openflow module.
Options	tmnxOFFlowEntryInsertFailed
Introduced	16.0.R2
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events openflow event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R2

repeat *boolean*

Context	**configure log log-events openflow event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R2

severity *keyword*

Context	**configure log log-events openflow event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R2

specific-throttle *boolean*

Context	**configure log log-events openflow event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R2

specific-throttle-interval *number*

Context	**configure log log-events openflow event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R2

specific-throttle-limit *number*

Context	**configure log log-events openflow event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R2

throttle *boolean*

Context	**configure log log-events openflow event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R2

ospf event *keyword*

Context	**configure log log-events**
Description	Enter the ospf context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ospf event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxOspfVirtIfStateChange, tmnxOspfVirtNbrStateChange, tmnxOspfVirtIfConfigError, tmnxOspfVirtIfAuthFailure, tmnxOspfVirtIfRxBadPacket, tmnxOspfVirtIfTxRetransmit, tmnxOspfAreaOriginateLsa, tmnxOspfAreaMaxAgeLsa, tmnxOspfLsdbOverflow, tmnxOspfLsdbApproachingOverflow, tmnxOspfNssaTranslatorStatusChg, tmnxOspfRestartStatusChange, tmnxOspfVirtNbrRestartHlprStsChg, tmnxOspfSpfRunsStopped, tmnxOspfSpfRunsRestarted, tmnxOspfOverloadEntered, tmnxOspfOverloadExited, tmnxOspfAsOriginateLsa, tmnxOspfAsMaxAgeLsa, tmnxOspfShamIfStateChange, tmnxOspfShamNbrStateChange, tmnxOspfShamIfConfigError, tmnxOspfShamIfAuthFailure, tmnxOspfShamIfRxBadPacket, tmnxOspfShamIfTxRetransmit, tmnxOspfShamNbrRestartHlprStsChg, tmnxOspfFailureDisabled, tmnxOspfExportLimitReached, tmnxOspfExportLimitWarning, tmnxOspfRoutesExpLmtDropped, tmnxOspfNgNbrStateChange, tmnxOspfNgIfConfigError, tmnxOspfNgIfAuthFailure, tmnxOspfNgIfRxBadPacket, tmnxOspfNgIfTxRetransmit, tmnxOspfNgIfStateChange, tmnxOspfNgNbrRestartHlprStsChg, tmnxOspfNgLinkOriginateLsa, tmnxOspfNgLinkMaxAgeLsa, tmnxOspfNgLdpSyncTimerStarted, tmnxOspfNgLdpSyncExit, tmnxOspfSrSidError, tmnxOspfSrSidNotInLabelRange, tmnxOspfOverloadWarning, tmnxOspfRejectedAdjacencySid, tmnxOspfAdjBfdSessionSetupFail, tmnxOspfSrgbBadLabelRange, tmnxOspfRejectedAdjacencySet
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ospf event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ospf event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ospf event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ospf event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ospf event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ospf event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ospf event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

pcap event *keyword*

Context	**configure log log-events**
Description	Enter the pcap context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events pcap event** *keyword*
Description	Events for PCAP module
Options	tmnxPcapFileError, tmnxPcapBufferFull, tmnxPcapReadWriteFailure, tmnxPcapSoftwareFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events pcap event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events pcap event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context **configure log log-events pcap event** *keyword*
Description Severity level associated with event type
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1

specific-throttle *boolean*

Context **configure log log-events pcap event** *keyword*
Description Use parameters that throttle this specific event
Default false
Introduced 16.0.R1

specific-throttle-interval *number*

Context **configure log log-events pcap event** *keyword*
Description Duration of the event specific throttling interval
Range 1 to 1200
Introduced 16.0.R1

specific-throttle-limit *number*

Context **configure log log-events pcap event** *keyword*
Description Times that this event can be logged within the specific throttle interval
Range 1 to 20000
Introduced 16.0.R1

throttle *boolean*

Context **configure log log-events pcap event** *keyword*
Description Throttle log events of this type
Default true
Introduced 16.0.R1

pim event *keyword*

Context	**configure log log-events**
Description	Enter the pim context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events pim event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrPimNgIfNeighborLoss, vRtrPimNgIfNeighborUp, vRtrPimNgInvalidJoinPrune, vRtrPimNgInvalidRegister, vRtrPimNgGrpInSSMRange, vRtrPimNgBSRStateChange, vRtrPimNgHelloDropped, vRtrPimNgSGLimitExceeded, vRtrPimNgReplicationLmtExceeded, vRtrPimNgMDTLimitExceeded, vRtrPimNgMaxGrpsLimitExceeded, vRtrPimNgDataMtReused, vRtrPimNgMcacPlcyDropped, vRtrPimNgInvalidIPmsiTunnel, vRtrPimNgMaxGraftRetry
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events pim event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events pim event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events pim event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events pim event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events pim event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events pim event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events pim event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

pim-snooping event *keyword*

Context	**configure log log-events**
Description	Enter the pim-snooping context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxPimSnpgIfNeighborLoss, tmnxPimSnpgIfNeighborUp, tmnxPimSnpgSGLimitExceeded, tmnxPimSnpgSnoopModeChanged
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events pim-snooping event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events pim-snooping event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

port event *keyword*

Context	**configure log log-events**
Description	Enter the port context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events port event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	sonetSDHAlarmSet, sonetSDHAlarmClear, sonetSDHChannelAlarmSet, sonetSDHChannelAlarmClear, SFPInserted, SFPRemoved, SFPStatusFailure, portError, yellowDiffDelayExceeded, redDiffDelayExceeded, bndlBadEndPtDiscriminator, ds3AlarmSet, ds3AlarmClear, ds1AlarmSet, ds1AlarmClear, etherAlarmSet, etherAlarmClear, ds1LoopbackStart, ds1LoopbackStop, ds3LoopbackStart, ds3LoopbackStop, sdhLoopbackStart, sdhLoopbackStop, etherLoopDetected, etherLoopCleared, etherSpeedNotCompatible, etherDuplexNotCompatible, etherIngressRateCfgNotCompatible, digitalDiagnosticMonitorFailed, SFPStatusDDMCorrupt, SFPStatusReadError, SFPStatusUnsupported, dsxClockSyncStateChange, bundleMlfrMemberLoopback, tmnxPortUnsupportedFunction,

	otuAlarms, wtrkAlarms, tPortAccEgrQGrpHostMatchFailure, tPortEgrVPortHostMatchFailure, digitalDiagnosticMonitorCleared, tmnxEqSonetClockSrcNotCompatible, tmnxEqSonetSfThreshNotCompatible, tmnxEqSonetFramingNotCompatible, tmnxResvCbsPoolThreshGreen, tmnxResvCbsPoolThreshAmber, tmnxResvCbsPoolThreshRed, tmnxEqPortEtherCrcAlarm, tmnxEqPortEtherCrcAlarmClear, tmnxEqPortEtherInternalAlarm, tmnxEqPortEtherInternalAlarmClr, tmnxEqCohOptPortAlarm, tmnxEqPortEtherSymMonAlarm, tmnxEqPortEtherSymMonAlarmClear, SFPStatusCulprit, SFPStatusBlocked, SFPStatusOperational, tmnxRS232ControlLeadSignalChg, tmnxRS232SquelchStatusChange, tmnxRS232SquelchResetIssued, tmnxCellularBearerCreated, tmnxCellularBearerDeleted, tmnxCellularBearerModified, tmnxEqPortEtherEgressRateChange, tmnxCellularNoServiceReset
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events port event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events port event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events port event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events port event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events port event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events port event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events port event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ppp event *keyword*

Context	**configure log log-events**
Description	Enter the ppp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ppp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxPppCpUp, tmnxPppCpDown, tmnxPppNcpUp, tmnxPppNcpDown, tmnxPppKeepaliveFailure, tmnxPppLqmFailure, ipcpRemoteIpUnknown, ipcpSameLocalAndRemoteIp, ipcpPeerSuggestedDifferentIp, ipcpPeerRejectedOurIp, ipcpPeerOnDifferentSubnet, tmnxPppLoopback, tmnxPppLoopbackClear, ipv6cpRemoteIntIdUnknown, ipv6cpSameLocalAndRemoteIntId, ipv6cpPeerSuggestedDiffIntId, ipv6cpPeerRejectedOurIntId, ipv6cpPeerOnDifferentSubnet
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ppp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ppp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ppp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ppp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ppp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ppp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ppp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

pppoe event *keyword*

Context	**configure log log-events**
Description	Enter the pppoe context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events pppoe event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxPppoeSessionFailure, tmnxPppoeNcpFailure, tmnxMlpppBundleIndicatorsChange, tmnxPppoeLacSteeringActive, tmnxPppoeLacSteeringStopped, tmnxPppoeLacSteeringFailed
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events pppoe event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events pppoe event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events pppoe event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events pppoe event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events pppoe event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events pppoe event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events pppoe event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

pppoe-clnt event *keyword*

Context	**configure log log-events**
Description	Enter the pppoe-clnt context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxPppoeClientSetupFailure, tmnxPppoeClientEchoTimeout, tmnxPppoeClientNcpFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events pppoe-clnt event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ptp event *keyword*

Context	**configure log log-events**
Description	Enter the ptp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events ptp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxPtpCardNotSupported, tmnxPtpCardNotSupportedClear, tmnxPtpMasterClockChangedEvent, tmnxPtpClockRecoveryStateChange, tmnxPtpOutOfResources, tmnxPtpOutOfResourcesClear, tmnxPtpDynamicChange, tmnxPtpPortNoTimestamping
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ptp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events ptp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events ptp event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events ptp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events ptp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events ptp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events ptp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

radius event *keyword*

Context	**configure log log-events**
Description	Enter the radius context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events radius event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxRadSrvPlcySrvOperStateCh, tmnxRadRouteDownloadFailed, tmnxRadAcctOnOngoing
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events radius event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events radius event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events radius event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events radius event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events radius event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events radius event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events radius event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

rip event *keyword*

Context	**configure log log-events**
Description	Enter the rip context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events rip event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	ripPacketDiscarded, vRtrRipAuthTypeMismatch, vRtrRipAuthTypeFailure, vRtrRipInstanceShuttingDown, vRtrRipInstanceRestarted, vRtrRipInstanceExpLmtReached, vRtrRipInstanceExpLmtWarning, vRtrRipInstanceRtsExpLmtDropped, vRtrRipPeerBfdDown
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events rip event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events rip event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events rip event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events rip event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events rip event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events rip event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events rip event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

ripng event *keyword*

Context	**configure log log-events**
Description	Enter the ripng context
Introduced	16.0.R3

event *keyword*

Context	**configure log log-events ripng event** *keyword*
Description	Events for RIPng module.
Options	tmnxRipNgPacketDiscarded, tmnxRipNgAuthTypeMismatch, tmnxRipNgAuthFailure, tmnxRipNgInstShuttingDown, tmnxRipNgInstRestarted, tmnxRipNgInstExpLmtReached, tmnxRipNgInstExpLmtWarning, tmnxRipNgInstRtsExpLmtDropped, tmnxRipNgIfUcastAddrNotUsed, tmnxRipNgPeerBfdDown
Introduced	16.0.R3
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events ripng event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R3

repeat *boolean*

Context	**configure log log-events ripng event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R3

severity *keyword*

Context	**configure log log-events ripng event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R3

specific-throttle *boolean*

Context	**configure log log-events ripng event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R3

specific-throttle-interval *number*

Context	**configure log log-events ripng event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R3

specific-throttle-limit *number*

Context	**configure log log-events ripng event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R3

throttle *boolean*

Context	**configure log log-events ripng event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R3

route-policy event *keyword*

Context	**configure log log-events**
Description	Enter the route-policy context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events route-policy event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	trigPolicyPrevEval
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events route-policy event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events route-policy event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events route-policy event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events route-policy event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events route-policy event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events route-policy event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events route-policy event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

rpki event *keyword*

Context	**configure log log-events**
Description	Enter the rpki context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events rpki event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxRpkiNotifySession, tmnxRpkiStaleTimerExpiry
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events rpki event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events rpki event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events rpki event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events rpki event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events rpki event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events rpki event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events rpki event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

rsvp event *keyword*

Context	**configure log log-events**
Description	Enter the rsvp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events rsvp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	vRtrRsvpStateChange, vRtrRsvpIfStateChange, vRtrRsvpIfNbrStateUp, vRtrRsvpIfNbrStateDown, vRtrRsvpPEFailOverPriToStdBy, vRtrRsvpPEFailOverStdByToPri
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events rsvp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events rsvp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events rsvp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events rsvp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events rsvp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events rsvp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events rsvp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

satellite event *keyword*

Context	**configure log log-events**
Description	Enter the satellite context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events satellite event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxSatelliteOperStateChange, tmnxSatSyncIfTimRefSwitch, tmnxSatSyncIfTimSystemQuality, tmnxSatSyncIfTimRef1Quality, tmnxSatSyncIfTimRef2Quality, tmnxSatSyncIfTimHoldover, tmnxSatSyncIfTimHoldoverClear, tmnxSatSyncIfTimRef1Alarm, tmnxSatSyncIfTimRef1AlarmClear, tmnxSatSyncIfTimRef2Alarm, tmnxSatSyncIfTimRef2AlarmClear, tmnxSatLocalForwardStateChg, tmnxSatLocalForwardSapStateChg
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events satellite event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events satellite event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events satellite event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events satellite event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events satellite event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events satellite event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events satellite event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

security event *keyword*

Context	**configure log log-events**
Description	Enter the security context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events security event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	cli_user_login, cli_user_logout, cli_user_login_failed, cli_user_login_max_attempts, ftp_user_login, ftp_user_logout, ftp_user_login_failed, ftp_user_login_max_attempts, ssh_user_login, ssh_user_logout, ssh_user_login_failed, ssh_user_login_max_attempts, radiusOperStatusChange, user_disconnect, radiusSystemIpAddrNotSet, tacplusOperStatusChange, mafEntryMatch, ftp_transfer_successful, ftp_transfer_failed, enable_admin, host_snmp_attempts, SSH_server_preserve_key_fail, tacplusInetSrvrOperStatusChange, radiusInetServerOperStatusChange, tmnxKeyChainAuthFailure, tmnxCpmProtViolPort, tmnxCpmProtViolPortAgg, tmnxCpmProtViolIf, tmnxCpmProtViolSap, tmnxCpmProtViolMac, tmnxCpmProtViolVdoSvcClient, tmnxCpmProtViolVdoVrtrClient, tmnxMD5AuthFailure, tmnxCpmProtDefPolModified, tmnxCpmProtViolSdpBind, tmnxCpmProtExcdSdpBind, tmnxCpmProtExcdSapEcm, tmnxCpmProtExcdSdpBindEcm, tmnxPkiFileReadFailed, tmnxPkiCertVerificationFailed, tmnxCAProfileStateChange, tmnxCpmProtExcdSapIp, tmnxDcpFpDynPoolUsageHiAlmRaise, tmnxDcpFpDynPoolUsageHiAlmClear, tmnxDcpCardFpEventOvrflwClr, tmnxDcpCardSapEventOvrflwClr, tmnxDcpCardVrtrIfEventOvrflwClr, sapDcpStaticExcd, sapDcpDynamicExcd, sapDcpStaticHoldDownStart, sapDcpDynamicHoldDownStart, sapDcpStaticHoldDownEnd, sapDcpDynamicHoldDownEnd, sapDcpStaticConform, sapDcpDynamicConform, sapDcpLocMonExcd, sapDcpLocMonExcdDynResource, sapDcpLocMonExcdAllDynAlloc, sapDcpLocMonExcdAllDynFreed, sapDcpDynamicEnforceAlloc, sapDcpDynamicEnforceFreed, vRtrIfDcpStaticExcd, vRtrIfDcpDynamicExcd, vRtrIfDcpStaticHoldDownStart, vRtrIfDcpDynamicHoldDownStart, vRtrIfDcpStaticHoldDownEnd, vRtrIfDcpDynamicHoldDownEnd, vRtrIfDcpStaticConform, vRtrIfDcpDynamicConform, vRtrIfDcpLocMonExcd, vRtrIfDcpLocMonExcdDynResource, vRtrIfDcpLocMonExcdAllDynAlloc, vRtrIfDcpLocMonExcdAllDynFreed, vRtrIfDcpDynamicEnforceAlloc, vRtrIfDcpDynamicEnforceFreed, tmnxDcpCardFpEventOvrflw, tmnxDcpCardSapEventOvrflw, tmnxDcpCardVrtrIfEventOvrflw, tmnxPkiCAProfActnStatusChg, tmnxCpmProtViolSapOutProf, tmnxCpmProtViolIfOutProf, sysDNSSecFailedAuthentication, tmnxCpmProtExcdSdpBindIp, tmnxSecComputeCertChainFailure, tmnxCpmProtViolSdpBindOutProf, tmnxSecNotifKeyChainExpired, tmnxSysLicenseInvalid, tmnxSysLicenseExpiresSoon, tmnxPkiCAProfRevokeChkWarning, tmnxCAProfUpDueToRevokeChkCrlOpt, tmnxPkiCertBeforeExpWarning, tmnxPkiCertAfterExpWarning, tmnxPkiCertExpWarningCleared, tmnxPkiCRLBeforeExpWarning, tmnxPkiCRLAfterExpWarning, tmnxPkiCRLExpWarningCleared, tmnxSecNotifFileReloaded, tmnxSysLicenseValid, tmnxSecPwdHistoryFileLoadFailed, tmnxSecPwdHistoryFileWriteFailed,

	tmnxPkiCAProfCrlUpdateStart, tmnxPkiCAProfCrlUpdateSuccess, tmnxPkiCAProfCrlUpdateUrlFail, tmnxPkiCAProfCrlUpdAllUrlsFail, tmnxPkiFileWriteFailed, tmnxPkiCAProfCrlUpdNoNxtUpdTime, tmnxUsrProfSessionLimitExceeded, tmnxCliGroupSessionLimitExceeded, tmnxPkiCAProfCrlUpdLargPreUpdTm, tmnxPkiCertNotYetValid, tmnxPkiCRLNotYetValid, tmnxAppPkiCertVerificationFailed, grpc_user_login, grpc_user_logout, grpc_user_login_failed, grpc_user_login_max_attempts, netconf_user_login, netconf_user_logout, netconf_user_login_failed, netconf_user_login_max_attempts, tmnxSysLicenseActivated, tmnxConfigModify, tmnxConfigCreate, tmnxConfigDelete, tmnxStateChange, radiusUserProfileInvalid, tmnxSysStandbyLicensingError, tmnxSysStandbyLicensingReady, md_cli_io, md_cli_unauth_io
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events security event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events security event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events security event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events security event** *keyword*
Description	Use parameters that throttle this specific event
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events security event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events security event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events security event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

sflow event *keyword*

Context	**configure log log-events**
Description	Enter the sflow context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events sflow event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	tmnxSflowCpEntrySampling, tmnxSflowPacketTxFailure
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events sflow event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events sflow event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events sflow event** *keyword*
Description	Severity level associated with event type
Default	minor
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events sflow event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events sflow event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events sflow event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events sflow event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

snmp event *keyword*

Context	**configure log log-events**
Description	Enter the snmp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events snmp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	coldStart, warmStart, authenticationFailure, linkDown, linkUp, risingAlarm, fallingAlarm, snmpdError
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events snmp event** *keyword*
Description	Generate log events of this type and increment the event counter
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events snmp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events snmp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events snmp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events snmp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events snmp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events snmp event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

stp event *keyword*

Context	**configure log log-events**
Description	Enter the stp context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events stp event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	topologyChangeSapMajorState, newRootSap, topologyChangeVcpState, newRootVcpState, topologyChangeSapState, receivedTCN, newRootBridge, unacknowledgedTCN, higherPriorityBridge, sapEncapPVST, sapEncapDot1d, tmnxSvcTopoChgSdpBindMajorState, tmnxSvcNewRootSdpBind, tmnxSvcTopoChgSdpBindState, tmnxSvcSdpBindRcvdTCN, tmnxSvcSdpBindRcvdHigherBriPrio, tmnxSvcSdpBindEncapPVST, tmnxSvcSdpBindEncapDot1d, tmnxNewCistRegionalRootBridge, tmnxNewMstiRegionalRootBridge, tmnxStpRootGuardViolation, tmnxStpMeshNotInMstRegion, tmnxSapStpExcepCondStateChng, tmnxSdpBndStpExcepCondStateChng, sapActiveProtocolChange, tmnxSvcSdpActiveProtocolChange, vcpActiveProtocolChange, topologyChangePipMajorState, topologyChangePipState, tmnxPipStpExcepCondStateChng, pipActiveProtocolChange
Introduced	16.0.R1
Notes	This element is part of a list key

generate *boolean*

Context	**configure log log-events stp event** *keyword*
Description	Generate log events of this type and increment the event counter
Default	true
Introduced	16.0.R1

repeat *boolean*

Context	**configure log log-events stp event** *keyword*
Description	The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.
Default	false
Introduced	16.0.R1

severity *keyword*

Context	**configure log log-events stp event** *keyword*
Description	Severity level associated with event type
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

specific-throttle *boolean*

Context	**configure log log-events stp event** *keyword*
Description	Use parameters that throttle this specific event
Default	false
Introduced	16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events stp event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events stp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events stp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

svcmgr event *keyword*

Context	**configure log log-events**
Description	Enter the svcmgr context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events svcmgr event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers

Introduced 16.0.R1

Notes This element is part of a list key

generate *boolean*

Context **configure log log-events svcmgr event** *keyword*

Description Generate log events of this type and increment the event counter

Introduced 16.0.R1

repeat *boolean*

Context **configure log log-events svcmgr event** *keyword*

Description The value of repeat determines whether or not events of this type will be repeated. When it has a value of 'true', the event is repeated. When it has a value of 'false', repeating is stopped.

Default false

Introduced 16.0.R1

severity *keyword*

Context **configure log log-events svcmgr event** *keyword*

Description Severity level associated with event type

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

specific-throttle *boolean*

Context **configure log log-events svcmgr event** *keyword*

Description Use parameters that throttle this specific event

Introduced 16.0.R1

specific-throttle-interval *number*

Context	**configure log log-events svcmgr event** *keyword*
Description	Duration of the event specific throttling interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle-limit *number*

Context	**configure log log-events svcmgr event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events svcmgr event** *keyword*
Description	Throttle log events of this type
Introduced	16.0.R1

system event *keyword*

Context	**configure log log-events**
Description	Enter the system context
Introduced	16.0.R1

event *keyword*

Context	**configure log log-events system event** *keyword*
Description	Specific log event as a trigger for one or more EHS handlers
Options	stiDateAndTimeChanged, ssiSaveConfigSucceeded, ssiSaveConfigFailed, sbiBootConfig, sbiBootSnmpd, tmnxConfigModify, tmnxConfigCreate, tmnxConfigDelete, tmnxStateChange, tmnxModuleMallocFailed, tmnxTrapDropped, ssiSyncConfigOK, ssiSyncConfigFailed, ssiSyncBootEnvOK, ssiSyncBootEnvFailed, socket_bind_failed, socket_conn_accept_failed, sntpTimeDiffExceedsThreshold, tmnxSssiMismatch, tmnxSnmpdStateChange, tmnxRedStandbySyncing, tmnxRedStandbyReady, tmnxRedStandbySyncLost, tmnxRedSwitchover, tmnxRedCpmActive, tmnxRedSingleCpm, persistencyClosedAlarmRaised, persistencyClosedAlarmCleared, tmnxSntpOperChange, tmnxFtpClientFailure, persistencyEventReport, sbiBootConfigFailFileError, sbiBootConfigOKFileError, persistenceRestoreProblem, tmnxSysRollbackStarted, tmnxSysRollbackStatusChange, tmnxSysRollbackSaveStatusChange,

specific-throttle-limit *number*

Context	**configure log log-events wpp event** *keyword*
Description	Times that this event can be logged within the specific throttle interval
Range	1 to 20000
Introduced	16.0.R1

throttle *boolean*

Context	**configure log log-events wpp event** *keyword*
Description	Throttle log events of this type
Default	true
Introduced	16.0.R1

log-id [id] *number*

Context	**configure log**
Description	Enter the log-id context
Max. Elements	30
Introduced	16.0.R1

[id] *number*

Context	**configure log log-id** *number*
Description	The value of id uniquely identifies an event stream log.
Range	1 to 101
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure log log-id** *number*
Description	Administrative state of the log
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure log log-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination

Context	**configure log log-id** *number*
Description	Enter the destination context
Introduced	16.0.R1

cli

Context	**configure log log-id** *number* **destination**
Description	Enter the **cli** context
Introduced	16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination cli**
Description	Number of events stored in this CLI log
Range	50 to 3000
Default	100
Introduced	16.0.R1
Notes	This element is part of a choice

console

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination**
Description	Log events to send to the system console port
Introduced	16.0.R1
Notes	This element is part of a choice

file *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination**
Description	Log events to send to the specified file ID
Reference	configure **log file** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

memory

Context	**configure log log-id** *number* **destination**
Description	Enter the **memory** context
Introduced	16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination memory**
Description	Number of events stored in this memory log
Range	50 to 3000
Default	100
Introduced	16.0.R1
Notes	This element is part of a choice

netconf

Context	**configure log log-id** *number* **destination**
Description	Enter the **netconf** context
Introduced	16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination netconf**
Description	Number of events stored in this NETCONF log
Range	50 to 3000
Default	100
Introduced	16.0.R1
Notes	This element is part of a choice

snmp

Context	**configure log log-id** *number* **destination**
Description	Enter the **snmp** context
Introduced	16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination snmp**
Description	Number of events stored in this SNMP log
Range	50 to 3000
Default	100
Introduced	16.0.R1
Notes	This element is part of a choice

syslog *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure log log-id** *number* **destination**
Description	Log events to send to the specified syslog ID
Reference	configure **log syslog** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

filter *string*

Context	**configure log log-id** *number*
Description	Filter for this log's source event stream to limit the event output in this log destination
Reference	configure **log filter** *number*
Introduced	16.0.R1

netconf-stream *string*

Context	**configure log log-id** *number*
Description	Destination NETCONF stream name
String Length	1 to 32
Introduced	16.0.R1

python-policy *string*

Context	**configure log log-id** *number*
Description	Python policy name
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

source

Context	**configure log log-id** *number*
Description	Enter the source context
Introduced	16.0.R1

change *boolean*

Context **configure log log-id** *number* **source**

Description All events in the activity stream to be sent to specific destination

Introduced 16.0.R1

debug *boolean*

Context **configure log log-id** *number* **source**

Description All debug-trace events in the debug stream to be sent to specific destination

Default false

Introduced 16.0.R1

main *boolean*

Context **configure log log-id** *number* **source**

Description All events in the main stream to be sent to specific destination

Introduced 16.0.R1

security *boolean*

Context **configure log log-id** *number* **source**

Description All events in the security event stream to be sent to specific destination

Introduced 16.0.R1

time-format *keyword*

Context **configure log log-id** *number*

Description Timestamp format for events sent to logs which have a value of either syslog, or file

Default utc

Options utc, local

Introduced 16.0.R1

route-preference

Context **configure log**

Description Enter the route-preference context

Introduced 16.0.R1

primary *keyword*

Context	**configure log route-preference**
Description	Primary routing preference for traffic that is generated for SNMP notifications and syslog messages
Default	outband
Options	inband, outband
Introduced	16.0.R1

secondary *keyword*

Context	**configure log route-preference**
Description	Secondary routing preference for traffic that is generated for SNMP notifications and syslog messages
Default	inband
Options	inband, outband, none
Introduced	16.0.R1

snmp-trap-group [log-id] *number*

Context	**configure log**
Description	Enter the snmp-trap-group context
Max. Elements	15
Introduced	16.0.R1

[log-id] *number*

Context	**configure log snmp-trap-group** *number*
Description	SNMP notification group associated with the event log
Range	1 to 100
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure log snmp-trap-group** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

trap-target [name] *string*

Context	**configure log snmp-trap-group** *number*
Description	Enter the trap-target context
Max. Elements	25
Introduced	16.0.R1

[name] *string*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	Name for an SNMP notification destination within the SNMP notification group
String Length	1 to 28
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	IP address attribute for the trap target
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

notify-community *string*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification
String Length	1 to 31
Introduced	16.0.R1
Notes	This element is mandatory

port *number*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	UDP port number to send messages to this remote SNMP notification collector
Range	0 | 1 to 65535
Default	162
Introduced	16.0.R1

replay *boolean*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	Retransmit missed notifications
Default	false
Introduced	16.0.R1

security-level *keyword*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	Security level at which SNMP notification messages are sent to SNMP notification collector
Default	no-auth-no-privacy
Options	no-auth-no-privacy, auth-no-privacy, privacy
Introduced	16.0.R1

version *keyword*

Context	**configure log snmp-trap-group** *number* **trap-target** *string*
Description	SNMP version to format notification messages sent to this SNMP notification collector
Default	snmpv3
Options	snmpv1, snmpv2c, snmpv3
Introduced	16.0.R1

syslog [syslog-id] *number*

Context	**configure log**
Description	Enter the syslog context
Introduced	16.0.R1

[syslog-id] *number*

Context	**configure log syslog** *number*
Description	Unique arbitrary identifier for this SYSLOG collector target
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure log syslog** *number*
Description	Target syslog host address
Introduced	16.0.R1

description *string*

Context	**configure log syslog** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

facility *keyword*

Context	**configure log syslog** *number*
Description	Facility code for messages
Default	local7
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Introduced	16.0.R1

log-prefix (*keyword* | *string*)

Context	**configure log syslog** *number*
Description	String that is prepended to every log message sent to this target syslog host
String Length	1 to 32
Default	TMNX
Options	no-prefix
Introduced	16.0.R1

port *number*

Context	**configure log syslog** *number*
Description	UDP port to generate syslog messages
Range	0 | 1 to 65535
Default	514
Introduced	16.0.R1

severity *keyword*

Context	**configure log syslog** *number*
Description	Severity level threshold for the syslog message
Default	info
Options	emergency, alert, critical, error, warning, notice, info, debug
Introduced	16.0.R1

throttle-rate

Context	**configure log**
Description	Enter the throttle-rate context
Introduced	16.0.R1

interval *number*

Context	**configure log throttle-rate**
Description	Duration of an event throttling interval
Range	1 to 1200
Default	1
Introduced	16.0.R1

limit *number*

Context	**configure log throttle-rate**
Description	Number of log events within the throttle interval
Range	1 to 20000
Default	2000
Introduced	16.0.R1

18 macsec Commands

configure
- — **macsec**
  - — **connectivity-association** *string*
    - — **admin-state** *keyword*
    - — **cipher-suite** *keyword*
    - — **clear-tag-mode** *keyword*
    - — **description** *string*
    - — **encryption-offset** *number*
    - — **macsec-encrypt** *boolean*
    - — **replay-protection** *boolean*
    - — **replay-window-size** *number*
    - — **static-cak**
      - — **active-psk** *number*
      - — **mka-key-server-priority** *number*
      - — **pre-shared-key** *number*
        - — **cak** *encrypted-leaf-hex-without-prefix*
        - — **cak-name** *string*
        - — **encryption-type** *keyword*
  - — **mac-policy** *number*
    - — **destination-mac-address** *mac-address*

18.1 macsec Command Descriptions

macsec

Context	**configure**
Description	Enter the macsec context
Introduced	16.0.R1

connectivity-association [ca-name] *string*

Context	**configure macsec**
Description	Enter the connectivity-association context
Introduced	16.0.R1

[ca-name] *string*

Context	**configure macsec connectivity-association** *string*
Description	Connectivity association name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure macsec connectivity-association** *string*
Description	Administrative state of this CA
Default	disable
Options	enable, disable
Introduced	16.0.R1

cipher-suite *keyword*

Context	**configure macsec connectivity-association** *string*
Description	Datapath encryption protocol
Default	gcm-aes-128
Options	gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Introduced	16.0.R1

clear-tag-mode *keyword*

Context	**configure macsec connectivity-association** *string*
Description	Clear tag mode
Default	none
Options	none, single-tag, dual-tag
Introduced	16.0.R1

description *string*

Context	**configure macsec connectivity-association** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

encryption-offset *number*

Context	**configure macsec connectivity-association** *string*
Description	Offset of the encryption in MACsec packet
Range	0 | 30 | 50
Default	0
Introduced	16.0.R1

macsec-encrypt *boolean*

Context	**configure macsec connectivity-association** *string*
Description	Encrypt all PDUs and authenticate (ICV payload)
Default	true
Introduced	16.0.R1

replay-protection *boolean*

Context	**configure macsec connectivity-association** *string*
Description	Discard packet that is not within the replay window size
Default	false
Introduced	16.0.R1

replay-window-size *number*

Context	**configure macsec connectivity-association** *string*
Description	Size of the replay protection window
Range	0 to 4294967294
Default	0
Introduced	16.0.R1

static-cak

Context	**configure macsec connectivity-association** *string*
Description	Enter the static-cak context
Introduced	16.0.R1

active-psk *number*

Context	**configure macsec connectivity-association** *string* **static-cak**
Description	Value of the pre-shared-key (PSK)
Range	1 to 2
Default	1
Introduced	16.0.R1

mka-key-server-priority *number*

Context	**configure macsec connectivity-association** *string* **static-cak**
Description	Key server priority used by the MKA protocol
Range	0 to 255
Default	16
Introduced	16.0.R1

pre-shared-key [psk-id] *number*

Context	**configure macsec connectivity-association** *string* **static-cak**
Description	Enter the pre-shared-key context
Max. Elements	2
Introduced	16.0.R1

[psk-id] *number*

Context	**configure macsec connectivity-association** *string* **static-cak pre-shared-key** *number*
Description	Value of the pre-shared-key (PSK)
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

cak *encrypted-leaf-hex-without-prefix*

Context	**configure macsec connectivity-association** *string* **static-cak pre-shared-key** *number*
Description	Connectivity association key (CAK) for a pre-shared key
String Length	1 to 70
Introduced	16.0.R1

cak-name *string*

Context	**configure macsec connectivity-association** *string* **static-cak pre-shared-key** *number*
Description	Connectivity Association Key (CAK) name for the PSK
String Length	1 to 64
Introduced	16.0.R1

encryption-type *keyword*

Context	**configure macsec connectivity-association** *string* **static-cak pre-shared-key** *number*
Description	Encryption for authentication of the MKA packet
Options	aes-128-cmac, aes-256-cmac
Introduced	16.0.R1
Notes	This element is mandatory

mac-policy [mac-policy-id] *number*

Context	**configure macsec**
Description	Enter the **mac-policy** context
Introduced	16.0.R5

[mac-policy-id] *number*

Context	**configure macsec mac-policy** *number*
Description	The ID of the mac policy.
Introduced	16.0.R5
Notes	This element is part of a list key

destination-mac-address [dest-mac-addr] *mac-address*

Context	**configure macsec mac-policy** *number*
Description	Enter the **destination-mac-address** context
Introduced	16.0.R5

[dest-mac-addr] *mac-address*

Context	**configure macsec mac-policy** *number* **destination-mac-address** *mac-address*
Description	The destination mac address to be added to the policy.
Introduced	16.0.R5
Notes	This element is part of a list key

19 mcac Commands

configure
- **mcac**
  - **interface-policy** *string*
    - **admin-state** *keyword*
    - **bandwidth**
      - **mandatory** (*number* | *keyword*)
      - **total** (*number* | *keyword*)
    - **description** *string*
  - **policy** *string*
    - **bundle** *string*
      - **admin-state** *keyword*
      - **bandwidth** *number*
      - **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
        - **bandwidth** *number*
        - **priority-class** *keyword*
        - **type** *keyword*
      - **description** *string*
      - **mc-constraints**
        - **lag-port-down** *number* **number-down** *number*
          - **level** *number*
        - **level** *number*
          - **bandwidth** *number*
        - **use-lag-port-weight** *boolean*
    - **default-action** *keyword*
    - **description** *string*

19.1 mcac Command Descriptions

mcac

Context	**configure**
Description	Enter the mcac context
Introduced	16.0.R1

interface-policy [policy-name] *string*

Context	**configure mcac**
Description	Enter the interface-policy context
Introduced	16.0.R1

[policy-name] *string*

Context	**configure mcac interface-policy** *string*
Description	Policy name for multicast CAC interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure mcac interface-policy** *string*
Description	Administrative state of the multicast CAC interface policy
Default	enable
Options	enable, disable
Introduced	16.0.R1

bandwidth

Context	**configure mcac interface-policy** *string*
Description	Enter the bandwidth context
Introduced	16.0.R1

mandatory (*number* | *keyword*)

Context **configure mcac interface-policy** *string* **bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure mcac interface-policy** *string* **bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

description *string*

Context **configure mcac interface-policy** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

policy [policy-name] *string*

Context **configure mcac**

Description Enter the policy context

Introduced 16.0.R1

[policy-name] *string*

Context **configure mcac policy** *string*

Description Multicast CAC policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

bundle [bundle-name] *string*

Context	**configure mcac policy** *string*
Description	Enter the bundle context
Max. Elements	64
Introduced	16.0.R1

[bundle-name] *string*

Context	**configure mcac policy** *string* **bundle** *string*
Description	Name for the Multicast CAC policy bundle
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure mcac policy** *string* **bundle** *string*
Description	Administrative state of the bundle
Default	disable
Options	enable, disable
Introduced	16.0.R1

bandwidth *number*

Context	**configure mcac policy** *string* **bundle** *string*
Description	Maximum bandwidth for this bundle
Range	1 to 4294967295
Default	100
Introduced	16.0.R1

channel start (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure mcac policy** *string* **bundle** *string*
Description	Enter the channel context
Introduced	16.0.R1

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Beginning multicast IP address
Introduced	16.0.R1
Notes	This element is part of a list key

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Ending multicast IP address
Introduced	16.0.R1
Notes	This element is part of a list key

source (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Source prefix
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Bandwidth required by this channel
Range	10 to 10000000
Default	10
Introduced	16.0.R1

priority-class *keyword*

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Classification of channels used in the algorithm when LAG ports change state
Default	low
Options	low, high
Introduced	16.0.R1

type *keyword*

Context	**configure mcac policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source** (*ipv4-prefix* | *ipv6-prefix*)
Description	Channel type to be either mandatory or optional
Default	optional
Options	optional, mandatory
Introduced	16.0.R1

description *string*

Context	**configure mcac policy** *string* **bundle** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

mc-constraints

Context	**configure mcac policy** *string* **bundle** *string*
Description	Enter the mc-constraints context
Introduced	16.0.R1

lag-port-down [lag-id] *number* **number-down** *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints**
Description	Enter the lag-port-down context
Introduced	16.0.R1

[lag-id] *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints lag-port-down** *number* **number-down** *number*
Description	LAG ID
Range	1 to 800
Introduced	16.0.R1
Notes	This element is part of a list key

number-down *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints lag-port-down** *number* **number-down** *number*
Description	Number of lag ports that are down.
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints lag-port-down** *number* **number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

level [level-id] *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints**
Description	Enter the level context
Introduced	16.0.R1

[level-id] *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints level** *number*
Description	Bandwidth level ID for a multicast CAC constraint
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure mcac policy** *string* **bundle** *string* **mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

default-action *keyword*

Context	**configure mcac policy** *string*
Description	Default action for this MCAC policy
Default	discard
Options	accept, discard
Introduced	16.0.R1

description *string*

Context	**configure mcac policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

20 mirror Commands

configure
- **mirror**
  - **mirror-dest** *service-name*
    - **admin-state** *keyword*
    - **description** *string*
    - **encap**
      - **layer-3-encap**
        - **direction-bit** *boolean*
        - **gateway**

20.1 mirror Command Descriptions

mirror

Context	**configure**
Description	Enter the mirror context
Introduced	16.0.R1

mirror-dest [service-name] *service-name*

Context	**configure mirror**
Description	Enter the mirror-dest context
Introduced	16.0.R1

[service-name] *service-name*

Context	**configure mirror mirror-dest** *service-name*
Description	Specify service name. Must start with a letter or be a number.
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure mirror mirror-dest** *service-name*
Description	Administrative state of the mirror destination service
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure mirror mirror-dest** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

encap

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the encap context
Introduced	16.0.R1

layer-3-encap

Context	**configure mirror mirror-dest** *service-name* **encap**
Description	Enter the layer-3-encap context
Introduced	16.0.R1

direction-bit *boolean*

Context	**configure mirror mirror-dest** *service-name* **encap layer-3-encap**
Description	Highest bit in Interception ID of shim header to show direction of mirrored traffic flow
Default	false
Introduced	16.0.R1

gateway

Context	**configure mirror mirror-dest** *service-name* **encap layer-3-encap**
Description	Enter the gateway context
Introduced	16.0.R1

ip-address

Context	**configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway**
Description	Enter the ip-address context
Introduced	16.0.R1

destination *ipv4-unicast-address*

Context	**configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway ip-address**
Description	IPv4 destination address for the gateway
Introduced	16.0.R1

source *ipv4-unicast-address*

Context **configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway ip-address**

Description IPv4 source address for the gateway

Introduced 16.0.R1

udp-port

Context **configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway**

Description Enter the udp-port context

Introduced 16.0.R1

destination *number*

Context **configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway udp-port**

Description UDP destination port to use with this gateway

Range 0 | 1 to 65535

Default 0

Introduced 16.0.R1

source *number*

Context **configure mirror mirror-dest** *service-name* **encap layer-3-encap gateway udp-port**

Description UDP source port with this gateway

Range 0 | 1 to 65535

Default 0

Introduced 16.0.R1

header-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure mirror mirror-dest** *service-name* **encap layer-3-encap**

Description Header for the Layer 3 encapsulation

Options ip-udp-shim, ip-gre

Introduced 16.0.R1

Notes This element is mandatory

router-instance *string*

Context	**configure mirror mirror-dest** *service-name* **encap layer-3-encap**
Description	Router instance to use with routed encapsulation
Default	Base
Introduced	16.0.R1

endpoint [name] *string*

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the endpoint context
Max. Elements	2
Introduced	16.0.R1

[name] *string*

Context	**configure mirror mirror-dest** *service-name* **endpoint** *string*
Description	Service endpoint name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure mirror mirror-dest** *service-name* **endpoint** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

revert-time (*number* | *keyword*)

Context	**configure mirror mirror-dest** *service-name* **endpoint** *string*
Description	Time before reverting back to primary spoke SDP defined after failing in backup spoke SDP
Default	immediate
Introduced	16.0.R1

fc *keyword*

Context	**configure mirror mirror-dest** *service-name*
Description	Forwarding class for destination traffic
Default	be
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

include-port-id *boolean*

Context	**configure mirror mirror-dest** *service-name*
Description	Include port ID of the system in the packet
Default	false
Introduced	16.0.R1

pcap [session-name] *string*

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the pcap context
Max. Elements	1
Introduced	16.0.R1

[session-name] *string*

Context	**configure mirror mirror-dest** *service-name* **pcap** *string*
Description	Packet Capture (PCAP) session name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

file-url *ts-url*

Context	**configure mirror mirror-dest** *service-name* **pcap** *string*
Description	location of the file, either local or remote
String Length	1 to 180
Introduced	16.0.R1

remote-source

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the remote-source context
Introduced	16.0.R1

far-end [far-end-addr] *ipv4-address*

Context	**configure mirror mirror-dest** *service-name* **remote-source**
Description	Enter the far-end context
Introduced	16.0.R1

[far-end-addr] *ipv4-address*

Context	**configure mirror mirror-dest** *service-name* **remote-source far-end** *ipv4-address*
Description	Far end IP address
Introduced	16.0.R1
Notes	This element is part of a list key

icb *boolean*

Context	**configure mirror mirror-dest** *service-name* **remote-source far-end** *ipv4-address*
Description	Remote source as an inter-chassis backup
Default	false
Introduced	16.0.R1

ing-vc-label *number*

Context	**configure mirror mirror-dest** *service-name* **remote-source far-end** *ipv4-address*
Description	Ingress virtual circuit label
Range	32 to 18431
Introduced	16.0.R1
Notes	This element is part of a choice

label-signaling *keyword*

Context	**configure mirror mirror-dest** *service-name* **remote-source far-end** *ipv4-address*
Description	Protocol to obtain the ingress labels
Default	tldp
Options	tldp
Introduced	16.0.R1
Notes	This element is part of a choice

vc-id *number*

Context	**configure mirror mirror-dest** *service-name* **remote-source far-end** *ipv4-address*
Description	Virtual circuit identifier associated with the remote source
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure mirror mirror-dest** *service-name* **remote-source**
Description	Enter the spoke-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier.
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

control-word *boolean*

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*

Description Enable the CW bit in label message

Introduced 16.0.R1

egress

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

vc-label *number*

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

endpoint

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*

Description Enter the endpoint context

Introduced 16.0.R1

icb *boolean*

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **endpoint**

Description Bind SDP as type Inter-Chassis Backup (ICB)

Default false

Introduced 16.0.R1

name *string*

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **endpoint**

Description Name of endpoint where this SDP bind is attached

Reference configure **mirror mirror-dest** *service-name* **endpoint** *string*

Introduced 16.0.R1

ingress

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id*

Description Enter the ingress context

Introduced 16.0.R1

l2tpv3

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the l2tpv3 context

Introduced 16.0.R1

cookie

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **ingress l2tpv3**

Description Enter the cookie context

Introduced 16.0.R1

cookie1 *cookie-value*

Context **configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **ingress l2tpv3 cookie**

Description Value of cookie-1 for the tunnel

String Length 18 to 23

Introduced 16.0.R1

cookie2 *cookie-value*

Context	**configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **ingress l2tpv3 cookie**
Description	Value of cookie-1 for the tunnel
String Length	18 to 23
Introduced	16.0.R1

vc-label *number*

Context	**configure mirror mirror-dest** *service-name* **remote-source spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	32 to 18431
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the sap context
Max. Elements	1
Introduced	16.0.R3

[sap-id] *sap*

Context	**configure mirror mirror-dest** *service-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R2
Notes	This element is part of a list key

egress

Context	**configure mirror mirror-dest** *service-name* **sap** *sap*
Description	Enter the egress context
Introduced	16.0.R1

ip-mirror

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress**

Description Enter the ip-mirror context

Introduced 16.0.R4

mac

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress ip-mirror**

Description Enter the mac context

Introduced 16.0.R4

destination *mac-address*

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress ip-mirror mac**

Description Destination MAC address.

Introduced 16.0.R4

source *mac-unicast-address*

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress ip-mirror mac**

Description Source MAC address.

Introduced 16.0.R4

qos

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

sap-egress

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress qos**

Description Enter the sap-egress context

Introduced 16.0.R1

policy-name *string*

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress qos sap-egress**

Description Policy identifier

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R4

port-redirect-group

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress qos sap-egress**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Port redirect queue-group policy

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R4

instance *number*

Context **configure mirror mirror-dest** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Port queue-group instance

Range 1 to 65535

Introduced 16.0.R4

endpoint *string*

Context **configure mirror mirror-dest** *service-name* **sap** *sap*

Description Configure name of the service endpoint.

Reference configure **mirror mirror-dest** *service-name* **endpoint** *string*

Introduced 16.0.R3

service-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure mirror mirror-dest** *service-name*
Description	Unique service ID; cannot be used by any other service, regardless of service type
Range	1 to 2147483647
Introduced	16.0.R1

slice-size *number*

Context	**configure mirror mirror-dest** *service-name*
Description	Maximum size of a mirrored frame that can be transmitted to the mirror destination
Range	128 to 9216
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure mirror mirror-dest** *service-name*
Description	Enter the spoke-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier.
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

control-word *boolean*

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Set the CW bit in the label message
Introduced	16.0.R1

egress

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the egress context
Introduced	16.0.R1

l2tpv3

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description	Enter the l2tpv3 context
Introduced	16.0.R1

cookie *cookie-value*

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **egress l2tpv3**
Description	Cookie parameters
String Length	18 to 23
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description	Static MPLS VC label that is used to send packets to the far end device through this SDP
Range	16 to 1048575
Introduced	16.0.R1

endpoint

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the endpoint context
Introduced	16.0.R1

icb *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Bind SDP as type Inter-Chassis Backup (ICB)
Default	false
Introduced	16.0.R1

name *string*

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Name of endpoint where this SDP bind is attached
Reference	configure **mirror mirror-dest** *service-name* **endpoint** *string*
Introduced	16.0.R1

precedence (*number* | *keyword*)

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Precedence of this SDP bind when there are multiple SDP binds attached to one service endpoint
Default	4
Introduced	16.0.R1

ingress

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the ingress context
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure mirror mirror-dest** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	32 to 18431
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure mirror mirror-dest** *service-name*
Description	Mirror type information
Default	ether
Options	ether, frame-relay, ppp, atm-sdu, satop-e1, satop-t1, cesopsn, cesopsn-cas, ip-only
Introduced	16.0.R1

21.1 multicast-management Command Descriptions

multicast-management

Context	**configure**
Description	Enter the multicast-management context
Introduced	16.0.R1

bandwidth-policy [policy-name] *string*

Context	**configure multicast-management**
Description	Enter the bandwidth-policy context
Max. Elements	32
Introduced	16.0.R1

[policy-name] *string*

Context	**configure multicast-management bandwidth-policy** *string*
Description	Multicast bandwidth policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-bw-threshold *number*

Context	**configure multicast-management bandwidth-policy** *string*
Description	Administrative bandwidth threshold
Range	1 to 40000000
Default	10
Units	kilobps
Introduced	16.0.R1

description *string*

Context	**configure multicast-management bandwidth-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

falling-percent-reset *number*

Context	**configure multicast-management bandwidth-policy** *string*
Description	Percentage of bandwidth decrease that occurs before resetting
Range	1 to 100
Default	50
Introduced	16.0.R1

impm-paths

Context	**configure multicast-management bandwidth-policy** *string*
Description	Enter the impm-paths context
Introduced	16.0.R1

primary-path

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths**
Description	Enter the primary-path context
Introduced	16.0.R1

queue-parameters

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path**
Description	Enter the queue-parameters context
Introduced	16.0.R1

cbs *decimal-number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path queue-parameters**
Description	Committed buffer size (CBS)
Range	0.00 to 100.00
Default	5.00
Units	centipercent
Introduced	16.0.R1

drop-tail

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path queue-parameters**
Description	Enter the drop-tail context
Introduced	16.0.R1

low

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path queue-parameters drop-tail**
Description	Enter the low context
Introduced	16.0.R1

percent-reduction-from-mbs *number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path queue-parameters drop-tail low**
Description	Low drop-tail percent from MBS that is reduced
Range	0 to 100
Default	10
Introduced	16.0.R1

mbs *decimal-number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths primary-path queue-parameters**
Description	Maximum buffer size (MBS)
Range	0.00 to 100.00
Default	7.00
Units	centipercent
Introduced	16.0.R1

secondary-path

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths**
Description	Enter the secondary-path context
Introduced	16.0.R1

number-paths

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path**
Description	Enter the number-paths context
Introduced	16.0.R1

number-of-paths *number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path number-paths**
Description	Number of paths for the secondary path
Range	1 to 15
Default	1
Introduced	16.0.R1

redundant-sfm *number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path number-paths**
Description	Number of paths for the secondary path in dual-sfm mode.
Range	1 to 15
Default	1
Introduced	16.0.R1

queue-parameters

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path**
Description	Enter the queue-parameters context
Introduced	16.0.R1

cbs *decimal-number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path queue-parameters**
Description	Committed buffer size (CBS)
Range	0.00 to 100.00
Default	30.00
Units	centipercent
Introduced	16.0.R1

drop-tail

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path queue-parameters**
Description	Enter the drop-tail context
Introduced	16.0.R1

low

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path queue-parameters drop-tail**
Description	Enter the low context
Introduced	16.0.R1

percent-reduction-from-mbs *number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path queue-parameters drop-tail low**
Description	Low drop-tail percent from MBS that is reduced
Range	0 to 100
Default	10
Introduced	16.0.R1

mbs *decimal-number*

Context	**configure multicast-management bandwidth-policy** *string* **impm-paths secondary-path queue-parameters**
Description	Maximum buffer size (MBS)
Range	0.00 to 100.00
Default	40.00
Units	centipercent
Introduced	16.0.R1

mcast-pool

Context	**configure multicast-management bandwidth-policy** *string*
Description	Enter the mcast-pool context
Introduced	16.0.R1

percent-of-total *number*

Context	**configure multicast-management bandwidth-policy** *string* **mcast-pool**
Description	Percentage of the total ingress buffer pool assigned for the bandwidth policy
Range	1 to 50
Default	10
Units	percent
Introduced	16.0.R1

resv-cbs *number*

Context	**configure multicast-management bandwidth-policy** *string* **mcast-pool**
Description	Percentage of the pool reserved for multicast path queues within their Committed Buffer Size (CBS) threshold.
Range	1 to 100
Default	50
Introduced	16.0.R1

slope-policy *string*

Context	**configure multicast-management bandwidth-policy** *string* **mcast-pool**
Description	Slope policy name
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

chassis-level

Context	**configure multicast-management**
Description	Enter the chassis-level context
Introduced	16.0.R1

mmrp-impm-override *boolean*

Context	**configure multicast-management chassis-level**
Description	Manage MMRP traffic by IMPM
Default	false
Introduced	16.0.R1

per-mcast-plane-capacity

Context	**configure multicast-management chassis-level**
Description	Enter the per-mcast-plane-capacity context
Introduced	16.0.R1

mcast-capacity

Context	**configure multicast-management chassis-level per-mcast-plane-capacity**
Description	Enter the mcast-capacity context
Introduced	16.0.R1

primary-percentage *decimal-number*

Context	**configure multicast-management chassis-level per-mcast-plane-capacity mcast-capacity**
Description	Percentage of the total multicast plane capacity to use for primary multicast planes
Range	0.01 to 100.00
Units	centipercent
Introduced	16.0.R1

secondary-percentage *decimal-number*

Context	**configure multicast-management chassis-level per-mcast-plane-capacity mcast-capacity**
Description	Percentage of the total multicast plane capacity to use for secondary multicast planes
Range	0.01 to 100.00
Units	centipercent
Introduced	16.0.R1

redundant-mcast-capacity

Context	**configure multicast-management chassis-level per-mcast-plane-capacity**
Description	Enter the redundant-mcast-capacity context
Introduced	16.0.R1

primary-percentage *decimal-number*

Context	**configure multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity**
Description	Percentage of the total multicast plane capacity to use for primary multicast planes
Range	0.01 to 100.00
Units	centipercent
Introduced	16.0.R1

secondary-percentage *decimal-number*

Context	**configure multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity**
Description	Percentage of the total multicast plane capacity to use for secondary multicast planes
Range	0.01 to 100.00
Units	centipercent
Introduced	16.0.R1

total-capacity *keyword*

Context	**configure multicast-management chassis-level per-mcast-plane-capacity**
Description	Total multicast plane bandwidth
Units	megabps
Options	dynamic, 2000, 4000, 5250, 8250, 16500, 19000
Introduced	16.0.R1

round-robin-inactive-records *boolean*

Context	**configure multicast-management chassis-level**
Description	Redistribute initially inactive records among all available IOM multicast paths and switch fabric planes
Default	false
Introduced	16.0.R1

multicast-info-policy [policy-name] *string*

Context	**configure multicast-management**
Description	Enter the multicast-info-policy context
Max. Elements	32
Introduced	16.0.R1

[policy-name] *string*

Context	**configure multicast-management multicast-info-policy** *string*
Description	Multicast CAC policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

bundle [bundle-name] *string*

Context	**configure multicast-management multicast-info-policy** *string*
Description	Enter the bundle context
Max. Elements	32
Introduced	16.0.R1

[bundle-name] *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Bundle name for the multicast info policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-bw *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Administrative bandwidth
Range	1 to 40000000
Units	kilobps
Introduced	16.0.R1

bw-activity

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Enter the bw-activity context
Introduced	16.0.R1

black-hole-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **bw-activity**
Description	Rate at which a channel is placed in the black-hole state
Range	1 to 40000000
Units	kilobps
Introduced	16.0.R1

bw-activity-type *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **bw-activity**
Description	Bandwidth required by a multicast channel
Default	dynamic
Options	use-admin-bw, dynamic
Introduced	16.0.R1

falling-delay *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **bw-activity**
Description	Falling delay threshold to hold on to the previous highest bandwidth until the delay time expires
Range	10 to 3600
Default	30
Units	seconds
Introduced	16.0.R1

channel start (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Enter the channel context
Introduced	16.0.R1

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Start IP address for a channel
Introduced	16.0.R1
Notes	This element is part of a list key

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Ending IP address for a channel
Introduced	16.0.R1
Notes	This element is part of a list key

admin-bw *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Administrative bandwidth
Range	1 to 40000000
Units	kilobps
Introduced	16.0.R1

bw-activity

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the bw-activity context
Introduced	16.0.R1

black-hole-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **bw-activity**
Description	Rate at which a channel is placed in the black-hole state
Range	0 to 40000000
Default	0
Units	kilobps
Introduced	16.0.R1

bw-activity-type *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **bw-activity**
Description	Bandwidth required by a multicast channel
Options	use-admin-bw, dynamic
Introduced	16.0.R1

falling-delay *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **bw-activity**
Description	Falling delay threshold to hold on to the previous highest bandwidth until the delay time expires
Range	10 to 3600
Units	seconds
Introduced	16.0.R1

explicit-sf-path *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Explicit ingress switch fabric multicast path that is assigned to a multicast channel
Options	primary, secondary
Introduced	16.0.R1

keepalive-override *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Keepalive timer override
Range	10 to 300
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Relative preference level for multicast channels
Range	1 to 7
Introduced	16.0.R1

primary-tunnel-interface

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the primary-tunnel-interface context
Introduced	16.0.R1

ldp-p2mp *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **primary-tunnel-interface**
Description	Identifier for signaling mLDP P2MP LSP
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

rsvp-p2mp *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **primary-tunnel-interface**
Description	Name of P2MP for LDP P2MP
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

sender *ipv4-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **primary-tunnel-interface**
Description	Bundle to assign in multicast info policy and channels to receive from primary tunnel interface
Introduced	16.0.R1

source-override [ip-address] *ipv4-unicast-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the source-override context
Introduced	16.0.R1

[ip-address] *ipv4-unicast-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*
Description	IP address for source override
Introduced	16.0.R1
Notes	This element is part of a list key

admin-bw *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*

Description Administrative bandwidth

Range 1 to 40000000

Units kilobps

Introduced 16.0.R1

bw-activity

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*

Description Enter the bw-activity context

Introduced 16.0.R1

black-hole-rate *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **bw-activity**

Description Rate at which a channel is placed in the black-hole state

Range 0 to 40000000

Default 0

Units kilobps

Introduced 16.0.R1

bw-activity-type *keyword*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **bw-activity**

Description Bandwidth required by a multicast channel

Options use-admin-bw, dynamic

Introduced 16.0.R1

falling-delay *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **bw-activity**
Description	Falling delay threshold to hold on to the previous highest bandwidth until the delay time expires
Range	10 to 3600
Units	seconds
Introduced	16.0.R1

explicit-sf-path *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*
Description	Explicit ingress switch fabric multicast path that is assigned to a multicast channel
Options	primary, secondary
Introduced	16.0.R1

keepalive-override *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*
Description	Keepalive timer override
Range	10 to 300
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*
Description	Relative preference level for multicast channels
Range	1 to 7
Introduced	16.0.R1

primary-tunnel-interface

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*
Description	Enter the primary-tunnel-interface context
Introduced	16.0.R1

ldp-p2mp *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **primary-tunnel-interface**
Description	Identifier for signaling mLDP P2MP LSP
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

rsvp-p2mp *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **primary-tunnel-interface**
Description	Name of P2MP for LDP P2MP
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

sender *ipv4-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **primary-tunnel-interface**
Description	Bundle to assign in multicast info policy and channels to receive from primary tunnel interface
Introduced	16.0.R1

video

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address*

Description Enter the video context

Introduced 16.0.R1

analyzer

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**

Description Enter the analyzer context

Introduced 16.0.R1

alarms

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer**

Description Enter the alarms context

Introduced 16.0.R1

cc-error *boolean*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**

Description Check the continuity counter (Cc)

Default false

Introduced 16.0.R1

non-vid-pid-absent *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**

Description PID that is checked within the specified interval

Range 100 to 5000

Units milliseconds

Introduced 16.0.R1

pat-repetition

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**

Description Enter the pat-repetition context

Introduced 16.0.R1

poa *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pat-repetition**

Description Time between two consecutive PATs for which a POA alarm is raised if interval is equaled or exceeded

Range 300 to 1000

Default 500

Units milliseconds

Introduced 16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 900
Default	200
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pat-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Check for PAT syntax errors
Default	false
Introduced	16.0.R1

pcr-repetition

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**

Description Enter the pcr-repetition context

Introduced 16.0.R1

poa *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pcr-repetition**

Description Time between two consecutive PCRs for which a POA alarm is raised if interval is equaled or exceeded

Range 300 to 1000

Default 500

Units milliseconds

Introduced 16.0.R1

qos *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pcr-repetition**

Description Time between two consecutive PCRs for which a QoS alarm is raised if interval is equaled or exceeded

Range 200 to 900

Default 200

Units milliseconds

Introduced 16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pid-pmt-unref *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Check for unreferenced PIDs in the PMT
Default	false
Introduced	16.0.R1

pmt-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Enter the pmt-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 5000
Default	2000
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 4900
Default	800
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 4800
Default	400
Units	milliseconds
Introduced	16.0.R1

pmt-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Check for PMT syntax errors
Default	false
Introduced	16.0.R1

report-alarm

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Enter the report-alarm context
Introduced	16.0.R1

severity *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms report-alarm**
Description	Keyword for the type of alarm
Options	tnc, qos, poa
Introduced	16.0.R1

tei-set *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Check for TEI set errors
Default	false
Introduced	16.0.R1

ts-sync-loss *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	Check for synchronization loss errors
Default	false
Introduced	16.0.R1

vid-pid-absent *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer alarms**
Description	VID PID that is checked within the specified time interval
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video analyzer**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fcc-channel-type *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**
Description	Channel type for the bundle or channel
Options	hd, sd, pip
Introduced	16.0.R1

fcc-min-duration *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**
Description	Minimum duration of the FCC burst
Range	300 to 8000
Units	milliseconds
Introduced	16.0.R1

fcc-server *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**
Description	Value to override parent value of FCC server
Options	false, true
Introduced	16.0.R1

local-rt-server *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**
Description	Value to override parent value of local RT server
Options	false, true
Introduced	16.0.R1

reorder-audio *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**
Description	Time by which the audio packets are reordered in the ad stream
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1

rt-buffer-size *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**

Description Buffer size to store channel packets

Range 300 to 8000

Default 300

Units milliseconds

Introduced 16.0.R1

rt-server

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**

Description Enter the rt-server context

Introduced 16.0.R1

ip-address *ipv4-unicast-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video rt-server**

Description RT server IP address.

Introduced 16.0.R1

port *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video rt-server**

Description RT server port number.

Range 1024 to 5999 | 6251 to 65535

Introduced 16.0.R1

rt-state *keyword*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video rt-server**

Description Specifies the value which will override parent value of RT server state.

Options false, true

Introduced 16.0.R1

stream-selection

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**

Description Enter the stream-selection context

Introduced 16.0.R1

intf1 *string*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video stream-selection**

Description Primary interface

String Length 1 to 32

Introduced 16.0.R1

intf2 *string*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video stream-selection**

Description Secondary interface

String Length 1 to 32

Introduced 16.0.R1

source1 *ipv4-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video stream-selection**

Description Primary source IP address

Introduced 16.0.R1

source2 *ipv4-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video stream-selection**

Description Secondary source IP address

Introduced 16.0.R1

video-group (*number* | *keyword*)

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** *ipv4-unicast-address* **video**

Description Identifier for this video group

Range 1 to 4

Options none

Introduced 16.0.R1

video

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the video context

Introduced 16.0.R1

analyzer

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**

Description Enter the analyzer context

Introduced 16.0.R1

alarms

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer**

Description Enter the alarms context

Introduced 16.0.R1

cc-error *boolean*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**

Description Check the continuity counter (Cc)

Default false

Introduced 16.0.R1

non-vid-pid-absent *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**

Description PID that is checked within the specified interval

Range 100 to 5000

Units milliseconds

Introduced 16.0.R1

pat-repetition

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**

Description Enter the pat-repetition context

Introduced 16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 1000
Default	500
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 900
Default	200
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pat-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Check for PAT syntax errors
Default	false
Introduced	16.0.R1

pcr-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Enter the pcr-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 1000
Default	500
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 900
Default	200
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pid-pmt-unref *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Check for unreferenced PIDs in the PMT
Default	false
Introduced	16.0.R1

pmt-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Enter the pmt-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 5000
Default	2000
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 4900
Default	800
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 4800
Default	400
Units	milliseconds
Introduced	16.0.R1

pmt-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Check for PMT syntax errors
Default	false
Introduced	16.0.R1

report-alarm

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Enter the report-alarm context
Introduced	16.0.R1

severity *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms report-alarm**
Description	Keyword for the type of alarm
Options	tnc, qos, poa
Introduced	16.0.R1

tei-set *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Check for TEI set errors
Default	false
Introduced	16.0.R1

ts-sync-loss *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	Check for synchronization loss errors
Default	false
Introduced	16.0.R1

vid-pid-absent *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms**
Description	VID PID that is checked within the specified time interval
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fcc-channel-type *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Channel type for the bundle or channel
Options	hd, sd, pip
Introduced	16.0.R1

fcc-min-duration *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Minimum duration of the FCC burst
Range	300 to 8000
Units	milliseconds
Introduced	16.0.R1

fcc-server *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Value to override parent value of FCC server
Options	false, true
Introduced	16.0.R1

local-rt-server *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Value to override parent value of local RT server
Options	false, true
Introduced	16.0.R1

reorder-audio *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Time by which the audio packets are reordered in the ad stream
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1

rt-buffer-size *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Buffer size to store channel packets
Range	300 to 8000
Default	300
Units	milliseconds
Introduced	16.0.R1

rt-server

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Enter the rt-server context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video rt-server**

Description RT server IP address.

Introduced 16.0.R1

port *number*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video rt-server**

Description RT server port number.

Range 1024 to 5999 | 6251 to 65535

Introduced 16.0.R1

rt-state *keyword*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video rt-server**

Description Specifies the value which will override parent value of RT server state.

Options false, true

Introduced 16.0.R1

stream-selection

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**

Description Enter the stream-selection context

Introduced 16.0.R1

intf1 *string*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video stream-selection**

Description Primary interface

String Length 1 to 32

Introduced 16.0.R1

intf2 *string*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video stream-selection**

Description Secondary interface

String Length 1 to 32

Introduced 16.0.R1

source1 *ipv4-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video stream-selection**

Description Primary source IP address

Introduced 16.0.R1

source2 *ipv4-address*

Context **configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video stream-selection**

Description Secondary source IP address

Introduced 16.0.R1

video-group (*number* | *keyword*)

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **channel start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video**
Description	Identifier for this video group
Range	1 to 4
Options	none
Introduced	16.0.R1

cong-priority-threshold *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Preference level threshold where records change from low to high congestion priority
Range	0 to 7
Default	4
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ecmp-opt-threshold *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	ECMP threshold
Range	0 to 7
Default	7
Introduced	16.0.R1

explicit-sf-path *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Explicit ingress switch fabric multicast path that is assigned to a multicast channel
Options	primary, secondary
Introduced	16.0.R1

keepalive-override *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Keepalive timer override
Range	10 to 300
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Relative preference level for multicast channels
Range	1 to 7
Introduced	16.0.R1

primary-tunnel-interface

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Enter the primary-tunnel-interface context
Introduced	16.0.R1

ldp-p2mp *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **primary-tunnel-interface**
Description	Identifier for signaling mLDP P2MP LSP
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

rsvp-p2mp *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **primary-tunnel-interface**
Description	Name of P2MP for LDP P2MP
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

sender *ipv4-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **primary-tunnel-interface**
Description	Bundle to assign in multicast info policy and channels to receive from primary tunnel interface
Introduced	16.0.R1

video

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string*
Description	Enter the video context
Introduced	16.0.R1

analyzer

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Enter the analyzer context
Introduced	16.0.R1

alarms

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer**
Description	Enter the alarms context
Introduced	16.0.R1

cc-error *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check the continuity counter (Cc)
Default	false
Introduced	16.0.R1

non-vid-pid-absent *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	PID that is checked within the specified interval
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

pat-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Enter the pat-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 1000
Default	500
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 900
Default	200
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pat-repetition**
Description	Time between two consecutive PATs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pat-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check for PAT syntax errors
Default	false
Introduced	16.0.R1

pcr-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Enter the pcr-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 1000
Default	500
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 900
Default	200
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pcr-repetition**
Description	Time between two consecutive PCRs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 800
Default	100
Units	milliseconds
Introduced	16.0.R1

pid-pmt-unref *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check for unreferenced PIDs in the PMT
Default	false
Introduced	16.0.R1

pmt-repetition

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Enter the pmt-repetition context
Introduced	16.0.R1

poa *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a POA alarm is raised if interval is equaled or exceeded
Range	300 to 5000
Default	2000
Units	milliseconds
Introduced	16.0.R1

qos *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a QoS alarm is raised if interval is equaled or exceeded
Range	200 to 4900
Default	800
Units	milliseconds
Introduced	16.0.R1

tnc *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms pmt-repetition**
Description	Time between two consecutive PMTs for which a TNC alarm is raised if interval is equaled or exceeded
Range	100 to 4800
Default	400
Units	milliseconds
Introduced	16.0.R1

pmt-syntax *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check for PMT syntax errors
Default	false
Introduced	16.0.R1

report-alarm

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Enter the report-alarm context
Introduced	16.0.R1

severity *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms report-alarm**
Description	Keyword for the type of alarm
Options	tnc, qos, poa
Introduced	16.0.R1

tei-set *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check for TEI set errors
Default	false
Introduced	16.0.R1

ts-sync-loss *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	Check for synchronization loss errors
Default	false
Introduced	16.0.R1

vid-pid-absent *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer alarms**
Description	VID PID that is checked within the specified time interval
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video analyzer**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fcc-channel-type *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Channel type for the bundle or channel
Options	hd, sd, pip
Introduced	16.0.R1

fcc-min-duration *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Minimum duration of the FCC burst
Range	300 to 8000
Default	300
Units	milliseconds
Introduced	16.0.R1

fcc-server *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Enable FCC server for a multicast bundle
Default	false
Introduced	16.0.R1

local-fcc-port *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Local port for FCC requests
Range	1024 to 5999 | 6251 to 65535
Default	4098
Introduced	16.0.R1

local-rt-port *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Local port for RT requests
Range	1024 to 5999 | 6251 to 65535
Default	4096
Introduced	16.0.R1

local-rt-server *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Enable local retransmission server capability
Default	false
Introduced	16.0.R1

reorder-audio *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Time by which the audio packets are reordered in the ad stream
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1

rt-buffer-size *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Buffer size to store channel packets
Range	300 to 8000
Default	300
Units	milliseconds
Introduced	16.0.R1

rt-server

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Enter the rt-server context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video rt-server**
Description	RT server IP address
Introduced	16.0.R1
Notes	This element is mandatory

port *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video rt-server**
Description	RT server port number
Range	1024 to 5999 | 6251 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

stream-selection

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Enter the stream-selection context
Introduced	16.0.R1

intf1 *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video stream-selection**
Description	Primary interface
String Length	1 to 32
Introduced	16.0.R1

intf2 *string*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video stream-selection**
Description	Secondary interface
String Length	1 to 32
Introduced	16.0.R1

source1 *ipv4-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video stream-selection**
Description	Primary source IP address
Introduced	16.0.R1

source2 *ipv4-address*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video stream-selection**
Description	Secondary source IP address
Introduced	16.0.R1

video-group *number*

Context	**configure multicast-management multicast-info-policy** *string* **bundle** *string* **video**
Description	Video group for this bundle
Range	1 to 4
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-info-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

video-policy

Context	**configure multicast-management multicast-info-policy** *string*
Description	Enter the video-policy context
Introduced	16.0.R1

video-interface [ip-address] *ipv4-unicast-address*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy**
Description	Enter the video-interface context
Introduced	16.0.R1

[ip-address] *ipv4-unicast-address*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	IP address of the video interface
Introduced	16.0.R1
Notes	This element is part of a list key

fcc-session-timeout *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	FCC session timeout
Range	5 to 300
Default	300
Units	seconds
Introduced	16.0.R1

hd

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Enter the hd context
Introduced	16.0.R1

dent-threshold *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	Threshold below which the FCC server dents unicast data sent to FCC client
Range	1 to 31
Default	16
Introduced	16.0.R1

fcc-burst *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	Burst rate at which the Fast Channel Change (FCC) server sends unicast data to FCC client
Range	0 to 600
Default	25
Units	percent
Introduced	16.0.R1

fcc-server

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	Enter the fcc-server context
Introduced	16.0.R1

mode *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd fcc-server**
Description	Mode by which FCC server sends information to the client
Options	burst, dent, hybrid
Introduced	16.0.R1

local-rt-server *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	Enable local retransmission server capability
Default	false
Introduced	16.0.R1

mc-handover *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	FCC server rate during handover.
Range	0 to 100
Default	25
Introduced	16.0.R1

rt-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **hd**
Description	Rate at which RT packets are sent to client
Range	1 to 100
Default	5
Introduced	16.0.R1

max-igmp-latency *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Maximum IGMP latency per client
Range	10 to 1000
Default	100
Units	milliseconds
Introduced	16.0.R1

max-sessions *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Maximum number of sessions per client
Range	1 to 65536
Default	256
Introduced	16.0.R1

pip

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Enter the pip context
Introduced	16.0.R1

dent-threshold *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Threshold below which the FCC server dents unicast data sent to FCC client
Range	1 to 31
Default	16
Introduced	16.0.R1

fcc-burst *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Burst rate at which the Fast Channel Change (FCC) server sends unicast data to FCC client
Range	0 to 600
Default	25
Units	percent
Introduced	16.0.R1

fcc-server

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Enter the fcc-server context
Introduced	16.0.R1

mode *keyword*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip fcc-server**
Description	Mode by which FCC server sends information to the client
Options	burst, dent, hybrid
Introduced	16.0.R1

local-rt-server *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Enable local retransmission server capability
Default	false
Introduced	16.0.R1

mc-handover *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Rate at which FCC server sends unicast data to FCC client during handover to multicast stream
Range	0 to 600
Default	25
Units	percent
Introduced	16.0.R1

rt-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **pip**
Description	Rate at which RT packets are sent to client
Range	1 to 100
Default	5
Introduced	16.0.R1

ret-session-timeout *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	RET session timeout
Range	5 to 300
Default	300
Units	seconds
Introduced	16.0.R1

rt-payload-type *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Format expected for received retransmission packets
Range	33 | 96 to 127
Default	99
Introduced	16.0.R1

rt-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Rate at which RT packets are sent to client
Range	1 to 100
Default	5
Introduced	16.0.R1

sd

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Enter the sd context
Introduced	16.0.R1

dent-threshold *number*

Context **configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**

Description Threshold below which the FCC server dents unicast data sent to FCC client

Range 1 to 31

Default 16

Introduced 16.0.R1

fcc-burst *number*

Context **configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**

Description Burst rate at which the Fast Channel Change (FCC) server sends unicast data to FCC client

Range 0 to 600

Default 25

Units percent

Introduced 16.0.R1

fcc-server

Context **configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**

Description Enter the fcc-server context

Introduced 16.0.R1

mode *keyword*

Context **configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd fcc-server**

Description Mode by which FCC server sends information to the client

Options burst, dent, hybrid

Introduced 16.0.R1

local-rt-server *boolean*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**
Description	Enable local retransmission server capability
Default	false
Introduced	16.0.R1

mc-handover *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**
Description	Rate at which FCC server sends unicast data to FCC client during handover to multicast stream
Range	0 to 600
Default	25
Units	percent
Introduced	16.0.R1

rt-rate *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address* **sd**
Description	Rate at which RT packets are sent to client
Range	1 to 100
Default	5
Introduced	16.0.R1

subscriber-bw-limit *number*

Context	**configure multicast-management multicast-info-policy** *string* **video-policy video-interface** *ipv4-unicast-address*
Description	Egress bandwidth limit per subscriber for retransmission
Range	1 to 4294967295
Default	4294967295
Units	kilobps
Introduced	16.0.R1

multicast-reporting-destination [name] *string*

Context	**configure multicast-management**
Description	Enter the multicast-reporting-destination context
Introduced	16.0.R1

[name] *string*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	Destination name for multicast reporting
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv4-address*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	IP address of the multicast reporting destination
Default	0.0.0.0
Introduced	16.0.R1

admin-state *keyword*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	Administrative state of the multicast reporting destination
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

maximum-transmission-delay *number*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	Maximum delay after which any cached reports are flushed to the reporting destination
Range	0 to 100
Default	1
Units	deciseconds
Introduced	16.0.R1

udp-port *number*

Context	**configure multicast-management multicast-reporting-destination** *string*
Description	UDP port to which multicast reports are sent
Range	1 to 65535
Default	1037
Introduced	16.0.R1

22.1 oam-pm Command Descriptions

oam-pm

Context	**configure**
Description	Enter the oam-pm context
Introduced	16.0.R1

bin-group [bin-group-id] *number*

Context	**configure oam-pm**
Description	Enter the bin-group context
Introduced	16.0.R4

[bin-group-id] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number*
Description	Bin group identifier
Range	1 to 255
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number*
Description	Administratively enable or disable the bin group
Options	enable, disable
Introduced	16.0.R4

bin-type [bin-metric] *keyword*

Context	**configure oam-pm bin-group** *number*
Description	Enter the bin-type context
Introduced	16.0.R4

[bin-metric] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword*
Description	Frame Delay, Frame Delay Range, Inter-Frame Delay Variation
Options	fd, fdr, ifdv
Introduced	16.0.R4
Notes	This element is part of a list key

bin [bin-number] *number*

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword*
Description	Enter the bin context
Introduced	16.0.R4

[bin-number] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **bin** *number*
Description	The number of the bin
Range	0 to 9
Introduced	16.0.R4
Notes	This element is part of a list key

lower-bound *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **bin** *number*
Description	The lower bound for the bin
Range	0 | 1 to 4294967295
Units	microseconds
Introduced	16.0.R4

delay-event [direction] *keyword*

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword*
Description	Enter the delay-event context
Introduced	16.0.R4

[direction] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **delay-event** *keyword*
Description	The MEF-35 traffic flow direction of an OAM-PM delay test
Options	forward, backward, round-trip
Introduced	16.0.R4
Notes	This element is part of a list key

clear-threshold *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **delay-event** *keyword*
Description	The OAM-PM clear threshold for excessive delay
Range	0 to 863999
Introduced	16.0.R4

exclude-lowest-bin *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **delay-event** *keyword*
Description	The lowest bin number of the set of bins to be excluded from Threshold Crossing Alert (TCA) calculations
Range	1 to 9
Introduced	16.0.R4

lowest-bin *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **delay-event** *keyword*
Description	The lowest OAM-PM delay bin to be used when applying a configured Raise or Clear delay threshold
Range	0 to 9
Introduced	16.0.R4
Notes	This element is mandatory

raise-threshold *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **delay-event** *keyword*
Description	The OAM-PM raise threshold for excessive delay
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory

exclude-from-avg [direction] *keyword*

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword*
Description	Enter the exclude-from-avg context
Introduced	16.0.R4

[direction] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **exclude-from-avg** *keyword*
Description	The MEF-35 traffic flow direction of an OAM-PM delay test
Options	forward, backward, round-trip
Introduced	16.0.R4
Notes	This element is part of a list key

bins *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure oam-pm bin-group** *number* **bin-type** *keyword* **exclude-from-avg** *keyword*
Description	A set of bin numbers, each in the range 0..9 Three example values: 0 0,8,9 0,7-9
String Length	1 to 39
Introduced	16.0.R4
Notes	This element is mandatory

description *string*

Context	**configure oam-pm bin-group** *number*
Description	A text description of the bin group
String Length	1 to 80
Introduced	16.0.R4

session [session-name] *string*

Context	**configure oam-pm**
Description	Enter the session context
Max. Elements	10000
Introduced	16.0.R4

[session-name] *string*

Context	**configure oam-pm session** *string*
Description	OAM-PM session name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

bin-group *string*

Context	**configure oam-pm session** *string*
Description	The bin group for the session
Reference	configure **oam-pm bin-group** *number*
Introduced	16.0.R4

description *string*

Context	**configure oam-pm session** *string*
Description	A text description of the session
String Length	1 to 80
Introduced	16.0.R4

ethernet

Context	**configure oam-pm session** *string*
Description	Enter the **ethernet** context
Introduced	16.0.R4

dest-mac *mac-unicast-address*

Context	**configure oam-pm session** *string* **ethernet**
Description	The destination MAC address for the session
Introduced	16.0.R4
Notes	This element is part of a choice

dmm

Context	**configure oam-pm session** *string* **ethernet**
Description	Enter the **dmm** context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **ethernet dmm**
Description	Administratively enable or disable the test
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

data-tlv-size *number*

Context	**configure oam-pm session** *string* **ethernet dmm**
Description	The size of the pad TLV in the frames sent for the test
Range	0 | 3 to 2000
Default	0
Units	octets
Introduced	16.0.R4
Notes	This element is part of a choice

interval *number*

Context	**configure oam-pm session** *string* **ethernet dmm**
Description	The elapsed time between transmission PDUs for the specified session's test
Range	100 | 1000 | 10000
Default	1000
Units	milliseconds
Introduced	16.0.R4
Notes	This element is part of a choice

test-duration *number*

Context	**configure oam-pm session** *string* **ethernet dmm**
Description	The duration of an on-demand test
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

test-id *number*

Context	**configure oam-pm session** *string* **ethernet dmm**
Description	The test identifier
Range	0 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

lmm

Context	**configure oam-pm session** *string* **ethernet**
Description	Enter the **lmm** context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	Administratively enable or disable the test
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

availability

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	Enter the **availability** context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm availability**
Description	Administratively enable or disable availability calculations for the LMM test
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

flr-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm availability**
Description	The Frame Loss Ratio threshold for the test
Range	0 to 100
Default	50
Introduced	16.0.R4
Notes	This element is part of a choice

hli-force-count *boolean*

Context	**configure oam-pm session** *string* **ethernet lmm availability**
Description	Force High Loss Intervals (HLIs) and Consecutive High Loss Intervals (CHLIs) to be counted, regardless of the Availability state
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

timing

Context	**configure oam-pm session** *string* **ethernet lmm availability**
Description	Enter the **timing** context
Introduced	16.0.R4

chli-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm availability timing**
Description	The MEF-35 Consecutive High Loss Interval (CHLI) threshold
Range	1 to 9
Default	5
Introduced	16.0.R4
Notes	This element is part of a choice

consec-delta-t *number*

Context	**configure oam-pm session** *string* **ethernet lmm availability timing**
Description	The number of consecutive MEF-35 'delta_t's which constitute a MEF-35 'Availability Window'
Range	2 to 10
Default	10
Introduced	16.0.R4
Notes	This element is part of a choice

frames-per-delta-t *number*

Context	**configure oam-pm session** *string* **ethernet lmm availability timing**
Description	The number of frames to send in one MEF-35 'delta_t' also known as 'Small Time Interval'
Range	1 to 50
Default	10
Introduced	16.0.R4
Notes	This element is part of a choice

fc-collection *boolean*

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	Enable or disable the collection of per forwarding class statistics for the LMM test
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

interval *number*

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	The elapsed time between transmission PDUs for the specified session's test
Range	100 | 1000 | 10000
Default	1000
Units	milliseconds
Introduced	16.0.R4
Notes	This element is part of a choice

loss-events

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	Enter the **loss-events** context
Introduced	16.0.R4

avg-flr-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **avg-flr-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events avg-flr-event** *keyword*
Description	Traffic flow direction
Options	forward, backward
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events avg-flr-event** *keyword*
Description	The clear threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 99.999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events avg-flr-event** *keyword*
Description	The raise threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 100.000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

chli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **chli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events chli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events chli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events chli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

hli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **hli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events hli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events hli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events hli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-availability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **undet-availability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-availability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-availability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-availability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events**
Description	Enter the **undet-unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet lmm loss-events undet-unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

test-duration *number*

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	The duration of an on-demand test
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

test-id *number*

Context	**configure oam-pm session** *string* **ethernet lmm**
Description	The test identifier
Range	0 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

priority *number*

Context	**configure oam-pm session** *string* **ethernet**
Description	The priority and forwarding class for the session
Range	0 to 7
Default	0
Introduced	16.0.R4
Notes	This element is part of a choice

remote-mep *number*

Context	**configure oam-pm session** *string* **ethernet**
Description	The remote Maintenance association End Point (MEP) for the session
Range	1 to 8191
Introduced	16.0.R4
Notes	This element is part of a choice

slm

Context	**configure oam-pm session** *string* **ethernet**
Description	Enter the **slm** context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	Administratively enable or disable the test
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

data-tlv-size *number*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	The size of the pad TLV in the frames sent for the test
Range	0 | 3 to 2000
Default	0
Units	octets
Introduced	16.0.R4
Notes	This element is part of a choice

flr-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	The Frame Loss Ratio threshold for the test
Range	0 to 100
Default	50
Introduced	16.0.R4
Notes	This element is part of a choice

hli-force-count *boolean*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	Force High Loss Intervals (HLIs) and Consecutive High Loss Intervals (CHLIs) to be counted, regardless of the Availability state
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

interval *number*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	The elapsed time between transmission PDUs for the specified session's test
Range	100 | 1000
Default	100
Units	milliseconds
Introduced	16.0.R4
Notes	This element is part of a choice

loss-events

Context	**configure oam-pm session** *string* **ethernet slm**
Description	Enter the **loss-events** context
Introduced	16.0.R4

avg-flr-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **avg-flr-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events avg-flr-event** *keyword*
Description	Traffic flow direction
Options	forward, backward
Introduced	16.0.R4
Notes	This element is part of a choice This element is part of a list key

clear-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events avg-flr-event** *keyword*
Description	The clear threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 99.999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events avg-flr-event** *keyword*
Description	The raise threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 100.000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

chli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **chli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events chli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events chli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events chli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

hli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **hli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events hli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events hli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events hli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-availability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **undet-availability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-availability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-availability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-availability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events**
Description	Enter the **undet-unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm loss-events undet-unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

test-duration *number*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	The duration of an on-demand test
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

test-id *number*

Context	**configure oam-pm session** *string* **ethernet slm**
Description	The test identifier
Range	0 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

timing

Context	**configure oam-pm session** *string* **ethernet slm**
Description	Enter the **timing** context
Introduced	16.0.R4

chli-threshold *number*

Context	**configure oam-pm session** *string* **ethernet slm timing**
Description	The MEF-35 Consecutive High Loss Interval (CHLI) threshold
Range	1 to 9
Default	5
Introduced	16.0.R4
Notes	This element is part of a choice

consec-delta-t *number*

Context	**configure oam-pm session** *string* **ethernet slm timing**
Description	The number of consecutive MEF-35 'delta_t's which constitute a MEF-35 'Availability Window'
Range	2 to 10
Default	10
Introduced	16.0.R4
Notes	This element is part of a choice

frames-per-delta-t *number*

Context	**configure oam-pm session** *string* **ethernet slm timing**
Description	The number of frames to send in one MEF-35 'delta_t' also known as 'Small Time Interval'
Range	1 to 50
Default	10
Introduced	16.0.R4
Notes	This element is part of a choice

source

Context	**configure oam-pm session** *string* **ethernet**
Description	Enter the **source** context
Introduced	16.0.R4

ma-admin-name *admin-name*

Context	**configure oam-pm session** *string* **ethernet source**
Description	The source Ethernet Maintenance Association (MA) name
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

md-admin-name *admin-name*

Context	**configure oam-pm session** *string* **ethernet source**
Description	The source Ethernet Maintenance Domain (MD) name
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

mep *number*

Context	**configure oam-pm session** *string* **ethernet source**
Description	The source Ethernet Maintenance association End Point (MEP) identifier
Range	1 to 8191
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

ip

Context	**configure oam-pm session** *string*
Description	Enter the **ip** context
Introduced	16.0.R4

allow-egress-remark-dscp *boolean*

Context	**configure oam-pm session** *string* **ip**
Description	Whether or not to allow the session's configured DSCP value to be overwritten by the applicable egress Quality of Service (QoS) policy
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure oam-pm session** *string* **ip**
Description	The destination IP address for the session
Introduced	16.0.R4
Notes	This element is part of a choice

destination-udp-port *number*

Context	**configure oam-pm session** *string* **ip**
Description	The destination UDP port for the session
Range	1 to 65535
Introduced	16.0.R4
Notes	This element is part of a choice

do-not-fragment *boolean*

Context	**configure oam-pm session** *string* **ip**
Description	The IPv4 packet header Don't Fragment (DF) field for the session
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

dscp (*keyword* | *keyword*)

Context	**configure oam-pm session** *string* **ip**
Description	The Differentiated Services Code Point (DSCP) for the session. resolve = use the fc and profile configuration values to derive the DSCP
Default	resolve
Introduced	16.0.R4
Notes	This element is part of a choice

fc *keyword*

Context	**configure oam-pm session** *string* **ip**
Description	The forwarding class for the session
Default	be
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R4
Notes	This element is part of a choice

forwarding

Context	**configure oam-pm session** *string* **ip**
Description	Enter the **forwarding** context
Introduced	16.0.R4

bypass-routing

Context	**configure oam-pm session** *string* **ip forwarding**
Description	Bypass the routing table when sending test packets
Introduced	16.0.R4
Notes	This element is part of a choice

interface *interface-name*

Context	**configure oam-pm session** *string* **ip forwarding**
Description	The name of the interface to be used
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure oam-pm session** *string* **ip forwarding**
Description	IP-address for forwarding
Introduced	16.0.R4
Notes	This element is part of a choice

pattern (*keyword* | *number*)

Context	**configure oam-pm session** *string* **ip**
Description	The pattern used to fill the packet padding field for the session
Default	0
Introduced	16.0.R4
Notes	This element is part of a choice

profile *keyword*

Context	**configure oam-pm session** *string* **ip**
Description	The profile for the session
Default	out
Options	in, out
Introduced	16.0.R4
Notes	This element is part of a choice

router-instance *string*

Context	**configure oam-pm session** *string* **ip**
Description	The router for the session
Default	Base
Introduced	16.0.R4
Notes	This element is part of a choice

source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure oam-pm session** *string* **ip**
Description	The source IP address for the session
Introduced	16.0.R4
Notes	This element is part of a choice

source-udp-port *number*

Context	**configure oam-pm session** *string* **ip**
Description	The source UDP port for the session
Range	64374 to 64383
Introduced	16.0.R4
Notes	This element is part of a choice

ttl *number*

Context	**configure oam-pm session** *string* **ip**
Description	The Time-To-Live value for the session
Range	1 to 255
Default	255
Introduced	16.0.R4
Notes	This element is part of a choice

twamp-light

Context	**configure oam-pm session** *string* **ip**
Description	Enter the **twamp-light** context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	Administratively enable or disable the test
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

interval *number*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	The elapsed time between transmission PDUs for the specified session's test
Range	100 | 1000 | 10000
Default	1000
Units	milliseconds
Introduced	16.0.R4
Notes	This element is part of a choice

loss

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	Enter the **loss** context
Introduced	16.0.R4

flr-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss**
Description	The Frame Loss Ratio threshold for the test
Range	0 to 100
Default	50
Introduced	16.0.R4
Notes	This element is part of a choice

hli-force-count *boolean*

Context	**configure oam-pm session** *string* **ip twamp-light loss**
Description	Force High Loss Intervals (HLIs) and Consecutive High Loss Intervals (CHLIs) to be counted, regardless of the Availability state
Default	false
Introduced	16.0.R4
Notes	This element is part of a choice

timing

Context	**configure oam-pm session** *string* **ip twamp-light loss**
Description	Enter the **timing** context
Introduced	16.0.R4

chli-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss timing**
Description	The MEF-35 Consecutive High Loss Interval (CHLI) threshold
Range	1 to 9
Default	5
Introduced	16.0.R4
Notes	This element is part of a choice

consec-delta-t *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss timing**
Description	The number of consecutive MEF-35 'delta_t's which constitute a MEF-35 'Availability Window'
Range	2 to 10
Default	10
Introduced	16.0.R4
Notes	This element is part of a choice

frames-per-delta-t *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss timing**
Description	The number of frames to send in one MEF-35 'delta_t' also known as 'Small Time Interval'
Range	1 to 50
Default	1
Introduced	16.0.R4
Notes	This element is part of a choice

loss-events

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	Enter the **loss-events** context
Introduced	16.0.R4

avg-flr-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **avg-flr-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events avg-flr-event** *keyword*
Description	Traffic flow direction
Options	forward, backward
Introduced	16.0.R4
Notes	This element is part of a choice This element is part of a list key

clear-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events avg-flr-event** *keyword*
Description	The clear threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 99.999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *decimal-number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events avg-flr-event** *keyword*
Description	The raise threshold for the average Frame Loss Ratio (FLR)
Range	0.000 to 100.000
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

chli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **chli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events chli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events chli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events chli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

hli-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **hli-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events hli-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events hli-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events hli-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-availability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **undet-availability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-availability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-availability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-availability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

undet-unavailability-event [direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events**
Description	Enter the **undet-unavailability-event** context
Introduced	16.0.R4

[direction] *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-unavailability-event** *keyword*
Description	Traffic flow direction
Options	forward, backward, aggregate
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

clear-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-unavailability-event** *keyword*
Description	Clear threshold
Range	0 to 863999
Introduced	16.0.R4
Notes	This element is part of a choice

raise-threshold *number*

Context	**configure oam-pm session** *string* **ip twamp-light loss-events undet-unavailability-event** *keyword*
Description	Raise threshold
Range	1 to 864000
Introduced	16.0.R4
Notes	This element is mandatory
	This element is part of a choice

pad-size *number*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	The amount of padding in each packet sent for the TWAMP-Light test
Range	0 to 2000
Default	0
Units	octets
Introduced	16.0.R4
Notes	This element is part of a choice

record-stats *keyword*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	The type of statistics recorded for the TWAMP-Light test
Default	delay
Options	delay, loss, delay-and-loss
Introduced	16.0.R4
Notes	This element is part of a choice

test-duration *number*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	The duration of an on-demand test
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

test-id *number*

Context	**configure oam-pm session** *string* **ip twamp-light**
Description	The test identifier
Range	0 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

measurement-interval [duration] *keyword*

Context	**configure oam-pm session** *string*
Description	Enter the measurement-interval context
Introduced	16.0.R4

[duration] *keyword*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	The duration of the measurement interval
Options	15-mins, 1-hour, 1-day, 5-mins
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	The accounting policy for the measurement interval
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R4

boundary-type *keyword*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	The start condition for the measurement interval (start when the test starts, or wall clock aligned)
Default	clock-aligned
Options	clock-aligned, test-relative
Introduced	16.0.R4

clock-offset *number*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	The offset for a clock-aligned measurement interval (must be less than the selected duration)
Range	0 to 86399
Default	0
Units	seconds
Introduced	16.0.R4

intervals-stored *number*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	The maximum number of intervals stored for the measurement interval
Range	1 to 96
Introduced	16.0.R4

threshold-cross-alerts

Context	**configure oam-pm session** *string* **measurement-interval** *keyword*
Description	Enter the threshold-cross-alerts context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword* **threshold-cross-alerts**
Description	Administratively enable or disable TCAs for the measurement interval
Default	disable
Options	enable, disable
Introduced	16.0.R4

delay-events *boolean*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword* **threshold-cross-alerts**
Description	Enable or disable delay TCAs for the measurement interval
Default	false
Introduced	16.0.R4

loss-events *boolean*

Context	**configure oam-pm session** *string* **measurement-interval** *keyword* **threshold-cross-alerts**
Description	Enable or disable loss TCAs for the measurement interval
Default	false
Introduced	16.0.R4

session-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure oam-pm session** *string*
Description	The type of the specified session
Default	proactive
Options	proactive, on-demand
Introduced	16.0.R4

23 openflow Commands

configure
- — **openflow**
  - — **of-controller** *number*
    - — **address** *ipv4-address*
    - — **admin-state** *keyword*
    - — **description** *string*
    - — **echo-interval** *number*
    - — **echo-multiple** *number*
    - — **role** *keyword*
    - — **tls-server-profile** *string*
    - — **version** *keyword*
  - — **of-switch** *string*
    - — **admin-state** *keyword*
    - — **aux-channel** *boolean*
    - — **controller** *ipv4-address* **port** *number*
      - — **ofc-loopback** *ipv4-address*
      - — **service-name** *service-name*
      - — **tls-client-profile** *string*
    - — **description** *very-long-description*
    - — **echo-interval** *number*
    - — **echo-multiple** *number*
    - — **flowtable** *number*
      - — **max-size** *number*
      - — **mismatch-action** *keyword*
      - — **switch-defined-cookie** *boolean*
    - — **logical-port-status** *keyword*

23.1 openflow Command Descriptions

openflow

Context	**configure**
Description	Enter the openflow context
Introduced	16.0.R1

of-controller [controller-id] *number*

Context	**configure openflow**
Description	Enter the of-controller context
Max. Elements	1
Introduced	16.0.R1

[controller-id] *number*

Context	**configure openflow of-controller** *number*
Description	OpenFlow controller id. Currently is supported only value of 1.
Default	1
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv4-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure openflow of-controller** *number*
Description	Local IPv4 address for OpenFlow controller to be used for packets on both main and aux channels. By default, this is the management IP address of the system. It may also correspond to the system IP address or another loopback address configured on the system. The OpenFlow controller must be shutdown to change its address.
Introduced	16.0.R1

admin-state *keyword*

Context	**configure openflow of-controller** *number*
Description	Administrative state of an OpenFlow controller instance.
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure openflow of-controller** *number*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R1

echo-interval *number*

Context	**configure openflow of-controller** *number*
Description	Time interval between two consecutive OpenFlow echo request transmissions for a given OpenFlow session.
Range	10 to 3600
Default	10
Units	seconds
Introduced	16.0.R1

echo-multiple *number*

Context	**configure openflow of-controller** *number*
Description	Multiplier for OpenFlow control channel echo packets. The OpenFlow control channel is considered operationally down if no reply is heard from the switch after the specified multiplier.
Range	3 to 100
Default	3
Introduced	16.0.R1

role *keyword*

Context	**configure openflow of-controller** *number*
Description	The role that the controller will request to OpenFlow switches when multiple controllers are connected to a switch.
Default	equal
Options	equal
Introduced	16.0.R1

tls-server-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure openflow of-controller** *number*
Description	Specifies the profile name used by the controller.
Reference	configure **system security tls server-tls-profile** *string*
Introduced	16.0.R1

version *keyword*

Context	**configure openflow of-controller** *number*
Description	OpenFlow version negotiated between an OpenFlow controller and the switch.
Default	version-1-3-1
Options	version-1-3-1
Introduced	16.0.R1

of-switch [name] *string*

Context	**configure openflow**
Description	Enter the of-switch context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure openflow of-switch** *string*
Description	The name of this OpenFlow switch.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure openflow of-switch** *string*
Description	Administrative state of an OpenFlow switch instance.
Default	disable
Options	enable, disable
Introduced	16.0.R1

aux-channel *boolean*

Context	**configure openflow of-switch** *string*
Description	The operational status of the auxiliary channel established between an OpenFlow controller and switch.
Default	false
Introduced	16.0.R1

controller [address] *ipv4-address* **port** *number*

Context	**configure openflow of-switch** *string*
Description	Enter the controller context
Max. Elements	2
Introduced	16.0.R1

[address] *ipv4-address*

Context	**configure openflow of-switch** *string* **controller** *ipv4-address* **port** *number*
Description	Local IPv4 address for OpenFlow controller to be used for packets on both main and aux channels. By default, this is the management IP address of the system. It may also correspond to the system IP address or another loopback address configured on the system. The OpenFlow controller must be shutdown to change its address.
Introduced	16.0.R1
Notes	This element is part of a list key

port *number*

Context	**configure openflow of-switch** *string* **controller** *ipv4-address* **port** *number*
Description	Controller port.
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

ofc-loopback *ipv4-address*

Context	**configure openflow of-switch** *string* **controller** *ipv4-address* **port** *number*
Description	The controller loop back IPv4 address.
Default	0.0.0.0
Introduced	16.0.R1

service-name *service-name*

Context	**configure openflow of-switch** *string* **controller** *ipv4-address* **port** *number*
Description	The unique value which identifies the Service identifier.
String Length	1 to 64
Introduced	16.0.R1

tls-client-profile *string*

Context	**configure openflow of-switch** *string* **controller** *ipv4-address* **port** *number*
Description	Specifies the profile name used by the controller.
Reference	configure **system security tls client-tls-profile** *string*
Introduced	16.0.R1

description *very-long-description*

Context	**configure openflow of-switch** *string*
Description	Text description.
String Length	1 to 255
Introduced	16.0.R1

echo-interval *number*

Context	**configure openflow of-switch** *string*
Description	Time interval between two consecutive OpenFlow echo request transmissions for a given OpenFlow session.
Range	1 to 3600
Default	10
Units	seconds
Introduced	16.0.R1

echo-multiple *number*

Context	**configure openflow of-switch** *string*
Description	Multiplier for OpenFlow control channel echo packets. The OpenFlow control channel is considered operationally down if no reply is heard from the switch after the specified multiplier.
Range	3 to 100
Default	3
Introduced	16.0.R1

flowtable [table-id] *number*

Context	**configure openflow of-switch** *string*
Description	Enter the flowtable context
Max. Elements	1
Introduced	16.0.R1

[table-id] *number*

Context	**configure openflow of-switch** *string* **flowtable** *number*
Description	OpenFlow table ID.
Introduced	16.0.R1
Notes	This element is part of a list key

max-size *number*

Context	**configure openflow of-switch** *string* **flowtable** *number*
Description	Maximum number of entries that the flowtable can have. The maximum size cannot be changed if any entries are present in the flowtable.
Range	1 to 524288
Default	1000
Introduced	16.0.R1

mismatch-action *keyword*

Context	**configure openflow of-switch** *string* **flowtable** *number*
Description	Action to be performed when no match is found in the flowtable. When the value is set to 'drop', packets are dropped if no match is found in flowtable. When the value is set to 'fall-through, evaluating is continued based on filter policy.
Default	fall-through
Options	drop, fall-through, packet-in
Introduced	16.0.R1

switch-defined-cookie *boolean*

Context	**configure openflow of-switch** *string* **flowtable** *number*
Description	Specifies whether to enable switch-defined cookie encoding or use standard cookie encoding for this flowtable. When the value is set to 'disabled', OpenFlow controller uses standard cookie encoding. When the value is set to 'enabled', OpenFlow controller encodes cookie with special information detailed below: 64 60 59 32 31 0 +-------------+------------------------+----------------------+ | cookie-type | switch-defined-cookie | standard-flow-cookie | +-------------+------------------------+----------------------+ Cookie Name Cookie Type Cookie Value Cookie Usage (Bits 63..60) (Bits 59..32) ---------- ------------- ------------ ------------ ------------------------ grt 0 0 0 0 0 use this cookie value to program flowtable rules to

	be used in GRT instance system 1 0 0 0 0 use this cookie value to program flowtable rules to be used in system filters service 1 1 0 0 service-id for use this cookie value to 'vpls' or program flowtable rules 'vprn' to be used in 'vpls' or services 'vprn' service-types All other values for the cookie are reserved.
Default	false
Introduced	16.0.R1

logical-port-status *keyword*

Context	**configure openflow of-switch** *string*
Description	Type of reporting for logical OpenFlow ports (interfaces with OpenFlow enabled) to the controller. Setting the 'rsvp-te' reports status/statistics for all RSVP-TE LSPs present in the system that are used as output port in flowtable to redirect all RSVP LSPs. Setting the 'mpls-tp' reports status/statistics for all MPLS-TP LSPs present in the system that are used as output port in flowtable to redirect MPLS-TP LSPs. Setting the 'sr-te' reports status/statistics for all SR-TE LSPs present in the system that are used as output port in flowtable to redirect SR-TE LSPs. By default, nothing is set.
Options	rsvp-te, mpls-tp, sr-te
Max. Elements	3
Introduced	16.0.R1

24 policy-options Commands

configure
- — **policy-options**
  - — **as-path** *string*
    - — **expression** *policy-as-path-regexp*
  - — **as-path-group** *string*
    - — **entry** *number*
      - — **expression** *policy-as-path-regexp*
  - — **community** *policy-community-name*
    - — **expression**
      - — **exact** *boolean*
      - — **expr** *expression-community*
    - — **member** *member-community*
  - — **damping** *string*
    - — **half-life** *number*
    - — **max-suppress** *number*
    - — **reuse** *number*
    - — **suppress** *number*
  - — **global-variables**
    - — **name** *policy-var-name*
      - — **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
      - — **number** *number*
      - — **value** *string*
  - — **policy-statement** *string*
    - — **default-action**
      - — **action-type** *keyword*
      - — **add-paths-send-limit** *number*
      - — **admin-tag-policy** *string*
      - — **advertise-label** *keyword*
      - — **aigp-metric**
        - — **add** (*number* | *string*)
        - — **set** (*keyword* | *number* | *string*)
      - — **as-path**
        - — **add** *string*
        - — **replace** *string*
      - — **as-path-prepend**
        - — **as-path** (*number* | *string* | *keyword*)
        - — **repeat** (*number* | *string*)
      - — **bgp-leak** *boolean*
      - — **community**
        - — **add** *string*
        - — **remove** *string*
        - — **replace** *string*
      - — **create-udp-tunnel** *boolean*
      - — **damping** *string*
      - — **dest-class** *number*
      - — **install-backup-path** *boolean*
      - — **local-preference** (*number* | *string*)
      - — **metric**
        - — **add** (*number* | *string*)

24.1 policy-options Command Descriptions

policy-options

Context	**configure**
Description	Enter the policy-options context
Introduced	16.0.R1

as-path [name] *string*

Context	**configure policy-options**
Description	Enter the as-path context
Introduced	16.0.R1

[name] *string*

Context	**configure policy-options as-path** *string*
Description	AS Path name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

expression *policy-as-path-regexp*

Context	**configure policy-options as-path** *string*
Description	Regular expression string
String Length	1 to 255
Introduced	16.0.R1

as-path-group [name] *string*

Context	**configure policy-options**
Description	Enter the as-path-group context
Introduced	16.0.R1

[name] *string*

Context	**configure policy-options as-path-group** *string*
Description	AS Path Group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

entry [entry] *number*

Context	**configure policy-options as-path-group** *string*
Description	Enter the entry context
Introduced	16.0.R1

[entry] *number*

Context	**configure policy-options as-path-group** *string* **entry** *number*
Description	ID to uniquely identify this AS Path entry
Range	1 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

expression *policy-as-path-regexp*

Context	**configure policy-options as-path-group** *string* **entry** *number*
Description	Regular expression string
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

community [name] *policy-community-name*

Context	**configure policy-options**
Description	Enter the community context
Introduced	16.0.R1

[name] *policy-community-name*

Context	**configure policy-options community** *policy-community-name*
Description	Name of a community
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

expression

Context	**configure policy-options community** *policy-community-name*
Description	Enter the expression context
Introduced	16.0.R1

exact *boolean*

Context	**configure policy-options community** *policy-community-name* **expression**
Description	Exact match for the expression
Default	false
Introduced	16.0.R1

expr *expression-community*

Context	**configure policy-options community** *policy-community-name* **expression**
Description	Community expression value
String Length	1 to 900
Introduced	16.0.R1
Notes	This element is mandatory

member [member] *member-community*

Context	**configure policy-options community** *policy-community-name*
Description	Enter the member context
Introduced	16.0.R1

[member] *member-community*

Context	**configure policy-options community** *policy-community-name* **member** *member-community*
Description	Community member value
String Length	1 to 72
Introduced	16.0.R1
Notes	This element is part of a list key

damping [name] *string*

Context	**configure policy-options**
Description	Enter the damping context
Introduced	16.0.R1

[name] *string*

Context	**configure policy-options damping** *string*
Description	Damping profile name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

half-life *number*

Context	**configure policy-options damping** *string*
Description	Time after which the accumulated figure-of-merit value is reduced by half if the route remains stable
Range	1 to 45
Units	minutes
Introduced	16.0.R1

max-suppress *number*

Context	**configure policy-options damping** *string*
Description	Maximum time for a route to remain suppressed
Range	1 to 720
Units	minutes
Introduced	16.0.R1

reuse *number*

Context	**configure policy-options damping** *string*
Description	Value below which a suppressed route can be used again
Range	1 to 20000
Introduced	16.0.R1

suppress *number*

Context	**configure policy-options damping** *string*
Description	Value above which a route is suppressed for use or inclusion in route advertisements
Range	1 to 20000
Introduced	16.0.R1

global-variables

Context	**configure policy-options**
Description	Enter the global-variables context
Introduced	16.0.R1

name [variable-name] *policy-var-name*

Context	**configure policy-options global-variables**
Description	Enter the name context
Max. Elements	1000
Introduced	16.0.R1

[variable-name] *policy-var-name*

Context	**configure policy-options global-variables name** *policy-var-name*
Description	Map a variable name starting and ending with an @ sign to a value, a number, or an address
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure policy-options global-variables name** *policy-var-name*
Description	Variable name that is resolved to IP address
Introduced	16.0.R1
Notes	This element is part of a choice

number *number*

Context	**configure policy-options global-variables name** *policy-var-name*
Description	Variable name that is resolved to assigned value
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

value *string*

Context	**configure policy-options global-variables name** *policy-var-name*
Description	Variable name that is resolved to assigned value
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

policy-statement [name] *string*

Context	**configure policy-options**
Description	Enter the policy-statement context
Max. Elements	65535
Introduced	16.0.R1

[name] *string*

Context	**configure policy-options policy-statement** *string*
Description	Name of a policy statement
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

default-action

Context	**configure policy-options policy-statement** *string*
Description	Enter the default-action context
Introduced	16.0.R1

action-type *keyword*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Type of action for routes
Options	accept, reject, next-entry, next-policy
Introduced	16.0.R1
Notes	This element is mandatory

add-paths-send-limit *number*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	BGP ADD-PATHS send limit that is applied for routes
Range	1 to 16
Introduced	16.0.R1

admin-tag-policy *string*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Administrative tag policy name
String Length	1 to 64
Introduced	16.0.R1

advertise-label *keyword*

Context **configure policy-options policy-statement** *string* **default-action**

Description Label allocation for matched BGP routes

Options per-prefix, pop

Introduced 16.0.R1

aigp-metric

Context **configure policy-options policy-statement** *string* **default-action**

Description Enter the aigp-metric context

Introduced 16.0.R1

add (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action aigp-metric**

Description AIGP metric to add

Introduced 16.0.R1

Notes This element is part of a choice

set (*keyword* | *number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action aigp-metric**

Description AIGP metric

Introduced 16.0.R1

Notes This element is part of a choice

as-path

Context **configure policy-options policy-statement** *string* **default-action**

Description Enter the as-path context

Introduced 16.0.R1

add *string*

Context **configure policy-options policy-statement** *string* **default-action as-path**

Description AS path to add

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

replace *string*

Context **configure policy-options policy-statement** *string* **default-action as-path**

Description AS path to replace

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

as-path-prepend

Context **configure policy-options policy-statement** *string* **default-action**

Description Enter the as-path-prepend context

Introduced 16.0.R1

as-path (*number* | *string* | *keyword*)

Context **configure policy-options policy-statement** *string* **default-action as-path-prepend**

Description AS number to prepend to AS path attribute

Introduced 16.0.R1

repeat (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action as-path-prepend**

Description Number of times to prepend the specified AS number

Default 1

Introduced 16.0.R1

bgp-leak *boolean*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Allow leaking for BGP routes
Default	false
Introduced	16.0.R1

community

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Enter the community context
Introduced	16.0.R1

add *string*

Context	**configure policy-options policy-statement** *string* **default-action community**
Description	List of community names to add
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is ordered by user

remove *string*

Context	**configure policy-options policy-statement** *string* **default-action community**
Description	List of community names to remove
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is ordered by user

replace *string*

Context	**configure policy-options policy-statement** *string* **default-action community**
Description	List of community names to replace
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is ordered by user

create-udp-tunnel *boolean*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Create an MPLS-over-UDP tunnel upon receiving BGP routes that match the import policy
Default	false
Introduced	16.0.R1

damping *string*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Damping profile for routes
String Length	1 to 32
Introduced	16.0.R1

dest-class *number*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Default destination class for this policy statement
Range	1 to 255
Introduced	16.0.R1

install-backup-path *boolean*

Context	**configure policy-options policy-statement** *string* **default-action**
Description	Install a pre-programmed backup path for the prefix to provide BGP fast reroute protection
Default	false
Introduced	16.0.R1

local-preference (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**

Description BGP local preference for routes that do not match any entry

Introduced 16.0.R1

metric

Context **configure policy-options policy-statement** *string* **default-action**

Description Enter the metric context

Introduced 16.0.R1

add (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action metric**

Description Metric to add

Introduced 16.0.R1

Notes This element is part of a choice

set (*keyword* | *number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action metric**

Description Metric to assign

Introduced 16.0.R1

Notes This element is part of a choice

subtract (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action metric**

Description Metric to subtract

Introduced 16.0.R1

Notes This element is part of a choice

multicast-redirection

Context **configure policy-options policy-statement** *string* **default-action**

Description Enter the multicast-redirection context

Introduced 16.0.R1

fwd-service *string*

Context **configure policy-options policy-statement** *string* **default-action multicast-redirection**
Description Service ID for multicast redirection
Default Base
Introduced 16.0.R1

ip-int-name *interface-name*

Context **configure policy-options policy-statement** *string* **default-action multicast-redirection**
Description Interface index to redirect IGMP multicast traffic
String Length 1 to 32
Introduced 16.0.R1

next-hop (*keyword* | *union* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description Next hop IP address applied to routes
String Length 1 to 32
Options self
Introduced 16.0.R1

origin (*keyword* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description BGP origin for routes that are exported into BGP
String Length 1 to 32
Options igp, egp, incomplete
Introduced 16.0.R1

origin-validation-state (*keyword* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description Origin validation state for routes
String Length 1 to 32
Options valid, not-found, invalid
Introduced 16.0.R1

preference (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description Route preference applied to routes
String Length 1 to 32
Range 1 to 255
Introduced 16.0.R1

resolve-static *boolean*

Context **configure policy-options policy-statement** *string* **default-action**
Description Use resolved next hop of static route for BGP next hop
Default false
Introduced 16.0.R1

source-class *number*

Context **configure policy-options policy-statement** *string* **default-action**
Description Default source class for this policy statement
Range 1 to 255
Introduced 16.0.R1

sticky-ecmp *boolean*

Context **configure policy-options policy-statement** *string* **default-action**
Description Sticky ECMP flag for BGP ECMP routes
Default false
Introduced 16.0.R1

tag (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description OSPF RIP or ISIS tag applied to routes
String Length 1 to 32
Range 1 to 4294967295
Introduced 16.0.R1

type (*number* | *string*)

Context **configure policy-options policy-statement** *string* **default-action**
Description OSPF type metric applied to routes
String Length 1 to 32
Range 1 to 2
Introduced 16.0.R1

description *string*

Context **configure policy-options policy-statement** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

entry [entry-id] *number*

Context **configure policy-options policy-statement** *string*
Description Enter the entry context
Introduced 16.0.R1

[entry-id] *number*

Context **configure policy-options policy-statement** *string* **entry** *number*
Description Entry ID of a route policy entry
Range 1 to 4294967295
Introduced 16.0.R1
Notes This element is part of a list key

action

Context **configure policy-options policy-statement** *string* **entry** *number*
Description Enter the action context
Introduced 16.0.R1

action-type *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Type of action for routes
Options	accept, reject, next-entry, next-policy
Introduced	16.0.R1
Notes	This element is mandatory

add-paths-send-limit *number*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	BGP ADD-PATHS send limit that is applied for routes
Range	1 to 16
Introduced	16.0.R1

admin-tag-policy *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Administrative tag policy name
String Length	1 to 64
Introduced	16.0.R1

advertise-label *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Label allocation for matched BGP routes
Options	per-prefix, pop
Introduced	16.0.R1

aigp-metric

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Enter the aigp-metric context
Introduced	16.0.R1

add (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action aigp-metric**

Description AIGP metric to add

Introduced 16.0.R1

Notes This element is part of a choice

set (*keyword* | *number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action aigp-metric**

Description AIGP metric

Introduced 16.0.R1

Notes This element is part of a choice

as-path

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Enter the as-path context

Introduced 16.0.R1

add *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **action as-path**

Description AS path to add

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

replace *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **action as-path**

Description AS path to replace

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

as-path-prepend

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Enter the as-path-prepend context

Introduced 16.0.R1

as-path (*number* | *string* | *keyword*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action as-path-prepend**

Description AS number to prepend to AS path attribute

Introduced 16.0.R1

repeat (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action as-path-prepend**

Description Number of times to prepend the specified AS number

Default 1

Introduced 16.0.R1

bgp-leak *boolean*

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Allow leaking for BGP routes

Default false

Introduced 16.0.R1

community

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Enter the community context

Introduced 16.0.R1

add *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action community**
Description	List of community names to add
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice This element is ordered by user

remove *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action community**
Description	List of community names to remove
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice This element is ordered by user

replace *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action community**
Description	List of community names to replace
String Length	1 to 64
Max. Elements	28
Introduced	16.0.R1
Notes	This element is part of a choice This element is ordered by user

create-udp-tunnel *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Create an MPLS-over-UDP tunnel upon receiving BGP routes that match the import policy
Default	false
Introduced	16.0.R1

damping *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Damping profile for routes

String Length 1 to 32

Introduced 16.0.R1

dest-class *number*

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Default destination class for this policy statement

Range 1 to 255

Introduced 16.0.R1

forwarding-class

Context **configure policy-options policy-statement** *string* **entry** *number* **action**

Description Enter the forwarding-class context

Introduced 16.0.R1

fc *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **action forwarding-class**

Description Forwarding class associated with the route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **action forwarding-class**

Description Route priority

Options low, high

Introduced 16.0.R1

install-backup-path *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Install a pre-programmed backup path for the prefix to provide BGP fast reroute protection
Default	false
Introduced	16.0.R1

local-preference (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	BGP local preference for routes that do not match any entry
Introduced	16.0.R1

metric

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Enter the metric context
Introduced	16.0.R1

add (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action metric**
Description	Metric to add
Introduced	16.0.R1
Notes	This element is part of a choice

set (*keyword* | *number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action metric**
Description	Metric to assign
Introduced	16.0.R1
Notes	This element is part of a choice

subtract (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action metric**
Description	Metric to subtract
Introduced	16.0.R1
Notes	This element is part of a choice

multicast-redirection

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Enter the multicast-redirection context
Introduced	16.0.R1

fwd-service *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action multicast-redirection**
Description	Service ID for multicast redirection
Default	Base
Introduced	16.0.R1

ip-int-name *interface-name*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action multicast-redirection**
Description	Interface index to redirect IGMP multicast traffic
String Length	1 to 32
Introduced	16.0.R1

next-hop (*keyword* | *union* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Next hop IP address applied to routes
String Length	1 to 32
Options	self
Introduced	16.0.R1

origin (*keyword* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action**
Description BGP origin for routes that are exported into BGP
String Length 1 to 32
Options igp, egp, incomplete
Introduced 16.0.R1

origin-validation-state (*keyword* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action**
Description Origin validation state for routes
String Length 1 to 32
Options valid, not-found, invalid
Introduced 16.0.R1

preference (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **action**
Description Route preference applied to routes
String Length 1 to 32
Range 1 to 255
Introduced 16.0.R1

resolve-static *boolean*

Context **configure policy-options policy-statement** *string* **entry** *number* **action**
Description Use resolved next hop of static route for BGP next hop
Default false
Introduced 16.0.R1

source-class *number*

Context **configure policy-options policy-statement** *string* **entry** *number* **action**
Description Default source class for this policy statement
Range 1 to 255
Introduced 16.0.R1

sticky-ecmp *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	Sticky ECMP flag for BGP ECMP routes
Default	false
Introduced	16.0.R1

tag (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	OSPF RIP or ISIS tag applied to routes
String Length	1 to 32
Range	1 to 4294967295
Introduced	16.0.R1

type (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **action**
Description	OSPF type metric applied to routes
String Length	1 to 32
Range	1 to 2
Introduced	16.0.R1

conditional-expression

Context	**configure policy-options policy-statement** *string* **entry** *number*
Description	Enter the conditional-expression context
Introduced	16.0.R1

route-exists *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **conditional-expression**
Description	Conditional expression to test route existence
String Length	1 to 255
Introduced	16.0.R1

description *string*

Context **configure policy-options policy-statement** *string* **entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

from

Context **configure policy-options policy-statement** *string* **entry** *number*

Description Enter the from context

Introduced 16.0.R1

area *ipv4-address*

Context **configure policy-options policy-statement** *string* **entry** *number* **from**

Description OSPF area as match criterion

Introduced 16.0.R1

as-path

Context **configure policy-options policy-statement** *string* **entry** *number* **from**

Description Enter the as-path context

Introduced 16.0.R1

group *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **from as-path**

Description AS Path Group as match criterion

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

length

Context **configure policy-options policy-statement** *string* **entry** *number* **from as-path**

Description Enter the length context

Introduced 16.0.R1

qualifier *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from as-path length**
Description	Higher or lower values to be accepted as match criteria
Default	equal
Options	equal, or-higher, or-lower
Introduced	16.0.R1

unique *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from as-path length**
Description	Only unique AS numbers to be assigned as criteria to match
Default	false
Introduced	16.0.R1

value (*number* | *string*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from as-path length**
Description	AS numbers in the AS Path that are matched on the BGP route
Introduced	16.0.R1

name *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from as-path**
Description	AS Path regular expression statement as match criterion
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

cluster-id

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the cluster-id context
Introduced	16.0.R1

ip-address *ipv4-prefix-with-host-bits*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from cluster-id**
Description	IP addresses within the cluster list attribute to match the BGP route
Max. Elements	5
Introduced	16.0.R1
Notes	This element is part of a choice This element is ordered by user

none-cluster-list *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from cluster-id**
Description	Cluster ID
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

community

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the community context
Introduced	16.0.R1

count

Context	**configure policy-options policy-statement** *string* **entry** *number* **from community**
Description	Enter the count context
Introduced	16.0.R1

qualifier *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from community count**
Description	Higher or lower values to be accepted as match criteria
Default	equal
Options	equal, or-higher, or-lower
Introduced	16.0.R1

type *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **from community count**

Description Communities count to match the community count criteria

Options standard, extended, large

Introduced 16.0.R1

value (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **from community count**

Description Number of BGP communities to match the BGP route

Introduced 16.0.R1

expression *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **from community**

Description Community expression name as match criterion

String Length 1 to 900

Introduced 16.0.R1

Notes This element is part of a choice

name *string*

Context **configure policy-options policy-statement** *string* **entry** *number* **from community**

Description Community name to match

String Length 1 to 64

Introduced 16.0.R1

Notes This element is part of a choice

evpn-type *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **from**

Description Configure an EVPN type as match criterion for the entry.

Options ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix

Introduced 16.0.R1

external *boolean*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	External ISIS route as match criterion
Default	false
Introduced	16.0.R1

family *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Match address families to this this condition
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4
Max. Elements	20
Introduced	16.0.R1

flowspec

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the flowspec context
Introduced	16.0.R1

dest *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from flowspec**
Description	A prefix list of flowspec destination addresses as a match criterion for the entry.
String Length	1 to 32
Introduced	16.0.R1

source *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from flowspec**
Description	A prefix list of flowspec source addresses as a match criterion for the entry.
String Length	1 to 32
Introduced	16.0.R1

group-address *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Prefix list of multicast group addresses to use as match criterion
String Length	1 to 32
Introduced	16.0.R1

host-ip *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Prefix list of IGMP host IP addresses to use as a match criterion
String Length	1 to 32
Introduced	16.0.R1

interface *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Interface name as match criterion
String Length	1 to 32
Introduced	16.0.R1

level *number*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	ISIS route level as match criterion
Range	1 to 2
Introduced	16.0.R1

local-preference

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the local-preference context
Introduced	16.0.R1

qualifier *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **from local-preference**
Description Higher or lower values to be accepted as match criteria
Default equal
Options equal, or-higher, or-lower
Introduced 16.0.R1

value (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **from local-preference**
Description BGP routes based on local preference value or variable name
Introduced 16.0.R1

metric

Context **configure policy-options policy-statement** *string* **entry** *number* **from**
Description Enter the metric context
Introduced 16.0.R1

qualifier *keyword*

Context **configure policy-options policy-statement** *string* **entry** *number* **from metric**
Description Higher or lower values to be accepted as match criteria
Default equal
Options equal, or-higher, or-lower
Introduced 16.0.R1

value (*number* | *string*)

Context **configure policy-options policy-statement** *string* **entry** *number* **from metric**
Description Local preference value, or variable name
Introduced 16.0.R1

mvpn-type *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	MVPN type as match criterion for the entry
Options	intra-as-ipmsi-auto-discovery, inter-as-ipmsi-auto-discovery, s-pmsi-auto-discovery, intra-as-segment-leaf-auto-discovery, source-active-auto-discovery, shared-tree-join, source-tree-join
Introduced	16.0.R1

neighbor

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the neighbor context
Introduced	16.0.R1

ip-address (*union* | *union*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from neighbor**
Description	IP address to match the neighbor
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from neighbor**
Description	Name to match the neighbor prefix list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

next-hop

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the next-hop context
Introduced	16.0.R1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from next-hop**
Description	IP address of next hop to match
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from next-hop**
Description	Name of a next hop prefix list to match
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

origin *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Origin attribute as a match criterion
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding
Introduced	16.0.R1

origin-validation-state *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Origin attribute as a match criterion
Options	valid, not-found, invalid
Introduced	16.0.R1

ospf-type *number*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	OSPF type metric that is applied to routes that do not match any entry
Range	1 to 2
Introduced	16.0.R1

path-type *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Path type as a match criterion
Options	ibgp, ebgp
Introduced	16.0.R1

policy *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Policy statement as a match criterion
String Length	1 to 255
Introduced	16.0.R1

policy-variables

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the policy-variables context
Introduced	16.0.R1

name [variable-name] *policy-var-name*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from policy-variables**
Description	Enter the name context
Max. Elements	10
Introduced	16.0.R1

[variable-name] *policy-var-name*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from policy-variables name** *policy-var-name*
Description	Map a variable name starting and ending with an @ sign to a value, a number, or an address
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from policy-variables name** *policy-var-name*
Description	Variable name that is resolved to IP address
Introduced	16.0.R1
Notes	This element is part of a choice

number *number*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from policy-variables name** *policy-var-name*
Description	Variable name that is resolved to assigned value
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

value *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from policy-variables name** *policy-var-name*
Description	Variable name that is resolved to assigned value
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Prefix list as match criterion
String Length	1 to 32
Max. Elements	28
Introduced	16.0.R1
Notes	This element is ordered by user

protocol

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the protocol context
Introduced	16.0.R1

instance (*keyword* | *number*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from protocol**
Description	Protocol instance
Range	0 to 31 | 64 to 95
Default	0
Options	all
Introduced	16.0.R1

name *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from protocol**
Description	Protocol name to match on
Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta, dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd
Max. Elements	2
Introduced	16.0.R1

source-address

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Enter the source-address context
Introduced	16.0.R1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from source-address**
Description	Source IP address to match
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from source-address**
Description	Name of a source address prefix list to match
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

state *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	State that is used as match criterion
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master
Introduced	16.0.R1

tag (*number* | *keyword*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **from**
Description	Route tag as match criterion
Range	1 to 4294967295
Options	no-tag
Introduced	16.0.R1

to

Context	**configure policy-options policy-statement** *string* **entry** *number*
Description	Enter the to context
Introduced	16.0.R1

level *number*

Context	**configure policy-options policy-statement** *string* **entry** *number* **to**
Description	ISIS route level as match criterion
Range	1 to 2
Introduced	16.0.R1

neighbor

Context	**configure policy-options policy-statement** *string* **entry** *number* **to**
Description	Enter the neighbor context
Introduced	16.0.R1

ip-address (*union* | *union*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **to neighbor**
Description	IP address to match the neighbor
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **to neighbor**
Description	Name to match the neighbor prefix list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-list *string*

Context	**configure policy-options policy-statement** *string* **entry** *number* **to**
Description	Prefix list as match criterion
String Length	1 to 32
Max. Elements	28
Introduced	16.0.R1
Notes	This element is ordered by user

protocol

Context	**configure policy-options policy-statement** *string* **entry** *number* **to**
Description	Enter the protocol context
Introduced	16.0.R1

instance (*keyword* | *number*)

Context	**configure policy-options policy-statement** *string* **entry** *number* **to protocol**
Description	Instance for protocol ISIS, OSPF, or OSPF4
Range	0 to 31 | 64 to 95
Default	0
Options	all
Introduced	16.0.R1

name *keyword*

Context	**configure policy-options policy-statement** *string* **entry** *number* **to protocol**
Description	Protocol name to match
Options	bgp, isis, ospf, rip, bgp-vpn, ospf3, ldp, vpn-leak, ripng, bgp-label
Max. Elements	2
Introduced	16.0.R1

prefix-list [name] *string*

Context	**configure policy-options**
Description	Enter the prefix-list context
Introduced	16.0.R1

[name] *string*

Context	**configure policy-options prefix-list** *string*
Description	Prefix list name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*

Context	**configure policy-options prefix-list** *string*
Description	Enter the prefix context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure policy-options prefix-list** *string* **prefix** (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*
Description IP prefix associated with prefix length
Introduced 16.0.R1
Notes This element is part of a list key

type *keyword*

Context **configure policy-options prefix-list** *string* **prefix** (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*
Description Prefix list
Options exact, longer, through, range
Introduced 16.0.R1
Notes This element is part of a list key

end-length *number*

Context **configure policy-options prefix-list** *string* **prefix** (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*
Description End in the prefix range length
Range 0 to 128
Introduced 16.0.R1
Notes This element is part of a choice

start-length *number*

Context **configure policy-options prefix-list** *string* **prefix** (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*
Description Start in the prefix range length
Range 0 to 128
Introduced 16.0.R1
Notes This element is part of a choice

through-length *number*

Context **configure policy-options prefix-list** *string* **prefix** (*ipv4-prefix* | *ipv6-prefix*) **type** *keyword*
Description Prefix through length
Range 0 to 128
Introduced 16.0.R1
Notes This element is part of a choice

25.1 port Command Descriptions

port [port-id] *port*

Context	**configure**
Description	Enter the port context
Introduced	16.0.R1

[port-id] *port*

Context	**configure port** *port*
Description	Unique port ID
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure port** *port*
Description	Enter the access context
Introduced	16.0.R1

egress

Context	**configure port** *port* **access**
Description	Enter the egress context
Introduced	16.0.R1

pool [name] *string*

Context	**configure port** *port* **access egress**
Description	Enter the pool context
Introduced	16.0.R1

[name] *string*

Context	**configure port** *port* **access egress pool** *string*
Description	Pool name for access port
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure port** *port* **access egress pool** *string*
Description	Threshold for amber alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

red-alarm-threshold *number*

Context	**configure port** *port* **access egress pool** *string*
Description	Threshold for red alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

resv-cbs

Context	**configure port** *port* **access egress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R1

amber-alarm-action

Context	**configure port** *port* **access egress pool** *string* **resv-cbs**
Description	Enter the amber-alarm-action context
Introduced	16.0.R1

max *number*

Context **configure port** *port* **access egress pool** *string* **resv-cbs amber-alarm-action**
Description Maximum percentage for reserved CBS of pool
Range 1 to 100
Units percent
Introduced 16.0.R1

step *number*

Context **configure port** *port* **access egress pool** *string* **resv-cbs amber-alarm-action**
Description Step-size percentage for reserved CBS of pool
Range 1 to 100
Units percent
Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure port** *port* **access egress pool** *string* **resv-cbs**
Description Percentage of pool size reserved for CBS
Range 0 to 100
Default auto
Units percent
Options auto
Introduced 16.0.R1

slope-policy *string*

Context **configure port** *port* **access egress pool** *string*
Description Slope policy for high and low priority RED slope parameters and time average factor
Reference configure **qos slope-policy** *string*
Introduced 16.0.R1

ingress

Context **configure port** *port* **access**
Description Enter the ingress context
Introduced 16.0.R1

pool [name] *string*

Context	**configure port** *port* **access ingress**
Description	Enter the pool context
Introduced	16.0.R1

[name] *string*

Context	**configure port** *port* **access ingress pool** *string*
Description	Pool name for access port
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure port** *port* **access ingress pool** *string*
Description	Threshold for amber alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

red-alarm-threshold *number*

Context	**configure port** *port* **access ingress pool** *string*
Description	Threshold for red alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

resv-cbs

Context	**configure port** *port* **access ingress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R1

amber-alarm-action

Context	**configure port** *port* **access ingress pool** *string* **resv-cbs**
Description	Enter the amber-alarm-action context
Introduced	16.0.R1

max *number*

Context	**configure port** *port* **access ingress pool** *string* **resv-cbs amber-alarm-action**
Description	Maximum percentage for reserved CBS of pool
Range	1 to 100
Units	percent
Introduced	16.0.R1

step *number*

Context	**configure port** *port* **access ingress pool** *string* **resv-cbs amber-alarm-action**
Description	Step-size percentage for reserved CBS of pool
Range	1 to 100
Units	percent
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure port** *port* **access ingress pool** *string* **resv-cbs**
Description	Percentage of pool size reserved for CBS
Range	0 to 100
Default	auto
Units	percent
Options	auto
Introduced	16.0.R1

slope-policy *string*

Context	**configure port** *port* **access ingress pool** *string*
Description	Slope policy for high and low priority RED slope parameters and time average factor
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port*
Description	Administrative state of this port
Options	enable, disable
Introduced	16.0.R1

connector

Context	**configure port** *port*
Description	Enter the connector context
Introduced	16.0.R1

breakout *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure port** *port* **connector**
Description	Breakout for this connector port
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g
Introduced	16.0.R1

rs-fec-mode *keyword*

Context	**configure port** *port* **connector**
Description	Configure the RS FEC mode for this connector.
Options	cl91-514-528, cl91-514-544
Introduced	16.0.R3

ddm-events *boolean*

Context	**configure port** *port*
Description	Enable Digital Diagnostic Monitoring (DDM) events
Default	true
Introduced	16.0.R1

description *string*

Context	**configure port** *port*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dwdm

Context	**configure port** *port*
Description	Enter the dwdm context
Introduced	16.0.R1

channel *number*

Context	**configure port** *port* **dwdm**
Description	DWDM channel number
Range	17 to 61 | 170 to 610
Introduced	16.0.R1

coherent

Context	**configure port** *port* **dwdm**
Description	Enter the coherent context
Introduced	16.0.R1

channel *number*

Context	**configure port** *port* **dwdm coherent**
Description	Received channel number
Range	17 to 61 | 170 to 610
Introduced	16.0.R1

compatibility *keyword*

Context	**configure port** *port* **dwdm coherent**
Description	Optical mode and rate of operation
Default	long-haul
Options	long-haul, metro, access, interop, interop2, interop3
Introduced	16.0.R1

cpr-window-size *number*

Context	**configure port** *port* **dwdm coherent**
Description	Window size for the carrier phase recovery
Range	2 | 4 | 8 | 16 | 32 | 64
Default	32
Units	symbols
Introduced	16.0.R1

dispersion *number*

Context	**configure port** *port* **dwdm coherent**
Description	Dispersion compensation
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	16.0.R1

mode *keyword*

Context	**configure port** *port* **dwdm coherent**
Description	Dispersion algorithm mode
Default	automatic
Options	automatic, manual
Introduced	16.0.R1

report-alarm

Context	**configure port** *port* **dwdm coherent**
Description	Enter the report-alarm context
Introduced	16.0.R1

hosttx *boolean*

Context	**configure port** *port* **dwdm coherent report-alarm**
Description	Report host (electrical side) transmit alarm
Default	true
Introduced	16.0.R1

mod *boolean*

Context	**configure port** *port* **dwdm coherent report-alarm**
Description	Report module alarm
Default	true
Introduced	16.0.R1

modflt *boolean*

Context	**configure port** *port* **dwdm coherent report-alarm**
Description	Report module fault alarm
Default	true
Introduced	16.0.R1

netrx *boolean*

Context	**configure port** *port* **dwdm coherent report-alarm**
Description	Report network (optical side) receive alarm
Default	true
Introduced	16.0.R1

nettx *boolean*

Context	**configure port** *port* **dwdm coherent report-alarm**
Description	Report network (optical side) transmit alarm
Default	true
Introduced	16.0.R1

rx-los-reaction *keyword*

Context	**configure port** *port* **dwdm coherent**
Description	Reaction to RX LOS
Default	squelch
Options	none, squelch
Introduced	16.0.R1

rx-los-thresh *decimal-number*

Context	**configure port** *port* **dwdm coherent**
Description	LOS threshold of the average input power
Range	-24 to -13
Default	-23
Units	decibels per milliwatt
Introduced	16.0.R1

sweep

Context	**configure port** *port* **dwdm coherent**
Description	Enter the sweep context
Introduced	16.0.R1

end *number*

Context	**configure port** *port* **dwdm coherent sweep**
Description	End value of dispersion sweeping
Range	-50000 to 50000
Default	2000
Units	picoseconds per nanometer
Introduced	16.0.R1

start *number*

Context	**configure port** *port* **dwdm coherent sweep**
Description	Start value of dispersion sweeping
Range	-50000 to 50000
Default	-25500
Units	picoseconds per nanometer
Introduced	16.0.R1

target-power *decimal-number*

Context	**configure port** *port* **dwdm coherent**
Description	Target for average of the output power
Range	-20 to 3
Default	1
Units	decibels per milliwatt
Introduced	16.0.R1

rxdtv-adjust *boolean*

Context	**configure port** *port* **dwdm**
Description	Adjust feedback for received decision threshold voltage
Introduced	16.0.R1

wavetracker

Context	**configure port** *port* **dwdm**
Description	Enter the wavetracker context
Introduced	16.0.R4

encode

Context	**configure port** *port* **dwdm wavetracker**
Description	Enter the encode context
Introduced	16.0.R4

key1 *number*

Context	**configure port** *port* **dwdm wavetracker encode**
Description	Configure the first wavetracker key.
Range	1 to 4095
Introduced	16.0.R4
Notes	This element is mandatory

key2 *number*

Context	**configure port** *port* **dwdm wavetracker encode**
Description	Configure the second wavetracker key.
Range	1 to 4095
Introduced	16.0.R4
Notes	This element is mandatory

power-control

Context	**configure port** *port* **dwdm wavetracker**
Description	Enter the power-control context
Introduced	16.0.R4

target-power *decimal-number*

Context	**configure port** *port* **dwdm wavetracker power-control**
Description	Configure desired average output power.
Range	-22 to 3
Default	-20
Units	decibels per milliwatt
Introduced	16.0.R4

report-alarm

Context	**configure port** *port* **dwdm wavetracker**
Description	Enter the report-alarm context
Introduced	16.0.R4

encoder-degrade *boolean*

Context **configure port** *port* **dwdm wavetracker report-alarm**

Description Enable/disable encoder-degrade alarm.

Default true

Introduced 16.0.R4

encoder-failure *boolean*

Context **configure port** *port* **dwdm wavetracker report-alarm**

Description Enable/disable encoder-failure alarm.

Default true

Introduced 16.0.R4

missing-pluggable-voa *boolean*

Context **configure port** *port* **dwdm wavetracker report-alarm**

Description Enable/disable missing-pluggable-voa alarm.

Default true

Introduced 16.0.R4

power-control-degrade *boolean*

Context **configure port** *port* **dwdm wavetracker report-alarm**

Description Enable/disable power-control-degrade alarm.

Default true

Introduced 16.0.R4

power-control-failure *boolean*

Context **configure port** *port* **dwdm wavetracker report-alarm**

Description Enable/disable power-control-failure alarm.

Default true

Introduced 16.0.R4

power-control-high-limit *boolean*

Context	**configure port** *port* **dwdm wavetracker report-alarm**
Description	Enable/disable power-control-high-limit alarm.
Default	true
Introduced	16.0.R4

power-control-low-limit *boolean*

Context	**configure port** *port* **dwdm wavetracker report-alarm**
Description	Enable/disable power-control-low-limit alarm.
Default	true
Introduced	16.0.R4

ethernet

Context	**configure port** *port*
Description	Enter the ethernet context
Introduced	16.0.R1

access

Context	**configure port** *port* **ethernet**
Description	Enter the access context
Introduced	16.0.R1

bandwidth *number*

Context	**configure port** *port* **ethernet access**
Description	Bandwidth of the Ethernet port
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

booking-factor *number*

Context	**configure port** *port* **ethernet access**
Description	Booking factor of the Ethernet port
Range	1 to 1000
Default	100
Introduced	16.0.R1

egress

Context	**configure port** *port* **ethernet access**
Description	Enter the egress context
Introduced	16.0.R1

queue-group [queue-group-name] *string* **instance-id** *number*

Context	**configure port** *port* **ethernet access egress**
Description	Enter the queue-group context
Introduced	16.0.R1

[queue-group-name] *string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Queue group name
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

instance-id *number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Instance ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*

Description Accounting policy for the Ethernet port egress queue group

Reference configure **log accounting-policy** *number*

Introduced 16.0.R1

aggregate-rate

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*

Description Enter the aggregate-rate context

Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **aggregate-rate**

Description Specify whether to enable limit unused bandwidth.

Default false

Introduced 16.0.R4

queue-frame-based-accounting *boolean*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **aggregate-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **aggregate-rate**

Description Specify aggregate rate limit.

Range 1 to 3200000000

Default max

Units kilobps

Options max

Introduced 16.0.R4

collect-stats *boolean*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Collect statistics on this queue group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

host-match

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Enter the host-match context
Introduced	16.0.R1

int-dest-id [destination-string] *destination-string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **host-match**
Description	Enter the int-dest-id context
Introduced	16.0.R1

[destination-string] *int-dest-id*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **host-match int-dest-id** *destination-string*
Description	Specifies the destination string.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

hs-turbo *boolean*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Allow corresponding HSQ queue group queues to achieve a higher throughput
Default	false
Introduced	16.0.R1

hsmda-queue-overrides

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*
Description	Enter the hsmda-queue-overrides context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides**
Description	Packet offset for HSMDA queue accounting
Range	-64 to 31
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides queue** *string*
Description	HSMDA queue overrides queue ID
Reference	configure **qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides queue** *string*

Description Maximum buffer space override

Units bytes

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides queue** *string*

Description PIR

Units kilobps

Introduced 16.0.R1

slope-policy *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides queue** *string*

Description Slope policy

Reference configure **qos hsmda-slope-policy** *string*

Introduced 16.0.R1

wrr-weight *number*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides queue** *string*

Description Weighted round robin (WRR)

Range 1 to 32

Introduced 16.0.R1

secondary-shaper *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides**

Description HSMDA egress secondary shaper

Reference configure **port** *port* **ethernet egress expanded-secondary-shaper** *string*

Introduced 16.0.R1

wrr-policy *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **hsmda-queue-overrides**

Description HSMDA egress WRR policy

Reference configure **qos hsmda-wrr-policy** *string*

Introduced 16.0.R1

queue-overrides

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*

Description Enter the queue-overrides context

Introduced 16.0.R1

queue [queue-id] *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides**

Description Enter the queue context

Introduced 16.0.R1

[queue-id] *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description HSMDA queue overrides queue ID

Reference configure **qos queue-group-templates egress queue-group** *string* **queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

adaptation-rule

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Burst limit

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description CBS rate

Introduced 16.0.R1

drop-tail

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description MBS rate

Units bytes

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enable queue depth monitoring

Default false

Introduced 16.0.R1

parent

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **parent**
Description	CIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

weight *number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **parent**
Description	PIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

percent-rate

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **rate**
Description	CIR rate
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **rate**
Description	PIR rate
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-policy

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number*

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R1

scheduler [scheduler-name] *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R1

[scheduler-name] *string*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string*

Description Scheduler name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string* **parent**

Description CIR parameter that overrides parent

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string* **parent**

Description PIR parameter that overrides parent

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string* **rate**

Description CIR rate

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy overrides scheduler** *string* **rate**

Description PIR rate

Units kilobps

Introduced 16.0.R1

policy-name *string*

Context	**configure port** *port* **ethernet access egress queue-group** *string* **instance-id** *number* **scheduler-policy**
Description	Scheduler policy for the QoS egress queue group
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R1

virtual-port [vport-name] *string*

Context	**configure port** *port* **ethernet access egress**
Description	Enter the virtual-port context
Introduced	16.0.R4

[vport-name] *string*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Specifies the name of the virtual port on the port.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

aggregate-rate

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Enter the aggregate-rate context
Introduced	16.0.R4

limit-unused-bandwidth *boolean*

Context	**configure port** *port* **ethernet access egress virtual-port** *string* **aggregate-rate**
Description	Specify whether to enable limit unused bandwidth.
Default	false
Introduced	16.0.R4

rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet access egress virtual-port** *string* **aggregate-rate**
Description	Specify aggregate rate limit.
Range	1 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R4

description *string*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Add/remove a text description for the virtual port.
String Length	1 to 80
Introduced	16.0.R4

host-match

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Enter the host-match context
Introduced	16.0.R4

int-dest-id [destination-string] *destination-string*

Context	**configure port** *port* **ethernet access egress virtual-port** *string* **host-match**
Description	Enter the int-dest-id context
Introduced	16.0.R4

[destination-string] *int-dest-id*

Context	**configure port** *port* **ethernet access egress virtual-port** *string* **host-match int-dest-id** *destination-string*
Description	Specifies the destination string.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

monitor-port-scheduler *boolean*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Enable/Disable monitoring of port scheduler.
Default	false
Introduced	16.0.R4

multicast-hqos-adjustment *boolean*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Enable/disable the egress rate modification.
Default	false
Introduced	16.0.R4

port-scheduler-policy *string*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Configure port scheduler policy.
Reference	configure **qos port-scheduler-policy** *string*
Introduced	16.0.R4

scheduler-policy *string*

Context	**configure port** *port* **ethernet access egress virtual-port** *string*
Description	Apply an egress scheduler policy.
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R4

ingress

Context	**configure port** *port* **ethernet access**
Description	Enter the ingress context
Introduced	16.0.R1

queue-group [queue-group-name] *string*

Context	**configure port** *port* **ethernet access ingress**
Description	Enter the queue-group context
Introduced	16.0.R1

[queue-group-name] *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string*
Description	Queue group name
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string*
Description	Accounting policy for the Ethernet port egress queue group
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure port** *port* **ethernet access ingress queue-group** *string*
Description	Collect statistics on this queue group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

queue-overrides

Context	**configure port** *port* **ethernet access ingress queue-group** *string*
Description	Enter the queue-overrides context
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*
Description	HSMDA queue overrides queue ID
Reference	configure **qos queue-group-templates ingress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*

Description CBS rate

Introduced 16.0.R1

drop-tail

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*

Description MBS rate

Units bytes

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*

Description Enable queue depth monitoring

Default false

Introduced 16.0.R1

rate

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **rate**

Description CIR rate

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **queue-overrides queue** *string* **rate**

Description PIR rate

Units kilobps

Introduced 16.0.R1

scheduler-policy

Context **configure port** *port* **ethernet access ingress queue-group** *string*

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R1

scheduler [scheduler-name] *string*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R1

[scheduler-name] *string*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string*

Description Scheduler name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string* **parent**

Description CIR parameter that overrides parent

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string* **parent**

Description PIR parameter that overrides parent

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string* **rate**

Description CIR rate

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy overrides scheduler** *string* **rate**

Description PIR rate

Units kilobps

Introduced 16.0.R1

policy-name *string*

Context	**configure port** *port* **ethernet access ingress queue-group** *string* **scheduler-policy**
Description	Scheduler policy for the Ethernet port ingress queue group
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R1

accounting-policy *string*

Context	**configure port** *port* **ethernet**
Description	Accounting policy that applis to the Ethernet port
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

autonegotiate *keyword*

Context	**configure port** *port* **ethernet**
Description	Speed and duplex autonegotiation on the Ethernet port
Options	true, false, limited
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure port** *port* **ethernet**
Description	Collect statistical data on the Ethernet port
Default	false
Introduced	16.0.R1

crc-monitor

Context	**configure port** *port* **ethernet**
Description	Enter the crc-monitor context
Introduced	16.0.R1

signal-degrade

Context	**configure port** *port* **ethernet crc-monitor**
Description	Enter the signal-degrade context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **ethernet crc-monitor signal-degrade**
Description	SD multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **ethernet crc-monitor signal-degrade**
Description	SD threshold
Range	1 to 9
Introduced	16.0.R1

signal-failure

Context	**configure port** *port* **ethernet crc-monitor**
Description	Enter the signal-failure context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **ethernet crc-monitor signal-failure**
Description	SF multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **ethernet crc-monitor signal-failure**
Description	SF threshold
Range	1 to 9
Introduced	16.0.R1

window-size *number*

Context	**configure port** *port* **ethernet crc-monitor**
Description	Window size of the monitor
Range	5 to 60
Default	10
Units	seconds
Introduced	16.0.R1

dampening

Context	**configure port** *port* **ethernet**
Description	Enter the dampening context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port* **ethernet dampening**
Description	Administrative state of exponential port dampening on the port
Default	disable
Options	enable, disable
Introduced	16.0.R1

half-life *number*

Context	**configure port** *port* **ethernet dampening**
Description	Half-life decay time
Range	1 to 2000
Default	5
Units	seconds
Introduced	16.0.R1

max-suppress-time *number*

Context	**configure port** *port* **ethernet dampening**
Description	Maximum time for which the port-up state is suppressed
Range	1 to 43200
Default	20
Units	seconds
Introduced	16.0.R1

reuse-threshold *number*

Context	**configure port** *port* **ethernet dampening**
Description	Port-up state no longer suppressed after penalties fall below reuse threshold
Range	1 to 20000
Default	1000
Units	penalties
Introduced	16.0.R1

suppress-threshold *number*

Context	**configure port** *port* **ethernet dampening**
Description	Penalties threshold above which port-up state is suppressed
Range	1 to 20000
Default	2000
Units	penalties
Introduced	16.0.R1

dot1q-etype *etype*

Context	**configure port** *port* **ethernet**
Description	Dot1q Ethertype on the Ethernet port
Default	33024
Introduced	16.0.R1

dot1x

Context	**configure port** *port* **ethernet**
Description	Enter the dot1x context
Introduced	16.0.R1

macsec

Context	**configure port** *port* **ethernet dot1x**
Description	Enter the macsec context
Introduced	16.0.R1

exclude-mac-policy *string*

Context	**configure port** *port* **ethernet dot1x macsec**
Description	Configure the policy of mac addresses to be excluded.
Reference	configure **macsec mac-policy** *number*
Introduced	16.0.R5

exclude-protocol

Context	**configure port** *port* **ethernet dot1x macsec**
Description	Enter the exclude-protocol context
Introduced	16.0.R1

cdp *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for CDP (protocol)
Default	false
Introduced	16.0.R1

eapol-start *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for EAPOL (protocol)
Default	false
Introduced	16.0.R1

efm-oam *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for EFM OAM (protocol)
Default	false
Introduced	16.0.R1

eth-cfm *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for ETH CFM (protocol)
Default	false
Introduced	16.0.R1

lacp *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for LACP (protocol)
Default	false
Introduced	16.0.R1

lldp *boolean*

Context	**configure port** *port* **ethernet dot1x macsec exclude-protocol**
Description	Disable MACsec for all packets that are sent and received on the link for LLDP (protocol)
Default	false
Introduced	16.0.R1

rx-must-be-encrypted *boolean*

Context	**configure port** *port* **ethernet dot1x macsec**
Description	Drop all port traffic that is not MACsec-secured
Default	false
Introduced	16.0.R1

sub-port [sub-port-id] *number*

Context	**configure port** *port* **ethernet dot1x macsec**
Description	Enter the sub-port context
Introduced	16.0.R1

[sub-port-id] *number*

Context	**configure port** *port* **ethernet dot1x macsec sub-port** *number*
Description	Specifies the sub-port ID on the port.
Range	1 to 1023
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure port** *port* **ethernet dot1x macsec sub-port** *number*
Description	Administrative state of MACsec on this port
Default	disable
Options	enable, disable
Introduced	16.0.R1

ca-name *string*

Context	**configure port** *port* **ethernet dot1x macsec sub-port** *number*
Description	Configure the connectivity association to be used for this port.
Reference	configure **macsec connectivity-association** *string*
Introduced	16.0.R1

eapol-destination-address *mac-address*

Context	**configure port** *port* **ethernet dot1x macsec sub-port** *number*
Description	Configure the eapol destination address.
Default	00:00:00:00:00:00
Introduced	16.0.R1

max-peers *number*

Context	**configure port** *port* **ethernet dot1x macsec sub-port** *number*
Description	Configure the max number of peers supported on this port.
Range	1 to 32
Introduced	16.0.R1

max-authentication-requests *number*

Context	**configure port** *port* **ethernet dot1x**
Description	Maximum number of times the router sends access request RADIUS message to RADIUS server
Range	1 to 10
Default	2
Introduced	16.0.R1

port-control *keyword*

Context	**configure port** *port* **ethernet dot1x**
Description	802.1x authentication mode
Default	force-authorized
Options	force-unauthorized, auto, force-authorized
Introduced	16.0.R1

quiet-period *number*

Context	**configure port** *port* **ethernet dot1x**
Description	Time between two authentication sessions during which no EAPOL frames are sent by router
Range	1 to 3600
Default	60
Units	seconds
Introduced	16.0.R1

radius-policy *string*

Context	**configure port** *port* **ethernet dot1x**
Description	Authentication server policy
Reference	configure **system security dot1x radius-policy** *string*
Introduced	16.0.R1

re-authentication

Context	**configure port** *port* **ethernet dot1x**
Description	Enter the re-authentication context
Introduced	16.0.R1

period *number*

Context	**configure port** *port* **ethernet dot1x re-authentication**
Description	Re-authentication period
Range	1 to 9000
Default	3600
Units	seconds
Introduced	16.0.R1

server-timeout *number*

Context	**configure port** *port* **ethernet dot1x**
Description	Time during which router waits for RADIUS server to respond to its access request message
Range	1 to 300
Default	30
Units	seconds
Introduced	16.0.R1

supplicant-timeout *number*

Context	**configure port** *port* **ethernet dot1x**
Description	Time during which router waits for a client to respond to its EAPOL messages
Range	1 to 300
Default	30
Units	seconds
Introduced	16.0.R1

transmit-period *number*

Context	**configure port** *port* **ethernet dot1x**
Description	Time after which router sends a new EAPOL request message
Range	1 to 3600
Default	30
Units	seconds
Introduced	16.0.R1

tunneling *boolean*

Context	**configure port** *port* **ethernet dot1x**
Description	Allow tunneling of untagged 802.1x frames received on a port
Default	false
Introduced	16.0.R1

down-on-internal-error

Context	**configure port** *port* **ethernet**
Description	Enter the down-on-internal-error context
Introduced	16.0.R1

tx-laser *keyword*

Context	**configure port** *port* **ethernet down-on-internal-error**
Description	Remote laser on internal errors
Default	on
Options	off, on
Introduced	16.0.R1

down-when-looped

Context	**configure port** *port* **ethernet**
Description	Enter the down-when-looped context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port* **ethernet down-when-looped**
Description	Administrative state of physical loop detection
Default	disable
Options	enable, disable
Introduced	16.0.R1

keep-alive *number*

Context	**configure port** *port* **ethernet down-when-looped**
Description	Time interval between keep-alive PDUs
Range	1 to 120
Default	10
Units	seconds
Introduced	16.0.R1

retry-timeout *number*

Context	**configure port** *port* **ethernet down-when-looped**
Description	Minimum time before re-enabling the port after loop detection
Range	0 | 10 to 160
Default	120
Units	seconds
Introduced	16.0.R1

use-broadcast-address *boolean*

Context	**configure port** *port* **ethernet down-when-looped**
Description	Broadcast MAC address for destination MAC address
Default	false
Introduced	16.0.R1

duplex *keyword*

Context	**configure port** *port* **ethernet**
Description	Duplex type for the Ethernet port
Options	full, half
Introduced	16.0.R1

efm-oam

Context	**configure port** *port* **ethernet**
Description	Enter the efm-oam context
Introduced	16.0.R1

accept-remote-loopback *boolean*

Context	**configure port** *port* **ethernet efm-oam**
Description	Enable reactions to loopback control OAM PDUs from peers
Default	false
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam**
Description	Administrative state of EFM OAM operation
Default	disable
Options	enable, disable
Introduced	16.0.R1

discovery

Context	**configure port** *port* **ethernet efm-oam**
Description	Enter the discovery context
Introduced	16.0.R1

advertise-capabilities

Context	**configure port** *port* **ethernet efm-oam discovery**
Description	Enter the advertise-capabilities context
Introduced	16.0.R1

link-monitoring *boolean*

Context	**configure port** *port* **ethernet efm-oam discovery advertise-capabilities**
Description	Advertise link monitoring capabilities to peer
Default	true
Introduced	16.0.R1

dying-gasp-tx-on-reset *boolean*

Context	**configure port** *port* **ethernet efm-oam**
Description	Allow generation of Information OAM PDU when EFM application receives soft reset notification
Default	true
Introduced	16.0.R1

grace-tx *boolean*

Context	**configure port** *port* **ethernet efm-oam**
Description	Allow sending of EFM OAM grace period messages
Default	true
Introduced	16.0.R1

grace-vendor-oui *string*

Context	**configure port** *port* **ethernet efm-oam**
Description	EFM OAM grace vendor unique ID
Default	00:16:4D
Introduced	16.0.R1

hold-time *number*

Context	**configure port** *port* **ethernet efm-oam**
Description	Time EFM OAM protocol waits before returning to operational state after leaving operational state
Range	1 to 50
Units	seconds
Introduced	16.0.R1

ignore-efm-state *boolean*

Context	**configure port** *port* **ethernet efm-oam**
Description	Suppress port operational state changes due to any EFM OAM protocol fault condition
Default	false
Introduced	16.0.R1

link-monitoring

Context	**configure port** *port* **ethernet efm-oam**
Description	Enter the link-monitoring context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam link-monitoring**
Description	Enable/disable link monitoring on the port.
Default	disable
Options	enable, disable
Introduced	16.0.R4

errored-frame

Context	**configure port** *port* **ethernet efm-oam link-monitoring**
Description	Enter the errored-frame context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame**
Description	Enable/disable link monitoring on the port.
Default	disable
Options	enable, disable
Introduced	16.0.R4

event-notification *boolean*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame**
Description	Configure if event notification OAMPDUs are transmitted with the TLVs.
Default	true
Introduced	16.0.R4

sd-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame**
Description	Configure the signal degrade threshold.
Range	1 to 1000000
Introduced	16.0.R4

sf-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame**
Description	Configure the signal failure threshold.
Range	1 to 1000000
Default	1
Introduced	16.0.R4

window *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame**
Description	Configure the window.
Range	10 to 600
Default	10
Units	deciseconds
Introduced	16.0.R4

errored-frame-period

Context	**configure port** *port* **ethernet efm-oam link-monitoring**
Description	Enter the errored-frame-period context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-period**
Description	Enable/disable link monitoring on the port.
Default	disable
Options	enable, disable
Introduced	16.0.R4

event-notification *boolean*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-period**
Description	Configure if event notification OAMPDUs are transmitted with the TLVs.
Default	true
Introduced	16.0.R4

sd-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-period**
Description	Configure the signal degrade threshold.
Range	1 to 1000000
Introduced	16.0.R4

sf-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-period**
Description	Configure the signal failure threshold.
Range	1 to 1000000
Default	1
Introduced	16.0.R4

window *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-period**
Description	Configure the window.
Range	1 to 4294967295
Default	1488095
Units	packets
Introduced	16.0.R4

errored-frame-seconds

Context	**configure port** *port* **ethernet efm-oam link-monitoring**
Description	Enter the errored-frame-seconds context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-seconds**
Description	Enable/disable link monitoring on the port.
Default	disable
Options	enable, disable
Introduced	16.0.R4

event-notification *boolean*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-seconds**
Description	Configure if event notification OAMPDUs are transmitted with the TLVs.
Default	true
Introduced	16.0.R4

sd-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-seconds**
Description	Configure the signal degrade threshold.
Range	1 to 900
Introduced	16.0.R4

sf-threshold *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-seconds**
Description	Configure the signal failure threshold.
Range	1 to 900
Default	1
Introduced	16.0.R4

window *number*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-frame-seconds**
Description	Configure the window.
Range	100 to 9000
Default	600
Units	deciseconds
Introduced	16.0.R4

errored-symbols

Context	**configure port** *port* **ethernet efm-oam link-monitoring**
Description	Enter the errored-symbols context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-symbols**
Description	Enable/disable link monitoring on the port.
Default	disable
Options	enable, disable
Introduced	16.0.R4

event-notification *boolean*

Context	**configure port** *port* **ethernet efm-oam link-monitoring errored-symbols**
Description	Configure if event notification OAMPDUs are transmitted with the TLVs.
Default	true
Introduced	16.0.R4

sd-threshold *number*

Context **configure port** *port* **ethernet efm-oam link-monitoring errored-symbols**

Description Configure the signal degrade threshold.

Range 1 to 1000000

Introduced 16.0.R4

sf-threshold *number*

Context **configure port** *port* **ethernet efm-oam link-monitoring errored-symbols**

Description Configure the signal failure threshold.

Range 1 to 1000000

Default 1

Introduced 16.0.R4

window *number*

Context **configure port** *port* **ethernet efm-oam link-monitoring errored-symbols**

Description Configure the window.

Range 10 to 600

Default 10

Units deciseconds

Introduced 16.0.R4

local-sf-action

Context **configure port** *port* **ethernet efm-oam link-monitoring**

Description Enter the local-sf-action context

Introduced 16.0.R4

event-notification-burst *number*

Context **configure port** *port* **ethernet efm-oam link-monitoring local-sf-action**

Description Configure the number of event notification OAMPDUs to burst.

Range 1 to 5

Default 1

Units packets

Introduced 16.0.R4

info-notification

Context **configure port** *port* **ethernet efm-oam link-monitoring local-sf-action**

Description Enter the info-notification context

Introduced 16.0.R4

critical-event *boolean*

Context **configure port** *port* **ethernet efm-oam link-monitoring local-sf-action info-notification**

Description Set/clear the Critical Event flag.

Default false

Introduced 16.0.R4

dying-gasp *boolean*

Context **configure port** *port* **ethernet efm-oam link-monitoring local-sf-action info-notification**

Description Set/clear the Dying Gasp flag.

Default false

Introduced 16.0.R4

local-port-action *keyword*

Context **configure port** *port* **ethernet efm-oam link-monitoring local-sf-action**

Description Configure the local port action.

Default port-out-of-service

Options log-only, port-out-of-service

Introduced 16.0.R4

mode *keyword*

Context **configure port** *port* **ethernet efm-oam**

Description EFM OAM DTE mode

Default active

Options passive, active

Introduced 16.0.R1

multiplier *number*

Context	**configure port** *port* **ethernet efm-oam**
Description	Multiplier of OAMPDUs
Range	2 to 5
Default	5
Introduced	16.0.R1

peer-rdi-rx

Context	**configure port** *port* **ethernet efm-oam**
Description	Enter the peer-rdi-rx context
Introduced	16.0.R1

critical-event *keyword*

Context	**configure port** *port* **ethernet efm-oam peer-rdi-rx**
Description	Action for local port when critical event is received from peer
Default	port-out-of-service
Options	log-only, port-out-of-service
Introduced	16.0.R1

dying-gasp *keyword*

Context	**configure port** *port* **ethernet efm-oam peer-rdi-rx**
Description	Action for local port when dying gasp is received from the peer
Default	port-out-of-service
Options	log-only, port-out-of-service
Introduced	16.0.R1

event-notification *keyword*

Context	**configure port** *port* **ethernet efm-oam peer-rdi-rx**
Description	Action for local port when event notification OAMPDU is received from peer
Default	log-only
Options	log-only, port-out-of-service
Introduced	16.0.R1

link-fault *keyword*

Context	**configure port** *port* **ethernet efm-oam peer-rdi-rx**
Description	Action for local port when link fault is received from peer
Default	port-out-of-service
Options	log-only, port-out-of-service
Introduced	16.0.R1

transmit-interval *number*

Context	**configure port** *port* **ethernet efm-oam**
Description	Transmit interval of OAMPDUs
Range	1 to 600
Default	10
Units	deciseconds
Introduced	16.0.R1

trigger-fault *keyword*

Context	**configure port** *port* **ethernet efm-oam**
Description	Flag field to be set in the Information OAM PDU
Options	dying-gasp, critical-event
Introduced	16.0.R1

tunneling *boolean*

Context	**configure port** *port* **ethernet efm-oam**
Description	Allow EFM OAM PDU tunneling
Default	false
Introduced	16.0.R1

egress

Context	**configure port** *port* **ethernet**
Description	Enter the egress context
Introduced	16.0.R1

eth-bn-rate-changes *boolean*

Context	**configure port** *port* **ethernet egress**
Description	Receive rate changes in Ethernet Bandwidth Notification (Eth-BN) messages to update egress rate
Default	false
Introduced	16.0.R1

expanded-secondary-shaper [secondary-shaper-name] *string*

Context	**configure port** *port* **ethernet egress**
Description	Enter the expanded-secondary-shaper context
Introduced	16.0.R1

[secondary-shaper-name] *string*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description	Name for the expanded secondary shaper
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

aggregate-burst

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description	Enter the aggregate-burst context
Introduced	16.0.R1

high-burst-increase *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **aggregate-burst**
Description	High burst increase
Range	0 to 65528
Units	bytes
Introduced	16.0.R1

low-burst-limit *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **aggregate-burst**
Description	Low burst limit
Range	1 to 327680
Units	bytes
Introduced	16.0.R1

class [class-number] *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description	Enter the class context
Introduced	16.0.R1

[class-number] *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **class** *number*
Description	Unique value of the class
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

burst-limit *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **class** *number*
Description	Class identifier of the low burst maximum class
Range	1 to 327680
Units	bytes
Introduced	16.0.R1

monitor-threshold *number*

Context	**configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **class** *number*
Description	Monitoring threshold for non-conformance burst of the class
Range	0 to 8190
Introduced	16.0.R1

rate (*kilobytes* | *keyword*)

Context **configure port** *port* **ethernet egress expanded-secondary-shaper** *string* **class** *number*
Description Class rate
Default max
Introduced 16.0.R1

low-burst-max-class *number*

Context **configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description Class to associate with the Ethernet egress expanded secondary shaper
Range 1 to 8
Default 8
Introduced 16.0.R1

monitor-threshold *number*

Context **configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description Monitoring threshold for non-conformance burst
Range 0 to 8190
Introduced 16.0.R1

rate (*kilobytes* | *keyword*)

Context **configure port** *port* **ethernet egress expanded-secondary-shaper** *string*
Description Rate of the expanded secondary shaper
Default max
Introduced 16.0.R1

hs-port-pool-policy *string*

Context **configure port** *port* **ethernet egress**
Description HS port pool policy
Reference configure **qos hs-port-pool-policy** *string*
Introduced 16.0.R1

hs-scheduler-policy

Context **configure port** *port* **ethernet egress**

Description Enter the hs-scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure port** *port* **ethernet egress hs-scheduler-policy**

Description HS port pool policy

Reference configure **qos hs-scheduler-policy** *string*

Introduced 16.0.R1

hsmda-scheduler-policy *string*

Context **configure port** *port* **ethernet egress**

Description HSMDA scheduler policy

Reference configure **qos hsmda-scheduler-policy** *string*

Introduced 16.0.R1

monitor-port-scheduler *boolean*

Context **configure port** *port* **ethernet egress**

Description Enable/disable monitoring of egress scheduler on the Ethernet port.

Default false

Introduced 16.0.R1

port-scheduler-policy

Context **configure port** *port* **ethernet egress**

Description Enter the port-scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure port** *port* **ethernet egress port-scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

level [priority-level] *number*

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides**
Description	Enter the level context
Introduced	16.0.R4

[priority-level] *number*

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number*
Description	Specifies the priority level of the port scheduler override.
Range	1 to 8
Introduced	16.0.R4
Notes	This element is part of a list key

percent-rate

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number*
Description	Enter the **percent-rate** context
Introduced	16.0.R4

cir *decimal-number*

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number* **percent-rate**
Description	Configure Che CIR rate as a percent.
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R4
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number* **percent-rate**
Description	Configure the PIR rate as a percent.
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R4
Notes	This element is part of a choice

rate

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number*
Description	Enter the **rate** context
Introduced	16.0.R4

cir (*number* | *keyword*)

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number* **rate**
Description	Configure the CIR rate in kbps.
Units	kilobps
Introduced	16.0.R4
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides level** *number* **rate**
Description	Configure the PIR rate in kbps.
Units	kilobps
Introduced	16.0.R4
Notes	This element is part of a choice

max-rate

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides**
Description	Enter the max-rate context
Introduced	16.0.R4

percent-rate *decimal-number*

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides max-rate**
Description	Configure the PIR rate as a percent.
Range	0.01 to 100
Default	100
Units	percent
Introduced	16.0.R4
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet egress port-scheduler-policy overrides max-rate**
Description	Configure the PIR rate as a rate.
Default	max
Units	kilobps
Introduced	16.0.R4
Notes	This element is part of a choice

policy-name *string*

Context	**configure port** *port* **ethernet egress port-scheduler-policy**
Description	Configure an egress scheduler policy.
Reference	configure **qos port-scheduler-policy** *string*
Introduced	16.0.R1

rate *number*

Context	**configure port** *port* **ethernet egress**
Description	Maximum egress bandwidth that this Ethernet port can receive
Range	1 to 400000000
Units	kilobps
Introduced	16.0.R1

elmi

Context	**configure port** *port* **ethernet**
Description	Enter the elmi context
Introduced	16.0.R4

mode *keyword*

Context	**configure port** *port* **ethernet elmi**
Description	Configure the Ethernet LMI Mode.
Options	uni-n
Introduced	16.0.R4

n393 *number*

Context	**configure port** *port* **ethernet elmi**
Description	Configure the monitored count of consecutive errors.
Range	2 to 10
Default	4
Introduced	16.0.R4

t391 *number*

Context	**configure port** *port* **ethernet elmi**
Description	Configure Polling Timer for UNI-C.
Range	5 to 30
Default	10
Units	seconds
Introduced	16.0.R4

t392 *number*

Context	**configure port** *port* **ethernet elmi**
Description	Configure the polling verification timer for UNI-N.
Range	5 to 30
Default	15
Units	seconds
Introduced	16.0.R4

encap-type *keyword*

Context	**configure port** *port* **ethernet**
Description	Encapsulation method for the Ethernet port
Options	null, dot1q, qinq
Introduced	16.0.R1

eth-cfm

Context	**configure port** *port* **ethernet**
Description	Enter the eth-cfm context
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure port** *port* **ethernet eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

csf

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the csf context
Introduced	16.0.R1

multiplier *decimal-number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-bn

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-bn context
Introduced	16.0.R1

receive *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-bn**
Description	Accept and process ETH-BN messages
Default	false
Introduced	16.0.R1

rx-update-pacing *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-bn**
Description	Pacing of update messages to QoS
Range	1 to 600
Default	5
Introduced	16.0.R1

eth-test

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Enter the test-pattern context
Introduced	16.0.R1

crc-tlv *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Generate a CRC checksum
Default	false
Introduced	16.0.R1

pattern *keyword*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Test pattern for eth-test frames
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1

facility-fault *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Allow the facility MEP to move from alarming only to network actionable function
Default	false
Introduced	16.0.R1

grace

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the grace context
Introduced	16.0.R1

eth-ed

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**
Description	Enter the eth-ed context
Introduced	16.0.R1

max-rx-defect-window *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Transmission priority for ETH-ED PDUs
Range	0 to 7
Introduced	16.0.R1

rx-eth-ed *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Receive and process ETH-ED PDUs
Default	true
Introduced	16.0.R1

tx-eth-ed *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Transmit ETH-ED PDUs
Default	false
Introduced	16.0.R1

eth-vsm-grace

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**
Description	Enter the eth-vsm-grace context
Introduced	16.0.R1

rx-eth-vsm-grace *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP
Default	true
Introduced	16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

vlan (*number* | *keyword*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure port** *port* **ethernet eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique VLAN ID for a specific VLAN
Default	none
Introduced	16.0.R1

hold-time

Context	**configure port** *port* **ethernet**
Description	Enter the hold-time context
Introduced	16.0.R1

down *number*

Context	**configure port** *port* **ethernet hold-time**
Description	Hold time for link-down event dampening
Range	1 to 3600000
Introduced	16.0.R1

units *keyword*

Context	**configure port** *port* **ethernet hold-time**
Description	Units of hold timers
Default	seconds
Options	seconds, centiseconds
Introduced	16.0.R1

up *number*

Context	**configure port** *port* **ethernet hold-time**
Description	Hold time for link-down event dampening
Range	1 to 3600000
Introduced	16.0.R1

hsmda-scheduler-overrides

Context	**configure port** *port* **ethernet**
Description	Enter the hsmda-scheduler-overrides context
Introduced	16.0.R1

group [group-id] *number*

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides**
Description	Enter the group context
Introduced	16.0.R1

[group-id] *number*

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides group** *number*
Description	Group ID
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides group** *number*
Description	Ingress and egress HSMDA scheduler override
Units	megabps
Introduced	16.0.R1

max-rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides**
Description	Maximum rate to override the QoS scheduler policy
Units	megabps
Introduced	16.0.R1

scheduling-class [class-number] *number*

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides**
Description	Enter the scheduling-class context
Introduced	16.0.R1

[class-number] *number*

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides scheduling-class** *number*
Description	Unique value of the class
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet hsmda-scheduler-overrides scheduling-class** *number*
Description	Maximum bandwidth limit for this HSMDA scheduler policy
Units	megabps
Introduced	16.0.R1

weight-in-group *number*

Context **configure port** *port* **ethernet hsmda-scheduler-overrides scheduling-class** *number*

Description Weight that the HSMDA scheduler policy applies to this policy

Range 1 to 100

Introduced 16.0.R1

ingress

Context **configure port** *port* **ethernet**

Description Enter the ingress context

Introduced 16.0.R1

rate *number*

Context **configure port** *port* **ethernet ingress**

Description Maximum ingress bandwidth that this Ethernet port can receive

Range 1 to 400000

Units megabps

Introduced 16.0.R1

lacp-tunnel *boolean*

Context **configure port** *port* **ethernet**

Description Allow LACP packet tunneling for the Ethernet port

Default false

Introduced 16.0.R1

lldp

Context **configure port** *port* **ethernet**

Description Enter the lldp context

Introduced 16.0.R1

dest-mac [mac-type] *keyword*

Context	**configure port** *port* **ethernet lldp**
Description	Enter the dest-mac context
Introduced	16.0.R1

[mac-type] *keyword*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	MAC address type unique ID
Options	nearest-bridge, nearest-non-tpmr, nearest-customer
Introduced	16.0.R1
Notes	This element is part of a list key

notification *boolean*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Allow LLDP notifications
Default	false
Introduced	16.0.R1

port-id-subtype *keyword*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Port identifier TLVs transmitted to peer which is encoded
Default	tx-local
Options	tx-if-alias, tx-if-name, tx-local
Introduced	16.0.R1

receive *boolean*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Enable LLDP received frame handling
Default	false
Introduced	16.0.R1

transmit *boolean*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Enable LLDP received frame handling
Default	false
Introduced	16.0.R1

tunnel-nearest-bridge *boolean*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Allow LLDP packets received on port with destination address of nearest bridge to be tunneled
Default	false
Introduced	16.0.R1

tx-mgmt-address [mgmt-address-system-type] *keyword*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword*
Description	Enter the tx-mgmt-address context
Introduced	16.0.R1

[mgmt-address-system-type] *keyword*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-mgmt-address** *keyword*
Description	Management address to transmit
Options	oob, system, system-ipv6, oob-ipv6
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-mgmt-address** *keyword*
Description	Administrative state of transmitting management address information
Default	disable
Options	enable, disable
Introduced	16.0.R1

tx-tlvs

Context **configure port** *port* **ethernet lldp dest-mac** *keyword*

Description Enter the tx-tlvs context

Introduced 16.0.R1

port-desc *boolean*

Context **configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-tlvs**

Description Transmit port description TLVs

Default false

Introduced 16.0.R1

sys-cap *boolean*

Context **configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-tlvs**

Description Transmit system capabilities TLVs

Default false

Introduced 16.0.R1

sys-desc *boolean*

Context **configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-tlvs**

Description Transmit system description TLVs

Default false

Introduced 16.0.R1

sys-name *boolean*

Context **configure port** *port* **ethernet lldp dest-mac** *keyword* **tx-tlvs**

Description Transmit system name TLVs

Default false

Introduced 16.0.R1

load-balancing-algorithm *keyword*

Context	**configure port** *port* **ethernet**
Description	Load balancing algorithm for the Ethernet port
Options	default, include-l4, exclude-l4
Introduced	16.0.R1

mac-address *mac-address*

Context	**configure port** *port* **ethernet**
Description	MAC address for the Ethernet port
Default	00:00:00:00:00:00
Introduced	16.0.R1

min-frame-length *number*

Context	**configure port** *port* **ethernet**
Description	Minimum transmitted frame length for the Ethernet port
Range	64 | 68
Default	64
Units	bytes
Introduced	16.0.R1

mode *keyword*

Context	**configure port** *port* **ethernet**
Description	Mode for the Ethernet port
Options	access, network, hybrid
Introduced	16.0.R1

mtu *number*

Context	**configure port** *port* **ethernet**
Description	Maximum payload MTU size for the Ethernet port
Range	512 to 9212
Units	bytes
Introduced	16.0.R1

network

Context **configure port** *port* **ethernet**

Description Enter the network context

Introduced 16.0.R1

accounting-policy *string*

Context **configure port** *port* **ethernet network**

Description Accounting policy that applies to the Ethernet network port

Reference configure **log accounting-policy** *number*

Introduced 16.0.R1

collect-stats *boolean*

Context **configure port** *port* **ethernet network**

Description Collect statistical data on the Ethernet port

Default false

Introduced 16.0.R1

egress

Context **configure port** *port* **ethernet network**

Description Enter the egress context

Introduced 16.0.R1

queue-group [queue-group-name] *string* instance-id *number*

Context **configure port** *port* **ethernet network egress**

Description Enter the queue-group context

Introduced 16.0.R1

[queue-group-name] *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Queue group name
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

instance-id *number*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Instance ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Accounting policy for the Ethernet port egress queue group
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

aggregate-rate

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Enter the aggregate-rate context
Introduced	16.0.R1

limit-unused-bandwidth *boolean*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **aggregate-rate**
Description	Specify whether to enable limit unused bandwidth.
Default	false
Introduced	16.0.R4

queue-frame-based-accounting *boolean*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **aggregate-rate**
Description	Enable frame-based accounting on all policers and queues associated with context
Default	false
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **aggregate-rate**
Description	Specify aggregate rate limit.
Range	1 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R4

collect-stats *boolean*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Collect statistics on this queue group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

hs-turbo *boolean*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Allow corresponding HSQ queue group queues to achieve a higher throughput
Default	false
Introduced	16.0.R1

policer-control-policy *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Policer control policy for the QoS egress queue group
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

queue-overrides

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Enter the queue-overrides context
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*
Description	HSMDA queue overrides queue ID
Reference	configure **qos queue-group-templates egress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description CBS rate

Introduced 16.0.R1

drop-tail

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description MBS rate

Units bytes

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enable queue depth monitoring

Default false

Introduced 16.0.R1

percent-rate

Context **configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **rate**
Description	CIR rate
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number* **queue-overrides queue** *string* **rate**
Description	PIR rate
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-policy *string*

Context	**configure port** *port* **ethernet network egress queue-group** *string* **instance-id** *number*
Description	Scheduler policy for the QoS egress queue group
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R1

queue-policy *string*

Context	**configure port** *port* **ethernet network egress**
Description	Configure the queue policy on the Ethernet network port.
Reference	configure **qos network-queue** *string*
Introduced	16.0.R1

pbb-etype *etype*

Context	**configure port** *port* **ethernet**
Description	Ethertype for PBB encapsulation on the Ethernet port
Default	35047
Introduced	16.0.R1

ptp-asymmetry *number*

Context	**configure port** *port* **ethernet**
Description	PTP asymmetry delay delta of the Ethernet port
Units	nanoseconds
Introduced	16.0.R1

qinq-etype *etype*

Context	**configure port** *port* **ethernet**
Description	Ethertype for QinQ encapsulation on the Ethernet port
Default	33024
Introduced	16.0.R1

report-alarm

Context	**configure port** *port* **ethernet**
Description	Enter the report-alarm context
Introduced	16.0.R1

alignment-marker-not-locked *boolean*

Context	**configure port** *port* **ethernet report-alarm**
Description	Enable/disable alignment-marker-not-locked alarm.
Introduced	16.0.R3

block-not-locked *boolean*

Context	**configure port** *port* **ethernet report-alarm**
Description	Enable/disable block-not-locked alarm.
Introduced	16.0.R3

duplicate-lane *boolean*

Context	**configure port** *port* **ethernet report-alarm**
Description	Report PCS Duplicate Lane Marker alarm
Introduced	16.0.R1

frame-not-locked *boolean*

Context	**configure port** *port* **ethernet report-alarm**
Description	Enable/disable frame-not-locked alarm.
Introduced	16.0.R3

high-ber *boolean*

Context **configure port** *port* **ethernet report-alarm**

Description Report High Bit Error Rate alarm

Introduced 16.0.R1

local *boolean*

Context **configure port** *port* **ethernet report-alarm**

Description Report local faults

Introduced 16.0.R1

remote *boolean*

Context **configure port** *port* **ethernet report-alarm**

Description Report remote faults

Introduced 16.0.R1

signal-fail *boolean*

Context **configure port** *port* **ethernet report-alarm**

Description Report an Ethernet signal lost alarm

Introduced 16.0.R1

rs-fec-mode *keyword*

Context **configure port** *port* **ethernet**

Description RS-FEC mode on the Ethernet port

Options cl91-514-528, cl74, cl108

Introduced 16.0.R1

single-fiber *boolean*

Context **configure port** *port* **ethernet**

Description Allow packet redirection of IP packets from single fiber on the Ethernet port

Default false

Introduced 16.0.R1

speed *number*

Context	**configure port** *port* **ethernet**
Description	Speed of the Ethernet port
Range	10 | 100 | 1000 | 10000 | 25000 | 40000 | 50000 | 100000
Units	megabps
Introduced	16.0.R1

ssm

Context	**configure port** *port* **ethernet**
Description	Enter the ssm context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port* **ethernet ssm**
Description	Administrative state of SSM
Default	disable
Options	enable, disable
Introduced	16.0.R1

code-type *keyword*

Context	**configure port** *port* **ethernet ssm**
Description	SSM channel to use either sonet or SDH
Default	sdh
Options	sonet, sdh
Introduced	16.0.R1

tx-dus *boolean*

Context	**configure port** *port* **ethernet ssm**
Description	Transmit value of QL-DUS/QL-DNU in SSM messaging channel
Default	false
Introduced	16.0.R1

symbol-monitor

Context	**configure port** *port* **ethernet**
Description	Enter the symbol-monitor context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure port** *port* **ethernet symbol-monitor**
Description	Administrative state of symbol monitoring on the port
Default	disable
Options	enable, disable
Introduced	16.0.R1

signal-degrade

Context	**configure port** *port* **ethernet symbol-monitor**
Description	Enter the signal-degrade context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **ethernet symbol-monitor signal-degrade**
Description	SD multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **ethernet symbol-monitor signal-degrade**
Description	SD threshold
Range	1 to 9
Introduced	16.0.R1

signal-failure

Context	**configure port** *port* **ethernet symbol-monitor**
Description	Enter the signal-failure context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **ethernet symbol-monitor signal-failure**
Description	SF multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **ethernet symbol-monitor signal-failure**
Description	SF threshold
Range	1 to 9
Introduced	16.0.R1

window-size *number*

Context	**configure port** *port* **ethernet symbol-monitor**
Description	Window size of the monitor
Range	5 to 60
Default	10
Units	seconds
Introduced	16.0.R1

util-stats-interval *number*

Context	**configure port** *port* **ethernet**
Description	Interval to calculate the utilization statistics of the Ethernet port
Range	30 to 600
Default	300
Units	seconds
Introduced	16.0.R1

xgig *keyword*

Context	**configure port** *port* **ethernet**
Description	LAN or WAN mode for the Ethernet port
Options	lan, wan
Introduced	16.0.R1

hybrid-buffer-allocation

Context	**configure port** *port*
Description	Enter the hybrid-buffer-allocation context
Introduced	16.0.R1

egress-weight

Context	**configure port** *port* **hybrid-buffer-allocation**
Description	Enter the egress-weight context
Introduced	16.0.R1

access *number*

Context	**configure port** *port* **hybrid-buffer-allocation egress-weight**
Description	Access weight for hybrid port
Range	0 to 100
Default	50
Introduced	16.0.R1

network *number*

Context	**configure port** *port* **hybrid-buffer-allocation egress-weight**
Description	Access weight for hybrid port
Range	0 to 100
Default	50
Introduced	16.0.R1

ingress-weight

Context **configure port** *port* **hybrid-buffer-allocation**

Description Enter the ingress-weight context

Introduced 16.0.R1

access *number*

Context **configure port** *port* **hybrid-buffer-allocation ingress-weight**

Description Access weight for hybrid port

Range 0 to 100

Default 50

Introduced 16.0.R1

network *number*

Context **configure port** *port* **hybrid-buffer-allocation ingress-weight**

Description Access weight for hybrid port

Range 0 to 100

Default 50

Introduced 16.0.R1

modify-buffer-allocation

Context **configure port** *port*

Description Enter the modify-buffer-allocation context

Introduced 16.0.R1

percentage-of-rate

Context **configure port** *port* **modify-buffer-allocation**

Description Enter the percentage-of-rate context

Introduced 16.0.R1

egress *number*

Context	**configure port** *port* **modify-buffer-allocation percentage-of-rate**
Description	Egress rate percentage
Range	1 to 1000
Default	100
Introduced	16.0.R1

ingress *number*

Context	**configure port** *port* **modify-buffer-allocation percentage-of-rate**
Description	Ingress rate percentage
Range	1 to 1000
Default	100
Introduced	16.0.R1

monitor-agg-egress-queue-stats *boolean*

Context	**configure port** *port*
Description	Monitor aggregate queue statistics
Default	false
Introduced	16.0.R1

named-pool-mode

Context	**configure port** *port*
Description	Enter the named-pool-mode context
Introduced	16.0.R4

egress

Context	**configure port** *port* **named-pool-mode**
Description	Enter the egress context
Introduced	16.0.R4

named-pool-policy *string*

Context **configure port** *port* **named-pool-mode egress**

Description Configure the named pool policy.

Reference configure **qos named-pool-policy** *string*

Introduced 16.0.R4

ingress

Context **configure port** *port* **named-pool-mode**

Description Enter the ingress context

Introduced 16.0.R4

named-pool-policy *string*

Context **configure port** *port* **named-pool-mode ingress**

Description Configure the named pool policy.

Reference configure **qos named-pool-policy** *string*

Introduced 16.0.R4

network

Context **configure port** *port*

Description Enter the network context

Introduced 16.0.R1

egress

Context **configure port** *port* **network**

Description Enter the egress context

Introduced 16.0.R1

pool [name] *string*

Context **configure port** *port* **network egress**

Description Enter the pool context

Introduced 16.0.R1

[name] *string*

Context	**configure port** *port* **network egress pool** *string*
Description	Unique name of pool for access port
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure port** *port* **network egress pool** *string*
Description	Threshold for amber alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

red-alarm-threshold *number*

Context	**configure port** *port* **network egress pool** *string*
Description	Threshold for red alarm on oversubscription
Range	1 to 1000
Units	percent
Introduced	16.0.R1

resv-cbs

Context	**configure port** *port* **network egress pool** *string*
Description	Enter the resv-cbs context
Introduced	16.0.R1

amber-alarm-action

Context	**configure port** *port* **network egress pool** *string* **resv-cbs**
Description	Enter the amber-alarm-action context
Introduced	16.0.R1

max *number*

Context **configure port** *port* **network egress pool** *string* **resv-cbs amber-alarm-action**
Description Maximum percentage for reserved CBS of pool
Range 1 to 100
Units percent
Introduced 16.0.R1

step *number*

Context **configure port** *port* **network egress pool** *string* **resv-cbs amber-alarm-action**
Description Step-size percentage for reserved CBS of pool
Range 1 to 100
Units percent
Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure port** *port* **network egress pool** *string* **resv-cbs**
Description Percentage of pool size reserved for CBS
Range 0 to 100
Default auto
Units percent
Options auto
Introduced 16.0.R1

slope-policy *string*

Context **configure port** *port* **network egress pool** *string*
Description Slope policy for high and low priority RED slope parameters and time average factor
Reference configure **qos slope-policy** *string*
Introduced 16.0.R1

otu

Context **configure port** *port*
Description Enter the otu context
Introduced 16.0.R1

async-mapping *boolean*

Context	**configure port** *port* **otu**
Description	Allow asynchoronous mapping of the payload inside the OTU
Introduced	16.0.R1

fec *keyword*

Context	**configure port** *port* **otu**
Description	Forwarding Error Correction (FEC) encapsulation on the port
Options	none, g709, enhanced
Introduced	16.0.R1

fine-granularity-ber

Context	**configure port** *port* **otu**
Description	Enter the fine-granularity-ber context
Introduced	16.0.R1

signal-degrade

Context	**configure port** *port* **otu fine-granularity-ber**
Description	Enter the signal-degrade context
Introduced	16.0.R1

clear

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade**
Description	Enter the clear context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade clear**
Description	Multiplier of the SD clear threshold
Range	10 to 99
Default	10
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade clear**
Description	SD clear threshold
Range	3 to 10
Default	8
Introduced	16.0.R1

raise

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade**
Description	Enter the raise context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade raise**
Description	Multiplier of the SD raise threshold
Range	10 to 99
Default	10
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-degrade raise**
Description	SD raise threshold
Range	3 to 9
Default	7
Introduced	16.0.R1

signal-failure

Context	**configure port** *port* **otu fine-granularity-ber**
Description	Enter the signal-failure context
Introduced	16.0.R1

clear

Context	**configure port** *port* **otu fine-granularity-ber signal-failure**
Description	Enter the clear context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-failure clear**
Description	Threshold for the Multiplier of SD clear
Range	10 to 99
Default	10
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-failure clear**
Description	Threshold for the Multiplier of SD clear
Range	3 to 9
Default	6
Introduced	16.0.R1

raise

Context	**configure port** *port* **otu fine-granularity-ber signal-failure**
Description	Enter the raise context
Introduced	16.0.R1

multiplier *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-failure raise**
Description	SF raise threshold
Range	10 to 99
Default	10
Introduced	16.0.R1

threshold *number*

Context	**configure port** *port* **otu fine-granularity-ber signal-failure raise**
Description	SF raise threshold
Range	3 to 8
Default	5
Introduced	16.0.R1

otu2-lan-data-rate *keyword*

Context	**configure port** *port* **otu**
Description	Data rate for 10GE LAN OTU2 on the port
Units	gigabps
Options	11.049, 11.096
Introduced	16.0.R1

path-monitoring

Context	**configure port** *port* **otu**
Description	Enter the path-monitoring context
Introduced	16.0.R4

trail-trace-identifier

Context	**configure port** *port* **otu path-monitoring**
Description	Enter the trail-trace-identifier context
Introduced	16.0.R4

expected

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier**
Description	Enter the expected context
Introduced	16.0.R4

auto-generated

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier expected**
Description	Auto-generate the TTI by the system.
Introduced	16.0.R1
Notes	This element is part of a choice

bytes *string*

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier expected**
Description	Configure the TTI as a sequence of bytes.
String Length	0 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier expected**
Description	Configure the TTI as a sequence of printable ASCII.
String Length	0 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

mismatch-reaction *keyword*

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier**
Description	Configure the reaction to a mismatched TTI.
Options	squelch-rx
Introduced	16.0.R4

transmit

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier**
Description	Enter the transmit context
Introduced	16.0.R4

auto-generated

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier transmit**
Description	Auto-generate the TTI by the system.
Introduced	16.0.R1
Notes	This element is part of a choice

bytes *string*

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier transmit**
Description	Configure the TTI as a sequence of bytes.
String Length	0 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure port** *port* **otu path-monitoring trail-trace-identifier transmit**
Description	Configure the TTI as a sequence of printable ASCII.
String Length	0 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

payload-structure-identifier

Context	**configure port** *port* **otu**
Description	Enter the payload-structure-identifier context
Introduced	16.0.R4

payload

Context	**configure port** *port* **otu payload-structure-identifier**
Description	Enter the payload context
Introduced	16.0.R4

expected *keyword*

Context	**configure port** *port* **otu payload-structure-identifier payload**
Description	Configure the port's PSI payload expected parameters.
Default	auto
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82, reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Introduced	16.0.R4

mismatch-reaction *keyword*

Context	**configure port** *port* **otu payload-structure-identifier payload**
Description	Configure the reaction to a mismatched payload.
Options	squelch-rx
Introduced	16.0.R4

transmit *keyword*

Context	**configure port** *port* **otu payload-structure-identifier payload**
Description	Configure the port's PSI payload transmit parameters.
Default	auto
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82, reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Introduced	16.0.R4

report-alarm

Context	**configure port** *port* **otu**
Description	Enter the report-alarm context
Introduced	16.0.R1

fec-fail *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report FEC mode mismatch alarm
Default	false
Introduced	16.0.R1

fec-sd *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report Signal Degrade alarm
Default	false
Introduced	16.0.R1

fec-sf *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report Signal Fail alarm
Default	true
Introduced	16.0.R1

fec-uncorr *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report one or more Uncorrectable FEC errors alarm
Default	false
Introduced	16.0.R1

loc *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report alarm for a loss of clock that causes the port to shut down
Default	true
Introduced	16.0.R1

lof *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report alarm for the loss of OTU framing
Default	true
Introduced	16.0.R1

lom *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report alarm for the loss of multi-frame
Default	true
Introduced	16.0.R1

los *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report alarm for the loss of signal transitions on data
Default	true
Introduced	16.0.R1

odu-ais *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report ODU Alarm Indication Signal alarm
Default	false
Introduced	16.0.R1

odu-bdi *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report PM Backward Defect Indication alarm
Default	false
Introduced	16.0.R1

odu-lck *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report ODU Locked alarm
Default	false
Introduced	16.0.R1

odu-oci *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report ODU Open Connection Indication alarm
Default	false
Introduced	16.0.R1

odu-tim *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report PM Trace ID Mismatch alarm
Default	false
Introduced	16.0.R1

opu-plm *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report PSI Payload Type Mismatch alarm
Default	false
Introduced	16.0.R1

otu-ais *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report OTU Alarm Indication Signal alarm
Default	false
Introduced	16.0.R1

otu-bdi *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Backward Defect Indication alarm
Default	true
Introduced	16.0.R1

otu-ber-sd *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Signal Degrade alarm
Default	false
Introduced	16.0.R1

otu-ber-sf *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Signal Fail alarm
Default	true
Introduced	16.0.R1

otu-biae *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Backward Incoming Alignment Error alarm
Default	false
Introduced	16.0.R1

otu-iae *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Incoming Alignment Error alarm
Default	false
Introduced	16.0.R1

otu-tim *boolean*

Context	**configure port** *port* **otu report-alarm**
Description	Report SM Trace ID Mismatch alarm
Default	false
Introduced	16.0.R1

sd-threshold *number*

Context	**configure port** *port* **otu**
Description	Error rate at which to declare the signal fail condition for the signal degrade (SD)
Range	5 to 9
Default	7
Introduced	16.0.R1

section-monitoring

Context	**configure port** *port* **otu**
Description	Enter the section-monitoring context
Introduced	16.0.R4

trail-trace-identifier

Context	**configure port** *port* **otu section-monitoring**
Description	Enter the trail-trace-identifier context
Introduced	16.0.R4

expected

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier**
Description	Enter the expected context
Introduced	16.0.R4

auto-generated

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier expected**
Description	Auto-generate the TTI by the system.
Introduced	16.0.R1
Notes	This element is part of a choice

bytes *string*

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier expected**
Description	Configure the TTI as a sequence of bytes.
String Length	0 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier expected**
Description	Configure the TTI as a sequence of printable ASCII.
String Length	0 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

mismatch-reaction *keyword*

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier**
Description	Configure the reaction to a mismatched TTI.
Options	squelch-rx
Introduced	16.0.R4

transmit

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier**
Description	Enter the transmit context
Introduced	16.0.R4

auto-generated

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier transmit**
Description	Auto-generate the TTI by the system.
Introduced	16.0.R1
Notes	This element is part of a choice

bytes *string*

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier transmit**
Description	Configure the TTI as a sequence of bytes.
String Length	0 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure port** *port* **otu section-monitoring trail-trace-identifier transmit**
Description	Configure the TTI as a sequence of printable ASCII.
String Length	0 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

sf-sd-method *keyword*

Context	**configure port** *port* **otu**
Description	Method used to determine the signal fail and signal degrade alarms
Default	fec
Options	fec, bip8
Introduced	16.0.R1

sf-threshold *number*

Context	**configure port** *port* **otu**
Description	Error rate at which to declare the signal fail condition for the signal fail (SF)
Range	3 to 6
Default	5
Introduced	16.0.R1

sonet-sdh

Context	**configure port** *port*
Description	Enter the sonet-sdh context
Introduced	16.0.R1

clock-source *keyword*

Context	**configure port** *port* **sonet-sdh**
Description	Configure the clock for transmitted data.
Options	loop-timed, node-timed
Introduced	16.0.R4

framing *keyword*

Context	**configure port** *port* **sonet-sdh**
Description	SONET or SDH framing
Default	sonet
Options	sonet, sdh
Introduced	16.0.R1

hold-time

Context	**configure port** *port* **sonet-sdh**
Description	Enter the hold-time context
Introduced	16.0.R4

down *number*

Context	**configure port** *port* **sonet-sdh hold-time**
Description	Configure the hold timer for link down event dampening.
Range	1 to 100
Units	deciseconds
Introduced	16.0.R4

up *number*

Context	**configure port** *port* **sonet-sdh hold-time**
Description	Configure the hold timer for link up event dampening.
Range	0 to 100
Default	5
Units	deciseconds
Introduced	16.0.R4

loopback *keyword*

Context	**configure port** *port* **sonet-sdh**
Description	Loopback to activate on SONET port
Options	line, internal
Introduced	16.0.R1

report-alarm

Context	**configure port** *port* **sonet-sdh**
Description	Enter the report-alarm context
Introduced	16.0.R1

lais *boolean*

Context	**configure port** *port* **sonet-sdh report-alarm**
Description	Report Line Indication Signal Errors alarm
Default	false
Introduced	16.0.R1

lb2er-sd *boolean*

Context	**configure port** *port* **sonet-sdh report-alarm**
Description	Report alarm for line signal degradation BER (bit interleaved parity) errors
Default	false
Introduced	16.0.R1

lb2er-sf *boolean*

Context **configure port** *port* **sonet-sdh report-alarm**
Description Report alarm line signal failure BER errors
Default true
Introduced 16.0.R1

loc *boolean*

Context **configure port** *port* **sonet-sdh report-alarm**
Description Report alarm for a loss of clock that causes the port to shut down
Default true
Introduced 16.0.R1

lrdi *boolean*

Context **configure port** *port* **sonet-sdh report-alarm**
Description Report Line Remote Defect Indication Errors alarm
Default true
Introduced 16.0.R1

lrei *boolean*

Context **configure port** *port* **sonet-sdh report-alarm**
Description Report alarm for a line error condition
Default false
Introduced 16.0.R1

slof *boolean*

Context **configure port** *port* **sonet-sdh report-alarm**
Description Report alarm for section loss of frame errors
Default true
Introduced 16.0.R1

slos *boolean*

Context	**configure port** *port* **sonet-sdh report-alarm**
Description	Report alarm for section loss of signal error on the transmit side
Default	true
Introduced	16.0.R1

ss1f *boolean*

Context	**configure port** *port* **sonet-sdh report-alarm**
Description	Report alarm for section synchronization failure
Default	false
Introduced	16.0.R1

reset-port-on-path-down *boolean*

Context	**configure port** *port* **sonet-sdh**
Description	Reset port when path goes operationally down
Default	false
Introduced	16.0.R1

sd-threshold *number*

Context	**configure port** *port* **sonet-sdh**
Description	Threshold for line signal failure BER
Range	3 to 9
Default	6
Introduced	16.0.R1

section-trace

Context	**configure port** *port* **sonet-sdh**
Description	Enter the section-trace context
Introduced	16.0.R4

byte *string*

Context	**configure port** *port* **sonet-sdh section-trace**
Description	Set j0 byte to the first octet of the j0 string and the z0 byte to 0xcc.
String Length	1 to 4
Default	1
Introduced	16.0.R4
Notes	This element is part of a choice

increment-z0

Context	**configure port** *port* **sonet-sdh section-trace**
Description	Set the j0 byte to 0x01 and increment z0 byte.
Introduced	16.0.R4
Notes	This element is part of a choice

string *string*

Context	**configure port** *port* **sonet-sdh section-trace**
Description	Set j0 byte to the string and the z0 byte to 0xcc.
String Length	0 to 16
Introduced	16.0.R4
Notes	This element is part of a choice

sf-threshold *number*

Context	**configure port** *port* **sonet-sdh**
Description	Threshold for line signal failure BER
Range	3 to 6
Default	3
Introduced	16.0.R1

single-fiber *boolean*

Context	**configure port** *port* **sonet-sdh**
Description	Allow packet gathering and redirection of IP packets from a single fiber (RX) port
Default	false
Introduced	16.0.R1

speed *keyword*

Context	**configure port** *port* **sonet-sdh**
Description	Configure the speed of a SONET/SDH port to be either OC3 or OC12.
Options	oc3, oc12, oc48, oc192, oc768, oc1
Introduced	16.0.R4

suppress-low-order-alarms *boolean*

Context	**configure port** *port* **sonet-sdh**
Description	Suppress low order alarms
Default	false
Introduced	16.0.R1

tx-dus *boolean*

Context	**configure port** *port* **sonet-sdh**
Description	Enable/disable the forced transmit 0xF (dus/dnu) in S1 overhead byte.
Default	false
Introduced	16.0.R4

transceiver

Context	**configure port** *port*
Description	Enter the transceiver context
Introduced	16.0.R4

digital-coherent-optics *boolean*

Context	**configure port** *port* **transceiver**
Description	Enable/disable digital coherent optics on the transceiver.
Default	false
Introduced	16.0.R4

26 port-policy Commands

configure
- — **port-policy** *string*
  - — **description** *string*
  - — **egress-port-scheduler-policy** *string*

26.1 port-policy Command Descriptions

port-policy [name] *string*

Context	**configure**
Description	Enter the port-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure port-policy** *string*
Description	Port policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure port-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-port-scheduler-policy *string*

Context	**configure port-policy** *string*
Description	Policy for egress port scheduler
Reference	configure **qos port-scheduler-policy** *string*
Introduced	16.0.R1

27 port-xc Commands

configure
- — **port-xc**
  - — **pxc** *number*
    - — **admin-state** *keyword*
    - — **description** *string*
    - — **port-id** *string*

27.1 port-xc Command Descriptions

port-xc

Context	**configure**
Description	Enter the port-xc context
Introduced	16.0.R1

pxc [pxc-id] *number*

Context	**configure port-xc**
Description	Enter the pxc context
Introduced	16.0.R1

[pxc-id] *number*

Context	**configure port-xc pxc** *number*
Description	Unique Identifier for the PXC
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure port-xc pxc** *number*
Description	Administrative state of PXC
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure port-xc pxc** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

port-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure port-xc pxc** *number*
Description	PXC port
Reference	configure **port** *port*
Introduced	16.0.R1

28 pw-port Commands

configure
- — **pw-port** *number*
  - — **description** *string*
  - — **dot1q-etype** *etype*
  - — **encap-type** *keyword*
  - — **epipe** *string*
    - — **admin-state** *keyword*
    - — **egress**

    - — **admin-state** *keyword*
    - — **egress**
      - — **shaper**
        - — **intermediate-destination-id** *string*
        - — **pw-sap-secondary-shaper** *string*
        - — **virtual-port** *string*
      - — **vc-label** *number*
    - — **ingress**
      - — **vc-label** *number*
    - — **monitor-oper-group** *string*
    - — **vc-id** *number*
    - — **vc-type** *keyword*
    - — **vlan-vc-tag** *number*

28.1 pw-port Command Descriptions

pw-port [pw-port-id] *number*

Context	**configure**
Description	Enter the pw-port context
Introduced	16.0.R1

[pw-port-id] *number*

Context	**configure pw-port** *number*
Description	The identifier which uniquely identifies the pw-port.
Range	1 to 32767
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure pw-port** *number*
Description	Description of the pseudo-wire port
String Length	1 to 160
Default	PW Port
Introduced	16.0.R1

dot1q-etype *etype*

Context	**configure pw-port** *number*
Description	Dot1q eth-type encapsulation value as 0xXXYY with range 0x0600-0xFFFF.
Default	33024
Introduced	16.0.R1

encap-type *keyword*

Context	**configure pw-port** *number*
Description	Encap type of the pseudo-wire port
Default	dot1q
Options	dot1q, qinq
Introduced	16.0.R1

epipe [service-name] *string*

Context	**configure pw-port** *number*
Description	Enter the **epipe** context
Max. Elements	1
Introduced	16.0.R4

[service-name] *string*

Context	**configure pw-port** *number* **epipe** *string*
Description	Name of the Epipe service
Reference	configure **service epipe** *service-name*
Introduced	16.0.R4
Notes	This element is part of a choice
	This element is part of a list key

admin-state *keyword*

Context	**configure pw-port** *number* **epipe** *string*
Description	Specifies desired state of this pseudo-wire port.
Default	enable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

egress

Context	**configure pw-port** *number* **epipe** *string*
Description	Enter the **egress** context
Introduced	16.0.R4

shaper

Context	**configure pw-port** *number* **epipe** *string* **egress**
Description	Enter the **shaper** context
Introduced	16.0.R4

intermediate-destination-id *string*

Context	**configure pw-port** *number* **epipe** *string* **egress shaper**
Description	Specifies the default intermediate destination identifier on the egress side which will eventualy map to an HSMDAv2 secondary shaper.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

virtual-port *string*

Context	**configure pw-port** *number* **epipe** *string* **egress shaper**
Description	Specifies the virtual port name of the shaper on the egress side.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

fpe-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure pw-port** *number* **epipe** *string*
Description	Forward path extension identifier.
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

monitor-oper-group *string*

Context	**configure pw-port** *number* **epipe** *string*
Description	Specifies the monitoring operational group name.
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

qinq-etype *etype*

Context	**configure pw-port** *number*
Description	QinQ eth-type encapsulation value. as 0xXXYY with range 0x0600-0xFFFF.
Default	33024
Introduced	16.0.R1

sdp [sdp-id] *string*

Context	**configure pw-port** *number*
Description	Enter the **sdp** context
Max. Elements	1
Introduced	16.0.R4

[sdp-id] *string*

Context	**configure pw-port** *number* **sdp** *string*
Description	Service Distribution Point (SDP) identifier.
Reference	configure **service sdp** *number*
Introduced	16.0.R4
Notes	This element is part of a choice This element is part of a list key

admin-state *keyword*

Context	**configure pw-port** *number* **sdp** *string*
Description	Specifies desired state of this pseudo-wire port.
Default	disable
Options	enable, disable
Introduced	16.0.R4
Notes	This element is part of a choice

egress

Context	**configure pw-port** *number* **sdp** *string*
Description	Enter the **egress** context
Introduced	16.0.R4

shaper

Context	**configure pw-port** *number* **sdp** *string* **egress**
Description	Enter the **shaper** context
Introduced	16.0.R4

intermediate-destination-id *string*

Context	**configure pw-port** *number* **sdp** *string* **egress shaper**
Description	Specifies the default intermediate destination identifier on the egress side which will eventualy map to an HSMDAv2 secondary shaper.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

pw-sap-secondary-shaper *string*

Context	**configure pw-port** *number* **sdp** *string* **egress shaper**
Description	Specifies the SAP secondary shaper associated on the egress side.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

virtual-port *string*

Context	**configure pw-port** *number* **sdp** *string* **egress shaper**
Description	Specifies the virtual port name of the shaper on the egress side.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure pw-port** *number* **sdp** *string* **egress**
Description	Specifies the static MPLS VC label to send packets to the far-end device.
Range	16 to 1048575
Introduced	16.0.R4
Notes	This element is part of a choice

ingress

Context	**configure pw-port** *number* **sdp** *string*
Description	Enter the **ingress** context
Introduced	16.0.R4

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure pw-port** *number* **sdp** *string* **ingress**
Description	Specifies the static MPLS VC label to receive packets from the far-end device.
Range	1 to 1048575
Introduced	16.0.R4
Notes	This element is part of a choice

monitor-oper-group *string*

Context	**configure pw-port** *number* **sdp** *string*
Description	Specifies the monitoring operational group name.
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

vc-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure pw-port** *number* **sdp** *string*
Description	Specifies the virtual-circuit identifier associated with this pseudo-wire port.
Range	1 to 4294967295
Introduced	16.0.R4
Notes	This element is mandatory This element is part of a choice

vc-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure pw-port** *number* **sdp** *string*
Description	Specifies the type of virtual circuit (VC).
Default	ether
Options	ether, vlan
Introduced	16.0.R4
Notes	This element is part of a choice

vlan-vc-tag *number*

Context	**configure pw-port** *number* **sdp** *string*
Description	Specifies the VLAN VC tag.
Range	0 to 4094
Introduced	16.0.R4
Notes	This element is part of a choice

29.1 python Command Descriptions

python

Context	**configure**
Description	Enter the python context
Introduced	16.0.R1

python-policy [name] *string*

Context	**configure python**
Description	Enter the python-policy context
Max. Elements	64
Introduced	16.0.R1

[name] *string*

Context	**configure python python-policy** *string*
Description	Python policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cache

Context	**configure python python-policy** *string*
Description	Enter the cache context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure python python-policy** *string* **cache**
Description	Administrative state of the Python cache
Default	disable
Options	enable, disable
Introduced	16.0.R1

entry-size *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure python python-policy** *string* **cache**
Description	Maximum size of the data structure to be stored in a single Python cache entry
Range	32 to 2048
Default	256
Units	bytes
Introduced	16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure python python-policy** *string* **cache**
Description	Maximum number of Python cache entries to be stored in the cache of this Python policy
Range	1 to 1000000
Default	128000
Introduced	16.0.R1

max-entry-lifetime *number*

Context	**configure python python-policy** *string* **cache**
Description	Maximum lifetime allowed for each entry of the Python cache of this Python policy
Range	1 to 604800
Default	86400
Units	seconds
Introduced	16.0.R1

mcs-peer

Context	**configure python python-policy** *string* **cache**
Description	Enter the mcs-peer context
Introduced	16.0.R1

ip-address *string*

Context	**configure python python-policy** *string* **cache mcs-peer**
Description	IP address of the Multi-Chassis Redundancy Synchronization (MCS) peer
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Context	**configure python python-policy** *string* **cache mcs-peer**
Description	Python policy cache that is uniquely identified within the scope of MCS peer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

minimum-lifetimes

Context	**configure python python-policy** *string* **cache**
Description	Enter the minimum-lifetimes context
Introduced	16.0.R1

high-availability *number*

Context	**configure python python-policy** *string* **cache minimum-lifetimes**
Description	Minimum value for the remaining lifetime of any cache entry to be synchronized with standby CPM
Range	1 to 600
Units	seconds
Introduced	16.0.R1

multi-chassis-redundancy *number*

Context	**configure python python-policy** *string* **cache minimum-lifetimes**
Description	Minimum value for the remaining lifetime of any cache entry to be synchronized with peer system
Range	1 to 600
Units	seconds
Introduced	16.0.R1

persistence *number*

Context	**configure python python-policy** *string* **cache minimum-lifetimes**
Description	Minimum value for the remaining lifetime of any cache entry to be written to system persistence
Range	1 to 1800
Units	seconds
Introduced	16.0.R1

persistence *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure python python-policy** *string* **cache**
Description	Allow persistency support for the cached entries of the Python policy
Default	false
Introduced	16.0.R1

description *string*

Context	**configure python python-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dhcp [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the dhcp context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **dhcp** *keyword* **direction** *keyword*
Description	DHCP message type
Options	discover, offer, request, decline, ack, nak, release, inform, force-renew, lease-query, lease-unassigned, lease-unknown, lease-active
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **dhcp** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **dhcp** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

dhcp6 [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the dhcp6 context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **dhcp6** *keyword* **direction** *keyword*
Description	DHCPv6 message type
Options	solicit, advertise, request, confirm, renew, rebind, reply, release, decline, reconfigure, info-request, relay-forward, relay-reply
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **dhcp6** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **dhcp6** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

diameter [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the diameter context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **diameter** *keyword* **direction** *keyword*
Description	Diameter message type
Options	ccr, cca, rar, raa, cer, cea, dwr, dwa, dpr, dpa, asr, asa, aar, aaa
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **diameter** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **diameter** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

gtpv1-c [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the gtpv1-c context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **gtpv1-c** *keyword* **direction** *keyword*
Description	GTPv1-C message type
Options	echo-request, echo-response, version-not-supported, create-pdp-context-request, create-pdp-context-response, delete-pdp-context-request, delete-pdp-context-response, error-indication, end-marker
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **gtpv1-c** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **gtpv1-c** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

gtpv2-c [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the gtpv2-c context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **gtpv2-c** *keyword* **direction** *keyword*
Description	GTPv2-C message type
Options	echo-request, echo-response, version-not-supported, create-session-request, create-session-response, modify-bearer-request, modify-bearer-response, delete-session-request, delete-session-response, delete-bearer-request, delete-bearer-response, release-access-bearers-request, release-access-bearers-response, downlink-data-notification, downlink-data-notification-ack, change-notification-request, change-notification-response, stop-paging-indication
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **gtpv2-c** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **gtpv2-c** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure python python-policy** *string*
Description	NAT ISA group for this Python policy
Reference	configure **isa nat-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

pppoe [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the pppoe context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **pppoe** *keyword* **direction** *keyword*
Description	PPPoE message type
Options	session-lcp, session-pap, session-chap, session-ipcp, session-ip6cp, pado, padi, padr, pads, padt
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **pppoe** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **pppoe** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

radius [message-type] *keyword* **direction** *keyword*

Context	**configure python python-policy** *string*
Description	Enter the radius context
Introduced	16.0.R1

[message-type] *keyword*

Context	**configure python python-policy** *string* **radius** *keyword* **direction** *keyword*
Description	RADIUS message type
Options	access-request, access-accept, access-reject, accounting-request, accounting-response, access-challenge, disconnect-request, change-of-authorization-request
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure python python-policy** *string* **radius** *keyword* **direction** *keyword*
Description	Event that is either incoming or outgoing
Options	ingress, egress
Introduced	16.0.R1
Notes	This element is part of a list key

script *string*

Context	**configure python python-policy** *string* **radius** *keyword* **direction** *keyword*
Description	Python script name for the message specified by message-type
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

syslog

Context	**configure python python-policy** *string*
Description	Enter the syslog context
Introduced	16.0.R1

script *string*

Context	**configure python python-policy** *string* **syslog**
Description	Python script name for outgoing syslog messages
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

vsd

Context	**configure python python-policy** *string*
Description	Enter the vsd context
Introduced	16.0.R1

script *string*

Context	**configure python python-policy** *string* **vsd**
Description	Python script name for the received XMPP Service-Config response messages
Reference	configure **python python-script** *string*
Introduced	16.0.R1
Notes	This element is mandatory

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure python python-policy** *string*
Description	WLAN ISA group for this Python policy
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

python-script [name] *string*

Context	**configure python**
Description	Enter the python-script context
Max. Elements	256
Introduced	16.0.R1

[name] *string*

Context	**configure python python-script** *string*
Description	Python script policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

action-on-fail *keyword*

Context	**configure python python-script** *string*
Description	Action taken when Python fails to modify the given message
Default	drop
Options	passthrough, drop
Introduced	16.0.R1

admin-state *keyword*

Context	**configure python python-script** *string*
Description	Administrative state of the Python script
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure python python-script** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

protection

Context	**configure python python-script** *string*
Description	Enter the protection context
Introduced	16.0.R1

hmac-sha256 *encrypted-leaf*

Context	**configure python python-script** *string* **protection**
Description	Python script to consist of the hash value as obtained by the hmac-sha256 hashing algorithm
String Length	1 to 198
Introduced	16.0.R1

urls *url*

Context	**configure python python-script** *string*
Description	The script locations in URL format
String Length	1 to 180
Max. Elements	3
Introduced	16.0.R4
Notes	This element is ordered by user

30 qos Commands

configure

30.1 qos Command Descriptions

qos

Context	**configure**
Description	Enter the qos context
Introduced	16.0.R1

adv-config-policy [adv-config-policy-name] *string*

Context	**configure qos**
Description	Enter the adv-config-policy context
Max. Elements	255
Introduced	16.0.R1

[adv-config-policy-name] *string*

Context	**configure qos adv-config-policy** *string*
Description	Advanced QoS policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

child-control

Context	**configure qos adv-config-policy** *string*
Description	Enter the child-control context
Introduced	16.0.R1

bandwidth-distribution

Context	**configure qos adv-config-policy** *string* **child-control**
Description	Enter the bandwidth-distribution context
Introduced	16.0.R1

above-offered-cap

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Enter the above-offered-cap context
Introduced	16.0.R1

percent *decimal-number*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution above-offered-cap**
Description	Percentage of the child's administrative PIR that is used as the fair share increase limit
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution above-offered-cap**
Description	Explicit number to assign as limit to the child's fair share increase
Range	0 to 100000000
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

enqueue-on-pir-zero *boolean*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Enqueue the packets when bandwidth-distribution granularity rate is set to zero
Default	false
Introduced	16.0.R1

granularity

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Enter the granularity context
Introduced	16.0.R1

percent *decimal-number*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution granularity**
Description	Rounding percentage value for administratiive PIR
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate *number*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution granularity**
Description	Rounding rate step value
Range	0 to 100000000
Introduced	16.0.R1
Notes	This element is part of a choice

internal-scheduler-weight-mode *keyword*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Weight mode applied to this advanced QoS policy
Options	auto, force-equal, offered-load, capped-offered-load
Introduced	16.0.R1

limit-pir-zero-drain *boolean*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Throttle the queue draining based on bandwidth-distribution granularity rate
Default	false
Introduced	16.0.R1

lub-init-min-pir *boolean*

Context	**configure qos adv-config-policy** *string* **child-control bandwidth-distribution**
Description	Apply minimum rate operational PIR to queue for use by enqueued packets prior to an HQoS iteration
Default	false
Introduced	16.0.R1

offered-measurement

Context	**configure qos adv-config-policy** *string* **child-control**
Description	Enter the offered-measurement context
Introduced	16.0.R1

add

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Enter the add context
Introduced	16.0.R1

active-min-only *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement add**
Description	Use increase in rate or percentage as minimum offered rate only for active queues or policers
Default	false
Introduced	16.0.R1

min-only *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement add**
Description	Use specified increase value as a minimum offered rate even for inactive queues or policers
Default	false
Introduced	16.0.R1

percent *decimal-number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement add**
Description	Percentage of child's administrative PIR to add to child's offered rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate *number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement add**
Description	Rate value to add to child's offered rate
Range	0 to 100000000
Introduced	16.0.R1
Notes	This element is part of a choice

fast-start *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Allow fast detection of initial bandwidth on a child policer or queue associated with policy
Default	false
Introduced	16.0.R1

fast-stop *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Allow fast detection of lack of offered rate on a child policer or queue associated with the policy
Default	false
Introduced	16.0.R1

granularity

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Enter the granularity context
Introduced	16.0.R1

percent *decimal-number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement granularity**
Description	Percentage of child's administrative PIR used as threshold sensitivity to offered rate change
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate *number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement granularity**
Description	Value to use as child's offered rate change sensitivity value
Range	0 to 100000000
Introduced	16.0.R1
Notes	This element is part of a choice

hold-time

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Enter the hold-time context
Introduced	16.0.R1

active-min-only *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement hold-time**
Description	Use specified increase value as minimum offered rate only for active queues or policers
Default	false
Introduced	16.0.R1

high-rate *number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement hold-time**
Description	Time during which current offered rate is maintained for a child policer or queue
Range	0 to 60
Default	0
Introduced	16.0.R1

max-decrement

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Enter the max-decrement context
Introduced	16.0.R1

percent *decimal-number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement max-decrement**
Description	Value of the child's administrative PIR to use as the decrement limit to offered rate change
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate *number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement max-decrement**
Description	Value to use as the decrement limit to offered rate change
Range	0 to 100000000
Introduced	16.0.R1
Notes	This element is part of a choice

sample-interval *number*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Interval for sampling the child's offered rate
Range	1 to 8
Default	1
Introduced	16.0.R1

time-average-factor

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement**
Description	Enter the time-average-factor context
Introduced	16.0.R1

dec-only *boolean*

Context	**configure qos adv-config-policy** *string* **child-control offered-measurement time-average-factor**
Description	Apply time average factor adjustment when the offered rate decreases compared to previous
Default	false
Introduced	16.0.R1

weighting-factor *number*

Context **configure qos adv-config-policy** *string* **child-control offered-measurement time-average-factor**

Description New offered rate with a sample of the previous offered rate

Range 0 to 64

Default 0

Introduced 16.0.R1

description *string*

Context **configure qos adv-config-policy** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

atm-td-profile [atm-td-profile-id] *number*

Context **configure qos**

Description Enter the atm-td-profile context

Introduced 16.0.R1

[atm-td-profile-id] *number*

Context **configure qos atm-td-profile** *number*

Description ATM traffic descriptor ID

Range 1 to 1000

Introduced 16.0.R1

Notes This element is part of a list key

clp-tagging *boolean*

Context **configure qos atm-td-profile** *number*

Description Control the setting of the CLP bit in the ATM cell header for egress traffic on IES or VPRN SAP

Default false

Introduced 16.0.R1

description *string*

Context	**configure qos atm-td-profile** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

descriptor-type *keyword*

Context	**configure qos atm-td-profile** *number*
Description	Select the type of ATM traffic descriptor
Options	p01, p01-and-s01, p01-and-s0, p01-and-s0-tag
Introduced	16.0.R1

policing *boolean*

Context	**configure qos atm-td-profile** *number*
Description	Allow ingress traffic policing
Default	false
Introduced	16.0.R1

service-category *keyword*

Context	**configure qos atm-td-profile** *number*
Description	ATM service category
Default	ubr
Options	cbr, rt-vbr, nrt-vbr, ubr
Introduced	16.0.R1

shaping *boolean*

Context	**configure qos atm-td-profile** *number*
Description	Enable cell level shaping when the ATP traffic description profile is applied to an ATM SAP queue
Introduced	16.0.R1

traffic

Context **configure qos atm-td-profile** *number*
Description Enter the traffic context
Introduced 16.0.R1

cdvt *number*

Context **configure qos atm-td-profile** *number* **traffic**
Description Cell Delay Variation Tolerance
Default 250
Units microseconds
Introduced 16.0.R1

mbs *number*

Context **configure qos atm-td-profile** *number* **traffic**
Description Maximum burst size in cell
Introduced 16.0.R1

mir *number*

Context **configure qos atm-td-profile** *number* **traffic**
Description Minimum information rate
Default 0
Units kilobps
Introduced 16.0.R1

pir *number*

Context **configure qos atm-td-profile** *number* **traffic**
Description Peak information rate
Units kilobps
Introduced 16.0.R1

sir *number*

Context	**configure qos atm-td-profile** *number* **traffic**
Description	Sustained information rate
Default	0
Units	kilobps
Introduced	16.0.R1

weight *number*

Context	**configure qos atm-td-profile** *number*
Description	Relative weight for the ATM traffic descriptor based on ATM VP shaper scheduling
Range	1 to 255
Introduced	16.0.R1

hs-attachment-policy [name] *string*

Context	**configure qos**
Description	Enter the hs-attachment-policy context
Max. Elements	31
Introduced	16.0.R1

[name] *string*

Context	**configure qos hs-attachment-policy** *string*
Description	HS attachment policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos hs-attachment-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

low-burst-max-class *number*

Context	**configure qos hs-attachment-policy** *string*
Description	Low priority burst threshold
Range	1 to 6
Default	6
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos hs-attachment-policy** *string*
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos hs-attachment-policy** *string* **queue** *number*
Description	Queue identifier for the HS attachment policy
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

sched-class *number*

Context	**configure qos hs-attachment-policy** *string* **queue** *number*
Description	Specifies scheduling class associated with this queue.
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a choice

unattached

Context	**configure qos hs-attachment-policy** *string* **queue** *number*
Description	Specifies the mapping type associated with this WRR group is unattached.
Introduced	16.0.R1
Notes	This element is part of a choice

wrr-group *number*

Context	**configure qos hs-attachment-policy** *string* **queue** *number*
Description	Specifies wrr group associated with this queue.
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a choice

wrr-group [wrr-group-id] *number*

Context	**configure qos hs-attachment-policy** *string*
Description	Enter the wrr-group context
Introduced	16.0.R1

[wrr-group-id] *number*

Context	**configure qos hs-attachment-policy** *string* **wrr-group** *number*
Description	WRR group ID for the HS attachment policy
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

sched-class *number*

Context	**configure qos hs-attachment-policy** *string* **wrr-group** *number*
Description	Specifies scheduling class associated with this WRR group.
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a choice

unattached

Context	**configure qos hs-attachment-policy** *string* **wrr-group** *number*
Description	Specifies the mapping type associated with this WRR group is unattached.
Introduced	16.0.R1
Notes	This element is part of a choice

hs-pool-policy [name] *string*

Context	**configure qos**
Description	Enter the hs-pool-policy context
Max. Elements	63
Introduced	16.0.R1

[name] *string*

Context	**configure qos hs-pool-policy** *string*
Description	HS pool policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos hs-pool-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

mid-tier

Context	**configure qos hs-pool-policy** *string*
Description	Enter the mid-tier context
Introduced	16.0.R1

mid-pool [mid-pool-id] *number*

Context	**configure qos hs-pool-policy** *string* **mid-tier**
Description	Enter the mid-pool context
Introduced	16.0.R1

[mid-pool-id] *number*

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number*
Description	Mid-pool identifier for the HS pool policy
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

allocation-percent *decimal-number*

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number*
Description	Specifies the percentage of the root-pool with which it is associated, as specified by root-parent will be available to this mid-pool.
Range	0.01 to 100.00
Introduced	16.0.R1

parent-root-pool

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number*
Description	Enter the parent-root-pool context
Introduced	16.0.R1

none

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number* **parent-root-pool**
Description	Specifies none mid-pool is associated with this parent-pool.
Introduced	16.0.R1
Notes	This element is part of a choice

pool-id *string*

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number* **parent-root-pool**
Description	Specifies the parent root to which this mid-pool is associated.
Reference	configure **qos hs-pool-policy** *string* **root-tier root-pool** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

port-bw-oversubscription-factor *number*

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number*
Description	Specifies the factor by which port bandwidth can be over subscribed.
Range	1 to 10
Default	1
Introduced	16.0.R1

slope-policy *string*

Context	**configure qos hs-pool-policy** *string* **mid-tier mid-pool** *number*
Description	Specifies the slope policy associated with this pool policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

root-tier

Context	**configure qos hs-pool-policy** *string*
Description	Enter the root-tier context
Introduced	16.0.R1

root-pool [root-pool-id] *number*

Context	**configure qos hs-pool-policy** *string* **root-tier**
Description	Enter the root-pool context
Introduced	16.0.R1

[root-pool-id] *number*

Context	**configure qos hs-pool-policy** *string* **root-tier root-pool** *number*
Description	Root pool identifier for the HS pool policy
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

allocation-weight *number*

Context	**configure qos hs-pool-policy** *string* **root-tier root-pool** *number*
Description	Specifies the weight that will be applied to the first root pool and is divided by the sum of all root pool weights to derive the pool's buffer allocation factor.
Range	0 to 100
Introduced	16.0.R1

slope-policy *string*

Context	**configure qos hs-pool-policy** *string* **root-tier root-pool** *number*
Description	Specifies the slope policy associated with this pool policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

system-reserve *decimal-number*

Context	**configure qos hs-pool-policy** *string*
Description	Percentage of HS buffers reserved for internal system use
Range	1.00 to 30.00
Default	5.00
Introduced	16.0.R1

hs-port-pool-policy [name] *string*

Context	**configure qos**
Description	Enter the hs-port-pool-policy context
Max. Elements	2047
Introduced	16.0.R1

[name] *string*

Context	**configure qos hs-port-pool-policy** *string*
Description	Name for HS port pool policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

alt-port-class-pools

Context	**configure qos hs-port-pool-policy** *string*
Description	Enter the alt-port-class-pools context
Introduced	16.0.R1

class-pool [alt-class-pool-id] *number*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools**
Description	Enter the class-pool context
Introduced	16.0.R1

[alt-class-pool-id] *number*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number*
Description	The alt-port-class-pool identifier for the HS port pool policy.
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a list key

allocation

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number*
Description	Enter the allocation context
Introduced	16.0.R1

explicit-percent *decimal-number*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number* **allocation**
Description	Specifies the percentage of parent pool to be allocated.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

port-bw-weight *number*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number* **allocation**
Description	Specifies the port share weight.
Range	1 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

parent-mid-pool

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number*
Description	Enter the parent-mid-pool context
Introduced	16.0.R1

none

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number* **parent-mid-pool**
Description	Specifies none mid-pool is associated with this parent-pool.
Introduced	16.0.R1
Notes	This element is part of a choice

pool-id *number*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number* **parent-mid-pool**
Description	Specifies the mid-pool parent.
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a choice

slope-policy *string*

Context	**configure qos hs-port-pool-policy** *string* **alt-port-class-pools class-pool** *number*
Description	Specifies the slope policy associated with this pool policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

description *string*

Context	**configure qos hs-port-pool-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

std-port-class-pools

Context	**configure qos hs-port-pool-policy** *string*
Description	Enter the std-port-class-pools context
Introduced	16.0.R1

class-pool [std-class-pool-id] *number*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools**
Description	Enter the class-pool context
Introduced	16.0.R1

[std-class-pool-id] *number*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number*
Description	Standard port class identifier for the HS port pool policy
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a list key

allocation

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number*
Description	Enter the allocation context
Introduced	16.0.R1

explicit-percent *decimal-number*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number* **allocation**
Description	Specifies the percentage of parent pool to be allocated.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

port-bw-weight *number*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number* **allocation**
Description	Specifies the port share weight.
Range	1 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

parent-mid-pool

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number*
Description	Enter the parent-mid-pool context
Introduced	16.0.R1

none

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number* **parent-mid-pool**
Description	Specifies none mid-pool is associated with this parent-pool.
Introduced	16.0.R1
Notes	This element is part of a choice

pool-id *number*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number* **parent-mid-pool**
Description	Specifies the mid-pool parent.
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a choice

slope-policy *string*

Context	**configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool** *number*
Description	Specifies the slope policy associated with this pool policy.
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

hs-scheduler-policy [name] *string*

Context	**configure qos**
Description	Enter the hs-scheduler-policy context
Max. Elements	127
Introduced	16.0.R1

[name] *string*

Context	**configure qos hs-scheduler-policy** *string*
Description	HS scheduler policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos hs-scheduler-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

group [group-id] *number*

Context	**configure qos hs-scheduler-policy** *string*
Description	Enter the group context
Introduced	16.0.R1

[group-id] *number*

Context	**configure qos hs-scheduler-policy** *string* **group** *number*
Description	Group ID for the HS scheduler policy
Range	1
Introduced	16.0.R1
Notes	This element is part of a list key

rate (*number* | *keyword*)

Context	**configure qos hs-scheduler-policy** *string* **group** *number*
Description	Group maximum rate
Range	1 to 100000
Default	max
Units	megabps
Options	max
Introduced	16.0.R1

max-rate (*number* | *keyword*)

Context	**configure qos hs-scheduler-policy** *string*
Description	Maximum rate for this HS scheduler policy
Range	1 to 100000
Default	max
Options	max
Introduced	16.0.R1

scheduling-class [class-id] *number*

Context	**configure qos hs-scheduler-policy** *string*
Description	Enter the scheduling-class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos hs-scheduler-policy** *string* **scheduling-class** *number*
Description	Class identifier for the HS scheduler policy scheduling class
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a list key

group

Context	**configure qos hs-scheduler-policy** *string* **scheduling-class** *number*
Description	Enter the **group** context
Introduced	16.0.R1

group-id *number*

Context	**configure qos hs-scheduler-policy** *string* **scheduling-class** *number* **group**
Description	Associated group associated with this scheduling class
Range	1
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

weight *number*

Context	**configure qos hs-scheduler-policy** *string* **scheduling-class** *number* **group**
Description	Weight associated with this scheduling class
Range	1 to 127
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure qos hs-scheduler-policy** *string* **scheduling-class** *number*
Description	Group maximum rate
Range	1 to 100000
Default	max
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-pool-policy [hsmda-pool-policy-name] *string*

Context	**configure qos**
Description	Enter the hsmda-pool-policy context
Introduced	16.0.R1

[hsmda-pool-policy-name] *string*

Context	**configure qos hsmda-pool-policy** *string*
Description	The name of the HSMDA Pool Policy.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

class-tier

Context	**configure qos hsmda-pool-policy** *string*
Description	Enter the class-tier context
Introduced	16.0.R1

class-pool [class-pool-id] *number*

Context	**configure qos hsmda-pool-policy** *string* **class-tier**
Description	Enter the class-pool context
Introduced	16.0.R1

[class-pool-id] *number*

Context	**configure qos hsmda-pool-policy** *string* **class-tier class-pool** *number*
Description	Class pool for the HSMDA pool policy
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

allocation-percent *decimal-number*

Context	**configure qos hsmda-pool-policy** *string* **class-tier class-pool** *number*
Description	Specifies the percentage of the root-pool with which it is associated, as specified by root-parent will be available to this class-pool.
Range	0.01 to 100.00
Introduced	16.0.R1

root-parent *string*

Context	**configure qos hsmda-pool-policy** *string* **class-tier class-pool** *number*
Description	Specifies the parent root to which this class-pool is associated.
Reference	configure **qos hsmda-pool-policy** *string* **root-tier root-pool** *number*
Introduced	16.0.R1

description *string*

Context	**configure qos hsmda-pool-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

root-tier

Context	**configure qos hsmda-pool-policy** *string*
Description	Enter the root-tier context
Introduced	16.0.R1

root-pool [root-pool-id] *number*

Context	**configure qos hsmda-pool-policy** *string* **root-tier**
Description	Enter the root-pool context
Introduced	16.0.R1

[root-pool-id] *number*

Context	**configure qos hsmda-pool-policy** *string* **root-tier root-pool** *number*
Description	Root pool identifier for the HSMDA pool policy
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

allocation-weight *number*

Context	**configure qos hsmda-pool-policy** *string* **root-tier root-pool** *number*
Description	Specifies the weight that will be applied to the first root pool and is divided by the sum of all root pool weights to derive the pool's buffer allocation factor.
Range	0 to 100
Introduced	16.0.R1

system-reserve *decimal-number*

Context	**configure qos hsmda-pool-policy** *string*
Description	Specifies the percentage of HSMDA buffers reserved for internal system use.
Range	1.00 to 30.00
Default	10.00
Introduced	16.0.R1

hsmda-scheduler-policy [hsmda-scheduler-policy-name] *string*

Context	**configure qos**
Description	Enter the hsmda-scheduler-policy context
Introduced	16.0.R1

[hsmda-scheduler-policy-name] *string*

Context	**configure qos hsmda-scheduler-policy** *string*
Description	The name of the HSMDA scheduler policy.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

burst-limit (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string*
Description	Explicit shaping burst size of a queue
Range	1 to 327680
Default	auto
Options	auto
Introduced	16.0.R1

description *string*

Context	**configure qos hsmda-scheduler-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

group [group-id] *number*

Context	**configure qos hsmda-scheduler-policy** *string*
Description	Enter the group context
Introduced	16.0.R1

[group-id] *number*

Context	**configure qos hsmda-scheduler-policy** *string* **group** *number*
Description	Group ID for the HSMDA scheduler policy
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

burst-limit (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string* **group** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 327680
Default	auto
Options	auto
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string* **group** *number*
Description	Specifies the group maximum rate.
Range	1 to 100000
Default	max
Units	megabps
Options	max
Introduced	16.0.R1

max-rate (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string*
Description	Specifies the maximum rate for this HSMDA scheduler policy.
Range	1 to 100000
Default	max
Units	megabps
Options	max
Introduced	16.0.R1

scheduling-class [class-id] *number*

Context	**configure qos hsmda-scheduler-policy** *string*
Description	Enter the scheduling-class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number*
Description	Class identifier for the HSMDA scheduler policy scheduling class
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

burst-limit (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 327680
Default	auto
Options	auto
Introduced	16.0.R1
Notes	This element is part of a choice

group

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number*
Description	Enter the **group** context
Introduced	16.0.R1

group-id *number*

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number* **group**
Description	Specifies the group associated with this scheduling class.
Range	1 to 2
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

weight *number*

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number* **group**
Description	Specifies the weight in group associated with this scheduling class.
Range	1 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure qos hsmda-scheduler-policy** *string* **scheduling-class** *number*
Description	Specifies the scheduling class maximum rate.
Range	1 to 100000
Default	max
Units	megabps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-slope-policy [hsmda-slope-policy-name] *string*

Context	**configure qos**
Description	Enter the hsmda-slope-policy context
Introduced	16.0.R1

[hsmda-slope-policy-name] *string*

Context	**configure qos hsmda-slope-policy** *string*
Description	HSMDA slope policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos hsmda-slope-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

high-slope

Context	**configure qos hsmda-slope-policy** *string*
Description	Enter the high-slope context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure qos hsmda-slope-policy** *string* **high-slope**
Description	Administrative state of the high priority RED slope
Default	enable
Options	enable, disable
Introduced	16.0.R1

max-depth *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **high-slope**
Description	Buffer percentage after which the drop probability reaches maximum average
Range	0.01 to 100.00
Default	100.00
Introduced	16.0.R1

max-prob *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **high-slope**
Description	Drop probability when the HSMDA queue depth reaches maximum depth
Range	0.01 to 100.00
Default	100.00
Introduced	16.0.R1

start-depth *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **high-slope**
Description	Buffer percentage after which the drop probability starts to rise above value
Range	0.01 to 100.00
Default	100.00
Introduced	16.0.R1

low-slope

Context	**configure qos hsmda-slope-policy** *string*
Description	Enter the low-slope context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure qos hsmda-slope-policy** *string* **low-slope**
Description	Administrative state of the low priority RED slope
Default	enable
Options	enable, disable
Introduced	16.0.R1

max-depth *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **low-slope**
Description	Buffer percentage after which the drop probability reaches maximum average
Range	0.01 to 100.00
Default	90.00
Introduced	16.0.R1

max-prob *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **low-slope**
Description	Drop probability when the HSMDA queue depth reaches maximum depth
Range	0.01 to 100.00
Default	100.00
Introduced	16.0.R1

start-depth *decimal-number*

Context	**configure qos hsmda-slope-policy** *string* **low-slope**
Description	Buffer percentage after which the drop probability starts to rise above value
Range	0.01 to 100.00
Default	90.00
Introduced	16.0.R1

hsmda-wrr-policy [hsmda-wrr-policy-name] *string*

Context	**configure qos**
Description	Enter the hsmda-wrr-policy context
Introduced	16.0.R1

[hsmda-wrr-policy-name] *string*

Context	**configure qos hsmda-wrr-policy** *string*
Description	HSMDA WRR policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

class-agg-weight *number*

Context	**configure qos hsmda-wrr-policy** *string*
Description	Weight assigned to the group of queues specified within the HSMDA scheduler
Range	1 | 2 | 4 | 8
Default	1
Introduced	16.0.R1

description *string*

Context	**configure qos hsmda-wrr-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

include-queues *keyword*

Context	**configure qos hsmda-wrr-policy** *string*
Description	Queues to include includes into the HSMDA WRR scheduling loop policy
Default	1-2
Options	1-2, 1-3
Introduced	16.0.R1

schedule-using-class *number*

Context	**configure qos hsmda-wrr-policy** *string*
Description	Class to schedule the queues specified within the HSMDA scheduler
Range	1 to 3
Default	1
Introduced	16.0.R1

match-list

Context	**configure qos**
Description	Enter the match-list context
Introduced	16.0.R1

ip-prefix-list [prefix-list-name] *string*

Context	**configure qos match-list**
Description	Enter the ip-prefix-list context
Max. Elements	512
Introduced	16.0.R1

[prefix-list-name] *string*

Context	**configure qos match-list ip-prefix-list** *string*
Description	Specifies the name given to this prefix list.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure qos match-list ip-prefix-list** *string*
Description	The description of ip-prefix-list.
String Length	1 to 80
Introduced	16.0.R4

prefix [ip-prefix] *ipv4-prefix*

Context	**configure qos match-list ip-prefix-list** *string*
Description	Enter the prefix context
Max. Elements	256
Introduced	16.0.R1

[ip-prefix] *ipv4-prefix*

Context	**configure qos match-list ip-prefix-list** *string* **prefix** *ipv4-prefix*
Description	Specifies the IPv4 prefix for this prefix list.
Introduced	16.0.R3
Notes	This element is part of a list key

ipv6-prefix-list [prefix-list-name] *string*

Context	**configure qos match-list**
Description	Enter the ipv6-prefix-list context
Max. Elements	128
Introduced	16.0.R4

[prefix-list-name] *string*

Context	**configure qos match-list ipv6-prefix-list** *string*
Description	Specifies the name given to this prefix list.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure qos match-list ipv6-prefix-list** *string*
Description	The description of ipv6-prefix-list.
String Length	1 to 80
Introduced	16.0.R4

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure qos match-list ipv6-prefix-list** *string*
Description	Enter the prefix context
Max. Elements	128
Introduced	16.0.R4

[ipv6-prefix] *ipv6-prefix*

Context	**configure qos match-list ipv6-prefix-list** *string* **prefix** *ipv6-prefix*
Description	Specifies the IPv6 prefix for this prefix list.
Introduced	16.0.R4
Notes	This element is part of a list key

mc-fr-profile-egress [mc-fr-egress-prof-index] *number*

Context	**configure qos**
Description	Enter the mc-fr-profile-egress context
Max. Elements	128
Introduced	16.0.R1

[mc-fr-egress-prof-index] *number*

Context	**configure qos mc-fr-profile-egress** *number*
Description	Egress MultiClass Frame Relay Profile Index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

class [class-id] *number*

Context	**configure qos mc-fr-profile-egress** *number*
Description	Enter the class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos mc-fr-profile-egress** *number* **class** *number*
Description	Frame-relay egress class per multi-class frame-relay egress profile
Range	0 to 3
Introduced	16.0.R1
Notes	This element is part of a list key

max-queue-size *number*

Context	**configure qos mc-fr-profile-egress** *number* **class** *number*
Description	Buffer queue size
Range	1 to 1000
Introduced	16.0.R1

mir *number*

Context	**configure qos mc-fr-profile-egress** *number* **class** *number*
Description	Minimum information rate (MIR) as percentage
Range	1 to 100
Introduced	16.0.R1

weight *number*

Context	**configure qos mc-fr-profile-egress** *number* **class** *number*
Description	Weight of this multiclass class as a percentage
Range	1 to 100
Introduced	16.0.R1

description *string*

Context	**configure qos mc-fr-profile-egress** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

mc-fr-profile-ingress [mc-fr-ingress-prof-index] *number*

Context	**configure qos**
Description	Enter the mc-fr-profile-ingress context
Max. Elements	128
Introduced	16.0.R1

[mc-fr-ingress-prof-index] *number*

Context	**configure qos mc-fr-profile-ingress** *number*
Description	Index of the ingress MultiClass Frame Relay profile
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

class [class-id] *number*

Context	**configure qos mc-fr-profile-ingress** *number*
Description	Enter the class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos mc-fr-profile-ingress** *number* **class** *number*
Description	Frame-relay ingress class per multi-class frame-relay ingress profile
Range	0 to 3
Introduced	16.0.R1
Notes	This element is part of a list key

reassembly-timeout *number*

Context	**configure qos mc-fr-profile-ingress** *number* **class** *number*
Description	Reassembly timeout for a specific frame-relay multi-class ingress class
Range	1 to 1000
Introduced	16.0.R1

description *string*

Context	**configure qos mc-fr-profile-ingress** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

md-auto-id

Context	**configure qos**
Description	Enter the md-auto-id context
Introduced	16.0.R1

qos-policy-id-range

Context	**configure qos md-auto-id**
Description	Enter the qos-policy-id-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos md-auto-id qos-policy-id-range**
Description	Upper value of the ID range, must be greater than or equal to start value
Range	2 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos md-auto-id qos-policy-id-range**
Description	Lower value of the ID range, must be less than or equal to end value
Range	2 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

mlppp-profile-egress [mc-mlppp-egress-prof-index] *number*

Context	**configure qos**
Description	Enter the mlppp-profile-egress context
Max. Elements	128
Introduced	16.0.R1

[mc-mlppp-egress-prof-index] *number*

Context	**configure qos mlppp-profile-egress** *number*
Description	Index of the egress MultiClass MLPPP profile
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

class [class-id] *number*

Context	**configure qos mlppp-profile-egress** *number*
Description	Enter the class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos mlppp-profile-egress** *number* **class** *number*
Description	Policy class
Range	0 to 3
Introduced	16.0.R1
Notes	This element is part of a list key

max-queue-size *number*

Context	**configure qos mlppp-profile-egress** *number* **class** *number*
Description	Buffer queue size
Range	1 to 1000
Introduced	16.0.R1

mir *number*

Context	**configure qos mlppp-profile-egress** *number* **class** *number*
Description	Minimum information rate (MIR) as percentage
Range	1 to 100
Introduced	16.0.R1

weight *number*

Context	**configure qos mlppp-profile-egress** *number* **class** *number*
Description	Weight of this multiclass class as a percentage
Range	1 to 100
Introduced	16.0.R1

description *string*

Context	**configure qos mlppp-profile-egress** *number*
Description	Text description
String Length	0 to 80
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure qos mlppp-profile-egress** *number*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos mlppp-profile-egress** *number* **fc** *keyword*
Description	Forwarding class name
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

mlppp-class *number*

Context	**configure qos mlppp-profile-egress** *number* **fc** *keyword*
Description	Mapping of the system forwarding class to the MLPPP classes
Range	0 to 3
Introduced	16.0.R1

mlppp-profile-ingress [mc-mlppp-ingress-prof-index] *number*

Context	**configure qos**
Description	Enter the mlppp-profile-ingress context
Max. Elements	128
Introduced	16.0.R1

[mc-mlppp-ingress-prof-index] *number*

Context	**configure qos mlppp-profile-ingress** *number*
Description	Index of the ingress MultiClass MLPPP profile
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

class [class-id] *number*

Context	**configure qos mlppp-profile-ingress** *number*
Description	Enter the class context
Introduced	16.0.R1

[class-id] *number*

Context	**configure qos mlppp-profile-ingress** *number* **class** *number*
Description	Policy class
Range	0 to 3
Introduced	16.0.R1
Notes	This element is part of a list key

reassembly-timeout *number*

Context	**configure qos mlppp-profile-ingress** *number* **class** *number*
Description	Reassembly timeout for this policy
Range	1 to 1000
Introduced	16.0.R1

description *string*

Context	**configure qos mlppp-profile-ingress** *number*
Description	Text description
String Length	0 to 80
Introduced	16.0.R1

named-pool-policy [named-pool-policy-name] *string*

Context	**configure qos**
Description	Enter the named-pool-policy context
Introduced	16.0.R1

[named-pool-policy-name] *string*

Context	**configure qos named-pool-policy** *string*
Description	Named Pool policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos named-pool-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

pool [q1-named-pool-name] *string*

Context	**configure qos named-pool-policy** *string*
Description	Enter the pool context
Introduced	16.0.R1

[q1-named-pool-name] *string*

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Q1 Named Pool policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

amber-alarm-threshold *number*

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Threshold for the amber alarm on an allowed oversubscription
Range	1 to 1000
Introduced	16.0.R1

application-weights

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Enter the application-weights context
Introduced	16.0.R1

access-allocation-weight *number*

Context	**configure qos named-pool-policy** *string* **pool** *string* **application-weights**
Description	Weight to divide access associated buffer space between named pools
Range	0 to 100
Default	50
Introduced	16.0.R1

network-allocation-weight *number*

Context	**configure qos named-pool-policy** *string* **pool** *string* **application-weights**
Description	Weight to divide network associated buffer space between named pools
Range	0 to 100
Default	50
Introduced	16.0.R1

description *string*

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

red-alarm-threshold *number*

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Threshold for the red alarm on an allowed oversubscription
Range	1 to 1000
Introduced	16.0.R1

resv-cbs

Context **configure qos named-pool-policy** *string* **pool** *string*

Description Enter the resv-cbs context

Introduced 16.0.R1

amber-alarm-action

Context **configure qos named-pool-policy** *string* **pool** *string* **resv-cbs**

Description Enter the amber-alarm-action context

Introduced 16.0.R1

max *number*

Context **configure qos named-pool-policy** *string* **pool** *string* **resv-cbs amber-alarm-action**

Description Maximum percentage for reserved CBS size of pool

Range 1 to 100

Introduced 16.0.R1

step *number*

Context **configure qos named-pool-policy** *string* **pool** *string* **resv-cbs amber-alarm-action**

Description Step-size percentage for reserved CBS of pool

Range 1 to 100

Introduced 16.0.R1

cbs *number*

Context **configure qos named-pool-policy** *string* **pool** *string* **resv-cbs**

Description Reserved CBS size of the pool

Range 0 to 100

Default 30

Units percent

Introduced 16.0.R1

slope-policy *string*

Context	**configure qos named-pool-policy** *string* **pool** *string*
Description	Slope policy name
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

port-allocation-weights

Context	**configure qos named-pool-policy** *string*
Description	Enter the port-allocation-weights context
Introduced	16.0.R1

default *number*

Context	**configure qos named-pool-policy** *string* **port-allocation-weights**
Description	Allocation weight for default pools
Range	0 to 100
Default	50
Introduced	16.0.R1

mda *number*

Context	**configure qos named-pool-policy** *string* **port-allocation-weights**
Description	Port allocation weight for MDA named pools
Range	0 to 100
Default	50
Introduced	16.0.R1

port *number*

Context	**configure qos named-pool-policy** *string* **port-allocation-weights**
Description	Named pool to create or edit within the policy
Range	0 to 100
Default	50
Introduced	16.0.R1

network [network-policy-name] *network-policy-name*

Context	**configure qos**
Description	Enter the network context
Max. Elements	255
Introduced	16.0.R1

[network-policy-name] *network-policy-name*

Context	**configure qos network** *network-policy-name*
Description	Name of this network QoS policy
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos network** *network-policy-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context	**configure qos network** *network-policy-name*
Description	Enter the egress context
Introduced	16.0.R1

dscp [dscp-name] *keyword*

Context	**configure qos network** *network-policy-name* **egress**
Description	Enter the dscp context
Introduced	16.0.R1

[dscp-name] *keyword*

Context	**configure qos network** *network-policy-name* **egress dscp** *keyword*
Description	Specifies the Differentiated Services Code Point (DSCP) name for which mapping is done.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos network** *network-policy-name* **egress dscp** *keyword*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is mandatory

profile *keyword*

Context	**configure qos network** *network-policy-name* **egress dscp** *keyword*
Description	Default profile to use for the ingressing traffic
Options	in, out, exceed, inplus
Introduced	16.0.R1
Notes	This element is mandatory

fc [fc-name] *keyword*

Context	**configure qos network** *network-policy-name* **egress**
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	Forwarding class name
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

de-mark

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	Enter the de-mark context
Introduced	16.0.R1

force *number*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword* **de-mark**
Description	DE value
Range	0 to 1
Introduced	16.0.R1

dot1p-in-profile *number*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	Dot1p marking for in-profile marking
Range	0 to 7
Introduced	16.0.R1

dot1p-out-profile *number*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	Dot1p marking for out-of-profile marking
Range	0 to 7
Introduced	16.0.R1

dscp-in-profile *keyword*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	DSCP marking for in-profile marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dscp-out-profile *keyword*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	DSCP marking for out-of-profile marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

lsp-exp-in-profile *number*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	LSP-EXP marking for in-profile marking
Range	0 to 7
Introduced	16.0.R1

lsp-exp-out-profile *number*

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	LSP-EXP marking for out-of-profile marking
Range	0 to 7
Introduced	16.0.R1

port-redirect-group

Context	**configure qos network** *network-policy-name* **egress fc** *keyword*
Description	Enter the port-redirect-group context
Introduced	16.0.R1

policer *number*

Context **configure qos network** *network-policy-name* **egress fc** *keyword* **port-redirect-group**
Description Policer to be used
Range 1 to 8
Introduced 16.0.R1

queue *number*

Context **configure qos network** *network-policy-name* **egress fc** *keyword* **port-redirect-group**
Description Queue to be used
Range 1 to 8
Introduced 16.0.R1

ip-criteria

Context **configure qos network** *network-policy-name* **egress**
Description Enter the ip-criteria context
Introduced 16.0.R1

entry [entry-id] *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria**
Description Enter the entry context
Introduced 16.0.R1

[entry-id] *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number*
Description Network Egress IP Criteria Entry Index.
Range 1 to 65535
Introduced 16.0.R1
Notes This element is part of a list key

action

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number*

Description Enter the action context

Introduced 16.0.R1

fc *keyword*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

port-redirect-group

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action**

Description Enter the port-redirect-group context

Introduced 16.0.R1

policer *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action port-redirect-group**

Description Specifies the policer identifier to be used for the matched traffic.

Range 1 to 8

Introduced 16.0.R1

queue *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action port-redirect-group**

Description Specifies the queue to use once the matched traffic has been policed.

Range 1 to 8

Introduced 16.0.R1

profile *keyword*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action**
Description	Specifies the default profile to be used for the matching traffic.
Options	in, out, exceed, inplus
Introduced	16.0.R1

type *keyword*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **action**
Description	Specified whether the criteria entry is active or in-active.
Default	ignore-match
Options	ignore-match, accept
Introduced	16.0.R1

description *string*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	DSCP value to match in the packet
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-ip

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-ip**
Description	IP address to match with destination IP of the packet.
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv4-address*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-ip**
Description	IP address to match with source IP of the packet.
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	Enter the dst-port context
Introduced	16.0.R1

eq *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port**
Description	Value 'equal to' assigned as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port**

Description Value 'less than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	Matches when the packet is a fragment (true) or when the packet is not a fragment (false) or matches all packets fragmented or not (off).
Options	false, true
Introduced	16.0.R1

icmp-type *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	ICMP type to match.
Range	0 to 255
Introduced	16.0.R1

protocol (*number* | *keyword*)

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	IP protocol to match
Introduced	16.0.R1

src-ip

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port**
Description	Value 'less than' assigned as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **egress ip-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-criteria

Context	**configure qos network** *network-policy-name* **egress**
Description	Enter the ipv6-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria**

Description Enter the entry context

Introduced 16.0.R1

[entry-id] *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number*

Description Network Egress IPv6 Criteria Entry Index.

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a list key

action

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number*

Description Enter the action context

Introduced 16.0.R1

fc *keyword*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

port-redirect-group

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action**

Description Enter the port-redirect-group context

Introduced 16.0.R1

policer *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action port-redirect-group**

Description Specifies the policer identifier to be used for the matched traffic.

Range 1 to 8

Introduced 16.0.R1

queue *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action port-redirect-group**

Description Specifies the queue to use once the matched traffic has been policed.

Range 1 to 8

Introduced 16.0.R1

profile *keyword*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action**

Description Specifies the default profile to be used for the matching traffic.

Options in, out, exceed, inplus

Introduced 16.0.R1

type *keyword*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

description *string*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**

Description DSCP value to match in the packet

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

dst-ip

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**

Description Enter the dst-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-ip**

Description IP address to match with destination IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-ip**

Description IP address to match with source IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

dst-port

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port**

Description Value 'less than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**
Description	Matches when the packet is a fragment (true) or when the packet is not a fragment (false) or matches all packets fragmented or not (off).
Options	false, true, first-only, non-first-only
Introduced	16.0.R1

icmp-type *number*

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**
Description	ICMP type to match.
Range	0 to 255
Introduced	16.0.R1

next-header (*number* | *keyword*)

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**
Description	IP protocol to match
Introduced	16.0.R1

src-ip

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet.

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port**

Description Value 'less than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **egress ipv6-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

prec [prec-value] *number*

Context	**configure qos network** *network-policy-name* **egress**
Description	Enter the prec context
Introduced	16.0.R1

[prec-value] *number*

Context	**configure qos network** *network-policy-name* **egress prec** *number*
Description	Precedence value for which mapping is performed
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos network** *network-policy-name* **egress prec** *number*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is mandatory

profile *keyword*

Context	**configure qos network** *network-policy-name* **egress prec** *number*
Description	Default profile to use for the ingressing traffic
Options	in, out, exceed, inplus
Introduced	16.0.R1
Notes	This element is mandatory

remark-trusted

Context **configure qos network** *network-policy-name* **egress**

Description Enter the remark-trusted context

Introduced 16.0.R1

force-egress-marking *boolean*

Context **configure qos network** *network-policy-name* **egress remark-trusted**

Description Remark DSCP bits in the internal IP header

Default false

Introduced 16.0.R1

ingress

Context **configure qos network** *network-policy-name*

Description Enter the ingress context

Introduced 16.0.R1

default-action

Context **configure qos network** *network-policy-name* **ingress**

Description Enter the default-action context

Introduced 16.0.R1

fc *keyword*

Context **configure qos network** *network-policy-name* **ingress default-action**

Description Default forwarding class to use while classifying the ingress traffic

Default be

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

profile *keyword*

Context	**configure qos network** *network-policy-name* **ingress default-action**
Description	Default profile for the ingressing traffic
Default	out
Options	in, out
Introduced	16.0.R1

dot1p [dot1p-value] *number*

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the dot1p context
Introduced	16.0.R1

[dot1p-value] *number*

Context	**configure qos network** *network-policy-name* **ingress dot1p** *number*
Description	Dot1p value to match in the packet
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos network** *network-policy-name* **ingress dot1p** *number*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is mandatory

profile *keyword*

Context	**configure qos network** *network-policy-name* **ingress dot1p** *number*
Description	Default profile to be used for the ingressing traffic
Options	in, out, de
Introduced	16.0.R1
Notes	This element is mandatory

dscp [dscp-name] *keyword*

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the dscp context
Introduced	16.0.R1

[dscp-name] *keyword*

Context	**configure qos network** *network-policy-name* **ingress dscp** *keyword*
Description	Specifies the Differentiated Services Code Point (DSCP) name for which mapping is done.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos network** *network-policy-name* **ingress dscp** *keyword*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is mandatory

profile *keyword*

Context	**configure qos network** *network-policy-name* **ingress dscp** *keyword*
Description	Default profile to use for the ingressing traffic
Options	in, out
Introduced	16.0.R1
Notes	This element is mandatory

fc [fc-name] *keyword*

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword*
Description	Forwarding class name
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

fp-redirect-group

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword*
Description	Enter the fp-redirect-group context
Introduced	16.0.R1

broadcast-policer *number*

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword* **fp-redirect-group**
Description	Policer to be used for broadcast traffic
Range	1 to 32
Introduced	16.0.R1

multicast-policer *number*

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword* **fp-redirect-group**
Description	Policer to be used for multicast traffic
Range	1 to 32
Introduced	16.0.R1

policer *number*

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword* **fp-redirect-group**
Description	Policer to be used for unicast traffic
Range	1 to 32
Introduced	16.0.R1

unknown-policer *number*

Context	**configure qos network** *network-policy-name* **ingress fc** *keyword* **fp-redirect-group**
Description	Plicer to be used for unknown traffic
Range	1 to 32
Introduced	16.0.R1

ip-criteria

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the ip-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number*
Description	Network Ingress IP Criteria Entry Index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *keyword*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

profile *keyword*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **action**

Description Default profile for the matching traffic

Options in, out

Introduced 16.0.R1

type *keyword*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

description *string*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**
Description	DSCP value to match in the packet.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-ip

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-ip**
Description	IP address to match with destination IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

ip-prefix-list *string*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-ip**
Description	Specifies ip-prefix-list used as match criterion.
Reference	configure **qos match-list ip-prefix-list** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

mask *ipv4-address*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-ip**
Description	IP address to match with source IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port**

Description Specifies the equal than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port**

Description Specifies the greater than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port**

Description Specifies the less than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**
Description	Matches when the packet is a fragment (true) or when the packet is not a fragment (false) or matches all packets fragmented or not (off)
Options	false, true
Introduced	16.0.R1

protocol (*number* | *keyword*)

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**
Description	IP protocol to match
Introduced	16.0.R1

src-ip

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-ip**

Description Specifies ip-prefix-list used as match criterion.

Reference configure **qos match-list ip-prefix-list** *string*

Introduced 16.0.R4

Notes This element is part of a choice

mask *ipv4-address*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port**

Description Specifies the equal than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port**

Description Specifies the greater than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port**

Description Specifies the less than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **ingress ip-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-criteria

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the ipv6-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number*
Description	Network Ingress IPv6 Criteria Entry Index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *keyword*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

profile *keyword*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **action**

Description Default profile for the matching traffic

Options in, out

Introduced 16.0.R1

type *keyword*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

description *string*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**
Description	DSCP value to match in the packet
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-ip

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-ip**
Description	IP address to match with destination IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-prefix-list *string*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-ip**
Description	Specifies the ip-prefix-list used as match criterion for the ip address.
Reference	configure **qos match-list ipv6-prefix-list** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

mask *ipv6-address*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-ip**
Description	IP address to match with source IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port**

Description Specifies the equal than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port**

Description Specifies the greater than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port**

Description Specifies the less than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**
Description	Matches when the packet is a fragment (true) or when the packet is not a fragment (false) or matches all packets fragmented or not (off)
Options	false, true, first-only, non-first-only
Introduced	16.0.R1

next-header (*number* | *keyword*)

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**
Description	IP protocol to match
Introduced	16.0.R1

src-ip

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-prefix-list *string*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-ip**

Description Specifies the ip-prefix-list used as match criterion for the ip address.

Reference configure **qos match-list ipv6-prefix-list** *string*

Introduced 16.0.R4

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port**

Description Specifies the equal than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port**

Description Specifies the greater than value as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port**

Description Specifies the less than value as match condition

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos network** *network-policy-name* **ingress ipv6-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

ler-use-dscp *boolean*

Context	**configure qos network** *network-policy-name* **ingress**
Description	Honor the DSCP markings instead of the LSP-EXP bits
Default	false
Introduced	16.0.R1

lsp-exp [lsp-exp-value] *number*

Context	**configure qos network** *network-policy-name* **ingress**
Description	Enter the lsp-exp context
Introduced	16.0.R1

[lsp-exp-value] *number*

Context	**configure qos network** *network-policy-name* **ingress lsp-exp** *number*
Description	Value to assign the unique MPLS LSP EXP value that will match the lsp-exp rule
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos network** *network-policy-name* **ingress lsp-exp** *number*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is mandatory

profile *keyword*

Context	**configure qos network** *network-policy-name* **ingress lsp-exp** *number*
Description	Default profile to use for the ingressing traffic
Options	in, out
Introduced	16.0.R1
Notes	This element is mandatory

policy-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos network** *network-policy-name*
Description	Network QoS policy identifier.
Range	1 to 65535
Introduced	16.0.R1

scope *keyword*

Context	**configure qos network** *network-policy-name*
Description	Scope of the policy
Default	template
Options	exclusive, template
Introduced	16.0.R1

network-queue [network-queue-policy] *string*

Context	**configure qos**
Description	Enter the network-queue context
Max. Elements	255
Introduced	16.0.R1

[network-queue-policy] *string*

Context	**configure qos network-queue** *string*
Description	Name for network queue policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos network-queue** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-hsmda

Context	**configure qos network-queue** *string*
Description	Enter the egress-hsmda context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos network-queue** *string* **egress-hsmda**
Description	Packet byte offset to use for the HSMDA egress queues
Range	-64 to 31
Default	0
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos network-queue** *string* **egress-hsmda**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Egress HSMDA queue ID
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

pir *keyword*

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 1000000
Default	auto
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Percentage of buffer space allowed for the queue
Range	0 to 2688000
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	PIR percentage rate
Range	0.01 to 100.00
Default	100.00
Introduced	16.0.R1

slope-policy *string*

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Slop policy name to override the default slope policy for the named buffer pool
Reference	configure **qos hsmda-slope-policy** *string*
Introduced	16.0.R1

wrr-weight *number*

Context	**configure qos network-queue** *string* **egress-hsmda queue** *number*
Description	Weight value for the HSMDA queue
Range	1 to 32
Default	1
Introduced	16.0.R1

wrr-policy *string*

Context	**configure qos network-queue** *string* **egress-hsmda**
Description	WRR policy to use on this HSMDA egress queue
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure qos network-queue** *string*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos network-queue** *string* **fc** *keyword*
Description	Forwarding class name
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

egress-hsmda

Context	**configure qos network-queue** *string* **fc** *keyword*
Description	Enter the egress-hsmda context
Introduced	16.0.R1

queue *number*

Context	**configure qos network-queue** *string* **fc** *keyword* **egress-hsmda**
Description	Egress HSDMA queue for packets in this forwarding class
Range	1 to 8
Introduced	16.0.R1

multicast-queue *string*

Context	**configure qos network-queue** *string* **fc** *keyword*
Description	Multicast queue for packets in this forwarding class
Reference	configure **qos network-queue** *string* **queue** *number*
Introduced	16.0.R1

queue *string*

Context	**configure qos network-queue** *string* **fc** *keyword*
Description	Queue for packets in this forwarding class
Reference	configure **qos network-queue** *string* **queue** *number*
Introduced	16.0.R1

hs-attachment-policy *string*

Context	**configure qos network-queue** *string*
Description	HS attachment policy applied
Reference	configure **qos hs-attachment-policy** *string*
Introduced	16.0.R1

hs-wrr-group [group-id] *number*

Context	**configure qos network-queue** *string*
Description	Enter the hs-wrr-group context
Introduced	16.0.R1

[group-id] *number*

Context	**configure qos network-queue** *string* **hs-wrr-group** *number*
Description	HS WRR group identifier
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure qos network-queue** *string* **hs-wrr-group** *number*

Description Enter the adaptation-rule context

Introduced 16.0.R1

pir *keyword*

Context **configure qos network-queue** *string* **hs-wrr-group** *number* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Default closest

Options max, min, closest

Introduced 16.0.R1

hs-class-weight *number*

Context **configure qos network-queue** *string* **hs-wrr-group** *number*

Description Weight of scheduling class

Range 1 | 2 | 4 | 8

Default 1

Introduced 16.0.R1

rate *number*

Context **configure qos network-queue** *string* **hs-wrr-group** *number*

Description PIR rate

Range 1 to 100

Default 100

Introduced 16.0.R1

queue [queue-id] *number*

Context **configure qos network-queue** *string*

Description Enter the queue context

Introduced 16.0.R1

[queue-id] *number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	HSMDA queue for packets in this forwarding class
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos network-queue** *string* **queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos network-queue** *string* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

fir *keyword*

Context	**configure qos network-queue** *string* **queue** *number* **adaptation-rule**
Description	The adaptation rule to be used while computing the operational FIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.
Default	closest
Options	max, min, closest
Introduced	16.0.R3

pir *keyword*

Context	**configure qos network-queue** *string* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

avg-frame-overhead *decimal-number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Encapsulation overhead to translate the packet based rate to frame based rate and vice versa
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1

cbs *decimal-number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Reserved buffer space for the queue
Range	0.00 to 100.00
Introduced	16.0.R1

drop-tail

Context	**configure qos network-queue** *string* **queue** *number*
Description	Enter the drop-tail context
Introduced	16.0.R1

low

Context	**configure qos network-queue** *string* **queue** *number* **drop-tail**
Description	Enter the low context
Introduced	16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context	**configure qos network-queue** *string* **queue** *number* **drop-tail low**
Description	Low drop-tail percent from MBS that is reduced
Introduced	16.0.R1

hs-alt-port-class-pool *boolean*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Use HS alternate class port pool buffer for traffic
Default	false
Introduced	16.0.R1

hs-class-weight *number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Scheduling class weight
Range	1 | 2 | 4 | 8
Default	1
Introduced	16.0.R1

hs-mbs *decimal-number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Percentage of buffer space allowed for the HS queue
Range	0.00 to 100.00
Default	100.00
Introduced	16.0.R1

hs-wred-queue

Context	**configure qos network-queue** *string* **queue** *number*
Description	Enter the hs-wred-queue context
Introduced	16.0.R1

policy *string*

Context	**configure qos network-queue** *string* **queue** *number* **hs-wred-queue**
Description	Slope policy name
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

hs-wrr-weight *number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Range	1 to 127
Default	1
Introduced	16.0.R1

mbs *decimal-number*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Percentage of buffer space allowed for the queue
Range	0.00 to 100.00
Introduced	16.0.R1

multipoint *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos network-queue** *string* **queue** *number*
Description	Apply as a multicast queue
Introduced	16.0.R1

pool *string*

Context	**configure qos network-queue** *string* **queue** *number*
Description	Pool name for network queue
String Length	1 to 32
Introduced	16.0.R1

port-parent

Context	**configure qos network-queue** *string* **queue** *number*
Description	Enter the port-parent context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos network-queue** *string* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 8
Default	0
Introduced	16.0.R1

cir-weight *number*

Context	**configure qos network-queue** *string* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	0
Introduced	16.0.R1

level *number*

Context	**configure qos network-queue** *string* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	1 to 8
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure qos network-queue** *string* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	1
Introduced	16.0.R1

queue-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos network-queue** *string* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Default	auto-expedited
Options	expedited, auto-expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos network-queue** *string* **queue** *number*
Description	Enter the rate context
Introduced	16.0.R1

cir *number*

Context	**configure qos network-queue** *string* **queue** *number* **rate**
Description	CIR percentage rate
Range	0 to 100
Units	percent
Introduced	16.0.R1

fir *number*

Context	**configure qos network-queue** *string* **queue** *number* **rate**
Description	Specifies the FIR percentage rate.
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R3

pir *number*

Context	**configure qos network-queue** *string* **queue** *number* **rate**
Description	PIR percentage rate
Range	1 to 100
Default	100
Units	percent
Introduced	16.0.R1

policer-control-policy [policer-control-policy-name] *string*

Context	**configure qos**
Description	Enter the policer-control-policy context
Max. Elements	2047
Introduced	16.0.R1

[policer-control-policy-name] *string*

Context	**configure qos policer-control-policy** *string*
Description	Name of Policer Control Policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos policer-control-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

root

Context	**configure qos policer-control-policy** *string*
Description	Enter the root context
Introduced	16.0.R1

max-rate (*number* | *keyword*)

Context	**configure qos policer-control-policy** *string* **root**
Description	Maximum frame based bandwidth limit of this policer
Range	1 to 2000000000
Default	max
Options	max
Introduced	16.0.R1

priority-mbs-thresholds

Context	**configure qos policer-control-policy** *string* **root**
Description	Enter the priority-mbs-thresholds context
Introduced	16.0.R1

min-thresh-separation (*number* | *keyword*)

Context	**configure qos policer-control-policy** *string* **root priority-mbs-thresholds**
Description	Minimum amount of separation buffer space
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

priority [priority-level] *number*

Context	**configure qos policer-control-policy** *string* **root priority-mbs-thresholds**
Description	Enter the priority context
Introduced	16.0.R1

[priority-level] *number*

Context	**configure qos policer-control-policy** *string* **root priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

fixed-mbs *boolean*

Context	**configure qos policer-control-policy** *string* **root priority-mbs-thresholds priority** *number*
Description	Consider cumulative buffer space to be fixed
Default	false
Introduced	16.0.R1

mbs-contribution (*number* | *keyword*)

Context	**configure qos policer-control-policy** *string* **root priority-mbs-thresholds priority** *number*
Description	Minimum amount of cumulative buffer space
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

profile-preferred *boolean*

Context	**configure qos policer-control-policy** *string* **root**
Description	Provide a preference to consume PIR bucket tokens at a given priority level
Default	false
Introduced	16.0.R1

tier [tier-id] *number*

Context	**configure qos policer-control-policy** *string*
Description	Enter the tier context
Introduced	16.0.R1

[tier-id] *number*

Context	**configure qos policer-control-policy** *string* **tier** *number*
Description	Tier for policer control policer arbiter
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

arbiter [arbiter-name] *string*

Context	**configure qos policer-control-policy** *string* **tier** *number*
Description	Enter the arbiter context
Introduced	16.0.R1

[arbiter-name] *string*

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string*
Description	Arbiter name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

arbiter-parent

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string*
Description	Enter the arbiter-parent context
Introduced	16.0.R3

arbiter-name *string*

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string* **arbiter-parent**
Description	Specifies the arbiter to which this policer is feeding to.
String Length	0 to 255
Introduced	16.0.R3

level *number*

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string* **arbiter-parent**
Description	Specifies the level of priority while feeding to the parent.
Range	1 to 8
Default	1
Introduced	16.0.R3

weight *number*

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string* **arbiter-parent**
Description	Specifies the weight that needs to be used by the arbiter to which this policer is feeding to.
Range	1 to 100
Default	1
Introduced	16.0.R3

description *string*

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure qos policer-control-policy** *string* **tier** *number* **arbiter** *string*
Description	Maximum frame based bandwidth limit
Range	1 to 2000000000
Default	max
Options	max
Introduced	16.0.R1

port-scheduler-policy [name] *string*

Context	**configure qos**
Description	Enter the port-scheduler-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure qos port-scheduler-policy** *string*
Description	Name of this port scheduler policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos port-scheduler-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dist-lag-rate-shared *boolean*

Context	**configure qos port-scheduler-policy** *string*
Description	Share rates when the port is part of a LAG configured in distribute mode
Default	false
Introduced	16.0.R1

group [group-name] *string*

Context	**configure qos port-scheduler-policy** *string*
Description	Enter the group context
Introduced	16.0.R1

[group-name] *string*

Context	**configure qos port-scheduler-policy** *string* **group** *string*
Description	Name of this port scheduler policy group
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

monitor-threshold *number*

Context	**configure qos port-scheduler-policy** *string* **group** *string*
Description	Specifies the threshold level that should be monitored. It is percentage of the max-rate or max-rate-percent
Range	0 to 100
Default	0
Introduced	16.0.R1

percent-rate

Context	**configure qos port-scheduler-policy** *string* **group** *string*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure qos port-scheduler-policy** *string* **group** *string* **percent-rate**
Description	Administrative CIR percent
Range	0.00 to 100.00
Default	100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos port-scheduler-policy** *string* **group** *string* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure qos port-scheduler-policy** *string* **group** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos port-scheduler-policy** *string* **group** *string* **rate**
Description	Administrative CIR
Range	0 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos port-scheduler-policy** *string* **group** *string* **rate**
Description	Administrative PIR
Range	1 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

level [level-id] *number*

Context	**configure qos port-scheduler-policy** *string*
Description	Enter the level context
Introduced	16.0.R1

[level-id] *number*

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Priority level this port scheduler policy
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

group *string*

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Associated group
Reference	configure **qos port-scheduler-policy** *string* **group** *string*
Introduced	16.0.R1

monitor-threshold *number*

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Specifies the threshold level that should be monitored. It is percentage of the max-rate or max-rate-percent
Range	0 to 100
Default	0
Introduced	16.0.R1

percent-rate

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure qos port-scheduler-policy** *string* **level** *number* **percent-rate**
Description	Administrative CIR percent
Range	0.00 to 100.00
Default	100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos port-scheduler-policy** *string* **level** *number* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos port-scheduler-policy** *string* **level** *number* **rate**
Description	Administrative CIR
Range	0 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos port-scheduler-policy** *string* **level** *number* **rate**
Description	Administrative PIR
Range	1 to 3200000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

weight *number*

Context	**configure qos port-scheduler-policy** *string* **level** *number*
Description	Specifies the weight associated with the group
Range	1 to 100
Default	1
Introduced	16.0.R1

max-percent-rate *decimal-number*

Context	**configure qos port-scheduler-policy** *string*
Description	Specifies the explicit maximum frame based bandwidth percentage
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

max-rate (*number* | *keyword*)

Context	**configure qos port-scheduler-policy** *string*
Description	Explicit maximum frame based bandwidth limit
Range	1 to 3200000000
Default	max
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

monitor-threshold *number*

Context	**configure qos port-scheduler-policy** *string*
Description	Specifies the threshold level that should be monitored. It is a percentage of the max-rate or max-rate-percent
Range	0 to 100
Default	0
Introduced	16.0.R1

orphan-overrides

Context	**configure qos port-scheduler-policy** *string*
Description	Enter the orphan-overrides context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos port-scheduler-policy** *string* **orphan-overrides**
Description	Specifies the port priority of orphaned queues and scheduler that are within-cir
Range	0 to 8
Default	0
Introduced	16.0.R1

cir-weight *number*

Context	**configure qos port-scheduler-policy** *string* **orphan-overrides**
Description	Specifies the weight of orphaned queues and scheduler that are within-cir
Range	0 to 100
Default	0
Introduced	16.0.R1

level *number*

Context	**configure qos port-scheduler-policy** *string* **orphan-overrides**
Description	Specifies the port priority of orphaned queues and scheduler that are above-cir
Range	1 to 8
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure qos port-scheduler-policy** *string* **orphan-overrides**
Description	Specifies the weight of orphaned queues and scheduler that are above-cir
Range	0 to 100
Default	0
Introduced	16.0.R1

post-policer-mapping [name] *string*

Context	**configure qos**
Description	Enter the post-policer-mapping context
Max. Elements	7
Introduced	16.0.R1

[name] *string*

Context	**configure qos post-policer-mapping** *string*
Description	Name of post policer mapping policy.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos post-policer-mapping** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fc [fc-name] *keyword* **profile** *keyword*

Context	**configure qos post-policer-mapping** *string*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos post-policer-mapping** *string* **fc** *keyword* **profile** *keyword*
Description	Name of forwarding class to be remapped
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

profile *keyword*

Context	**configure qos post-policer-mapping** *string* **fc** *keyword* **profile** *keyword*
Description	Packet Profile that needs to be remapped.
Options	in, out, exceed, inplus
Introduced	16.0.R1
Notes	This element is part of a list key

maps-to

Context	**configure qos post-policer-mapping** *string* **fc** *keyword* **profile** *keyword*
Description	Enter the maps-to context
Introduced	16.0.R1

fc *keyword*

Context **configure qos post-policer-mapping** *string* **fc** *keyword* **profile** *keyword* **maps-to**

Description Name of forwarding class to be remapped

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

profile *keyword*

Context **configure qos post-policer-mapping** *string* **fc** *keyword* **profile** *keyword* **maps-to**

Description Packet Profile that needs to be remapped.

Options in, out, exceed, inplus

Introduced 16.0.R1

queue-group-redirect-list [name] *string*

Context **configure qos**

Description Enter the queue-group-redirect-list context

Max. Elements 2047

Introduced 16.0.R1

[name] *string*

Context **configure qos queue-group-redirect-list** *string*

Description Name of queue-group redirect list.

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

match [field-value] *number*

Context **configure qos queue-group-redirect-list** *string*

Description Enter the match context

Max. Elements 16

Introduced 16.0.R1

[field-value] *number*

Context	**configure qos queue-group-redirect-list** *string* **match** *number*
Description	Specifies the value of the field in the ingress or egress packet which, when matched, will redirect the packet to the queue-group instance
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a list key

instance *number*

Context	**configure qos queue-group-redirect-list** *string* **match** *number*
Description	Specifies the queue-group instance to which packet will be forwarded.
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

type *keyword*

Context	**configure qos queue-group-redirect-list** *string*
Description	Type for queue-group redirect list
Default	vxlan-vni
Options	vxlan-vni
Introduced	16.0.R1

queue-group-templates

Context	**configure qos**
Description	Enter the queue-group-templates context
Introduced	16.0.R1

egress

Context	**configure qos queue-group-templates**
Description	Enter the egress context
Introduced	16.0.R1

queue-group [egress-queue-group-name] *string*

Context **configure qos queue-group-templates egress**
Description Enter the queue-group context
Introduced 16.0.R1

[egress-queue-group-name] *string*

Context **configure qos queue-group-templates egress queue-group** *string*
Description Name of Egress Queue Group
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a list key

description *string*

Context **configure qos queue-group-templates egress queue-group** *string*
Description Text description
String Length 0 to 80
Introduced 16.0.R1

fc [fc-name] *keyword*

Context **configure qos queue-group-templates egress queue-group** *string*
Description Enter the fc context
Introduced 16.0.R1

[fc-name] *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **fc** *keyword*
Description Forwarding class name
Options be, l2, af, l1, h2, ef, h1, nc
Introduced 16.0.R1
Notes This element is part of a list key

queue

Context **configure qos queue-group-templates egress queue-group** *string* **fc** *keyword*
Description Enter the queue context
Introduced 16.0.R1

none

Context **configure qos queue-group-templates egress queue-group** *string* **fc** *keyword* **queue**
Description No mid-pool is associated with this parent-pool
Introduced 16.0.R1
Notes This element is part of a choice

queue-id *string*

Context **configure qos queue-group-templates egress queue-group** *string* **fc** *keyword* **queue**
Description Queue defined in forwarding class mapping
Reference configure **qos queue-group-templates egress queue-group** *string* **queue** *number*
Introduced 16.0.R1
Notes This element is part of a choice

hs-attachment-policy *string*

Context **configure qos queue-group-templates egress queue-group** *string*
Description HS attachment policy applied
Reference configure **qos hs-attachment-policy** *string*
Introduced 16.0.R1

hs-wrr-group [group-id] *number*

Context **configure qos queue-group-templates egress queue-group** *string*
Description Enter the hs-wrr-group context
Introduced 16.0.R1

[group-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number*
Description	HS WRR group identifier
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

pir *keyword*

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

hs-class-weight *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number*
Description	Weight of scheduling class
Range	1 | 2 | 4 | 8
Default	1
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number*
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **hs-wrr-group** *number*
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure qos queue-group-templates egress queue-group** *string*
Description	Enter the hsmda-queues context
Introduced	16.0.R1

low-burst-max-class *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues**
Description	Specifies which class should use the low priority burst threshold. Use the low priority burst threshold for all classes starting from 1, up to and including that specified by this value. Use the high priority burst threshold for all classes greater than the this value, up to and including class 8.
Range	1 to 8
Default	8
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues**
Description	Packet byte offset to use for the HSMDA egress queues
Range	-64 to 31
Default	0
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Egress HSMDA queue ID
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

pir *keyword*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 1000000
Default	auto
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Buffer space allowed for the queue
Units	bytes
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	PIR rate
Default	max
Introduced	16.0.R1

slope-policy *string*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Name of the slope policy which overrides the default policy for the named buffer pool
Reference	configure **qos hsmda-slope-policy** *string*
Introduced	16.0.R1

wrr-weight *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues queue** *number*
Description	Weight value for the HSMDA queue
Range	1 to 32
Default	1
Introduced	16.0.R1

wrr-policy *string*

Context	**configure qos queue-group-templates egress queue-group** *string* **hsmda-queues**
Description	WRR policy to use on this HSMDA egress queue
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

policer [policer-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string*
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Egress Queue-Group Policer identifier
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Default closest

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Default closest

Options max, min, closest

Introduced 16.0.R1

adv-config-policy *string*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Name of the advanced configuration policy to apply with this queue

Reference configure **qos adv-config-policy** *string*

Introduced 16.0.R1

arbiter-parent

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Enter the arbiter-parent context

Introduced 16.0.R1

arbiter-name *string*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **arbiter-parent**

Description Arbiter to which this policer feeds

String Length 1 to 32

Introduced 16.0.R1

level *number*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **arbiter-parent**

Description Level of priority while feeding to the parent

Range 1 to 8

Default 1

Introduced 16.0.R1

weight *number*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **arbiter-parent**

Description Weight to be used by the arbiter for feeding this policer

Range 1 to 100

Default 1

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Exceed threshold of the CIR leaky bucket of this policer

Range 0 to 16777216

Default auto

Units bytes

Options auto

Introduced 16.0.R1

description *string*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

exceed-pir *boolean*

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Allow forwarding of packets with an exceed-profile state and traffic exceeding the PIR
Default	false
Introduced	16.0.R1

high-prio-only (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Percentage of PIR leaky bucket's MBS of this policer that is reserved for high priority traffic
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	High priority 'violate' threshold of PIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Size of each packet, handled by the policer, to be modified
Range	-64 to 31
Default	0
Introduced	16.0.R1

profile-capped *boolean*

Context	**configure qos queue-group-templates egress queue-group** *string* **policer** *number*
Description	Enforce a limit on the profile
Default	false
Introduced	16.0.R1

rate

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **rate**

Description CIR

Default 0

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number* **rate**

Description CIR

Default max

Units kilobps

Introduced 16.0.R1

stat-mode *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **policer** *number*

Description Mode of statistics collected by the policer

Default minimal

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile

Introduced 16.0.R1

queue [queue-id] *number*

Context **configure qos queue-group-templates egress queue-group** *string*

Description Enter the queue context

Introduced 16.0.R1

[queue-id] *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Egress Queue-Group queue identifier
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Name of the advanced configuration policy
Reference	configure **qos adv-config-policy** *string*
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Explicit shaping burst size of a queue

Range 1 to 14000000

Default auto

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Reserved buffer space for the queue

Range 0 to 1048576

Default auto

Units kilobytes

Options auto

Introduced 16.0.R1

drop-tail

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Enter the drop-tail context

Introduced 16.0.R1

exceed

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail**

Description Enter the exceed context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail exceed**

Description Percentage of drop-tail that is reduced from MBS for exceed profile packets

Introduced 16.0.R1

high

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail**

Description Enter the high context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail high**

Description Percentage of drop-tail being that is reduced from MBS for high profile packets

Introduced 16.0.R1

highplus

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail**

Description Enter the highplus context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail highplus**

Description Percentage of drop-tail being that is reduced from MBS for high plus profile packets

Introduced 16.0.R1

low

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **drop-tail low**

Description Low drop-tail percent from MBS that is reduced

Introduced 16.0.R1

dynamic-mbs *boolean*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Allow modifying of the MBS size for a queue to maintain maximum latency for traffic

Default false

Introduced 16.0.R1

hs-alt-port-class-pool *boolean*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Use HS alternate class port pool buffer for traffic

Default false

Introduced 16.0.R1

hs-class-weight *number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Scheduling class weight

Range 1 | 2 | 4 | 8

Default 1

Introduced 16.0.R1

hs-wred-queue

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **hs-wred-queue**

Description Slope policy name

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler

Range 1 to 127

Default 1

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Buffer space allowed for the queue

Range 0 to 1073741824

Default auto

Units bytes

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Packet byte offset for addition of policing information

Range -64 to 31

Default 0

Introduced 16.0.R1

percent-rate

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **percent-rate**

Description Administrative CIR percent

Range 0.00 to 100.00

Default 0.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **percent-rate**

Description Administrative PIR percent

Range 0.01 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pool *string*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Pool name

String Length 1 to 32

Introduced 16.0.R1

port-parent

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Enter the **port-parent** context

Introduced 16.0.R1

cir-level *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

weight *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

queue-delay *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Target queue delay for forwarding packets through this queue
Range	1 to 5000
Units	milliseconds
Introduced	16.0.R1

queue-type *keyword*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Options	expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **rate**
Description	Administrative CIR
Default	0
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **rate**
Description	Administrative PIR
Default	max
Units	kilobps
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-parent

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number*
Description	Enter the **scheduler-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **scheduler-parent**
Description	Weight that is used by the scheduler until the committed rate for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-name *string*

Context	**configure qos queue-group-templates egress queue-group** *string* **queue** *number* **scheduler-parent**
Description	Scheduler to which this queue feeds
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

weight *number*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **scheduler-parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Default 1

Introduced 16.0.R1

Notes This element is part of a choice

wred-queue

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number*

Description Enter the wred-queue context

Introduced 16.0.R1

mode *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **wred-queue**

Description Generic pool association of the queue to allow queue-specific WRED slopes

Options native, pool-per-queue

Introduced 16.0.R1

policy *string*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **wred-queue**

Description Slope policy name

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

usage *keyword*

Context **configure qos queue-group-templates egress queue-group** *string* **queue** *number* **wred-queue**

Description Specifies which slopes are active for given slope-mode

Options auto, exceed-low

Introduced 16.0.R1

queues-hqos-manageable *boolean*

Context	**configure qos queue-group-templates egress queue-group** *string*
Description	Manage queues through the Hierarchical QoS process
Default	true
Introduced	16.0.R1

ingress

Context	**configure qos queue-group-templates**
Description	Enter the ingress context
Introduced	16.0.R1

queue-group [ingress-queue-group-name] *string*

Context	**configure qos queue-group-templates ingress**
Description	Enter the queue-group context
Introduced	16.0.R1

[ingress-queue-group-name] *string*

Context	**configure qos queue-group-templates ingress queue-group** *string*
Description	Name of Ingress Queue Group
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos queue-group-templates ingress queue-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

policer [policer-id] *number*

Context	**configure qos queue-group-templates ingress queue-group** *string*
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *number*

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Ingress Queue-Group Policer identifier
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number*

Description Name of the advanced configuration policy to apply with this queue

Reference configure **qos adv-config-policy** *string*

Introduced 16.0.R1

arbiter-parent

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number*

Description Enter the arbiter-parent context

Introduced 16.0.R1

arbiter-name *string*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **arbiter-parent**

Description Arbiter to which this policer feeds

String Length 1 to 32

Introduced 16.0.R1

level *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **arbiter-parent**

Description Level of priority while feeding to the parent

Range 1 to 8

Default 1

Introduced 16.0.R1

weight *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **arbiter-parent**

Description Weight to be used by the arbiter for feeding this policer

Range 1 to 100

Default 1

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Exceed threshold of the CIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

description *string*

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

high-prio-only (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Percentage of PIR leaky bucket's MBS of this policer that is reserved for high priority traffic
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	High priority 'violate' threshold of PIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number*

Description Size of each packet, handled by the policer, to be modified

Range -32 to 31

Default 0

Introduced 16.0.R1

profile-capped *boolean*

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number*

Description Enforce a limit on the profile

Default false

Introduced 16.0.R1

rate

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **rate**

Description CIR

Default 0

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure qos queue-group-templates ingress queue-group** *string* **policer** *number* **rate**

Description CIR

Default max

Units kilobps

Introduced 16.0.R1

stat-mode *keyword*

Context	**configure qos queue-group-templates ingress queue-group** *string* **policer** *number*
Description	Mode of statistics collected by the policer
Default	minimal
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos queue-group-templates ingress queue-group** *string*
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Ingress Queue-Group Queue identifier
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

fir *keyword*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **adaptation-rule**

Description The adaptation rule to be used while computing the operational FIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.

Default closest

Options max, min, closest

Introduced 16.0.R3

pir *keyword*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **adaptation-rule**

Description Adaptation rule to apply when assigning the operational PIR value

Default closest

Options max, min, closest

Introduced 16.0.R1

adv-config-policy *string*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number*

Description Name of the advanced configuration policy to apply with this queue

Reference configure **qos adv-config-policy** *string*

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number*

Description Explicit shaping burst size of a queue

Range 1 to 14000000

Default auto

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number*

Description Reserved buffer space for the queue

Range 0 to 1048576

Default auto

Units kilobytes

Options auto

Introduced 16.0.R1

cir-non-profiling *boolean*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number*

Description Specifies that the CIR affect the scheduling priority of a queue but does not modify the profile of packets depending on the specified CIR.

Default false

Introduced 16.0.R3

drop-tail

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **drop-tail low**

Description Low drop-tail percent from MBS that is reduced

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Maximum buffer space that is allowed for queue
Range	0 to 1073741824
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

multipoint *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Create an ingress multipoint queue
Default	false
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Value of the adjustment on the size of each packet for queue accounting
Range	-32 to 31
Default	0
Introduced	16.0.R1

pool *string*

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Pool name to apply for SAP ingress queue
String Length	1 to 32
Introduced	16.0.R1

queue-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Specifies the mode in which the queue is operating. This attribute is associated with the queue at the time of creation and cannot be modified thereafter.
Default	priority
Options	priority, profile
Introduced	16.0.R1

queue-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Default	best-effort
Options	expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Enter the rate context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **rate**
Description	Specifies administrative CIR.
Default	0
Units	kilobps
Introduced	16.0.R3
Notes	This element is part of a choice

fir (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **rate**
Description	Specifies administrative FIR.
Default	0
Units	kilobps
Introduced	16.0.R3
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **rate**
Description	CIR
Default	max
Units	kilobps
Introduced	16.0.R1

police

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **rate**
Description	Specifies that the out of profile traffic feeding into the physical queue instance should be dropped
Introduced	16.0.R3
Notes	This element is part of a choice

scheduler-parent

Context	**configure qos queue-group-templates ingress queue-group** *string* **queue** *number*
Description	Enter the scheduler-parent context
Introduced	16.0.R1

cir-level *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **scheduler-parent**

Description Level of priority while feeding to the parent

Range 0 to 8

Default 0

Introduced 16.0.R1

cir-weight *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **scheduler-parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Default 1

Introduced 16.0.R1

level *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **scheduler-parent**

Description Level of priority while feeding to the parent

Range 1 to 8

Default 1

Introduced 16.0.R1

scheduler-name *string*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **scheduler-parent**

Description Scheduler to which this queue feeds

String Length 1 to 32

Introduced 16.0.R1

weight *number*

Context **configure qos queue-group-templates ingress queue-group** *string* **queue** *number* **scheduler-parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Default 1

Introduced 16.0.R1

sap-egress [sap-egress-policy-name] *qos-policy-name*

Context **configure qos**

Description Enter the sap-egress context

Introduced 16.0.R1

[sap-egress-policy-name] *qos-policy-name*

Context **configure qos sap-egress** *qos-policy-name*

Description Name of this sap-egress QoS policy

String Length 1 to 64

Introduced 16.0.R1

Notes This element is part of a list key

description *string*

Context **configure qos sap-egress** *qos-policy-name*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

dot1p [dot1p-value] *number*

Context **configure qos sap-egress** *qos-policy-name*

Description Enter the dot1p context

Introduced 16.0.R1

[dot1p-value] *number*

Context	**configure qos sap-egress** *qos-policy-name* **dot1p** *number*
Description	Dot1p value to match in the packet
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **dot1p** *number*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

profile *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **dot1p** *number*
Description	Default profile for the ingressing traffic
Options	in, out, de, exceed, inplus
Introduced	16.0.R1

dscp [dscp-name] *keyword*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the dscp context
Introduced	16.0.R1

[dscp-name] *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **dscp** *keyword*
Description	Specifies the Differentiated Services Code Point (DSCP) name for which mapping is done.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context **configure qos sap-egress** *qos-policy-name* **dscp** *keyword*

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

hsmda-counter-override *number*

Context **configure qos sap-egress** *qos-policy-name* **dscp** *keyword*

Description Specifies the counter to use for all the traffic that matches the specific precedence. A value of zero implies that the default counters should be used.

Range 1 to 8

Introduced 16.0.R1

profile *keyword*

Context **configure qos sap-egress** *qos-policy-name* **dscp** *keyword*

Description Default profile for the ingressing traffic

Options in, out, exceed, inplus

Introduced 16.0.R1

ethernet-ctag *boolean*

Context **configure qos sap-egress** *qos-policy-name*

Description Tag value for dot1p and DE (Drop-Eligible) that are used by all dot1-p entries

Default false

Introduced 16.0.R1

fc [fc-name] *keyword*

Context **configure qos sap-egress** *qos-policy-name*

Description Enter the fc context

Introduced 16.0.R1

[fc-name] *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

de-mark

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the de-mark context
Introduced	16.0.R1

force *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **de-mark**
Description	DE value
Range	0 to 1
Introduced	16.0.R1

de-mark-inner

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the de-mark-inner context
Introduced	16.0.R1

force *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **de-mark-inner**
Description	DE value to set in inner VLAN tag
Range	0 to 1
Introduced	16.0.R1

de-mark-outer

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword*

Description Enter the de-mark-outer context

Introduced 16.0.R1

force *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **de-mark-outer**

Description DE value to set in outer VLAN tag

Range 0 to 1

Introduced 16.0.R1

dot1p

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword*

Description Enter the dot1p context

Introduced 16.0.R1

exceed-profile *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p**

Description Dot1p value for exceed-profile frames

Range 0 to 7

Introduced 16.0.R1

in-profile *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p**

Description Dot1p value for in-profile frames

Range 0 to 7

Introduced 16.0.R1

out-profile *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p**

Description Dot1p value for out-of-profile frames

Range 0 to 7

Introduced 16.0.R1

dot1p-inner

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword*

Description Enter the dot1p-inner context

Introduced 16.0.R1

in-profile *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p-inner**

Description Inner Dot1p value for in-profile frames

Range 0 to 7

Introduced 16.0.R1

out-profile *number*

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p-inner**

Description Inner Dot1p value for out-of-profile frames

Range 0 to 7

Introduced 16.0.R1

dot1p-outer

Context **configure qos sap-egress** *qos-policy-name* **fc** *keyword*

Description Enter the dot1p-outer context

Introduced 16.0.R1

exceed-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p-outer**
Description	Outer Dot1p value for exceed-profile frames
Range	0 to 7
Introduced	16.0.R1

in-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p-outer**
Description	Outer Dot1p value for in-profile frames
Range	0 to 7
Introduced	16.0.R1

out-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dot1p-outer**
Description	Outer Dot1p value for out-of-profile frames
Range	0 to 7
Introduced	16.0.R1

dscp

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the **dscp** context
Introduced	16.0.R1

exceed-profile *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dscp**
Description	DSCP name for exceed-profile frames
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a choice

in-profile *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dscp**
Description	DSCP name for in-profile frames
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a choice

out-profile *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **dscp**
Description	DSCP name for out-of-profile frames
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the hsmda context
Introduced	16.0.R1

port-redirect-group-queue

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **hsmda**
Description	Enter the **port-redirect-group-queue** context
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **hsmda port-redirect-group-queue**
Description	HSMDA queue to which traffic is forwarded
Reference	configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

queue *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **hsmda**
Description	HSMDA queue to which traffic is forwarded
Reference	configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

policer *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Policer to forward the traffic
Reference	configure **qos sap-egress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1

port-redirect-group-queue

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the **port-redirect-group-queue** context
Introduced	16.0.R1

queue *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **port-redirect-group-queue**
Description	Queue to forward the traffic
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a choice

prec

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the **prec** context
Introduced	16.0.R1

exceed-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **prec**
Description	Precedence for exceed-profile frames
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a choice

in-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **prec**
Description	Precedence value for in-profile frames
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a choice

out-profile *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **prec**
Description	Precedence value for out-of-profile frames
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a choice

queue *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Queue to forward the traffic
Reference	configure **qos sap-egress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

queue-group-queue

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword*
Description	Enter the **queue-group-queue** context
Introduced	16.0.R1

instance *number*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **queue-group-queue**
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

queue *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **queue-group-queue**
Description	Specifies the queue to forward the traffic.
Reference	configure **qos queue-group-templates egress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

queue-group-name *string*

Context	**configure qos sap-egress** *qos-policy-name* **fc** *keyword* **queue-group-queue**
Description	Queue group to which the traffic is forwarded
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

hs-attachment-policy *string*

Context	**configure qos sap-egress** *qos-policy-name*
Description	HS attachment policy applied
Reference	configure **qos hs-attachment-policy** *string*
Introduced	16.0.R1

hs-wrr-group [group-id] *number*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the hs-wrr-group context
Introduced	16.0.R1

[group-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Description	HS WRR group identifier
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

pir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

hs-class-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Description	Weight of scheduling class
Range	1 | 2 | 4 | 8
Default	1
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the hsmda-queues context
Introduced	16.0.R1

low-burst-max-class *number*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues**
Description	Class that uses low priority burst threshold
Range	1 to 8
Default	8
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues**
Description	Packet byte offset to use for the HSMDA egress queues
Range	-64 to 31
Default	0
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues**
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Egress HSMDA queue ID
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

pir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 1000000
Default	auto
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Buffer space allowed for the queue
Units	bytes
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	PIR rate
Default	max
Introduced	16.0.R1

slope-policy *string*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Name of the slope policy which overrides the default policy for the named buffer pool
Reference	configure **qos hsmda-slope-policy** *string*
Introduced	16.0.R1

wrr-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Description	Weight value for the HSMDA queue
Range	1 to 32
Default	1
Introduced	16.0.R1

wrr-policy *string*

Context	**configure qos sap-egress** *qos-policy-name* **hsmda-queues**
Description	Weighted Round Robin (WRR) policy
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

ip-criteria

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the ip-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number*
Description	IP Criteria Entry Index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *keyword*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

hsmda-counter-override *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description HSMDA counter to use for matching packets

Range 1 to 8

Introduced 16.0.R1

policer *string*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Policer identifier for the matched traffic

Reference configure **qos sap-egress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

port-redirect-group-queue *boolean*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Use the queue specified in egress access port queue-group instance

Default false

Introduced 16.0.R1

profile *keyword*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Default profile for the matching traffic

Options in, out, exceed, inplus

Introduced 16.0.R1

queue *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Queue to use when the matched traffic is policed by the local policer

Introduced 16.0.R1

type *keyword*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

use-fc-mapped-queue *boolean*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **action**

Description Redirect policer output to the configured queues

Default false

Introduced 16.0.R1

description *string*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	DSCP value to match in the packet
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-ip

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**
Description	IP address to match with source IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

ip-prefix-list *string*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**
Description	Specifies ip-prefix-list used as match criterion.
Reference	configure **qos match-list ip-prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv4-address*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**
Description	IP address mask to match with source IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**

Description Value 'equal to' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**

Description Value 'greater than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**

Description Value 'less than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	Matching criteria to be used for fragmented or non-fragmented packets
Options	false, true
Introduced	16.0.R1

protocol (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	IP protocol to match
Introduced	16.0.R1

src-ip

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description Specifies ip-prefix-list used as match criterion.

Reference configure **qos match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description IP address mask to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'equal to' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'greater than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'less than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos sap-egress** *qos-policy-name* **ip-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-criteria

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the ipv6-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	IP Criteria Entry Index
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *keyword*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description Forwarding class

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

hsmda-counter-override *number*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description HSMDA counter to use for matching packets

Range 1 to 8

Introduced 16.0.R1

policer *string*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description Policer identifier for the matched traffic

Reference configure **qos sap-egress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

port-redirect-group-queue *boolean*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description Use the queue specified in egress access port queue-group instance

Default false

Introduced 16.0.R1

profile *keyword*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description Default profile for the matching traffic

Options in, out, exceed, inplus

Introduced 16.0.R1

queue *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Queue to use when the matched traffic is policed by the local policer
Introduced	16.0.R1

type *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Specified whether the criteria entry is active or in-active.
Default	ignore-match
Options	ignore-match, accept
Introduced	16.0.R1

use-fc-mapped-queue *boolean*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Redirect policer output to the configured queues
Default	false
Introduced	16.0.R1

description *string*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**
Description	DSCP value to match in the packet
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-ip

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**
Description	Enter the dst-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-ip**
Description	IP address to match with destination IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

mask *ipv6-address*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-ip**
Description	IP address mask to match with destination IP of the packet
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**
Description	Enter the dst-port context
Introduced	16.0.R1

eq *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Value 'equal to' as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

gt *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Value 'greater than' as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Value 'less than' as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port range**

Description Start value of range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

next-header (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description IP protocol to match

Introduced 16.0.R1

src-ip

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-ip**

Description IP address mask to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'equal to' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'greater than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'less than' as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos sap-egress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

parent-location *keyword*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Location in which queues can find their parent scheduler in case the parent scheduler if not found
Default	auto
Options	auto, sla
Introduced	16.0.R1

policer [policer-id] *number*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Sap-Egress Policer identifier.
Range	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Name of the advanced configuration policy to apply with this queue
Reference	configure **qos adv-config-policy** *string*
Introduced	16.0.R1

arbiter-parent

Context **configure qos sap-egress** *qos-policy-name* **policer** *number*
Description Enter the arbiter-parent context
Introduced 16.0.R1

arbiter-name *string*

Context **configure qos sap-egress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description Arbiter to which this policer feeds
String Length 1 to 32
Introduced 16.0.R1

level *number*

Context **configure qos sap-egress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description Level of priority while feeding to the parent
Range 1 to 8
Default 1
Introduced 16.0.R1

weight *number*

Context **configure qos sap-egress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description Weight to be used by the arbiter for feeding this policer
Range 1 to 100
Default 1
Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **policer** *number*
Description Exceed threshold of the CIR leaky bucket of this policer
Range 0 to 16777216
Default auto
Units bytes
Options auto
Introduced 16.0.R1

description *string*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dscp-prec-remarking *boolean*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Remark DSCP and precedence based on the profile state of a forwarding packet
Default	false
Introduced	16.0.R1

exceed-pir *boolean*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Allow forwarding of packets with an exceed-profile state and traffic exceeding the PIR
Default	false
Introduced	16.0.R1

high-prio-only (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Percentage of PIR leaky bucket's MBS of this policer that is reserved for high priority traffic
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	High priority 'violate' threshold of PIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Size of each packet, handled by the policer, to be modified
Range	-64 to 31
Default	0
Introduced	16.0.R1

percent-rate

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **percent-rate**
Description	Administrative CIR percent
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

port-parent

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enter the **port-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **port-parent**
Description	Specifies the port priority this queue will use to receive bandwidth from the port-level scheduler for its within-cir offered load.
Range	0 to 8
Default	0
Introduced	16.0.R3
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **port-parent**
Description	Specifies the weight this queue will use to receive bandwidth from the port-level scheduler for its within-cir offered load.
Range	0 to 100
Default	0
Introduced	16.0.R3
Notes	This element is part of a choice

level *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **port-parent**
Description	Specifies the port priority this queue will use to receive bandwidth from the port-level scheduler for its above-cir offered load.
Range	1 to 8
Default	1
Introduced	16.0.R3
Notes	This element is part of a choice

weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **port-parent**
Description	Specifies the weight this queue will use to receive bandwidth from the port-level scheduler for its above-cir offered load.
Range	0 to 100
Default	1
Introduced	16.0.R3
Notes	This element is part of a choice

profile-capped *boolean*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enforce an overall in-profile burst limit to the CIR bucket at egress policer
Default	false
Introduced	16.0.R1

profile-out-preserve *boolean*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Preserve the color of offered out-of-profile traffic at SAP-egress policer
Default	false
Introduced	16.0.R1

rate

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **rate**
Description	Administrative CIR
Range	0 to 2000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **rate**
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-parent

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Enter the **scheduler-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **scheduler-parent**
Description	Specifies the level of priority while feeding to the parent. The level '0' means treat all offered load for this queue as for the above CIR traffic.
Range	0 to 8
Default	0
Introduced	16.0.R3
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **scheduler-parent**
Description	The weight that needs to be used until the committed rate by the scheduler to which this queue would be feeding to.
Range	0 to 100
Default	1
Introduced	16.0.R3
Notes	This element is part of a choice

level *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **scheduler-parent**
Description	Specifies the level of priority while feeding to the parent.
Range	1 to 8
Default	1
Introduced	16.0.R3
Notes	This element is part of a choice

scheduler-name *string*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **scheduler-parent**
Description	Specifies the scheduler to which this queue would be feeding to.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is mandatory This element is part of a choice

weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number* **scheduler-parent**
Description	Specifies the weight that needs to be used by the scheduler to which this queue would be feeding to.
Range	0 to 100
Default	1
Introduced	16.0.R3
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **policer** *number*
Description	Mode of statistics collected by the policer
Default	minimal
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1

policers-hqos-manageable *boolean*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Manage policers through the Hierarchical QoS process
Default	false
Introduced	16.0.R1

policy-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-egress** *qos-policy-name*
Description	The sap-egress QoS policy identifier.
Range	1 to 65535
Introduced	16.0.R1

post-policer-mapping *string*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Post policer mapping policy applied to this policy
Reference	configure **qos post-policer-mapping** *string*
Introduced	16.0.R1

prec [prec-value] *number*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the prec context
Introduced	16.0.R1

[prec-value] *number*

Context	**configure qos sap-egress** *qos-policy-name* **prec** *number*
Description	Precedence value for which mapping is performed
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **prec** *number*
Description	Forwarding class
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

hsmda-counter-override *number*

Context	**configure qos sap-egress** *qos-policy-name* **prec** *number*
Description	Specifies the counter to use for all the traffic that matches the specific precedence. A value of zero implies that the default counters should be used.
Range	1 to 8
Introduced	16.0.R1

profile *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **prec** *number*
Description	Default profile for the ingressing traffic
Options	in, out, exceed, inplus
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Egress Queue-Group queue identifier
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Name of the advanced configuration policy
Reference	configure **qos adv-config-policy** *string*
Introduced	16.0.R1

avg-frame-overhead *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Specifies the encapsulation overhead, in centipercent, used to translate packet-based rate to frame-based rate and vice versa.
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 14000000
Default	auto
Options	auto
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Reserved buffer space for the queue
Range	0 to 1048576
Default	auto
Units	kilobytes
Options	auto
Introduced	16.0.R1

drop-tail

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*

Description Enter the drop-tail context

Introduced 16.0.R1

exceed

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail**

Description Enter the exceed context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail exceed**

Description Percentage of drop-tail that is reduced from MBS for exceed profile packets

Introduced 16.0.R1

high

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail**

Description Enter the high context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail high**

Description Percentage of drop-tail being that is reduced from MBS for high profile packets

Introduced 16.0.R1

highplus

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail**

Description Enter the highplus context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail highplus**

Description Percentage of drop-tail being that is reduced from MBS for high plus profile packets

Introduced 16.0.R1

low

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **drop-tail low**

Description Low drop-tail percent from MBS that is reduced

Introduced 16.0.R1

hs-alt-port-class-pool *boolean*

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*

Description Use HS alternate class port pool buffer for traffic

Default false

Introduced 16.0.R1

hs-class-weight *number*

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*

Description Scheduling class weight

Range 1 | 2 | 4 | 8

Default 1

Introduced 16.0.R1

hs-wred-queue

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure qos sap-egress** *qos-policy-name* **queue** *number* **hs-wred-queue**
Description Slope policy name
Reference configure **qos slope-policy** *string*
Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*
Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Range 1 to 127
Default 1
Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*
Description Buffer space allowed for the queue
Range 0 to 1073741824
Default auto
Units kilobytes
Options auto
Introduced 16.0.R1

packet-byte-offset *number*

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*
Description Packet byte offset for addition of policing information
Range -64 to 32
Default 0
Introduced 16.0.R1

percent-rate

Context **configure qos sap-egress** *qos-policy-name* **queue** *number*
Description Enter the **percent-rate** context
Introduced 16.0.R1

cir *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Administrative CIR percent
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

reference-rate *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Reference rate as percentage
Default	port-limit
Options	port-limit, local-limit
Introduced	16.0.R1
Notes	This element is part of a choice

pool *string*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Pool name
String Length	1 to 32
Introduced	16.0.R1

port-parent

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Enter the **port-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

queue-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Default	auto-expedited
Options	expedited, auto-expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **rate**
Description	Administrative CIR
Range	0 to 2000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **rate**
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-parent

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Enter the **scheduler-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Weight that is used by the scheduler until the committed rate for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-name *string*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Scheduler to which this queue feeds
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Weight to be used by the scheduler for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

wred-queue

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number*
Description	Enter the wred-queue context
Introduced	16.0.R1

mode *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **wred-queue**
Description	Generic pool association of the queue to allow queue-specific WRED slopes
Options	native, pool-per-queue
Introduced	16.0.R1

policy *string*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **wred-queue**
Description	Slope policy name
Reference	configure **qos slope-policy** *string*
Introduced	16.0.R1

usage *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **queue** *number* **wred-queue**
Description	Specifies which slopes are active for given slope-mode
Options	auto, exceed-low
Introduced	16.0.R1

scope *keyword*

Context	**configure qos sap-egress** *qos-policy-name*
Description	Scope of the policy
Default	template
Options	exclusive, template
Introduced	16.0.R1

subscriber-mgmt

Context	**configure qos sap-egress** *qos-policy-name*
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

dynamic-policer

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt**
Description	Enter the dynamic-policer context
Introduced	16.0.R1

arbiter-parent

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Enter the arbiter-parent context
Introduced	16.0.R1

arbiter-name *string*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Arbiter to which this policer feeds
String Length	1 to 32
Introduced	16.0.R1

level *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Weight to be used by the arbiter for feeding this policer
Range	1 to 100
Default	1
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Exceed threshold of the CIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	High priority 'violate' threshold of PIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Size of each packet, handled by the policer, to be modified
Range	-64 to 31
Default	0
Introduced	16.0.R1

policer-id-range

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Enter the policer-id-range context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer policer-id-range**
Description	Specifies the ending place at which dynamic policers required for the pcc-rule ip-criteria entries that are received from Diameter and that are shared across several hosts will be inserted.
Range	1 to 63
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer policer-id-range**
Description	Specifies the starting place at which dynamic policers required for the pcc-rule ip-criteria entries that are received from Diameter and that are shared across several hosts will be inserted.
Range	1 to 63
Introduced	16.0.R1
Notes	This element is mandatory

stat-mode *keyword*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Mode of statistics collected by the policer
Default	minimal
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir
Introduced	16.0.R1

pcc-rule-entry

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt**
Description	Enter the pcc-rule-entry context
Introduced	16.0.R1

range

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry**
Description	Enter the range context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry range**
Description	Specifies the ending entry at which the pcc-rule ip-criteria entries that are received from Diameter and that are shared across several hosts.
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure qos sap-egress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry range**
Description	Specifies the starting entry at which the pcc-rule ip-criteria entries that are received from Diameter and that are shared across several hosts.
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

sap-ingress [sap-ingress-policy-name] *qos-policy-name*

Context	**configure qos**
Description	Enter the sap-ingress context
Introduced	16.0.R1

[sap-ingress-policy-name] *qos-policy-name*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Name of this SAP-ingress QoS policy
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

default-fc *string*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Default forwarding class or sub forwarding class for traffic not matching specific classification
String Length	1 to 32
Introduced	16.0.R1

default-priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Priority to assign to traffic ingressing as the default action queue
Default	low
Options	low, high
Introduced	16.0.R1

description *string*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dot1p [dot1p-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the dot1p context
Introduced	16.0.R1

[dot1p-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **dot1p** *number*
Description	Dot1p value to match in the packet
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *string*

Context	**configure qos sap-ingress** *qos-policy-name* **dot1p** *number*
Description	Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length	1 to 32
Introduced	16.0.R1

priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **dot1p** *number*
Description	Priority for packets that match the Dot1p value
Options	low, high, auto
Introduced	16.0.R1

dscp [dscp-name] *keyword*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the dscp context
Introduced	16.0.R1

[dscp-name] *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **dscp** *keyword*
Description	Name for the Differentiated Services Code Point (DSCP)
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a list key

fc *string*

Context	**configure qos sap-ingress** *qos-policy-name* **dscp** *keyword*
Description	Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length	1 to 32
Introduced	16.0.R1

priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **dscp** *keyword*
Description	Priority for the packet
Options	low, high, auto
Introduced	16.0.R1

fc [fc-name] *sap-ingress-fc-name*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *sap-ingress-fc-name*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Forwarding class or the sub forwarding class for which this mapping is performed
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

broadcast-policer *number*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Policer identifier for the broadcast traffic in this forwarding class
Introduced	16.0.R1
Notes	This element is part of a choice

broadcast-queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

broadcast-queue-group-queue

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Enter the **broadcast-queue-group-queue** context
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **broadcast-queue-group-queue**
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos queue-group-templates ingress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

queue-group-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **broadcast-queue-group-queue**
Description	Queue group name associated with broadcast queue
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

de-1-out-profile *boolean*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Frames with DE value to be assigned as out of profile
Default	false
Introduced	16.0.R1

egress-fc *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Forwarding class to override the forwarding class determined by ingress classification
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

fp-redirect-group-broadcast-policer

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast policer to be used as defined in the FP (forwarding-plane)
Introduced	16.0.R1
Notes	This element is part of a choice

fp-redirect-group-multicast-policer

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast policer to be used as defined in the FP (forwarding-plane)
Introduced	16.0.R1
Notes	This element is part of a choice

fp-redirect-group-policer

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Specified policer to be used as defined in the FP (forwarding-plane)
Introduced	16.0.R1
Notes	This element is part of a choice

fp-redirect-group-unknown-policer

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast policer to be used as defined in the FP (forwarding-plane)
Introduced	16.0.R1
Notes	This element is part of a choice

in-remark

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*

Description Enter the in-remark context

Introduced 16.0.R1

dscp *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **in-remark**

Description Specifies the DSCP to be used while remarking the in profile packets when the in-profile remarking type is 'dscp'.

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R3

Notes This element is part of a choice

prec *number*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **in-remark**

Description Specifies the precedence value to be used while remarking the in profile packets when the in-profile remarking type is 'precedence'.

Range 0 to 7

Introduced 16.0.R3

Notes This element is part of a choice

multicast-policer *number*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*

Description Policer identifier for the broadcast traffic in this forwarding class

Introduced 16.0.R1

Notes This element is part of a choice

multicast-queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

multicast-queue-group-queue

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Enter the **multicast-queue-group-queue** context
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **multicast-queue-group-queue**
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos queue-group-templates ingress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

queue-group-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **multicast-queue-group-queue**
Description	Queue group name associated with broadcast queue
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

out-remark

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*

Description Enter the out-remark context

Introduced 16.0.R1

dscp *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **out-remark**

Description Specifies the DSCP to be used while remarking the out profile packets when the out-profile remarking type is 'dscp'.

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R3

Notes This element is part of a choice

prec *number*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **out-remark**

Description Specifies the precedence value to be used while remarking the out profile packets when the out-profile remarking type is 'precedence'.

Range 0 to 7

Introduced 16.0.R3

Notes This element is part of a choice

policer *number*

Context **configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*

Description Policer identifier for the normal traffic in this forwarding class

Introduced 16.0.R1

Notes This element is part of a choice

profile *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Profile of the packets associated with this forwarding class
Options	in, out
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Queue to assign for packets in this forwarding class
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

queue-group-queue

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Enter the **queue-group-queue** context
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **queue-group-queue**
Description	Queue to assign for packets in this forwarding class
Reference	configure **qos queue-group-templates ingress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

queue-group-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **queue-group-queue**
Description	Queue group name associated with queue
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

unknown-policer *number*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Policer identifier for the broadcast traffic in this forwarding class
Introduced	16.0.R1
Notes	This element is part of a choice

unknown-queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

unknown-queue-group-queue

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name*
Description	Enter the **unknown-queue-group-queue** context
Introduced	16.0.R1

queue *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **unknown-queue-group-queue**
Description	Broadcast queue to assign for packets in this forwarding class
Reference	configure **qos queue-group-templates ingress queue-group** *string* **queue** *number*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

queue-group-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **fc** *sap-ingress-fc-name* **unknown-queue-group-queue**
Description	Queue group name associated with broadcast queue
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

ip-criteria

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the ip-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number*
Description	IP criteria entry to create or edit for the policy
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *string*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **action**
Description Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length 1 to 32
Introduced 16.0.R1

policer *string*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **action**
Description Policer identifier for the traffic matching MAC Criteria
Reference configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced 16.0.R1

priority *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **action**
Description Priority for the packet
Options low, high, auto
Introduced 16.0.R1

type *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **action**
Description Specified whether the criteria entry is active or in-active.
Default ignore-match
Options ignore-match, accept
Introduced 16.0.R1

description *string*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

match

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description DSCP value to match in the packet

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

dst-ip

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Enter the dst-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**

Description IP address to match with destination IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**

Description IP-prefix list as match criterion

Reference configure **qos match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-ip**
Description IP address to match with source IP of the packet
Introduced 16.0.R1
Notes This element is part of a choice

dst-port

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description Enter the dst-port context
Introduced 16.0.R1

eq *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**
Description Value 'equal to' assigned as match condition
Range 0 to 65535
Introduced 16.0.R1
Notes This element is part of a choice

gt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**
Description Value 'greater than' assigned as match condition
Range 0 to 65535
Introduced 16.0.R1
Notes This element is part of a choice

lt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**
Description Value 'less than' assigned as match condition
Range 0 to 65535
Introduced 16.0.R1
Notes This element is part of a choice

range

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match dst-port range**

Description Start value of range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

fragment *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Match performed when the packet is either a fragment or not, or matches all packets

Options false, true

Introduced 16.0.R1

protocol (*number* | *keyword*)

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description IP protocol to match

Introduced 16.0.R1

src-ip

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description IP-prefix list as match criterion

Reference configure **qos match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Value 'less than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

vxlan-vni

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match**
Description	Enter the vxlan-vni context
Introduced	16.0.R1

eq *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match vxlan-vni**
Description	Value 'equal to' assigned as match condition
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match vxlan-vni**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match vxlan-vni range**
Description	End value for range
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria entry** *number* **match vxlan-vni range**
Description	Start value of range
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **ip-criteria**
Description	IP filter type
Default	normal
Options	normal, vxlan-vni
Introduced	16.0.R1

ipv6-criteria

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the ipv6-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	IPv6 criteria entry to create or edit for the policy
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number*
Description	Enter the action context
Introduced	16.0.R1

fc *string*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length	1 to 32
Introduced	16.0.R1

policer *string*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Policer identifier for the traffic matching MAC Criteria
Reference	configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1

priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **action**
Description	Priority for the packet
Options	low, high, auto
Introduced	16.0.R1

type *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

description *string*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description DSCP value to match in the packet

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

dst-ip

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the dst-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-ip**

Description IP address to match with destination IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

dst-port

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Value 'less than' assigned as match condition
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port range**
Description	End value for range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match dst-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

fragment *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**
Description	Match performed when the packet is either a fragment or not, or matches all packets
Options	false, true, first-only, non-first-only
Introduced	16.0.R1

next-header (*number* | *keyword*)

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Next Header to match

Introduced 16.0.R1

src-ip

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-ip**

Description IP address to match with source IP of the packet

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'equal to' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'greater than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Value 'less than' assigned as match condition

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port range**

Description End value for range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match src-port range**
Description	Start value of range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

vxlan-vni

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match**
Description	Enter the vxlan-vni context
Introduced	16.0.R1

eq *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match vxlan-vni**
Description	Value 'equal to' assigned as match condition
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match vxlan-vni**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match vxlan-vni range**
Description	End value for range
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria entry** *number* **match vxlan-vni range**
Description	Start value of range
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a choice

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **ipv6-criteria**
Description	IPv6 filter type
Default	normal
Options	normal, vxlan-vni
Introduced	16.0.R1

lsp-exp [lsp-exp-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the lsp-exp context
Introduced	16.0.R1

[lsp-exp-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **lsp-exp** *number*
Description	Value to assign the unique MPLS LSP EXP value that will match the lsp-exp rule
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *string*

Context	**configure qos sap-ingress** *qos-policy-name* **lsp-exp** *number*
Description	Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length	1 to 32
Introduced	16.0.R1

priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **lsp-exp** *number*
Description	Priority for the matching traffic
Options	low, high, auto
Introduced	16.0.R1

mac-criteria

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the mac-criteria context
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number*
Description	Identifier for MAC match criteria and the corresponding action for a SAP-ingress policy
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number*

Description Enter the action context

Introduced 16.0.R1

fc *string*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **action**

Description Forwarding class or sub forwarding class to classify traffic matching the MAC criteria

String Length 1 to 32

Introduced 16.0.R1

policer *string*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **action**

Description Policer identifier for the traffic matching MAC Criteria

Reference configure **qos sap-ingress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

priority *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **action**

Description Priority for the packet

Options low, high, auto

Introduced 16.0.R1

type *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **action**

Description Specified whether the criteria entry is active or in-active.

Default ignore-match

Options ignore-match, accept

Introduced 16.0.R1

description *string*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number*
Description	Enter the match context
Introduced	16.0.R1

atm-vci *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	ATM VC Identifier to match as part of the MAC match criteria
Range	1 to 65535
Introduced	16.0.R1

dot1p

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Enter the dot1p context
Introduced	16.0.R1

mask *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match dot1p**
Description	Value of 802.1P mask to use as a MAC filter match criterion
Range	0 to 7
Default	7
Introduced	16.0.R1

priority *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match dot1p**
Description	Value of 802.1P priority to use as a MAC filter match criterion
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

dst-mac

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Enter the dst-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match dst-mac**
Description	Destination MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match dst-mac**
Description	Mask for destination MAC address
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

etype *etype-value*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Ethernet type
String Length	5 to 6
Introduced	16.0.R1

frame-type *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Match MAC criteria for ingress SAP QoS policy
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, atm
Introduced	16.0.R1

inner-tag

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Enter the inner-tag context
Introduced	16.0.R1

mask *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match inner-tag**
Description	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Range	1 to 4095
Default	4095
Introduced	16.0.R1

vlan *number*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match inner-tag**
Description	Match against VID of the second or first VLAN tag in the packet carried transparently through service
Range	0 to 4095
Introduced	16.0.R1
Notes	This element is mandatory

llc-dsap

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Enter the llc-dsap context
Introduced	16.0.R1

dsap *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match llc-dsap**
Description DSAP value
Range 0 to 255
Introduced 16.0.R1
Notes This element is mandatory

mask *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match llc-dsap**
Description DSAP mask
Range 0 to 255
Default 255
Introduced 16.0.R1

llc-ssap

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description Enter the llc-ssap context
Introduced 16.0.R1

mask *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match llc-ssap**
Description Source SAP mask
Range 0 to 255
Default 255
Introduced 16.0.R1

ssap *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match llc-ssap**
Description SSAP value
Range 0 to 255
Introduced 16.0.R1
Notes This element is mandatory

outer-tag

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**

Description Enter the outer-tag context

Introduced 16.0.R1

mask *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match outer-tag**

Description First tag carried transparently through the service

Range 1 to 4095

Default 4095

Introduced 16.0.R1

vlan *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match outer-tag**

Description Match against VID of the first VLAN tag in the packet carried transparently through service

Range 0 to 4095

Introduced 16.0.R1

Notes This element is mandatory

snap-oui *keyword*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**

Description Parameter snap-oui as MAC filter match criteria

Options zero, non-zero

Introduced 16.0.R1

snap-pid *number*

Context **configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**

Description Parameter snap-pid as MAC filter match criteria

Range 0 to 65535

Introduced 16.0.R1

src-mac

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match**
Description	Enter the src-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match src-mac**
Description	Source MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria entry** *number* **match src-mac**
Description	Mask for source MAC address
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **mac-criteria**
Description	MAC criteria filter type
Default	normal
Options	normal, vid
Introduced	16.0.R1

policer [policer-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the policer context
Introduced	16.0.R1

[policer-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	SAP-ingress policer identifier
Range	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Name of the advanced configuration policy to apply with this queue
Reference	configure **qos adv-config-policy** *string*
Introduced	16.0.R1

arbiter-parent

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Enter the arbiter-parent context
Introduced	16.0.R1

arbiter-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description	Arbiter to which this policer feeds
String Length	1 to 32
Introduced	16.0.R1

level *number*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **arbiter-parent**
Description	Weight to be used by the arbiter for feeding this policer
Range	1 to 100
Default	1
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Exceed threshold of the CIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

description *string*

Context **configure qos sap-ingress** *qos-policy-name* **policer** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

high-prio-only (*number* | *keyword*)

Context **configure qos sap-ingress** *qos-policy-name* **policer** *number*

Description Percentage of PIR leaky bucket's MBS of this policer that is reserved for high priority traffic

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure qos sap-ingress** *qos-policy-name* **policer** *number*

Description High priority for the violate threshold of PIR leaky bucket of this policer

Range 0 to 16777216

Default auto

Units bytes

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure qos sap-ingress** *qos-policy-name* **policer** *number*

Description Size of each packet, handled by the policer, to be modified

Range -32 to 31

Default 0

Introduced 16.0.R1

percent-rate

Context **configure qos sap-ingress** *qos-policy-name* **policer** *number*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **percent-rate**
Description	Administrative CIR percent
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

profile-capped *boolean*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Enforce an overall in-profile burst limit to the CIR bucket at ingress policer
Default	false
Introduced	16.0.R1

rate

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **rate**
Description	Administrative CIR
Range	0 to 2000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number* **rate**
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **policer** *number*
Description	Mode of statistics collected by the policer
Default	minimal
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

policy-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name*
Description	The sap-ingress QoS policy identifier.
Range	1 to 65535
Introduced	16.0.R1

prec [prec-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the prec context
Introduced	16.0.R1

[prec-value] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **prec** *number*
Description	Precedence value for which mapping is performed
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

fc *string*

Context	**configure qos sap-ingress** *qos-policy-name* **prec** *number*
Description	Forwarding class or sub forwarding class to classify traffic matching the MAC criteria
String Length	1 to 32
Introduced	16.0.R1

priority *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **prec** *number*
Description	Priority for the matching traffic
Options	low, high, auto
Introduced	16.0.R1

queue [queue-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the queue context
Introduced	16.0.R1

[queue-id] *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	SAP-ingress policer identifier
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

fir *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **adaptation-rule**
Description	The adaptation rule to be used while computing the operational FIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.
Default	closest
Options	max, min, closest
Introduced	16.0.R3

pir *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Default	closest
Options	max, min, closest
Introduced	16.0.R1

adv-config-policy *string*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Name of the advanced configuration policy to apply with this queue
Reference	configure **qos adv-config-policy** *string*
Introduced	16.0.R1

burst-limit (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Explicit shaping burst size of a queue
Range	1 to 14000000
Default	auto
Options	auto
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Reserved buffer space for the queue
Range	0 to 1048576
Default	auto
Units	kilobytes
Options	auto
Introduced	16.0.R1

cir-non-profiling *boolean*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Prevents the CIR to be used for re-profiling a packet's state.
Default	false
Introduced	16.0.R3

drop-tail

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Enter the drop-tail context
Introduced	16.0.R1

low

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **drop-tail**
Description	Enter the low context
Introduced	16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **drop-tail low**
Description	Low drop-tail percent from MBS that is reduced
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Maximum buffer space that is allowed for queue
Range	0 to 1073741824
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

multipoint *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Apply as a multicast queue
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Value of the adjustment on the size of each packet for queue accounting
Range	-32 to 30
Default	0
Introduced	16.0.R1

percent-rate

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Specifies the administrative CIR percent.
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R3
Notes	This element is part of a choice

fir *decimal-number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Specifies the administrative FIR percent.
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R3
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Administrative PIR percent
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

police

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Specifies that the out of profile traffic feeding into the physical queue instance should be dropped
Introduced	16.0.R3
Notes	This element is part of a choice

reference-rate *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **percent-rate**
Description	Reference rate as percentage
Default	port-limit
Options	port-limit, local-limit
Introduced	16.0.R1
Notes	This element is part of a choice

pool *string*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Pool name to apply for SAP ingress queue
String Length	1 to 32
Introduced	16.0.R1

queue-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Operating mode for this queue
Default	priority
Options	priority, profile
Introduced	16.0.R1

queue-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Default	auto-expedited
Options	expedited, auto-expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **rate**
Description	Specifies the administrative CIR.
Range	0 to 2000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R3
Notes	This element is part of a choice

fir (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **rate**
Description	Specifies the administrative FIR.
Range	0 to 2000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R3
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **rate**
Description	Administrative PIR
Range	1 to 2000000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

police

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **rate**
Description	Specifies that the out of profile traffic feeding into the physical queue instance should be dropped
Introduced	16.0.R3
Notes	This element is part of a choice

scheduler-parent

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number*
Description	Enter the scheduler-parent context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	0 to 8
Default	0
Introduced	16.0.R1

cir-weight *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Weight that is used by the scheduler until the committed rate for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1

level *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1

scheduler-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Scheduler to which this queue feeds
String Length	1 to 32
Introduced	16.0.R1

weight *number*

Context	**configure qos sap-ingress** *qos-policy-name* **queue** *number* **scheduler-parent**
Description	Weight to be used by the scheduler for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1

scope *keyword*

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Scope of the policy
Default	template
Options	exclusive, template
Introduced	16.0.R1

subscriber-mgmt

Context	**configure qos sap-ingress** *qos-policy-name*
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

dynamic-policer

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt**
Description	Enter the dynamic-policer context
Introduced	16.0.R1

arbiter-parent

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Enter the arbiter-parent context
Introduced	16.0.R1

arbiter-name *string*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Arbiter to which this policer feeds
String Length	1 to 32
Introduced	16.0.R1

level *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer arbiter-parent**
Description	Weight to be used by the arbiter for feeding this policer
Range	1 to 100
Default	1
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Exceed threshold of the CIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	High priority violate threshold of PIR leaky bucket of this policer
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Size of each packet, handled by the policer, to be modified
Range	-32 to 31
Default	0
Introduced	16.0.R1

policer-id-range

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Enter the policer-id-range context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer policer-id-range**
Description	Ending place at which dynamic policers, required for PCC-rule IP criteria entries, will be inserted
Range	1 to 63
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer policer-id-range**
Description	Starting place at which dynamic policers, required for PCC-rule IP criteria entries, will be inserted
Range	1 to 63
Introduced	16.0.R1
Notes	This element is mandatory

stat-mode *keyword*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt dynamic-policer**
Description	Mode of statistics collected by the policer
Default	minimal
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

pcc-rule-entry

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt**
Description	Enter the pcc-rule-entry context
Introduced	16.0.R1

range

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry**
Description	Enter the range context
Introduced	16.0.R1

end *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry range**
Description	Ending entry at which the PCC-rule IP criteria entries are shared across several hosts
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Context	**configure qos sap-ingress** *qos-policy-name* **subscriber-mgmt pcc-rule-entry range**
Description	Starting entry at which the PCC-rule IP criteria entries are shared across several hosts
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

scheduler-policy [scheduler-policy-name] *string*

Context	**configure qos**
Description	Enter the scheduler-policy context
Max. Elements	2047
Introduced	16.0.R1

[scheduler-policy-name] *string*

Context	**configure qos scheduler-policy** *string*
Description	Scheduler policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos scheduler-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

frame-based-accounting *boolean*

Context	**configure qos scheduler-policy** *string*
Description	Use frame-based accounting for schedulers and children within scheduler policy
Default	false
Introduced	16.0.R1

tier [tier-id] *number*

Context	**configure qos scheduler-policy** *string*
Description	Enter the tier context
Introduced	16.0.R1

[tier-id] *number*

Context	**configure qos scheduler-policy** *string* **tier** *number*
Description	Tier for scheduler-policy scheduler
Range	1 to 3
Introduced	16.0.R1
Notes	This element is part of a list key

parent-location *keyword*

Context	**configure qos scheduler-policy** *string* **tier** *number*
Description	Location in which the tier 1 schedulers can find their parent
Default	auto
Options	auto, sub, vport
Introduced	16.0.R1

scheduler [scheduler-name] *string*

Context	**configure qos scheduler-policy** *string* **tier** *number*
Description	Enter the scheduler context
Introduced	16.0.R1

[scheduler-name] *string*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Scheduler name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

limit-unused-bandwidth *boolean*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Enable aggregate rate overrun protection
Default	false
Introduced	16.0.R1

port-parent

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Enter the **port-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **port-parent**
Description	Port priority that this queue uses to receive bandwidth from the port level scheduler
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

weight *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **port-parent**
Description	Weight that this queue uses to receive bandwidth from the port level scheduler
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Enter the rate context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **rate**
Description	Administrative CIR
Default	sum
Units	kilobps
Introduced	16.0.R1

pir (*number* | *keyword*)

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **rate**
Description	Administrative PIR
Default	max
Units	kilobps
Introduced	16.0.R1

scheduler-parent

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string*
Description	Enter the **scheduler-parent** context
Introduced	16.0.R1

cir-level *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	0 to 8
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

cir-weight *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **scheduler-parent**
Description	Weight that is used by the scheduler until the committed rate for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

level *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **scheduler-parent**
Description	Level of priority while feeding to the parent
Range	1 to 8
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler-name *string*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **scheduler-parent**
Description	Scheduler to which this queue would be feeding to
String Length	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

weight *number*

Context	**configure qos scheduler-policy** *string* **tier** *number* **scheduler** *string* **scheduler-parent**
Description	Weight to be used by the scheduler for feeding this queue
Range	0 to 100
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

shared-queue [shared-queue-policy-name] *string*

Context	**configure qos**
Description	Enter the shared-queue context
Introduced	16.0.R1

[shared-queue-policy-name] *string*

Context	**configure qos shared-queue** *string*
Description	Name for the shared queue policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos shared-queue** *string*
Description	Text description
String Length	0 to 80
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure qos shared-queue** *string*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure qos shared-queue** *string* **fc** *keyword*
Description	Forwarding class mapping to queue mappings
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

broadcast-queue *number*

Context **configure qos shared-queue** *string* **fc** *keyword*

Description Logical queue that the broadcast traffic, classified into this forwarding class, should use

Range 9 to 32

Introduced 16.0.R1

multicast-queue *number*

Context **configure qos shared-queue** *string* **fc** *keyword*

Description Logical queue that the multicast traffic, classified into this forwarding class, should use

Range 9 to 32

Introduced 16.0.R1

queue *number*

Context **configure qos shared-queue** *string* **fc** *keyword*

Description Logical queue that the traffic, classified into this forwarding class, should use

Range 1 to 8

Introduced 16.0.R1

unknown-queue *number*

Context **configure qos shared-queue** *string* **fc** *keyword*

Description Logical queue that the unknown traffic, classified into this forwarding class, should use

Range 9 to 32

Introduced 16.0.R1

queue [queue-id] *number*

Context **configure qos shared-queue** *string*

Description Enter the queue context

Introduced 16.0.R1

[queue-id] *number*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Shared queue identifier
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cbs *number*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Committed burst size as a percentage of the maximum reserved buffer space for the queue
Range	0 to 100
Units	percent
Introduced	16.0.R1

drop-tail

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Enter the drop-tail context
Introduced	16.0.R1

low

Context	**configure qos shared-queue** *string* **queue** *number* **drop-tail**
Description	Enter the low context
Introduced	16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context	**configure qos shared-queue** *string* **queue** *number* **drop-tail low**
Description	Low drop-tail percent from MBS that is reduced
Introduced	16.0.R1

mbs *number*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Maximum burst size as a percentage of maximum reserved buffer space for the queue
Range	0 to 100
Units	percent
Introduced	16.0.R1

multipoint *boolean*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Apply as a multicast queue
Introduced	16.0.R1

pool *string*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Pool name for shared queue
String Length	1 to 32
Introduced	16.0.R1

queue-type *keyword*

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Priority that this queue receives from the hardware level schedulers
Default	auto-expedited
Options	expedited, auto-expedited, best-effort
Introduced	16.0.R1

rate

Context	**configure qos shared-queue** *string* **queue** *number*
Description	Enter the rate context
Introduced	16.0.R1

cir *number*

Context	**configure qos shared-queue** *string* **queue** *number* **rate**
Description	CIR percentage rate
Range	0 to 100
Units	percent
Introduced	16.0.R1

fir *number*

Context	**configure qos shared-queue** *string* **queue** *number* **rate**
Description	Specifies the FIR percentage rate.
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R3

pir *number*

Context	**configure qos shared-queue** *string* **queue** *number* **rate**
Description	PIR percentage rate
Range	1 to 100
Default	100
Units	percent
Introduced	16.0.R1

slope-policy [slope-policy-name] *string*

Context	**configure qos**
Description	Enter the slope-policy context
Max. Elements	511
Introduced	16.0.R1

[slope-policy-name] *string*

Context	**configure qos slope-policy** *string*
Description	Slope policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure qos slope-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

exceed-slope

Context	**configure qos slope-policy** *string*
Description	Enter the exceed-slope context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure qos slope-policy** *string* **exceed-slope**
Description	Administrative state of the exceed priority RED slope
Options	enable, disable
Introduced	16.0.R1

max-avg *number*

Context	**configure qos slope-policy** *string* **exceed-slope**
Description	Buffer percentage after which the drop probability reaches maximum average
Range	0 to 100
Introduced	16.0.R1

max-prob *number*

Context	**configure qos slope-policy** *string* **exceed-slope**
Description	Drop probability to increase at exceed start-average
Range	0 to 100
Introduced	16.0.R1

start-avg *number*

Context	**configure qos slope-policy** *string* **exceed-slope**
Description	Buffer percentage after which the drop probability starts to rise above value
Range	0 to 100
Introduced	16.0.R1

high-slope

Context	**configure qos slope-policy** *string*
Description	Enter the high-slope context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure qos slope-policy** *string* **high-slope**
Description	Administrative state of the high priority RED slope
Options	enable, disable
Introduced	16.0.R1

max-avg *number*

Context	**configure qos slope-policy** *string* **high-slope**
Description	Buffer percentage after which the drop probability reaches maximum average
Range	0 to 100
Introduced	16.0.R1

max-prob *number*

Context **configure qos slope-policy** *string* **high-slope**

Description Drop probability to increase at high start-average

Range 0 to 100

Introduced 16.0.R1

start-avg *number*

Context **configure qos slope-policy** *string* **high-slope**

Description Buffer percentage after which the drop probability starts to rise above value

Range 0 to 100

Introduced 16.0.R1

highplus-slope

Context **configure qos slope-policy** *string*

Description Enter the highplus-slope context

Introduced 16.0.R1

admin-state *keyword*

Context **configure qos slope-policy** *string* **highplus-slope**

Description Administrative state of the highplus priority RED slope

Options enable, disable

Introduced 16.0.R1

max-avg *number*

Context **configure qos slope-policy** *string* **highplus-slope**

Description Buffer percentage after which the drop probability reaches maximum average

Range 0 to 100

Introduced 16.0.R1

max-prob *number*

Context	**configure qos slope-policy** *string* **highplus-slope**
Description	Drop probability increase at highplus start-average
Range	0 to 100
Introduced	16.0.R1

start-avg *number*

Context	**configure qos slope-policy** *string* **highplus-slope**
Description	Buffer percentage after which the drop probability starts to rise above value
Range	0 to 100
Introduced	16.0.R1

low-slope

Context	**configure qos slope-policy** *string*
Description	Enter the low-slope context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure qos slope-policy** *string* **low-slope**
Description	Administrative state of the low priority RED slope
Options	enable, disable
Introduced	16.0.R1

max-avg *number*

Context	**configure qos slope-policy** *string* **low-slope**
Description	Buffer percentage after which the drop probability reaches maximum average
Range	0 to 100
Introduced	16.0.R1

max-prob *number*

Context	**configure qos slope-policy** *string* **low-slope**
Description	Drop probability to increase at low start-average
Range	0 to 100
Introduced	16.0.R1

start-avg *number*

Context	**configure qos slope-policy** *string* **low-slope**
Description	Buffer percentage after which the drop probability starts to rise above value
Range	0 to 100
Introduced	16.0.R1

time-average-factor *number*

Context	**configure qos slope-policy** *string*
Description	Apply time average factor to weight between previous and new shared buffer utilization result
Range	0 to 15
Default	7
Introduced	16.0.R1

31.1 redundancy Command Descriptions

redundancy

Context	**configure**
Description	Enter the redundancy context
Introduced	16.0.R1

bgp-evpn

Context	**configure redundancy**
Description	Enter the bgp-evpn context
Introduced	16.0.R1

ethernet-segment

Context	**configure redundancy bgp-evpn**
Description	Enter the ethernet-segment context
Introduced	16.0.R1

activation-timer *number*

Context	**configure redundancy bgp-evpn ethernet-segment**
Description	Time before activating specified Ethernet segment on specified PE that is elected as DF
Range	0 to 100
Default	3
Units	seconds
Introduced	16.0.R1

boot-timer *number*

Context	**configure redundancy bgp-evpn ethernet-segment**
Description	Time before running BGP EVPN multi-homing DF election algorithm
Range	0 to 600
Default	10
Units	seconds
Introduced	16.0.R1

bgp-mh

Context	**configure redundancy**
Description	Enter the bgp-mh context
Introduced	16.0.R1

site

Context	**configure redundancy bgp-mh**
Description	Enter the site context
Introduced	16.0.R1

activation-timer *number*

Context	**configure redundancy bgp-mh site**
Description	Time to keep local sites in standby status before running DF election algorithm
Range	0 to 100
Default	2
Units	seconds
Introduced	16.0.R1

boot-timer *number*

Context	**configure redundancy bgp-mh site**
Description	Time that system waits after node reboot and before it runs DF election algorithm
Range	0 to 600
Default	10
Units	seconds
Introduced	16.0.R1

min-down-timer *number*

Context	**configure redundancy bgp-mh site**
Description	Minimum downtime for BGP multi-homing site after transition from up to down
Range	1 to 100
Units	seconds
Introduced	16.0.R1

cert-sync *boolean*

Context	**configure redundancy**
Description	Synchronize redundancy certificate files between the primary and secondary CPMs
Default	true
Introduced	16.0.R1

mgmt-ethernet

Context	**configure redundancy**
Description	Enter the mgmt-ethernet context
Introduced	16.0.R1

revert *number*

Context	**configure redundancy mgmt-ethernet**
Description	Time before reverting standby CPM management Ethernet port to active CPM
Range	1 to 300
Default	5
Units	seconds
Introduced	16.0.R1

multi-chassis

Context	**configure redundancy**
Description	Enter the multi-chassis context
Introduced	16.0.R1

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure redundancy multi-chassis**
Description	Enter the peer context
Max. Elements	20
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address for server
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Administrative state of the peer instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Authentication key used between this node and the multi-chassis peer
String Length	1 to 54
Introduced	16.0.R1

description *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

mc-ipsec

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the mc-ipsec context
Introduced	16.0.R1

bfd-liveness *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec**

Description Enable BFD

Default false

Introduced 16.0.R1

discovery-interval

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec**

Description Enter the discovery-interval context

Introduced 16.0.R1

boot *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec discovery-interval**

Description Maximum interval after system bootup

Range 1 to 1800

Default 300

Units seconds

Introduced 16.0.R1

interval-secs *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec discovery-interval**

Description Maximum discovery interval

Range 1 to 1800

Default 300

Units seconds

Introduced 16.0.R1

hold-on-neighbor-failure *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec**
Description	Hold time on neighbor failure
Range	2 to 25
Default	3
Introduced	16.0.R1

keep-alive-interval *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec**
Description	Keepalive interval
Range	5 to 500
Default	10
Units	deciseconds
Introduced	16.0.R1

tunnel-group [tunnel-group-id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec**
Description	Enter the tunnel-group context
Introduced	16.0.R1

[tunnel-group-id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec tunnel-group** *string*
Description	Tunnel group ID
Reference	configure **isa tunnel-group** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec tunnel-group** *string*

Description Administrative state of the peer IPsec tunnel group instance

Default disable

Options enable, disable

Introduced 16.0.R1

peer-group *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec tunnel-group** *string*

Description Peer tunnel group

Range 1 to 16

Introduced 16.0.R1

priority *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ipsec tunnel-group** *string*

Description Tunnel group priority

Range 0 to 255

Default 100

Introduced 16.0.R1

mc-lag

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the mc-lag context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag**
Description	Administrative state of MC-LAG
Default	disable
Options	enable, disable
Introduced	16.0.R1

hold-on-neighbor-failure *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag**
Description	Intervals before standby node assumes that redundant neighbor node has failed
Range	2 to 25
Default	3
Introduced	16.0.R1

keep-alive-interval *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag**
Description	Keepalive timer value
Range	5 to 500
Default	10
Units	deciseconds
Introduced	16.0.R1

lag [lag-index] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag**
Description	Enter the lag context
Introduced	16.0.R1

[lag-index] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*
Description	LAG index
Reference	configure **lag** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

lacp-key *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*
Description	Key based on the remote MC-LAG
Range	1 to 65535
Introduced	16.0.R1

remote-lag *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*
Description	Lag ID of the remote MC-LAG
Range	1 to 800
Introduced	16.0.R1

source-bmac-lsb (*keyword* | *string*)

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*
Description	MAC address value to apply to all ingress traffic
Options	use-lacp-key
Introduced	16.0.R1

system-id *mac-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*

Description ID based on the remote MC-LAG

Introduced 16.0.R1

system-priority *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-lag lag** *string*

Description Priority based on the remote MC-LAG

Range 1 to 65535

Introduced 16.0.R1

mc-ring

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the mc-ring context

Introduced 16.0.R1

ring [sync-tag] *string*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring**

Description Enter the ring context

Introduced 16.0.R1

[sync-tag] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Synchronization tag for this ring on this multi-chassis peer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Administrative state of the multi-chassis ring
Default	disable
Options	enable, disable
Introduced	16.0.R1

in-band-control-path

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Enter the in-band-control-path context
Introduced	16.0.R1

debounce *boolean*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **in-band-control-path**
Description	Exponential back-off timer to use for delay path switching after consecutive failures
Default	true
Introduced	16.0.R1

dst-ip *ipv4-unicast-address*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **in-band-control-path**
Description	IP address of the in-band control path peer
Introduced	16.0.R1

interface *interface-name*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **in-band-control-path**
Description	Interface to verify in-band control path
String Length	1 to 32
Introduced	16.0.R1

max-debounce-time *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **in-band-control-path**
Description	Maximum delay after a failure when debouncing is active
Range	5 to 200
Default	10
Units	seconds
Introduced	16.0.R1

service-name *service-name*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **in-band-control-path**
Description	Name of the service to verify the in-band control path
String Length	1 to 64
Introduced	16.0.R1

path-b

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Enter the path-b context
Introduced	16.0.R1

range start *number* **end** *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-b**
Description	Enter the range context
Introduced	16.0.R1

start *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-b range start** *number* **end** *number*

Description First VLAN in the range

Range 0 to 4094

Introduced 16.0.R1

Notes This element is part of a list key

end *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-b range start** *number* **end** *number*

Description Last VLAN in the range

Range 0 to 4094

Introduced 16.0.R1

Notes This element is part of a list key

wildcard-saps *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-b**

Description Include the SAPs starting with a wildcard '*'

Default false

Introduced 16.0.R4

path-excl

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*

Description Enter the path-excl context

Introduced 16.0.R1

range start *number* **end** *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-excl**

Description Enter the range context

Introduced 16.0.R1

start *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-excl range start** *number* **end** *number*
Description	First VLAN in the range
Range	0 to 4094
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-excl range start** *number* **end** *number*
Description	Last VLAN in the range
Range	0 to 4094
Introduced	16.0.R1
Notes	This element is part of a list key

wildcard-saps *boolean*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **path-excl**
Description	Include the SAPs starting with a wildcard '*'
Default	false
Introduced	16.0.R4

ring-node [name] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Enter the ring-node context
Introduced	16.0.R1

[name] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*
Description	Name of a multi-chassis ring access node
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*
Description	Administrative state of connection verification for this access node
Default	disable
Options	enable, disable
Introduced	16.0.R1

dst-ip *ipv4-unicast-address*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*
Description	Destination IP address for access node connection
Introduced	16.0.R1

interval *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*
Description	Connection verification interval
Range	1 to 6000
Default	5
Units	minutes
Introduced	16.0.R1

service-name *service-name*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*

Description Service name for access node connection

String Length 1 to 64

Introduced 16.0.R1

src-ip *ipv4-unicast-address*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*

Description Source IP address for access node connection

Introduced 16.0.R1

src-mac (*keyword* | *string*)

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*

Description Source MAC address for the access node connection

Default system-mac-address

Options system-mac-address

Introduced 16.0.R1

vlan *ext-vlan-encap*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **ring-node** *string*

Description VLAN ID for access node connection

String Length 1 to 11

Introduced 16.0.R1

srrp-instance [id] *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*

Description Enter the srrp-instance context

Max. Elements 2

Introduced 16.0.R1

[id] *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string* **srrp-instance** *number*
Description	SRRP ID
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mc-ring ring** *string*
Description	Type of the multi-chassis ring
Options	layer-2, layer-3
Introduced	16.0.R1
Notes	This element is mandatory

peer-name *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Multi-chassis peer name
String Length	1 to 32
Introduced	16.0.R1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Source address to communicate with the multi-chassis peer
Introduced	16.0.R1

sync

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the sync context

Introduced 16.0.R1

admin-state *keyword*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Administrative state of the synchronization

Default disable

Options enable, disable

Introduced 16.0.R1

diameter-proxy *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize the Diameter proxy data with the multi-chassis peer

Default false

Introduced 16.0.R1

igmp *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize IGMP protocol information with the multi-chassis peer

Default false

Introduced 16.0.R1

igmp-snooping *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize IGMP snooping information

Default false

Introduced 16.0.R1

ipsec *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize IPsec information

Default false

Introduced 16.0.R1

l2tp *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize Layer Two Tunnel Protocol (L2TP)

Default false

Introduced 16.0.R1

local-dhcp-server *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize DHCP Server information

Default false

Introduced 16.0.R1

mc-ring *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize ring information

Default false

Introduced 16.0.R1

mld *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize MLD protocol information

Default false

Introduced 16.0.R1

mld-snooping *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize MLD snooping information

Default false

Introduced 16.0.R1

pim-snooping

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Enter the pim-snooping context

Introduced 16.0.R1

saps *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync pim-snooping**

Description Synchronize PIM snooping data with the multi-chassis peer on SDP endpoints

Default false

Introduced 16.0.R1

spoke-sdps *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync pim-snooping**

Description Synchronize PIM snooping data with the multi-chassis peer on SDP endpoints

Default false

Introduced 16.0.R1

python *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize Python

Default false

Introduced 16.0.R1

srrp *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize SRRP information

Default false

Introduced 16.0.R1

sub-host-trk *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Synchronize subscriber host tracking information

Default false

Introduced 16.0.R1

sub-mgmt

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Enter the sub-mgmt context

Introduced 16.0.R1

ipoe *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync sub-mgmt**

Description Synchronize subscriber management IPoE information

Default false

Introduced 16.0.R1

pppoe *boolean*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync sub-mgmt**

Description Synchronize subscriber management PPPoE information

Default false

Introduced 16.0.R1

tags

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Enter the tags context

Introduced 16.0.R1

lag [id] *string*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags**

Description Enter the lag context

Introduced 16.0.R1

[id] *string*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string*

Description LAG port synchronization

Reference configure **lag** *number*

Introduced 16.0.R1

Notes This element is part of a list key

range start *vlan-encap* end *vlan-encap*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string*

Description Enter the range context

Introduced 16.0.R1

start *vlan-encap*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string* **range start** *vlan-encap* **end** *vlan-encap*

Description First encapsulation value

String Length 1 to 11

Introduced 16.0.R1

Notes This element is part of a list key

end *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Last encapsulation value
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags lag** *string*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1

port [id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags**
Description	Enter the port context
Introduced	16.0.R1

[id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string*
Description	Port synchronization
Reference	configure **port** *port*
Introduced	16.0.R1
Notes	This element is part of a list key

range start *vlan-encap* **end** *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string*
Description	Enter the range context
Introduced	16.0.R1

start *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	First encapsulation value
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

end *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Last encapsulation value
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags port** *string*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1

pw-port [id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags**
Description	Enter the pw-port context
Introduced	16.0.R1

[id] *string*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string*
Description	A pseudowire port to synchronize
Reference	configure **pw-port** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

range start *vlan-encap* **end** *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string*
Description	Enter the range context
Introduced	16.0.R1

start *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	First encapsulation value
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

end *vlan-encap*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Last encapsulation value
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string* **range start** *vlan-encap* **end** *vlan-encap*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags pw-port** *string*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1

sdp [id] *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags**
Description	Enter the sdp context
Introduced	16.0.R1

[id] *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number*
Description	SDP synchronization
Range	1 to 32767
Introduced	16.0.R1
Notes	This element is part of a list key

range start *number* **end** *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number*
Description	Enter the range context
Introduced	16.0.R1

start *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number* **range start** *number* **end** *number*
Description	First virtual circuit ID
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number* **range start** *number* **end** *number*
Description	Last virtual circuit ID
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number* **range start** *number* **end** *number*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tags sdp** *number*
Description	Synchronization tag
String Length	1 to 32
Introduced	16.0.R1

track-srrp [id] *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**
Description	Enter the track-srrp context
Introduced	16.0.R1

[id] *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync track-srrp** *number*
Description	ID of tracked SRRP instance
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

l2tp-tunnel-id-range

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync track-srrp** *number*
Description	Enter the l2tp-tunnel-id-range context
Introduced	16.0.R1

end *number*

Context	**configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync track-srrp** *number* **l2tp-tunnel-id-range**
Description	End value of range
Range	1 to 16383
Introduced	16.0.R1

start *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync track-srrp** *number* **l2tp-tunnel-id-range**

Description Start value of range

Range 1 to 16383

Introduced 16.0.R1

tunnel-group [tunnel-group-id] *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync**

Description Enter the tunnel-group context

Introduced 16.0.R1

[tunnel-group-id] *number*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tunnel-group** *number*

Description Multi-active tunnel group ID

Range 1 to 16

Introduced 16.0.R1

Notes This element is part of a list key

sync-tag *string*

Context **configure redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync tunnel-group** *number*

Description Synchronization tag for this tunnel group on this multi-chassis peer

String Length 1 to 32

Introduced 16.0.R1

Notes This element is mandatory

rollback-sync *keyword*

Context **configure redundancy**

Description Parameters for redundancy rollback synchronization

Options rollback-single, rollback-all

Introduced 16.0.R1

switchover-exec *url*

Context	**configure redundancy**
Description	Location and name of the CLI script file executed after a redundancy switchover
String Length	1 to 100
Introduced	16.0.R1

synchronize *keyword*

Context	**configure redundancy**
Description	Parameters for redundancy synchronization
Options	config, boot-env
Introduced	16.0.R1

32 router Commands

configure
- **router** *string*
  - **aggregates**
    - **aggregate** (*ipv4-prefix* | *ipv6-prefix*)

32.1 router Command Descriptions

router [router-name] *string*

Context	**configure**
Description	Enter the router context
Max. Elements	10240
Introduced	16.0.R1

[router-name] *string*

Context	**configure router** *string*
Description	The administrative name for this virtual router. The router name must be unique among all virtual routers in the system.
String Length	1 to 64
Introduced	16.0.R3
Notes	This element is part of a list key

aggregates

Context	**configure router** *string*
Description	Enter the aggregates context
Introduced	16.0.R1

aggregate [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **aggregates**
Description	Enter the aggregate context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address prefix to match for aggregation
Introduced	16.0.R1
Notes	This element is part of a list key

aggregator

Context **configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the aggregator context

Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **aggregator**

Description Aggregator IP address

Introduced 16.0.R1

as-number *number*

Context **configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **aggregator**

Description Aggregator Autonomous System Number (ASN)

Range 1 to max

Introduced 16.0.R1

as-set *boolean*

Context **configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description Allow aggregate route as an AS-SET option

Default false

Introduced 16.0.R1

blackhole

Context **configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the **blackhole** context

Introduced 16.0.R1

generate-icmp *boolean*

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **blackhole**
Description	Send ICMP unreachable messages when packets match an aggregate route with black-hole next-hop
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

community *community*

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Community name that is added to aggregate route
String Length	1 to 72
Max. Elements	12
Introduced	16.0.R1
Notes	This element is ordered by user

description *string*

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address of indirect next hop
Introduced	16.0.R1
Notes	This element is part of a choice

local-preference *number*

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Default local preference if aggregate route is exported and advertised to BGP peers
Range	0 to 4294967295
Introduced	16.0.R1

summary-only *boolean*

Context	**configure router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise only the aggregate route and not the specific routes that make up the aggregate
Default	false
Introduced	16.0.R1

allow-icmp-redirect *boolean*

Context	**configure router** *string*
Description	Allow ICMP redirects on management interface
Default	false
Introduced	16.0.R1

allow-icmp6-redirect *boolean*

Context	**configure router** *string*
Description	Allow IPv6 ICMP redirects on management interface
Default	false
Introduced	16.0.R1

autonomous-system *number*

Context	**configure router** *string*
Description	Autonomous System number that is advertised to peer
Range	1 to max
Introduced	16.0.R1

bgp

Context **configure router** *string*

Description Enter the bgp context

Introduced 16.0.R1

add-paths

Context **configure router** *string* **bgp**

Description Enter the add-paths context

Introduced 16.0.R1

ipv4

Context **configure router** *string* **bgp add-paths**

Description Enter the ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths ipv4**

Description Negotiate to receive multiple unlabeled unicast routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths ipv4**

Description Maximum number of paths per unlabeled IPv4 unicast prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

ipv6

Context **configure router** *string* **bgp add-paths**

Description Enter the ipv6 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp add-paths ipv6**
Description	Negotiate to receive multiple unlabeled unicast routes per IPv6 prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp add-paths ipv6**
Description	Max number of paths per unlabeled unicast IPv6 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

label-ipv4

Context	**configure router** *string* **bgp add-paths**
Description	Enter the label-ipv4 context
Introduced	16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp add-paths label-ipv4**
Description	Negotiate to receive multiple labeled-unicast routes per IPv4 prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp add-paths label-ipv4**
Description	Maximum number of paths per labeled-unicast IPv4 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

label-ipv6

Context **configure router** *string* **bgp add-paths**

Description Enter the label-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths label-ipv6**

Description Negotiate to receive multiple labeled unicast routes per IPv6 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths label-ipv6**

Description Maximum number of paths per labeled-unicast IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mcast-vpn-ipv4

Context **configure router** *string* **bgp add-paths**

Description Enter the mcast-vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths mcast-vpn-ipv4**

Description Negotiate to receive multiple multicast routes per IPv4 VPN prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths mcast-vpn-ipv4**

Description Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mcast-vpn-ipv6

Context **configure router** *string* **bgp add-paths**

Description Enter the mcast-vpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths mcast-vpn-ipv6**

Description Negotiate to receive multiple multicast routes per IPv6 VPN prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths mcast-vpn-ipv6**

Description Maximum number of paths per multicast IPv6 VPN prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mvpn-ipv4

Context **configure router** *string* **bgp add-paths**

Description Enter the mvpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp add-paths mvpn-ipv4**
Description	Negotiate to receive multiple multicast VPN routes per IPv4 prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp add-paths mvpn-ipv4**
Description	Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

mvpn-ipv6

Context	**configure router** *string* **bgp add-paths**
Description	Enter the mvpn-ipv6 context
Introduced	16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp add-paths mvpn-ipv6**
Description	Negotiate to receive multiple multicast routes per IPv6 VPN prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp add-paths mvpn-ipv6**
Description	Maximum number of paths per multicast VPN IPv6 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

vpn-ipv4

Context **configure router** *string* **bgp add-paths**

Description Enter the vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths vpn-ipv4**

Description Negotiate to receive VPN-IPv4 routes

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths vpn-ipv4**

Description Maximum number of paths per VPN-IPv4 NLRI that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

vpn-ipv6

Context **configure router** *string* **bgp add-paths**

Description Enter the vpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp add-paths vpn-ipv6**

Description Negotiate to receive multiple VPN-IPv6 routes

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp add-paths vpn-ipv6**
Description Maximum number of paths per VPN-IPv6 NLRI that can be advertised to add-path peers
Range 1 to 16
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **bgp**
Description Administrative state of BGP instance
Default enable
Options enable, disable
Introduced 16.0.R1

advertise-external

Context **configure router** *string* **bgp**
Description Enter the advertise-external context
Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp advertise-external**
Description Support unlabeled unicast IPv4 routes
Default false
Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp advertise-external**
Description Support unlabeled unicast IPv6 routes
Default false
Introduced 16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp advertise-external**
Description	Support labeled unicast IPv4 routes
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure router** *string* **bgp advertise-external**
Description	Support labeled unicast IPv6 routes
Default	false
Introduced	16.0.R1

advertise-inactive *boolean*

Context	**configure router** *string* **bgp**
Description	Advertise inactive BGP routes to other BGP peers
Default	false
Introduced	16.0.R1

advertise-ipv6-next-hops

Context	**configure router** *string* **bgp**
Description	Enter the advertise-ipv6-next-hops context
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp advertise-ipv6-next-hops**
Description	Advertise labeled IPv4 routes
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp advertise-ipv6-next-hops**
Description Advertise labeled IPv6 routes
Default false
Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp advertise-ipv6-next-hops**
Description Advertise VPN IPv4 routes
Default false
Introduced 16.0.R1

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp advertise-ipv6-next-hops**
Description Advertise VPN IPv6 routes
Default false
Introduced 16.0.R1

aggregator-id-zero *boolean*

Context **configure router** *string* **bgp**
Description Set router ID in aggregator path attribute to zero when BGP aggregates routes
Default false
Introduced 16.0.R1

asn-4-byte *boolean*

Context **configure router** *string* **bgp**
Description Allow use of 4-byte ASNs
Default true
Introduced 16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **bgp**
Description	Configure the BGP authentication key for all peers.
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **bgp**
Description	The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

backup-path

Context	**configure router** *string* **bgp**
Description	Enter the backup-path context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **bgp backup-path**
Description	Support unlabeled unicast IPv4 routes
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **bgp backup-path**
Description	Support unlabeled unicast IPv6 routes
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp backup-path**
Description Support labeled unicast IPv4 routes
Default false
Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp backup-path**
Description Support labeled unicast IPv6 routes
Default false
Introduced 16.0.R1

best-path-selection

Context **configure router** *string* **bgp**
Description Enter the best-path-selection context
Introduced 16.0.R1

always-compare-med

Context **configure router** *string* **bgp best-path-selection**
Description Enter the always-compare-med context
Introduced 16.0.R1

med-value *keyword*

Context **configure router** *string* **bgp best-path-selection always-compare-med**
Description MED path attribute
Default off
Options off, missing-med-zero, missing-med-infinity, on
Introduced 16.0.R1

strict-as *boolean*

Context	**configure router** *string* **bgp best-path-selection always-compare-med**
Description	Compare MED path attribute between routes from same neighbor AS only
Default	true
Introduced	16.0.R1

as-path-ignore

Context	**configure router** *string* **bgp best-path-selection**
Description	Enter the as-path-ignore context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support IPv4 address family
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support IPv6 address family
Default	false
Introduced	16.0.R1

l2-vpn *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support L2 VPN address family
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support labeled IPv4 address family
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support labeled IPv6 address family
Default	false
Introduced	16.0.R1

mcast-ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support multicast IPv4 address family
Default	false
Introduced	16.0.R1

mcast-ipv6 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support multicast IPv6 address family
Default	false
Introduced	16.0.R1

mvpn-ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection as-path-ignore**
Description	Support MVPN IPv4 address family
Default	false
Introduced	16.0.R1

mvpn-ipv6 *boolean*

Context **configure router** *string* **bgp best-path-selection as-path-ignore**

Description Support MVPN IPv6 address family

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp best-path-selection as-path-ignore**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R1

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp best-path-selection as-path-ignore**

Description Support VPN IPv6 address family

Default false

Introduced 16.0.R1

compare-origin-validation-state *boolean*

Context **configure router** *string* **bgp best-path-selection**

Description Use origin validation state in BGP decision process

Default false

Introduced 16.0.R1

deterministic-med *boolean*

Context **configure router** *string* **bgp best-path-selection**

Description Use deterministic MED for BGP instance

Default false

Introduced 16.0.R1

ebgp-ibgp-equal

Context **configure router** *string* **bgp best-path-selection**

Description Enter the ebgp-ibgp-equal context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**

Description Load balance eBGP and iBGP paths for unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**

Description Load balance eBGP and iBGP paths for unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**

Description Load balance eBGP and iBGP paths for labeled unicast IPv4 routes

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**

Description Load balance eBGP and iBGP paths for labeled unicast IPv6 routes

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**
Description	Load balance eBGP and iBGP paths for IPv4 VPN routes
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp best-path-selection ebgp-ibgp-equal**
Description	Load balance eBGP and iBGP paths for IPv6 VPN routes
Default	false
Introduced	16.0.R1

ignore-nh-metric *boolean*

Context	**configure router** *string* **bgp best-path-selection**
Description	Ignore next hop metric for best routes of base router BGP instance
Default	false
Introduced	16.0.R1

ignore-router-id

Context	**configure router** *string* **bgp best-path-selection**
Description	Enter the ignore-router-id context
Introduced	16.0.R1

include-internal

Context	**configure router** *string* **bgp best-path-selection ignore-router-id**
Description	Enter the include-internal context
Introduced	16.0.R1

mvpn-ipv4 *boolean*

Context	**configure router** *string* **bgp best-path-selection ignore-router-id include-internal**
Description	Include MVPN IPv4 address family
Default	false
Introduced	16.0.R1

mvpn-ipv6 *boolean*

Context	**configure router** *string* **bgp best-path-selection ignore-router-id include-internal**
Description	Include MVPN IPv6 address family
Default	false
Introduced	16.0.R1

origin-invalid-unusable *boolean*

Context	**configure router** *string* **bgp best-path-selection**
Description	Consider routes with 'Invalid' origin validation state as unusable by best path selection algorithm
Default	false
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **bgp**
Description	Use Bidirectional Forwarding Detection
Default	false
Introduced	16.0.R1

client-reflect *boolean*

Context	**configure router** *string* **bgp**
Description	Enable client reflection of routes by the route reflector
Default	true
Introduced	16.0.R1

cluster

Context **configure router** *string* **bgp**

Description Enter the cluster context

Introduced 16.0.R1

allow-local-fallback *boolean*

Context **configure router** *string* **bgp cluster**

Description Allow fallback to RR default location when no BGP routes reachable from ORR location

Default false

Introduced 16.0.R1

cluster-id *ipv4-address*

Context **configure router** *string* **bgp cluster**

Description Cluster ID for route reflector server

Introduced 16.0.R1

orr-location *number*

Context **configure router** *string* **bgp cluster**

Description Optimal route reflection location for cluster ID

Range 1 to 16

Introduced 16.0.R1

connect-retry *number*

Context **configure router** *string* **bgp**

Description BGP connect retry timer value

Range 1 to 65535

Default 120

Introduced 16.0.R1

damp-peer-oscillations

Context	**configure router** *string* **bgp**
Description	Enter the damp-peer-oscillations context
Introduced	16.0.R1

error-interval *number*

Context	**configure router** *string* **bgp damp-peer-oscillations**
Description	Error free interval after session reset, to return idle-hold-time to initial-wait
Range	0 to 2048
Default	30
Introduced	16.0.R1

idle-hold-time

Context	**configure router** *string* **bgp damp-peer-oscillations**
Description	Enter the idle-hold-time context
Introduced	16.0.R1

initial-wait *number*

Context	**configure router** *string* **bgp damp-peer-oscillations idle-hold-time**
Description	Time a session remains in idle state after session stabilized
Range	0 to 2048
Default	0
Introduced	16.0.R1

max-wait *number*

Context	**configure router** *string* **bgp damp-peer-oscillations idle-hold-time**
Description	Maximum session idle time after repeated instability
Range	1 to 2048
Default	60
Introduced	16.0.R1

second-wait *number*

Context	**configure router** *string* **bgp damp-peer-oscillations idle-hold-time**
Description	Time that doubles after each session failure within relatively short time
Range	1 to 2048
Default	5
Introduced	16.0.R1

damping *boolean*

Context	**configure router** *string* **bgp**
Description	Use BGP route damping for learned routes defined within the route policy
Default	false
Introduced	16.0.R1

def-recv-evpn-encap *keyword*

Context	**configure router** *string* **bgp**
Description	Default encapsulation type when EVPN route is received without BGP encapsulation extended community
Default	mpls
Options	mpls, vxlan
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **bgp**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dynamic-neighbor-limit *number*

Context	**configure router** *string* **bgp**
Description	Dynamic peer limit for BGP instance
Range	1 to 8192
Introduced	16.0.R1

enforce-first-as *boolean*

Context	**configure router** *string* **bgp**
Description	Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match
Default	false
Introduced	16.0.R1

error-handling

Context	**configure router** *string* **bgp**
Description	Enter the error-handling context
Introduced	16.0.R1

update-fault-tolerance *boolean*

Context	**configure router** *string* **bgp error-handling**
Description	Consider non-critical errors as treat-as-withdraw and do not trigger session reset
Default	false
Introduced	16.0.R1

export

Context	**configure router** *string* **bgp**
Description	Enter the export context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp export**
Description	Export policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

extended-nh-encoding

Context **configure router** *string* **bgp**

Description Enter the extended-nh-encoding context

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp extended-nh-encoding**

Description Advertise extended NH encoding capability for labeled IPv4 routes

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp extended-nh-encoding**

Description Advertise extended NH encoding capability for VPN IPv4 routes

Default false

Introduced 16.0.R1

family

Context **configure router** *string* **bgp**

Description Enter the family context

Introduced 16.0.R1

bgp-ls *boolean*

Context **configure router** *string* **bgp family**

Description Support BGP-LS address family

Default false

Introduced 16.0.R1

evpn *boolean*

Context **configure router** *string* **bgp family**
Description Support EVPN address family
Default false
Introduced 16.0.R1

flow-ipv4 *boolean*

Context **configure router** *string* **bgp family**
Description Support flowspec IPv4 address family
Default false
Introduced 16.0.R1

flow-ipv6 *boolean*

Context **configure router** *string* **bgp family**
Description Support flowspec IPv6 address family
Default false
Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp family**
Description Support IPv4 address family
Default true
Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp family**
Description Support IPv6 address family
Default false
Introduced 16.0.R1

l2-vpn *boolean*

Context **configure router** *string* **bgp family**

Description Support L2 VPN address family

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp family**

Description Support labeled IPv4 address family

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp family**

Description Support labeled IPv6 address family

Default false

Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure router** *string* **bgp family**

Description Support multicast IPv4 address family

Default false

Introduced 16.0.R1

mcast-ipv6 *boolean*

Context **configure router** *string* **bgp family**

Description Support multicast IPv6 address family

Default false

Introduced 16.0.R1

mcast-vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support multicast VPN IPv4 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support multicast VPN IPv6 address family
Default	false
Introduced	16.0.R1

mdt-safi *boolean*

Context	**configure router** *string* **bgp family**
Description	Support Multicast Distribution Tree (MDT) SAFI address family
Default	false
Introduced	16.0.R1

ms-pw *boolean*

Context	**configure router** *string* **bgp family**
Description	Support multi-segment pseudowire address family
Default	false
Introduced	16.0.R1

mvpn-ipv4 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support MVPN IPv4 address family
Default	false
Introduced	16.0.R1

mvpn-ipv6 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support MVPN IPv6 address family
Default	false
Introduced	16.0.R1

route-target *boolean*

Context	**configure router** *string* **bgp family**
Description	Support address family for RT constrain routes
Default	false
Introduced	16.0.R1

sr-policy-ipv4 *boolean*

Context	**configure router** *string* **bgp family**
Description	Advertise capability for AFI1/SAFI73, BGP routes that encode an SR policy to an IPv4 destination
Default	false
Introduced	16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp family**
Description	Support VPN IPv6 address family
Default	false
Introduced	16.0.R1

fast-external-failover *boolean*

Context	**configure router** *string* **bgp**
Description	Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.
Default	true
Introduced	16.0.R1

flowspec

Context	**configure router** *string* **bgp**
Description	Enter the flowspec context
Introduced	16.0.R1

validate-dest-prefix *boolean*

Context	**configure router** *string* **bgp flowspec**
Description	Validate received IPv4 and IPv6 flowspec routes that contain destination prefix
Default	false
Introduced	16.0.R1

validate-redirect-ip *boolean*

Context	**configure router** *string* **bgp flowspec**
Description	Validate the redirect-to-IPv4 action attached to flowspec IPv4 routes received by the BGP instance
Default	false
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **bgp**
Description	Enter the graceful-restart context
Introduced	16.0.R1

gr-notification *boolean*

Context	**configure router** *string* **bgp graceful-restart**
Description	Enable graceful restart capability indicating support for NOTIFICATION messages
Default	false
Introduced	16.0.R1

long-lived

Context	**configure router** *string* **bgp graceful-restart**
Description	Enter the long-lived context
Introduced	16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Advertise BGP routes marked as LLGR stale to BGP peers
Default	false
Introduced	16.0.R1

advertised-stale-time *number*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **bgp graceful-restart long-lived family** *keyword*
Description	Address family type for LLGR
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6
Introduced	16.0.R1
Notes	This element is part of a list key

advertised-stale-time *number*

Context	**configure router** *string* **bgp graceful-restart long-lived family** *keyword*
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure router** *string* **bgp graceful-restart long-lived family** *keyword*
Description	Locally-imposed LLGR stale time
Range	0 to 16777215
Introduced	16.0.R1

forwarding-bits-set *keyword*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	BGP LLGR forwarding bit behavior for F bit in AFI or SAFI
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1

helper-override-restart-time *number*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability
Range	0 to 4095
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Locally-imposed LLGR stale time
Range	0 to 16777215
Introduced	16.0.R1

without-no-export *boolean*

Context	**configure router** *string* **bgp graceful-restart long-lived**
Description	Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability
Default	false
Introduced	16.0.R1

restart-time *number*

Context	**configure router** *string* **bgp graceful-restart**
Description	BGP graceful restart time
Range	0 to 4095
Default	120
Introduced	16.0.R1

stale-routes-time *number*

Context	**configure router** *string* **bgp graceful-restart**
Description	Maximum time that stale routes maintain after graceful restart is initiated
Range	1 to 3600
Default	360
Introduced	16.0.R1

group [group-name] *string*

Context	**configure router** *string* **bgp**
Description	Enter the group context
Introduced	16.0.R1

[group-name] *string*

Context	**configure router** *string* **bgp group** *string*
Description	BGP peer group
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

add-paths

Context	**configure router** *string* **bgp group** *string*
Description	Enter the add-paths context
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **bgp group** *string* **add-paths**
Description	Enter the ipv4 context
Introduced	16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp group** *string* **add-paths ipv4**
Description	Negotiate to receive multiple unlabeled unicast routes per IPv4 prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp group** *string* **add-paths ipv4**
Description	Maximum number of paths per unlabeled IPv4 unicast prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

ipv6

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths ipv6**

Description Negotiate to receive multiple unlabeled unicast routes per IPv6 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths ipv6**

Description Maximum number of paths per unlabeled unicast IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

label-ipv4

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the label-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths label-ipv4**

Description Negotiate to receive multiple labeled-unicast routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths label-ipv4**

Description Maximum number of paths per labeled-unicast IPv4 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

label-ipv6

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the label-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths label-ipv6**

Description Negotiate to receive multiple labeled-unicast routes per IPv6 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths label-ipv6**

Description Maximum number of paths per labeled-unicast IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mcast-vpn-ipv4

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the mcast-vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp group** *string* **add-paths mcast-vpn-ipv4**
Description	Negotiate to receive multiple multicast routes per IPv4 VPN prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp group** *string* **add-paths mcast-vpn-ipv4**
Description	Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

mcast-vpn-ipv6

Context	**configure router** *string* **bgp group** *string* **add-paths**
Description	Enter the mcast-vpn-ipv6 context
Introduced	16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp group** *string* **add-paths mcast-vpn-ipv6**
Description	Negotiate to receive multiple multicast routes per IPv6 VPN prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp group** *string* **add-paths mcast-vpn-ipv6**
Description	Maximum number of paths per multicast IPv6 VPN prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

mvpn-ipv4

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the mvpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths mvpn-ipv4**

Description Negotiate to receive multiple multicast VPN routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths mvpn-ipv4**

Description Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mvpn-ipv6

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the mvpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths mvpn-ipv6**

Description Negotiate to receive multiple multicast routes per IPv6 VPN prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths mvpn-ipv6**

Description Maximum number of paths per multicast VPN IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

vpn-ipv4

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp group** *string* **add-paths vpn-ipv4**

Description Negotiate to receive VPN-IPv4 routes

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp group** *string* **add-paths vpn-ipv4**

Description Maximum number of paths per VPN-IPv4 NLRI that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

vpn-ipv6

Context **configure router** *string* **bgp group** *string* **add-paths**

Description Enter the vpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp group** *string* **add-paths vpn-ipv6**
Description	Negotiate to receive multiple VPN-IPv6 routes
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp group** *string* **add-paths vpn-ipv6**
Description	Maximum number of paths per VPN-IPv6 NLRI that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **bgp group** *string*
Description	Administrative state of BGP group
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-inactive *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Advertise inactive BGP routes to other BGP peers
Introduced	16.0.R1

advertise-ipv6-next-hops

Context	**configure router** *string* **bgp group** *string*
Description	Enter the advertise-ipv6-next-hops context
Introduced	16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **advertise-ipv6-next-hops**

Description Advertise labeled IPv4 routes

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **advertise-ipv6-next-hops**

Description Advertise labeled IPv6 routes

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **advertise-ipv6-next-hops**

Description Advertise VPN IPv4 routes

Default false

Introduced 16.0.R1

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **advertise-ipv6-next-hops**

Description Advertise VPN IPv6 routes

Default false

Introduced 16.0.R1

aggregator-id-zero *boolean*

Context **configure router** *string* **bgp group** *string*

Description Set router ID in aggregator path attribute to zero when BGP aggregates routes

Introduced 16.0.R1

aigp *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Add Accumalated IGP (AIGP) attribute to advertised routes
Default	false
Introduced	16.0.R1

asn-4-byte *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Allow use of 4-byte ASNs
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **bgp group** *string*
Description	Configure the BGP authentication key for all peers.
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **bgp group** *string*
Description	The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

bfd-liveness *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Use Bidirectional Forwarding Detection
Introduced	16.0.R1

capability-negotiation *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Enable capability negotiation
Default	true
Introduced	16.0.R1

client-reflect *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Enable client reflection of routes by the route reflector
Introduced	16.0.R1

cluster

Context	**configure router** *string* **bgp group** *string*
Description	Enter the cluster context
Introduced	16.0.R1

allow-local-fallback *boolean*

Context	**configure router** *string* **bgp group** *string* **cluster**
Description	Allow fallback to RR default location when no BGP routes reachable from ORR location
Default	false
Introduced	16.0.R1

cluster-id *ipv4-address*

Context	**configure router** *string* **bgp group** *string* **cluster**
Description	Cluster ID for route reflector server
Introduced	16.0.R1

orr-location *number*

Context	**configure router** *string* **bgp group** *string* **cluster**
Description	Optimal route reflection location for cluster ID
Range	1 to 16
Introduced	16.0.R1

connect-retry *number*

Context **configure router** *string* **bgp group** *string*

Description BGP connect retry timer value

Range 1 to 65535

Introduced 16.0.R1

damp-peer-oscillations

Context **configure router** *string* **bgp group** *string*

Description Enter the damp-peer-oscillations context

Introduced 16.0.R1

error-interval *number*

Context **configure router** *string* **bgp group** *string* **damp-peer-oscillations**

Description Error free interval after session reset, to return idle-hold-time to initial-wait

Range 0 to 2048

Default 30

Introduced 16.0.R1

idle-hold-time

Context **configure router** *string* **bgp group** *string* **damp-peer-oscillations**

Description Enter the idle-hold-time context

Introduced 16.0.R1

initial-wait *number*

Context **configure router** *string* **bgp group** *string* **damp-peer-oscillations idle-hold-time**

Description Time a session remains in idle state after session stabilized

Range 0 to 2048

Default 0

Introduced 16.0.R1

max-wait *number*

Context	**configure router** *string* **bgp group** *string* **damp-peer-oscillations idle-hold-time**
Description	Maximum session idle time after repeated instability
Range	1 to 2048
Default	60
Introduced	16.0.R1

second-wait *number*

Context	**configure router** *string* **bgp group** *string* **damp-peer-oscillations idle-hold-time**
Description	Time that doubles after each session failure within relatively short time
Range	1 to 2048
Default	5
Introduced	16.0.R1

damping *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Use BGP route damping for learned routes defined within the route policy
Introduced	16.0.R1

def-recv-evpn-encap *keyword*

Context	**configure router** *string* **bgp group** *string*
Description	Default encapsulation type when EVPN route is received without BGP encapsulation extended community
Options	mpls, vxlan
Introduced	16.0.R1

default-route-target *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Send default RTC route to peers in BGP peer group
Default	false
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **bgp group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dynamic-neighbor

Context	**configure router** *string* **bgp group** *string*
Description	Enter the dynamic-neighbor context
Introduced	16.0.R1

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **bgp group** *string* **dynamic-neighbor**
Description	Enter the prefix context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **bgp group** *string* **dynamic-neighbor prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Prefix for dynamic BGP sessions in peer group
Introduced	16.0.R1
Notes	This element is part of a list key

dynamic-neighbor-limit *number*

Context	**configure router** *string* **bgp group** *string*
Description	Dynamic peer limit for BGP instance
Range	1 to 8192
Introduced	16.0.R1

enforce-first-as *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match
Introduced	16.0.R1

error-handling

Context	**configure router** *string* **bgp group** *string*
Description	Enter the error-handling context
Introduced	16.0.R1

update-fault-tolerance *boolean*

Context	**configure router** *string* **bgp group** *string* **error-handling**
Description	Consider non-critical errors as treat-as-withdraw and do not trigger session reset
Introduced	16.0.R1

export

Context	**configure router** *string* **bgp group** *string*
Description	Enter the export context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp group** *string* **export**
Description	Import policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

extended-nh-encoding

Context **configure router** *string* **bgp group** *string*

Description Enter the extended-nh-encoding context

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **extended-nh-encoding**

Description Advertise extended NH encoding capability for labeled IPv4 routes

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **extended-nh-encoding**

Description Advertise extended NH encoding capability for VPN IPv4 routes

Default false

Introduced 16.0.R1

family

Context **configure router** *string* **bgp group** *string*

Description Enter the family context

Introduced 16.0.R1

bgp-ls *boolean*

Context **configure router** *string* **bgp group** *string* **family**

Description Support BGP-LS address family

Default false

Introduced 16.0.R1

evpn *boolean*

Context **configure router** *string* **bgp group** *string* **family**
Description Support EVPN address family
Default false
Introduced 16.0.R1

flow-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **family**
Description Support flowspec IPv4 address family
Default false
Introduced 16.0.R1

flow-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **family**
Description Support flowspec IPv6 address family
Default false
Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **family**
Description Support IPv4 address family
Default false
Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **family**
Description Support IPv6 address family
Default false
Introduced 16.0.R1

l2-vpn *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support L2 VPN address family
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support labeled IPv4 address family
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support labeled IPv6 address family
Default	false
Introduced	16.0.R1

mcast-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support multicast IPv4 address family
Default	false
Introduced	16.0.R1

mcast-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support multicast IPv6 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support multicast VPN IPv4 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support multicast VPN IPv6 address family
Default	false
Introduced	16.0.R1

mdt-safi *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support Multicast Distribution Tree (MDT) SAFI address family
Default	false
Introduced	16.0.R1

ms-pw *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support multi-segment pseudowire address family
Default	false
Introduced	16.0.R1

mvpn-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support MVPN IPv4 address family
Default	false
Introduced	16.0.R1

mvpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support MVPN IPv6 address family
Default	false
Introduced	16.0.R1

route-target *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support address family for RT constrain routes
Default	false
Introduced	16.0.R1

sr-policy-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Advertise capability for AFI1/SAFI73, BGP routes that encode an SR policy to an IPv4 destination
Default	false
Introduced	16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **family**
Description	Support VPN IPv6 address family
Default	false
Introduced	16.0.R1

fast-external-failover *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **bgp group** *string*
Description	Enter the graceful-restart context
Introduced	16.0.R1

gr-notification *boolean*

Context	**configure router** *string* **bgp group** *string* **graceful-restart**
Description	Enable graceful restart capability indicating support for NOTIFICATION messages
Default	false
Introduced	16.0.R1

long-lived

Context	**configure router** *string* **bgp group** *string* **graceful-restart**
Description	Enter the long-lived context
Introduced	16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context	**configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description	Advertise BGP routes marked as LLGR stale to BGP peers
Default	false
Introduced	16.0.R1

advertised-stale-time *number*

Context **configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description Long-lived stale time that is advertised by router in its LLGR capability
Range 0 to 16777215
Default 86400
Introduced 16.0.R1

family [family-type] *keyword*

Context **configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description Enter the family context
Introduced 16.0.R1

[family-type] *keyword*

Context **configure router** *string* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description Address family type for LLGR
Options ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6
Introduced 16.0.R1
Notes This element is part of a list key

advertised-stale-time *number*

Context **configure router** *string* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description Long-lived stale time that is advertised by router in its LLGR capability
Range 0 to 16777215
Default 86400
Introduced 16.0.R1

helper-override-stale-time *number*

Context **configure router** *string* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description Locally-imposed LLGR stale time
Range 0 to 16777216
Default 16777216
Introduced 16.0.R1

forwarding-bits-set *keyword*

Context	**configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description	BGP LLGR forwarding bit behavior for F bit in AFI or SAFI
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1

helper-override-restart-time *number*

Context	**configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description	Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability
Range	0 to 4095
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description	Locally-imposed LLGR stale time
Range	0 to 16777215
Introduced	16.0.R1

without-no-export *boolean*

Context	**configure router** *string* **bgp group** *string* **graceful-restart long-lived**
Description	Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability
Default	false
Introduced	16.0.R1

restart-time *number*

Context	**configure router** *string* **bgp group** *string* **graceful-restart**
Description	BGP graceful restart time
Range	0 to 4095
Default	300
Introduced	16.0.R1

stale-routes-time *number*

Context **configure router** *string* **bgp group** *string* **graceful-restart**
Description Maximum time that stale routes maintain after graceful restart is initiated
Range 1 to 3600
Default 360
Introduced 16.0.R1

hold-time

Context **configure router** *string* **bgp group** *string*
Description Enter the hold-time context
Introduced 16.0.R1

minimum-hold-time *number*

Context **configure router** *string* **bgp group** *string* **hold-time**
Description Minimum hold time that is strictly enforced
Range 0 | 3 to 65536
Default 0
Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **bgp group** *string* **hold-time**
Description BGP hold time
Range 0 | 3 to 65535
Introduced 16.0.R1

import

Context **configure router** *string* **bgp group** *string*
Description Enter the import context
Introduced 16.0.R1

policy *string*

Context	**configure router** *string* **bgp group** *string* **import**
Description	Import policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Introduced	16.0.R1

keepalive *number*

Context	**configure router** *string* **bgp group** *string*
Description	Time after which the keepalive message is sent
Range	0 to 21845
Introduced	16.0.R1

label-preference *number*

Context	**configure router** *string* **bgp group** *string*
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Introduced	16.0.R1

link-bandwidth

Context	**configure router** *string* **bgp group** *string*
Description	Enter the link-bandwidth context
Introduced	16.0.R3

accept-from-ebgp

Context **configure router** *string* **bgp group** *string* **link-bandwidth**

Description Enter the accept-from-ebgp context

Introduced 16.0.R4

ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

label-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv6 routes

Default false

Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R4

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes

Default false

Introduced 16.0.R4

add-to-received-ebgp

Context **configure router** *string* **bgp group** *string* **link-bandwidth**

Description Enter the add-to-received-ebgp context

Introduced 16.0.R3

ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R3

ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R3

label-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**
Description	Support Link Bandwidth EC to labeled unicast IPv4 routes
Default	false
Introduced	16.0.R3

label-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**
Description	Support Link Bandwidth EC to labeled unicast IPv6 routes
Default	false
Introduced	16.0.R3

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R3

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth add-to-received-ebgp**
Description	Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes
Default	false
Introduced	16.0.R3

aggregate-used-paths

Context	**configure router** *string* **bgp group** *string* **link-bandwidth**
Description	Enter the aggregate-used-paths context
Introduced	16.0.R4

ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes
Default false
Introduced 16.0.R4

ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes
Default false
Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description Support Link Bandwidth EC to labeled unicast IPv4 routes
Default false
Introduced 16.0.R4

label-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description Support Link Bandwidth EC to labeled unicast IPv6 routes
Default false
Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description Support VPN IPv4 address family
Default false
Introduced 16.0.R4

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth aggregate-used-paths**
Description	Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes
Default	false
Introduced	16.0.R4

send-to-ebgp

Context	**configure router** *string* **bgp group** *string* **link-bandwidth**
Description	Enter the send-to-ebgp context
Introduced	16.0.R4

ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support Link Bandwidth EC to unlabeled unicast IPv4 routes
Default	false
Introduced	16.0.R4

ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support Link Bandwidth EC to unlabeled unicast IPv6 routes
Default	false
Introduced	16.0.R4

label-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support Link Bandwidth EC to labeled unicast IPv4 routes
Default	false
Introduced	16.0.R4

label-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support Link Bandwidth EC to labeled unicast IPv6 routes
Default	false
Introduced	16.0.R4

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R4

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description	Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes
Default	false
Introduced	16.0.R4

local-address (*union* | *string*)

Context	**configure router** *string* **bgp group** *string*
Description	Local IP address used by group when communicating with BGP peers
Introduced	16.0.R1

local-as

Context	**configure router** *string* **bgp group** *string*
Description	Enter the local-as context
Introduced	16.0.R1

as-number *number*

Context **configure router** *string* **bgp group** *string* **local-as**
Description BGP AS number
Range 1 to 4294967295
Introduced 16.0.R1

prepend-global-as *boolean*

Context **configure router** *string* **bgp group** *string* **local-as**
Description Prepend global AS number when advertising routes to EBGP peer
Default true
Introduced 16.0.R1

private *boolean*

Context **configure router** *string* **bgp group** *string* **local-as**
Description Hide local AS number in paths learned from peering
Default false
Introduced 16.0.R1

local-preference *number*

Context **configure router** *string* **bgp group** *string*
Description Default value for local preference attribute if not specified in incoming routes
Range 0 to 4294967295
Introduced 16.0.R1

loop-detect *keyword*

Context **configure router** *string* **bgp group** *string*
Description Loop detection strategy in AS path
Options drop-peer, ignore-loop, off, discard-route
Introduced 16.0.R1

med-out (*number* | *keyword*)

Context **configure router** *string* **bgp group** *string*
Description Multi-Exit Discriminator (MED) identifier
Options igp-cost
Introduced 16.0.R1

min-route-advertisement *number*

Context **configure router** *string* **bgp group** *string*
Description Minimum interval between successive updates of prefix toward peer
Range 1 to 255
Introduced 16.0.R1

monitor

Context **configure router** *string* **bgp group** *string*
Description Enter the monitor context
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **bgp group** *string* **monitor**
Description Administrative state of BMP monitoring
Default disable
Options enable, disable
Introduced 16.0.R1

all-stations *boolean*

Context **configure router** *string* **bgp group** *string* **monitor**
Description Use all BMP monitoring stations
Default false
Introduced 16.0.R1

route-monitoring

Context	**configure router** *string* **bgp group** *string* **monitor**
Description	Enter the route-monitoring context
Introduced	16.0.R1

post-policy *boolean*

Context	**configure router** *string* **bgp group** *string* **monitor route-monitoring**
Description	Send post-policy monitoring messages
Default	false
Introduced	16.0.R1

pre-policy *boolean*

Context	**configure router** *string* **bgp group** *string* **monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure router** *string* **bgp group** *string* **monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure router** *string* **bgp group** *string* **monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

multihop *number*

Context	**configure router** *string* **bgp group** *string*
Description	TTL value in the IP header of packets sent to a peer
Range	1 to 255
Introduced	16.0.R1

next-hop-self *boolean*

Context	**configure router** *string* **bgp group** *string*
Description	Advertise routes to peer using next hop path attribute set to itself
Default	false
Introduced	16.0.R1

next-hop-unchanged

Context	**configure router** *string* **bgp group** *string*
Description	Enter the next-hop-unchanged context
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp group** *string* **next-hop-unchanged**
Description	Send labeled IPv4 routes to peers with unchanged BGP next-hops
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure router** *string* **bgp group** *string* **next-hop-unchanged**
Description	Send labeled IPv6 routes to peers with unchanged BGP next-hops
Default	false
Introduced	16.0.R1

origin-validation

Context **configure router** *string* **bgp group** *string*

Description Enter the origin-validation context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **origin-validation**

Description Support unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **origin-validation**

Description Support unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp group** *string* **origin-validation**

Description Support labeled unicast IPv4 routes

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp group** *string* **origin-validation**

Description Support labeled unicast IPv6 routes

Default false

Introduced 16.0.R1

outbound-route-filtering

Context	**configure router** *string* **bgp group** *string*
Description	Enter the outbound-route-filtering context
Introduced	16.0.R1

extended-community

Context	**configure router** *string* **bgp group** *string* **outbound-route-filtering**
Description	Enter the extended-community context
Introduced	16.0.R1

accept-orf *boolean*

Context	**configure router** *string* **bgp group** *string* **outbound-route-filtering extended-community**
Description	Negotiate BGP ORF receive capabilities with peer
Introduced	16.0.R1

send-orf

Context	**configure router** *string* **bgp group** *string* **outbound-route-filtering extended-community**
Description	Enter the send-orf context
Introduced	16.0.R1

route-target [community-name] *string*

Context	**configure router** *string* **bgp group** *string* **outbound-route-filtering extended-community send-orf**
Description	Enter the route-target context
Introduced	16.0.R1

[community-name] *string*

Context	**configure router** *string* **bgp group** *string* **outbound-route-filtering extended-community send-orf route-target** *string*
Description	Extended community name that is accepted by route reflector server, or advertised by router
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

passive *boolean*

Context **configure router** *string* **bgp group** *string*
Description Enable passive mode for BGP group
Default false
Introduced 16.0.R1

path-mtu-discovery *boolean*

Context **configure router** *string* **bgp group** *string*
Description Allow path MTU discovery for associated TCP connections
Introduced 16.0.R1

peer-as *number*

Context **configure router** *string* **bgp group** *string*
Description AS number for all remote peers in group
Range 1 to 4294967295
Introduced 16.0.R1

peer-ip-tracking *boolean*

Context **configure router** *string* **bgp group** *string*
Description Allow BGP peer tracking
Introduced 16.0.R1

preference *number*

Context **configure router** *string* **bgp group** *string*
Description Route preference for routes learned from all peers
Range 1 to 255
Introduced 16.0.R1

prefix-limit [family] *keyword*

Context **configure router** *string* **bgp group** *string*
Description Enter the prefix-limit context
Introduced 16.0.R1

[family] *keyword*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Address family to which the limit applies
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4
Introduced	16.0.R1
Notes	This element is part of a list key

idle-timeout *number*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Time that BGP peering remains idle before reconnecting to peers
Range	1 to 1024
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Send warning message if specified threshold or limit is reached, without disabling BGP peer session
Default	false
Introduced	16.0.R1

maximum *number*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Specifies the maximum number of routes that can be learned from this peer.
Range	1 to 4294967295
Introduced	16.0.R3
Notes	This element is mandatory

post-import *boolean*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Apply prefix limit only to number of routes accepted by import policies
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **bgp group** *string* **prefix-limit** *keyword*
Description	Threshold value that triggers a warning message
Range	1 to 100
Default	90
Introduced	16.0.R1

remove-private

Context	**configure router** *string* **bgp group** *string*
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context	**configure router** *string* **bgp group** *string* **remove-private**
Description	Remove private AS numbers up to first public ASN encountered
Default	false
Introduced	16.0.R1

skip-peer-as *boolean*

Context	**configure router** *string* **bgp group** *string* **remove-private**
Description	Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN
Default	false
Introduced	16.0.R1

send-communities

Context	**configure router** *string* **bgp group** *string*
Description	Enter the send-communities context
Introduced	16.0.R1

extended *boolean*

Context **configure router** *string* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for external communities.

Introduced 16.0.R1

large *boolean*

Context **configure router** *string* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for large communities.

Introduced 16.0.R1

standard *boolean*

Context **configure router** *string* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for non-external communities.

Introduced 16.0.R1

split-horizon *boolean*

Context **configure router** *string* **bgp group** *string*

Description Prevent routes from being reflected back to peer that sends best route

Introduced 16.0.R1

static-group *boolean*

Context **configure router** *string* **bgp group** *string*

Description Use group for static peers

Default true

Introduced 16.0.R1

third-party-nexthop *boolean*

Context **configure router** *string* **bgp group** *string*

Description Send third party next hop to EBGP peers in same subnet as source peer

Introduced 16.0.R1

ttl-security *number*

Context **configure router** *string* **bgp group** *string*

Description Minimum TTL value for incoming BGP packet

Range 1 to 255

Introduced 16.0.R1

type *keyword*

Context **configure router** *string* **bgp group** *string*

Description BGP peer type

Default no-type

Options no-type, internal, external

Introduced 16.0.R1

vpn-apply-export *boolean*

Context **configure router** *string* **bgp group** *string*

Description Apply base instance BGP export route policies to BGP VPN routes

Introduced 16.0.R1

vpn-apply-import *boolean*

Context **configure router** *string* **bgp group** *string*

Description Apply base instance BGP import route policies to BGP VPN routes

Introduced 16.0.R1

hold-time

Context **configure router** *string* **bgp**

Description Enter the hold-time context

Introduced 16.0.R1

minimum-hold-time *number*

Context	**configure router** *string* **bgp hold-time**
Description	Minimum hold time that is strictly enforced
Range	0 | 3 to 65535
Default	0
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **bgp hold-time**
Description	BGP hold time
Range	0 | 3 to 65535
Default	90
Introduced	16.0.R1

ibgp-multipath *boolean*

Context	**configure router** *string* **bgp**
Description	Add IBGP routes with multiple next hops to route table
Default	false
Introduced	16.0.R1

import

Context	**configure router** *string* **bgp**
Description	Enter the import context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp import**
Description	Import policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure router** *string* **bgp**
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Default	false
Introduced	16.0.R1

inter-as-vpn *boolean*

Context	**configure router** *string* **bgp**
Description	Configure BGP to enable sending VPN routes across AS boundaries
Default	false
Introduced	16.0.R1

keepalive *number*

Context	**configure router** *string* **bgp**
Description	Time after which the keepalive message is sent
Range	0 to 21845
Default	30
Introduced	16.0.R1

label-preference *number*

Context	**configure router** *string* **bgp**
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Default	170
Introduced	16.0.R1

link-state-route-export *boolean*

Context	**configure router** *string* **bgp**
Description	Specifies whether to export the TED database into BGP.
Default	false
Introduced	16.0.R1

link-state-route-import *boolean*

Context	**configure router** *string* **bgp**
Description	Specifies whether to receive TED NLRI updates. It is applicable to only Virtual Service Router (VSR) running within a Network Service Provider (NSP).
Default	false
Introduced	16.0.R1

local-as

Context	**configure router** *string* **bgp**
Description	Enter the local-as context
Introduced	16.0.R1

as-number *number*

Context	**configure router** *string* **bgp local-as**
Description	BGP AS number
Range	1 to 4294967295
Introduced	16.0.R1

prepend-global-as *boolean*

Context	**configure router** *string* **bgp local-as**
Description	Prepend global AS number when advertising routes to EBGP peer
Default	true
Introduced	16.0.R1

private *boolean*

Context	**configure router** *string* **bgp local-as**
Description	Hide local AS number in paths learned from peering
Default	false
Introduced	16.0.R1

local-preference *number*

Context **configure router** *string* **bgp**

Description Default value for local preference attribute if not specified in incoming routes

Default 100

Introduced 16.0.R1

loop-detect *keyword*

Context **configure router** *string* **bgp**

Description Loop detection strategy in AS path

Default ignore-loop

Options drop-peer, ignore-loop, off, discard-route

Introduced 16.0.R1

med-out (*number* | *keyword*)

Context **configure router** *string* **bgp**

Description Multi-Exit Discriminator (MED) identifier

Options igp-cost

Introduced 16.0.R1

min-route-advertisement *number*

Context **configure router** *string* **bgp**

Description Minimum interval between successive updates of prefix toward peer

Range 1 to 255

Default 30

Introduced 16.0.R1

monitor

Context **configure router** *string* **bgp**

Description Enter the monitor context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **bgp monitor**
Description	Administrative state of BMP monitoring
Default	disable
Options	enable, disable
Introduced	16.0.R1

all-stations *boolean*

Context	**configure router** *string* **bgp monitor**
Description	Use all BMP monitoring stations
Default	false
Introduced	16.0.R1

route-monitoring

Context	**configure router** *string* **bgp monitor**
Description	Enter the route-monitoring context
Introduced	16.0.R1

post-policy *boolean*

Context	**configure router** *string* **bgp monitor route-monitoring**
Description	Send post-policy monitoring messages
Default	false
Introduced	16.0.R1

pre-policy *boolean*

Context	**configure router** *string* **bgp monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure router** *string* **bgp monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure router** *string* **bgp monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

mp-bgp-keep *boolean*

Context	**configure router** *string* **bgp**
Description	Keep information for all Multiprotocol BGP routes on BGP router instance
Default	false
Introduced	16.0.R1

multihop *number*

Context	**configure router** *string* **bgp**
Description	TTL value entered in IP header of packets sent to peer
Range	1 to 255
Introduced	16.0.R1

multipath

Context	**configure router** *string* **bgp**
Description	Enter the multipath context
Introduced	16.0.R1

ebgp *number*

Context **configure router** *string* **bgp multipath**

Description Maximum multipaths per prefix or NLRI when best path is an EBGP learned route

Range 1 to 64

Introduced 16.0.R1

ibgp *number*

Context **configure router** *string* **bgp multipath**

Description Maximum multipaths per prefix or NLRI when best path is an IBGP learned route

Range 1 to 64

Introduced 16.0.R1

max-paths *number*

Context **configure router** *string* **bgp multipath**

Description Maximum multipaths per prefix or NLRI if EBGP or IBGP maximum paths do not apply

Range 1 to 64

Default 1

Introduced 16.0.R1

restrict *keyword*

Context **configure router** *string* **bgp multipath**

Description Multipath restrictions

Default same-as-path-length

Options same-as-path-length, same-neighbor-as, exact-as-path

Introduced 16.0.R1

mvpn-vrf-import-subtype-new *boolean*

Context **configure router** *string* **bgp**

Description Encode the new IANA value of 0x010b in advertised routes

Default false

Introduced 16.0.R1

neighbor [ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure router** *string* **bgp**

Description Enter the neighbor context

Introduced 16.0.R1

[ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description BGP group neighbor

Introduced 16.0.R1

Notes This element is part of a list key

add-paths

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the add-paths context

Introduced 16.0.R1

ipv4

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths ipv4**

Description Negotiate to receive multiple unlabeled unicast routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths ipv4**

Description Maximum number of paths per unlabeled IPv4 unicast prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

ipv6

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths ipv6**

Description Negotiate to receive multiple unlabeled unicast routes per IPv6 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths ipv6**

Description Maximum number of paths per unlabeled unicast IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

label-ipv4

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the label-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths label-ipv4**

Description Negotiate to receive multiple labeled-unicast routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths label-ipv4**

Description Maximum number of paths per labeled-unicast IPv4 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

label-ipv6

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the label-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths label-ipv6**

Description Negotiate to receive multiple labeled-unicast routes per IPv6 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths label-ipv6**

Description Maximum number of paths per labeled-unicast IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mcast-vpn-ipv4

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the mcast-vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mcast-vpn-ipv4**
Description	Negotiate to receive multiple multicast routes per IPv4 VPN prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mcast-vpn-ipv4**
Description	Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

mcast-vpn-ipv6

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**
Description	Enter the mcast-vpn-ipv6 context
Introduced	16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mcast-vpn-ipv6**
Description	Negotiate to receive multiple multicast routes per IPv6 VPN prefix
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mcast-vpn-ipv6**
Description	Maximum number of paths per multicast IPv6 VPN prefix that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

mvpn-ipv4

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the mvpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mvpn-ipv4**

Description Negotiate to receive multiple multicast VPN routes per IPv4 prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mvpn-ipv4**

Description Maximum number of paths per multicast VPN IPv4 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

mvpn-ipv6

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the mvpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mvpn-ipv6**

Description Negotiate to receive multiple multicast routes per IPv6 VPN prefix

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths mvpn-ipv6**

Description Maximum number of paths per multicast VPN IPv6 prefix that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

vpn-ipv4

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the vpn-ipv4 context

Introduced 16.0.R1

receive *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths vpn-ipv4**

Description Negotiate to receive VPN-IPv4 routes

Default false

Introduced 16.0.R1

send *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths vpn-ipv4**

Description Maximum number of paths per VPN-IPv4 NLRI that can be advertised to add-path peers

Range 1 to 16

Introduced 16.0.R1

vpn-ipv6

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths**

Description Enter the vpn-ipv6 context

Introduced 16.0.R1

receive *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths vpn-ipv6**
Description	Negotiate to receive multiple VPN-IPv6 routes
Default	false
Introduced	16.0.R1

send *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **add-paths vpn-ipv6**
Description	Maximum number of paths per VPN-IPv6 NLRI that can be advertised to add-path peers
Range	1 to 16
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Administrative state of BGP peer
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-inactive *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Advertise inactive BGP routes to other BGP peers
Introduced	16.0.R1

advertise-ipv6-next-hops

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the advertise-ipv6-next-hops context
Introduced	16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **advertise-ipv6-next-hops**

Description Advertise labeled IPv4 routes

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **advertise-ipv6-next-hops**

Description Advertise labeled IPv6 routes

Default false

Introduced 16.0.R1

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **advertise-ipv6-next-hops**

Description Advertise VPN IPv4 routes

Default false

Introduced 16.0.R1

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **advertise-ipv6-next-hops**

Description Advertise VPN IPv6 routes

Default false

Introduced 16.0.R1

advertise-ldp-prefix *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Advertise all activated LDP FEC prefixes to BGP peer

Default false

Introduced 16.0.R1

aggregator-id-zero *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Set router ID in aggregator path attribute to zero when BGP aggregates routes

Introduced 16.0.R1

aigp *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Add Accumalated IGP (AIGP) attribute to advertised routes

Introduced 16.0.R1

asn-4-byte *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Allow use of 4-byte ASNs

Introduced 16.0.R1

authentication-key *encrypted-leaf*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Configure the BGP authentication key for all peers.

String Length 1 to 370

Introduced 16.0.R1

authentication-keychain *string*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.

Reference configure **system security keychains keychain** *string*

Introduced 16.0.R3

bfd-liveness *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Use Bidirectional Forwarding Detection

Introduced 16.0.R1

capability-negotiation *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enable capability negotiation

Introduced 16.0.R1

client-reflect *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enable client reflection of routes by the route reflector

Introduced 16.0.R1

cluster

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the cluster context

Introduced 16.0.R1

allow-local-fallback *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **cluster**

Description Allow fallback to RR default location when no BGP routes reachable from ORR location

Default false

Introduced 16.0.R1

cluster-id *ipv4-address*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **cluster**

Description Cluster ID for route reflector server

Introduced 16.0.R1

orr-location *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **cluster**

Description Optimal route reflection location for cluster ID

Range 1 to 16

Introduced 16.0.R1

connect-retry *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description BGP connect retry timer value

Range 1 to 65535

Introduced 16.0.R1

damp-peer-oscillations

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the damp-peer-oscillations context

Introduced 16.0.R1

error-interval *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations**

Description Error free interval after session reset, to return idle-hold-time to initial-wait

Range 0 to 2048

Default 30

Introduced 16.0.R1

idle-hold-time

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations**

Description Enter the idle-hold-time context

Introduced 16.0.R1

initial-wait *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Time a session remains in idle state after session stabilized

Range 0 to 2048

Default 0

Introduced 16.0.R1

max-wait *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Maximum session idle time after repeated instability

Range 1 to 2048

Default 60

Introduced 16.0.R1

second-wait *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Time that doubles after each session failure within relatively short time

Range 1 to 2048

Default 5

Introduced 16.0.R1

damping *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Use BGP route damping for learned routes defined within the route policy

Introduced 16.0.R1

def-recv-evpn-encap *keyword*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Default encapsulation type when EVPN route is received without BGP encapsulation extended community

Options mpls, vxlan

Introduced 16.0.R1

default-route-target *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Send default RTC route to peers in BGP peer group

Introduced 16.0.R1

description *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

enforce-first-as *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match
Introduced	16.0.R1

error-handling

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the error-handling context
Introduced	16.0.R1

update-fault-tolerance *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **error-handling**
Description	Consider non-critical errors as treat-as-withdraw and do not trigger session reset
Introduced	16.0.R1

export

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the export context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **export**
Description	Export policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

extended-nh-encoding

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the extended-nh-encoding context
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **extended-nh-encoding**
Description	Advertise extended NH encoding capability for labeled IPv4 routes
Default	false
Introduced	16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **extended-nh-encoding**
Description	Advertise extended NH encoding capability for VPN IPv4 routes
Default	false
Introduced	16.0.R1

family

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the family context
Introduced	16.0.R1

bgp-ls *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support BGP-LS address family

Default false

Introduced 16.0.R1

evpn *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support EVPN address family

Default false

Introduced 16.0.R1

flow-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support flowspec IPv4 address family

Default false

Introduced 16.0.R1

flow-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support flowspec IPv6 address family

Default false

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support IPv4 address family

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support IPv6 address family

Default false

Introduced 16.0.R1

l2-vpn *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support L2 VPN address family

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support labeled IPv4 address family

Default false

Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support labeled IPv6 address family

Default false

Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support multicast IPv4 address family

Default false

Introduced 16.0.R1

mcast-ipv6 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support multicast IPv6 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support multicast VPN IPv4 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support multicast VPN IPv6 address family
Default	false
Introduced	16.0.R1

mdt-safi *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support Multicast Distribution Tree (MDT) SAFI address family
Default	false
Introduced	16.0.R1

ms-pw *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support multi-segment pseudowire address family
Default	false
Introduced	16.0.R1

mvpn-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support MVPN IPv4 address family
Default	false
Introduced	16.0.R1

mvpn-ipv6 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support MVPN IPv6 address family
Default	false
Introduced	16.0.R1

route-target *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support address family for RT constrain routes
Default	false
Introduced	16.0.R1

sr-policy-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Advertise capability for AFI1/SAFI73, BGP routes that encode an SR policy to an IPv4 destination
Default	false
Introduced	16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support VPN IPv4 address family
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description	Support VPN IPv6 address family
Default	false
Introduced	16.0.R1

fast-external-failover *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the graceful-restart context
Introduced	16.0.R1

gr-notification *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**
Description	Enable graceful restart capability indicating support for NOTIFICATION messages
Default	false
Introduced	16.0.R1

long-lived

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**
Description	Enter the long-lived context
Introduced	16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Advertise BGP routes marked as LLGR stale to BGP peers
Default	false
Introduced	16.0.R1

advertised-stale-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*
Description	Address family type for LLGR
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6
Introduced	16.0.R1
Notes	This element is part of a list key

advertised-stale-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*
Description	Locally-imposed LLGR stale time
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1

forwarding-bits-set *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	BGP LLGR forwarding bit behavior for F bit in AFI or SAFI
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1

helper-override-restart-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability
Range	0 to 4095
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Locally-imposed LLGR stale time
Range	0 to 16777215
Introduced	16.0.R1

without-no-export *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability
Default	false
Introduced	16.0.R1

restart-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**
Description	BGP graceful restart time
Range	0 to 4095
Default	300
Introduced	16.0.R1

stale-routes-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**
Description	Maximum time that stale routes maintain after graceful restart is initiated
Range	1 to 3600
Default	360
Introduced	16.0.R1

group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	BGP peer group
Reference	configure **router** *string* **bgp group** *string*
Introduced	16.0.R1
Notes	This element is mandatory

hold-time

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the hold-time context
Introduced	16.0.R1

minimum-hold-time *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **hold-time**
Description	Minimum hold time that is strictly enforced
Range	0 | 3 to 65536
Default	0
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **hold-time**
Description	BGP hold time
Range	0 | 3 to 65535
Introduced	16.0.R1

import

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the import context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **import**
Description	Import policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Introduced	16.0.R1

keepalive *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Time after which the keepalive message is sent
Range	0 to 21845
Introduced	16.0.R1

l2vpn-cisco-interop *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Allow translation between non-compliant NLRI format of Cisco
Default	false
Introduced	16.0.R1

label-preference *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Introduced	16.0.R1

link-bandwidth

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the link-bandwidth context

Introduced 16.0.R4

accept-from-ebgp

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the accept-from-ebgp context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv6 routes

Default false

Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R4

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes

Default false

Introduced 16.0.R4

add-to-received-ebgp

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the add-to-received-ebgp context

Introduced 16.0.R3

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R3

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R3

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R3

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv6 routes

Default false

Introduced 16.0.R3

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R3

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes

Default false

Introduced 16.0.R3

aggregate-used-paths

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the aggregate-used-paths context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to labeled unicast IPv6 routes

Default false

Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R4

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes

Default false

Introduced 16.0.R4

send-to-ebgp

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the send-to-ebgp context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv6 routes

Default false

Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support VPN IPv4 address family

Default false

Introduced 16.0.R4

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to IPv6 VPN (SAFI 128) routes

Default false

Introduced 16.0.R4

local-address (*union* | *string*)

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Local IP address used by neighbor when communicating with BGP peers

Introduced 16.0.R1

local-as

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the local-as context

Introduced 16.0.R1

as-number *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**

Description BGP AS number

Range 1 to 4294967295

Introduced 16.0.R1

prepend-global-as *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**

Description Prepend global AS number when advertising routes to EBGP peer

Default true

Introduced 16.0.R1

private *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**

Description Hide local AS number in paths learned from peering

Default false

Introduced 16.0.R1

local-preference *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Default value for local preference attribute if not specified in incoming routes

Range 0 to 4294967295

Introduced 16.0.R1

loop-detect *keyword*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Loop detection strategy in AS path

Options drop-peer, ignore-loop, off, discard-route

Introduced 16.0.R1

med-out (*number* | *keyword*)

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Multi-Exit Discriminator (MED) identifier

Options igp-cost

Introduced 16.0.R1

min-route-advertisement *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Minimum interval between successive updates of prefix toward peer

Range 1 to 255

Introduced 16.0.R1

monitor

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the monitor context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**

Description Administrative state of BMP monitoring

Default disable

Options enable, disable

Introduced 16.0.R1

all-stations *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**
Description	Use all BMP monitoring stations
Default	false
Introduced	16.0.R1

route-monitoring

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**
Description	Enter the route-monitoring context
Introduced	16.0.R1

post-policy *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor route-monitoring**
Description	Send post-policy monitoring messages
Default	false
Introduced	16.0.R1

pre-policy *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

multihop *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	TTL value in the P header of packets sent to a peer
Range	1 to 255
Introduced	16.0.R1

next-hop-self *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Advertise routes to peer using next hop path attribute set to itself
Introduced	16.0.R1

next-hop-unchanged

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the next-hop-unchanged context
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **next-hop-unchanged**
Description	Send labeled IPv4 routes to peers with unchanged BGP next-hops
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **next-hop-unchanged**
Description Send labeled IPv6 routes to peers with unchanged BGP next-hops
Default false
Introduced 16.0.R1

origin-validation

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Enter the origin-validation context
Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **origin-validation**
Description Support unlabeled unicast IPv4 routes
Default false
Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **origin-validation**
Description Support unlabeled unicast IPv6 routes
Default false
Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **origin-validation**
Description Support labeled unicast IPv4 routes
Default false
Introduced 16.0.R1

label-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **origin-validation**

Description Support labeled unicast IPv6 routes

Default false

Introduced 16.0.R1

outbound-route-filtering

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the outbound-route-filtering context

Introduced 16.0.R1

extended-community

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **outbound-route-filtering**

Description Enter the extended-community context

Introduced 16.0.R1

accept-orf *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **outbound-route-filtering extended-community**

Description Negotiate BGP ORF receive capabilities with peer

Introduced 16.0.R1

send-orf

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **outbound-route-filtering extended-community**

Description Enter the send-orf context

Introduced 16.0.R1

route-target [community-name] *string*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **outbound-route-filtering extended-community send-orf**

Description Enter the route-target context

Introduced 16.0.R1

[community-name] *string*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **outbound-route-filtering extended-community send-orf route-target** *string*
Description	Extended community name that is accepted by route reflector server, or advertised by router
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

passive *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enable passive mode for BGP group
Introduced	16.0.R1

path-mtu-discovery *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Allow path MTU discovery for associated TCP connections
Introduced	16.0.R1

peer-as *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	AS number for the remote peer
Range	1 to 4294967295
Introduced	16.0.R1

peer-creation-type *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Peer creation type
Default	static
Options	static, dynamic
Introduced	16.0.R1

peer-ip-tracking *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Allow BGP peer tracking
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Route preference for routes learned from all peers
Range	1 to 255
Introduced	16.0.R1

prefix-limit [family] *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the prefix-limit context
Introduced	16.0.R1

[family] *keyword*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Address family to which the limit applies
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4
Introduced	16.0.R1
Notes	This element is part of a list key

idle-timeout *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Time that BGP peering remains idle before reconnecting to peers
Range	1 to 1024
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Send warning message if specified threshold or limit is reached, without disabling BGP peer session
Default	false
Introduced	16.0.R1

maximum *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Specifies the maximum number of routes that can be learned from this peer.
Range	1 to 4294967295
Introduced	16.0.R3

post-import *boolean*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Apply prefix limit only to number of routes accepted by import policies
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Threshold value that triggers a warning message
Range	1 to 100
Default	90
Introduced	16.0.R1

remove-private

Context	**configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **remove-private**
Description Remove private AS numbers up to first public ASN encountered
Default false
Introduced 16.0.R1

skip-peer-as *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **remove-private**
Description Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN
Default false
Introduced 16.0.R1

send-communities

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Enter the send-communities context
Introduced 16.0.R1

extended *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**
Description Enables the sending of community attribute to the peer for external communities.
Introduced 16.0.R1

large *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**
Description Enables the sending of community attribute to the peer for large communities.
Introduced 16.0.R1

standard *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**
Description Enables the sending of community attribute to the peer for non-external communities.
Introduced 16.0.R1

split-horizon *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Prevent routes from being reflected back to peer that sends best route (true)
Introduced 16.0.R1

third-party-nexthop *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Send third party next hop to EBGP peers in same subnet as source peer
Introduced 16.0.R1

ttl-security *number*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Minimum TTL value for incoming BGP packet
Range 1 to 255
Introduced 16.0.R1

type *keyword*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Peer as internal (IBGP) or external (EBGP)
Options no-type, internal, external
Introduced 16.0.R1

vpn-apply-export *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Apply base instance BGP export route polices to BGP VPN routes
Introduced 16.0.R1

vpn-apply-import *boolean*

Context **configure router** *string* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Apply base instance BGP import route polices to BGP VPN routes
Introduced 16.0.R1

neighbor-trust

Context **configure router** *string* **bgp**

Description Enter the neighbor-trust context

Introduced 16.0.R4

vpn-ipv4 *boolean*

Context **configure router** *string* **bgp neighbor-trust**

Description Enable/disable family type vpn-ipv4.

Default false

Introduced 16.0.R4

vpn-ipv6 *boolean*

Context **configure router** *string* **bgp neighbor-trust**

Description Enable/disable family type vpn-ipv6.

Default false

Introduced 16.0.R4

next-hop-resolution

Context **configure router** *string* **bgp**

Description Enter the next-hop-resolution context

Introduced 16.0.R1

labeled-routes

Context **configure router** *string* **bgp next-hop-resolution**

Description Enter the labeled-routes context

Introduced 16.0.R1

allow-static *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes**

Description Allow static routes to resolve BGP next-hop of label-IPv4/IPv6 and VPN-IPv4/IPv6 routes from peer

Default false

Introduced 16.0.R1

rr-use-route-table *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes**
Description	RTM resolution of BGP next hop for labeled routes if TTM resolution fails
Default	false
Introduced	16.0.R1

transport-tunnel

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes**
Description	Enter the transport-tunnel context
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword*
Description	Address family type for configuring next-hop resolution of BGP label routes
Options	vpn, label-ipv4, label-ipv6
Introduced	16.0.R1
Notes	This element is part of a list key

enforce-strict-tunnel-tagging *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword*
Description	Consider only LSPs marked with an admin-tag for next-hop resolution
Default	false
Introduced	16.0.R1

resolution *keyword*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword*
Description	Resolution state of BGP unlabeled routes to tunnels
Default	filter
Options	none, filter, any
Introduced	16.0.R1

resolution-filter

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword*
Description	Enter the resolution-filter context
Introduced	16.0.R1

bgp *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**
Description	Use BGP tunneling for next-hop resolution
Introduced	16.0.R1

ldp *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**
Description	Use LDP tunneling for next-hop resolution
Default	true
Introduced	16.0.R1

mpls-fwd-policy *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**
Description	Use Mpls Forwarding Policy for next hop resolution.
Default	false
Introduced	16.0.R4

rib-api *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**

Description Use rib-api tunnel for next hop resolution.

Default false

Introduced 16.0.R4

rsvp *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**

Description Use RSVP tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-isis *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**

Description Use SR ISIS tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**

Description Use SR OSPF tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-policy *boolean*

Context **configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**

Description Use SR policies for next-hop resolution

Default false

Introduced 16.0.R1

sr-te *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**
Description	Use SR traffic engineering for next-hop resolution
Default	false
Introduced	16.0.R1

udp *boolean*

Context	**configure router** *string* **bgp next-hop-resolution labeled-routes transport-tunnel family** *keyword* **resolution-filter**
Description	Use UDP for next-hop resolution
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp next-hop-resolution**
Description	Policy that controls which IP routes are eligible to resolve BGP next hop addresses
String Length	1 to 64
Introduced	16.0.R1

shortcut-tunnel

Context	**configure router** *string* **bgp next-hop-resolution**
Description	Enter the shortcut-tunnel context
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword*
Description	Address family type for shortcut tunnel selection
Options	ipv4, ipv6
Introduced	16.0.R1
Notes	This element is part of a list key

disallow-igp *boolean*

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword*
Description	Do not resolve BGP routes using IGP next-hops in RTM if no tunnel next-hops found in TTM
Default	false
Introduced	16.0.R1

enforce-strict-tunnel-tagging *boolean*

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword*
Description	Consider only LSPs marked with an admin-tag for next-hop resolution
Default	false
Introduced	16.0.R1

resolution *keyword*

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword*
Description	Resolution state of BGP unlabeled routes to tunnels
Default	none
Options	none, filter, any
Introduced	16.0.R1

resolution-filter

Context	**configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword*
Description	Enter the resolution-filter context
Introduced	16.0.R1

bgp *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use BGP tunneling for next-hop resolution

Default false

Introduced 16.0.R1

ldp *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use LDP tunneling for next-hop resolution

Default false

Introduced 16.0.R1

mpls-fwd-policy *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use Mpls Forwarding Policy for next hop resolution.

Default false

Introduced 16.0.R4

rib-api *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use rib-api tunnel for next hop resolution.

Default false

Introduced 16.0.R4

rsvp *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use RSVP tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-isis *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use SR ISIS tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use SR OSPF tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-policy *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use SR policies for next-hop resolution

Default false

Introduced 16.0.R1

sr-te *boolean*

Context **configure router** *string* **bgp next-hop-resolution shortcut-tunnel family** *keyword* **resolution-filter**

Description Use SR traffic engineering for next-hop resolution

Default false

Introduced 16.0.R1

use-bgp-routes *boolean*

Context **configure router** *string* **bgp next-hop-resolution**

Description Use BGP routes to recursively resolve BGP next-hop of unlabeled IPv4 and unlabeled IPv6 routes

Default false

Introduced 16.0.R1

weighted-ecmp *boolean*

Context	**configure router** *string* **bgp next-hop-resolution**
Description	Allow weighted ECMP for next-hop tunnel selection for 6PE
Default	false
Introduced	16.0.R1

optimal-route-reflection

Context	**configure router** *string* **bgp**
Description	Enter the optimal-route-reflection context
Introduced	16.0.R1

location [location-id] *number*

Context	**configure router** *string* **bgp optimal-route-reflection**
Description	Enter the location context
Introduced	16.0.R1

[location-id] *number*

Context	**configure router** *string* **bgp optimal-route-reflection location** *number*
Description	Optimal route reflection location
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

primary-ip-address *ipv4-unicast-address*

Context	**configure router** *string* **bgp optimal-route-reflection location** *number*
Description	Preferred IPv4 address to calculate ORR cost from location associated to BGP next hop
Introduced	16.0.R1

primary-ipv6-address *ipv6-unicast-address*

Context	**configure router** *string* **bgp optimal-route-reflection location** *number*
Description	Specifies the preferred IPv6 address to calculate the optimal-route-reflection cost from the associated location to a bgp next-hop.
Introduced	16.0.R4

secondary-ip-address *ipv4-unicast-address*

Context **configure router** *string* **bgp optimal-route-reflection location** *number*

Description Second preferred IP address to calculate ORR cost from location associated to BGP next hop

Introduced 16.0.R1

secondary-ipv6-address *ipv6-unicast-address*

Context **configure router** *string* **bgp optimal-route-reflection location** *number*

Description Specifies the second preferred IPv6 address to calculate the optimal-route-reflection cost from the associated location to a bgp next-hop.

Introduced 16.0.R4

tertiary-ip-address *ipv4-unicast-address*

Context **configure router** *string* **bgp optimal-route-reflection location** *number*

Description Third preferred IP address to calculate ORR cost from location associated to BGP next hop

Introduced 16.0.R1

tertiary-ipv6-address *ipv6-unicast-address*

Context **configure router** *string* **bgp optimal-route-reflection location** *number*

Description Specifies the third preferred IPv6 address to calculate the optimal-route-reflection cost from the associated location to a bgp next-hop.

Introduced 16.0.R4

spf-wait

Context **configure router** *string* **bgp optimal-route-reflection**

Description Enter the spf-wait context

Introduced 16.0.R1

initial-wait *number*

Context	**configure router** *string* **bgp optimal-route-reflection spf-wait**
Description	Initial hold off time before initiating an SPF to calculate cost from optimal route reflection location
Range	1 to 300
Default	5
Introduced	16.0.R1

max-wait *number*

Context	**configure router** *string* **bgp optimal-route-reflection spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	1 to 600
Default	60
Introduced	16.0.R1

second-wait *number*

Context	**configure router** *string* **bgp optimal-route-reflection spf-wait**
Description	Additional hold off time between first and second SPF calculations
Range	1 to 300
Default	15
Introduced	16.0.R1

outbound-route-filtering

Context	**configure router** *string* **bgp**
Description	Enter the outbound-route-filtering context
Introduced	16.0.R1

extended-community

Context	**configure router** *string* **bgp outbound-route-filtering**
Description	Enter the extended-community context
Introduced	16.0.R1

accept-orf *boolean*

Context	**configure router** *string* **bgp outbound-route-filtering extended-community**
Description	Negotiate BGP ORF receive capabilities with peer
Default	false
Introduced	16.0.R1

send-orf

Context	**configure router** *string* **bgp outbound-route-filtering extended-community**
Description	Enter the send-orf context
Introduced	16.0.R1

route-target [community-name] *string*

Context	**configure router** *string* **bgp outbound-route-filtering extended-community send-orf**
Description	Enter the route-target context
Introduced	16.0.R1

[community-name] *string*

Context	**configure router** *string* **bgp outbound-route-filtering extended-community send-orf route-target** *string*
Description	Extended community name that is accepted by route reflector server, or advertised by router
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

override-tunnel-elc *boolean*

Context	**configure router** *string* **bgp**
Description	Render all far ends for BGP tunnels as entropy-label-capable, despite received capability signaling
Default	false
Introduced	16.0.R1

path-mtu-discovery *boolean*

Context	**configure router** *string* **bgp**
Description	Allow path MTU discovery for associated TCP connections
Default	false
Introduced	16.0.R1

peer-ip-tracking *boolean*

Context	**configure router** *string* **bgp**
Description	Allow BGP peer tracking
Default	false
Introduced	16.0.R1

peer-tracking-policy *string*

Context	**configure router** *string* **bgp**
Description	Policy for BGP peer tracking on router instance
String Length	1 to 64
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **bgp**
Description	Route preference for routes learned from all peers
Range	1 to 255
Default	170
Introduced	16.0.R1

purge-timer *number*

Context	**configure router** *string* **bgp**
Description	Maximum time before stale routes are purged
Range	1 to 60
Default	10
Introduced	16.0.R1

rapid-update

Context	**configure router** *string* **bgp**
Description	Enter the rapid-update context
Introduced	16.0.R1

evpn *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include EVPN address family
Default	false
Introduced	16.0.R1

l2-vpn *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include L2 VPN address family
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include labeled IPv4 address family
Default	false
Introduced	16.0.R1

label-ipv6 *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include labeled IPv6 address family
Default	false
Introduced	16.0.R1

mcast-vpn-ipv4 *boolean*

Context **configure router** *string* **bgp rapid-update**
Description Include multicast VPN IPv4 address family
Default false
Introduced 16.0.R1

mcast-vpn-ipv6 *boolean*

Context **configure router** *string* **bgp rapid-update**
Description Include multicast VPN IPv6 address family
Default false
Introduced 16.0.R1

mdt-safi *boolean*

Context **configure router** *string* **bgp rapid-update**
Description Include Multicast Distribution Tree (MDT) SAFI address family
Default false
Introduced 16.0.R1

mvpn-ipv4 *boolean*

Context **configure router** *string* **bgp rapid-update**
Description Include MVPN IPv4 address family
Default false
Introduced 16.0.R1

mvpn-ipv6 *boolean*

Context **configure router** *string* **bgp rapid-update**
Description Include MVPN IPv6 address family
Default false
Introduced 16.0.R1

vpn-ipv4 *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include VPN IPv4 address family
Default	false
Introduced	16.0.R1

vpn-ipv6 *boolean*

Context	**configure router** *string* **bgp rapid-update**
Description	Include VPN IPv6 address family
Default	false
Introduced	16.0.R1

rapid-withdrawal *boolean*

Context	**configure router** *string* **bgp**
Description	Send BGP withdrawals immediately without MRAI timer expiring
Default	false
Introduced	16.0.R1

remove-private

Context	**configure router** *string* **bgp**
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context	**configure router** *string* **bgp remove-private**
Description	Remove private ASNs up to the first public ASN encountered
Default	false
Introduced	16.0.R1

skip-peer-as *boolean*

Context	**configure router** *string* **bgp remove-private**
Description	Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN
Default	false
Introduced	16.0.R1

rib-management

Context	**configure router** *string* **bgp**
Description	Enter the rib-management context
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **bgp rib-management**
Description	Enter the ipv4 context
Introduced	16.0.R1

leak-import

Context	**configure router** *string* **bgp rib-management ipv4**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp rib-management ipv4 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context	**configure router** *string* **bgp rib-management ipv4**
Description	Enter the route-table-import context
Introduced	16.0.R1

policy-name *string*

Context	**configure router** *string* **bgp rib-management ipv4 route-table-import**
Description	Policy that controls the importation of active routes from IP route table into one of BGP RIBs
String Length	1 to 64
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **bgp rib-management**
Description	Enter the ipv6 context
Introduced	16.0.R1

leak-import

Context	**configure router** *string* **bgp rib-management ipv6**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp rib-management ipv6 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context	**configure router** *string* **bgp rib-management ipv6**
Description	Enter the route-table-import context
Introduced	16.0.R1

policy-name *string*

Context	**configure router** *string* **bgp rib-management ipv6 route-table-import**
Description	Policy that controls the importation of active routes from IP route table into one of BGP RIBs
String Length	1 to 64
Introduced	16.0.R1

label-ipv4

Context	**configure router** *string* **bgp rib-management**
Description	Enter the label-ipv4 context
Introduced	16.0.R1

leak-import

Context	**configure router** *string* **bgp rib-management label-ipv4**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **bgp rib-management label-ipv4 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context **configure router** *string* **bgp rib-management label-ipv4**

Description Enter the route-table-import context

Introduced 16.0.R1

policy-name *string*

Context **configure router** *string* **bgp rib-management label-ipv4 route-table-import**

Description Policy that controls the importation of active routes from IP route table into one of BGP RIBs

String Length 1 to 64

Introduced 16.0.R1

label-ipv6

Context **configure router** *string* **bgp rib-management**

Description Enter the label-ipv6 context

Introduced 16.0.R1

route-table-import

Context **configure router** *string* **bgp rib-management label-ipv6**

Description Enter the route-table-import context

Introduced 16.0.R1

policy-name *string*

Context **configure router** *string* **bgp rib-management label-ipv6 route-table-import**

Description Policy that controls the importation of active routes from IP route table into one of BGP RIBs

String Length 1 to 64

Introduced 16.0.R1

route-table-install *boolean*

Context **configure router** *string* **bgp**

Description Enable/Disable route table installation

Default true

Introduced 16.0.R1

route-target-list [community-name] *string*

Context	**configure router** *string* **bgp**
Description	Enter the route-target-list context
Introduced	16.0.R1

[community-name] *string*

Context	**configure router** *string* **bgp route-target-list** *string*
Description	Extended community name that is accepted by route reflector server, or advertised by router
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

router-id *ipv4-address*

Context	**configure router** *string* **bgp**
Description	Unique router ID for BGP instance in AS
Introduced	16.0.R1

rr-vpn-forwarding *boolean*

Context	**configure router** *string* **bgp**
Description	Configure BGP to enable route-reflector to resolve the VPN-IPv4 and VPN-IPv6 routes, set itself as the next-hop and generate new labels for all the resolved routes.
Default	false
Introduced	16.0.R1

send-communities

Context	**configure router** *string* **bgp**
Description	Enter the send-communities context
Introduced	16.0.R1

extended *boolean*

Context **configure router** *string* **bgp send-communities**

Description Enables the sending of community attribute to the peer for external communities.

Default true

Introduced 16.0.R1

large *boolean*

Context **configure router** *string* **bgp send-communities**

Description Enables the sending of community attribute to the peer for large communities.

Default true

Introduced 16.0.R1

standard *boolean*

Context **configure router** *string* **bgp send-communities**

Description Enables the sending of community attribute to the peer for non-external communities.

Default true

Introduced 16.0.R1

split-horizon *boolean*

Context **configure router** *string* **bgp**

Description Prevent routes from being reflected back to peer that sends best route

Default false

Introduced 16.0.R1

sr-policy-import *boolean*

Context **configure router** *string* **bgp**

Description Import all statically-configured non-local SR policies into BGP RIB

Default false

Introduced 16.0.R1

third-party-nexthop *boolean*

Context	**configure router** *string* **bgp**
Description	Send third-party next hop to EBGP peers in same subnet as source peer
Default	false
Introduced	16.0.R1

vpn-apply-export *boolean*

Context	**configure router** *string* **bgp**
Description	Apply base instance BGP export route polices to BGP VPN routes
Default	false
Introduced	16.0.R1

vpn-apply-import *boolean*

Context	**configure router** *string* **bgp**
Description	Apply base instance BGP import route polices to BGP VPN routes
Default	false
Introduced	16.0.R1

class-forwarding *boolean*

Context	**configure router** *string*
Description	Allow class-based forwarding over IGP shortcuts
Default	false
Introduced	16.0.R1

confederation

Context	**configure router** *string*
Description	Enter the confederation context
Introduced	16.0.R1

confed-as-num *number*

Context	**configure router** *string* **confederation**
Description	Confederation number within an autonomous system
Range	1 to 4294967295
Introduced	16.0.R1

members [as-number] *number*

Context	**configure router** *string* **confederation**
Description	Enter the members context
Max. Elements	256
Introduced	16.0.R1

[as-number] *number*

Context	**configure router** *string* **confederation members** *number*
Description	AS number to assign to members that are part of the confederation
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dhcp-server

Context	**configure router** *string*
Description	Enter the dhcp-server context
Introduced	16.0.R1

dhcpv4 [name] *string*

Context	**configure router** *string* **dhcp-server**
Description	Enter the dhcpv4 context
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	DHCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Administrative state of the DHCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failover

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

force-renews *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Send DHCP FORCERENEW messages to force renewal of lease state
Default	false
Introduced	16.0.R1

lease-hold

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Enter the lease-hold context
Introduced	16.0.R1

additional-scenarios

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **lease-hold**
Description	Enter the additional-scenarios context
Introduced	16.0.R1

internal-lease-ipsec *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for internal IPsec clients
Default	false
Introduced	16.0.R1

solicited-release *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for solicited releases
Default	false
Introduced	16.0.R1

time *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **lease-hold**
Description	Lease hold time
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1

pool [pool-name] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Enter the pool context
Introduced	16.0.R1

[pool-name] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	DHCP server pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failover

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

max-lease-time *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Maximum lease time
Range	10 to 315446399
Default	864000
Units	seconds
Introduced	16.0.R1

min-lease-time *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Minimum lease time
Range	10 to 315446399
Default	600
Units	seconds
Introduced	16.0.R1

minimum-free

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the minimum-free context
Introduced	16.0.R1

absolute *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Absolute minimum number for free addresses
Range	0 to 255
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Minimum percentage of free addresses
Range	0 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

nak-non-matching-subnet *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Send a DHCP NAK if a DHCP request IP address does not match any range in this pool
Default	false
Introduced	16.0.R1

offer-time *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Time interval when a DHCP offer remains valid
Range	10 to 600
Default	60
Units	seconds
Introduced	16.0.R1

options

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

subnet [ipv4-prefix] *ipv4-unicast-prefix*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the subnet context
Introduced	16.0.R1

[ipv4-prefix] *ipv4-unicast-prefix*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	IPv4 prefix
Introduced	16.0.R1
Notes	This element is part of a list key

address-range [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the address-range context
Introduced	16.0.R1

[start] *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	End address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

failover-control-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Failover control type for this range
Default	local
Options	local, remote, access-driven
Introduced	16.0.R1

drain *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Prevent new leases from setting up in this prefix
Default	false
Introduced	16.0.R1

exclude-addresses [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the exclude-addresses context
Introduced	16.0.R1

[start] *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **exclude-addresses** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-unicast-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **exclude-addresses** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	End address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

maximum-declined *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Maximum number of declined addresses
Default	64
Introduced	16.0.R1

minimum-free

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the minimum-free context
Introduced	16.0.R1

absolute *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Absolute minimum number for free addresses
Range	0 to 255
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Minimum percentage of free addresses
Range	0 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

options

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

pool-selection

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Enter the pool-selection context
Introduced	16.0.R1

use-gi-address

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool-selection**
Description	Enter the use-gi-address context
Introduced	16.0.R1

scope *keyword*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool-selection use-gi-address**
Description	Match the GI address to a specific subnet or pool.
Default	subnet
Options	subnet, pool
Introduced	16.0.R4

use-pool-from-client

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool-selection**
Description	Enter the use-pool-from-client context
Introduced	16.0.R1

delimiter *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string* **pool-selection use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1

user-db *string*

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	Local user database for authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

user-identification *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv4** *string*
Description	User identification for DHCPv6
Default	mac-circuit-id
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1

dhcpv6 [name] *string*

Context	**configure router** *string* **dhcp-server**
Description	Enter the dhcpv6 context
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	DHCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Administrative state of the DHCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-provisioned *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Auto-provision the pools of this server
Default	false
Introduced	16.0.R1

defaults

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the defaults context
Introduced	16.0.R4

options

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults**
Description	Enter the options context
Introduced	16.0.R4

option [number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options**
Description	Enter the option context
Introduced	16.0.R4

[number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R4
Notes	This element is part of a list key

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R4
Notes	This element is part of a choice

domain-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R4
Notes	This element is part of a choice

duration *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R4
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

preferred-lifetime *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults**
Description	Time for the prefix to remain preferred.
Range	300 to 315446399
Default	3600
Units	seconds
Introduced	16.0.R4

rebind-time *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults**
Description	Rebind time for the prefix.
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R4

renew-time *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults**
Description	Renew time for the prefix.
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R4

valid-lifetime *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **defaults**
Description	Time for the prefix to remain valid.
Range	300 to 315446399
Default	86400
Units	seconds
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failover

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

ignore-rapid-commit *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Rapid Commit Option to ignore
Default	false
Introduced	16.0.R1

interface-id-mapping *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Map different hosts using the same interface ID to the same prefix
Default	false
Introduced	16.0.R1

lease-hold

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the lease-hold context
Introduced	16.0.R1

additional-scenarios

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **lease-hold**
Description	Enter the additional-scenarios context
Introduced	16.0.R1

internal-lease-ipsec *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for internal IPsec clients
Default	false
Introduced	16.0.R1

solicited-release *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for solicited releases
Default	false
Introduced	16.0.R1

time *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **lease-hold**
Description	Lease hold time
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1

lease-query *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Allow lease query messages
Default	false
Introduced	16.0.R1

pool [pool-name] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the pool context
Introduced	16.0.R1

[pool-name] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	DHCP server pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

delegated-prefix

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the delegated-prefix context
Introduced	16.0.R1

length *number*

Context **configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description Prefix length for this pool if unspecified by client
Range 48 to 127
Default 64
Introduced 16.0.R1

maximum *number*

Context **configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description Maximum delegated prefix length for this pool
Range 48 to 127
Default 64
Introduced 16.0.R1

minimum *number*

Context **configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description Minimum delegated prefix length for this pool
Range 48 to 127
Default 48
Introduced 16.0.R1

description *string*

Context **configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

exclude-prefix [ipv6-prefix] *ipv6-prefix*

Context **configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description Enter the exclude-prefix context
Introduced 16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **exclude-prefix** *ipv6-prefix*
Description	IPv6 prefix
Introduced	16.0.R1
Notes	This element is part of a list key

failover

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

options

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice
