emulated-server *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server**

Description The address used as source and siaddr when emulating a DHCP server.

Introduced 16.0.R1

lease-time

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server lease-time**

Description Use lease time information provided by RADIUS server

Default false

Introduced 16.0.R1

value *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server lease-time**

Description DHCP lease time

Range 300 to 315446399

Units seconds

Introduced 16.0.R1

python-policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Python policy.

Reference configure **python python-policy** *string*

Introduced 16.0.R4

relay-plain-bootp *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enable/disable relaying of plain BOOTP packets.

Default false

Introduced 16.0.R4

relay-proxy

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the relay-proxy context

Introduced 16.0.R1

release-update-src-ip *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp relay-proxy**

Description Specify whether or not to relay release messages.

Default false

Introduced 16.0.R4

siaddr-override *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp relay-proxy**

Description Specify the IP address to use.

Introduced 16.0.R4

server *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

trusted *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of untrusted packets.
Default	false
Introduced	16.0.R4

use-arp *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable the use of ARP to determine the destination Hw address.
Default	false
Introduced	16.0.R4

icmp

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the icmp context
Introduced	16.0.R1

mask-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Allow responses to ICMP mask requests
Default	true
Introduced	16.0.R1

param-problem

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Enter the param-problem context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description	Administrative state of sending parameter-problem messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description	Number of parameter-problem ICMP messages to send in specified time interval
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description	Time used to limit number of parameter-problem ICMP messages issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

redirects

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp redirects**

Description Administrative state of sending ICMP redirects

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp redirects**

Description Maximum number of ICMP redirect messages to send

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp redirects**

Description Time to limit the number of ICMP redirect messages that can be issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

ttl-expired

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp**

Description Enter the ttl-expired context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Maximum number of TTL expired messages to send
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Time to limit the number of ICMP TTL expired messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

unreachables

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Enter the unreachables context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description	Administrative state of sending unreachable messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description Maximum number of unreachable messages to send
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description Time to limit the number of unreachable messages that can be issued
Range 1 to 60
Default 10
Units seconds
Introduced 16.0.R1

ip-helper-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description Gateway address
Introduced 16.0.R1

local-dhcp-server *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description DHCP server for the interface
Reference configure **service vprn** *service-name* **dhcp-server dhcpv4** *string*
Introduced 16.0.R1

neighbor-discovery

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description Enter the neighbor-discovery context
Introduced 16.0.R1

learn-unsolicited *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow ARP application to learn new entries based on any received ARP message
Default	false
Introduced	16.0.R1

limit

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 524288
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-arp *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable local proxy ARP on interface
Default	false
Introduced	16.0.R1

populate *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow static and dynamic hosts to be populated in system ARP cache
Default	false
Introduced	16.0.R1

populate-host *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow addition or deletion of host routes in route table derived from ARP entries in ARP cache
Default	false
Introduced	16.0.R1

proactive-refresh *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Send a single refresh message with no retries 30 seconds prior to entry timeout
Default	false
Introduced	16.0.R1

proxy-arp-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Proxy ARP policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

remote-proxy-arp *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable remote proxy ARP on interface
Default	false
Introduced	16.0.R1

retry-timer *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP retry interval
Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1

route-tag *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP route tag
Range	1 to 255
Introduced	16.0.R1

static-neighbor [ipv4-address] *ipv4-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv4-address] *ipv4-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	IPv4 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

static-neighbor-unnumbered

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor-unnumbered context
Introduced	16.0.R1

mac-address *mac-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor-unnumbered**
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

primary

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the primary context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is mandatory

broadcast *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 primary**
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 primary**
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

qos-route-lookup *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	QoS Route lookup
Options	destination, source
Introduced	16.0.R1

secondary [address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**

Description Enter the secondary context

Introduced 16.0.R1

[address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*

Description IPv4 address for a router interface

Introduced 16.0.R1

Notes This element is part of a list key

broadcast *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*

Description Broadcast address format

Default host-ones

Options all-ones, host-ones

Introduced 16.0.R1

igp-inhibit *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*

Description Secondary IP address that is not recognized as local interface by the running IGP

Default false

Introduced 16.0.R1

prefix-length *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*

Description IPv4 address prefix length

Range 0 to 32

Introduced 16.0.R1

Notes This element is mandatory

track-srrp *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

tcp-mss *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	TCP maximum segment size for the interface
Range	384 to 9158
Introduced	16.0.R1

unnumbered

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the unnumbered context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 unnumbered**
Description	IP address of the interface
Introduced	16.0.R1
Notes	This element is part of a choice

ip-int-name *interface-name*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 unnumbered**
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

urpf-check

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description Enter the urpf-check context
Introduced 16.0.R1

ignore-default *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 urpf-check**
Description Ignore default route when performing a uRPF check
Default false
Introduced 16.0.R1

mode *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 urpf-check**
Description Unicast RPF check mode
Default strict
Options strict, loose, strict-no-ecmp
Introduced 16.0.R1

vrrp [virtual-router-id] *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description Enter the vrrp context
Introduced 16.0.R1

[virtual-router-id] *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Password for simple text authentication
String Length	1 to 38
Introduced	16.0.R1

backup *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	16
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Destination IP address to be used for BFD session
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 2559
Default	10
Units	deciseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

ssh-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to SSH requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

standby-forwarding *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

address [ipv6-address] *ipv6-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Enable/disable Duplicate Address Detection.
Default	true
Introduced	16.0.R1

eui-64 *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Form complete IPv6 address from supplied prefix and 64-bit interface identifier
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is mandatory

primary-preference *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Order to enforce in which the address is used from control plane protocols and applications
Range	1 to 4294967295
Introduced	16.0.R1

track-srrp *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

bfd

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description BFD transmit interval over this interface
Range 10 to 100000
Default 100
Units milliseconds
Introduced 16.0.R1

type *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 bfd**
Description BFD session termination
Default auto
Options cpm-np, auto
Introduced 16.0.R1

dhcp6

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**
Description Enter the dhcp6 context
Introduced 16.0.R1

relay

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6**
Description Enter the relay context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description Administrative state of DHCPv6 relay
Default disable
Options enable, disable
Introduced 16.0.R1

description *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

lease-populate

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Enter the lease-populate context
Introduced	16.0.R1

max-nbr-of-leases *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate**
Description	Maximum number of lease states allocated by the DHCPv6 relay function, allowed on interface
Range	0 to 32767
Default	0
Introduced	16.0.R1

route-populate

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate**
Description	Enter the route-populate context
Introduced	16.0.R1

na *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**
Description	Create route based on IA_NA prefix option in relay-reply message
Default	false
Introduced	16.0.R1

pd

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**

Description Enter the pd context

Introduced 16.0.R1

exclude *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate pd**

Description Create back hole route based on prefix exclude option in relay-reply message

Default false

Introduced 16.0.R1

ta *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**

Description Create route based on IA_TA prefix option in relay-reply message

Default false

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**

Description Link address of the DHCPv6 relay messages

Introduced 16.0.R1

neighbor-resolution *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**

Description Enable neighbor resolution via DHCPv6 relay

Default false

Introduced 16.0.R1

option

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**

Description Enter the option context

Introduced 16.0.R1

interface-id

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option**

Description Enter the interface-id context

Introduced 16.0.R1

ascii-tuple

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**

Description Use ASCII-encoded concatenated tuple in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

if-index

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**

Description Use interface index in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

sap-id

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**

Description Use SAP ID in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**
Description	String for interface ID option in DHCPv6 relay packet
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option**
Description	Allow remote ID option to be sent in the DHCPv6 relay packet
Default	false
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Python policy name
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

server *ipv6-address-with-zone*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	DHCPv6 server to which the DHCPv6 requests are forwarded
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

source-address *ipv6-unicast-or-linklocal-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Source IPv6 address of the DHCPv6 relay messages
Introduced	16.0.R1

user-db *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Local user database for authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

server

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6**
Description	Enter the server context
Introduced	16.0.R1

max-nbr-of-leases *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server**
Description	DHCPv6 leases allowed
Range	0 to 8000
Default	8000
Introduced	16.0.R1

prefix-delegation

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server**
Description	Enter the prefix-delegation context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation**
Description	Administrative state of the prefix delegation
Default	disable
Options	enable, disable
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation**
Description	Enter the prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	IPv6 prefix to be delegated
Introduced	16.0.R1
Notes	This element is part of a list key

client-id

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	Enter the client-id context
Introduced	16.0.R1

duid *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix* **client-id**
Description	Requesting router ID
String Length	1 to 130
Introduced	16.0.R1

iaid *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix* **client-id**
Description	IAID from the requesting router that matches to delegate the prefix
Range	1 to 4294967295
Introduced	16.0.R1

preferred-lifetime (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*

Description IPv6 prefix/mask preferred life time

Default 604800

Units seconds

Introduced 16.0.R1

valid-lifetime (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*

Description IPv6 prefix/mask valid life time

Default 2592000

Units seconds

Introduced 16.0.R1

duplicate-address-detection *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description Enable/disable Duplicate Address Detection

Default true

Introduced 16.0.R1

icmp6

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description Enter the icmp6 context

Introduced 16.0.R1

packet-too-big

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6**

Description Enter the packet-too-big context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**

Description Administrative state of packet-too-big messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**

Description Number of packet-too-big messages

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**

Description Time to limit packet-too-big messages

Range 1 to 60

Default 10

Introduced 16.0.R1

param-problem

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6**

Description Enter the param-problem context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**

Description Administrative state of param-problem messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**

Description Number of parameter-problem messages

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**

Description Time to limit parameter problem messages

Range 1 to 60

Default 10

Introduced 16.0.R1

redirects

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**

Description Administrative state of the redirect messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**
Description Number of redirect messages
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**
Description Time to limit redirect messages
Range 1 to 60
Default 10
Introduced 16.0.R1

time-exceeded

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description Enter the time-exceeded context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Administrative state of the time-exceeded messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Number of time-exceeded messages
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Time to limit time-exceeded messages
Range 1 to 60
Default 10
Introduced 16.0.R1

unreachables

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description Enter the unreachables context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description Administrative state of the unreachable messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description Number of unreachable messages
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description Time to limit unreachable messages
Range 1 to 60
Default 10
Introduced 16.0.R1

link-local-address

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description Enter the link-local-address context

Introduced 16.0.R1

address *ipv6-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 link-local-address**

Description Link-local IPv6 address of this router interface

Introduced 16.0.R1

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 link-local-address**

Description Enable/disable Duplicate Address Detection.

Default true

Introduced 16.0.R1

local-dhcp-server *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description DHCP server for the interface

Reference configure **service vprn** *service-name* **dhcp-server dhcpv6** *string*

Introduced 16.0.R1

neighbor-discovery

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

learn-unsolicited *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Type of entries learned from unsolicited NA messages
Options	global, link-local, both
Introduced	16.0.R1

limit

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 102400
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-nd *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enable neighbor discovery on interface
Default	false
Introduced	16.0.R1

populate-host *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Allow addition or deletion of host routes in route table derived from ARP entries in ARP cache
Default	false
Introduced	16.0.R1

proactive-refresh *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Neighbor entries to be refreshed proactively
Options	global, link-local, both
Introduced	16.0.R1

proxy-nd-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Name of the proxy Neighbor Discovery policies for the interface
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

reachable-time *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Timer for neighbor reachability detection
Range	30 to 3600
Introduced	16.0.R1

route-tag *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	ARP route tag
Range	1 to 255
Introduced	16.0.R1

secure-nd

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the secure-nd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Administrative state of secure neighbor discovery
Default	disable
Options	enable, disable
Introduced	16.0.R1

allow-unsecured-msgs *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Accept unsecured messages
Default	true
Introduced	16.0.R1

public-key-min-bits *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Minimum acceptable key length for public keys
Range	512 to 1024
Default	1024
Introduced	16.0.R1

security-parameter *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**

Description Security parameter in the generation of a cryptographical address

Range 0 to 1

Default 1

Introduced 16.0.R1

stale-time *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**

Description Time during which a neighbor discovery cache entry remains stale

Range 60 to 65535

Introduced 16.0.R1

static-neighbor [ipv6-address] *ipv6-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**

Description Enter the static-neighbor context

Introduced 16.0.R1

[ipv6-address] *ipv6-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*

Description IPv6 address corresponding to the media-dependent physical address

Introduced 16.0.R1

Notes This element is part of a list key

mac-address *mac-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*

Description Media-dependent physical address

Introduced 16.0.R1

Notes This element is mandatory

qos-route-lookup *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description QoS Route lookup

Options destination, source

Introduced 16.0.R1

tcp-mss *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description TCP maximum segment size for the interface

Range 1220 to 9138

Introduced 16.0.R1

urpf-check

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6**

Description Enter the urpf-check context

Introduced 16.0.R1

ignore-default *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 urpf-check**

Description Ignore default route when performing a uRPF check

Default false

Introduced 16.0.R1

mode *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv6 urpf-check**

Description Unicast RPF check mode

Default strict

Options strict, loose, strict-no-ecmp

Introduced 16.0.R1

vrrp [virtual-router-id] *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the vrrp context
Max. Elements	1
Introduced	16.0.R1

[virtual-router-id] *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

backup *ipv6-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	4
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	ip-address.
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 4095
Default	100
Units	centiseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

standby-forwarding *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

load-balancing

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the load-balancing context
Introduced	16.0.R1

ip-load-balancing *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **load-balancing**
Description	Configure IP load balancing algorithm.
Default	both
Options	both, destination, source, inner-ip
Introduced	16.0.R3

spi-load-balancing *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **load-balancing**
Description	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Default	false
Introduced	16.0.R1

teid-load-balancing *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **load-balancing**
Description	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Default	false
Introduced	16.0.R1

loopback *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Use interface as a loopback interface
Default	false
Introduced	16.0.R1

mac *mac-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name*

Description MAC address for the interface

Introduced 16.0.R1

mac-accounting *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Enable MAC accounting functionality

Default false

Introduced 16.0.R1

monitor-oper-group *string*

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Operational group to monitor

Reference configure **service oper-group** *string*

Introduced 16.0.R1

ptp-hw-assist

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Enter the ptp-hw-assist context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ptp-hw-assist**

Description Administrative state of the port-based timestamping assist function for the interface

Default disable

Options enable, disable

Introduced 16.0.R1

radius-auth-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Authentication policy
Reference	configure **subscriber-mgmt radius-authentication-policy** *string*
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the sap context
Max. Elements	1
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Anti-spoof filtering
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1

bandwidth *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	SAP bandwidth
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

calling-station-id *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Calling station ID
String Length	1 to 64
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Collect accounting statistics
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

ip-src-monitoring

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enable IP source monitoring for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description CPM protection policy
Reference configure **system security cpu-protection policy** *number*
Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description Text description
String Length 1 to 160
Introduced 16.0.R1

dist-cpu-protection *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description Distributed CPU protection policy for SAP
Reference configure **system security dist-cpu-protection policy** *string*
Introduced 16.0.R1

egress

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description Enter the egress context
Introduced 16.0.R1

agg-rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress**
Description Enter the agg-rate context
Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**
Description	Enable aggregate rate overrun protection
Default	false
Introduced	16.0.R1

queue-frame-based-accounting *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**
Description	Enable frame-based accounting on all policers and queues associated with context
Default	false
Introduced	16.0.R1

rate *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**
Description	Maximum total rate of all egress queues in kbps.
Range	1 to 3200000000
Introduced	16.0.R1

filter

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress filter**
Description	MAC filter ID
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Minimum amount of cumulative buffer space allowed
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**
Description	Policer control policy name
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

qinq-mark-top-only *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**
Description	Mark top Q-tags
Default	false
Introduced	16.0.R1

sap-egress

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**
Description	Enter the sap-egress context
Introduced	16.0.R1

overrides

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**
Description	Enter the overrides context
Introduced	16.0.R1

hs-secondary-shaper *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	HS Secondary Shaper
String Length	1 to 32
Introduced	16.0.R1

hs-wrr-group [group-id] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hs-wrr-group context
Introduced	16.0.R4

[group-id] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	HS WRR group identifier
Reference	configure **qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

hs-class-weight *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Weight of scheduling class.
Range	1 | 2 | 4 | 8
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR percent.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hsmda-queues context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Packet byte offset for HSMDA queue
Range	-64 to 31
Introduced	16.0.R1

queue [queue-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**

Description Enter the queue context

Introduced 16.0.R4

[queue-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Egress HSMDA queue ID

Reference configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Buffer space allowed for the queue

Units bytes

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Administrative PIR rate.

Introduced 16.0.R1

slope-policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Name of the slope-policy which is used to override the default slope-policy for the named buffer pool.

Reference configure **qos hsmda-slope-policy** *string*

Introduced 16.0.R1

wrr-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Weight value for the HSMDA queue

Range 1 to 32

Introduced 16.0.R1

secondary-shaper *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**

Description Secondary shaper for the HSMDA queue

String Length 1 to 32

Introduced 16.0.R1

wrr-policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**

Description WRR policy for the HSMDA queue

Reference configure **qos hsmda-wrr-policy** *string*

Introduced 16.0.R1

policer [policer-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**

Description Enter the policer context

Introduced 16.0.R4

[policer-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Policer unique ID

Reference configure **qos sap-egress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

Notes This element is part of a list key

cbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description CBS

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -64 to 31

Introduced 16.0.R1

percent-rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

avg-frame-overhead *decimal-number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Encapsulation overhead, in centipercent, used to translate packet-based rate to frame-based rate and vice versa.

Range 0.00 to 100.00

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Explicit shaping burst size of a queue.

Range 1 to 14000000

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobytes

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

hs-class-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Scheduling class weight.

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

hs-wred-queue

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **hs-wred-queue**

Description Name of slope-policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler

Range 1 to 127

Default 1

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Units kilobytes

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Monitor queue depth

Default false

Introduced 16.0.R1

parent

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**

Description CIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**

Description PIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

percent-rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

policy-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**
Description	Policy identifier
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

port-redirect-group

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**
Description	Enter the port-redirect-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress port-redirect-group**
Description	Policy for port redirect queue group
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Instance of port queue group

Range 1 to 65535

Introduced 16.0.R1

scheduler-policy

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

scheduler [scheduler-name] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

queue-group-redirect-list *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Queue group redirect list

Reference configure **qos queue-group-redirect-list** *string*

Introduced 16.0.R4

eth-cfm

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**

Description Enter the collect-lmm-fc-stats context

Introduced 16.0.R1

fc *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate AIS frames from the Maintenance Entity Group (MEG).
Default	false
Introduced	16.0.R1

alarm-notification

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the csf context
Introduced	16.0.R1

multiplier *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

eth-test

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

fwd-wholesale

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the fwd-wholesale context

Introduced 16.0.R4

pppoe-service *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **fwd-wholesale**

Description PPPoE service name

Reference configure **service epipe** *service-name*

Introduced 16.0.R4

host-admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enable/disable administrative state of hosts

Default enable

Options enable, disable

Introduced 16.0.R1

host-lockout-policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Host lockout policy

Reference configure **subscriber-mgmt host-lockout-policy** *string*

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Priority level

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Minimum amount of cumulative buffer space allowed

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

sap-ingress

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

fp-redirect-group

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**

Description Forwarding-plane queue group policy

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**

Description Queue group instance

Range 1 to 65535

Introduced 16.0.R1

overrides

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Enter the overrides context

Introduced 16.0.R4

policer [policer-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides**

Description Enter the policer context

Introduced 16.0.R4

[policer-id] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	CBS
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	MBS
Range	0 to 1073741824
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Size of each packet, handled by the policer, to be modified
Range	-32 to 31
Introduced	16.0.R1

percent-rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**

Description CIR percent rate

Range 0.00 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**

Description PIR percent rate

Range 0.01 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **rate** context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**

Description CIR rate

Range 0 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

pir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**

Description PIR rate

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

stat-mode *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Mode of statistics collected by the policer

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir

Introduced 16.0.R1

queue [queue-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides**

Description Enter the queue context

Introduced 16.0.R4

[queue-id] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Policer unique ID

Reference configure **qos sap-ingress** *qos-policy-name* **queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

adaptation-rule

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobps

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Monitor queue depth
Default	false
Introduced	16.0.R1

parent

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the parent context
Introduced	16.0.R1

cir-weight *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**
Description	CIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

weight *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**
Description	PIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

percent-rate

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

policy-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**
Description	Policy identifier
Reference	configure **qos sap-ingress** *qos-policy-name*
Introduced	16.0.R1

queuing-type *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**
Description	Ingress queuing type
Options	shared, multipoint-shared
Introduced	16.0.R1

scheduler-policy

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**
Description	Enter the overrides context
Introduced	16.0.R4

scheduler [scheduler-name] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

queue-group-redirect-list *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Queue group redirect list

Reference configure **qos queue-group-redirect-list** *string*

Introduced 16.0.R4

ip-tunnel [tunnel-name] *interface-name*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the ip-tunnel context
Max. Elements	1
Introduced	16.0.R1

[tunnel-name] *interface-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	IP tunnel name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Administrative state of the tunnel
Default	disable
Options	enable, disable
Introduced	16.0.R1

backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Backup remote IP address that is applied to this tunnel
Introduced	16.0.R1

clear-df-bit *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Clear the Do-not-Fragment bit
Default	false
Introduced	16.0.R1

delivery-service *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Delivery service name
String Length	1 to 64
Introduced	16.0.R1

description *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dest-ip [dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the dest-ip context
Introduced	16.0.R1

[dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **dest-ip** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Destination IP address of the tunnel
Introduced	16.0.R1
Notes	This element is part of a list key

dscp *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Differentiated Services Code Point (DSCP) name
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

encapsulated-ip-mtu *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Encapsulated IP MTU of this tunnel
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

gre-header

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the gre-header context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header**
Description	Administrative state of the GRE header in the tunnel
Options	enable, disable
Introduced	16.0.R1

key

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header**
Description	Enter the key context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Administrative state of the keys in the GRE header
Default	disable
Options	enable, disable
Introduced	16.0.R1

receive *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Receive key of a GRE header
Default	0
Introduced	16.0.R1

send *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Send key of a GRE header
Default	0
Introduced	16.0.R1

icmp6-generation

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the icmp6-generation context
Introduced	16.0.R1

packet-too-big

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation**

Description Enter the packet-too-big context

Introduced 16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**

Description Administrative state of packet-too-big messages

Options enable, disable

Introduced 16.0.R1

number *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**

Description Number of packet-too-big ICMPv6 messages issued in a specified time frame

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**
Description	Time frame to limit the number of packet-too-big ICMPv6 messages
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ip-mtu *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	IP MTU of this tunnel
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Local IP address of this tunnel
Introduced	16.0.R1

private-tcp-mss-adjust *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	TCP maximum segment size (MSS) on private network
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	TCP maximum segment size (MSS) on private network
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1

reassembly (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Reassembly wait time
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1

remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Remote IP address of this tunnel
Introduced	16.0.R1

ipsec-gateway [name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the ipsec-gateway context
Max. Elements	1
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	IPsec gateway name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	Administrative state of the IPsec gateway.
Default	disable
Options	enable, disable
Introduced	16.0.R1

default-secure-service

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description Enter the default-secure-service context

Introduced 16.0.R1

interface *interface-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **default-secure-service**

Description The name of the default interface used by this IPsec gateway.

String Length 1 to 32

Introduced 16.0.R1

service-name *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **default-secure-service**

Description The name of the default security service used by this IPsec gateway.

String Length 1 to 64

Introduced 16.0.R1

default-tunnel-template *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description The IPsec tunnel template ID.

Reference configure **ipsec tunnel-template** *number*

Introduced 16.0.R1

ike-policy *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description IKE policy ID.

Reference configure **ipsec ike-policy** *number*

Introduced 16.0.R1

local

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description Enter the local context

Introduced 16.0.R1

gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local**

Description The IPsec gateway address.

Introduced 16.0.R1

id

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local**

Description Enter the id context

Introduced 16.0.R1

auto

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	System picks a local ID automatically based on auth-method configured in ike-policy.
Introduced	16.0.R1
Notes	This element is part of a choice

fqdn *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The Fully Qualified Domain Name (FQDN) Local ID.
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4 *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The IPv4 Local ID.
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6 *ipv6-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The IPv6 Local ID.
Introduced	16.0.R1
Notes	This element is part of a choice

max-history-key-records

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	Enter the max-history-key-records context
Introduced	16.0.R1

esp *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **max-history-key-records**
Description	The maximum number of historical ESP keys which can be recorded by the system.
Range	1 to 48
Introduced	16.0.R1

ike *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **max-history-key-records**
Description	The maximum number of historical IKE keys which can be recorded by the system.
Range	1 to 3
Introduced	16.0.R1

pre-shared-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	The pre-shared key used for authentication by two peers forming the tunnel for the IPSec gateway.
String Length	1 to 114
Introduced	16.0.R1

lag

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the lag context

Introduced 16.0.R1

link-map-profile *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **lag**

Description LAG link map profile applied to a SAP or network interface

Range 1 to 64

Introduced 16.0.R1

per-link-hash

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **lag**

Description Enter the per-link-hash context

Introduced 16.0.R1

class *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **lag per-link-hash**

Description Class used on LAG egress when using weighted per-link-hash

Range 1 to 3

Default 1

Introduced 16.0.R1

weight *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **lag per-link-hash**

Description Weight used on LAG egress when using weighted per-link-hash

Range 1 to 1024

Default 1

Introduced 16.0.R1

multi-service-site *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Multi service site name

String Length 1 to 32

Introduced 16.0.R1

static-host

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the static-host context

Introduced 16.0.R1

ipv4 [ip] *ipv4-address* **mac** *mac-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host**

Description Enter the ipv4 context

Introduced 16.0.R1

[ip] *ipv4-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description IP address

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description MAC address

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Administrative state of the static host
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp-string *ancp-string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

sla-profile *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	SLA profile name
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Sub-profile name
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Enter the subscriber-id context
Introduced	16.0.R1

string *subscriber-id*

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Subscriber identification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

use-sap-id

Context	**configure service vprn** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Use the SAP id as subscriber ID
Introduced	16.0.R1
Notes	This element is part of a choice

shcv-policy-ipv4 *string*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Host connectivity IPv4 policy
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the spoke-sdp context
Max. Elements	1
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Policy to collect accounting statistics
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

encap *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **bfd-liveness**
Description	BFD encapsulation used on this SDP binding
Default	ipv4
Options	ipv4
Introduced	16.0.R1

bfd-template *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	BFD template associated with SDP binding
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Allow agent to collect accounting statistics
Default	false
Introduced	16.0.R1

control-word *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Use the control word as preferred
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**

Description Enter the **eth-cfm-monitoring** context

Introduced 16.0.R1

aggregate

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**

Description Apply rate limit to the sum of the per peer packet rates

Introduced 16.0.R1

Notes This element is part of a choice

car

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**

Description Eth-CFM packets to be ignored when enforcing overall rate

Introduced 16.0.R1

Notes This element is part of a choice

ip-src-monitoring

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**

Description Enable IP source monitoring for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

mac-monitoring

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**

Description Monitor MAC for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

policy-id *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**

Description CPM protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

egress

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos**

Description Enter the network context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network**

Description Egress network policy name applied to this SDP binding

Reference configure **qos network** *network-policy-name*

Introduced 16.0.R1

port-redirect-group

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Policy for port queue group for this SDP binding

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Instance of the port egress Queue Group for this SDP binding.

Range 1 to 65535

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

entropy-label

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Whether the use of entropy-label is enabled or not.

Introduced 16.0.R1

Notes This element is part of a choice

eth-cfm

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate AIS frames from the Maintenance Entity Group (MEG).
Default	false
Introduced	16.0.R1

alarm-notification

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate CCM messages

Default false

Introduced 16.0.R1

ccm-ltm-priority *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Priority of CCM and LTM messages transmitted by the MEP

Range 0 to 7

Default 7

Introduced 16.0.R1

ccm-padding-size *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Additional octets inserted into CCM PDU for data TLV padding

Range 3 to 1500

Introduced 16.0.R1

csf

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP

Default true

Introduced 16.0.R1

low-priority-defect *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Lowest priority defect that is allowed to generate a fault alarm

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

one-way-delay-threshold *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

hash-label

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **hash-label**
Description	To signal the hash label capability to the remote PE.
Introduced	16.0.R1
Notes	This element is part of a choice

ingress

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the ingress context
Introduced	16.0.R1

filter

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Forwarding-plane queue group policy for this SDP binding

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Instance of the forwarding-plane ingress Queue Group for this SDP binding

Range 1 to 65535

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**

Description Ingress network policy name applied to this SDP binding

Reference configure **qos network** *network-policy-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

vc-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Type of virtual circuit (VC) associated with the SDP binding
Default	ether
Options	ether, ipipe
Introduced	16.0.R1

tos-marking-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	TOS marking state
Default	trusted
Options	trusted, untrusted
Introduced	16.0.R1

tunnel *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enable/disable tunnel interface
Default	false
Introduced	16.0.R1

vas-if-type *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	VAS interface type
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1

vpls [vpls-name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the vpls context
Max. Elements	1
Introduced	16.0.R1

[vpls-name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **vpls** *string*
Description	VPLS service
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

egress

Context	**configure service vprn** *service-name* **interface** *interface-name* **vpls** *string*
Description	Enter the egress context
Introduced	16.0.R1

reclassify-using-qos *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **egress**
Description	Egress QoS policy
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

routed-override-filter

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **egress**

Description Enter the routed-override-filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **egress routed-override-filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **egress routed-override-filter**

Description IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

evpn-tunnel

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string*

Description Enter the evpn-tunnel context

Introduced 16.0.R1

ipv6-gateway-address *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **evpn-tunnel**

Description Type of IPv6 gateway address

Default ip

Options ip, mac

Introduced 16.0.R4

ingress

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string*

Description Enter the ingress context

Introduced 16.0.R1

routed-override-filter

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **ingress**

Description Enter the routed-override-filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **ingress routed-override-filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **vpls** *string* **ingress routed-override-filter**

Description IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

ip-mirror-interface [interface-name] *interface-name*

Context **configure service vprn** *service-name*

Description Enter the ip-mirror-interface context

Introduced 16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name*
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name*
Description	Enter the spoke-sdp context
Max. Elements	1
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ingress

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the ingress context
Introduced	16.0.R1

filter

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**
Description	IP filter identifier
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **ip-mirror-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

neighbor-discovery

Context	**configure service vprn** *service-name* **ipv6**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

reachable-time *number*

Context	**configure service vprn** *service-name* **ipv6 neighbor-discovery**
Description	Timer for neighbor reachability detection
Range	30 to 3600
Default	30
Introduced	16.0.R1

stale-time *number*

Context	**configure service vprn** *service-name* **ipv6 neighbor-discovery**
Description	Time during which a neighbor discovery cache entry remains stale before removal
Range	60 to 65535
Default	14400
Introduced	16.0.R1

router-advertisement

Context **configure service vprn** *service-name* **ipv6**
Description Enter the router-advertisement context
Introduced 16.0.R1

dns-options

Context **configure service vprn** *service-name* **ipv6 router-advertisement**
Description Enter the dns-options context
Introduced 16.0.R1

rdnss-lifetime (*keyword* | *number*)

Context **configure service vprn** *service-name* **ipv6 router-advertisement dns-options**
Description Maximum time over which the RDNSS address is valid
Range 0 | 4 to 3600
Default infinite
Units seconds
Options infinite
Introduced 16.0.R1

server *ipv6-address*

Context **configure service vprn** *service-name* **ipv6 router-advertisement dns-options**
Description Router advertisements that are forwarded to servers
Max. Elements 4
Introduced 16.0.R1
Notes This element is ordered by user

interface [ip-int-name] *string*

Context **configure service vprn** *service-name* **ipv6 router-advertisement**
Description Enter the interface context
Introduced 16.0.R1

[ip-int-name] *string*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	VPRN interface name
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Administrative state of router advertisement on an interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

current-hop-limit *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Hop limit to advertise in ICMPv6 ND router advertisement messages
Range	0 to 255
Default	64
Introduced	16.0.R1

dns-options

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Enter the dns-options context
Introduced	16.0.R1

include-rdnss *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **dns-options**
Description	Include the RDNSS option in the router advertisement sent from this interface
Default	true
Introduced	16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **dns-options**
Description	Maximum time over which the RDNSS address 25 is valid
Range	0 | 4 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1

server *ipv6-address*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **dns-options**
Description	Router advertisements that are forwarded to servers
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

managed-configuration *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Managed address configuration flag in ICMPv6 ND router advertisement messages
Default	false
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Maximum time between sending ICMPv6 ND router advertisement messages
Range	4 to 1800
Default	600
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Minimum time between sending ICMPv6 ND router advertisement messages
Range	3 to 1350
Default	200
Units	seconds
Introduced	16.0.R1

mtu *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	MTU for sending packets to the router
Range	1280 to 9212
Introduced	16.0.R1

other-stateful-configuration *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Other configuration flag to assign in ICMPv6 ND router advertisement messages
Default	false
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Enter the prefix context
Max. Elements	254
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **prefix** *ipv6-prefix*
Description	IPv6 address prefix
Introduced	16.0.R1
Notes	This element is part of a list key

autonomous *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **prefix** *ipv6-prefix*
Description	Autonomous flag value
Default	true
Introduced	16.0.R1

on-link *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **prefix** *ipv6-prefix*
Description	Use prefix for onlink determination
Default	true
Introduced	16.0.R1

preferred-lifetime (*keyword* | *number*)

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **prefix** *ipv6-prefix*
Description	Remaining time that the prefix remains preferred
Range	0 to 4294967294
Default	604800
Units	seconds
Options	infinite
Introduced	16.0.R1

valid-lifetime (*keyword* | *number*)

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string* **prefix** *ipv6-prefix*
Description	Remaining time during which the prefix continues to be valid
Range	0 to 4294967294
Default	2592000
Units	seconds
Options	infinite
Introduced	16.0.R1

reachable-time *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Time during which this router is considered reachable by other hosts or nodes on the subnet
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-time *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Interval to advertise in ICMPv6 ND router advertisement messages
Range	0 to 1800000
Default	0
Units	milliseconds
Introduced	16.0.R1

router-lifetime *number*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Lifetime value that the router advertises in ICMPv6 ND router advertisement messages
Range	0 | 4 to 9000
Default	1800
Units	seconds
Introduced	16.0.R1

use-virtual-mac *boolean*

Context	**configure service vprn** *service-name* **ipv6 router-advertisement interface** *string*
Description	Router advertisement messages to send using VRRP virtual MAC address
Default	false
Introduced	16.0.R1

isis [isis-instance] *number*

Context	**configure service vprn** *service-name*
Description	Enter the isis context
Introduced	16.0.R1

[isis-instance] *number*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Instance ID for IS-IS instance
Range	0 to 31
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Administrative state of IS-IS instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-passive-only *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Advertise only prefixes that belong to passive interfaces
Default	false
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Advertise router capabilities to neighbors for information and troubleshooting purposes
Options	area, as
Introduced	16.0.R1

all-l1isis *mac-address*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Destination MAC address for all L1 ISIS neighbors on the link for this ISIS instance
Default	01:80:C2:00:00:14
Introduced	16.0.R1

all-l2isis *mac-address*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Destination MAC address for all L1 ISIS routers
Default	01:80:C2:00:00:15
Introduced	16.0.R1

area-address *area-address*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Area address portion of NSAP address
String Length	2 to 38
Max. Elements	3
Introduced	16.0.R1

authentication-check *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Perform authentication check to reject PDUs that do not match the type or key requirements
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Authentication key to verify PDUs sent by neighboring routers
String Length	1 to 366
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure service vprn** *service-name* **isis** *number*
Description	The keychain used to sign and/or authenticate.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Authentication type
Options	password, message-digest
Introduced	16.0.R1

csnp-authentication *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of complete sequence number PDU (CSNP) type
Default	true
Introduced	16.0.R1

default-route-tag *number*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Route tag for default route
Range	1 to max
Introduced	16.0.R1

export-limit

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure service vprn** *service-name* **isis** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **isis** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

graceful-restart

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **graceful-restart**
Description	Enable graceful restart helper for IS-IS
Default	true
Introduced	16.0.R1

hello-authentication *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of Hello type
Default	true
Introduced	16.0.R1

hello-padding *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Padding on IS-IS Hello packets
Options	adaptive, loose, strict, none
Introduced	16.0.R1

ignore-attached-bit *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Ignore attached bit on received L1 LSPs to disable installation of default routes
Default	false
Introduced	16.0.R1

ignore-lsp-errors *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Ignore LSP packets with errors
Default	false
Introduced	16.0.R1

ignore-narrow-metric *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Ignore links with narrow metrics when wide-metrics support is enabled
Default	false
Introduced	16.0.R1

iid-tlv *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Use IID TLVs with IS-IS multi-instance (MI)
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Router interface name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Administrative state of interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **bfd-liveness**
Description	Enter the ipv4 context
Introduced	16.0.R1

include-bfd-tlv *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **bfd-liveness ipv4**
Description	BFD-enabled TLV for IPv4 to include on this IS-IS interface
Default	false
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **bfd-liveness**
Description	Enter the ipv6 context
Introduced	16.0.R1

include-bfd-tlv *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **bfd-liveness ipv6**
Description	BFD-enabled TLV for IPv4 to include on this IS-IS interface
Default	false
Introduced	16.0.R1

csnp-interval *number*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Time interval between successive CSN PDUs sent from interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

default-instance *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Allow non-MI capable router to establish an adjacency and operate with a router in non-zero instance
Default	false
Introduced	16.0.R1

hello-authentication *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Authenticate individual IS-IS protocol packets of Hello type
Default	true
Introduced	16.0.R1

hello-authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Authentication key or hash string for Hello PDUs
String Length	1 to 366
Introduced	16.0.R1

hello-authentication-keychain *string*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

hello-authentication-type *keyword*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Hello authentication type

Options password, message-digest

Introduced 16.0.R1

hello-padding *keyword*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Padding on IS-IS Hello packets

Options adaptive, loose, strict, none

Introduced 16.0.R1

interface-type *keyword*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Interface type to broadcast, point-to-point, or to be default

Options point-to-point, broadcast

Introduced 16.0.R1

ipv4-multicast *boolean*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Clear IPv4 multicast routing for interface

Default true

Introduced 16.0.R1

ipv6-unicast *boolean*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Clear IPv4 multicast routing for interface

Default true

Introduced 16.0.R1

level [level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

hello-authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Authentication or hash key string.
String Length	1 to 366
Introduced	16.0.R4

hello-authentication-keychain *string*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R4

hello-authentication-type *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Hello-authentication-type to be enabled.
Options	password, message-digest
Introduced	16.0.R4

hello-interval *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Interval between Hello messages sent on this level

Range 1 to 20000

Default 9

Introduced 16.0.R1

hello-multiplier *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Hello messages missed from neighbor before router declares adjacency down

Range 2 to 100

Default 3

Introduced 16.0.R1

hello-padding *keyword*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Padding on IS-IS Hello packets

Options adaptive, loose, strict, none

Introduced 16.0.R1

ipv4-multicast-metric *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description IS-IS interface metric applied for IPv4 multicast

Range 1 to 16777215

Introduced 16.0.R1

ipv6-unicast-metric *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description IS-IS interface metric applied for for IPv6 unicast

Range 1 to 16777215

Introduced 16.0.R1

metric *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description IS-IS interface metric applied for for IPv4 unicast

Range 1 to 16777215

Introduced 16.0.R1

passive *boolean*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Passive interface

Default false

Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Router to become the designated router on a multi-access network

Range 0 to 127

Default 64

Introduced 16.0.R1

sd-offset *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Value of the signal degrade offset

Range 1 to 16777215

Introduced 16.0.R1

sf-offset *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Value of the signal fail offset

Range 1 to 16777215

Introduced 16.0.R1

level-capability *keyword*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description IS-IS levels for this interface

Options 1, 2, 1/2

Introduced 16.0.R1

load-balancing-weight *number*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Load balancing weight

Introduced 16.0.R1

loopfree-alternate

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name*

Description Enter the loopfree-alternate context

Introduced 16.0.R3

exclude *boolean*

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **loopfree-alternate**

Description Enable/disable Loopfree Alternative at interface level.

Default false

Introduced 16.0.R3

policy-map

Context **configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **loopfree-alternate**

Description Enter the policy-map context

Introduced 16.0.R1

route-nh-template *string*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsp-pacing-interval *number*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Interval for sending LSPs from interface
Range	0 to 65535
Default	100
Introduced	16.0.R1

mesh-group

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Enter the mesh-group context
Introduced	16.0.R1

blocked

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **mesh-group**
Description	Prevent the interface from flooding LSPs
Introduced	16.0.R1
Notes	This element is part of a choice

value *number*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name* **mesh-group**
Description	Mesh group for the interface
Range	1 to 2000000000
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Passive interface
Default	false
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Minimum time between LSP PDU retransmissions on point-to-point interface
Range	1 to 65535
Default	5
Units	seconds
Introduced	16.0.R1

tag *number*

Context	**configure service vprn** *service-name* **isis** *number* **interface** *interface-name*
Description	Route tag for IP address of interface
Range	1 to max
Introduced	16.0.R1

ipv4-multicast-routing *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	IS-IS topology for IPv4 multicast routing
Default	native
Options	false, native, mt
Introduced	16.0.R1

ipv4-routing *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Support IPv4 routing for IS-IS instance
Default	true
Introduced	16.0.R1

ipv6-routing *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Routing topology for IPv6
Default	false
Options	false, native, mt
Introduced	16.0.R1

level [level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	Authentication or hash key string.
String Length	1 to 366
Introduced	16.0.R4

authentication-keychain *string*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description The keychain used to sign and/or authenticate.

Reference configure **system security keychains keychain** *string*

Introduced 16.0.R4

authentication-type *keyword*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Configure the authentication type to be used.

Options password, message-digest

Introduced 16.0.R4

csnp-authentication *boolean*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Enable/disable authentication on received ISIS protocol packets of type CSNP.

Default true

Introduced 16.0.R4

default-ipv4-multicast-metric *number*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Default metric for IPv4 unicast

Range 1 to 16777215

Default 10

Introduced 16.0.R1

default-ipv6-unicast-metric *number*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Default metric for IPv6 unicast

Range 1 to 16777215

Default 10

Introduced 16.0.R1

default-metric *number*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Default metric

Range 1 to 16777215

Default 10

Introduced 16.0.R1

external-preference *number*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description External route preference for IS-IS level

Range 1 to 255

Introduced 16.0.R1

hello-authentication *boolean*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Authenticate individual IS-IS protocol packets of Hello type

Default true

Introduced 16.0.R1

hello-padding *keyword*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Padding on IS-IS Hello packets

Options adaptive, loose, strict, none

Introduced 16.0.R1

loopfree-alternate-exclude *boolean*

Context **configure service vprn** *service-name* **isis** *number* **level** *keyword*

Description Exclude interface participating in specific IS-IS level in SPF LFA computation

Default false

Introduced 16.0.R1

lsp-mtu-size *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	LSP MTU size
Range	490 to 9190
Default	1492
Units	bytes
Introduced	16.0.R1

preference *number*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	External route preference at level
Range	1 to 255
Introduced	16.0.R1

psnp-authentication *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	Enable/disable authentication on received ISIS protocol packets of type PSNP.
Default	true
Introduced	16.0.R4

wide-metrics-only *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **level** *keyword*
Description	Use wide metrics advertisements in the LSPs
Default	false
Introduced	16.0.R1

level-capability *keyword*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Routing level for instance
Options	1, 2, 1/2
Introduced	16.0.R1

link-group [link-group-name] *string*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the link-group context
Introduced	16.0.R1

[link-group-name] *string*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string*
Description	Link group name for the IS-IS protocol
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *very-long-description*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string*
Description	Text description
String Length	1 to 255
Introduced	16.0.R1

level [level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

ipv4-multicast-metric-offset *number*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv4 multicast address family
Range	1 to 16777215
Introduced	16.0.R1

ipv4-unicast-metric-offset *number*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv4 unicast address family
Range	1 to 16777215
Introduced	16.0.R1

ipv6-unicast-metric-offset *number*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv6 unicast address family
Range	1 to 16777215
Introduced	16.0.R1

member [interface-name] *string*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Enter the member context
Max. Elements	8
Introduced	16.0.R1

[interface-name] *string*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword* **member** *string*
Description	Router interface name for this link group
Reference	configure **service vprn** *service-name* **isis** *number* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

oper-members *number*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Minimum number of operational links
Range	1 to 8
Introduced	16.0.R1

revert-members *number*

Context	**configure service vprn** *service-name* **isis** *number* **link-group** *string* **level** *keyword*
Description	Minimum number of operational links to return link group to normal state and remove offsets
Range	1 to 8
Introduced	16.0.R1

loopfree-alternate

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure service vprn** *service-name* **isis** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure service vprn** *service-name* **isis** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

lsp-lifetime *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure service vprn** *service-name* **isis** *number*
Description	Amount of time during which an LSP is considered valid
Range	350 to 65535
Default	1200
Units	seconds
Introduced	16.0.R1

lsp-mtu-size *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure service vprn** *service-name* **isis** *number*
Description	LSP MTU size
Range	490 to 9190
Default	1492
Units	bytes
Introduced	16.0.R1

lsp-refresh

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the lsp-refresh context
Introduced	16.0.R1

half-lifetime *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **lsp-refresh**
Description	Set the refresh interval to always be half the LSP lifetime
Default	true
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **isis** *number* **lsp-refresh**
Description	Refresh timer interval
Range	150 to 65535
Default	600
Units	seconds
Introduced	16.0.R1

multi-topology

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the multi-topology context
Introduced	16.0.R1

ipv4-multicast *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **multi-topology**
Description	Support IPv4 topology (MT3)
Default	false
Introduced	16.0.R1

ipv6-unicast *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **multi-topology**
Description	Support multi-topology TLVs
Default	false
Introduced	16.0.R1

multicast-import

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the multicast-import context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **multicast-import**
Description	Submit IPv4 routes into the multicast RPF of the RTM
Default	false
Introduced	16.0.R1

overload

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the overload context
Introduced	16.0.R1

max-metric *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **overload**
Description	Advertise transit links with maximum metric instead of setting overload bit
Default	false
Introduced	16.0.R1

overload-export-external *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Advertise the external routes when router is in overloaded
Default	false
Introduced	16.0.R1

overload-export-interlevel *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Advertise the inter-level routes when router is overloaded
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

max-metric *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **overload-on-boot**
Description	Advertise transit links with maximum metric instead of setting overload bit
Default	false
Introduced	16.0.R1

timeout *number*

Context	**configure service vprn** *service-name* **isis** *number* **overload-on-boot**
Description	Time during which the router operates in overload state after reboot
Range	60 to 1800
Units	seconds
Introduced	16.0.R1

poi-tlv *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Purge Originator Identification TLV
Default	false
Introduced	16.0.R1

prefix-attributes-tlv *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information
Default	false
Introduced	16.0.R1

prefix-limit

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the prefix-limit context
Introduced	16.0.R1

limit *number*

Context	**configure service vprn** *service-name* **isis** *number* **prefix-limit**
Description	Maximum number of prefixes for IS-IS instance
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

log-only *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **prefix-limit**
Description	Send warning message at specified threshold or when limit is reached, without going into overload
Default	false
Introduced	16.0.R1

overload-timeout (*number* | *keyword*)

Context	**configure service vprn** *service-name* **isis** *number* **prefix-limit**
Description	Time router remains in overload after prefix limit is exceeded before restarting
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure service vprn** *service-name* **isis** *number* **prefix-limit**
Description	Specifies the percentage of the value defined by prefix-limit, at which a warning log message and SNMP notification would be sent. This would only be a warning and additional prefixes will be learned up to 100% of prefix-limit. A value of 0 indicates that the threshold is disabled and no log message or SNMP notification will be sent.
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

psnp-authentication *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Default	true
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Reference bandwidth for bandwidth relative costing
Range	1 to 4000000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the rib-priority context
Introduced	16.0.R1

high

Context	**configure service vprn** *service-name* **isis** *number* **rib-priority**
Description	Enter the high context
Introduced	16.0.R1

prefix-list *string*

Context	**configure service vprn** *service-name* **isis** *number* **rib-priority high**
Description	List used to select routes processed at higher priority through OSPF route calculation process
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

tag *number*

Context	**configure service vprn** *service-name* **isis** *number* **rib-priority high**
Description	Value that matches IS-IS routes processed at higher priority through route calculation process
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **isis** *number*
Description	Unique router ID for ISIS instance
Introduced	16.0.R1

standard-multi-instance *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enable RFC standards compliant multi-instance behavior
Default	false
Introduced	16.0.R1

strict-adjacency-check *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enable strict checking of address families for IS-IS adjacencies
Default	false
Introduced	16.0.R1

summary-address [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the summary-address context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	Summary IP prefix
Introduced	16.0.R1
Notes	This element is part of a list key

level-capability *keyword*

Context	**configure service vprn** *service-name* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	IS-IS Level from which the prefix should be summarized
Options	1, 2, 1/2
Introduced	16.0.R1

route-tag *number*

Context	**configure service vprn** *service-name* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	Route tag assigned to the summary address
Range	1 to max
Introduced	16.0.R1

suppress-attached-bit *boolean*

Context	**configure service vprn** *service-name* **isis** *number*
Description	Allow IS-IS to suppress setting the attached bit on LSPs
Default	false
Introduced	16.0.R1

system-id *system-id*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure service vprn** *service-name* **isis** *number*
Description	System ID
String Length	14
Introduced	16.0.R1

timers

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the timers context
Introduced	16.0.R1

lsp-wait

Context	**configure service vprn** *service-name* **isis** *number* **timers**
Description	Enter the lsp-wait context
Introduced	16.0.R1

lsp-initial-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers lsp-wait**
Description	Initial LSP generation delay
Range	10 to 100000
Default	10
Units	milliseconds
Introduced	16.0.R1

lsp-max-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers lsp-wait**
Description	Maximum time between two consecutive occurrences of LSP generation
Range	10 to 120000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsp-second-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers lsp-wait**
Description	Delay between first and second LSP generation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-wait

Context	**configure service vprn** *service-name* **isis** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers spf-wait**
Description	Initial SPF calculation delay after topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure service vprn** *service-name* **isis** *number* **timers spf-wait**
Description	Hold time between first and second SPF calculations
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

unicast-import

Context	**configure service vprn** *service-name* **isis** *number*
Description	Enter the unicast-import context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **unicast-import**
Description	Submit IPv4 routes into unicast RTM
Default	true
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure service vprn** *service-name* **isis** *number* **unicast-import**
Description	Submit IPv6 routes into unicast RTM
Default	true
Introduced	16.0.R1

l2tp

Context **configure service vprn** *service-name*
Description Enter the l2tp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **l2tp**
Description Administrative state of L2TP
Default disable
Options enable, disable
Introduced 16.0.R1

avp-hiding *keyword*

Context **configure service vprn** *service-name* **l2tp**
Description Attribute of the Value Pair (AVP) hiding algorithm
Options sensitive, always
Introduced 16.0.R1

challenge *boolean*

Context **configure service vprn** *service-name* **l2tp**
Description Use challenge-response authentication
Default false
Introduced 16.0.R1

destruct-timeout *number*

Context **configure service vprn** *service-name* **l2tp**
Description Destruction timeout
Range 60 to 86400
Introduced 16.0.R1

ethernet-tunnel

Context **configure service vprn** *service-name* **l2tp**

Description Enter the ethernet-tunnel context

Introduced 16.0.R4

reconnect-timeout (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp ethernet-tunnel**

Description Timeout for a session setup retry

Introduced 16.0.R4

exclude-avps

Context **configure service vprn** *service-name* **l2tp**

Description Enter the exclude-avps context

Introduced 16.0.R1

calling-number *boolean*

Context **configure service vprn** *service-name* **l2tp exclude-avps**

Description Calling Number AVP to exclude

Default false

Introduced 16.0.R1

initial-rx-lcp-conf-req *boolean*

Context **configure service vprn** *service-name* **l2tp exclude-avps**

Description Initial Received LCP ConfReq AVP to exclude

Default false

Introduced 16.0.R1

failover

Context **configure service vprn** *service-name* **l2tp**

Description Enter the failover context

Introduced 16.0.R1

recovery-max-session-lifetime *number*

Context	**configure service vprn** *service-name* **l2tp failover**
Description	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Range	2 to 4294967295
Default	2
Units	centiseconds
Introduced	16.0.R1

recovery-method *keyword*

Context	**configure service vprn** *service-name* **l2tp failover**
Description	Recovery method of the sequence numbers after failover
Options	mcs, recovery-tunnel
Introduced	16.0.R1

recovery-time *number*

Context	**configure service vprn** *service-name* **l2tp failover**
Description	Time requested from the L2TP peer before assuming failover as failed
Range	0 to 900
Introduced	16.0.R1

track-srrp [id] *number*

Context	**configure service vprn** *service-name* **l2tp failover**
Description	Enter the track-srrp context
Introduced	16.0.R1

[id] *number*

Context	**configure service vprn** *service-name* **l2tp failover track-srrp** *number*
Description	SRRP instance ID that this interface route needs to track
Introduced	16.0.R1
Notes	This element is part of a list key

peer *string*

Context	**configure service vprn** *service-name* **l2tp failover track-srrp** *number*
Description	Multi-chassis peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Context	**configure service vprn** *service-name* **l2tp failover track-srrp** *number*
Description	Synchronization tag on the multi-chassis peer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

group [tunnel-group-name] *string*

Context	**configure service vprn** *service-name* **l2tp**
Description	Enter the group context
Introduced	16.0.R1

[tunnel-group-name] *string*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Tunnel group name
String Length	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Administrative state of the L2TP tunnel group
Default	disable
Options	enable, disable
Introduced	16.0.R1

avp-hiding *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	The AVP hiding algorithm
Options	never, sensitive, always
Introduced	16.0.R4

challenge *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Enable/disable the use of challenge-response authentication.
Options	false, true
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destruct-timeout *number*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Destruction timeout
Range	60 to 86400
Introduced	16.0.R1

ethernet-tunnel

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Enter the ethernet-tunnel context
Introduced	16.0.R4

reconnect-timeout (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **ethernet-tunnel**
Description Timeout for a session setup retry at group level
Introduced 16.0.R4

failover

Context **configure service vprn** *service-name* **l2tp group** *string*
Description Enter the failover context
Introduced 16.0.R1

recovery-method *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **failover**
Description Recovery method of the sequence numbers after failover
Options mcs, recovery-tunnel
Introduced 16.0.R1

recovery-time *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **failover**
Description Time requested from the L2TP peer before assuming failover as failed
Range 0 to 900
Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string*
Description Hello interval
Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string*
Description Idle timeout
Introduced 16.0.R1

l2tpv3

Context **configure service vprn** *service-name* **l2tp group** *string*

Description Enter the l2tpv3 context

Introduced 16.0.R1

cookie-length (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description Cookie field length

Introduced 16.0.R1

digest-type *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description Hashing algorithm that calculates the message digest

Options none, md5, sha1

Introduced 16.0.R1

nonce-length *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description Length for the local L2TPv3 nonce (random number)

Range 0 | 16 to 64

Introduced 16.0.R1

password *encrypted-leaf*

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description L2TPv3 password

String Length 1 to 114

Introduced 16.0.R1

private-tcp-mss-adjust (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description TCP maximum segment size (MSS) on private network

Introduced 16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description TCP Maximum Segment Size (MSS) on public network

Introduced 16.0.R1

pw-cap-list

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description Enter the pw-cap-list context

Introduced 16.0.R1

ethernet *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3 pw-cap-list**

Description Advertise Ethernet pseudowire type

Default false

Introduced 16.0.R1

ethernet-vlan *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3 pw-cap-list**

Description Advertise Ethernet VLAN pseudowire type

Default false

Introduced 16.0.R1

rem-router-id *ipv4-address*

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**

Description Filter on remote router ID

Default 0.0.0.0

Introduced 16.0.R1

track-password-change *boolean*

Context **configure service vprn** *service-name* **l2tp group** *string* **l2tpv3**
Description Enable tracking of password changes
Default false
Introduced 16.0.R1

lac

Context **configure service vprn** *service-name* **l2tp group** *string*
Description Enter the lac context
Introduced 16.0.R1

df-bit *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **lac**
Description DF (do not fragment) bit in data traffic transmitted as LAC
Options false, true
Introduced 16.0.R1

lns

Context **configure service vprn** *service-name* **l2tp group** *string*
Description Enter the lns context
Introduced 16.0.R1

lns-group *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns**
Description ISA LNS group
Reference configure **isa lns-group** *number*
Introduced 16.0.R1

load-balance-method *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns**
Description New sessions for L2TP ISA MDA
Default per-session
Options per-session, per-tunnel
Introduced 16.0.R1

mlppp

Context **configure service vprn** *service-name* **l2tp group** *string* **lns**
Description Enter the mlppp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Administrative state of MLPPP in this L2TP tunnel group
Default disable
Options enable, disable
Introduced 16.0.R1

endpoint

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Enter the endpoint context
Introduced 16.0.R1

ip (*string* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp endpoint**
Description Endpoint ID as an IP address
Introduced 16.0.R1
Notes This element is part of a choice

mac (*string* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp endpoint**
Description Endpoint ID as a MAC address
Introduced 16.0.R1
Notes This element is part of a choice

interleave *boolean*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Enable link fragmentation and interleaving
Default false
Introduced 16.0.R1

max-fragment-delay (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Maximum fragment delay caused by transmission on a link
Default no-fragmentation
Introduced 16.0.R1

max-links *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Maximum MLPPP links
Range 1 to 8
Default 1
Introduced 16.0.R1

reassembly-timeout *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description Reassembly timeout
Range 100 | 1000
Default 1000
Introduced 16.0.R1

short-sequence-numbers *boolean*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns mlppp**
Description	Request a peer to send short sequence numbers
Default	false
Introduced	16.0.R1

ppp

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns**
Description	Enter the ppp context
Introduced	16.0.R1

authentication *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	PPP authentication protocol to negotiate
Default	pref-chap
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1

authentication-policy *string*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	Authentication policy when a DHCP message is received
String Length	1 to 32
Introduced	16.0.R1

chap-challenge-length

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	Enter the chap-challenge-length context
Introduced	16.0.R1

end *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp chap-challenge-length**
Description Maximum PPP CHAP challenge length
Range 8 to 64
Default 64
Introduced 16.0.R1

start *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp chap-challenge-length**
Description Minimum PPP CHAP challenge length
Range 8 to 64
Default 32
Introduced 16.0.R1

default-group-interface

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Enter the default-group-interface context
Introduced 16.0.R1

interface *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp default-group-interface**
Description Group interface
String Length 1 to 32
Introduced 16.0.R1

service-name *service-name*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp default-group-interface**
Description Service name
String Length 1 to 64
Introduced 16.0.R1

ipcp-subnet-negotiation *boolean*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	Allow IPCP subnet negotiation for PPPoE hosts
Default	false
Introduced	16.0.R1

keepalive

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	Enter the keepalive context
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp keepalive**
Description	PPP keepalive interval
Range	10 to 300
Default	30
Introduced	16.0.R1

multiplier *number*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp keepalive**
Description	PPP keepalive multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1

lcp-force-ack-accm *boolean*

Context	**configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Default	false
Introduced	16.0.R1

lcp-ignore-magic-numbers *boolean*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Check Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages
Default false
Introduced 16.0.R1

mtu *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Maximum PPP MTU size
Range 512 to 9212
Default 1500
Introduced 16.0.R1

proxy-authentication *boolean*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Use authentication AVPs that are received from LAC
Default false
Introduced 16.0.R1

proxy-lcp *boolean*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Proxy LCP AVPs that are received from LAC
Default false
Introduced 16.0.R1

user-db *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **lns ppp**
Description Local user database for PPP PAP and CHAP authentication
String Length 1 to 32
Introduced 16.0.R1

local-address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Local address
Introduced	16.0.R1

local-name *host-name*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	The local host name.
String Length	1 to 64
Introduced	16.0.R4

max-retries-estab *number*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Maximum retries for established tunnels
Range	2 to 7
Introduced	16.0.R1

max-retries-not-estab *number*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Maximum retries for unestablished tunnels
Range	2 to 7
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	The password.
String Length	1 to 114
Introduced	16.0.R4

protocol *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Protocol version
Options	v2, v3, v3draft
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	RADIUS accounting policy
Reference	configure **aaa radius l2tp-accounting-policy** *string*
Introduced	16.0.R1

receive-window-size *number*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	L2TP receive window size
Range	4 to 1024
Introduced	16.0.R1

session-assign-method *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Session assignment method
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1

session-limit (*number* | *keyword*)

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Session limit
Introduced	16.0.R1

tunnel [tunnel-name] *string*

Context	**configure service vprn** *service-name* **l2tp group** *string*
Description	Enter the tunnel context
Max. Elements	31
Introduced	16.0.R1

[tunnel-name] *string*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description	Tunnel name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description	Administrative state of the L2TP tunnel
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-establish *boolean*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description	Allow the tunnel to be automatically set up by the system
Default	false
Introduced	16.0.R1

avp-hiding *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description	The AVP hiding algorithm
Options	never, sensitive, always
Introduced	16.0.R4

challenge *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Enable/disable the use of challenge-response authentication.

Options false, true

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

destruct-timeout *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Destruction timeout

Range 60 to 86400

Introduced 16.0.R1

failover

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Enter the failover context

Introduced 16.0.R1

recovery-method *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **failover**

Description Recovery method of the sequence numbers after failover

Options mcs, recovery-tunnel

Introduced 16.0.R1

recovery-time *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **failover**
Description Time requested from the L2TP peer before assuming failover as failed
Range 0 to 900
Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description Hello interval
Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description Idle timeout
Introduced 16.0.R1

l2tpv3

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*
Description Enter the l2tpv3 context
Introduced 16.0.R1

private-tcp-mss-adjust (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **l2tpv3**
Description TCP maximum segment size (MSS) on private network
Introduced 16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **l2tpv3**
Description TCP maximum segment size (MSS) on public network
Introduced 16.0.R1

lac

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Enter the lac context

Introduced 16.0.R1

df-bit *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lac**

Description DF (do not fragment) bit in data traffic transmitted as LAC

Options false, true

Introduced 16.0.R1

lns

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Enter the lns context

Introduced 16.0.R1

lns-group *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns**

Description ISA LNS group

Reference configure **isa lns-group** *number*

Introduced 16.0.R1

load-balance-method *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns**

Description New sessions for L2TP ISA MDA

Options per-session, per-tunnel

Introduced 16.0.R1

mlppp

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns**

Description Enter the mlppp context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Administrative state of MLPPP in the L2TP tunnel

Options enable, disable

Introduced 16.0.R1

endpoint

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Enter the endpoint context

Introduced 16.0.R1

ip (*string* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp endpoint**

Description Endpoint ID as an IP address

Introduced 16.0.R1

Notes This element is part of a choice

mac (*string* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp endpoint**

Description Endpoint ID as a MAC address

Introduced 16.0.R1

Notes This element is part of a choice

interleave *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Use of Link fragmentation and interleaving

Options false, true

Introduced 16.0.R1

max-fragment-delay *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Maximum fragment delay caused by transmission on a link

Range 5 to 1000

Introduced 16.0.R1

max-links *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Maximum MLPPP links

Range 1 to 8

Introduced 16.0.R1

reassembly-timeout *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Reassembly timeout

Range 100 | 1000

Introduced 16.0.R1

short-sequence-numbers *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Request a peer to send short sequence numbers

Options false, true

Introduced 16.0.R1

ppp

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns**

Description Enter the ppp context

Introduced 16.0.R1

authentication *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	PPP authentication protocol to negotiate
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1

authentication-policy *string*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Authentication policy when a DHCP message is received
String Length	1 to 32
Introduced	16.0.R1

chap-challenge-length

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Enter the chap-challenge-length context
Introduced	16.0.R1

end *number*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp chap-challenge-length**
Description	Minimum PPP CHAP challenge length
Range	8 to 64
Introduced	16.0.R1

start *number*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp chap-challenge-length**
Description	Minimum PPP CHAP challenge length
Range	8 to 64
Introduced	16.0.R1

default-group-interface

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Enter the default-group-interface context
Introduced	16.0.R1

interface *string*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface**
Description	Group interface
String Length	1 to 32
Introduced	16.0.R1

service-name *service-name*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface**
Description	Service name
String Length	1 to 64
Introduced	16.0.R1

ipcp-subnet-negotiation *keyword*

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Use of IPCP subnet negotiation for PPPoE hosts
Options	false, true
Introduced	16.0.R1

keepalive

Context	**configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Enter the keepalive context
Introduced	16.0.R1

interval *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive**

Description PPP keepalive interval

Range 10 to 300

Introduced 16.0.R1

multiplier *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive**

Description PPP keepalive multiplier

Range 1 to 5

Introduced 16.0.R1

lcp-force-ack-accm *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option

Options false, true

Introduced 16.0.R1

lcp-ignore-magic-numbers *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked

Options false, true

Introduced 16.0.R1

mtu *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Maximum PPP MTU size

Range 512 to 9212

Introduced 16.0.R1

proxy-authentication *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Authentication AVPs that are received from LAC

Options false, true

Introduced 16.0.R1

proxy-lcp *keyword*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Use the Proxy LCP AVPs that are received from the LAC

Options false, true

Introduced 16.0.R1

user-db *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Local user database for PPP PAP and CHAP authentication

String Length 1 to 32

Introduced 16.0.R1

local-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Local address

Introduced 16.0.R1

local-name *host-name*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description The local host name.

String Length 1 to 64

Introduced 16.0.R4

max-retries-estab *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Maximum retries for established tunnels

Range 2 to 7

Introduced 16.0.R1

max-retries-not-estab *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Maximum retries for unestablished tunnels

Range 2 to 7

Introduced 16.0.R1

password *encrypted-leaf*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description The password.

String Length 1 to 114

Introduced 16.0.R4

peer *ipv4-unicast-address*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Peer address

Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Tunnel preference number with its group

Range 0 to 16777215

Default 50

Introduced 16.0.R1

radius-accounting-policy *string*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description RADIUS accounting policy

Reference configure **aaa radius l2tp-accounting-policy** *string*

Introduced 16.0.R1

receive-window-size *number*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description L2TP receive window size

Range 4 to 1024

Introduced 16.0.R1

remote-name *host-name*

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description Remote host name for tunnel

String Length 1 to 64

Introduced 16.0.R1

session-limit (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp group** *string* **tunnel** *string*

Description L2TP session limit for each tunnel of this router

Introduced 16.0.R1

group-session-limit *number*

Context **configure service vprn** *service-name* **l2tp**

Description L2TP session limit for each group of this router

Range 1 to 250000

Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp**

Description Hello interval

Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp**

Description Idle timeout

Introduced 16.0.R1

ignore-avps

Context **configure service vprn** *service-name* **l2tp**

Description Enter the ignore-avps context

Introduced 16.0.R1

sequencing-required *boolean*

Context **configure service vprn** *service-name* **l2tp ignore-avps**

Description Ignore Sequencing Required AVP

Default false

Introduced 16.0.R1

l2tpv3

Context **configure service vprn** *service-name* **l2tp**

Description Enter the l2tpv3 context

Introduced 16.0.R1

cookie-length *number*

Context **configure service vprn** *service-name* **l2tp l2tpv3**

Description Cookie field length

Range 4 | 8

Introduced 16.0.R1

digest-type *keyword*

Context	**configure service vprn** *service-name* **l2tp l2tpv3**
Description	Hashing algorithm that calculates the message digest
Options	md5, sha1
Introduced	16.0.R1

nonce-length *number*

Context	**configure service vprn** *service-name* **l2tp l2tpv3**
Description	Length of the local L2TPv3 nonce (random number)
Range	0 | 16 to 64
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure service vprn** *service-name* **l2tp l2tpv3**
Description	L2TPv3 password
String Length	1 to 114
Introduced	16.0.R1

private-tcp-mss-adjust *number*

Context	**configure service vprn** *service-name* **l2tp l2tpv3**
Description	TCP maximum segment size (MSS) on private network
Range	512 to 9000
Introduced	16.0.R1

public-tcp-mss-adjust *number*

Context	**configure service vprn** *service-name* **l2tp l2tpv3**
Description	TCP maximum segment size (MSS) on public network
Range	512 to 9000
Introduced	16.0.R1

transport-type

Context **configure service vprn** *service-name* **l2tp l2tpv3**

Description Enter the transport-type context

Introduced 16.0.R1

ip *boolean*

Context **configure service vprn** *service-name* **l2tp l2tpv3 transport-type**

Description Transport type that carries L2TPv3 tunnel

Default false

Introduced 16.0.R1

lac

Context **configure service vprn** *service-name* **l2tp**

Description Enter the lac context

Introduced 16.0.R1

calling-number-format *ascii-specification*

Context **configure service vprn** *service-name* **l2tp lac**

Description Calling Number AVP for L2TP control messages

String Length 1 to 255

Default %S %s

Introduced 16.0.R1

cisco-nas-port

Context **configure service vprn** *service-name* **l2tp lac**

Description Enter the cisco-nas-port context

Introduced 16.0.R1

ethernet *binary-specification*

Context **configure service vprn** *service-name* **l2tp lac cisco-nas-port**

Description L2TP Cisco NAS port AVP with binary patterns for Ethernet

String Length 1 to 255

Introduced 16.0.R1

df-bit *boolean*

Context **configure service vprn** *service-name* **l2tp lac**

Description Send all L2TP packets with DF bit set to 1

Default true

Introduced 16.0.R1

local-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **l2tp**

Description Local address

Introduced 16.0.R1

local-name *host-name*

Context **configure service vprn** *service-name* **l2tp**

Description Local host name

String Length 1 to 64

Introduced 16.0.R1

max-retries-estab *number*

Context **configure service vprn** *service-name* **l2tp**

Description Maximum retries for established tunnels

Range 2 to 7

Introduced 16.0.R1

max-retries-not-estab *number*

Context	**configure service vprn** *service-name* **l2tp**
Description	Maximum retries for unestablished tunnels
Range	2 to 7
Introduced	16.0.R1

next-attempt *keyword*

Context	**configure service vprn** *service-name* **l2tp**
Description	Tunnel that is selected when previous session setup failed
Default	next-preference-level
Options	same-preference-level, next-preference-level
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure service vprn** *service-name* **l2tp**
Description	L2TP password
String Length	1 to 114
Introduced	16.0.R1

peer-address-change-policy *keyword*

Context	**configure service vprn** *service-name* **l2tp**
Description	Reaction when a L2TP response is received from a different address
Options	accept, ignore, reject
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure service vprn** *service-name* **l2tp**
Description	RADIUS accounting policy
Reference	configure **aaa radius l2tp-accounting-policy** *string*
Introduced	16.0.R1

receive-window-size *number*

Context **configure service vprn** *service-name* **l2tp**

Description L2TP receive window size

Range 4 to 1024

Introduced 16.0.R1

replace-result-code

Context **configure service vprn** *service-name* **l2tp**

Description Enter the replace-result-code context

Introduced 16.0.R1

cdn-invalid-dst *boolean*

Context **configure service vprn** *service-name* **l2tp replace-result-code**

Description Enable/disable replacing result code 'Invalid destination' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.

Default false

Introduced 16.0.R4

cdn-permanent-no-facilities *boolean*

Context **configure service vprn** *service-name* **l2tp replace-result-code**

Description Enable/disable replacing result code 'Call failed due to lack of appropriate facilities being available (permanent condition)"Invalid destination' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.

Default false

Introduced 16.0.R4

cdn-temporary-no-facilities *boolean*

Context **configure service vprn** *service-name* **l2tp replace-result-code**

Description Enable/disable replacing result code 'Call failed due to lack of appropriate facilities being available (temporary condition)' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.

Default false

Introduced 16.0.R4

rtm-debounce-time (*number* | *keyword*)

Context **configure service vprn** *service-name* **l2tp**

Description Debounce timer that declares L2TP action for route table management events

Introduced 16.0.R1

session-assign-method *keyword*

Context **configure service vprn** *service-name* **l2tp**

Description Session assignment method

Options existing-first, weighted, weighted-random

Introduced 16.0.R1

session-limit *number*

Context **configure service vprn** *service-name* **l2tp**

Description L2TP session limit of this router

Range 1 to 250000

Introduced 16.0.R1

tunnel-selection-blacklist

Context **configure service vprn** *service-name* **l2tp**

Description Enter the tunnel-selection-blacklist context

Introduced 16.0.R1

add-tunnel-on

Context **configure service vprn** *service-name* **l2tp tunnel-selection-blacklist**

Description Enter the add-tunnel-on context

Introduced 16.0.R1

address-change-timeout *boolean*

Context **configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**

Description Add to the blacklist in case of an address change timeout.

Default false

Introduced 16.0.R4

cdn-err-code *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a CDN is received with code: General error
Default	false
Introduced	16.0.R1

cdn-invalid-dst *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Invalid destination'.
Default	false
Introduced	16.0.R4

cdn-permanent-no-facilities *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Call failed due to lack of appropriate facilities being available (permanent condition)'.
Default	false
Introduced	16.0.R4

cdn-temporary-no-facilities *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Call failed due to lack of appropriate facilities being available (temporary condition)'.
Default	false
Introduced	16.0.R4

stop-ccn-err-code *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a StopCNN is received with code: General error
Default	false
Introduced	16.0.R1

stop-ccn-other *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a StopCNN is received with code: other than general error
Default	false
Introduced	16.0.R1

tx-cdn-not-established-in-time *boolean*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if CDN transmitted with code: Call not established within time allotted by LAC
Default	false
Introduced	16.0.R1

max-list-length (*number* | *keyword*)

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist**
Description	Tunnels or peers in the blacklist
Range	1 to 65535
Default	infinite
Units	minutes
Options	infinite
Introduced	16.0.R1

max-time *number*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist**
Description	Maximum time that a tunnel or peer can remain in the tunnel selection blacklist
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1

timeout-action *keyword*

Context	**configure service vprn** *service-name* **l2tp tunnel-selection-blacklist**
Description	Action when a tunnel or peer remained in the blacklist for maximum time
Default	remove-from-blacklist
Options	remove-from-blacklist, try-one-session
Introduced	16.0.R1

tunnel-session-limit *number*

Context	**configure service vprn** *service-name* **l2tp**
Description	L2TP session limit for each tunnel of this router
Range	1 to 65534
Introduced	16.0.R1

label-mode *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name*
Description	Allocation mode for VPRN service labels
Default	vrf
Options	vrf, next-hop
Introduced	16.0.R1

log

Context	**configure service vprn** *service-name*
Description	Enter the log context
Introduced	16.0.R1

filter [filter-id] *number*

Context	**configure service vprn** *service-name* **log**
Description	Enter the filter context
Introduced	16.0.R1

[filter-id] *number*

Context	**configure service vprn** *service-name* **log filter** *number*
Description	Identification number for an event log filter
Range	1 to 1500
Introduced	16.0.R1
Notes	This element is part of a list key

default-action *keyword*

Context	**configure service vprn** *service-name* **log filter** *number*
Description	Default action for the event filter
Default	forward
Options	drop, forward
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **log filter** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure service vprn** *service-name* **log filter** *number*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number*
Description	Identification number for an event log filter parameter
Range	1 to 999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number*

Description Action for this event filter entry

Options drop, forward

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number*

Description Enter the match context

Introduced 16.0.R1

application

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match**

Description Enter the application context

Introduced 16.0.R1

eq *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match application**

Description Application to match

Options application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, ripng, openflow, sflow, rpki, gmpls, lmp, calltrace, satellite, ldap, pppoe-clnt, adp, mgmt-core, macsec, pcap, mobile-gateway, mobile-pdn, mobile-pdn-cups, mobile-profile, mobile-profile-cups, mobile-serving, auto-prov

Introduced 16.0.R1

Notes This element is part of a choice

neq *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match application**

Description Application to be filtered out

Options application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, ripng, openflow, sflow, rpki, gmpls, lmp, calltrace, satellite, ldap, pppoe-clnt, adp, mgmt-core, macsec, pcap, mobile-gateway, mobile-pdn, mobile-pdn-cups, mobile-profile, mobile-profile-cups, mobile-serving, auto-prov

Introduced 16.0.R1

Notes This element is part of a choice

event

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match**

Description Enter the event context

Introduced 16.0.R1

eq *number*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**

Description Log event message to match

Range 1 to max

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**

Description Number of the log event to match

Range 1 to max

Introduced 16.0.R1

Notes This element is part of a choice

gte *number*

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

lt *number*

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

lte *number*

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**
Description	Number of the log event to match
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

neq *number*

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number* **match event**
Description	Log event message to filter out
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

message

Context	**configure service vprn** *service-name* **log filter** *number* **entry** *number* **match**
Description	Enter the message context
Introduced	16.0.R1

eq *string*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match message**
Description Log event message to match
String Length 1 to 400
Introduced 16.0.R1
Notes This element is part of a choice

neq *string*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match message**
Description Log event message to be filtered out
String Length 1 to 400
Introduced 16.0.R1
Notes This element is part of a choice

regexp *boolean*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match message**
Description String comparison to determine if the log event matches the value of pattern
Default false
Introduced 16.0.R1

severity

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match**
Description Enter the severity context
Introduced 16.0.R1

eq *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**
Description Log event severity level to match
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1
Notes This element is part of a choice

gt *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**

Description Log event severity level

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

Notes This element is part of a choice

gte *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**

Description Log event severity level

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

Notes This element is part of a choice

lt *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**

Description Log event severity level

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

Notes This element is part of a choice

lte *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**

Description Log event severity level

Options cleared, indeterminate, critical, major, minor, warning

Introduced 16.0.R1

Notes This element is part of a choice

neq *keyword*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match severity**
Description Log event severity level to filter out
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1
Notes This element is part of a choice

subject

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match**
Description Enter the subject context
Introduced 16.0.R1

eq *string*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match subject**
Description Log event subject string to match
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a choice

neq *string*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match subject**
Description Log event subject string to filter out
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a choice

regexp *boolean*

Context **configure service vprn** *service-name* **log filter** *number* **entry** *number* **match subject**
Description String comparison to determine if the log event matches the value of subject
Default false
Introduced 16.0.R1

log-id [id] *number*

Context	**configure service vprn** *service-name* **log**
Description	Enter the log-id context
Max. Elements	30
Introduced	16.0.R1

[id] *number*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	The value of id uniquely identifies an event stream log.
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Administrative state of the log
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Enter the destination context
Introduced	16.0.R1

netconf

Context **configure service vprn** *service-name* **log log-id** *number* **destination**

Description Enter the **netconf** context

Introduced 16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name* **log log-id** *number* **destination netconf**

Description Number of events stored in this netconf log.

Range 50 to 3000

Default 100

Introduced 16.0.R1

Notes This element is part of a choice

snmp

Context **configure service vprn** *service-name* **log log-id** *number* **destination**

Description Enter the **snmp** context

Introduced 16.0.R1

max-entries *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name* **log log-id** *number* **destination snmp**

Description Number of events stored in this snmp log.

Range 50 to 3000

Default 100

Introduced 16.0.R1

Notes This element is part of a choice

syslog *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **log log-id** *number* **destination**
Description	Index with the information to format event messages sent to a specific SYSLOG collector
Reference	configure **service vprn** *service-name* **log syslog** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

filter *string*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Filter for this log's source event stream to limit the event output in this log destination
Reference	configure **service vprn** *service-name* **log filter** *number*
Introduced	16.0.R1

netconf-stream *string*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Destination NETCONF stream name
String Length	1 to 32
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Python policy name
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

source

Context	**configure service vprn** *service-name* **log log-id** *number*
Description	Enter the source context
Introduced	16.0.R1

change *boolean*

Context **configure service vprn** *service-name* **log log-id** *number* **source**
Description Source event streams change of log events
Default false
Introduced 16.0.R1

main *boolean*

Context **configure service vprn** *service-name* **log log-id** *number* **source**
Description Source event streams main of log events
Default false
Introduced 16.0.R1

time-format *keyword*

Context **configure service vprn** *service-name* **log log-id** *number*
Description Timestamp format for events sent to logs which have a value of either syslog, or file
Default utc
Options utc, local
Introduced 16.0.R1

snmp-trap-group [log-id] *number*

Context **configure service vprn** *service-name* **log**
Description Enter the snmp-trap-group context
Introduced 16.0.R1

[log-id] *number*

Context **configure service vprn** *service-name* **log snmp-trap-group** *number*
Description SNMP notification group associated with the event log
Range 1 to 100
Introduced 16.0.R1
Notes This element is part of a list key

description *string*

Context **configure service vprn** *service-name* **log snmp-trap-group** *number*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

trap-target [name] *string*

Context **configure service vprn** *service-name* **log snmp-trap-group** *number*
Description Enter the trap-target context
Max. Elements 25
Introduced 16.0.R1

[name] *string*

Context **configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description Name for an SNMP notification destination within the SNMP notification group
String Length 1 to 28
Introduced 16.0.R1
Notes This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description IP address attribute for the trap target
Introduced 16.0.R1
Notes This element is mandatory

description *string*

Context **configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

notify-community *string*

Context	**configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description	SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification
String Length	1 to 31
Introduced	16.0.R1
Notes	This element is mandatory

port *number*

Context	**configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description	UDP port number to send messages to this remote SNMP notification collector
Range	0 | 1 to 65535
Default	162
Introduced	16.0.R1

replay *boolean*

Context	**configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description	Retransmit missed notifications
Default	false
Introduced	16.0.R1

security-level *keyword*

Context	**configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description	Security level at which SNMP notification messages are sent to SNMP notification collector
Default	no-auth-no-privacy
Options	no-auth-no-privacy, auth-no-privacy, privacy
Introduced	16.0.R1

version *keyword*

Context	**configure service vprn** *service-name* **log snmp-trap-group** *number* **trap-target** *string*
Description	SNMP version to format notification messages sent to this SNMP notification collector
Default	snmpv3
Options	snmpv1, snmpv2c, snmpv3
Introduced	16.0.R1

syslog [syslog-id] *number*

Context	**configure service vprn** *service-name* **log**
Description	Enter the syslog context
Introduced	16.0.R1

[syslog-id] *number*

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	Unique arbitrary identifier for this SYSLOG collector target
Range	1 to 30
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	Target syslog host address
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

facility *keyword*

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	Facility code for messages
Default	local7
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Introduced	16.0.R1

log-prefix (*keyword* | *string*)

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	String that is prepended to every log message sent to this target syslog host
String Length	1 to 32
Default	TMNX
Options	no-prefix
Introduced	16.0.R1

port *number*

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	UDP port to generate syslog messages
Range	0 | 1 to 65535
Default	514
Introduced	16.0.R1

severity *keyword*

Context	**configure service vprn** *service-name* **log syslog** *number*
Description	Severity level threshold for the syslog message
Default	info
Options	emergency, alert, critical, error, warning, notice, info, debug
Introduced	16.0.R1

management

Context **configure service vprn** *service-name*

Description Enter the management context

Introduced 16.0.R1

allow-ssh *boolean*

Context **configure service vprn** *service-name* **management**

Description Allow/disallow access to ssh server.

Default false

Introduced 16.0.R5

allow-telnet *boolean*

Context **configure service vprn** *service-name* **management**

Description Allow/disallow access to telnet server.

Default false

Introduced 16.0.R5

allow-telnet6 *boolean*

Context **configure service vprn** *service-name* **management**

Description Allow/disallow access to telnet IPv6 server.

Default false

Introduced 16.0.R5

maximum-ipv4-routes

Context **configure service vprn** *service-name*

Description Enter the maximum-ipv4-routes context

Introduced 16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **maximum-ipv4-routes**
Description	Action when the maximum number of routes, held within a VRF context, is reached
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **maximum-ipv4-routes**
Description	Mid-level water marker for the number of routes which this VRF holds
Range	1 to 100
Units	percent
Introduced	16.0.R1

value *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **maximum-ipv4-routes**
Description	Maximum number of routes that are configured on this virtual router
Range	1 to 2147483647
Introduced	16.0.R1

maximum-ipv6-routes

Context	**configure service vprn** *service-name*
Description	Enter the maximum-ipv6-routes context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **maximum-ipv6-routes**
Description	Action when the maximum number of routes, held within a VRF context, is reached
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **maximum-ipv6-routes**
Description	Mid-level water marker for the number of routes which this VRF holds
Range	1 to 100
Units	percent
Introduced	16.0.R1

value *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **maximum-ipv6-routes**
Description	Maximum number of routes that are configured on this virtual router
Range	1 to 2147483647
Introduced	16.0.R1

mc-maximum-routes

Context	**configure service vprn** *service-name*
Description	Enter the mc-maximum-routes context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **mc-maximum-routes**
Description	Action when the maximum number of multicast routes, held within a VRF context, is reached
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **mc-maximum-routes**
Description	Mid-level water marker for the number of multicast routes which this VRF holds
Range	1 to 100
Units	percent
Introduced	16.0.R1

value *number*

Context	**configure service vprn** *service-name* **mc-maximum-routes**
Description	Maximum number of multicast routes to be configured on this virtual router
Range	1 to 2147483647
Introduced	16.0.R1

mld

Context	**configure service vprn** *service-name*
Description	Enter the mld context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **mld**
Description	Administrative state of MLD operation
Default	enable
Options	enable, disable
Introduced	16.0.R1

forwarding-group-interface forwarding-service *service-name* **group-interface-name** *interface-name*

Context	**configure service vprn** *service-name* **mld**
Description	Enter the forwarding-group-interface context
Introduced	16.0.R1

forwarding-service *service-name*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Forwarding service for a subscriber interface in a retailer context
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

group-interface-name *interface-name*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Max groups number for which IGMP can have local receiver information based on received IGMP reports

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Maximum number of sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

mcac

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time to wait for a response to the host-query messages

Range 1 to 1023

Introduced 16.0.R1

query-source-address *ipv6-unicast-or-linklocal-address*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Source address for MLD queries

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

sub-hosts-only *boolean*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Allow MLD traffic from known hosts only

Default true

Introduced 16.0.R1

subnet-check *boolean*

Context **configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enable subnet checking

Default true

Introduced 16.0.R1

version *keyword*

Context	**configure service vprn** *service-name* **mld forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	MLD protocol version
Default	2
Options	1, 2
Introduced	16.0.R1

group-if-query-source-address *ipv6-unicast-or-linklocal-address*

Context	**configure service vprn** *service-name* **mld**
Description	Source address in queries for group interfaces when not configured at group interface level
Introduced	16.0.R1

group-interface [group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **mld**
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context **configure service vprn** *service-name* **mld group-interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld group-interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld group-interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **mld group-interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **mld group-interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Time between two consecutive host-query messages
Range	2 to 1024
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Time between group-specific query messages
Range	1 to 1023
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

query-source-address *ipv6-unicast-or-linklocal-address*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Source address for MLD queries
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

sub-hosts-only *boolean*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Allow MLD traffic from known hosts only
Default	true
Introduced	16.0.R1

subnet-check *boolean*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure service vprn** *service-name* **mld group-interface** *interface-name*
Description	MLD protocol version
Default	2
Options	1, 2
Introduced	16.0.R1

interface [ip-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **mld**
Description	Enter the interface context
Introduced	16.0.R1

[ip-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context **configure service vprn** *service-name* **mld interface** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints**
Description	Enter the level context
Introduced	16.0.R1

[level-id] *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth level ID for a multicast CAC constraint
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints number-down** *number*

Description Level associated with the number of LAG ports that are down

Range 1 to 8

Introduced 16.0.R1

Notes This element is mandatory

use-lag-port-weight *boolean*

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac mc-constraints**

Description Use LAG port weight while calculating Multicast CAC constraints

Default false

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **mld interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure service vprn** *service-name* **mld interface** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vprn** *service-name* **mld interface** *interface-name*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

ssm-translate

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

static

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Start of group range of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	End of group range for multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

step *ipv6-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Step interval for the group-range addresses
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vprn** *service-name* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

version *keyword*

Context	**configure service vprn** *service-name* **mld interface** *interface-name*
Description	MLD protocol version
Default	2
Options	1, 2
Introduced	16.0.R1

query-interval *number*

Context	**configure service vprn** *service-name* **mld**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vprn** *service-name* **mld**
Description	Time between group-specific query messages
Range	1 to 1023
Default	1
Units	seconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **mld**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vprn** *service-name* **mld**
Description	Robust count to tune for the expected packet loss on a subnet
Range	2 to 10
Default	2
Introduced	16.0.R1

ssm-translate

Context	**configure service vprn** *service-name* **mld**
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure service vprn** *service-name* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

mss-adjust

Context	**configure service vprn** *service-name*
Description	Enter the mss-adjust context
Introduced	16.0.R1

nat-group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **mss-adjust**
Description	NAT group (including WLAN Gateway group) that executes the adjustment
Introduced	16.0.R1
Notes	This element is mandatory

segment-size *number*

Context	**configure service vprn** *service-name* **mss-adjust**
Description	Intended value for the Maximum Segment Size (MSS) option in transmitted TCP SYN requests
Range	160 to 10240
Introduced	16.0.R1
Notes	This element is mandatory

mtrace2

Context	**configure service vprn** *service-name*
Description	Enter the mtrace2 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **mtrace2**
Description	Administrative state of UDP based multicast traceroute tests (mstat2 and mtrace2)
Default	disable
Options	enable, disable
Introduced	16.0.R1

udp-port *number*

Context	**configure service vprn** *service-name* **mtrace2**
Description	Destination UDP port for mstat2|mtrace2 test, or unsolicited mstat2|mtrace2 packets
Range	1024 to 49151
Default	5000
Introduced	16.0.R1

multicast-info-policy *string*

Context	**configure service vprn** *service-name*
Description	Multicast policy name for virtual router
Reference	configure **multicast-management multicast-info-policy** *string*
Introduced	16.0.R1

nat

Context **configure service vprn** *service-name*

Description Enter the nat context

Introduced 16.0.R1

inside

Context **configure service vprn** *service-name* **nat**

Description Enter the inside context

Introduced 16.0.R1

l2-aware

Context **configure service vprn** *service-name* **nat inside**

Description Enter the l2-aware context

Introduced 16.0.R1

subscribers [prefix] *ipv4-prefix-with-host-bits*

Context **configure service vprn** *service-name* **nat inside l2-aware**

Description Enter the subscribers context

Introduced 16.0.R1

[prefix] *ipv4-prefix-with-host-bits*

Context **configure service vprn** *service-name* **nat inside l2-aware subscribers** *ipv4-prefix-with-host-bits*

Description Layer-2 Aware NAT subscriber prefix

Introduced 16.0.R1

Notes This element is part of a list key

large-scale

Context **configure service vprn** *service-name* **nat inside**

Description Enter the large-scale context

Introduced 16.0.R1

dnat-only

Context **configure service vprn** *service-name* **nat inside large-scale**

Description Enter the dnat-only context

Introduced 16.0.R1

source-prefix-list *string*

Context **configure service vprn** *service-name* **nat inside large-scale dnat-only**

Description NAT prefix list that contains source IP addresses

Reference configure **service nat prefix-list** *string*

Introduced 16.0.R1

dual-stack-lite

Context **configure service vprn** *service-name* **nat inside large-scale**

Description Enter the dual-stack-lite context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale dual-stack-lite**

Description Administrative state of Dual Stack Lite

Default disable

Options enable, disable

Introduced 16.0.R1

deterministic

Context **configure service vprn** *service-name* **nat inside large-scale dual-stack-lite**

Description Enter the deterministic context

Introduced 16.0.R1

policy-map [source-prefix] *ipv6-unicast-prefix*

Context **configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic**

Description Enter the policy-map context

Introduced 16.0.R1

[source-prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Source prefix that adds traffic to NAT pool
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Administrative state of this prefix
Default	disable
Options	enable, disable
Introduced	16.0.R1

map [from] *ipv6-prefix* **to** *ipv6-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Enter the map context
Introduced	16.0.R1

[from] *ipv6-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	Beginning of the range for IPv6 addresses that is mapped on the inside to outside IPv6addresses
Introduced	16.0.R1
Notes	This element is part of a list key

to *ipv6-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	Ending of the range for IPv6 addresses that is mapped on the inside to outside IPv6 addresses
Introduced	16.0.R1
Notes	This element is part of a list key

first-outside-address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	IPv6 address range that is mapped to outside IPv4 address
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	NAT policy
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

endpoint [address] *ipv6-address*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite**
Description	Enter the endpoint context
Max. Elements	128
Introduced	16.0.R1

[address] *ipv6-address*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Dual Stack Lite IPv6 address
Introduced	16.0.R1
Notes	This element is part of a list key

ip-fragmentation *keyword*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Fragmentation control of the AFTR originated downstream IPv6 traffic
Options	fragment-ipv6, fragment-ipv6-unless-ipv4-df-set
Introduced	16.0.R1

reassembly *boolean*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Reassembly of IPv6 payload datagrams
Default	false
Introduced	16.0.R1

tunnel-mtu *number*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Maximum size of IPv4 packet inside of DS-Lite tunnel
Range	512 to 9212
Default	1500
Introduced	16.0.R1

max-subscriber-limit *number*

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite**
Description	Largest value for all subscriber limits in each deterministic pool
Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768
Introduced	16.0.R1

subscriber-prefix-length *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat inside large-scale dual-stack-lite**
Description	IPv6 prefix length of the Dual Stack Lite subscribers
Range	32 to 64 | 128
Introduced	16.0.R1

filters

Context	**configure service vprn** *service-name* **nat inside large-scale**
Description	Enter the filters context
Introduced	16.0.R1

downstream

Context	**configure service vprn** *service-name* **nat inside large-scale filters**
Description	Enter the downstream context
Introduced	16.0.R1

ipv4 *string*

Context	**configure service vprn** *service-name* **nat inside large-scale filters downstream**
Description	IP filter for downstream traffic
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

nat-policy *string*

Context	**configure service vprn** *service-name* **nat inside large-scale**
Description	NAT policy for LSN
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

nat44

Context	**configure service vprn** *service-name* **nat inside large-scale**
Description	Enter the nat44 context
Introduced	16.0.R1

destination-prefix [ip-prefix-length] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale nat44**
Description	Enter the destination-prefix context
Max. Elements	1024
Introduced	16.0.R1

[ip-prefix-length] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale nat44 destination-prefix** *ipv4-unicast-prefix*
Description	Traffic sent to destinations within this prefix will be NATed
Introduced	16.0.R1
Notes	This element is part of a list key

nat-policy *string*

Context	**configure service vprn** *service-name* **nat inside large-scale nat44 destination-prefix** *ipv4-unicast-prefix*
Description	NAT policy
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

deterministic

Context	**configure service vprn** *service-name* **nat inside large-scale nat44**
Description	Enter the deterministic context
Introduced	16.0.R1

policy-map [source-prefix] *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **nat inside large-scale nat44 deterministic**

Description Enter the policy-map context

Introduced 16.0.R1

[source-prefix] *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*

Description Source prefix that adds traffic to NAT pool

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*

Description Administrative state of this prefix

Default disable

Options enable, disable

Introduced 16.0.R1

map [from] *ipv4-address* **to** *ipv4-address*

Context **configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*

Description Enter the map context

Introduced 16.0.R1

[from] *ipv4-address*

Context **configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*

Description Beginning of the range for IPv4 addresses that is mapped on the inside to outside IPv4 addresses

Introduced 16.0.R1

Notes This element is part of a list key

to *ipv4-address*

Context	**configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*
Description	Ending of the range for IPv4 addresses that is mapped on the inside to outside IPv4 addresses
Introduced	16.0.R1
Notes	This element is part of a list key

first-outside-address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*
Description	IPv6 address range that is mapped to outside IPv4 address
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*
Description	NAT policy
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

max-subscriber-limit *number*

Context	**configure service vprn** *service-name* **nat inside large-scale nat44**
Description	Largest value for all subscriber limits in each deterministic pool
Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768
Introduced	16.0.R1

nat64

Context **configure service vprn** *service-name* **nat inside large-scale**

Description Enter the nat64 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale nat64**

Description Administrative state of NAT65

Default disable

Options enable, disable

Introduced 16.0.R1

drop-zero-ipv4-checksum *boolean*

Context **configure service vprn** *service-name* **nat inside large-scale nat64**

Description Drop UDP datagrams with zero IPv4 checksum

Default false

Introduced 16.0.R1

insert-ipv6-fragment-header *boolean*

Context **configure service vprn** *service-name* **nat inside large-scale nat64**

Description Include IPv6 fragment header to indicate that the sender allows fragmentation

Default false

Introduced 16.0.R1

ip-fragmentation *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale nat64**

Description Control fragmentation of originated downstream IPv6 traffic

Options fragment-ipv6, fragment-ipv6-unless-ipv4-df-set

Introduced 16.0.R1

ipv6-mtu *number*

Context	**configure service vprn** *service-name* **nat inside large-scale nat64**
Description	Size of the IPv6 downstream packet in NAT64
Range	1280 to 9212
Default	1520
Introduced	16.0.R1

prefix *ipv6-prefix*

Context	**configure service vprn** *service-name* **nat inside large-scale nat64**
Description	IPv6 prefix to derive the IPv6 address from the IPv4 address
Default	64:ff9b::/96
Introduced	16.0.R1

subscriber-prefix-length *number*

Context	**configure service vprn** *service-name* **nat inside large-scale nat64**
Description	IPv6 prefix length for the NAT64 subscribers
Range	32 to 64 | 128
Introduced	16.0.R1

tos

Context	**configure service vprn** *service-name* **nat inside large-scale nat64**
Description	Enter the tos context
Introduced	16.0.R1

downstream

Context	**configure service vprn** *service-name* **nat inside large-scale nat64 tos**
Description	Enter the downstream context
Introduced	16.0.R4

use-ipv4 *boolean*

Context	**configure service vprn** *service-name* **nat inside large-scale nat64 tos downstream**
Description	Copy TOS/DSCP bits from the incoming IPv4 frame to the outgoing IPv6 frame
Default	false
Introduced	16.0.R4

upstream

Context	**configure service vprn** *service-name* **nat inside large-scale nat64 tos**
Description	Enter the upstream context
Introduced	16.0.R4

set-tos (*keyword* | *number*)

Context	**configure service vprn** *service-name* **nat inside large-scale nat64 tos upstream**
Description	TOS/DSCP bits in IPv4 frame in the upstream direction
Range	0 to 255
Default	use-ipv6
Options	use-ipv6
Introduced	16.0.R4

redundancy

Context	**configure service vprn** *service-name* **nat inside large-scale**
Description	Enter the redundancy context
Introduced	16.0.R1

peer *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **nat inside large-scale redundancy**
Description	IP address of the NAT redundancy peer for this virtual router instance
Introduced	16.0.R1

peer6 *ipv6-unicast-address*

Context **configure service vprn** *service-name* **nat inside large-scale redundancy**

Description IPv6 address of the NAT redundancy peer for this virtual router instance

Introduced 16.0.R1

steering-route (*ipv4-prefix* | *ipv6-prefix*)

Context **configure service vprn** *service-name* **nat inside large-scale redundancy**

Description IP address and prefix length of the steering route

Introduced 16.0.R1

subscriber-identification

Context **configure service vprn** *service-name* **nat inside large-scale**

Description Enter the subscriber-identification context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification**

Description Administrative state of subscriber identification

Default disable

Options enable, disable

Introduced 16.0.R1

attribute

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification**

Description Enter the attribute context

Introduced 16.0.R1

type *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification attribute**

Description The RADIUS Vendor-Id value corresponding with this vendor.

Default alc-sub-string

Options alc-sub-string, user-name, class, station-id, imsi, imei

Introduced 16.0.R4

vendor *keyword*

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification attribute**

Description The RADIUS Vendor

Default nokia

Options standard, nokia, 3gpp

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

drop-unidentified-traffic *boolean*

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification**

Description Drop traffic from unidentified flows

Default false

Introduced 16.0.R1

radius-proxy-server

Context **configure service vprn** *service-name* **nat inside large-scale subscriber-identification**

Description Enter the radius-proxy-server context

Introduced 16.0.R1

router-instance *string*

Context	**configure service vprn** *service-name* **nat inside large-scale subscriber-identification radius-proxy-server**
Description	Router instance
Introduced	16.0.R1
Notes	This element is mandatory

server *string*

Context	**configure service vprn** *service-name* **nat inside large-scale subscriber-identification radius-proxy-server**
Description	Server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

map

Context	**configure service vprn** *service-name* **nat**
Description	Enter the map context
Introduced	16.0.R1

map-domain [domain-name] *string*

Context	**configure service vprn** *service-name* **nat map**
Description	Enter the map-domain context
Introduced	16.0.R1

[domain-name] *string*

Context	**configure service vprn** *service-name* **nat map map-domain** *string*
Description	MAP domain name
Reference	configure **service nat map-t domain** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

outside

Context	**configure service vprn** *service-name* **nat**
Description	Enter the outside context
Introduced	16.0.R1

dnat-only

Context	**configure service vprn** *service-name* **nat outside**
Description	Enter the dnat-only context
Introduced	16.0.R1

route-limit *number*

Context	**configure service vprn** *service-name* **nat outside dnat-only**
Description	Number that is used to limit internal routes for downstream traffic
Range	1 to 131072
Default	32768
Introduced	16.0.R1

filters

Context	**configure service vprn** *service-name* **nat outside**
Description	Enter the filters context
Introduced	16.0.R1

downstream

Context	**configure service vprn** *service-name* **nat outside filters**
Description	Enter the downstream context
Introduced	16.0.R1

ipv4 *string*

Context	**configure service vprn** *service-name* **nat outside filters downstream**
Description	IP filter for downstream traffic
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **nat outside filters downstream**

Description IPv6 filter for downstream traffic

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

upstream

Context **configure service vprn** *service-name* **nat outside filters**

Description Enter the upstream context

Introduced 16.0.R1

ipv4 *string*

Context **configure service vprn** *service-name* **nat outside filters upstream**

Description IP filter for upstream traffic

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **nat outside filters upstream**

Description IPv6 filter for upstream traffic

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mtu *number*

Context **configure service vprn** *service-name* **nat outside**

Description MTU for downstream traffic

Range 512 to 9000

Introduced 16.0.R1

pool [name] *string*

Context	**configure service vprn** *service-name* **nat outside**
Description	Enter the pool context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	NAT pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address-range [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the address-range context
Max. Elements	4096
Introduced	16.0.R1

[start] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	End address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context **configure service vprn** *service-name* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

drain *boolean*

Context **configure service vprn** *service-name* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*

Description Start or stop draining this NAT address range

Default false

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **nat outside pool** *string*

Description Administrative state of the outside NAT pool

Default disable

Options enable, disable

Introduced 16.0.R1

applications

Context **configure service vprn** *service-name* **nat outside pool** *string*

Description Enter the applications context

Introduced 16.0.R1

agnostic *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat outside pool** *string* **applications**
Description	NAT pool to create in the outside routing context
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

l2-aware

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the l2-aware context
Introduced	16.0.R1

external-assignment *boolean*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **l2-aware**
Description	External IP address for Layer-2-aware
Default	false
Introduced	16.0.R1

large-scale

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the large-scale context
Introduced	16.0.R1

deterministic

Context	**configure service vprn** *service-name* **nat outside pool** *string* **large-scale**
Description	Enter the deterministic context
Introduced	16.0.R1

port-reservation *number*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale deterministic**

Description Number of ports per deterministic port-block

Range 1 to 65536

Introduced 16.0.R1

redundancy

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale**

Description Enter the redundancy context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy**

Description Administrative state of multi-chassis redundancy

Default disable

Options enable, disable

Introduced 16.0.R1

Notes This element is part of a choice

export-route *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy**

Description Route to export to the peer

Introduced 16.0.R1

Notes This element is part of a choice

follow

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy**

Description Enter the **follow** context

Introduced 16.0.R1

name *string*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy follow**

Description NAT pool name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

router-instance *string*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy follow**

Description The virtual router instance of the pool.

Introduced 16.0.R1

Notes This element is part of a choice

monitor-route *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale redundancy**

Description Monitor the peer route

Introduced 16.0.R1

Notes This element is part of a choice

subscriber-limit *number*

Context **configure service vprn** *service-name* **nat outside pool** *string* **large-scale**

Description Maximum number of subscribers per IP address

Range 1 to 65535

Introduced 16.0.R1

mode *keyword*

Context **configure service vprn** *service-name* **nat outside pool** *string*

Description Mode of operation of this NAT address pool

Options auto, napt, one-to-one

Introduced 16.0.R1

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Create a NAT group
Reference	configure **isa nat-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

port-forwarding

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the port-forwarding context
Introduced	16.0.R1

dynamic-block-reservation *boolean*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **port-forwarding**
Description	Dynamic block to reserve for each subscriber with a forwarding port
Default	false
Introduced	16.0.R1

range-end *number*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **port-forwarding**
Description	End of the wildcard range for port forwards
Range	0 | 1023 to 65535
Introduced	16.0.R1

port-reservation

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the port-reservation context
Introduced	16.0.R1

port-blocks *number*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **port-reservation**
Description	Number of dynamic port blocks per outside IP address
Range	1 to 64512
Introduced	16.0.R1
Notes	This element is part of a choice

ports *number*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **port-reservation**
Description	Number of ports in each dynamic port block within the pool
Range	1 to 32256
Introduced	16.0.R1
Notes	This element is part of a choice

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	NAT pool type
Options	large-scale, l2-aware, wlan-gw-anchor
Introduced	16.0.R1
Notes	This element is mandatory

watermarks

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **watermarks**
Description	Percentage for high watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure service vprn** *service-name* **nat outside pool** *string* **watermarks**
Description	Percentage for low watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **nat outside pool** *string*
Description	Create a WLAN GW group for NAT
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

network

Context	**configure service vprn** *service-name*
Description	Enter the network context
Introduced	16.0.R4

ingress

Context	**configure service vprn** *service-name* **network**
Description	Enter the ingress context
Introduced	16.0.R4

filter

Context **configure service vprn** *service-name* **network ingress**

Description Enter the filter context

Introduced 16.0.R4

ip *string*

Context **configure service vprn** *service-name* **network ingress filter**

Description Apply IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R4

ipv6 *string*

Context **configure service vprn** *service-name* **network ingress filter**

Description Apply IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R4

qos

Context **configure service vprn** *service-name* **network ingress**

Description Enter the qos context

Introduced 16.0.R4

fp-redirect-group *string*

Context **configure service vprn** *service-name* **network ingress qos**

Description The forwarding-plane queue group Policy for this VPRN

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R4

instance *number*

Context	**configure service vprn** *service-name* **network ingress qos**
Description	The instance of the forwarding-plane ingress Queue Group for this VPRN
Range	1 to 65535
Introduced	16.0.R4

network-policy *string*

Context	**configure service vprn** *service-name* **network ingress qos**
Description	Associates a pre-existing network-policy-id to a VPRN
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R4

urpf-check *boolean*

Context	**configure service vprn** *service-name* **network ingress**
Description	Enable/disable URPF checking when the network interface is in selective VPRN mode
Default	true
Introduced	16.0.R4

network-interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name*
Description	Enter the network-interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	The administrative name assigned to this router interface. The interface name must be unique among entries with the same vRtrID value.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

cflowd-parameters

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R1

sampling [sampling-type] *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **cflowd-parameters**
Description	Enter the sampling context
Introduced	16.0.R1

[sampling-type] *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	Cflowd sampling type for virtual router interface
Options	unicast, multicast
Introduced	16.0.R5
Notes	This element is part of a list key

direction *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The direction of the Cflowd analysis that is applied to the given interface.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4

type *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The type of Cflowd analysis that is applied to the given interface.
Options	acl, interface
Introduced	16.0.R4
Notes	This element is mandatory

cpu-protection *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	CPM Protection policy associated with an interface
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Distributed CPU protection policy
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

egress

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Enter the egress context
Introduced	16.0.R1

filter

Context **configure service vprn** *service-name* **network-interface** *interface-name* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **egress filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

hold-time

Context **configure service vprn** *service-name* **network-interface** *interface-name*

Description Enter the hold-time context

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time**

Description Enter the ipv4 context

Introduced 16.0.R1

down

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time ipv4**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time ipv4 down**

Description Apply down delay only when interface is configured or after reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time ipv4 down**

Description Down hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time ipv4**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **hold-time ipv4 up**

Description Up hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **network-interface** *interface-name*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ingress filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ingress-stats *boolean*

Context **configure service vprn** *service-name* **network-interface** *interface-name*

Description Collect ingress statistics

Default false

Introduced 16.0.R1

ip-mtu *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name*

Description Interface IP MTU

Range 512 to 9000

Units bytes

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **network-interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

allow-directed-broadcasts *boolean*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**

Description Accept broadcasts that are directed to this interface

Default false

Introduced 16.0.R1

bfd

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	BFD transmit interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 bfd**
Description	BFD session termination
Default	auto
Options	cpm-np, auto
Introduced	16.0.R1

icmp

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description	Enter the icmp context
Introduced	16.0.R1

mask-reply *boolean*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp**
Description	Allow responses to ICMP mask requests
Default	true
Introduced	16.0.R1

param-problem

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp**

Description Enter the param-problem context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp param-problem**

Description Administrative state of sending parameter-problem messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp param-problem**

Description Number of parameter-problem ICMP messages to send in specified time interval

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp param-problem**

Description Time used to limit number of parameter-problem ICMP messages issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

redirects

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp redirects**
Description	Administrative state of sending ICMP redirects
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp redirects**
Description	Maximum number of ICMP redirect messages to send
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp redirects**
Description	Time to limit the number of ICMP redirect messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ttl-expired

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp**
Description	Enter the ttl-expired context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Maximum number of TTL expired messages to send
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Time to limit the number of ICMP TTL expired messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

unreachables

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp**
Description	Enter the unreachables context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp unreachables**
Description	Administrative state of sending unreachable messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp unreachables**
Description	Maximum number of unreachable messages to send
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 icmp unreachables**
Description	Time to limit the number of unreachable messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

neighbor-discovery

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

retry-timer *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP retry interval
Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1

static-neighbor [ipv4-address] *ipv4-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv4-address] *ipv4-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	IPv4 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

primary

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description	Enter the primary context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 primary**
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is mandatory

broadcast *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 primary**
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 primary**
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

secondary [address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description	Enter the secondary context
Introduced	16.0.R1

[address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

broadcast *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

igp-inhibit *boolean*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Secondary IP address that is not recognized as local interface by the running IGP
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

tcp-mss *number*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description TCP maximum segment size for the interface
Range 384 to 9158
Introduced 16.0.R1

urpf-check

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4**
Description Enter the urpf-check context
Introduced 16.0.R1

ignore-default *boolean*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 urpf-check**
Description Ignore default route when performing a uRPF check
Default false
Introduced 16.0.R1

mode *keyword*

Context **configure service vprn** *service-name* **network-interface** *interface-name* **ipv4 urpf-check**
Description Unicast RPF check mode
Default strict
Options strict, loose, strict-no-ecmp
Introduced 16.0.R1

lag

Context **configure service vprn** *service-name* **network-interface** *interface-name*
Description Enter the lag context
Introduced 16.0.R1

link-map-profile *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **lag**
Description	LAG link map profile applied to a SAP or network interface
Range	1 to 64
Introduced	16.0.R1

per-link-hash

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **lag**
Description	Enter the per-link-hash context
Introduced	16.0.R1

class *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **lag per-link-hash**
Description	Class used on LAG egress when using weighted per-link-hash
Range	1 to 3
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

load-balancing

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Enter the load-balancing context
Introduced	16.0.R1

ip-load-balancing *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **load-balancing**
Description	Configure IP load balancing algorithm.
Default	both
Options	both, destination, source, inner-ip
Introduced	16.0.R3

lsr-load-balancing *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **load-balancing**
Description	LSR load balancing algorithm
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1

spi-load-balancing *boolean*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **load-balancing**
Description	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Default	false
Introduced	16.0.R1

teid-load-balancing *boolean*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **load-balancing**
Description	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Default	false
Introduced	16.0.R1

loopback

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Use interface as a loopback interface
Introduced	16.0.R1
Notes	This element is part of a choice

mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	MAC address for the interface
Introduced	16.0.R1

port *port-and-encap*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Port to bind the interface
String Length	1 to 45
Introduced	16.0.R1
Notes	This element is part of a choice

qos

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	Enter the qos context
Introduced	16.0.R1

egress-instance *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **qos**
Description	Instance of the port egress queue group for this interface
Range	1 to 65535
Introduced	16.0.R1

egress-port-redirect-group *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **qos**
Description	QoS queue group name
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1

ingress-fp-redirect-group *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **qos**
Description	Forwarding-plane queue group policy for this interface
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1

ingress-instance *number*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **qos**
Description	Instance of the forwarding-plane ingress queue group for this interface
Range	1 to 65535
Introduced	16.0.R1

network-policy *string*

Context	**configure service vprn** *service-name* **network-interface** *interface-name* **qos**
Description	Pre-existing network policy ID associated with a network interface
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

tos-marking-state *keyword*

Context	**configure service vprn** *service-name* **network-interface** *interface-name*
Description	TOS marking state
Default	trusted
Options	trusted, untrusted
Introduced	16.0.R1

ntp

Context	**configure service vprn** *service-name*
Description	Enter the ntp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **ntp**
Description	Administrative state of NTP protocol execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

authenticate *boolean*

Context	**configure service vprn** *service-name* **ntp**
Description	Authentication of NTP PDUs when acting as a server
Default	false
Introduced	16.0.R1

authentication-check *boolean*

Context	**configure service vprn** *service-name* **ntp**
Description	Reject NTP PDUs that do not match the authentication key-id, type, or key requirements
Default	true
Introduced	16.0.R1

authentication-key [key-id] *number*

Context	**configure service vprn** *service-name* **ntp**
Description	Enter the authentication-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure service vprn** *service-name* **ntp authentication-key** *number*
Description	Index of the NTP authentication key table that uniquely identifies an authentication key and type
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

key *encrypted-leaf*

Context	**configure service vprn** *service-name* **ntp authentication-key** *number*
Description	Key to authenticate NTP packets
String Length	1 to 70
Introduced	16.0.R1
Notes	This element is mandatory

type *keyword*

Context	**configure service vprn** *service-name* **ntp authentication-key** *number*
Description	Type of authentication method to authenticate NTP packet
Options	des, message-digest
Introduced	16.0.R1
Notes	This element is mandatory

broadcast [interface-name] *string*

Context	**configure service vprn** *service-name* **ntp**
Description	Enter the broadcast context
Introduced	16.0.R1

[interface-name] *string*

Context	**configure service vprn** *service-name* **ntp broadcast** *string*
Description	Router interface name.
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

key-id *string*

Context	**configure service vprn** *service-name* **ntp broadcast** *string*
Description	Specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node.
Reference	configure **service vprn** *service-name* **ntp authentication-key** *number*
Introduced	16.0.R1

ttl *number*

Context	**configure service vprn** *service-name* **ntp broadcast** *string*
Description	TTL value of messages transmitted by this broadcast address
Range	1 to 255
Default	127
Introduced	16.0.R1

version *number*

Context	**configure service vprn** *service-name* **ntp broadcast** *string*
Description	NTP version number generated or accepted by this node in NTP packets
Range	2 to 4
Default	4
Introduced	16.0.R1

ospf [ospf-instance] *number*

Context	**configure service vprn** *service-name*
Description	Enter the ospf context
Max. Elements	32
Introduced	16.0.R1

[ospf-instance] *number*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Specifies the value of the integrated OSPF instance.
Range	0
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Administrative state of the OSPF instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Allow router advertisement capabilities
Default	false
Options	false, link, area, as
Introduced	16.0.R1

area [area-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the area context
Introduced	16.0.R1

[area-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Area-ID attribute
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

area-range [ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **area-range** *ipv4-unicast-prefix*
Description	ip-prefix a.b.c.d (host bits must be 0) mask [0..32]
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **area-range** *ipv4-unicast-prefix*
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

blackhole-aggregate *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Install a low priority blackhole route to avoid loops
Default	true
Introduced	16.0.R1

export-policy *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Route that is exported as Type 3 Summary-LSAs or OSPFv3 Inter-Area-Prefix-LSA between areas
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Route that is imported as summary type 3/inter-area-prefix-LSA from another area into this area
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Router interface name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

advertise-subnet *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Advertise point-to-point interfaces as subnet routes
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Authentication key
String Length	1 to 38
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Configure TCP authentication keychain to use for the session
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Authentication type used on OSPF interface
Options	password, message-digest
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

remain-down-on-failure *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **bfd-liveness**
Description	Force adjacency down on BFD failure and remain down until BFD session returns
Default	false
Introduced	16.0.R1

dead-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

interface-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Interface type to broadcast or point-to-point
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1

loopfree-alternate

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the loopfree-alternate context
Introduced	16.0.R3

exclude *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enable/disable fast re-route capability for OSPF at interface level (only valid for primary interface)
Default	false
Introduced	16.0.R3

policy-map

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enter the policy-map context
Introduced	16.0.R1

route-nh-template *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsa-filter-out *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	LSA flooding reduction
Default	none
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Introduced	16.0.R1

message-digest-key [key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the message-digest-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **message-digest-key** *number*
Description	Message digest index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

md5 *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **message-digest-key** *number*
Description	MD5 hash key
String Length	1 to 50
Introduced	16.0.R1

metric *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Explicit route cost metric that is applied to the interface
Range	1 to 65535
Introduced	16.0.R1

mtu *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	MTU for the OSPF to use on the interface
Range	512 to 9198
Introduced	16.0.R1

neighbor [address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the neighbor context
Introduced	16.0.R1

[address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **neighbor** *ipv4-unicast-address*
Description	Neighbor address
Introduced	16.0.R1
Notes	This element is part of a list key

passive *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow interface to be advertised as an OSPF interface without running the OSPF protocol
Default	false
Introduced	16.0.R1

poll-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between two Hello packets to a non-adjacent OSPF NBMA neighbor
Default	120
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Priority of the interface to apply in the designated router election on the subnet
Range	0 to 255
Default	1
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

rib-priority *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	RIB priority for OSPF
Options	high
Introduced	16.0.R1

transit-delay *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

loopfree-alternate-exclude *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Exclude specific interface or all interfaces participating in all OSPF areas in SPF LFA computation
Default	false
Introduced	16.0.R1

nssa

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the nssa context
Introduced	16.0.R1

area-range [ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa area-range** *ipv4-unicast-prefix*
Description	ip-prefix a.b.c.d (host bits must be 0) mask [0..32]
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa area-range** *ipv4-unicast-prefix*
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

originate-default-route

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Enter the originate-default-route context
Introduced	16.0.R1

adjacency-check *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Perform adjacency checks before originating a default route
Default	false
Introduced	16.0.R1

type-nssa *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Generate a default route using NSSA-LSA type
Default	false
Introduced	16.0.R1

redistribute-external *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Redistribute external routes into the NSSA
Default	true
Introduced	16.0.R1

summaries *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Send summary (Type 3) LSAs into the NSSA on an ABR
Default	true
Introduced	16.0.R1

sham-link [interface] *interface-name* **ip-address** *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the sham-link context
Introduced	16.0.R1

[interface] *interface-name*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Router interface name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

ip-address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Destination IP address
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	authentication-key - [8 chars max] hash/hash2-key - [32 chars max]
String Length	1 to 38
Introduced	16.0.R4

authentication-keychain *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Configure TCP authentication keychain to use for the session
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Enable/disable authentication and specify authentication type to be used on the interface
Options	password, message-digest
Introduced	16.0.R4

dead-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

message-digest-key [key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Enter the message-digest-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address* **message-digest-key** *number*
Description	Message digest index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

md5 *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address* **message-digest-key** *number*
Description	key - [16 chars max] hash/hash2-key - [44 chars max] (for hash scheme)
String Length	1 to 50
Introduced	16.0.R4

metric *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Explicit route cost metric that is applied to the sham link
Range	1 to 65535
Default	1
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

transit-delay *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **sham-link** *interface-name* **ip-address** *ipv4-unicast-address*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

stub

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the stub context
Introduced	16.0.R1

default-metric *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **stub**
Description	Metric used by the ABR for the default route into the stub area
Range	1 to 16777214
Default	1
Introduced	16.0.R1

summaries *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **stub**
Description	Send summary (Type 3) LSAs into the stub area on an ABR
Default	true
Introduced	16.0.R1

virtual-link [router-id] *ipv4-address* **transit-area** *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Description	Enter the virtual-link context
Introduced	16.0.R1

[router-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Router identity of the virtual link neighbor
Introduced	16.0.R1
Notes	This element is part of a list key

transit-area *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Transit area that links backbone area to area without physical connection with the backbone
Reference	configure **service vprn** *service-name* **ospf** *number* **area** *ipv4-address*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Authentication key
String Length	1 to 38
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Configure TCP authentication keychain to use for the session
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Authentication type used on OSPF interface
Options	password, message-digest
Introduced	16.0.R1

dead-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	60
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

message-digest-key [key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Enter the message-digest-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string* **message-digest-key** *number*
Description	Message digest index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

md5 *encrypted-leaf*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string* **message-digest-key** *number*
Description	key - [16 chars max] hash/hash2-key - [44 chars max] (for hash scheme)
String Length	1 to 50
Introduced	16.0.R4

retransmit-interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

transit-delay *number*

Context	**configure service vprn** *service-name* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

compatible-rfc1583 *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	OSPF summary and external route calculations
Default	true
Introduced	16.0.R1

export-limit

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure service vprn** *service-name* **ospf** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **ospf** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

external-db-overflow

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the external-db-overflow context
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **ospf** *number* **external-db-overflow**
Description	Time during which the router operates in overload
Range	0 to 2147483647
Default	0
Units	seconds
Introduced	16.0.R1

limit *number*

Context	**configure service vprn** *service-name* **ospf** *number* **external-db-overflow**
Description	Number of external LSA at which overload is triggered
Range	0 to 2147483647
Default	0
Introduced	16.0.R1

external-preference *number*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Preference for OSPF external routes
Range	1 to 255
Default	150
Introduced	16.0.R1

graceful-restart

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **graceful-restart**
Description	Enable graceful restart helper for OSPF
Default	true
Introduced	16.0.R1

strict-lsa-checking *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **graceful-restart**
Description	Perform strict LSA checking during graceful restart helper
Default	true
Introduced	16.0.R1

ignore-dn-bit *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enable/disable whether this instance of OSPF will ignore the DN bit for OSPF LSA packets.
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

loopfree-alternate

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure service vprn** *service-name* **ospf** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure service vprn** *service-name* **ospf** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

multicast-import *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Submit routes into the multicast Route Table Manager
Default	false
Introduced	16.0.R1

overload *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Change overload state of the local router to appear to be overloaded
Default	false
Introduced	16.0.R1

overload-include-ext-2 *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Advertise external type-2 routes with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-include-stub *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Advertise all stub interfaces with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

timeout *number*

Context	**configure service vprn** *service-name* **ospf** *number* **overload-on-boot**
Description	Time during which the router operates in overload state before reestablishing normal operations
Range	60 to 1800
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Preference for OSPF internal routes
Range	1 to 255
Default	10
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Bandwidth to reference the default costing of interfaces
Range	1 to 4000000000
Default	100000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context **configure service vprn** *service-name* **ospf** *number*

Description Enter the rib-priority context

Introduced 16.0.R1

high

Context **configure service vprn** *service-name* **ospf** *number* **rib-priority**

Description Enter the high context

Introduced 16.0.R1

prefix-list *string*

Context **configure service vprn** *service-name* **ospf** *number* **rib-priority high**

Description List used to select routes processed at higher priority through OSPF route calculation process

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **ospf** *number*

Description Unique router ID for OSPF instance

Introduced 16.0.R1

rtr-adv-lsa-limit

Context **configure service vprn** *service-name* **ospf** *number*

Description Enter the rtr-adv-lsa-limit context

Introduced 16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **ospf** *number* **rtr-adv-lsa-limit**
Description	Log the event, without triggering overload
Default	false
Introduced	16.0.R1

max-lsa-count *number*

Context	**configure service vprn** *service-name* **ospf** *number* **rtr-adv-lsa-limit**
Description	Maximum number of LSAs allowed to be advertised by one router
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

overload-timeout (*number* | *keyword*)

Context	**configure service vprn** *service-name* **ospf** *number* **rtr-adv-lsa-limit**
Description	Maximum timeout for overload when the maximum LSA count is reached
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure service vprn** *service-name* **ospf** *number* **rtr-adv-lsa-limit**
Description	Percentage of the maximum LSA count at which a warning is given
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

super-backbone *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enable/disable super-backbone functionality.
Default	false
Introduced	16.0.R1

suppress-dn-bit *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enable/disable whether this instance of OSPF will suppress setting the DN bit for OSPF LSA packets.
Default	false
Introduced	16.0.R1

timers

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the timers context
Introduced	16.0.R1

incremental-spf-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Delay time before an incremental SPF calculation is started
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-accumulate *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Delay time for accumulating multiple LSAs before advertising them to neighbors
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-arrival *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Minimum delay between receipt of the same LSAs arriving from neighbors
Range	0 to 600000
Default	1000
Introduced	16.0.R1

lsa-generate

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Enter the lsa-generate context
Introduced	16.0.R1

lsa-initial-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers lsa-generate**
Description	First waiting period between link state advertisements LSA originates
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsa-second-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers lsa-generate**
Description	Hold time between the first and second LSA generation
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

max-lsa-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers lsa-generate**
Description	Maximum time between two consecutive occurrences of an LSA being generated
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

redistribute-delay *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Hold down timer for external routes that are redistributed in OSPF
Range	0 to 1000
Default	1000
Introduced	16.0.R1

spf-wait

Context	**configure service vprn** *service-name* **ospf** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers spf-wait**
Description	Initial SPF calculation delay after a topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure service vprn** *service-name* **ospf** *number* **timers spf-wait**
Description	Hold time between the first and second SPF calculation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

unicast-import *boolean*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Submit routes into the unicast Route Table Manager
Default	true
Introduced	16.0.R1

vpn-domain

Context	**configure service vprn** *service-name* **ospf** *number*
Description	Enter the vpn-domain context
Introduced	16.0.R1

id *system-id*

Context	**configure service vprn** *service-name* **ospf** *number* **vpn-domain**
Description	VPN domain identifier in octets
String Length	14
Introduced	16.0.R1

type *keyword*

Context	**configure service vprn** *service-name* **ospf** *number* **vpn-domain**
Description	VPN domain
Options	0005, 0105, 0205, 8005
Introduced	16.0.R1
Notes	This element is mandatory

vpn-tag *number*

Context	**configure service vprn** *service-name* **ospf** *number*
Description	OSPF VPN tag
Default	0
Introduced	16.0.R1

ospf3 [ospf-instance] *number*

Context	**configure service vprn** *service-name*
Description	Enter the ospf3 context
Max. Elements	32
Introduced	16.0.R1

[ospf-instance] *number*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Specifies the value of the integrated OSPF instance.
Range	0 to 31 | 64 to 95
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Administrative state of the OSPF instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Allow router advertisement capabilities
Default	false
Options	false, link, area, as
Introduced	16.0.R1

area [area-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the area context
Introduced	16.0.R1

[area-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Area-ID attribute
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

area-range [ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address ranges to create on an ABR for route summarization or suppression
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

blackhole-aggregate *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Install a low priority blackhole route to avoid loops
Default	true
Introduced	16.0.R1

export-policy *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Route that is exported as Type 3 Summary-LSAs or OSPFv3 Inter-Area-Prefix-LSA between areas
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Route that is imported as summary type 3/inter-area-prefix-LSA from another area into this area
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*

Description Enter the interface context

Introduced 16.0.R1

[interface-name] *interface-name*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Router interface name.

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Administrative state of the OSPF

Default enable

Options enable, disable

Introduced 16.0.R1

advertise-router-capability *boolean*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Allow router advertisement capabilities

Default true

Introduced 16.0.R1

bfd-liveness

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Enter the bfd-liveness context

Introduced 16.0.R1

remain-down-on-failure *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **bfd-liveness**
Description	Force adjacency down on BFD failure and remain down until BFD session returns
Default	false
Introduced	16.0.R1

dead-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

interface-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Interface type to broadcast or point-to-point
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1

loopfree-alternate

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the loopfree-alternate context
Introduced	16.0.R3

exclude *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enable/disable fast re-route capability for OSPF at interface level (only valid for primary interface)
Default	false
Introduced	16.0.R3

policy-map

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enter the policy-map context
Introduced	16.0.R1

route-nh-template *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsa-filter-out *keyword*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	LSA flooding reduction
Default	none
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Introduced	16.0.R1

metric *number*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Explicit route cost metric that is applied to the interface

Range 1 to 65535

Introduced 16.0.R1

mtu *number*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description MTU for the OSPF to use on the interface

Range 512 to 9198

Introduced 16.0.R1

neighbor [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Enter the neighbor context

Introduced 16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **neighbor** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Neighbor link local address

Introduced 16.0.R1

Notes This element is part of a list key

passive *boolean*

Context **configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Allow interface to be advertised as an OSPF interface without running the OSPF protocol

Default false

Introduced 16.0.R1

poll-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between two Hello packets to a non-adjacent OSPF NBMA neighbor
Default	120
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Priority of the interface to apply in the designated router election on the subnet
Range	0 to 255
Default	1
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

rib-priority *keyword*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	RIB priority for OSPF
Options	high
Introduced	16.0.R1

transit-delay *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

key-rollover-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Key rollover interval
Range	10 to 300
Default	10
Units	seconds
Introduced	16.0.R1

loopfree-alternate-exclude *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Exclude specific interface or all interfaces participating in all OSPF areas in SPF LFA computation
Default	false
Introduced	16.0.R1

nssa

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Enter the nssa context
Introduced	16.0.R1

area-range [ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address ranges to create on an ABR for route summarization or suppression
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

originate-default-route

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Enter the originate-default-route context
Introduced	16.0.R1

adjacency-check *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Perform adjacency checks before originating a default route
Default	false
Introduced	16.0.R1

type-nssa *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Generate a default route using NSSA-LSA type
Default	false
Introduced	16.0.R1

redistribute-external *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Redistribute external routes into the NSSA
Default	true
Introduced	16.0.R1

summaries *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Send summary (Type 3) LSAs into the NSSA on an ABR
Default	true
Introduced	16.0.R1

stub

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Enter the stub context
Introduced	16.0.R1

default-metric *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **stub**
Description	Metric used by the ABR for the default route into the stub area
Range	1 to 16777214
Default	1
Introduced	16.0.R1

summaries *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **stub**
Description	Send summary (Type 3) LSAs into the stub area on an ABR
Default	true
Introduced	16.0.R1

virtual-link [router-id] *ipv4-address* **transit-area** *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Description	Enter the virtual-link context
Introduced	16.0.R1

[router-id] *ipv4-address*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Router identity of the virtual link neighbor
Introduced	16.0.R1
Notes	This element is part of a list key

transit-area *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Transit area that links backbone area to area without physical connection with the backbone
Reference	configure **service vprn** *service-name* **ospf3** *number* **area** *ipv4-address*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

dead-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	60
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

transit-delay *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

export-limit

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

external-db-overflow

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the external-db-overflow context
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **external-db-overflow**
Description	Time during which the router operates in overload
Range	0 to 2147483647
Default	0
Units	seconds
Introduced	16.0.R1

limit *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **external-db-overflow**
Description	Number of external LSA at which overload is triggered
Range	0 to 2147483647
Default	0
Introduced	16.0.R1

external-preference *number*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Preference for OSPF external routes
Range	1 to 255
Default	150
Introduced	16.0.R1

graceful-restart

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **graceful-restart**
Description	Enable graceful restart helper for OSPF
Default	true
Introduced	16.0.R1

strict-lsa-checking *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **graceful-restart**
Description	Perform strict LSA checking during graceful restart helper
Default	true
Introduced	16.0.R1

ignore-dn-bit *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enable/disable whether this instance of OSPF will ignore the DN bit for OSPF LSA packets.
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

loopfree-alternate

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure service vprn** *service-name* **ospf3** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

multicast-import *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Submit routes into the multicast Route Table Manager
Default	false
Introduced	16.0.R1

overload *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Change overload state of the local router to appear to be overloaded
Default	false
Introduced	16.0.R1

overload-include-ext-2 *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Advertise external type-2 routes with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-include-stub *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Advertise all stub interfaces with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

timeout *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **overload-on-boot**
Description	Time during which the router operates in overload state before reestablishing normal operations
Range	60 to 1800
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Preference for OSPF internal routes
Range	1 to 255
Default	10
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Bandwidth to reference the default costing of interfaces
Range	1 to 4000000000
Default	100000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the rib-priority context
Introduced	16.0.R1

high

Context	**configure service vprn** *service-name* **ospf3** *number* **rib-priority**
Description	Enter the high context
Introduced	16.0.R1

prefix-list *string*

Context	**configure service vprn** *service-name* **ospf3** *number* **rib-priority high**
Description	List used to select routes processed at higher priority through OSPF route calculation process
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Unique router ID for OSPF instance
Introduced	16.0.R1

rtr-adv-lsa-limit

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the rtr-adv-lsa-limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Log the event, without triggering overload
Default	false
Introduced	16.0.R1

max-lsa-count *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Maximum number of LSAs allowed to be advertised by one router
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

overload-timeout (*number* | *keyword*)

Context	**configure service vprn** *service-name* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Maximum timeout for overload when the maximum LSA count is reached
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Percentage of the maximum LSA count at which a warning is given
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

suppress-dn-bit *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enable/disable whether this instance of OSPF will suppress setting the DN bit for OSPF LSA packets.
Default	false
Introduced	16.0.R1

timers

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Enter the timers context
Introduced	16.0.R1

incremental-spf-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Delay time before an incremental SPF calculation is started
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-accumulate *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Delay time for accumulating multiple LSAs before advertising them to neighbors
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-arrival *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Minimum delay between receipt of the same LSAs arriving from neighbors
Range	0 to 600000
Default	1000
Introduced	16.0.R1

lsa-generate

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Enter the lsa-generate context
Introduced	16.0.R1

lsa-initial-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers lsa-generate**
Description	First waiting period between link state advertisements LSA originates
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsa-second-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers lsa-generate**
Description	Hold time between the first and second LSA generation
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

max-lsa-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers lsa-generate**
Description	Maximum time between two consecutive occurrences of an LSA being generated
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

redistribute-delay *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Hold down timer for external routes that are redistributed in OSPF
Range	0 to 1000
Default	1000
Introduced	16.0.R1

spf-wait

Context	**configure service vprn** *service-name* **ospf3** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers spf-wait**
Description	Initial SPF calculation delay after a topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure service vprn** *service-name* **ospf3** *number* **timers spf-wait**
Description	Hold time between the first and second SPF calculation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

unicast-import *boolean*

Context	**configure service vprn** *service-name* **ospf3** *number*
Description	Submit routes into the unicast Route Table Manager
Default	true
Introduced	16.0.R1

pcp

Context	**configure service vprn** *service-name*
Description	Enter the pcp context
Introduced	16.0.R1

server [name] *string*

Context	**configure service vprn** *service-name* **pcp**
Description	Enter the server context
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	PCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	Administrative state of this PCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dual-stack-lite-address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	Inside Dual Stack Lite AFTR address
Introduced	16.0.R1

fwd-inside-router *string*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	PCP forwarding inside virtual router instance
Introduced	16.0.R1

interface [name] *string*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	Enter the interface context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **pcp server** *string* **interface** *string*
Description	Interface name
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

policy *string*

Context	**configure service vprn** *service-name* **pcp server** *string*
Description	PCP server policy
Reference	configure **service nat pcp-server-policy** *string*
Introduced	16.0.R1

pim

Context	**configure service vprn** *service-name*
Description	Enter the pim context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim**
Description	Administrative state of PIM
Default	enable
Options	enable, disable
Introduced	16.0.R1

apply-to *keyword*

Context	**configure service vprn** *service-name* **pim**
Description	IES and non-IES interfaces to create in PIM
Default	none
Options	all, none
Introduced	16.0.R1

import

Context	**configure service vprn** *service-name* **pim**
Description	Enter the import context
Introduced	16.0.R1

join-policy *string*

Context	**configure service vprn** *service-name* **pim import**
Description	Name of the policy is limited to 32 characters.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

register-policy *string*

Context	**configure service vprn** *service-name* **pim import**
Description	Name of the policy is limited to 32 characters.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name* **pim**
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Service VPRN interface name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

assert-period *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Time for periodic refreshes of PIM Assert messages on an interface
Range	1 to 300
Default	60
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **bfd-liveness**
Description	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **bfd-liveness**
Description	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Default	false
Introduced	16.0.R1

bsm-check-rtr-alert *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Check router alert option in bootstrap messages received
Default	false
Introduced	16.0.R1

hello-interval *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Frequency at which PIM Hello messages are sent over this interface
Range	0 to 255
Default	30
Introduced	16.0.R1

hello-multiplier *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Multiplier of Hello in multiples of 0.1
Range	20 to 100
Default	35
Introduced	16.0.R1

improved-assert *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Allow improved assert processing on interface
Default	true
Introduced	16.0.R1

instant-prune-echo *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Default	false
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

monitor-oper-group

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv4**
Description	Enter the monitor-oper-group context
Introduced	16.0.R1

name *string*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv4 monitor-oper-group**
Description	Operational group to monitor for address family
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

operation *keyword*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv4 monitor-oper-group**
Description	Perform given operation when oper-group is active.
Options	add, subtract, set
Introduced	16.0.R1

priority-delta *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv4 monitor-oper-group**
Description	Delta priority with operation when operational group is active
Range	1 to 4294967295
Introduced	16.0.R1

multicast *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv4**
Description	Enable PIM interface operation
Default	true
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

monitor-oper-group

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv6**
Description	Enter the monitor-oper-group context
Introduced	16.0.R1

name *string*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description	Operational group to monitor for address family
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

operation *keyword*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description	Perform given operation when oper-group is active.
Options	add, subtract, set
Introduced	16.0.R1

priority-delta *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description	Delta priority with operation when operational group is active
Range	1 to 4294967295
Introduced	16.0.R1

multicast *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **ipv6**
Description	Enable PIM interface operation
Default	true
Introduced	16.0.R1

max-groups *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Max number of groups for which PIM can have local receiver information based on received PIM reports
Range	0 | 1 to 16000
Default	0
Introduced	16.0.R1

mcac

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints**

Description Administrative state of constraint for multicast CAC policy

Default enable

Options enable, disable

Introduced 16.0.R1

level [level-id] *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints**
Description	Enter the level context
Introduced	16.0.R1

[level-id] *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth level ID for a multicast CAC constraint
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **pim interface** *interface-name* **mcac**
Description	Multicast CAC policy name
Reference	configure **mcac policy** *string*
Introduced	16.0.R1

multicast-senders *keyword*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Subnet matching for the incoming data packets
Default	auto
Options	auto, always, never
Introduced	16.0.R1

p2mp-ldp-tree-join

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Enter the p2mp-ldp-tree-join context
Introduced	16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **pim interface** *interface-name* **p2mp-ldp-tree-join**
Description Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Default false
Introduced 16.0.R1

ipv6 *boolean*

Context **configure service vprn** *service-name* **pim interface** *interface-name* **p2mp-ldp-tree-join**
Description Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Default false
Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **pim interface** *interface-name*
Description DR election priority for this interface
Range 1 to max
Default 1
Introduced 16.0.R1

sticky-dr

Context **configure service vprn** *service-name* **pim interface** *interface-name*
Description Enter the sticky-dr context
Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **pim interface** *interface-name* **sticky-dr**
Description DR election priority for this interface
Range 1 to max
Default 1024
Introduced 16.0.R1

three-way-hello *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Allow three-way hello compatibility mode
Default	false
Introduced	16.0.R1

tracking-support *boolean*

Context	**configure service vprn** *service-name* **pim interface** *interface-name*
Description	Allow upstream routers to explicitly track join membership
Default	false
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **pim**
Description	Enter the ipv4 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim ipv4**
Description	Administrative state of PIM operation for IPv4
Default	enable
Options	enable, disable
Introduced	16.0.R1

grt-extranet

Context	**configure service vprn** *service-name* **pim ipv4**
Description	Enter the grt-extranet context
Introduced	16.0.R1

any

Context	**configure service vprn** *service-name* **pim ipv4 grt-extranet**
Description	GRT or VRF extranet for this instance
Introduced	16.0.R1
Notes	This element is part of a choice

group-prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim ipv4 grt-extranet**
Description	Enter the **group-prefix** context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim ipv4 grt-extranet group-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address and mask length
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

starg *boolean*

Context	**configure service vprn** *service-name* **pim ipv4 grt-extranet group-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Add a static (*,G) entry
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

rpf-table *keyword*

Context	**configure service vprn** *service-name* **pim ipv4**
Description	Route table(s) for RPF lookup
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1

ssm-assert-compatible-mode *boolean*

Context	**configure service vprn** *service-name* **pim ipv4**
Description	Enable SSM assert compatible mode
Default	false
Introduced	16.0.R1

ssm-default-range *boolean*

Context	**configure service vprn** *service-name* **pim ipv4**
Description	SSM default range
Default	true
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **pim**
Description	Enter the ipv6 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim ipv6**
Description	Administrative state of PIM operation for IPv6
Default	disable
Options	enable, disable
Introduced	16.0.R1

rpf-table *keyword*

Context	**configure service vprn** *service-name* **pim ipv6**
Description	Route table(s) for RPF lookup
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1

ssm-default-range *boolean*

Context	**configure service vprn** *service-name* **pim ipv6**
Description	SSM default range
Default	true
Introduced	16.0.R1

mc-ecmp-balance *boolean*

Context	**configure service vprn** *service-name* **pim**
Description	Enable/disable multicast balancing of traffic over ECMP links.
Default	true
Introduced	16.0.R1

mc-ecmp-balance-hold *number*

Context	**configure service vprn** *service-name* **pim**
Description	Hold time for multicast balancing over ECMP links
Range	2 to 600
Units	minutes
Introduced	16.0.R1

mc-ecmp-hashing

Context	**configure service vprn** *service-name* **pim**
Description	Enter the mc-ecmp-hashing context
Introduced	16.0.R1

rebalance *boolean*

Context	**configure service vprn** *service-name* **pim mc-ecmp-hashing**
Description	Rebalance flows to newly added links immediately instead of waiting until they are pruned
Default	false
Introduced	16.0.R1

non-dr-attract-traffic *boolean*

Context	**configure service vprn** *service-name* **pim**
Description	Attract traffic when the router is not the designated one
Default	false
Introduced	16.0.R1

rp

Context	**configure service vprn** *service-name* **pim**
Description	Enter the rp context
Introduced	16.0.R1

bootstrap

Context	**configure service vprn** *service-name* **pim rp**
Description	Enter the bootstrap context
Introduced	16.0.R1

export *string*

Context	**configure service vprn** *service-name* **pim rp bootstrap**
Description	Name of the policy is limited to 32 characters.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import *string*

Context	**configure service vprn** *service-name* **pim rp bootstrap**
Description	Name of the policy is limited to 32 characters.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

ipv4

Context **configure service vprn** *service-name* **pim rp**

Description Enter the ipv4 context

Introduced 16.0.R1

anycast [ipv4-address] *ipv4-unicast-address* rp-set-peer *ipv4-unicast-address*

Context **configure service vprn** *service-name* **pim rp ipv4**

Description Enter the anycast context

Introduced 16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **pim rp ipv4 anycast** *ipv4-unicast-address* **rp-set-peer** *ipv4-unicast-address*

Description Anycast RP address

Introduced 16.0.R1

Notes This element is part of a list key

rp-set-peer *ipv4-unicast-address*

Context **configure service vprn** *service-name* **pim rp ipv4 anycast** *ipv4-unicast-address* **rp-set-peer** *ipv4-unicast-address*

Description Configure a peer in the anycast rp-set.

Introduced 16.0.R1

Notes This element is part of a list key

auto-rp-discovery *boolean*

Context **configure service vprn** *service-name* **pim rp ipv4**

Description Enable auto RP discovery

Default false

Introduced 16.0.R1

bsr-candidate

Context **configure service vprn** *service-name* **pim rp ipv4**

Description Enter the bsr-candidate context

Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **pim rp ipv4 bsr-candidate**

Description Static bootstrap address of the router

Default 0.0.0.0

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **pim rp ipv4 bsr-candidate**

Description Administrative state for participation of router in bootstrap election

Default disable

Options enable, disable

Introduced 16.0.R1

hash-mask-len *number*

Context **configure service vprn** *service-name* **pim rp ipv4 bsr-candidate**

Description Length for bootstrap hash mask

Range 0 to 32

Default 30

Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **pim rp ipv4 bsr-candidate**

Description Bootstrap priority of the router

Range 0 to 255

Default 0

Introduced 16.0.R1

rp-candidate

Context	**configure service vprn** *service-name* **pim rp ipv4**
Description	Enter the rp-candidate context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate**
Description	Bootstrap address of router
Default	0.0.0.0
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

group-range [ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate**
Description	Enter the group-range context
Introduced	16.0.R1

[ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate group-range** *ipv4-multicast-prefix*
Description	IPv4 address and mask
Introduced	16.0.R1
Notes	This element is part of a list key

holdtime *number*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate**
Description	Time during which the neighboring router considers this router to be up
Range	5 to 255
Default	150
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **pim rp ipv4 rp-candidate**
Description	Candidate RP priority
Range	0 to 255
Default	192
Introduced	16.0.R1

static

Context	**configure service vprn** *service-name* **pim rp ipv4**
Description	Enter the static context
Introduced	16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv4 static**
Description	Enter the address context
Introduced	16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Configure the address of the statically configured RP.
Introduced	16.0.R1
Notes	This element is part of a list key

group-prefix [ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Enter the group-prefix context
Introduced	16.0.R1

[ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv4 static address** *ipv4-unicast-address* **group-prefix** *ipv4-multicast-prefix*
Description	IPv4 address and mask
Introduced	16.0.R1
Notes	This element is part of a list key

override *boolean*

Context	**configure service vprn** *service-name* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Change the precedence for static RP over dynamically learnt RP
Default	false
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **pim rp**
Description	Enter the ipv6 context
Introduced	16.0.R1

anycast [ipv6-address] *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6**
Description	Enter the anycast context
Introduced	16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 anycast** *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*
Description	Anycast RP address
Introduced	16.0.R1
Notes	This element is part of a list key

rp-set-peer *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 anycast** *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*
Description	Configure a peer in the anycast rp-set.
Introduced	16.0.R1
Notes	This element is part of a list key

bsr-candidate

Context	**configure service vprn** *service-name* **pim rp ipv6**
Description	Enter the bsr-candidate context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 bsr-candidate**
Description	Bootstrap address of router
Default	::
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim rp ipv6 bsr-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

hash-mask-len *number*

Context	**configure service vprn** *service-name* **pim rp ipv6 bsr-candidate**
Description	Length for bootstrap hash mask
Range	0 to 128
Default	126
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **pim rp ipv6 bsr-candidate**
Description	Bootstrap priority of the router
Range	0 to 255
Default	0
Introduced	16.0.R1

embedded-rp

Context	**configure service vprn** *service-name* **pim rp ipv6**
Description	Enter the embedded-rp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim rp ipv6 embedded-rp**
Description	Administrative state of embedded RP
Default	disable
Options	enable, disable
Introduced	16.0.R1

group-range [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 embedded-rp**
Description	Enter the group-range context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 embedded-rp group-range** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

rp-candidate

Context	**configure service vprn** *service-name* **pim rp ipv6**
Description	Enter the rp-candidate context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate**
Description	Bootstrap address of router
Default	::
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

group-range [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate**
Description	Enter the group-range context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate group-range** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

holdtime *number*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate**
Description	Time during which the neighboring router considers this router to be up
Range	5 to 255
Default	150
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **pim rp ipv6 rp-candidate**
Description	Candidate RP priority
Range	0 to 255
Default	192
Introduced	16.0.R1

static

Context	**configure service vprn** *service-name* **pim rp ipv6**
Description	Enter the static context
Introduced	16.0.R1

address [ipv6-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 static**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Configure the address of the statically configured RP.
Introduced	16.0.R1
Notes	This element is part of a list key

group-prefix [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Enter the group-prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure service vprn** *service-name* **pim rp ipv6 static address** *ipv6-unicast-address* **group-prefix** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

override *boolean*

Context	**configure service vprn** *service-name* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Change the precedence for static RP over dynamically learnt RP
Default	false
Introduced	16.0.R1

spt-switchover [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim**
Description	Enter the spt-switchover context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim spt-switchover** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

threshold (*number* | *keyword*)

Context	**configure service vprn** *service-name* **pim spt-switchover** (*ipv4-prefix* | *ipv6-prefix*)
Description	SPT switchover threshold
Range	1 to 4294967294
Units	kilobps
Options	infinity
Introduced	16.0.R1
Notes	This element is mandatory

ssm-groups

Context	**configure service vprn** *service-name* **pim**
Description	Enter the ssm-groups context
Introduced	16.0.R1

group-range [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim ssm-groups**
Description	Enter the group-range context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **pim ssm-groups group-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

radius

Context	**configure service vprn** *service-name*
Description	Enter the radius context
Introduced	16.0.R1

proxy [name] *string*

Context	**configure service vprn** *service-name* **radius**
Description	Enter the proxy context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	RADIUS proxy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Administrative state of RADIUS proxy
Default	disable
Options	enable, disable
Introduced	16.0.R1

attribute-matching

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Enter the attribute-matching context
Introduced	16.0.R1

entry [index] *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching**

Description Enter the entry context

Introduced 16.0.R1

[index] *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching entry** *number*

Description Index of this entry

Range 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

accounting-server-policy *string*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching entry** *number*

Description Accounting server policy

String Length 1 to 32

Introduced 16.0.R1

authentication-server-policy *string*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching entry** *number*

Description Authentication server policy

String Length 1 to 32

Introduced 16.0.R1

prefix-string *string*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching entry** *number*

Description Prefix string

String Length 1 to 128

Introduced 16.0.R1

suffix-string *string*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching entry** *number*

Description Prefix string

String Length 1 to 128

Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching**

Description Matching attribute type to RADIUS server policy

Range 1 to 255

Introduced 16.0.R1

vendor (*number* | *keyword*)

Context **configure service vprn** *service-name* **radius proxy** *string* **attribute-matching**

Description Matching Vendor ID to RADIUS server policy

Introduced 16.0.R1

cache

Context **configure service vprn** *service-name* **radius proxy** *string*

Description Enter the cache context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache**

Description Administrative state of the RADIUS proxy cache

Default disable

Options enable, disable

Introduced 16.0.R1

key

Context	**configure service vprn** *service-name* **radius proxy** *string* **cache**
Description	Enter the key context
Introduced	16.0.R1

attribute-type *number*

Context	**configure service vprn** *service-name* **radius proxy** *string* **cache key**
Description	RADIUS attribute type to cache for this RADIUS proxy server
Range	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

packet-type *keyword*

Context	**configure service vprn** *service-name* **radius proxy** *string* **cache key**
Description	Packet type of the RADIUS messages to generate the key for the cache of this RADIUS proxy server
Options	access-request, access-accept
Introduced	16.0.R1
Notes	This element is mandatory

vendor (*number* | *keyword*)

Context	**configure service vprn** *service-name* **radius proxy** *string* **cache key**
Description	RADIUS Vendor ID
Introduced	16.0.R1

timeout *number*

Context	**configure service vprn** *service-name* **radius proxy** *string* **cache**
Description	Idle timeout value
Range	60 to 3600
Default	300
Introduced	16.0.R1

track-accounting

Context **configure service vprn** *service-name* **radius proxy** *string* **cache**

Description Enter the track-accounting context

Introduced 16.0.R1

accounting-off *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-accounting**

Description Remove all ESM hosts associated with the RADIUS client

Default false

Introduced 16.0.R1

accounting-on *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-accounting**

Description Remove all ESM hosts associated with the RADIUS client

Default false

Introduced 16.0.R1

interim-update *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-accounting**

Description Update the ESM host with the RADIUS client that generated the interim update

Default false

Introduced 16.0.R1

start *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-accounting**

Description Update the ESM host with the RADIUS client that generated the accounting-start

Default false

Introduced 16.0.R1

stop *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-accounting**

Description Remove the ESM host and forward the accounting-stop packet to the external RADIUS server

Default false

Introduced 16.0.R1

track-authentication

Context **configure service vprn** *service-name* **radius proxy** *string* **cache**

Description Enter the track-authentication context

Introduced 16.0.R1

accept *boolean*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache track-authentication**

Description Track Access-Accept message for mobility

Default true

Introduced 16.0.R1

track-delete-hold-time *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **cache**

Description Delete hold time

Range 0 to 6000

Default 0

Introduced 16.0.R1

defaults

Context **configure service vprn** *service-name* **radius proxy** *string*

Description Enter the defaults context

Introduced 16.0.R1

accounting-server-policy *string*

Context	**configure service vprn** *service-name* **radius proxy** *string* **defaults**
Description	Default accounting RADIUS server policy
String Length	1 to 32
Introduced	16.0.R1

authentication-server-policy *string*

Context	**configure service vprn** *service-name* **radius proxy** *string* **defaults**
Description	Default authentication RADIUS server policy
String Length	1 to 32
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

interface [interface-name] *string*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *string*

Context	**configure service vprn** *service-name* **radius proxy** *string* **interface** *string*
Description	Specifies the interface name
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

load-balance-key

Context **configure service vprn** *service-name* **radius proxy** *string*

Description Enter the load-balance-key context

Introduced 16.0.R1

attribute-1

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-1** context

Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-1**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-1**

Description Vendor-Id attribute

Introduced 16.0.R1

Notes This element is part of a choice

attribute-2

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-2** context

Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-2**
Description Attribute type to cache for this RADIUS Proxy server
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-2**
Description Vendor-Id attribute
Introduced 16.0.R1
Notes This element is part of a choice

attribute-3

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**
Description Enter the **attribute-3** context
Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-3**
Description Attribute type to cache for this RADIUS Proxy server
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-3**
Description Vendor-Id attribute
Introduced 16.0.R1
Notes This element is part of a choice

attribute-4

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-4** context

Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-4**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-4**

Description Vendor-Id attribute

Introduced 16.0.R1

Notes This element is part of a choice

attribute-5

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-5** context

Introduced 16.0.R1

type *number*

Context **configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-5**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context	**configure service vprn** *service-name* **radius proxy** *string* **load-balance-key attribute-5**
Description	Vendor-Id attribute
Introduced	16.0.R1
Notes	This element is part of a choice

source-ip-udp

Context	**configure service vprn** *service-name* **radius proxy** *string* **load-balance-key**
Description	Key to consist of the source IP address and source UDP port of the RADIUS message
Introduced	16.0.R1
Notes	This element is part of a choice

purpose *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Purpose of the RADIUS proxy
Options	accounting, authentication, accounting-authentication
Introduced	16.0.R1
Notes	This element is mandatory

python-policy *string*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Format of the secret key to access the RADIUS proxy server
String Length	1 to 114
Introduced	16.0.R1

send-accounting-response *boolean*

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Allow RADIUS proxy server to respond to Accounting-Response messages
Default	false
Introduced	16.0.R1

wlan-gw

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	Enter the wlan-gw context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **radius proxy** *string* **wlan-gw**
Description	IP address of this RADIUS proxy server
Introduced	16.0.R1

ipv6-address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **radius proxy** *string* **wlan-gw**
Description	IPv6 address of this RADIUS proxy server
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **radius proxy** *string*
Description	ISA WLAN gateway group
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

server [name] *string*

Context	**configure service vprn** *service-name* **radius**
Description	Enter the server context
Max. Elements	64
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	RADIUS server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

accept-coa *boolean*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	Allow the server to send Change of Authorization (CoA) messages
Default	false
Introduced	16.0.R1

acct-port *number*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	UDP port number of the RADIUS for accounting events
Range	1 to 65535
Default	1813
Introduced	16.0.R1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **radius server** *string*
Description	IP address for server
Introduced	16.0.R1
Notes	This element is mandatory

auth-port *number*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	UDP port number of the RADIUS to be used as match criteria
Range	1 to 65535
Default	1812
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

pending-requests-limit *number*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	Limit of the number for pending RADIUS requests
Range	1 to 4096
Default	4096
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	Python script policy to modify CoA messages
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure service vprn** *service-name* **radius server** *string*
Description	Secret key associated with this RADIUS server
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is mandatory

reassembly

Context	**configure service vprn** *service-name*
Description	Enter the reassembly context
Introduced	16.0.R1

nat-group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **reassembly**
Description	NAT group (including WLAN Gateway group) that executes the reassembly
Introduced	16.0.R1
Notes	This element is mandatory

redundant-interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name*
Description	Enter the redundant-interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name*
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name*

Description Text description

String Length 1 to 160

Introduced 16.0.R1

hold-time

Context **configure service vprn** *service-name* **redundant-interface** *interface-name*

Description Enter the hold-time context

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time**

Description Enter the ipv4 context

Introduced 16.0.R1

down

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time ipv4**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 down**

Description Apply down delay only when interface is configured or after reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 down**

Description Down hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time ipv4**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 up**

Description Up hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

ip-mtu *number*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name*

Description Interface IP MTU

Range 512 to 9000

Units bytes

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **redundant-interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

primary

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **ipv4**

Description Enter the primary context

Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description IPv4 address assigned to a redundant interface.

Introduced 16.0.R1

Notes This element is mandatory

prefix-length *number*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description The prefix length 0..32 for IPv4 Address.

Range 0 to 32

Introduced 16.0.R1

Notes This element is mandatory

remote-ip *ipv4-unicast-address*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description IP address of the remote redundant interface.

Introduced 16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name*

Description Enter the spoke-sdp context

Max. Elements 1

Introduced 16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

control-word *boolean*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Use the control word as preferred
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Static MPLS VC label used by the far end device to send packets through this SDP

Range 1 to 1048575

Introduced 16.0.R1

rip

Context **configure service vprn** *service-name*

Description Enter the rip context

Introduced 16.0.R4

admin-state *keyword*

Context **configure service vprn** *service-name* **rip**

Description Administratively enable/disable the RIP instance.

Default enable

Options enable, disable

Introduced 16.0.R4

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **rip**
Description	Authentication or hash key string.
String Length	1 to 50
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure service vprn** *service-name* **rip**
Description	Authentication type to be used.
Default	none
Options	none, password, md5, md20
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **rip**
Description	Enable BFD monitoring of RIP peers.
Default	false
Introduced	16.0.R4

check-zero *boolean*

Context	**configure service vprn** *service-name* **rip**
Description	Check for zero values in must-be-zero fields.
Default	false
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **rip**
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-limit

Context	**configure service vprn** *service-name* **rip**
Description	Enter the export-limit context
Introduced	16.0.R4

log-percent *number*

Context	**configure service vprn** *service-name* **rip export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R4

number *number*

Context	**configure service vprn** *service-name* **rip export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R4
Notes	This element is mandatory

export-policy *string*

Context	**configure service vprn** *service-name* **rip**
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

group [group-name] *string*

Context	**configure service vprn** *service-name* **rip**
Description	Enter the group context
Introduced	16.0.R4

[group-name] *string*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	RIP group name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Administratively enable/disable the group.
Default	enable
Options	enable, disable
Introduced	16.0.R4

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Authentication or hash key string.
String Length	1 to 50
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Authentication type to be used.
Options	none, password, md5, md20
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Enable BFD monitoring of RIP peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Apply export policies used to determine routes advertised to group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Apply import policies used to determine routes accepted from group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Metric added to routes exported into RIP.
Range	1 to 16
Introduced	16.0.R4

neighbor [interface-name] *interface-name*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Enter the neighbor context
Introduced	16.0.R4

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Administratively enable/disable the neighbor.
Default	enable
Options	enable, disable
Introduced	16.0.R4

authentication-key *encrypted-leaf*

Context **configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*

Description Authentication or hash key string.

String Length 1 to 50

Introduced 16.0.R4

authentication-type *keyword*

Context **configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*

Description Authentication type to be used.

Options none, password, md5, md20

Introduced 16.0.R4

bfd-liveness *boolean*

Context **configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*

Description Enable BFD monitoring of RIP peers.

Introduced 16.0.R4

check-zero *boolean*

Context **configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*

Description Check for zero values in must-be-zero fields.

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*

Description Text description.

String Length 1 to 80

Introduced 16.0.R4

export-policy *string*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Apply export policies used to determine routes advertised to peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Apply import policies used to determine routes accepted from peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Metric added to routes exported into RIP.
Range	1 to 16
Introduced	16.0.R4

preference *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Accepted version on received packets.
Options	version-1, version-2, both, none
Introduced	16.0.R4

send *keyword*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	RIP version and method used to send RIP updates.
Options	none, version-1, broadcast, multicast, unicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

unicast-address [address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name*
Description	Enter the unicast-address context
Introduced	16.0.R4

[address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **rip group** *string* **neighbor** *interface-name* **unicast-address** *ipv4-unicast-address*
Description	Create a unicast-address for the neighbor.
Introduced	16.0.R4
Notes	This element is part of a list key

preference *number*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Accepted version on received packets.
Options	version-1, version-2, both, none
Introduced	16.0.R4

send *keyword*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	RIP version and method used to send RIP updates.
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure service vprn** *service-name* **rip group** *string*
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure service vprn** *service-name* **rip group** *string* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **rip group** *string* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **rip group** *string* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

import-policy *string*

Context	**configure service vprn** *service-name* **rip**
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context **configure service vprn** *service-name* **rip**

Description Maximum number of routes in message.

Range 25 to 255

Default 25

Introduced 16.0.R4

metric-in *number*

Context **configure service vprn** *service-name* **rip**

Description Metric added to routes from neighbor.

Range 1 to 16

Default 1

Introduced 16.0.R4

metric-out *number*

Context **configure service vprn** *service-name* **rip**

Description Metric added to routes exported into RIP.

Range 1 to 16

Default 1

Introduced 16.0.R4

preference *number*

Context **configure service vprn** *service-name* **rip**

Description Route preference.

Range 1 to 255

Default 100

Introduced 16.0.R4

propagate-metric *boolean*

Context **configure service vprn** *service-name* **rip**

Description Enable propagation of metric.

Default false

Introduced 16.0.R4

receive *keyword*

Context	**configure service vprn** *service-name* **rip**
Description	Accepted version on received packets.
Default	both
Options	version-1, version-2, both, none
Introduced	16.0.R4

send *keyword*

Context	**configure service vprn** *service-name* **rip**
Description	RIP version and method used to send RIP updates.
Default	broadcast
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure service vprn** *service-name* **rip**
Description	Enable split-horizon.
Default	true
Introduced	16.0.R4

timers

Context	**configure service vprn** *service-name* **rip**
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure service vprn** *service-name* **rip timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **rip timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **rip timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

ripng

Context	**configure service vprn** *service-name*
Description	Enter the ripng context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure service vprn** *service-name* **ripng**
Description	Administratively enable/disable the RIPng instance.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **ripng**
Description	Enable BFD monitoring of RIPng peers.
Default	false
Introduced	16.0.R4

check-zero *boolean*

Context	**configure service vprn** *service-name* **ripng**
Description	Check for zero values in must-be-zero fields.
Default	false
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **ripng**
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-limit

Context	**configure service vprn** *service-name* **ripng**
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure service vprn** *service-name* **ripng export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R4

number *number*

Context	**configure service vprn** *service-name* **ripng export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R4
Notes	This element is mandatory

export-policy *string*

Context	**configure service vprn** *service-name* **ripng**
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

group [group-name] *string*

Context	**configure service vprn** *service-name* **ripng**
Description	Enter the group context
Introduced	16.0.R4

[group-name] *string*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	RIP group name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Administratively enable/disable the group.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Enable BFD monitoring of RIPng peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Apply export policies used to determine routes advertised to group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Apply import policies used to determine routes accepted from group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Metric added to routes exported into RIPng.
Range	1 to 16
Introduced	16.0.R4

neighbor [interface-name] *string*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Enter the neighbor context
Introduced	16.0.R4

[interface-name] *string*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Interface name.
Reference	configure **service vprn** *service-name* **interface** *interface-name*
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Administratively enable/disable the neighbor.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Enable BFD monitoring of RIPng peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Apply export policies used to determine routes advertised to peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Apply import policies used to determine routes accepted from peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context **configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*

Description Maximum number of routes in message.

Range 25 to 255

Introduced 16.0.R4

metric-in *number*

Context **configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*

Description Metric added to routes from neighbor.

Range 1 to 16

Introduced 16.0.R4

metric-out *number*

Context **configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*

Description Metric added to routes exported into RIPng.

Range 1 to 16

Introduced 16.0.R4

preference *number*

Context **configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*

Description Route preference.

Range 1 to 255

Introduced 16.0.R4

receive *keyword*

Context **configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*

Description Accepted version on received packets.

Options none, ripng

Introduced 16.0.R4

send *keyword*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	RIPng version and method used to send RIPng updates.
Options	none, ripng, unicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

unicast-address [address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string*
Description	Enter the unicast-address context
Introduced	16.0.R4

[address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **ripng group** *string* **neighbor** *string* **unicast-address** *ipv6-unicast-address*
Description	Create a unicast-address for the neighbor.
Introduced	16.0.R4
Notes	This element is part of a list key

preference *number*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Accepted version on received packets.
Options	none, ripng
Introduced	16.0.R4

send *keyword*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	RIPng version and method used to send RIPng updates.
Options	none, ripng
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure service vprn** *service-name* **ripng group** *string*
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **ripng group** *string* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

import-policy *string*

Context	**configure service vprn** *service-name* **ripng**
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure service vprn** *service-name* **ripng**
Description	Maximum number of routes in message.
Range	25 to 255
Default	25
Introduced	16.0.R4

metric-in *number*

Context	**configure service vprn** *service-name* **ripng**
Description	Metric added to routes from neighbor.
Range	1 to 16
Default	1
Introduced	16.0.R4

metric-out *number*

Context **configure service vprn** *service-name* **ripng**

Description Metric added to routes exported into RIPng.

Range 1 to 16

Default 1

Introduced 16.0.R4

preference *number*

Context **configure service vprn** *service-name* **ripng**

Description Route preference.

Range 1 to 255

Default 100

Introduced 16.0.R4

receive *keyword*

Context **configure service vprn** *service-name* **ripng**

Description Accepted version on received packets.

Default ripng

Options none, ripng

Introduced 16.0.R4

send *keyword*

Context **configure service vprn** *service-name* **ripng**

Description RIPng version and method used to send RIPng updates.

Default ripng

Options none, ripng

Introduced 16.0.R4

split-horizon *boolean*

Context **configure service vprn** *service-name* **ripng**

Description Enable split-horizon.

Default true

Introduced 16.0.R4

timers

Context	**configure service vprn** *service-name* **ripng**
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure service vprn** *service-name* **ripng timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure service vprn** *service-name* **ripng timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure service vprn** *service-name* **ripng timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name*
Description Route distinguisher
Introduced 16.0.R1

router-id *router-id*

Context **configure service vprn** *service-name*
Description Unique router ID for the router in the Autonomous System
Introduced 16.0.R1

selective-fib *boolean*

Context **configure service vprn** *service-name*
Description Selective FIB
Default true
Introduced 16.0.R1

service-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name*
Description Unique service ID; cannot be used by any other service, regardless of service type
Range 1 to 2147483647
Introduced 16.0.R1

sfm-overload

Context **configure service vprn** *service-name*
Description Enter the sfm-overload context
Introduced 16.0.R1

holdoff-time *number*

Context	**configure service vprn** *service-name* **sfm-overload**
Description	The delay between the detection of the SFM condition and the IGP entering the overload state.
Range	1 to 600
Units	seconds
Introduced	16.0.R3

sgt-qos

Context	**configure service vprn** *service-name*
Description	Enter the sgt-qos context
Introduced	16.0.R1

dot1p

Context	**configure service vprn** *service-name* **sgt-qos**
Description	Enter the dot1p context
Introduced	16.0.R1

application [dot1p-app-name] *keyword*

Context	**configure service vprn** *service-name* **sgt-qos dot1p**
Description	Enter the application context
Introduced	16.0.R1

[dot1p-app-name] *keyword*

Context	**configure service vprn** *service-name* **sgt-qos dot1p application** *keyword*
Description	Dot1p application identifier on the NOKIA SR OS router that generates control traffic over IP
Options	arp, isis, pppoe
Introduced	16.0.R1
Notes	This element is part of a list key

dot1p (*keyword* | *number*)

Context **configure service vprn** *service-name* **sgt-qos dot1p application** *keyword*

Description Dot1p value to the traffic generated by this application

Range 0 to 7

Introduced 16.0.R1

dscp

Context **configure service vprn** *service-name* **sgt-qos**

Description Enter the dscp context

Introduced 16.0.R1

application [dscp-app-name] *keyword*

Context **configure service vprn** *service-name* **sgt-qos dscp**

Description Enter the application context

Introduced 16.0.R1

[dscp-app-name] *keyword*

Context **configure service vprn** *service-name* **sgt-qos dscp application** *keyword*

Description DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP

Options bgp, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, gtp, diameter, pcep, call-trace, bmp, grpc, mtrace2, http

Introduced 16.0.R1

Notes This element is part of a list key

dscp (*keyword* | *number*)

Context **configure service vprn** *service-name* **sgt-qos dscp application** *keyword*

Description DSCP value to the traffic generated by this application

Range 0 to 63

Introduced 16.0.R1

dscp-map [dscp-name] *keyword*

Context	**configure service vprn** *service-name* **sgt-qos dscp**
Description	Enter the dscp-map context
Introduced	16.0.R3

[dscp-name] *keyword*

Context	**configure service vprn** *service-name* **sgt-qos dscp dscp-map** *keyword*
Description	DSCP name mapped to forwarding class
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R2
Notes	This element is part of a list key

fc *keyword*

Context	**configure service vprn** *service-name* **sgt-qos dscp dscp-map** *keyword*
Description	Value for the forwarding class for this mapping
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2

snmp

Context	**configure service vprn** *service-name*
Description	Enter the **snmp** context
Introduced	16.0.R5

access *boolean*

Context	**configure service vprn** *service-name* **snmp**
Description	Enable/Disable SNMP access for the vprn service
Default	false
Introduced	16.0.R5

community [community-string] *encrypted-leaf*

Context	**configure service vprn** *service-name* **snmp**
Description	Enter the **community** context
Introduced	16.0.R5

[community-string] *encrypted-leaf*

Context	**configure service vprn** *service-name* **snmp community** *encrypted-leaf*
Description	Community string for which this entry represents a configuration. community-string - [64 chars max] hash-key - [113 chars max] hash2-key - [114 chars max]
String Length	1 to 114
Introduced	16.0.R5
Notes	This element is part of a list key

access-permissions *keyword*

Context	**configure service vprn** *service-name* **snmp community** *encrypted-leaf*
Description	Community string for which this entry represents a configuration.
Options	r, rw
Introduced	16.0.R5
Notes	This element is mandatory

source-access-list *string*

Context	**configure service vprn** *service-name* **snmp community** *encrypted-leaf*
Description	The context in which management information is accessed when using the community string.
Reference	configure **system security snmp source-access-list** *string*
Introduced	16.0.R5

version *keyword*

Context	**configure service vprn** *service-name* **snmp community** *encrypted-leaf*
Description	SNMP version.
Default	both
Options	v1, v2c, both
Introduced	16.0.R5

source-address

Context	**configure service vprn** *service-name*
Description	Enter the source-address context
Introduced	16.0.R1

ipv4 [application] *keyword*

Context	**configure service vprn** *service-name* **source-address**
Description	Enter the ipv4 context
Introduced	16.0.R1

[application] *keyword*

Context	**configure service vprn** *service-name* **source-address ipv4** *keyword*
Description	Source IP address for the application
Options	telnet, ssh, ping, traceroute, ntp, cflowd, ptp, icmp-error
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **source-address ipv4** *keyword*
Description	Source IPv4 address to be used in all packets sent by the application
Introduced	16.0.R1
Notes	This element is part of a choice

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **source-address ipv4** *keyword*
Description	Interface name whose IP address to be used in all packets sent by the application
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6 [application] *keyword*

Context	**configure service vprn** *service-name* **source-address**
Description	Enter the ipv6 context
Introduced	16.0.R1

[application] *keyword*

Context	**configure service vprn** *service-name* **source-address ipv6** *keyword*
Description	Source IPv6 address for the application
Options	telnet, ping, traceroute, cflowd, ntp, icmp6-error
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **source-address ipv6** *keyword*
Description	Source IPv6 address to be used in all packets sent by the application
Introduced	16.0.R1
Notes	This element is mandatory

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name*
Description	Enter the spoke-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vprn** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R3
Notes	This element is part of a list key

description *string*

Context	**configure service vprn** *service-name* **spoke-sdp** *sdp-bind-id*
Description	User-provided description for the SDP Bind
String Length	1 to 80
Introduced	16.0.R4

static-routes

Context	**configure service vprn** *service-name*
Description	Enter the static-routes context
Introduced	16.0.R1

hold-down

Context	**configure service vprn** *service-name* **static-routes**
Description	Enter the hold-down context
Introduced	16.0.R1

initial *number*

Context	**configure service vprn** *service-name* **static-routes hold-down**
Description	Value for the initial hold down time
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

max-value *number*

Context	**configure service vprn** *service-name* **static-routes hold-down**
Description	Maximum value of the hold down time
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

multiplier *number*

Context	**configure service vprn** *service-name* **static-routes hold-down**
Description	Value by which the previous hold-down time is multiplied to calculate the new one
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

route [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Context	**configure service vprn** *service-name* **static-routes**
Description	Enter the route context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	IP prefix and prefix length for the static routes
Introduced	16.0.R1
Notes	This element is part of a list key

route-type *keyword*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Indicates the type of that static-route being configured, either for unicast routing or for use with multicast rpf.
Options	unicast, multicast
Introduced	16.0.R1
Notes	This element is part of a list key

blackhole

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the blackhole context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Administrative state of the static route next hop

Options enable, disable

Introduced 16.0.R1

community *community*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Community ID associated with the static route

String Length 1 to 72

Introduced 16.0.R1

description *description-allow-all-white-spaces*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

generate-icmp *boolean*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Send ICMP unreachable messages when received packets match a static route with black-hole next-hop

Default false

Introduced 16.0.R1

metric *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Static route tag

Range 1 to max

Introduced 16.0.R1

community *community*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Community ID associated with the static route

String Length 1 to 72

Max. Elements 12

Introduced 16.0.R1

Notes This element is ordered by user

grt

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the grt context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **grt**

Description Administrative state of the static route next hop

Options enable, disable

Introduced 16.0.R1

description *description-allow-all-white-spaces*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **grt**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

metric *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **grt**

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **grt**

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

indirect [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the indirect context

Introduced 16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Indirect next hop for static routes

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Administrative state of the static route next hop

Options enable, disable

Introduced 16.0.R1

community *community*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Community ID associated with the static route

String Length 1 to 72

Introduced 16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the cpe-check context

Max. Elements 1

Introduced 16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description IP address of the target CPE device.

Introduced 16.0.R1

Notes This element is part of a list key

drop-count *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Number of consecutive ping replies that are missed before declaring the CPE down

Range 1 to 255

Default 3

Introduced 16.0.R1

interval *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Time between ICMP pings to the target CPE IP address

Range 1 to 255

Default 1

Units seconds

Introduced 16.0.R1

log *boolean*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Log the transitions between active and inactive based on the CPE connectivity check

Default false

Introduced 16.0.R1

padding-size *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Padding size for the ICMP ping test packet of the CPE connectivity check
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Destination class for this static route
Range	1 to 255
Introduced	16.0.R1

metric *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Static route metric
Range	0 to 65535
Default	1
Introduced	16.0.R1

preference *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Static route tag

Range 1 to max

Introduced 16.0.R1

interface [interface-name] *interface-name*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the interface context

Introduced 16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Router interface name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

community *community*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Enter the cpe-check context
Max. Elements	1
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description IP address of the target CPE device.

Introduced 16.0.R1

Notes This element is part of a list key

drop-count *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Number of consecutive ping replies that are missed before declaring the CPE down

Range 1 to 255

Default 3

Introduced 16.0.R1

interval *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Time between ICMP pings to the target CPE IP address

Range 1 to 255

Default 1

Units seconds

Introduced 16.0.R1

log *boolean*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Log the transitions between active and inactive based on the CPE connectivity check

Default false

Introduced 16.0.R1

padding-size *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Padding size for the ICMP ping test packet of the CPE connectivity check
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Destination class for this static route
Range	1 to 255
Introduced	16.0.R1

load-balancing-weight *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Load-balancing weight for all of the ECMP next hops
Range	1 to max
Introduced	16.0.R1

metric *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Static route tag

Range 1 to max

Introduced 16.0.R1

ipsec-tunnel [ipsec-tunnel-name] *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the ipsec-tunnel context

Introduced 16.0.R1

[ipsec-tunnel-name] *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Ipsec tunnel name.

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Administrative state of the static route next hop

Options enable, disable

Introduced 16.0.R1

community *community*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Community ID associated with the static route

String Length 1 to 72

Introduced 16.0.R1

description *description-allow-all-white-spaces*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*
Description	Destination class for this static route
Range	1 to 255
Introduced	16.0.R1

metric *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*
Description	Static route metric
Range	0 to 65535
Default	1
Introduced	16.0.R1

preference *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*
Description	Priority of this static route over the routes from different sources
Range	1 to 255
Default	5
Introduced	16.0.R1

qos

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string* **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string* **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **ipsec-tunnel** *string*

Description Static route tag

Range 1 to max

Introduced 16.0.R1

next-hop [ip-address] (*ipv4-address* | *ipv6-address*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Enter the next-hop context
Introduced	16.0.R1

[ip-address] (*ipv4-address* | *ipv6-address*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	IP address of the next-hop.
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Use Bidirectional Forwarding Detection on this static route
Default	false
Introduced	16.0.R1

community *community*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Enter the cpe-check context
Max. Elements	1
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address of the target CPE device.
Introduced	16.0.R1
Notes	This element is part of a list key

drop-count *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Number of consecutive ping replies that are missed before declaring the CPE down
Range	1 to 255
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Time between ICMP pings to the target CPE IP address
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1

log *boolean*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Log the transitions between active and inactive based on the CPE connectivity check

Default false

Introduced 16.0.R1

padding-size *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Padding size for the ICMP ping test packet of the CPE connectivity check

Range 0 to 16384

Default 56

Units bytes

Introduced 16.0.R1

description *description-allow-all-white-spaces*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Text description

String Length 1 to 80

Introduced 16.0.R1

destination-class *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Destination class for this static route

Range 1 to 255

Introduced 16.0.R1

load-balancing-weight *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Load-balancing weight for all of the ECMP next hops

Range 1 to max

Introduced 16.0.R1

metric *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Static route tag

Range 1 to max

Introduced 16.0.R1

validate-next-hop *boolean*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache

Default false

Introduced 16.0.R1

tag *number*

Context **configure service vprn** *service-name* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Static route tag

Range 1 to max

Introduced 16.0.R1

subscriber-interface [interface-name] *interface-name*

Context **configure service vprn** *service-name*

Description Enter the subscriber-interface context

Introduced 16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Administratively enable/disable the interface.
Default	enable
Options	enable, disable
Introduced	16.0.R4

arp-host

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Enter the arp-host context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **arp-host**
Description	Administrative state of ARP hosts
Default	enable
Options	enable, disable
Introduced	16.0.R1

host-limit *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **arp-host**
Description	Maximum number of ARP triggered hosts
Range	1 to 524287
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Description for the interface.
String Length	1 to 160
Introduced	16.0.R4

fwd-service *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Configure the forwarding service.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R4

fwd-subscriber-interface *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Configure the forwarding subscriber interface.
Reference	configure **service vprn** *service-name* **subscriber-interface** *interface-name*
Introduced	16.0.R4

group-interface [group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

arp-host

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the arp-host context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**
Description	Administrative state of ARP hosts
Default	disable
Options	enable, disable
Introduced	16.0.R1

host-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Maximum number of ARP triggered hosts.

Range 1 to 524287

Default 1

Introduced 16.0.R1

min-auth-interval *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Minimal time that has to pass before incoming ARPs of an active ARP host are re-authenticated

Range 1 to 6000

Default 15

Units minutes

Introduced 16.0.R1

sap-host-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Maximum number of ARP triggered hosts allowed per SAP

Range 1 to 131071

Default 1

Introduced 16.0.R1

bonding-parameters

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the bonding-parameters context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Administrative state of ESM bonding
Default	disable
Options	enable, disable
Introduced	16.0.R1

connection [connection-index] *connection-index*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Enter the connection context
Introduced	16.0.R1

[connection-index] *bonding-connection-index*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters connection** *connection-index*
Description	Bonding connection index
Range	1 to 2
Introduced	16.0.R4
Notes	This element is part of a list key

service *service-name*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters connection** *connection-index*
Description	Connection service
String Length	1 to 64
Introduced	16.0.R4

fpe *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	FPE that provisions bonding functionality
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R1

multicast

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Enter the multicast context
Introduced	16.0.R1

connection *multicast-bonding-connection*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters multicast**
Description	Multicast connection
Default	use-incoming
Introduced	16.0.R1

brg

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the brg context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Administrative state of BRG
Default	disable
Options	enable, disable
Introduced	16.0.R1

authenticated-brg-only *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Allow BRGs that have been pre-authenticated
Default	false
Introduced	16.0.R1

default-brg-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Default BRG profile that can be overridden during authentication
Reference	configure **subscriber-mgmt vrgw brg-profile** *string*
Introduced	16.0.R1

cflowd-parameters

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R4

sampling [sampling-type] *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters**

Description Enter the sampling context

Introduced 16.0.R4

[sampling-type] *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*

Description Cflowd sampling type for virtual router interface

Options unicast, multicast

Introduced 16.0.R4

Notes This element is part of a list key

direction *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*

Description The direction of the Cflowd analysis that is applied to the given interface.

Default ingress-only

Options ingress-only, egress-only, both

Introduced 16.0.R4

type *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*

Description The type of Cflowd analysis that is applied to the given interface.

Options acl, interface

Introduced 16.0.R4

Notes This element is mandatory

data-trigger

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the data-trigger context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **data-trigger**

Description Administrative state of data triggered host creation

Default disable

Options enable, disable

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Text description

String Length 1 to 160

Introduced 16.0.R1

dynamic-routes-track-srrp

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the dynamic-routes-track-srrp context

Introduced 16.0.R1

hold-time *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **dynamic-routes-track-srrp**

Description Delay before updating the route state after the last SRRP transition

Range 1 to 50

Units deciseconds

Introduced 16.0.R1

gtp-parameters

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the gtp-parameters context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **gtp-parameters**

Description Administrative state of GTP Access

Default disable

Options enable, disable

Introduced 16.0.R1

fpe *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **gtp-parameters**

Description PE that provisions the GTP user interface

Reference configure **fwd-path-ext fpe** *number*

Introduced 16.0.R1

gx-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Diameter application policy

Reference configure **subscriber-mgmt diameter-gx-policy** *string*

Introduced 16.0.R1

ingress-stats *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Collect ingress interface statistics
Default	false
Introduced	16.0.R1

ip-mtu *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Interface IP MTU
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

ipoe-linking

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipoe-linking context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Administrative state of IPoE host linking
Default	disable
Options	enable, disable
Introduced	16.0.R1

gratuitous-router-advertisement *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Send unsolicited router advertisement after DHCP setup
Default	false
Introduced	16.0.R1

shared-circuit-id *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Block DHCPv6 with unknown interface-id (circuit-id) until a circuit-id is learned from DHCP.
Default	false
Introduced	16.0.R1

ipoe-session

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipoe-session context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Administrative state of IPoE session
Options	enable, disable
Introduced	16.0.R1

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

force-auth

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**

Description Enter the force-auth context

Introduced 16.0.R1

cid-change *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session force-auth**

Description Ignore min-auth-interval when circuit ID changed

Introduced 16.0.R1

rid-change *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session force-auth**

Description Ignore min-auth-interval when remote ID changed

Introduced 16.0.R1

ipoe-session-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**

Description IPoE Session policy to be used for new sessions

Reference configure **subscriber-mgmt ipoe-session-policy** *string*

Introduced 16.0.R1

min-auth-interval *ipoe-session-min-auth-interval*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Minimum time between two authentication attempts
Default	infinite
Units	seconds
Introduced	16.0.R1

radius-session-timeout *ipoe-session-radius-session-timeout*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Session timeout attribute to be interpreted
Options	absolute, ignore, backwards-compatible
Introduced	16.0.R1

sap-session-limit *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Maximum number of sessions per SAP
Range	1 to 131071
Introduced	16.0.R1

session-limit *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Maximum number of sessions on this group interface
Range	1 to 500000
Introduced	16.0.R1

stateless-redundancy *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup
Default	false
Introduced	16.0.R1

user-db *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Local user database that is used to (pre-)authenticate new sessions
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

dhcp

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default disable

Options enable, disable

Introduced 16.0.R4

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the client-applications context

Introduced 16.0.R4

dhcp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable DHCP as client application.

Default true

Introduced 16.0.R4

ppp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable PPP as client application.

Default false

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

filter *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description DHCP filter.

Reference configure **filter dhcp-filter** *number*

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

l2-header

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate**

Description Enter the l2-header context

Introduced 16.0.R1

mac *mac-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate l2-header**

Description Specify the MAC address.

Introduced 16.0.R4

max-leases *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate**

Description The maximum number of DHCPv4 leases.

Range 1 to 511999

Default 1

Introduced 16.0.R4

match-circuit-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Configure match Opt82 circuit ID on relayed DHCP packets.

Default false

Introduced 16.0.R4

option-82

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

action *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description What to do with DHCP option 82.

Default keep

Options replace, drop, keep

Introduced 16.0.R4

circuit-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the circuit-id context

Introduced 16.0.R4

ascii-tuple

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

ifindex

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ifindex in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Do not include the circuit-id.

Introduced 16.0.R4

Notes This element is part of a choice

sap-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use SAP ID in the option.

Introduced 16.0.R4

Notes This element is part of a choice

vlan-ascii-tuple

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use vlan-ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

remote-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the remote-id context

Introduced 16.0.R4

ascii-string *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use user-defined ASCII string in the option.

String Length 1 to 32

Introduced 16.0.R4

Notes This element is part of a choice

mac

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use MAC address in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Do not include the remote-id.

Introduced 16.0.R4

Notes This element is part of a choice

vendor-specific-option

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R4

client-mac-address *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

pool-name *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the pool name in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the proxy-server context

Introduced 16.0.R4

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description Administrative state of DHCP proxy

Default disable

Options enable, disable

Introduced 16.0.R1

emulated-server *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description IP address used as the DHCP server address in the context of this service

Introduced 16.0.R1

lease-time

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	Use lease time information provided by RADIUS server
Default	false
Introduced	16.0.R1

value *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	DHCP lease time
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Python policy.
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

relay-proxy

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Enter the relay-proxy context
Introduced	16.0.R1

release-update-src-ip *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify whether or not to relay release messages.
Default	false
Introduced	16.0.R4

siaddr-override *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify the IP address to use.
Introduced	16.0.R4

server *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

trusted *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of untrusted packets.
Default	false
Introduced	16.0.R4

user-db *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Configure the local user database to use for authentication.

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R4

icmp

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the icmp context

Introduced 16.0.R1

mask-reply *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Allow responses to ICMP mask requests

Default true

Introduced 16.0.R1

param-problem

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the param-problem context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Administrative state of sending parameter-problem messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Number of parameter-problem ICMP messages to send in specified time interval

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Time used to limit number of parameter-problem ICMP messages issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

redirects

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**

Description Administrative state of sending ICMP redirects

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**
Description	Maximum number of ICMP redirect messages to send
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**
Description	Time to limit the number of ICMP redirect messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ttl-expired

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**
Description	Enter the ttl-expired context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**

Description Maximum number of TTL expired messages to send

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**

Description Time to limit the number of ICMP TTL expired messages that can be issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

unreachables

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the unreachables context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Administrative state of sending unreachable messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Maximum number of unreachable messages to send

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Time to limit the number of unreachable messages that can be issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

neighbor-discovery

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

local-proxy-arp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**

Description Enable local proxy ARP on interface

Default true

Introduced 16.0.R1

populate *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow static and dynamic hosts to be populated in system ARP cache
Introduced	16.0.R1

proxy-arp-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Proxy ARP policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

remote-proxy-arp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable remote proxy ARP on interface
Default	false
Introduced	16.0.R1

timeout *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

qos-route-lookup *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description QoS route lookup

Options destination

Introduced 16.0.R1

urpf-check

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the urpf-check context

Introduced 16.0.R1

mode *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 urpf-check**

Description Unicast RPF check mode

Default strict

Options strict, loose, strict-no-ecmp

Introduced 16.0.R1

ipv6

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the ipv6 context

Introduced 16.0.R1

allow-multiple-wan-addresses *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Configure if the interface will accept multiple WAN addresses.

Default false

Introduced 16.0.R4

auto-reply

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the auto-reply context

Introduced 16.0.R1

neighbor-solicitation *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 auto-reply**

Description Enable auto-reply for NS

Default false

Introduced 16.0.R1

router-solicitation *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 auto-reply**

Description Enable auto-reply for RS

Default false

Introduced 16.0.R1

dhcp6

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the dhcp6 context

Introduced 16.0.R1

filter *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description DHCPv6 filter

Reference configure **filter dhcp6-filter** *number*

Introduced 16.0.R1

option

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Enter the option context

Introduced 16.0.R1

interface-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option**

Description Enter the interface-id context

Introduced 16.0.R1

ascii-tuple

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use ASCII-encoded concatenated tuple in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

if-index

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use interface index in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

sap-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use SAP ID in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**
Description	String for interface ID option in DHCPv6 relay packet
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option**
Description	Allow remote ID option to be sent in the DHCPv6 relay packet
Default	false
Introduced	16.0.R1

override-slaac *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Default	false
Introduced	16.0.R1

pd-managed-route

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the pd-managed-route context
Introduced	16.0.R1

next-hop *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 pd-managed-route**
Description	Next hop type
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1

proxy-server

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the proxy-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Administrative state of DHCPv6 proxy server
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the DHCP application to make use of the DHCP relay functionality on this interface.
Default	true
Introduced	16.0.R1

ppp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**

Description Allow the PPP application to use DHCP relay functionality

Default false

Introduced 16.0.R1

preferred-lifetime *dhcp6-prefix-lifetime*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Time for prefix to remain preferred on this interface

Default 3600

Introduced 16.0.R1

rebind-timer *dhcp6-rebind-timer*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Rebind timer (T2) for this interface

Range 0 to 1209600

Introduced 16.0.R1

renew-timer *dhcp6-renew-timer*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Renew timer (T1)

Range 0 to 604800

Introduced 16.0.R1

server-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Enter the server-id context

Introduced 16.0.R1

duid-en-ascii *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

duid-en-hex *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-ll

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Use link-layer address (DUID-LL) as DUID
Introduced	16.0.R1
Notes	This element is part of a choice

valid-lifetime *dhcp6-prefix-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain valid on this interface
Default	86400
Introduced	16.0.R1

python-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Python policy

Reference configure **python python-policy** *string*

Introduced 16.0.R1

relay

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Enter the relay context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description Administrative state of DHCvP6 relay

Default disable

Options enable, disable

Introduced 16.0.R1

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description Enter the client-applications context

Introduced 16.0.R1

dhcp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay client-applications**

Description Allow the DHCP application to make use of the DHCP relay functionality on this interface.

Default true

Introduced 16.0.R1

ppp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay client-applications**
Description	Allow the PPP application to use DHCP relay functionality
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

link-address *ipv6-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Link address for the DHCPv6 relay messages
Introduced	16.0.R1

server *ipv6-address-with-zone*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	DHCP6 server(s) to which the DHCP6 requests are forwarded
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

source-address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Source IPv6 address for the DHCPv6 relay messages
Introduced	16.0.R1

snooping

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Enter the snooping context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 snooping**

Description Enable/disable DHCP6 snooping

Default disable

Options enable, disable

Introduced 16.0.R1

user-db *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Assign a local user database.

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R1

user-ident *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description DHCP6 user identification for this interface

Default mac

Options mac, mac-interface-id

Introduced 16.0.R1

ipoe-bridged-mode *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enable/Disable IPv6 IPoE Bridged Mode.

Default false

Introduced 16.0.R4

neighbor-discovery

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

dad-snooping *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 neighbor-discovery**

Description Duplicate address detection packets that are snooped to populate new neighbor entries for SLAAC hosts

Default false

Introduced 16.0.R1

neighbor-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 neighbor-discovery**

Description Maximum number of neighbor entries learned per SLAAC host

Range 1 to 8

Default 1

Introduced 16.0.R1

qos-route-lookup *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description QoS route lookup

Options destination

Introduced 16.0.R1

router-advertisements

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the router-advertisements context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Administrative state of router advertisement
Default	disable
Options	enable, disable
Introduced	16.0.R1

force-mcast *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Send router advertisement to a multicast address instead of unicast for IPoE
Options	ip, ip-mac
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Maximum advertisement interval
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**

Description Minimum advertisement interval

Range 900 to 1350

Default 900

Units seconds

Introduced 16.0.R1

options

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**

Description Enter the options context

Introduced 16.0.R1

current-hop-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Hop limit to be advertised

Range 0 to 255

Default 64

Introduced 16.0.R1

dns

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Enter the dns context

Introduced 16.0.R1

include-rdnss *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Include the RDNSS server option 25

Default false

Introduced 16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Maximum time for the RDNSS address to remain valid

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

managed-configuration *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Managed address configuration flag

Default false

Introduced 16.0.R1

mtu (*number* | *keyword*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Advertised MTU value

Range 1280 to 9212

Default not-included

Units bytes

Options not-included

Introduced 16.0.R1

other-stateful-configuration *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Other stateful configuration flag
Default	false
Introduced	16.0.R1

reachable-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery reachable time that is advertised for this group interface
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-timer *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery retrasnmit timer that is advertised for this group interface
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1

router-lifetime (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Router lifetime
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1

prefix-options

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the prefix-options context
Introduced	16.0.R1

autonomous *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Value of the autonomous flag
Default	false
Introduced	16.0.R1

on-link *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Assign the prefix to an interface on the specified link
Default	true
Introduced	16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain preferred
Default	3600
Units	seconds
Introduced	16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain valid
Default	86400
Units	seconds
Introduced	16.0.R1

router-solicit

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the router-solicit context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Administrative state of router-solicit based authentication
Default	disable
Options	enable, disable
Introduced	16.0.R1

inactivity-timer (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Timebefore an inactive host is removed
Range	1 to 31536000
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1

min-auth-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Minimum interval between two consecutive authentication attempts for the same host
Range	1 to 360000
Default	300
Units	seconds
Introduced	16.0.R1

user-db *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Local user-database that is used for router solicit based authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

urpf-check

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the urpf-check context
Introduced	16.0.R1

mode *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 urpf-check**
Description	Unicast RPF check mode
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1

local-address-assignment

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the local-address-assignment context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**

Description Administrative state of local address assignment

Default disable

Options enable, disable

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**

Description Enter the ipv4 context

Introduced 16.0.R1

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**

Description Enter the client-applications context

Introduced 16.0.R1

ipoe *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4 client-applications**

Description Request local addresses for non-DHCP/managed IPoE hosts

Default false

Introduced 16.0.R1

ppp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4 client-applications**
Description	Request local addresses for PPP IPCP hosts
Default	false
Introduced	16.0.R1

default-pool *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**
Description	Default pools
String Length	1 to 32
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

server *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**
Description	Local DHCP server that contains pools for local address assignment
Reference	configure **service vprn** *service-name* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**
Description	Enter the ipv6 context
Introduced	16.0.R1

client-applications

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6**
Description	Enter the client-applications context
Introduced	16.0.R1

ipoe-slaac *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for IPoE SLAAC hosts

Default false

Introduced 16.0.R1

ipoe-wan *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for IPoE IA NA hosts

Default false

Introduced 16.0.R1

ppp-slaac *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for PPP SLAAC hosts

Default false

Introduced 16.0.R1

server *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6**

Description Local DHCPv6 server that contains pools for local address assignment

Reference configure **service vprn** *service-name* **dhcp-server dhcpv6** *string*

Introduced 16.0.R1

mac *mac-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description MAC address for the interface

Introduced 16.0.R1

nasreq-auth-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Diameter NASREQ application policy to use for authentication
Reference	configure **subscriber-mgmt diameter-nasreq-policy** *string*
Introduced	16.0.R1

oper-up-while-empty *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enable this group interface without any active SAPs
Default	false
Introduced	16.0.R1

pppoe

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the pppoe context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Administrative state of PPPoE
Default	disable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *pppoe-anti-spoof*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	PPPoE anti-spoof filtering
Default	mac-sid
Options	mac-sid, mac-sid-ip
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	PPPoE policy
Reference	configure **subscriber-mgmt ppp-policy** *string*
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Python policy used to modify PPPoE packets
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

sap-session-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**

Description Maximum PPPoE sessions per SAP

Range 1 to 131071

Default 1

Introduced 16.0.R1

session-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**

Description Maximum PPPoE sessions

Range 1 to 262143

Default 1

Introduced 16.0.R1

user-db *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**

Description Local user database for authentication

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R1

radius-auth-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description RADIUS authentication policy

Reference configure **subscriber-mgmt radius-authentication-policy** *string*

Introduced 16.0.R1

redundant-interface *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Redundant interface
Reference	configure **service vprn** *service-name* **redundant-interface** *interface-name*
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the sap context
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Type of anti-spoof filtering
Default	source-ip-and-mac-addr
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1

calling-station-id *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Calling station ID
String Length	1 to 64
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Collect accounting statistics
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**

Description Apply rate limit to the sum of the per peer packet rates

Introduced 16.0.R1

Notes This element is part of a choice

car

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**

Description Eth-CFM packets to be ignored when enforcing overall rate

Introduced 16.0.R1

Notes This element is part of a choice

ip-src-monitoring

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description Enable IP source monitoring for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

mac-monitoring

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description Monitor MAC for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

policy-id *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description CPM protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R4

default-host

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the default-host context

Introduced 16.0.R1

ipv4 [address] *string* prefix-length *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host**

Description Enter the ipv4 context

Introduced 16.0.R1

[address] *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*

Description IPv4 default host address.

Reference configure **service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*

Introduced 16.0.R1

Notes This element is part of a list key

prefix-length *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*

Description IPv4 address prefix length

Range 0 to 32

Introduced 16.0.R1

Notes This element is part of a list key

next-hop *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*
Description	Next-hop used to forward default-host traffic on this SAP.
Introduced	16.0.R1
Notes	This element is mandatory

ipv6 [address] *ipv6-unicast-address* **prefix-length** *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host**
Description	Enter the ipv6 context
Introduced	16.0.R1

[address] *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	IPv6 default host address.
Introduced	16.0.R1
Notes	This element is part of a list key

prefix-length *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	IPv6 default host prefix length.
Range	0 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

next-hop *ipv6-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	Next-hop used to forward default-host traffic on this SAP.
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Distributed CPU protection policy for SAP
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

egress

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the egress context
Introduced	16.0.R1

agg-rate

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**
Description	Enter the agg-rate context
Introduced	16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Maximum total rate of all egress queues in kbps.

Range 1 to 3200000000

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress filter**

Description MAC filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

qinq-mark-top-only *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Mark top Q-tags

Default false

Introduced 16.0.R1

sap-egress

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the sap-egress context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos sap-egress**

Description Policy identifier

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

scheduler-policy

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

eth-cfm

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate AIS frames from the Maintenance Entity Group (MEG).
Default	false
Introduced	16.0.R1

alarm-notification

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate CCM messages

Default false

Introduced 16.0.R1

ccm-ltm-priority *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Priority of CCM and LTM messages transmitted by the MEP

Range 0 to 7

Default 7

Introduced 16.0.R1

ccm-padding-size *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Additional octets inserted into CCM PDU for data TLV padding

Range 3 to 1500

Introduced 16.0.R1

csf

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Receive and process ETH-ED PDUs
Default	true
Introduced	16.0.R1

tx-eth-ed *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Transmit ETH-ED PDUs
Default	false
Introduced	16.0.R1

eth-vsm-grace

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**
Description	Enter the eth-vsm-grace context
Introduced	16.0.R1

rx-eth-vsm-grace *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP
Default	true
Introduced	16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

fwd-wholesale

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the fwd-wholesale context

Introduced 16.0.R1

pppoe-service *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **fwd-wholesale**

Description PPPoE service name

Reference configure **service epipe** *service-name*

Introduced 16.0.R1

host-admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Administrative state of hosts

Default enable

Options enable, disable

Introduced 16.0.R1

host-lockout-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Host lockout policy

Reference configure **subscriber-mgmt host-lockout-policy** *string*

Introduced 16.0.R1

igmp-host-tracking

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the igmp-host-tracking context

Introduced 16.0.R1

expiry-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Time during which the system continues to track inactive hosts
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Maximum number of multicast groups to be tracked per group
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Maximum number of multicast groups to be tracked
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast sources to be tracked

Range 1 to 1000

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

sap-ingress

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Policy identifier

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R1

queuing-type *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Ingress queuing type

Options shared, multipoint-shared

Introduced 16.0.R4

scheduler-policy

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

lag

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the lag context

Introduced 16.0.R1

link-map-profile *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag**

Description LAG link map profile applied to a SAP or network interface

Range 1 to 64

Introduced 16.0.R1

per-link-hash

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag**

Description Enter the per-link-hash context

Introduced 16.0.R1

class *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag per-link-hash**

Description Class used on LAG egress when using weighted per-link-hash

Range 1 to 3

Default 1

Introduced 16.0.R1

weight *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag per-link-hash**

Description Weight used on LAG egress when using weighted per-link-hash

Range 1 to 1024

Default 1

Introduced 16.0.R1

monitor-oper-group *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Monitor operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

multi-service-site *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Multi service site name
String Length	1 to 32
Introduced	16.0.R1

oper-group *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

static-host

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the static-host context
Introduced	16.0.R1

ipv4 [ip] *ipv4-unicast-address* **mac** *mac-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**
Description	Enter the ipv4 context
Introduced	16.0.R1

[ip] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	IP address used by the static host.
Introduced	16.0.R1
Notes	This element is part of a list key

mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	MAC address of the static host.
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	Administrative state of the static host
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp-string *ancp-string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

managed-route [prefix] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	Enter the managed-route context
Max. Elements	16
Introduced	16.0.R4

[prefix] *ipv4-unicast-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **managed-route** *ipv4-unicast-prefix*
Description	Managed route prefix.
Introduced	16.0.R4
Notes	This element is part of a list key

rip-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	RIP policy name
Reference	configure **subscriber-mgmt rip-policy** *string*
Introduced	16.0.R1

shcv

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Enter the shcv context

Introduced 16.0.R4

sla-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description SLA profile name

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Sub-profile name

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Enter the subscriber-id context

Introduced 16.0.R1

string *subscriber-id*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Subscriber identification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

use-sap-id

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Use the SAP id as subscriber ID
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6 [prefix] *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**
Description	Enter the ipv6 context
Introduced	16.0.R1

[prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	IPv6 prefix
Introduced	16.0.R1
Notes	This element is part of a list key

mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	MAC address
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	Administrative state of the static host
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp-string *ancp-string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

mac-linking *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	IPv6 host associated with the IPv4 host through the learned MAC address
Introduced	16.0.R1

managed-route [ipv6-prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	Enter the managed-route context
Max. Elements	16
Introduced	16.0.R4

[ipv6-prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **managed-route** *ipv6-unicast-prefix*
Description	Managed route prefix.
Introduced	16.0.R4
Notes	This element is part of a list key

metric *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **managed-route** *ipv6-unicast-prefix*
Description	Managed route metric.
Default	0
Introduced	16.0.R4

retail-svc-id *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Retail service ID

Range 1 to 2147483647

Introduced 16.0.R1

shcv

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Enter the shcv context

Introduced 16.0.R4

sla-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description SLA profile name

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Sub-profile name

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Enter the subscriber-id context

Introduced 16.0.R1

string *subscriber-id*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **subscriber-id**

Description Subscriber identification

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

use-sap-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **subscriber-id**

Description Use the SAP id as subscriber ID

Introduced 16.0.R1

Notes This element is part of a choice

mac-learning

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**

Description Enter the mac-learning context

Introduced 16.0.R4

data-triggered *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host mac-learning**

Description Enable learning of MAC addresses from data packets.

Default false

Introduced 16.0.R4

single-mac *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host mac-learning**

Description Enforce the limit of a single MAC address per SAP, learned by means of ICMPv6.

Default false

Introduced 16.0.R4

sub-sla-mgmt

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the sub-sla-mgmt context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Administrative state of subscriber management on this SAP

Default disable

Options enable, disable

Introduced 16.0.R1

defaults

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Enter the defaults context

Introduced 16.0.R1

int-dest-id

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Enter the int-dest-id context
Introduced	16.0.R1

string *int-dest-id*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the configured string
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

top-q-tag

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the top Q-tag of this SAP
Introduced	16.0.R1
Notes	This element is part of a choice

sla-profile *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default SLA profile for hosts on this SAP
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default subscriber profile used for subscribers on this SAP
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**

Description Enter the subscriber-id context

Introduced 16.0.R1

auto-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Use auto-generated subscriber identification string

Introduced 16.0.R1

Notes This element is part of a choice

sap-id

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Use SAP ID as default subscriber identification string

Introduced 16.0.R1

Notes This element is part of a choice

string *subscriber-id*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Subscriber ID policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

single-sub-parameters

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Enter the single-sub-parameters context

Introduced 16.0.R1

non-sub-traffic

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**

Description Enter the non-sub-traffic context

Introduced 16.0.R1

sla-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**

Description SLA profile applicable for all non-subscriber traffic

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

Notes This element is mandatory

sub-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**

Description Subscriber IDprofile applied for all non-subscriber traffic

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

Notes This element is mandatory

subscriber-id *subscriber-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**

Description Subscriber ID applied for all non-subscriber traffic

String Length 1 to 32

Introduced 16.0.R1

profiled-traffic-only *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**

Description Include all traffic in subscriber profile

Default false

Introduced 16.0.R1

sub-ident-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Subscriber identification policy used on this SAP

Reference configure **subscriber-mgmt sub-ident-policy** *external-named-item*

Introduced 16.0.R1

subscriber-limit *sap-subscriber-limit*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Maximum number of subscribers on this SAP

Default 1

Introduced 16.0.R1

sap-parameters

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the sap-parameters context

Introduced 16.0.R1

anti-spoof *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**

Description Anti-spoofing type.

Default ip-mac

Options ip-mac, nh-mac

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

sub-sla-mgmt

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**

Description Enter the sub-sla-mgmt context

Introduced 16.0.R1

defaults

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt**

Description Enter the defaults context

Introduced 16.0.R1

sla-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**

Description Default SLA profile

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**

Description Default subscriber profile

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**
Description	Enter the subscriber-id context
Introduced	16.0.R1

auto-id

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults subscriber-id**
Description	Subscriber ID that is autogenerated
Introduced	16.0.R1
Notes	This element is part of a choice

string *subscriber-id*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults subscriber-id**
Description	String to be used as default subscriber ID
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

sub-ident-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt**
Description	Subscriber identification policy
Reference	configure **subscriber-mgmt sub-ident-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv4 and IPv6
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy-ipv4 *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv4
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy-ipv6 *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv6
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

srrp [srrp-id] *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the srrp context
Max. Elements	1
Introduced	16.0.R1

[srrp-id] *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	SRRP instance ID
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Administrative state of SRRP
Default	disable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Destination IPv4 prefix
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

gw-mac *mac-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Gateway MAC address
Introduced	16.0.R1

keep-alive-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Interval between SRRP advertisements
Range	1 to 100
Default	10
Units	deciseconds
Introduced	16.0.R1

message-path *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	SAP to use as the SRRP message path
Reference	configure **service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Introduced	16.0.R1

monitor-oper-group

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Enter the monitor-oper-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **monitor-oper-group**
Description	Operational group name
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

priority-step *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **monitor-oper-group**
Description	Value with which the group priority increases or decreases if the state of this messaging-SAP changes.
Range	1 to 10
Introduced	16.0.R1

one-garp-per-sap *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Send one gratuitous ARP to each SAP
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	VRRP priority control policy associated with the SRRP
Reference	configure **vrrp policy** *number*
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

preempt *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Allow the SRRP instance to override an existing master
Default	true
Introduced	16.0.R1

priority *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Priority for this interface at this level
Range	1 to 254
Default	100
Introduced	16.0.R1

send-fib-population-packets *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*

Description Mode used to send FIB population packets (such as ARP) on switchover

Default all

Options all, outer-tag-only

Introduced 16.0.R1

suppress-aa-sub *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enable application assurance suppression for ESM subscribers

Default false

Introduced 16.0.R1

tos-marking-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description TOS marking state

Default trusted

Options trusted, untrusted

Introduced 16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Group interface type

Default plain

Options plain, lns, wlan-gw, gtp, bonding

Introduced 16.0.R1

wlan-gw

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the wlan-gw context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Administrative state of WLAN Gateway on this group interface

Default disable

Options enable, disable

Introduced 16.0.R1

gateway-address [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the gateway-address context

Max. Elements 10

Introduced 16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description The IP address of the WLAN Gateway tunnel function of this system on this group interface

Introduced 16.0.R1

Notes This element is part of a list key

purpose

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the purpose context

Introduced 16.0.R1

xconnect *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **purpose**

Description Use tunnel IP address for crosse-connect traffic

Default false

Introduced 16.0.R1

gateway-router *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description The routing instance where the tunneled UE traffic is routed, or empty to specify that the routing instance corresponding to the service containing this interface is used.

Introduced 16.0.R1

l2-ap

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the l2-ap context

Introduced 16.0.R1

access-point [sap-id] *sap*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**

Description Enter the access-point context

Introduced 16.0.R1

[sap-id] *sap*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*
Description	SAP ID for the Layer 2 access point
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*
Description	Administrative state of this access point
Default	disable
Options	enable, disable
Introduced	16.0.R1

encap-type *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*
Description	Service encapsulation type of this access point
Options	null, dot1q, qinq
Introduced	16.0.R1

epipe-sap-template *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*
Description	Parameters template for the internal connections with the ISA cards
Reference	configure **service template epipe-sap-template** *string*
Introduced	16.0.R1

auto-sub-id-fmt *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**
Description	Format of the auto-generated subscriber ID
Default	include-ap-tags
Options	include-ap-tags, sap-only
Introduced	16.0.R1

default-encap-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**
Description	Default encapsulation type for Layer 2 access points
Default	null
Options	null, dot1q, qinq
Introduced	16.0.R1

lanext

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the lanext context
Introduced	16.0.R1

max-bd *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw lanext**
Description	Maximum number of bridge domains
Range	1 to 131071
Default	131071
Introduced	16.0.R1

learn-ap-mac

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the learn-ap-mac context
Introduced	16.0.R1

delay-auth *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw learn-ap-mac**
Description	Delay authentication until ARP/ND is answered or timed out, after which AP MAC can be included
Default	false
Introduced	16.0.R1

mobility

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the mobility context
Introduced	16.0.R1

hold-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Minimum time between two mobility events for a single UE
Range	0 to 255
Default	5
Units	seconds
Introduced	16.0.R1

inter-tunnel-type *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enable mobility between terminating tunnel types
Default	false
Introduced	16.0.R1

inter-vlan *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enable mobility within different VLANs within the same range of VLAN Q-tags
Default	false
Introduced	16.0.R1

trigger

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enter the trigger context
Introduced	16.0.R1

control *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**
Description	Use control traffic (DHCP, DHCPv6, and ICMPv6-RS messages) as mobility trigger
Default	false
Introduced	16.0.R1

data *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**

Description Use data traffic as mobility trigger

Default false

Introduced 16.0.R1

iapp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**

Description Use Inter Access Point Protocol (IAPP) messages as mobility trigger

Default false

Introduced 16.0.R1

oper-down-on-group-degrade *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Bring interface operationally down when its ISA WLAN Gateway becomes degraded

Default false

Introduced 16.0.R1

tcp-mss-adjust *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Value for the TCP Maximum Segment Size (MSS) option if not present, or if value is higher

Range 160 to 10240

Units bytes

Introduced 16.0.R1

tunnel-egress-qos

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the tunnel-egress-qos context

Introduced 16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Administrative state of egress QoS
Default	disable
Options	enable, disable
Introduced	16.0.R1

agg-rate-limit (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Aggregate rate limit of each shaper associated with this interface
Default	max
Introduced	16.0.R1

granularity *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Granularity of the egress shaping for WLAN Gateway
Default	per-tunnel
Options	per-tunnel, per-retailer
Introduced	16.0.R1

hold-time (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Minimum time that the egress QoS resources associated with a tunnel (such as a shaper) are held
Range	1 to 86400
Units	seconds
Options	infinite
Introduced	16.0.R1

multi-client-only *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Tunnel traffic to shape when multiple UEs use this tunnel
Default	false
Introduced	16.0.R1

qos *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Identifier of the egress QoS policy associated with each tunnel of this interface
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

scheduler-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Identifier of the egress scheduler policy associated with each tunnel of this interface
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R1

tunnel-encaps

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the tunnel-encaps context
Introduced	16.0.R1

learn-l2tp-cookie (*keyword* | *string*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-encaps**
Description	System that learns the cookie from L2TP tunnels terminating on this interface
String Length	6
Default	never
Options	never, always
Introduced	16.0.R1

vlan-range [range] *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the vlan-range context
Introduced	16.0.R1

[range] *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	IEEE 802.1q VLAN tag range
Introduced	16.0.R1
Notes	This element is part of a list key

authentication

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the authentication context

Introduced 16.0.R1

hold-time *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description Minimum time to hold a UE down after an authentication failure

Range 0 to 3600

Default 5

Units seconds

Introduced 16.0.R1

on-control-plane *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description Trigger authentication on first control plane packet instead of first data packet

Default false

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description RADIUS policy for authentication

Reference configure **aaa radius isa-policy** *string*

Introduced 16.0.R1

vlan-mismatch-timeout *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**
Description	Timeout value for the RADIUS proxy cache if a packet is received with a non-matching VLAN
Range	5 to 60
Units	seconds
Introduced	16.0.R1

data-triggered-ue-creation

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the data-triggered-ue-creation context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation**
Description	Administrative state of data triggered UE authentication
Default	disable
Options	enable, disable
Introduced	16.0.R1

create-proxy-cache-entry

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation**
Description	Enter the create-proxy-cache-entry context
Introduced	16.0.R1

mac-format *mac-specification*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

proxy-server

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry**
Description	Enter the proxy-server context
Introduced	16.0.R1

name *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry proxy-server**
Description	RADIUS Proxy server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

router-instance *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry proxy-server**
Description	The router instance of the RADIUS Proxy server.
Introduced	16.0.R1
Notes	This element is mandatory

dhcp4

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the dhcp4 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**

Description Administrative state of the DHCPv4 protocol

Default disable

Options enable, disable

Introduced 16.0.R1

dns *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**

Description DNS servers signaled in DHCP

Max. Elements 2

Introduced 16.0.R1

Notes This element is ordered by user

l2-aware-ip-address (*string* | *keyword*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**

Description IPv4 address for migrant or DSM Ues

Options from-pool

Introduced 16.0.R1

lease-time

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**

Description Enter the lease-time context

Introduced 16.0.R1

active *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4 lease-time**
Description	IP address lease time for the UE after successful (portal) authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4 lease-time**
Description	IP address lease time that is provided before and during (portal) authentication to the UE
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

nbns *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	NetBIOS servers signaled in DHCP
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

dhcp6

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the dhcp6 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**
Description	Administrative state of this protocol
Default	disable
Options	enable, disable
Introduced	16.0.R1

preferred-lifetime

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**
Description	Enter the preferred-lifetime context
Introduced	16.0.R1

active *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 preferred-lifetime**
Description	Preferred signaled lifetime after full authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 preferred-lifetime**
Description	Preferred signaled lifetime when the UE is not fully authenticated
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

valid-lifetime

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**

Description Enter the valid-lifetime context

Introduced 16.0.R1

active *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 valid-lifetime**

Description Signaled valid lifetime after full authentication

Range 300 to 3600

Default 600

Units seconds

Introduced 16.0.R1

initial *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 valid-lifetime**

Description Valid signaled lifetime when the UE is not fully authenticated

Range 300 to 3600

Default 300

Units seconds

Introduced 16.0.R1

dsm

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the dsm context

Introduced 16.0.R1

accounting-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	ISA Radius Policy for accounting
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

accounting-update

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Enter the accounting-update context
Introduced	16.0.R1

interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm accounting-update**
Description	Time interval between consecutive Interim accounting update messages
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Administrative state of DSM
Default	disable
Options	enable, disable
Introduced	16.0.R1

egress

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Enter the egress context
Introduced	16.0.R1

policer *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm egress**

Description Policer for egress traffic

Reference configure **subscriber-mgmt isa-policer** *string*

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**

Description Enter the ingress context

Introduced 16.0.R1

ip-filter *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm ingress**

Description Filter for ingress traffic

Reference configure **subscriber-mgmt isa-filter** *string*

Introduced 16.0.R1

policer *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm ingress**

Description Policer for ingress traffic

Reference configure **subscriber-mgmt isa-policer** *string*

Introduced 16.0.R1

one-time-redirect

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**

Description Enter the one-time-redirect context

Introduced 16.0.R1

port *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm one-time-redirect**

Description Destination port of packets considered for HTTP redirect

Range 1 to 65535

Default 80

Introduced 16.0.R1

url *one-time-http-redirect-url*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm one-time-redirect**

Description URL for redirected HTTP protocol packets that can be overridden by AAA

Introduced 16.0.R1

http-redirect-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Default HTTP redirect policy for portal authentication

Reference configure **subscriber-mgmt http-redirect-policy** *string*

Introduced 16.0.R1

idle-timeout-action *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Action to perform when the idle timeout expires

Default remove

Options remove, shcv

Introduced 16.0.R1

l2-service

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the l2-service context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Administrative state of the Layer 2 service
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

service *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Layer 2 service associated with this range
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	NAT policy for DSM and ISA portal authentication
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

retail-service *service-name*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Default retail service for new UEs in this range
String Length	1 to 64
Introduced	16.0.R1

slaac

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the slaac context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**
Description	Administrative state of this protocol
Default	disable
Options	enable, disable
Introduced	16.0.R1

preferred-lifetime

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**
Description	Enter the preferred-lifetime context
Introduced	16.0.R1

active *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac preferred-lifetime**

Description Preferred signaled lifetime after full authentication

Range 300 to 3600

Default 600

Units seconds

Introduced 16.0.R1

initial *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac preferred-lifetime**

Description Preferred signaled lifetime when the UE is not fully authenticated

Range 300 to 3600

Default 300

Units seconds

Introduced 16.0.R1

valid-lifetime

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**

Description Enter the valid-lifetime context

Introduced 16.0.R1

active *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac valid-lifetime**

Description Signaled valid lifetime after full authentication

Range 300 to 3600

Default 600

Units seconds

Introduced 16.0.R1

initial *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac valid-lifetime**
Description	Valid signaled lifetime when the UE is not fully authenticated
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

vrgw

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the vrgw context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Administrative state of VRGW
Default	disable
Options	enable, disable
Introduced	16.0.R1

brg

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Enter the brg context
Introduced	16.0.R1

authenticated-brg-only *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw brg**
Description	Only allow hosts from BRGs pre-authenticated using the radius-proxy
Default	false
Introduced	16.0.R1

default-brg-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw brg**
Description	Default BRG profile to use if the AAA server does not specify one
Reference	configure **subscriber-mgmt vrgw brg-profile** *string*
Introduced	16.0.R1

lanext

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Enter the lanext context
Introduced	16.0.R1

access

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Enter the access context
Introduced	16.0.R1

max-mac *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext access**
Description	Maximum number of MAC entries in bridged domain from access side
Range	1 to 128
Default	20
Introduced	16.0.R1

multi-access *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext access**
Description	Allow multiple access points
Default	false
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Administrative state of HLE
Default	disable
Options	enable, disable
Introduced	16.0.R1

assistive-address-resolution *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	ISA assists in address resolution
Default	false
Introduced	16.0.R1

bd-mac-prefix *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Prefix from which BD MACs for MAC translation are derived
String Length	8
Introduced	16.0.R1

mac-translation *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Hide MAC address of home host by translating it to BD MAC
Default	false
Introduced	16.0.R1

network

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Enter the network context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext network**
Description	Administrative state of network
Default	enable
Options	enable, disable
Introduced	16.0.R1

max-mac *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext network**
Description	Maximum number of MAC entries in bridged domain from network side
Range	1 to 64
Default	20
Introduced	16.0.R1

xconnect

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the xconnect context
Introduced	16.0.R1

accounting

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect**
Description	Enter the accounting context
Introduced	16.0.R1

mobility-updates *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	Accounting updates triggered by mobility
Default	false
Introduced	16.0.R1

policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	ISA RADIUS accounting policy for cross-connected UEs
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

update-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	Time between consecutive Interim accounting update messages
Range	5 to 259200
Units	minutes
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect**
Description	Administrative state of the cross-connect
Default	disable
Options	enable, disable
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Identifier of the WLAN Gateway ISA group to terminate UEs for this group interface
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

wpp

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the wpp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Administrative state of WPP
Default	disable
Options	enable, disable
Introduced	16.0.R1

initial

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Enter the initial context
Introduced	16.0.R1

sla-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp initial**

Description Initial SLA profile

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp initial**

Description Initial subscriber profile

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

lease-time *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**

Description Lease time

Range 10 to 315446399

Default 600

Introduced 16.0.R1

portal

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**

Description Enter the portal context

Introduced 16.0.R1

name *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	Name for the WPP portal of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

portal-group *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	WPP portal group for this interface
Reference	configure **aaa wpp portal-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	The virtual router instance of the WPP portal for this interface
Introduced	16.0.R1
Notes	This element is part of a choice

restore-to-initial-on-disconnect *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Restore initial profiles after a host has disconnected
Default	true
Introduced	16.0.R1

triggered-hosts *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Enable/disable triggered hosts
Default	false
Introduced	16.0.R1

user-db *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	User database
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

hold-time

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Enter the hold-time context
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time**
Description	Enter the ipv4 context
Introduced	16.0.R1

down

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 down**
Description	Apply down delay only when interface is configured or after reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 down**
Description	Down hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 up**
Description	Up hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time**
Description	Enter the ipv6 context
Introduced	16.0.R1

down

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 down**

Description Apply hold time only when IP interface is first configured or after system reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 down**

Description Down hold time for the IPv6 interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 up**

Description Up hold time for the IPv6 interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

ipoe-linking

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipoe-linking context

Introduced 16.0.R1

gratuitous-router-advertisement *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipoe-linking**

Description Send unsolicited router advertisement after DHCP setup

Default false

Introduced 16.0.R1

ipoe-session

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipoe-session context

Introduced 16.0.R1

session-limit *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipoe-session**

Description Maximum number of sessions on this group interface

Range 1 to 500000

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**

Description Enter the address context

Introduced 16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	IP address or IP subnet applied to interface
Introduced	16.0.R1
Notes	This element is part of a list key

gateway *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Separate IP address within the subnet for SRRP routing purposes
Introduced	16.0.R1

holdup-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Time for the route before it accepts the new state attribute
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

populate-host-routes *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Populate subscriber host routes in local FIB
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

allow-unmatching-subnets *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Allow subscriber hosts without a matching subnet
Default	false
Introduced	16.0.R1

default-dns *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Default DNS server addresses
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

dhcp

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default enable

Options enable, disable

Introduced 16.0.R4

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the client-applications context

Introduced 16.0.R4

dhcp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable DHCP as client application.

Default true

Introduced 16.0.R4

ppp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable PPP as client application.

Default false

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

max-leases *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp lease-populate**

Description The maximum number of DHCPv4 leases.

Range 0 to 511999

Introduced 16.0.R4

option-82

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

vendor-specific-option

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R4

client-mac-address *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Enter the proxy-server context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	Administratively enable/disable DHCP proxy.
Default	disable
Options	enable, disable
Introduced	16.0.R1

emulated-server *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	IP address used as the DHCP server address in the context of this service
Introduced	16.0.R1

lease-time

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	Enter the lease-time context
Introduced	16.0.R1

radius-override *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	Use lease time information provided by RADIUS server
Default	false
Introduced	16.0.R1

value *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**

Description DHCP lease time

Range 300 to 315446399

Units seconds

Introduced 16.0.R1

python-policy *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Python policy.

Reference configure **python python-policy** *string*

Introduced 16.0.R4

relay-proxy

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the relay-proxy context

Introduced 16.0.R1

release-update-src-ip *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp relay-proxy**

Description Specify whether or not to relay release messages.

Default false

Introduced 16.0.R4

siaddr-override *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp relay-proxy**

Description Specify the IP address to use.

Introduced 16.0.R4

server *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

virtual-subnet *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable virtual subnetting.
Default	false
Introduced	16.0.R4

export-host-routes *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Allow export of subscriber management host routes
Default	false
Introduced	16.0.R1

unnumbered

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Enter the unnumbered context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 unnumbered**

Description IP address of the interface

Introduced 16.0.R1

Notes This element is part of a choice

ip-int-name *interface-name*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv4 unnumbered**

Description Interface name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

ipv6

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipv6 context

Introduced 16.0.R1

address [ipv6-address] *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**

Description Enter the address context

Introduced 16.0.R1

[ipv6-address] *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*

Description IPv6 address for a router interface

Introduced 16.0.R1

Notes This element is part of a list key

holdup-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Configures the time to wait, in milliseconds, for the route before it accepts the new state attribute.
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

host-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Host type for subscriber interface addresses or prefixes
Options	pd, wan, pd-wan
Introduced	16.0.R1

prefix-length *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

allow-multiple-wan-addresses *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Configure if the interface will accept multiple WAN addresses.
Default	false
Introduced	16.0.R4

allow-unmatching-prefixes *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Allow subscriber hosts without a matching prefix
Default	false
Introduced	16.0.R1

default-dns *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Default DNS server addresses
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

delegated-prefix-length (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	IPv6 delegated prefix length
Range	48 to 64
Default	64
Options	variable
Introduced	16.0.R1

dhcp6

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the dhcp6 context
Introduced	16.0.R1

override-slaac *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Default	false
Introduced	16.0.R1

pd-managed-route

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the pd-managed-route context
Introduced	16.0.R1

next-hop *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 pd-managed-route**
Description	Next hop type
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1

proxy-server

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the proxy-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Administrative state of DHCPv6 proxy server
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the DHCP application to use DHCP relay functionality
Default	true
Introduced	16.0.R1

ppp *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the PPP application to use DHCP relay functionality
Default	false
Introduced	16.0.R1

preferred-lifetime *dhcp6-prefix-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain preferred on this interface
Default	3600
Introduced	16.0.R1

rebind-timer *dhcp6-rebind-timer*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Rebind timer (T2) for this interface
Range	0 to 1209600
Introduced	16.0.R1

renew-timer *dhcp6-renew-timer*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Renew timer (T1)
Range	0 to 604800
Introduced	16.0.R1

server-id

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the server-id context
Introduced	16.0.R1

duid-en-ascii *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

duid-en-hex *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-ll

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Use link-layer address (DUID-LL) as DUID
Introduced	16.0.R1
Notes	This element is part of a choice

valid-lifetime *dhcp6-prefix-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain valid on this interface
Default	86400
Introduced	16.0.R1

python-policy *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

relay

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the relay context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Administrative state of DHCvP6 relay
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**

Description Enter the client-applications context

Introduced 16.0.R1

dhcp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay client-applications**

Description Allow the DHCP application to use DHCP relay functionality

Default true

Introduced 16.0.R1

ppp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay client-applications**

Description Allow the PPP application to use DHCP relay functionality

Default false

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**

Description Link address for the DHCPv6 relay messages

Introduced 16.0.R1

server *ipv6-address-with-zone*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	DHCP6 server(s) to which the DHCP6 requests are forwarded
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

source-address *ipv6-unicast-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Source IPv6 address for the DHCPv6 relay messages
Introduced	16.0.R1

ipoe-bridged-mode *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enable/Disable IPv6 IPoE Bridged Mode.
Default	false
Introduced	16.0.R4

link-local-address

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the link-local-address context
Introduced	16.0.R1

address *ipv6-address*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 link-local-address**
Description	Link local address
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

holdup-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	Configures the time to wait, in milliseconds, for the route before it accepts the new state attribute.
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

host-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	Host type for subscriber interface addresses or prefixes
Options	pd, wan, pd-wan
Introduced	16.0.R1

track-srrp *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*

Description SRRP instance whose state is tracked on this IP address

Range 1 to 4294967295

Introduced 16.0.R1

router-advertisements

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**

Description Enter the router-advertisements context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**

Description Administrative state of router advertisement

Default disable

Options enable, disable

Introduced 16.0.R1

force-mcast *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**

Description Send router advertisement to a multicast address instead of unicast for IPoE

Options ip, ip-mac

Introduced 16.0.R1

max-advertisement-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Maximum advertisement interval
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Minimum advertisement interval
Range	900 to 1350
Default	900
Units	seconds
Introduced	16.0.R1

options

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the options context
Introduced	16.0.R1

current-hop-limit *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Hop limit to be advertised
Range	0 to 255
Default	64
Introduced	16.0.R1

dns

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**

Description Enter the dns context

Introduced 16.0.R1

include-rdnss *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Include the RDNSS server option 25

Default false

Introduced 16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Maximum time for the RDNSS address to remain valid

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

managed-configuration *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**

Description Managed address configuration flag

Default false

Introduced 16.0.R1

mtu (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Advertised MTU value
Range	1280 to 9212
Default	not-included
Units	bytes
Options	not-included
Introduced	16.0.R1

other-stateful-configuration *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Other stateful configuration flag
Default	false
Introduced	16.0.R1

reachable-time *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery reachable time that is advertised for this group interface
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-timer *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery retrasnmit timer that is advertised for this group interface
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1

router-lifetime (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Router lifetime
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1

prefix-options

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the prefix-options context
Introduced	16.0.R1

autonomous *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Value of the autonomous flag
Default	false
Introduced	16.0.R1

on-link *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Assign the prefix to an interface on the specified link
Default	true
Introduced	16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain preferred
Default	3600
Units	seconds
Introduced	16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain valid
Default	86400
Units	seconds
Introduced	16.0.R1

router-solicit

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the router-solicit context
Introduced	16.0.R1

inactivity-timer (*number* | *keyword*)

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **ipv6 router-solicit**
Description	Timebefore an inactive host is removed
Range	1 to 31536000
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1

local-address-assignment

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the local-address-assignment context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**

Description Administrative state of local address assignment

Default disable

Options enable, disable

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**

Description Enter the ipv4 context

Introduced 16.0.R1

client-applications

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**

Description Enter the client-applications context

Introduced 16.0.R1

ppp *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4 client-applications**

Description Request local addresses for PPP IPCP hosts

Default false

Introduced 16.0.R1

default-pool *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**
Description	Default pools
String Length	1 to 32
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

server *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**
Description	Local DHCP server that contains pools for local address assignment
Reference	configure **service vprn** *service-name* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**
Description	Enter the ipv6 context
Introduced	16.0.R1

client-applications

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6**
Description	Enter the client-applications context
Introduced	16.0.R1

ipoe-slaac *boolean*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**
Description	Request local addresses for IPoE SLAAC hosts
Default	false
Introduced	16.0.R1

ipoe-wan *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for IPoE IA NA hosts

Default false

Introduced 16.0.R1

ppp-slaac *boolean*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for PPP SLAAC hosts

Default false

Introduced 16.0.R1

server *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6**

Description Local DHCPv6 server that contains pools for local address assignment

Reference configure **service vprn** *service-name* **dhcp-server dhcpv6** *string*

Introduced 16.0.R1

pppoe

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name*

Description Enter the pppoe context

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **pppoe**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

session-limit *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **pppoe**
Description	Maximum PPPoE sessions
Range	1 to 262143
Default	1
Introduced	16.0.R1

private-retail-subnets *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Export subnets to the forwarding service
Default	false
Introduced	16.0.R1

wan-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	The mode of operation for hosts that have a /128 WAN IPv6 address.
Default	mode64
Options	mode64, mode128
Introduced	16.0.R4

wlan-gw

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name*
Description	Enter the wlan-gw context
Introduced	16.0.R1

pool-manager

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw**

Description Enter the pool-manager context

Introduced 16.0.R1

dhcp6-client

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**

Description Enter the dhcp6-client context

Introduced 16.0.R1

dhcpv4-nat

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the dhcpv4-nat context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description Administrative state of the considered DHCPv6 client

Default disable

Options enable, disable

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description The IPv6-address that should be included in the link-address field of the relay header.

Default ::

Introduced 16.0.R4

pool-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description Pool name to be sent in the DHCPv6 messages

String Length 1 to 32

Introduced 16.0.R1

ia-na

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the ia-na context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**

Description Administrative state of the considered DHCPv6 client

Default disable

Options enable, disable

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**

Description The IPv6-address that should be included in the link-address field of the relay header.

Default ::

Introduced 16.0.R4

pool-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**

Description Pool name to be sent in the DHCPv6 messages

String Length 1 to 32

Introduced 16.0.R1

lease-query

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the lease-query context

Introduced 16.0.R1

max-retries *number*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client lease-query**

Description Maximum number of retries before the lease query assumes that no existing subnets were allocated

Range 0 to 10

Default 2

Introduced 16.0.R1

servers *ipv6-unicast-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description DHCPv6 servers that are used for requesting addresses

Max. Elements 8

Introduced 16.0.R1

slaac

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the slaac context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**

Description Administrative state of the considered DHCPv6 client

Default disable

Options enable, disable

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**

Description The IPv6-address that should be included in the link-address field of the relay header.

Default ::

Introduced 16.0.R4

pool-name *string*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**

Description Pool name to be sent in the DHCPv6 messages

String Length 1 to 32

Introduced 16.0.R1

source-ip (*keyword* | *string*)

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Source IP address that is used by the DHCPv6 client

Default use-interface-ip

Options use-interface-ip

Introduced 16.0.R1

watermarks

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**

Description Enter the watermarks context

Introduced 16.0.R1

high *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager watermarks**
Description	New prefix that is used when the ISA level reaches high watermark
Range	51 to 99
Default	95
Introduced	16.0.R1

low *number*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager watermarks**
Description	Prefix that is released if the usage level without this prefix is below the low watermark
Range	50 to 98
Default	90
Introduced	16.0.R1

wlan-gw-group *string*

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**
Description	Identifier of the WLAN Gateway ISA group on which the prefixes are installed
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

redundancy

Context	**configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw**
Description	Enter the redundancy context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**

Description Administrative state of redundancy

Default disable

Options enable, disable

Introduced 16.0.R1

export *ipv4-unicast-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**

Description Route to export to peer

Introduced 16.0.R1

monitor *ipv4-unicast-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vprn** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**

Description Peer route to monitor

Introduced 16.0.R1

ttl-propagate

Context **configure service vprn** *service-name*

Description Enter the ttl-propagate context

Introduced 16.0.R1

local *keyword*

Context	**configure service vprn** *service-name* **ttl-propagate**
Description	Manage TTL propagation from IP header into label stack for local packets.
Default	use-base
Options	none, all, vc-only, use-base
Introduced	16.0.R1

transit *keyword*

Context	**configure service vprn** *service-name* **ttl-propagate**
Description	Manage TTL propagation from IP header into label stack for transit packets.
Default	use-base
Options	none, all, vc-only, use-base
Introduced	16.0.R1

twamp-light

Context	**configure service vprn** *service-name*
Description	Enter the twamp-light context
Introduced	16.0.R1

reflector

Context	**configure service vprn** *service-name* **twamp-light**
Description	Enter the reflector context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **twamp-light reflector**
Description	Administratively enable or disable TWAMP-Light reflector
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **twamp-light reflector**
Description	Descriptive text for the specified TWAMP-Light reflector
String Length	1 to 80
Introduced	16.0.R1

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **twamp-light reflector**
Description	Enter the prefix context
Max. Elements	50
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **twamp-light reflector prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Source prefix for the TWAMP-Light reflector
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure service vprn** *service-name* **twamp-light reflector prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Descriptive text for the specified TWAMP-Light reflector prefix
String Length	1 to 80
Introduced	16.0.R1

udp-port *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **twamp-light reflector**
Description	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Range	862 | 64364 to 64373
Introduced	16.0.R1
Notes	This element is mandatory

video-interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name*
Description	Enter the video-interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Interface name
String Length	1 to 29
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Accounting Policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

address [ip-address] *ipv4-prefix-with-host-bits*

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Enter the address context
Max. Elements	16
Introduced	16.0.R1

[ip-address] *ipv4-prefix-with-host-bits*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **address** *ipv4-prefix-with-host-bits*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

adi

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Enter the adi context
Introduced	16.0.R1

scte30

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi**
Description	Enter the scte30 context
Introduced	16.0.R1

ad-server [address] *ipv4-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi scte30**
Description	Enter the ad-server context
Max. Elements	4
Introduced	16.0.R1

[address] *ipv4-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi scte30 ad-server** *ipv4-address*
Description	Ad server address
Introduced	16.0.R1
Notes	This element is part of a list key

local-address

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi scte30**
Description	Enter the local-address context
Introduced	16.0.R1

control *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi scte30 local-address**
Description	Control
Introduced	16.0.R1
Notes	This element is mandatory

data *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **adi scte30 local-address**
Description	Data
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Administrative state of the video interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

channel [mcast-address] *ipv4-multicast-address* **source** *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name*
Description	Enter the channel context
Introduced	16.0.R1

[mcast-address] *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Multicast channel address
Introduced	16.0.R1
Notes	This element is part of a list key

source *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Unicast source address
Introduced	16.0.R1
Notes	This element is part of a list key

channel-name *string*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	max 32 chars.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

scte35-action *keyword*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Enable/disable forwarding scte 35 cue avails.
Default	forward
Options	forward, drop
Introduced	16.0.R1

zone-channel [zone-mcast-address] *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Enter the zone-channel context
Introduced	16.0.R1

[zone-mcast-address] *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*
Description	Multicast zone channel address
Introduced	16.0.R1
Notes	This element is part of a list key

zone-source *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*
Description	Unicast source address
Introduced	16.0.R1
Notes	This element is part of a list key

adi-channel-name *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Description max 32 chars.

String Length 1 to 32

Introduced 16.0.R1

cpu-protection *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description CPU protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

multicast-service *number*

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description Service ID of the associated multicast service.

Range 1 to 2147483647

Introduced 16.0.R1

output-format *keyword*

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description Output format

Default rtp-udp

Options udp, rtp-udp

Introduced 16.0.R1

rt-client

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description Enter the rt-client context

Introduced 16.0.R1

src-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **video-interface** *interface-name* **rt-client**

Description An IP address for the RT client.

Introduced 16.0.R3

Notes This element is mandatory

video-sap

Context **configure service vprn** *service-name* **video-interface** *interface-name*

Description Enter the video-sap context

Introduced 16.0.R1

egress

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap**

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap egress filter**

Description ID for the IP filter policy

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap egress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap egress qos**

Description SAP-egress QoS policy

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

ingress

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap**

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap ingress filter**

Description ID for the IP filter policy

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vprn** *service-name* **video-interface** *interface-name* **video-sap ingress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **video-sap ingress qos**
Description	SAP-ingress QoS policy
Reference	configure **qos sap-ingress** *qos-policy-name*
Introduced	16.0.R1

video-group-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **video-interface** *interface-name* **video-sap**
Description	Group id for the video interface.
Reference	configure **isa video-group** *number*
Introduced	16.0.R1
Notes	This element is mandatory

vprn-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name*
Description	VPRN type
Default	regular
Options	regular, hub, spoke, subscriber-split-horizon
Introduced	16.0.R1

vrf-export

Context	**configure service vprn** *service-name*
Description	Enter the vrf-export context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **vrf-export**
Description	Name of the export policy. The name of the policy is limited to 64 characters except for the first policy.
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

vrf-import

Context	**configure service vprn** *service-name*
Description	Enter the vrf-import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **vrf-import**
Description	Name of the import policy. The name of the policy is limited to 64 characters except for the first policy.
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

vrf-target

Context	**configure service vprn** *service-name*
Description	Enter the vrf-target context
Introduced	16.0.R1

community *route-target*

Context	**configure service vprn** *service-name* **vrf-target**
Description	Specify a extended BGP community in the form type:x:y. Type can be only target, x and y are 16 bit integers.
String Length	10 to 28
Introduced	16.0.R1
Notes	This element is part of a choice

export-community *route-target*

Context	**configure service vprn** *service-name* **vrf-target**
Description	Communities to be sent to remote PE neighbors
String Length	10 to 28
Introduced	16.0.R1
Notes	This element is part of a choice

import-community *route-target*

Context	**configure service vprn** *service-name* **vrf-target**
Description	Communities that are accepted from remote PE neighbors
String Length	10 to 28
Introduced	16.0.R1
Notes	This element is part of a choice

vxlan

Context	**configure service vprn** *service-name*
Description	Enter the vxlan context
Introduced	16.0.R1

tunnel-termination [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **vxlan**
Description	Enter the tunnel-termination context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **vxlan tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Non system IP address to terminate the VXLAN
Introduced	16.0.R4
Notes	This element is part of a list key

fpe-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **vxlan tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	FPE id for this entry
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R4
Notes	This element is mandatory

weighted-ecmp *boolean*

Context	**configure service vprn** *service-name*
Description	Allow weighted load-balancing
Default	false
Introduced	16.0.R1

wlan-gw

Context	**configure service vprn** *service-name*
Description	Enter the wlan-gw context
Introduced	16.0.R1

distributed-subscriber-mgmt

Context	**configure service vprn** *service-name* **wlan-gw**
Description	Enter the distributed-subscriber-mgmt context
Introduced	16.0.R4

ipv6-tcp-mss-adjust *number*

Context	**configure service vprn** *service-name* **wlan-gw distributed-subscriber-mgmt**
Description	Insert or decrease the TCP Maximum Segment Size option to this value for upstream IPv6 SYN messages
Range	160 to 10240
Introduced	16.0.R4

mobility-triggered-accounting

Context	**configure service vprn** *service-name* **wlan-gw**
Description	Enter the mobility-triggered-accounting context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure service vprn** *service-name* **wlan-gw mobility-triggered-accounting**
Description	Administrative state of mobility-triggered-accounting
Default	disable
Options	enable, disable
Introduced	16.0.R4

hold-down *number*

Context	**configure service vprn** *service-name* **wlan-gw mobility-triggered-accounting**
Description	Hold additional mobility-triggered update until this timer expires
Range	60 to 86400
Units	seconds
Introduced	16.0.R4

include-counters *boolean*

Context	**configure service vprn** *service-name* **wlan-gw mobility-triggered-accounting**
Description	Include counters in interim updates
Default	false
Introduced	16.0.R4

xconnect

Context	**configure service vprn** *service-name* **wlan-gw**
Description	Enter the xconnect context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **wlan-gw xconnect**
Description	Administrative state of WLAN-GW cross-connect
Default	disable
Options	enable, disable
Introduced	16.0.R1

tunnel-source-ip *ipv6-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **wlan-gw xconnect**
Description	IPv6 address and prefix for the tunnel source
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **wlan-gw xconnect**
Description	ISA WLAN Gateway group
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

wpp

Context	**configure service vprn** *service-name*
Description	Enter the wpp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **wpp**
Description	Administrative state of WPP
Default	disable
Options	enable, disable
Introduced	16.0.R1

portal [name] *string*

Context	**configure service vprn** *service-name* **wpp**
Description	Enter the portal context
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	WPP portal name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

ack-auth-retry-count *number*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Number of retransmissions of an ACK_OUT message
Range	0 to 5
Default	5
Introduced	16.0.R1

address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	WPP portal address
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Administrative state of the WPP portal
Default	disable
Options	enable, disable
Introduced	16.0.R1

ntf-logout-retry-count *number*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Number of retransmissions of an NTF_LOGOUT message
Range	0 to 5
Default	5
Introduced	16.0.R1

port-format *keyword*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Format of the port in the ACK_INO message
Default	standard
Options	standard, vendor-specific
Introduced	16.0.R1

retry-interval *number*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Time between two consecutive retransmissions
Range	10 to 2000
Default	2000
Units	milliseconds
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Message authentication between portal and BRAS by applying the secret used by WPPv2
String Length	1 to 114
Introduced	16.0.R1

version *number*

Context	**configure service vprn** *service-name* **wpp portal** *string*
Description	Protocol version to be expected by the WPP portal
Range	1 | 2
Default	1
Introduced	16.0.R1

36 sfm Commands

configure
- — **sfm** *number*
  - — **admin-state** *keyword*
  - — **sfm-type** *keyword*

36.1 sfm Command Descriptions

sfm [sfm-slot] *number*

Context	**configure**
Description	Enter the sfm context
Introduced	16.0.R1

[sfm-slot] *number*

Context	**configure sfm** *number*
Description	Unique value to identify this SFM slot within a chassis in the system
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure sfm** *number*
Description	Administrative state of SFM
Default	enable
Options	enable, disable
Introduced	16.0.R1

sfm-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure sfm** *number*
Description	Provision the SFM type
Options	sfm-x20, m-sfm4-12e, sfm-x20-b, sfm-x16-b, m-sfm5-7, m-sfm5-12, m-sfm5-12e, sfm-x20s-b, sfm-s, m-sfm6-12e, sfm2-x20s, sfm-2s, m-sfm6-7/12
Introduced	16.0.R1

37 subscriber-mgmt Commands

configure
- — **subscriber-mgmt**
  - — **accu-stats-policy** *string*
    - — **description** *string*
    - — **egress** *type* **id** *id*
    - — **ingress** *type* **id** *id*
  - — **ancp**
    - — **ancp-policy** *string*
      - — **egress**
        - — **rate-adjustment** *number*
        - — **rate-modify**
          - — **agg-rate**
          - — **scheduler** *string*
        - — **rate-monitor**
          - — **alarm** *boolean*
          - — **rate** *number*
        - — **rate-reduction** *number*
      - — **ingress**
        - — **rate-adjustment** *number*
        - — **rate-modify**
          - — **scheduler** *string*
        - — **rate-monitor**
          - — **alarm** *boolean*
          - — **rate** *number*
        - — **rate-reduction** *number*
      - — **port-down**
        - — **suspend-shcv**
          - — **alarm** *boolean*
          - — **hold-time** *number*
    - — **ancp-static-map**
      - — **multi-service-site-entry** *ancp-string* **customer-name** *string* **customer-site-name** *string*
        - — **ancp-policy** *string*
      - — **sap-entry** *ancp-string* **sap-id** *sap*
        - — **ancp-policy** *string*
  - — **auto-sub-id**
    - — **implicit-generation** *boolean*
    - — **ipoe-key** *sub-id-key-ipoe*
    - — **ppp-key** *sub-id-key-ppp*
  - — **bgp-peering-policy** *string*
    - — **advertise-inactive** *boolean*
    - — **aggregator-id-zero** *boolean*
    - — **as-override** *boolean*
    - — **asn-4-byte** *boolean*
    - — **authentication-key** *encrypted-leaf*
    - — **authentication-keychain** *string*
    - — **client-reflect** *boolean*
    - — **cluster** *ipv4-address*
    - — **connect-retry** *number*
    - — **damping** *boolean*
    - — **description** *string*

```
        — export string

37.1 subscriber-mgmt Command Descriptions

subscriber-mgmt

Context	**configure**
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

accu-stats-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the accu-stats-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt accu-stats-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt accu-stats-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress [type] *type* id *id*

Context	**configure subscriber-mgmt accu-stats-policy** *string*
Description	Enter the egress context
Max. Elements	4
Introduced	16.0.R1

[type] *queue-or-policer*

Context	**configure subscriber-mgmt accu-stats-policy** *string* **egress** *type* **id** *id*
Description	Type
Options	queue, policer
Introduced	16.0.R1
Notes	This element is part of a list key

id *queue-or-policer-id*

Context	**configure subscriber-mgmt accu-stats-policy** *string* **egress** *type* **id** *id*
Description	Queue or policer ID
Range	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

ingress [type] *type* **id** *id*

Context	**configure subscriber-mgmt accu-stats-policy** *string*
Description	Enter the ingress context
Max. Elements	4
Introduced	16.0.R1

[type] *queue-or-policer*

Context	**configure subscriber-mgmt accu-stats-policy** *string* **ingress** *type* **id** *id*
Description	Type
Options	queue, policer
Introduced	16.0.R1
Notes	This element is part of a list key

id *queue-or-policer-id*

Context	**configure subscriber-mgmt accu-stats-policy** *string* **ingress** *type* **id** *id*
Description	Queue or policer ID
Range	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

ancp

Context	**configure subscriber-mgmt**
Description	Enter the ancp context
Introduced	16.0.R1

ancp-policy [name] *string*

Context	**configure subscriber-mgmt ancp**
Description	Enter the ancp-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt ancp ancp-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

egress

Context	**configure subscriber-mgmt ancp ancp-policy** *string*
Description	Enter the egress context
Introduced	16.0.R1

rate-adjustment *number*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress**
Description	Rate adjustment
Range	1 to 200
Default	100
Units	percent
Introduced	16.0.R1

rate-modify

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress**
Description	Enter the rate-modify context
Introduced	16.0.R1

agg-rate

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress rate-modify**
Description	Aggregate rate that applies for modification
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress rate-modify**
Description	Scheduler to be applied for rate modification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

rate-monitor

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress**
Description	Enter the rate-monitor context
Introduced	16.0.R1

alarm *boolean*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **egress rate-monitor**
Description	Generate SNMP notification when monitor event is raised
Default	false
Introduced	16.0.R1

rate *number*

Context **configure subscriber-mgmt ancp ancp-policy** *string* **egress rate-monitor**
Description Rate below which the system generates an event
Range 1 to 4294967295
Units kilobps
Introduced 16.0.R1

rate-reduction *number*

Context **configure subscriber-mgmt ancp ancp-policy** *string* **egress**
Description Rate reduction
Range 1 to 4294967295
Units kilobps
Introduced 16.0.R1

ingress

Context **configure subscriber-mgmt ancp ancp-policy** *string*
Description Enter the ingress context
Introduced 16.0.R1

rate-adjustment *number*

Context **configure subscriber-mgmt ancp ancp-policy** *string* **ingress**
Description Rate adjustment
Range 1 to 200
Default 100
Units percent
Introduced 16.0.R1

rate-modify

Context **configure subscriber-mgmt ancp ancp-policy** *string* **ingress**
Description Enter the rate-modify context
Introduced 16.0.R1

scheduler *string*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **ingress rate-modify**
Description	Scheduler to be applied for rate modification
String Length	1 to 32
Introduced	16.0.R1

rate-monitor

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **ingress**
Description	Enter the rate-monitor context
Introduced	16.0.R1

alarm *boolean*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **ingress rate-monitor**
Description	Generate SNMP notification when monitor event is raised
Default	false
Introduced	16.0.R1

rate *number*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **ingress rate-monitor**
Description	Rate below which the system generates an event
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1

rate-reduction *number*

Context	**configure subscriber-mgmt ancp ancp-policy** *string* **ingress**
Description	Rate reduction
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1

port-down

Context **configure subscriber-mgmt ancp ancp-policy** *string*

Description Enter the port-down context

Introduced 16.0.R1

suspend-shcv

Context **configure subscriber-mgmt ancp ancp-policy** *string* **port-down**

Description Enter the suspend-shcv context

Introduced 16.0.R1

alarm *boolean*

Context **configure subscriber-mgmt ancp ancp-policy** *string* **port-down suspend-shcv**

Description Enables/disables whether the system should generate a notification before suspending SHCV.

Default false

Introduced 16.0.R1

hold-time *number*

Context **configure subscriber-mgmt ancp ancp-policy** *string* **port-down suspend-shcv**

Description Configures how long SHCV is suspended.

Range 1 to 7200

Units seconds

Introduced 16.0.R1

ancp-static-map

Context **configure subscriber-mgmt ancp**

Description Enter the ancp-static-map context

Introduced 16.0.R1

multi-service-site-entry [ancp-string] *ancp-string* **customer-name** *string* **customer-site-name** *string*

Context	**configure subscriber-mgmt ancp ancp-static-map**
Description	Enter the multi-service-site-entry context
Introduced	16.0.R1

[ancp-string] *ancp-string*

Context	**configure subscriber-mgmt ancp ancp-static-map multi-service-site-entry** *ancp-string* **customer-name** *string* **customer-site-name** *string*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

customer-name *string*

Context	**configure subscriber-mgmt ancp ancp-static-map multi-service-site-entry** *ancp-string* **customer-name** *string* **customer-site-name** *string*
Description	Service customer identifier
Reference	configure **service customer** *customer-name*
Introduced	16.0.R1
Notes	This element is part of a list key

customer-site-name *string*

Context	**configure subscriber-mgmt ancp ancp-static-map multi-service-site-entry** *ancp-string* **customer-name** *string* **customer-site-name** *string*
Description	Service customer multi-service site name
Reference	configure **service customer** *customer-name* **multi-service-site** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

ancp-policy *string*

Context	**configure subscriber-mgmt ancp ancp-static-map multi-service-site-entry** *ancp-string* **customer-name** *string* **customer-site-name** *string*
Description	The ANCP policy.
Reference	configure **subscriber-mgmt ancp ancp-policy** *string*
Introduced	16.0.R1
Notes	This element is mandatory

sap-entry [ancp-string] *ancp-string* **sap-id** *sap*

Context	**configure subscriber-mgmt ancp ancp-static-map**
Description	Enter the sap-entry context
Introduced	16.0.R1

[ancp-string] *ancp-string*

Context	**configure subscriber-mgmt ancp ancp-static-map sap-entry** *ancp-string* **sap-id** *sap*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

sap-id *sap*

Context	**configure subscriber-mgmt ancp ancp-static-map sap-entry** *ancp-string* **sap-id** *sap*
Description	SAP
Introduced	16.0.R1
Notes	This element is part of a list key

ancp-policy *string*

Context	**configure subscriber-mgmt ancp ancp-static-map sap-entry** *ancp-string* **sap-id** *sap*
Description	ANCP policy name
Reference	configure **subscriber-mgmt ancp ancp-policy** *string*
Introduced	16.0.R1
Notes	This element is mandatory

auto-sub-id

Context	**configure subscriber-mgmt**
Description	Enter the auto-sub-id context
Introduced	16.0.R1

implicit-generation *boolean*

Context	**configure subscriber-mgmt auto-sub-id**
Description	Generate implicitly the subscriber identifier if none is provided
Default	true
Introduced	16.0.R1

ipoe-key *sub-id-key-ipoe*

Context	**configure subscriber-mgmt auto-sub-id**
Description	Auto-generated subscriber identifier key1 for IPoE hosts
Options	mac, sap-id, circuit-id, remote-id, dual-stack-remote-id
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

ppp-key *sub-id-key-ppp*

Context	**configure subscriber-mgmt auto-sub-id**
Description	Auto-generated subscriber identifier key1 for PPP hosts
Options	mac, sap-id, circuit-id, remote-id, session-id
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

bgp-peering-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the bgp-peering-policy context
Max. Elements	255
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-inactive *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Advertise inactive BGP routes to other BGP peers
Introduced	16.0.R1

aggregator-id-zero *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Set router ID in aggregator path attribute to zero when BGP aggregates routes
Introduced	16.0.R1

as-override *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Replace all instances of the peer's AS number with the local AS number in a BGP route's AS_PATH
Introduced	16.0.R1

asn-4-byte *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Enable/disable the advertisement of 4-byte ASN capability.
Introduced	16.0.R3

authentication-key *encrypted-leaf*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	BGP authentication key for all peers
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Specify the TCP authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

client-reflect *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Enable/disable the reflection of routes by the route reflector.
Introduced	16.0.R3

cluster *ipv4-address*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Cluster ID for route reflector server
Introduced	16.0.R1

connect-retry *number*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	BGP connect retry timer value
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

damping *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Use BGP route damping for learned routes defined within the route policy
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

export *string*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Export route policies used to control routes advertised to BGP neighbors
Reference	configure **policy-options policy-statement** *string*
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

fast-external-failover *boolean*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Enable/disable BGP fast external failover.
Introduced	16.0.R3

hold-time *number*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	BGP hold time before closing connection
Range	0 | 3 to 65535
Units	seconds
Introduced	16.0.R1

import *string*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Import route policies used to control routes advertised to BGP neighbors
Reference	configure **policy-options policy-statement** *string*
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

keepalive *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description BGP keepalive timer
Range 0 to 21845
Units seconds
Introduced 16.0.R1

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description Local IP address used by group or neighbor when communicating with BGP peers
Introduced 16.0.R1

local-as

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description Enter the local-as context
Introduced 16.0.R1

as-number *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string* **local-as**
Description AS number to be advertised to peer
Range 1 to 4294967295
Introduced 16.0.R1

private *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string* **local-as**
Description Hide local AS number in paths learned from peering
Default false
Introduced 16.0.R1

local-preference *number*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Local preference attribute for incoming routes if not specified
Range	0 to 4294967295
Introduced	16.0.R1

loop-detect *keyword*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Loop detection strategy in AS path
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1

med-out (*number* | *keyword*)

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Multi-Exit Discriminator (MED) advertising
Options	igp-cost
Introduced	16.0.R1

min-route-advertisement *number*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	Minimum interval between successive updates of prefix toward peer
Range	1 to 255
Units	seconds
Introduced	16.0.R1

multihop *number*

Context	**configure subscriber-mgmt bgp-peering-policy** *string*
Description	TTL value entered in IP header of packets sent to peer
Range	1 to 255
Introduced	16.0.R1

next-hop-self *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description Advertise routes to peer using next hop path attribute set to itself

Introduced 16.0.R1

passive *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description Wait passively for BGP peer to connect

Introduced 16.0.R1

peer-as *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description AS number for remote peer

Range 1 to 4294967295

Introduced 16.0.R1

preference *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description Route preference for routes learned from all configured peers

Range 1 to 255

Introduced 16.0.R1

prefix-limit *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description Maximum number of routes that can be learned from peer

Range 1 to 4294967295

Introduced 16.0.R1

remove-private

Context **configure subscriber-mgmt bgp-peering-policy** *string*

Description Enter the remove-private context

Introduced 16.0.R1

limited *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string* **remove-private**
Description Remove private AS numbers up to first public ASN encountered
Default false
Introduced 16.0.R1

send-communities

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description Enter the send-communities context
Introduced 16.0.R3

extended *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string* **send-communities**
Description Send the community attribute to the peer for external communities
Introduced 16.0.R3

standard *boolean*

Context **configure subscriber-mgmt bgp-peering-policy** *string* **send-communities**
Description Send the community attribute to the peer for non-external communities
Introduced 16.0.R3

ttl-security *number*

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description Minimum TTL value for incoming BGP packet
Range 1 to 255
Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt bgp-peering-policy** *string*
Description Peer type
Options no-type, internal, external
Introduced 16.0.R1

category-map [category-map-name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the category-map context
Max. Elements	255
Introduced	16.0.R1

[category-map-name] *string*

Context	**configure subscriber-mgmt category-map** *string*
Description	Category map name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

activity-threshold *activity-threshold*

Context	**configure subscriber-mgmt category-map** *string*
Description	Threshold that is applied to determine whether an activity is ongoing
Range	1 to 100000000
Introduced	16.0.R1

category [category-name] *string*

Context	**configure subscriber-mgmt category-map** *string*
Description	Enter the category context
Max. Elements	16
Introduced	16.0.R1

[category-name] *string*

Context	**configure subscriber-mgmt category-map** *string* **category** *string*
Description	Category name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

credit-type-override *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string*
Description Credit type override in category map
Options volume, time
Introduced 16.0.R1

default-credit

Context **configure subscriber-mgmt category-map** *string* **category** *string*
Description Enter the default-credit context
Introduced 16.0.R1

time *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **default-credit**
Description Default time credit
Range 1 to 4294967295
Units seconds
Introduced 16.0.R1
Notes This element is part of a choice

volume

Context **configure subscriber-mgmt category-map** *string* **category** *string* **default-credit**
Description Enter the **volume** context
Introduced 16.0.R1

unit *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **default-credit volume**
Description Unit for the default volume credit
Default bytes
Options bytes, kilobytes, megabytes, gigabytes
Introduced 16.0.R1
Notes This element is part of a choice

value *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **default-credit volume**
Description	Value for the default volume credit
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

description *string*

Context	**configure subscriber-mgmt category-map** *string* **category** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context	**configure subscriber-mgmt category-map** *string* **category** *string*
Description	Enter the egress context
Introduced	16.0.R1

policer *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **egress**
Description	Egress policers for this category
Range	1 to 63
Max. Elements	63
Introduced	16.0.R1

queue *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **egress**
Description	Egress queues for this category
Range	1 to 8
Max. Elements	8
Introduced	16.0.R1

exhausted-credit-service-level

Context	**configure subscriber-mgmt category-map** *string* **category** *string*
Description	Enter the exhausted-credit-service-level context
Introduced	16.0.R1

egress

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level**
Description	Enter the egress context
Introduced	16.0.R1

ip-filter

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress**
Description	Enter the ip-filter context
Introduced	16.0.R1

entry [id] *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter**
Description	Enter the entry context
Max. Elements	10
Introduced	16.0.R1

[id] *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number*
Description	IP Filter entry ID
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number*

Description Enter the action context

Introduced 16.0.R1

drop

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **action**

Description Packets matching the filter entry are dropped

Introduced 16.0.R1

Notes This element is part of a choice

forward

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **action**

Description Packets matching the filter entry are forwarded

Introduced 16.0.R1

Notes This element is part of a choice

http-redirect

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **action**

Description Enter the **http-redirect** context

Introduced 16.0.R1

allow-override *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **action http-redirect**

Description Allow URL to be overridden by RADIUS/Diameter

Default false

Introduced 16.0.R1

Notes This element is part of a choice

url *http-redirect-url*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **action http-redirect**
Description	URL that is used to redirect the packets
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

description *string*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**
Description	DSCP to match
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

dst-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port**

Description Port greater than

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port**

Description Port less than

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match dst-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

fragment *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Fragmentation to match

Options false, true

Introduced 16.0.R1

icmp

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Enter the icmp context

Introduced 16.0.R1

code *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match icmp**

Description ICMP code to match

Range 0 to 255

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

ip-option

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Enter the ip-option context

Introduced 16.0.R1

mask *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match ip-option**

Description Mask with which the first IP option of IP header is ANDed before comparing

Default 0

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match ip-option**

Description First IP option value for the IP header

Default 0

Introduced 16.0.R1

multiple-option *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Match the multiple option

Introduced 16.0.R1

option-present *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Match the present option

Introduced 16.0.R1

protocol (*number* | *keyword*)

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description IPv4 protocol to match

Introduced 16.0.R1

src-ip *ipv4-address-and-mask*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Source IP address and mask to match

Introduced 16.0.R1

src-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port**

Description Port greater than

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port**

Description Port less than

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match src-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

tcp-flags

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match**

Description Enter the tcp-flags context

Introduced 16.0.R1

ack *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match tcp-flags**

Description Check for ACK bit

Introduced 16.0.R1

syn *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ip-filter entry** *number* **match tcp-flags**

Description Check for SYN bit

Introduced 16.0.R1

ipv6-filter

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress**

Description Enter the ipv6-filter context

Introduced 16.0.R1

entry [id] *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter**

Description Enter the entry context

Max. Elements 10

Introduced 16.0.R1

[id] *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number*

Description IP Filter entry ID

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a list key

action

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number*

Description Enter the action context

Introduced 16.0.R1

drop

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **action**

Description Packets matching the filter entry are dropped

Introduced 16.0.R1

Notes This element is part of a choice

forward

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **action**

Description Packets matching the filter entry are forwarded

Introduced 16.0.R1

Notes This element is part of a choice

description *string*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description DSCP to match

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

dst-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match dst-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match dst-port**

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match dst-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match dst-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

icmp

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description Enter the icmp context

Introduced 16.0.R1

code *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match icmp**

Description ICMP code to match

Range 0 to 255

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

next-header (*number* | *keyword*)

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description IPv6 next header to match

Introduced 16.0.R1

src-ip *ipv6-address-and-mask*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description Source IP address and mask to match

Default 0::0 0::0

Introduced 16.0.R1

src-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match src-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level egress ipv6-filter entry** *number* **match src-port**

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match dst-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match dst-port range**
Description	Lower bound of the range
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

fragment *keyword*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**
Description	Fragmentation to match
Options	false, true
Introduced	16.0.R1

icmp

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**
Description	Enter the icmp context
Introduced	16.0.R1

code *number*

Context	**configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match icmp**
Description	ICMP code to match
Range	0 to 255
Introduced	16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

ip-option

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description Enter the ip-option context

Introduced 16.0.R1

mask *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match ip-option**

Description Mask with which the first IP option of IP header is ANDed before comparing

Default 0

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match ip-option**

Description First IP option value for the IP header

Default 0

Introduced 16.0.R1

multiple-option *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description Match the multiple option

Introduced 16.0.R1

option-present *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description Match the present option

Introduced 16.0.R1

protocol (*number* | *keyword*)

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description IPv4 protocol to match

Introduced 16.0.R1

src-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port**

Description Port greater than

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port**

Description Port less than

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match src-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

tcp-flags

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match**

Description Enter the tcp-flags context

Introduced 16.0.R1

ack *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match tcp-flags**

Description Check for ACK bit

Introduced 16.0.R1

syn *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ip-filter entry** *number* **match tcp-flags**

Description Check for SYN bit

Introduced 16.0.R1

ipv6-filter

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress**

Description Enter the ipv6-filter context

Introduced 16.0.R1

entry [id] *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter**

Description Enter the entry context

Max. Elements 10

Introduced 16.0.R1

[id] *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number*

Description IP Filter entry ID

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a list key

action

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number*

Description Enter the action context

Introduced 16.0.R1

drop

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **action**

Description Packets matching the filter entry are dropped

Introduced 16.0.R1

Notes This element is part of a choice

forward

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **action**

Description Packets matching the filter entry are forwarded

Introduced 16.0.R1

Notes This element is part of a choice

description *string*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description DSCP to match

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

dst-ip *ipv6-address-and-mask*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description Destination IP address and mask to match

Default 0::0 0::0

Introduced 16.0.R1

dst-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port**

Description Port greater than

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port**

Description Port less than

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match dst-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

icmp

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description Enter the icmp context

Introduced 16.0.R1

code *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match icmp**

Description ICMP code to match

Range 0 to 255

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

next-header (*number* | *keyword*)

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description IPv6 next header to match

Introduced 16.0.R1

src-port

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description Enter the src-port context

Introduced 16.0.R1

eq *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port**

Description Port equal

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port**

Description Port greater than

Range 0 to 65534

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port**

Description Port less than

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port range**

Description Upper bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match src-port range**

Description Lower bound of the range

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

tcp-flags

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match**

Description Enter the tcp-flags context

Introduced 16.0.R1

ack *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match tcp-flags**

Description Check for ACK bit

Introduced 16.0.R1

syn *boolean*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level ingress ipv6-filter entry** *number* **match tcp-flags**

Description Check for SYN bit

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt category-map** *string* **category** *string* **exhausted-credit-service-level**

Description PIR

Introduced 16.0.R1

ingress

Context **configure subscriber-mgmt category-map** *string* **category** *string*

Description Enter the ingress context

Introduced 16.0.R1

policer *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **ingress**
Description Ingress policers used in this category
Range 1 to 63
Max. Elements 63
Introduced 16.0.R1

queue *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string* **ingress**
Description Ingress queues used in this category
Range 1 to 32
Max. Elements 32
Introduced 16.0.R1

out-of-credit-action-override *keyword*

Context **configure subscriber-mgmt category-map** *string* **category** *string*
Description Out of credit action that is overriden in category map
Options continue, disconnect-host, block-category, change-service-level
Introduced 16.0.R1

rating-group *number*

Context **configure subscriber-mgmt category-map** *string* **category** *string*
Description Rating group for this category
Range 0 to 4294967295
Introduced 16.0.R1

credit-exhaust-threshold *number*

Context **configure subscriber-mgmt category-map** *string*
Description Percentage for credit exhaust threshold
Range 50 to 100
Default 100
Units percent
Introduced 16.0.R1

credit-type *keyword*

Context	**configure subscriber-mgmt category-map** *string*
Description	Credit type
Default	volume
Options	volume, time
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt category-map** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

gx-session-level-usage *boolean*

Context	**configure subscriber-mgmt category-map** *string*
Description	Allow Gx session level Usage Monitoring
Default	false
Introduced	16.0.R1

credit-control-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the credit-control-policy context
Max. Elements	255
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

default-category-map *string*

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Default category map for this policy
Reference	configure **subscriber-mgmt category-map** *string*
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

error-handling-action *keyword*

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Action when an error occurs in the determination of Credit Control
Default	continue
Options	continue, block
Introduced	16.0.R1

out-of-credit-action *keyword*

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Action when out of credit is reached
Default	continue
Options	continue, disconnect-host, block-category, change-service-level
Introduced	16.0.R1

server

Context	**configure subscriber-mgmt credit-control-policy** *string*
Description	Enter the server context
Introduced	16.0.R1

diameter *string*

Context	**configure subscriber-mgmt credit-control-policy** *string* **server**
Description	Diameter policy name that defines the Diameter peers to be used
Reference	configure **subscriber-mgmt diameter-gy-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

radius

Context	**configure subscriber-mgmt credit-control-policy** *string* **server**
Description	Use RADIUS authentication servers defined in the RADIUS authentication policy in group interface
Introduced	16.0.R1
Notes	This element is part of a choice

diameter-gx-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the diameter-gx-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Diameter application policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

gx

Context **configure subscriber-mgmt diameter-gx-policy** *string*

Description Enter the gx context

Introduced 16.0.R1

avp-subscription-id

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx**

Description Enter the avp-subscription-id context

Introduced 16.0.R1

origin *keyword*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx avp-subscription-id**

Description Format of the Subscription-Id-Data AVP

Default subscriber-id

Options subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id

Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx avp-subscription-id**

Description Format of the Subscription-Id-Type AVP

Default private

Options e164, imsi, nai, private

Introduced 16.0.R1

ccrt-replay

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx**

Description Enter the ccrt-replay context

Introduced 16.0.R1

interval *number*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx ccrt-replay**
Description	Minimum interval between two consecutive CCR-t replay attempts in a session
Range	60 to 86400
Default	3600
Introduced	16.0.R1

max-lifetime *number*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx ccrt-replay**
Description	The maximum time in hours for CCR-t replay attempts for a sessions.
Range	1 to 24
Default	24
Units	hours
Introduced	16.0.R4

include-avp

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx**
Description	Enter the include-avp context
Introduced	16.0.R1

an-gw-address *boolean*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description	Include the IP address of this gateway
Default	false
Introduced	16.0.R1

apn-ambr *boolean*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description	Include the APN aggregate maximum bitrate
Default	false
Introduced	16.0.R1

called-station-id *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Include the called station ID
Default false
Introduced 16.0.R1

calling-station-id

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Enter the calling-station-id context
Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp calling-station-id**
Description Specifies the calling-station-id type.
Default sap-string
Options sap-string, mac, sap-id, remote-id, llid
Introduced 16.0.R1

ip-can-type *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Include the IP CAN type
Default false
Introduced 16.0.R1

logical-access-id *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Include the logical access id
Default false
Introduced 16.0.R1

nas-port

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Enter the nas-port context
Introduced 16.0.R1

bit-spec *binary-specification*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port**
Description NAS-Port AVP format
String Length 1 to 255
Introduced 16.0.R1
Notes This element is mandatory

nas-port-id

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**
Description Enter the nas-port-id context
Introduced 16.0.R1

prefix-string *string*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id**
Description Prefix string for NAS-Port-Id AVP
String Length 1 to 8
Introduced 16.0.R1

suffix

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id**
Description Enter the suffix context
Introduced 16.0.R1

circuit-id

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id suffix**

Description Add Circuit ID as suffix

Introduced 16.0.R1

Notes This element is part of a choice

not-included

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id suffix**

Description Do not add a suffix

Introduced 16.0.R1

Notes This element is part of a choice

remote-id

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id suffix**

Description Add Remote ID as suffix

Introduced 16.0.R1

Notes This element is part of a choice

user-string *string*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-id suffix**

Description Add a user configurable string as suffix

String Length 1 to 64

Introduced 16.0.R1

Notes This element is part of a choice

nas-port-type

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Enter the nas-port-type context

Introduced 16.0.R1

type *number*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp nas-port-type**

Description NAS-Port-Type AVP value

Range 0 to 255

Introduced 16.0.R1

pdn-connection-id *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the PDN connection id

Default false

Introduced 16.0.R1

physical-access-id *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the physical access ID

Default false

Introduced 16.0.R1

rai *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the routing area identity

Default false

Introduced 16.0.R1

rat-type *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the RAT type

Default false

Introduced 16.0.R1

sgsn-mcc-mnc *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the SGSN MCC and MNC.

Default false

Introduced 16.0.R1

supported-features *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the supported features

Default false

Introduced 16.0.R1

user-equipment-info

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Enter the user-equipment-info context

Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp user-equipment-info**

Description Information to include in User-Equipment-Info attribute in CCR messages

Default mac

Options imeisv, mac, eui64, modified-eui64

Introduced 16.0.R1

user-location-info *boolean*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx include-avp**

Description Include the user location info.

Default false

Introduced 16.0.R1

mac-format *mac-specification*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

report-ip-address-event *boolean*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx**
Description	Enable CCR-u upon IP address allocation events for dual stack subscribers
Default	true
Introduced	16.0.R1

three-gpp-qos-mapping

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx**
Description	Enter the three-gpp-qos-mapping context
Introduced	16.0.R1

apn-ambr-dl

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping**
Description	Enter the apn-ambr-dl context
Introduced	16.0.R1

aggregate-rate

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**
Description	map apn-ambr-dl to an aggregate rate override.
Introduced	16.0.R1
Notes	This element is part of a choice

arbiter *string*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**
Description	Arbiter name to be overridden
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

hs-sla-agg-rate

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**
Description	map apn-ambr-dl to an hs aggregate rate override.
Introduced	16.0.R1
Notes	This element is part of a choice

ignore-override

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**
Description	no override on apn-ambr-dl
Introduced	16.0.R1
Notes	This element is part of a choice

policer *number*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**
Description	policerId used for the apn-ambr-dl qos override.
Range	1 to 63
Introduced	16.0.R1
Notes	This element is part of a choice

queue *number*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**

Description queueId used for the apn-ambr-dl qos override.

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a choice

scheduler *string*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-dl**

Description scheduler name used for the apn-ambr-dl qos override

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

apn-ambr-ul

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping**

Description Enter the apn-ambr-ul context

Introduced 16.0.R1

arbiter *string*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-ul**

Description Arbiter name to be overridden

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

ignore-override

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-ul**

Description no override on apn-ambr-ul

Introduced 16.0.R1

Notes This element is part of a choice

policer *number*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-ul**

Description policerId used for the apn-ambr-ul qos override.

Range 1 to 63

Introduced 16.0.R1

Notes This element is part of a choice

queue *number*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-ul**

Description queueId used for the apn-ambr-ul qos override.

Range 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

scheduler *string*

Context **configure subscriber-mgmt diameter-gx-policy** *string* **gx three-gpp-qos-mapping apn-ambr-ul**

Description scheduler name used for the apn-ambr-ul qos override

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

node

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Enter the **node** context
Introduced	16.0.R4

destination-realm *string*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **node**
Description	Destination-Realm to where the diameter application messages should be delivered.
String Length	1 to 80
Introduced	16.0.R4
Notes	This element is part of a choice

origin-host *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **node**
Description	Origin-host that identifies the diameter-node that is to be used for transmission
Reference	configure **aaa diameter node** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

on-failure

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Enter the on-failure context
Introduced	16.0.R1

failover *boolean*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **on-failure**
Description	Session peer failover
Default	true
Introduced	16.0.R1

handling *keyword*

Context	**configure subscriber-mgmt diameter-gx-policy** *string* **on-failure**
Description	Session peer failure handling
Default	terminate
Options	terminate, continue, retry-and-terminate
Introduced	16.0.R1

peer-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Configure the policy for the Diameter peers.
Reference	configure **aaa diameter peer-policy** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

statistics

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Enter the statistics context
Introduced	16.0.R4

tx-timer *number*

Context	**configure subscriber-mgmt diameter-gx-policy** *string*
Description	Maximum wait time for a pending session request
Range	10 to 1000
Default	10
Units	seconds
Introduced	16.0.R1

diameter-gy-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the diameter-gy-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Diameter application policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

gy

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Enter the gy context
Introduced	16.0.R1

avp-subscription-id

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy**
Description	Enter the avp-subscription-id context
Introduced	16.0.R1

origin *keyword*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy avp-subscription-id**
Description Origin for the Subscription-Id-Data AVP
Default subscriber-id
Options subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id
Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy avp-subscription-id**
Description Origin for the Subscription-Id-Type AVP
Default private
Options e164, imsi, nai, private
Introduced 16.0.R1

ccrt-replay

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy**
Description Enter the ccrt-replay context
Introduced 16.0.R1

interval *number*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy ccrt-replay**
Description The interval between two consecutive CCR-t replay attempts for a sessions.
Range 60 to 86400
Default 3600
Introduced 16.0.R1

max-lifetime *number*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy ccrt-replay**
Description The maximum time in hours for CCR-t replay attempts for a sessions.
Range 1 to 24
Default 24
Units hours
Introduced 16.0.R1

extended-failure-handling

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy**

Description Enter the extended-failure-handling context

Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling**

Description Administrative state of the extended failure handling

Default disable

Options enable, disable

Introduced 16.0.R1

interim-credit

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling**

Description Enter the interim-credit context

Introduced 16.0.R1

max-attempts (*number* | *keyword*)

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit**

Description Attempts to retry setting up a session to the OCS

Range 1 to 4294967295

Default 10

Options infinite

Introduced 16.0.R1

reporting *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit**

Description Report interim Credit

Default false

Introduced 16.0.R1

validity-time (*number* | *keyword*)

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit**
Description	Validity time for interim credit
Range	1 to 4294967295
Default	1800
Units	seconds
Options	none
Introduced	16.0.R1

volume

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit**
Description	Enter the volume context
Introduced	16.0.R1

credits *number*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit volume**
Description	Default volume credit value
Range	1 to 4294967295
Default	500
Introduced	16.0.R1

units *keyword*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling interim-credit volume**
Description	Default volume credit units
Default	megabytes
Options	bytes, kilobytes, megabytes, gigabytes
Introduced	16.0.R1

new-session-id *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy extended-failure-handling**

Description Enable/disable using a new session id for CCR-i messages.

Default false

Introduced 16.0.R1

include-avp

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy**

Description Enter the include-avp context

Introduced 16.0.R1

aaa-user-name *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description Include the User-Name.

Default false

Introduced 16.0.R1

address-avp *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description DCCA AVPs that contain the host address or prefix

Default true

Introduced 16.0.R1

called-station-id

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description Enter the called-station-id context

Introduced 16.0.R1

id *string*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp called-station-id**
Description	MAC address of AP in WiFi
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is mandatory

charging-rule-base-name

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Enter the charging-rule-base-name context
Introduced	16.0.R1

category-map

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp charging-rule-base-name**
Description	Use the category map name in use for this session
Introduced	16.0.R1
Notes	This element is part of a choice

not-included

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp charging-rule-base-name**
Description	Do not include Charging-Rule-Base-Name AVP in Diameter DCCA CCR messages
Introduced	16.0.R1
Notes	This element is part of a choice

user-string *string*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp charging-rule-base-name**
Description	String for charging rule base name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

ggsn-address

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description Enter the ggsn-address context
Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp ggsn-address**
Description Address type of GGSN address AVP
Options ipv4, ipv6
Introduced 16.0.R1
Notes This element is mandatory

pdp-context-type *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description Include the DCCA PDP-Context-Type AVP Parameter
Default true
Introduced 16.0.R1

ps-information *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description Enable reporting of AVPs in grouped PS-Information AVP
Default false
Introduced 16.0.R1

service-context-id

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description Enter the service-context-id context
Introduced 16.0.R1

id *string*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp service-context-id**

Description Value for the Service-Context-Id AVP

String Length 1 to 32

Introduced 16.0.R1

Notes This element is mandatory

three-gpp-charging-characteristics *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description DCCA 3GPP charging characteristics AVP parameter

Default true

Introduced 16.0.R1

three-gpp-charging-id *keyword*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description DCCA 3GPP charging ID AVP parameter

Default auto

Options false, auto, esm-info, id

Introduced 16.0.R1

three-gpp-ggsn-ipv4-address *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description Include the 3GPP-GGSN-Address.

Default true

Introduced 16.0.R4

three-gpp-ggsn-ipv6-address *boolean*

Context **configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**

Description Include the 3GPP-GGSN-Ipv6 address

Default false

Introduced 16.0.R1

three-gpp-gprs-negotiated-qos-profile *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Include the DCCA 3GPP GPRS-negotiated QoS profile AVP parameter
Default	true
Introduced	16.0.R1

three-gpp-imsi *keyword*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Origin of the information to send in the IMSI AVP
Default	subscriber-id
Options	false, subscriber-id, circuit-id, imsi
Introduced	16.0.R1

three-gpp-nsapi *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Include the 3GPP-NSAPI
Default	true
Introduced	16.0.R1

three-gpp-rat-type

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Enter the three-gpp-rat-type context
Introduced	16.0.R1

type *number*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp three-gpp-rat-type**
Description	Value for 3GPP-RAT-Type AVP
Range	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

three-gpp-selection-mode *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	DCCA 3GPP selection mode AVP parameter
Default	true
Introduced	16.0.R1

three-gpp-session-stop-indicator *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	DCCA 3GPP session stop indicator AVP parameter
Default	true
Introduced	16.0.R1

three-gpp-user-location-info *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	DCCA 3GPP session stop indicator AVP parameter
Default	false
Introduced	16.0.R1

user-equipment-info-type

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp**
Description	Enter the user-equipment-info-type context
Introduced	16.0.R1

type *keyword*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy include-avp user-equipment-info-type**
Description	Information to include in User-Equipment-Info attribute in CCR messages
Options	imeisv
Introduced	16.0.R1
Notes	This element is mandatory

mac-format *mac-specification*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

out-of-credit-reporting *keyword*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy**
Description	Reporting reason when the final granted units are consumed
Default	final
Options	final, quota-exhausted
Introduced	16.0.R1

vendor-support *diam-vendor-support*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **gy**
Description	Vendor support type announced in capability exchange
Default	three-gpp
Options	vodafone, three-gpp
Introduced	16.0.R1

node

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Enter the **node** context
Introduced	16.0.R4

destination-realm *string*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **node**
Description	Destination-Realm to where the diameter application messages should be delivered.
String Length	1 to 80
Introduced	16.0.R4
Notes	This element is part of a choice

origin-host *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **node**
Description	Origin-host that identifies the diameter-node that is to be used for transmission
Reference	configure **aaa diameter node** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

on-failure

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Enter the on-failure context
Introduced	16.0.R1

failover *boolean*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **on-failure**
Description	Session peer failover
Default	true
Introduced	16.0.R1

handling *keyword*

Context	**configure subscriber-mgmt diameter-gy-policy** *string* **on-failure**
Description	Session peer failure handling
Default	terminate
Options	terminate, continue, retry-and-terminate
Introduced	16.0.R1

peer-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Configure the policy for the Diameter peers.
Reference	configure **aaa diameter peer-policy** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

statistics

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Enter the statistics context
Introduced	16.0.R4

tx-timer *number*

Context	**configure subscriber-mgmt diameter-gy-policy** *string*
Description	Maximum wait time for a pending session request
Range	10 to 1000
Default	10
Units	seconds
Introduced	16.0.R1

diameter-nasreq-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the diameter-nasreq-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Diameter application policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

nasreq

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Enter the nasreq context
Introduced	16.0.R1

include-avp

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq**
Description	Enter the include-avp context
Introduced	16.0.R1

called-station-id *boolean*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Include the Called-Station-Id.
Default	false
Introduced	16.0.R1

calling-station-id

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Enter the calling-station-id context
Introduced	16.0.R1

type *keyword*

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp calling-station-id**

Description Origin of the calling-station-id.

Default sap-string

Options sap-string, mac, sap-id, remote-id, llid

Introduced 16.0.R1

circuit-id *boolean*

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**

Description Include the Circuit-Id.

Default false

Introduced 16.0.R1

imei *boolean*

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**

Description Include the IMEI

Default false

Introduced 16.0.R1

nas-port

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**

Description Enter the nas-port context

Introduced 16.0.R1

bit-spec *binary-specification*

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port**

Description NAS-Port AVP format

String Length 1 to 255

Introduced 16.0.R1

Notes This element is mandatory

nas-port-id

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**

Description Enter the nas-port-id context

Introduced 16.0.R1

prefix-string *string*

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id**

Description Prefix string for NAS-Port-Id AVP

String Length 1 to 8

Introduced 16.0.R1

suffix

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id**

Description Enter the suffix context

Introduced 16.0.R1

circuit-id

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id suffix**

Description Add Circuit ID as suffix

Introduced 16.0.R1

Notes This element is part of a choice

not-included

Context **configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id suffix**

Description Do not add a suffix

Introduced 16.0.R1

Notes This element is part of a choice

remote-id

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id suffix**
Description	Add Remote ID as suffix
Introduced	16.0.R1
Notes	This element is part of a choice

user-string *string*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-id suffix**
Description	Add a user configurable string as suffix
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

nas-port-type

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Enter the nas-port-type context
Introduced	16.0.R1

type (*keyword* | *number*)

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp nas-port-type**
Description	NAS-Port-Type AVP value
Range	0 to 255
Default	rfc-aligned
Options	rfc-aligned
Introduced	16.0.R1

rat-type *boolean*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Include the RAT-Type.
Default	false
Introduced	16.0.R1

remote-id *boolean*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Include the Remote-Id.
Default	false
Introduced	16.0.R1

user-location-info *boolean*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq include-avp**
Description	Include the user-location-info.
Default	false
Introduced	16.0.R1

mac-format *mac-specification*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq**
Description	AA-request password
String Length	1 to 114
Introduced	16.0.R1

user-name

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq**
Description	Enter the user-name context
Introduced	16.0.R1

domain-name *string*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq user-name**
Description	Domain name
String Length	1 to 128
Introduced	16.0.R1

format *keyword*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq user-name**
Description	Format type for username
Default	mac
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, nas-port-id
Introduced	16.0.R1

operation *user-name-format-domain-operation*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **nasreq user-name**
Description	Operation to perform
Options	append, strip, replace, default
Introduced	16.0.R1

node

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Enter the **node** context
Introduced	16.0.R4

destination-realm *string*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **node**
Description	Destination-Realm to where the diameter application messages should be delivered.
String Length	1 to 80
Introduced	16.0.R4
Notes	This element is part of a choice

origin-host *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **node**
Description	Origin-host that identifies the diameter-node that is to be used for transmission
Reference	configure **aaa diameter node** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

on-failure

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Enter the on-failure context
Introduced	16.0.R1

failover *boolean*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **on-failure**
Description	Session peer failover
Default	true
Introduced	16.0.R1

handling *keyword*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string* **on-failure**
Description	Session peer failure handling
Default	terminate
Options	terminate, continue, retry-and-terminate
Introduced	16.0.R1

peer-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Configure the policy for the Diameter peers.
Reference	configure **aaa diameter peer-policy** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

statistics

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Enter the statistics context
Introduced	16.0.R4

tx-timer *number*

Context	**configure subscriber-mgmt diameter-nasreq-policy** *string*
Description	Maximum wait time for a pending session request
Range	10 to 1000
Default	10
Units	seconds
Introduced	16.0.R1

explicit-subscriber-map

Context	**configure subscriber-mgmt**
Description	Enter the explicit-subscriber-map context
Introduced	16.0.R1

entry [subscriber-id] *subscriber-id*

Context	**configure subscriber-mgmt explicit-subscriber-map**
Description	Enter the entry context
Introduced	16.0.R1

[subscriber-id] *subscriber-id*

Context	**configure subscriber-mgmt explicit-subscriber-map entry** *subscriber-id*
Description	Subscriber Identification string
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

alias *string*

Context	**configure subscriber-mgmt explicit-subscriber-map entry** *subscriber-id*
Description	Alias for subscriber identification string
String Length	1 to 64
Introduced	16.0.R1

sla-profile *string*

Context	**configure subscriber-mgmt explicit-subscriber-map entry** *subscriber-id*
Description	SLA profile name
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure subscriber-mgmt explicit-subscriber-map entry** *subscriber-id*
Description	Subscriber profile name
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

gtp

Context	**configure subscriber-mgmt**
Description	Enter the gtp context
Introduced	16.0.R1

apn-policy [name] *string*

Context	**configure subscriber-mgmt gtp**
Description	Enter the apn-policy context
Max. Elements	128
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string*
Description	GTP APN policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

apn [apn-name] *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string*
Description	Enter the apn context
Max. Elements	1024
Introduced	16.0.R1

[apn-name] *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	GTP APN name
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a list key

defaults

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	Enter the defaults context
Introduced	16.0.R1

group-interface

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string* **defaults**
Description	Enter the group-interface context
Introduced	16.0.R1

name *interface-name*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string* **defaults group-interface**
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

svc-name *service-name*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string* **defaults group-interface**
Description	Group interface service name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is mandatory

diameter-nasreq-policy *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	NASREQ authentication policy name
Reference	configure **subscriber-mgmt diameter-nasreq-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

radius-auth-policy *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	RADIUS authentication policy name
Reference	configure **subscriber-mgmt radius-authentication-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

skip-gtp-ipv4-allocation *boolean*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	defer IPv4 address allocation to DHCP
Default	false
Introduced	16.0.R1

user-db *string*

Context	**configure subscriber-mgmt gtp apn-policy** *string* **apn** *string*
Description	Local user database name
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

max-held-uplink-sessions *number*

Context	**configure subscriber-mgmt gtp**
Description	Maximum GTP sessions to be held while there is no corresponding ESM state
Range	0 to 500000
Default	2000
Introduced	16.0.R1

peer-profile [name] *string*

Context	**configure subscriber-mgmt gtp**
Description	Enter the peer-profile context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	GTP peer profile name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

interface-type *keyword*

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	3GPP interface type for connections toward this peer
Options	gn, s2a, s2b, s11
Introduced	16.0.R1

ip-ttl *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	IP TTL value for GTP control messages.
Range	1 to 255
Default	255
Introduced	16.0.R1

keep-alive

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	Enter the keep-alive context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **keep-alive**
Description	Enable/disable GTP-C echo messages.
Default	enable
Options	enable, disable
Introduced	16.0.R1

interval *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **keep-alive**
Description	Frequency for sending keepalives
Range	60 to 180
Default	60
Units	seconds
Introduced	16.0.R1

retry-count *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **keep-alive**
Description	Maximum number of unanswered echo retries after which keepalive failure is detected
Range	1 to 15
Default	4
Introduced	16.0.R1

timeout *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **keep-alive**
Description	Timeout after which an echo request is considered unanswered
Range	1 to 20
Default	5
Units	seconds
Introduced	16.0.R1

message-retransmit

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	Enter the message-retransmit context
Introduced	16.0.R1

retry-count *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **message-retransmit**
Description	Maximum number of unanswered retries after which the message is considered failed
Range	1 to 8
Default	3
Introduced	16.0.R1

timeout *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **message-retransmit**
Description	Timeout after which a message is considered unanswered
Range	1 to 30
Default	5
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	Python policy used to process GTP messages.
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

s11

Context	**configure subscriber-mgmt gtp peer-profile** *string*
Description	Enter the s11 context
Introduced	16.0.R1

change-reporting-action (*number* | *keyword*)

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11**
Description	The value of the Change Reporting Action Information Element sent to the peer.
Range	0 to 255
Options	cgi-sai, rai, tai, ecgi, cgi-sai-rai, tai-ecgi
Introduced	16.0.R1

end-marker-count *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11**
Description	The number of GTP-U end-marker packets sent after mobility.
Range	0 to 5
Default	1
Introduced	16.0.R1

ipv4-mtu *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11**
Description	IPv4 MTU signaled in the Protocol Configuration Options (PCO)
Range	512 to 9000
Default	1400
Introduced	16.0.R1

qos

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11**
Description	Enter the qos context
Introduced	16.0.R1

ambr

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos**
Description	Enter the ambr context
Introduced	16.0.R1

down-link *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos ambr**
Description	Downlink Aggregated Maximum Bit Rate (AMBR)
Range	0 to 10000000
Default	20000
Units	kilobps
Introduced	16.0.R1

up-link *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos ambr**
Description	Uplink Aggregated Maximum Bit Rate (AMBR)
Range	0 to 10000000
Default	10000
Units	kilobps
Introduced	16.0.R1

arp *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos**
Description	Allocation or retention priority
Range	1 to 15
Default	1
Introduced	16.0.R1

down-link

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos**
Description	Enter the down-link context
Introduced	16.0.R1

gbr *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **s11 qos down-link**
Description	Guaranteed Bit Rate (GBR)
Range	0 to 100000
Default	0
Units	kilobps
Introduced	16.0.R1

mbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **s11 qos down-link**
Description Maximum Bit Rate (MBR)
Range 0 to 100000
Default 0
Units kilobps
Introduced 16.0.R1

qci *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **s11 qos**
Description QoS Class Identifier (QCI) value that is used in GTP messages
Range 1 to 9
Default 8
Introduced 16.0.R1

up-link

Context **configure subscriber-mgmt gtp peer-profile** *string* **s11 qos**
Description Enter the up-link context
Introduced 16.0.R1

gbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **s11 qos up-link**
Description Guaranteed Bit Rate (GBR)
Range 0 to 100000
Default 0
Units kilobps
Introduced 16.0.R1

mbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **s11 qos up-link**

Description Maximum Bit Rate (MBR)

Range 0 to 100000

Default 0

Units kilobps

Introduced 16.0.R1

uplink

Context **configure subscriber-mgmt gtp peer-profile** *string*

Description Enter the uplink context

Introduced 16.0.R1

charging-characteristics

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink**

Description Enter the charging-characteristics context

Introduced 16.0.R1

home

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics**

Description Enter the home context

Introduced 16.0.R1

bit0 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 0 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit1 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 1 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit10 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 10 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit11 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 11 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit12 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 12 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit13 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 13 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit14 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 14 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit15 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 15 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit2 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 2 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit3 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 3 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit4 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 4 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit5 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 5 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit6 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 6 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit7 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 7 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit8 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 8 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit9 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics home**

Description Set bit 9 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

roaming

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics**

Description Enter the roaming context

Introduced 16.0.R1

bit0 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 0 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit1 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 1 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit10 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 10 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit11 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 11 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit12 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 12 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit13 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 13 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit14 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 14 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit15 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 15 in charging characteristics information element (IE) for home UE

Default false

Introduced 16.0.R1

bit2 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 2 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit3 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 3 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit4 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 4 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit5 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 5 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit6 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 6 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit7 *boolean*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**

Description Set bit 7 in charging characteristics information element (IE) for roaming UE

Default false

Introduced 16.0.R1

bit8 *boolean*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**
Description	Set bit 8 in charging characteristics information element (IE) for roaming UE
Default	false
Introduced	16.0.R1

bit9 *boolean*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink charging-characteristics roaming**
Description	Set bit 9 in charging characteristics information element (IE) for roaming UE
Default	false
Introduced	16.0.R1

ggsn

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description	Enter the ggsn context
Introduced	16.0.R1

qos

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn**
Description	Enter the qos context
Introduced	16.0.R1

ambr

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos**
Description	Enter the ambr context
Introduced	16.0.R1

down-link *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos ambr**
Description	Downlink Aggregated Maximum Bit Rate (AMBR)
Range	0 to 10000000
Units	kilobps
Introduced	16.0.R1
Notes	This element is mandatory

up-link *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos ambr**
Description	Uplink Aggregated Maximum Bit Rate (AMBR)
Range	0 to 10000000
Units	kilobps
Introduced	16.0.R1
Notes	This element is mandatory

arp *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos**
Description	Allocation or retention priority
Range	1 to 3
Default	1
Introduced	16.0.R1

down-link

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos**
Description	Enter the down-link context
Introduced	16.0.R1

gbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos down-link**

Description Guaranteed Bit Rate (GBR)

Range 0 to 100000

Default 2000

Units kilobps

Introduced 16.0.R1

mbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos down-link**

Description Maximum Bit Rate (MBR)

Range 0 to 100000

Default 2000

Units kilobps

Introduced 16.0.R1

up-link

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos**

Description Enter the up-link context

Introduced 16.0.R1

gbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos up-link**

Description Guaranteed Bit Rate (GBR)

Range 0 to 100000

Default 5000

Units kilobps

Introduced 16.0.R1

mbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink ggsn qos up-link**
Description Maximum Bit Rate (MBR)
Range 0 to 100000
Default 5000
Units kilobps
Introduced 16.0.R1

pgw

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description Enter the pgw context
Introduced 16.0.R1

qos

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw**
Description Enter the qos context
Introduced 16.0.R1

ambr

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos**
Description Enter the ambr context
Introduced 16.0.R1

down-link *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos ambr**
Description Downlink Aggregated Maximum Bit Rate (AMBR)
Range 0 to 10000000
Default 20000
Units kilobps
Introduced 16.0.R1

up-link *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos ambr**
Description	Uplink Aggregated Maximum Bit Rate (AMBR)
Range	0 to 10000000
Default	10000
Units	kilobps
Introduced	16.0.R1

arp *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos**
Description	Allocation or retention priority
Range	1 to 15
Default	1
Introduced	16.0.R1

down-link

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos**
Description	Enter the down-link context
Introduced	16.0.R1

gbr *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos down-link**
Description	Guaranteed Bit Rate (GBR)
Range	0 to 100000
Default	0
Units	kilobps
Introduced	16.0.R1

mbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos down-link**

Description Maximum Bit Rate (MBR)

Range 0 to 100000

Default 0

Units kilobps

Introduced 16.0.R1

qci *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos**

Description QoS Class Identifier (QCI) value that is used in GTP messages

Range 1 to 9

Default 8

Introduced 16.0.R1

up-link

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos**

Description Enter the up-link context

Introduced 16.0.R1

gbr *number*

Context **configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos up-link**

Description Guaranteed Bit Rate (GBR)

Range 0 to 100000

Default 0

Units kilobps

Introduced 16.0.R1

mbr *number*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink pgw qos up-link**
Description	Maximum Bit Rate (MBR)
Range	0 to 100000
Default	0
Units	kilobps
Introduced	16.0.R1

protocol-configuration-options *keyword*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description	Information element to use for the protocol configuration options
Default	pco
Options	pco, apco
Introduced	16.0.R1

rat-type (*number* | *keyword*)

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description	The default Radio Access Technology type signaled during GTP set-up.
Range	0 to 255
Default	wlan
Options	utran, geran, wlan, gan, hspa, eutran, virtual
Introduced	16.0.R1

report-wlan-location *boolean*

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description	Report the wlan location of the UE during session set-up.
Default	false
Introduced	16.0.R1

session-hold-time (*number* | *keyword*)

Context	**configure subscriber-mgmt gtp peer-profile** *string* **uplink**
Description	Time to hold a GTP session after its UE is disconnected
Range	0 to 3600
Default	30
Options	remaining-lease-time
Introduced	16.0.R1

serving-network

Context	**configure subscriber-mgmt gtp**
Description	Enter the serving-network context
Introduced	16.0.R1

mcc *string*

Context	**configure subscriber-mgmt gtp serving-network**
Description	Mobile Country Code (MCC) portion of serving network
String Length	3
Introduced	16.0.R1
Notes	This element is mandatory

mnc *string*

Context	**configure subscriber-mgmt gtp serving-network**
Description	Mobile Network Code (MNC) portion of serving network
String Length	2 to 3
Introduced	16.0.R1
Notes	This element is mandatory

host-lockout-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the host-lockout-policy context
Max. Elements	128
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

host-key *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Parameters used in host identification for lockout on specified SAP or capture SAP
Default	all
Options	all, mac
Introduced	16.0.R1

lockout-reset-time *number*

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Lockout reset time settings
Range	1 to 86400
Default	60
Units	seconds
Introduced	16.0.R1

lockout-time

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Enter the lockout-time context
Introduced	16.0.R1

max *number*

Context	**configure subscriber-mgmt host-lockout-policy** *string* **lockout-time**
Description	Maximum lockout time
Range	1 to 86400
Default	3600
Units	seconds
Introduced	16.0.R1

min *number*

Context	**configure subscriber-mgmt host-lockout-policy** *string* **lockout-time**
Description	Minimum lockout time
Range	1 to 86400
Default	10
Units	seconds
Introduced	16.0.R1

max-lockout-hosts *number*

Context	**configure subscriber-mgmt host-lockout-policy** *string*
Description	Max lockout hosts
Range	1 to 32000
Default	100
Introduced	16.0.R1

host-tracking-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the host-tracking-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt host-tracking-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt host-tracking-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-rate-modify

Context	**configure subscriber-mgmt host-tracking-policy** *string*
Description	Enter the egress-rate-modify context
Introduced	16.0.R1

agg-rate

Context	**configure subscriber-mgmt host-tracking-policy** *string* **egress-rate-modify**
Description	Aggregate rate that applies for modification
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt host-tracking-policy** *string* **egress-rate-modify**
Description	Scheduler to be applied for rate modification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

http-redirect-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the http-redirect-policy context
Max. Elements	16
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt http-redirect-policy** *string*
Description	Identification of the http redirect policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt http-redirect-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dst-port *number*

Context	**configure subscriber-mgmt http-redirect-policy** *string*
Description	Destination port number of the HTTP request to match
Range	1 to 65535
Default	80
Introduced	16.0.R1

forward-entry dst-ip (*ipv4-prefix* | *ipv6-prefix*) **protocol** *keyword* **dst-port** *number*

Context	**configure subscriber-mgmt http-redirect-policy** *string*
Description	Enter the forward-entry context
Introduced	16.0.R1

dst-ip (*ipv4-prefix* | *ipv6-prefix*)

Context **configure subscriber-mgmt http-redirect-policy** *string* **forward-entry dst-ip** (*ipv4-prefix* | *ipv6-prefix*) **protocol** *keyword* **dst-port** *number*

Description Destination address

Introduced 16.0.R1

Notes This element is part of a list key

protocol *keyword*

Context **configure subscriber-mgmt http-redirect-policy** *string* **forward-entry dst-ip** (*ipv4-prefix* | *ipv6-prefix*) **protocol** *keyword* **dst-port** *number*

Description Destination protocol

Options tcp, udp

Introduced 16.0.R1

Notes This element is part of a list key

dst-port *number*

Context **configure subscriber-mgmt http-redirect-policy** *string* **forward-entry dst-ip** (*ipv4-prefix* | *ipv6-prefix*) **protocol** *keyword* **dst-port** *number*

Description Destination port

Range 1 to 65535

Introduced 16.0.R1

Notes This element is part of a list key

portal-hold-time *number*

Context **configure subscriber-mgmt http-redirect-policy** *string*

Description Time for holding on to the re-direct forwarding resources after the subscriber has left the portal

Range 1 to 60

Introduced 16.0.R1

url *http-redirect-url*

Context	**configure subscriber-mgmt http-redirect-policy** *string*
Description	HTTP URL to which the matching traffic is redirected. Only macros $URL, $MAC, $IP are supported in this case. For unsupported macros, the string is not modified.
Introduced	16.0.R1

igmp-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the igmp-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-rate-modify

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Enter the egress-rate-modify context
Introduced	16.0.R1

agg-rate

Context	**configure subscriber-mgmt igmp-policy** *string* **egress-rate-modify**
Description	Aggregate rate that applies for modification
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt igmp-policy** *string* **egress-rate-modify**
Description	Scheduler to be applied for rate modification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

fast-leave *boolean*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Enable fast leave
Default	true
Introduced	16.0.R1

import-policy *string*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

multicast-reporter

Context	**configure subscriber-mgmt igmp-policy** *string*
Description	Enter the multicast-reporter context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure subscriber-mgmt igmp-policy** *string* **multicast-reporter**
Description	Administrative state of multicast reporter
Default	disable
Options	enable, disable
Introduced	16.0.R4

destination *string*

Context	**configure subscriber-mgmt igmp-policy** *string* **multicast-reporter**
Description	Multicast reporter destination
Reference	configure **multicast-management multicast-reporting-destination** *string*
Introduced	16.0.R4

optional-fields

Context **configure subscriber-mgmt igmp-policy** *string* **multicast-reporter**

Description Enter the optional-fields context

Introduced 16.0.R4

host-mac *boolean*

Context **configure subscriber-mgmt igmp-policy** *string* **multicast-reporter optional-fields**

Description Include host mac address

Default false

Introduced 16.0.R4

pppoe-session-id *boolean*

Context **configure subscriber-mgmt igmp-policy** *string* **multicast-reporter optional-fields**

Description Include the PPPoE session ID in multicast reporting messages

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure subscriber-mgmt igmp-policy** *string* **multicast-reporter optional-fields**

Description Include sap ID

Default false

Introduced 16.0.R4

svc-id *boolean*

Context **configure subscriber-mgmt igmp-policy** *string* **multicast-reporter optional-fields**

Description Include service ID

Default false

Introduced 16.0.R4

query-interval *number*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Time to wait for a response to the host-query messages

Range 1 to 1023

Introduced 16.0.R1

redirection-policy *string*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Policy for redirection.

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

replication *keyword*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Specifies where outgoing traffic will be replicated.

Default per-sap

Options per-sap, per-host

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

static

Context **configure subscriber-mgmt igmp-policy** *string*

Description Enter the static context

Introduced 16.0.R1

group [group-address] *ipv4-multicast-address*

Context **configure subscriber-mgmt igmp-policy** *string* **static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv4-multicast-address*

Context **configure subscriber-mgmt igmp-policy** *string* **static group** *ipv4-multicast-address*

Description Group address of multicast channel

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context **configure subscriber-mgmt igmp-policy** *string* **static group** *ipv4-multicast-address*

Description Enter the **source** context

Introduced 16.0.R3

[source-address] *ipv4-unicast-address*

Context **configure subscriber-mgmt igmp-policy** *string* **static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*

Description Source address of multicast channel.

Introduced 16.0.R3

Notes This element is part of a choice

This element is part of a list key

starg

Context **configure subscriber-mgmt igmp-policy** *string* **static group** *ipv4-multicast-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

use-multicast-destination-mac *boolean*

Context **configure subscriber-mgmt igmp-policy** *string*

Description Use multicast destination mac address for outgoing traffic.

Default false

Introduced 16.0.R4

version *keyword*

Context **configure subscriber-mgmt igmp-policy** *string*

Description IGMP protocol version

Default 3

Options 1, 2, 3

Introduced 16.0.R1

ipoe-session-policy [name] *string*

Context **configure subscriber-mgmt**

Description Enter the ipoe-session-policy context

Max. Elements 256

Introduced 16.0.R1

[name] *string*

Context	**configure subscriber-mgmt ipoe-session-policy** *string*
Description	Name for IPoE session policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

circuit-id-from-auth *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt ipoe-session-policy** *string*
Description	Use the Circuit ID from the authentication server to identify a session
Default	false
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt ipoe-session-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

session-key

Context	**configure subscriber-mgmt ipoe-session-policy** *string*
Description	Enter the session-key context
Introduced	16.0.R1

cid *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure subscriber-mgmt ipoe-session-policy** *string* **session-key**
Description Use the Circuit ID as part of the index
Introduced 16.0.R1

mac *boolean*

Context **configure subscriber-mgmt ipoe-session-policy** *string* **session-key**
Description Use the MAC address as part of the index
Introduced 16.0.R1

rid *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure subscriber-mgmt ipoe-session-policy** *string* **session-key**
Description Use the remote ID as part of the index
Introduced 16.0.R1

sap *boolean*

Context **configure subscriber-mgmt ipoe-session-policy** *string* **session-key**
Description Use the SAP ID as part of the index
Introduced 16.0.R1

session-timeout (*number* | *keyword*)

Context **configure subscriber-mgmt ipoe-session-policy** *string*
Description Timeout for IPoE sessions
Range 1 to 31104000
Default unlimited
Options unlimited
Introduced 16.0.R1

isa-filter [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the isa-filter context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt isa-filter** *string*
Description	ISA filter name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt isa-filter** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ipv4

Context	**configure subscriber-mgmt isa-filter** *string*
Description	Enter the ipv4 context
Introduced	16.0.R1

default-action *keyword*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv4**
Description	Action for non-matching entry
Options	drop, forward
Introduced	16.0.R1

entry [id] *number*

Context **configure subscriber-mgmt isa-filter** *string* **ipv4**

Description Enter the entry context

Introduced 16.0.R1

[id] *number*

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number*

Description Identification for the ISA filter entry

Range 1 to 1024

Introduced 16.0.R1

Notes This element is part of a list key

action

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number*

Description Action for matching entry

Introduced 16.0.R1

drop

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **action**

Description A packet matching the entry will be dropped

Introduced 16.0.R5

Notes This element is part of a choice

forward

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **action**

Description A packet matching the entry will be forwarded

Introduced 16.0.R5

Notes This element is part of a choice

description *string*

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number*

Description Enter the match context

Introduced 16.0.R1

dst-ip *ipv4-prefix*

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **match**

Description Destination IPv4 prefix

Introduced 16.0.R1

dst-port

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

equals *number*

Context **configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **match dst-port**

Description Exact port number

Range 0 | 1 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

protocol *keyword*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv4 entry** *number* **match**
Description	Protocol
Options	icmp, tcp, udp, gre
Introduced	16.0.R1

ipv6

Context	**configure subscriber-mgmt isa-filter** *string*
Description	Enter the ipv6 context
Introduced	16.0.R1

default-action *keyword*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6**
Description	Action for non-matching entry
Options	drop, forward
Introduced	16.0.R1

entry [id] *number*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6**
Description	Enter the entry context
Introduced	16.0.R1

[id] *number*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number*
Description	Identification for the ISA filter entry
Range	1 to 1024
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number*

Description Action for matching entry

Introduced 16.0.R1

drop

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **action**

Description A packet matching the entry will be dropped

Introduced 16.0.R5

Notes This element is part of a choice

forward

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **action**

Description A packet matching the entry will be forwarded

Introduced 16.0.R5

Notes This element is part of a choice

description *string*

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number*

Description Enter the match context

Introduced 16.0.R1

dst-ip *ipv6-prefix*

Context **configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **match**

Description Destination IPv6 prefix

Introduced 16.0.R1

dst-port

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **match**
Description	Enter the dst-port context
Introduced	16.0.R1

equals *number*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **match dst-port**
Description	Exact port number
Range	0 | 1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

protocol *keyword*

Context	**configure subscriber-mgmt isa-filter** *string* **ipv6 entry** *number* **match**
Description	Protocol
Options	icmp, tcp, udp, gre
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-filter** *string*
Description	Limit what the ISA filter can be used for
Default	dsm
Options	dsm
Introduced	16.0.R1

isa-policer [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the isa-policer context
Max. Elements	128
Introduced	16.0.R1

[name] *string*

Context **configure subscriber-mgmt isa-policer** *string*
Description ISA policer name
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a list key

action *keyword*

Context **configure subscriber-mgmt isa-policer** *string*
Description Action to be taken for packets that are in-profile and out-of-profile
Default permit-deny
Options permit-deny, priority-mark
Introduced 16.0.R1

adaptation-rule

Context **configure subscriber-mgmt isa-policer** *string*
Description Enter the adaptation-rule context
Introduced 16.0.R1

cir *keyword*

Context **configure subscriber-mgmt isa-policer** *string* **adaptation-rule**
Description Committed information rate
Default closest
Options max, min, closest
Introduced 16.0.R1

pir *keyword*

Context **configure subscriber-mgmt isa-policer** *string* **adaptation-rule**
Description Peak Information Rate
Default closest
Options max, min, closest
Introduced 16.0.R1

cbs *number*

Context **configure subscriber-mgmt isa-policer** *string*
Description Committed burst size
Range 0 to 131071
Default 0
Introduced 16.0.R1

description *string*

Context **configure subscriber-mgmt isa-policer** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

mbs *number*

Context **configure subscriber-mgmt isa-policer** *string*
Description Maximum Burst Size
Range 0 to 131071
Default 0
Introduced 16.0.R1

rate

Context **configure subscriber-mgmt isa-policer** *string*
Description Enter the rate context
Introduced 16.0.R1

cir (*kilobytes* | *keyword*)

Context **configure subscriber-mgmt isa-policer** *string* **rate**
Description Committed information rate
Default 0
Introduced 16.0.R1

pir (*kilobytes* | *keyword*)

Context	**configure subscriber-mgmt isa-policer** *string* **rate**
Description	Peak Information Rate
Default	max
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-policer** *string*
Description	Policing technique
Default	single-bucket-bandwidth
Options	single-bucket-bandwidth, dual-bucket-bandwidth
Introduced	16.0.R1

isa-service-chaining

Context	**configure subscriber-mgmt**
Description	Enter the isa-service-chaining context
Introduced	16.0.R1

evpn [id] *service-name*

Context	**configure subscriber-mgmt isa-service-chaining**
Description	Enter the evpn context
Max. Elements	1024
Introduced	16.0.R1

[id] *service-name*

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name*
Description	Service-id of the EVPN
String Length	1 to 64
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name*

Description Administrative state of EVPN

Default disable

Options enable, disable

Introduced 16.0.R1

bgp

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name*

Description Enter the bgp context

Introduced 16.0.R1

route-distinguisher

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **bgp**

Description Enter the route-distinguisher context

Introduced 16.0.R1

rd (*keyword* | *vpn-route-distinguisher*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **bgp route-distinguisher**

Description High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI

Introduced 16.0.R1

route-target

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **bgp**

Description Enter the route-target context

Introduced 16.0.R1

export *route-target-32*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name* **bgp route-target**
Description	Extended community name for default export policy for BGP in EVPN service
String Length	10 to 32
Introduced	16.0.R1
Notes	This element is mandatory

import *route-target-32*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name* **bgp route-target**
Description	Extended community name for default import policy for BGP in EVPN service
String Length	10 to 32
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

export

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name*
Description	Enter the export context
Introduced	16.0.R1

advertise-pools

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export**

Description Enter the advertise-pools context

Introduced 16.0.R4

admin-state *keyword*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export advertise-pools**

Description Administrative state of IP routes advertised from NAT pools

Default disable

Options enable, disable

Introduced 16.0.R4

pool router-instance *string* name *string*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export advertise-pools**

Description Enter the pool context

Introduced 16.0.R4

router-instance *string*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export advertise-pools pool router-instance** *string* **name** *string*

Description Router-instance of the NAT pool

Introduced 16.0.R4

Notes This element is part of a list key

name *string*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export advertise-pools pool router-instance** *string* **name** *string*

Description Name of the NAT pool

String Length 1 to 32

Introduced 16.0.R4

Notes This element is part of a list key

gateway-address-range

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export**

Description Enter the gateway-address-range context

Introduced 16.0.R1

end *ipv4-unicast-address*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export gateway-address-range**

Description End of the gateway address range (V4) for this EVPN service

Introduced 16.0.R4

Notes This element is mandatory

start *ipv4-unicast-address*

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export gateway-address-range**

Description Start of the gateway address range (V4) for this EVPN service

Introduced 16.0.R4

Notes This element is mandatory

vxlan

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export**

Description Enter the vxlan context

Introduced 16.0.R1

vni *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure subscriber-mgmt isa-service-chaining evpn** *service-name* **export vxlan**

Description VNI of the VXLAN created by the EVPN service

Range 1 to 16777215

Introduced 16.0.R1

import-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining evpn** *service-name*
Description	Import mode for the EVPN
Default	none
Options	none, bridged, routed
Introduced	16.0.R1

mac-prefix *string*

Context	**configure subscriber-mgmt isa-service-chaining**
Description	Unique MAC prefix per ISA and per outside service for all NAT-groups configured for Service Chaining
String Length	8
Introduced	16.0.R1

vas-filter [name] *string*

Context	**configure subscriber-mgmt isa-service-chaining**
Description	Enter the vas-filter context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string*
Description	VAS filter name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string*
Description	Enter the entry context
Max. Elements	64
Introduced	16.0.R1

[id] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number*
Description	VAS filter entry id
Range	1 to 65535
Introduced	16.0.R4
Notes	This element is part of a list key

action [direction] *keyword*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

[direction] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword*
Description	Direction for the action in a VAS filter entry
Options	upstream, downstream
Introduced	16.0.R1
Notes	This element is part of a list key

fail-action *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword*
Description	Fail action when packet matches VAS filter entry in specific direction but no forward or NSH specified
Default	accept
Options	drop, accept
Introduced	16.0.R1

forward

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword*
Description	Enter the forward context
Introduced	16.0.R1

esi *ethernet-segment-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **forward**
Description	ESI (Ethernet Segment Identifier) for the action in a VAS filter
Introduced	16.0.R1

sf-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **forward**
Description	Forwarding SF (Service Forward) IP address for the action in VAS filter entry
Introduced	16.0.R1
Notes	This element is mandatory

svc *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **forward**
Description	EVPN service used for forwarding packets
Reference	configure **subscriber-mgmt isa-service-chaining evpn** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

insert-nsh

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword*
Description	Enter the insert-nsh context
Introduced	16.0.R1

meta-data

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh**
Description	Enter the meta-data context
Introduced	16.0.R1

insert-subscriber-id

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh meta-data**
Description	Insert the subscriber-id in the NSH
Introduced	16.0.R4
Notes	This element is part of a choice

opaque-data *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh meta-data**
Description	Opaque meta-data for the NSH
String Length	10|18|26|34
Introduced	16.0.R4
Notes	This element is part of a choice

svc-path

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh**
Description	Enter the svc-path context
Introduced	16.0.R1

path-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh svc-path**
Description	Path ID used to construct a NSH for the action in a VAS filter entry
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

svc-index *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **action** *keyword* **insert-nsh svc-path**
Description	Service index used to construct a NSH for the action in a VAS filter entry
Range	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number*
Description	Administrative state of the VAS filter
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match

Context **configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number*

Description Enter the match context

Introduced 16.0.R1

foreign-ip (*string* | *string*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **match**

Description Foreign IP address or prefix to match in this VAS filter entry

Introduced 16.0.R1

foreign-port *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **match**

Description Foreign TCP or UDP port to match in this VAS filter entry

Range 1 to 65535

Introduced 16.0.R1

protocol *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure subscriber-mgmt isa-service-chaining vas-filter** *string* **entry** *number* **match**

Description IP protocol to match the VAS filter

Default none

Options tcp-udp, none, icmp, tcp, udp

Introduced 16.0.R1

local-user-db [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the local-user-db context
Max. Elements	127
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt local-user-db** *string*
Description	Local user database name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure subscriber-mgmt local-user-db** *string*
Description	Administrative state of the local user database
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt local-user-db** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ipoe

Context	**configure subscriber-mgmt local-user-db** *string*
Description	Enter the ipoe context
Introduced	16.0.R1

host [host-name] *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe**
Description Enter the host context
Introduced 16.0.R1

[host-name] *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description Host key
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a list key

admin-state *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description Administrative state of this IPOE host
Default disable
Options enable, disable
Introduced 16.0.R1

authentication

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description Enter the authentication context
Introduced 16.0.R1

auth-domain-name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **authentication**
Description Authentication domain name for this host
String Length 1 to 32
Introduced 16.0.R1

gx-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **authentication**
Description	Diameter application policy
String Length	1 to 32
Introduced	16.0.R1

nasreq-auth-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **authentication**
Description	Diameter NASREQ application policy to use for authentication
String Length	1 to 32
Introduced	16.0.R1

radius-auth-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **authentication**
Description	Host authentication policy
String Length	1 to 32
Introduced	16.0.R1

gtp-interface

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the gtp-interface context
Introduced	16.0.R1

name *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **gtp-interface**
Description	IP interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **gtp-interface**
Description	Service ID
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381
Introduced	16.0.R1
Notes	This element is mandatory

host-identification

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the host-identification context
Introduced	16.0.R1

circuit-id

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	Enter the circuit-id context
Introduced	16.0.R1

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification circuit-id**
Description	Circuit ID as ASCII string
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification circuit-id**
Description	Circuit ID as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

derived-id *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**

Description Derived ID string

String Length 1 to 255

Introduced 16.0.R1

encap-tag-range

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**

Description Enter the encap-tag-range context

Introduced 16.0.R1

from *atm-or-vlan-encap*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification encap-tag-range**

Description Start tag

String Length 1 to 11

Introduced 16.0.R1

Notes This element is mandatory

to *atm-or-vlan-encap*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification encap-tag-range**

Description End tag

String Length 1 to 11

Introduced 16.0.R1

Notes This element is mandatory

ip-prefix (*ipv4-prefix-with-host-bits* | *ipv6-prefix-with-host-bits*)

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**

Description IP interface name

Introduced 16.0.R1

mac *mac-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	MAC address
Introduced	16.0.R1

option60

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	Enter the option60 context
Introduced	16.0.R1

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification option60**
Description	Option 60 as ASCII string
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification option60**
Description	Option 60 as hexadecimal string
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	Enter the remote-id context
Introduced	16.0.R1

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification remote-id**
Description	Remote ID as ASCII string
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification remote-id**
Description	Remote ID as hexadecimal string
String Length	1 to 512
Introduced	16.0.R1
Notes	This element is part of a choice

sap-id *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	SAP ID
String Length	1 to 255
Introduced	16.0.R1

service-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**
Description	Service ID
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381
Introduced	16.0.R1

string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**

Description VSO string

String Length 1 to 255

Introduced 16.0.R1

system-id *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **host-identification**

Description System ID

String Length 1 to 255

Introduced 16.0.R1

identification

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*

Description Enter the identification context

Introduced 16.0.R1

ancp-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**

Description ANCP string

String Length 1 to 63

Introduced 16.0.R1

category-map-name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**

Description Category map name

String Length 1 to 32

Introduced 16.0.R1

int-dest-id *int-dest-id*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

option-number *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	The option number used to return the strings in case the LUDB is linked to a DHCP server.
Range	1 to 254
Default	254
Introduced	16.0.R1

sla-profile-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	SLA profile string
String Length	1 to 16
Introduced	16.0.R1

spi-sharing-group-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	Group ID for SLA Profile Instance sharing per group
Range	0 to 65535
Introduced	16.0.R1

sub-profile-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	Sub profile string
String Length	1 to 16
Introduced	16.0.R1

subscriber-id *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **identification**
Description	Subscriber ID
String Length	1 to 32
Introduced	16.0.R1

ipv4

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the ipv4 context
Introduced	16.0.R1

address

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4**
Description	Enter the address context
Introduced	16.0.R1

gi-address *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address**
Description	Use gi-address to select a pool with the given scope
Options	subnet-scope, pool-scope
Introduced	16.0.R1
Notes	This element is part of a choice

ip-address *ipv4-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address**
Description	IPv4 host address
Introduced	16.0.R1
Notes	This element is part of a choice

pool

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address**
Description	Enter the **pool** context
Introduced	16.0.R1

delimiter *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address pool**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1
Notes	This element is part of a choice

primary *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address pool**
Description	Primary pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

secondary *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address pool**
Description	Secondary pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

use-pool-from-client

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address**
Description	Enter the **use-pool-from-client** context
Introduced	16.0.R1

delimiter *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 address use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1
Notes	This element is part of a choice

gi-address *ipv4-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4**
Description	The DHCP gi-address of this host.
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

server *ipv4-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv4**
Description	IPv4 address of the DHCP server
Introduced	16.0.R1

ipv6

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the ipv6 context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**
Description	IPv6 address of this host
Introduced	16.0.R1

address-pool *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description IPv6 address pool name

String Length 1 to 32

Introduced 16.0.R1

delegated-prefix *ipv6-unicast-prefix*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description IPv6 delegated prefix of this host

Introduced 16.0.R1

delegated-prefix-length *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description Delegated prefix length

Range 48 to 64

Introduced 16.0.R1

delegated-prefix-pool *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description Delegated prefix pool

String Length 1 to 32

Introduced 16.0.R1

link-address *ipv6-unicast-address*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description The DHCP Relay link-address.

Introduced 16.0.R1

option [number] (*number* | *keyword*)

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description Enter the option context

Introduced 16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 option** (*number* | *keyword*)
Description	The number of the DHCPv6 option.
Range	23
Options	dns-server
Introduced	16.0.R5
Notes	This element is part of a list key

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R5
Notes	This element is part of a choice

router-advertisement-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**
Description	IPv6 router advertisement policy
String Length	1 to 32
Introduced	16.0.R1

server *ipv6-unicast-address*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description IPv6 address of the DHCP server

Introduced 16.0.R1

slaac-prefix *ipv6-unicast-prefix*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description IPv6 SLAAC prefix of this host

Introduced 16.0.R1

slaac-prefix-pool *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description IPv6 SLAAC prefix pool of this host

String Length 1 to 32

Introduced 16.0.R1

timers

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6**

Description Enter the timers context

Introduced 16.0.R1

preferred-lifetime (*number* | *keyword*)

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 timers**

Description Time for a lease to remain preferred

Range 300 to 315446399

Units seconds

Options infinite

Introduced 16.0.R1

rebind *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 timers**

Description Rebind timer (T2)

Range 0 to 1209600

Units seconds

Introduced 16.0.R1

renew *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 timers**

Description Renew timer (T1)

Range 0 to 604800

Units seconds

Introduced 16.0.R1

valid-lifetime (*number* | *keyword*)

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **ipv6 timers**

Description Time for a lease to remain valid

Range 300 to 315446399

Units seconds

Options infinite

Introduced 16.0.R1

match-radius-proxy-cache

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*

Description Enter the match-radius-proxy-cache context

Introduced 16.0.R1

fail-action *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache**
Description	Action when no match is found
Default	drop
Options	continue, drop
Introduced	16.0.R1

mac-format *mac-specification*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

match

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache**
Description	Enter the match context
Introduced	16.0.R1

circuit-id *boolean*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache match**
Description	Match circuit ID in DHCP Option 82
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-option *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache match**
Description	DHCP option number
Range	1 to 254
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-option *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache match**
Description	DHCPv6 option number
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mac *boolean*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache match**
Description	Match MAC address of DHCP client
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id *boolean*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache match**
Description	Match remote ID in DHCP Option 82
Introduced	16.0.R1
Notes	This element is part of a choice

server

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache**

Description Enter the server context

Introduced 16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache server**

Description Server Name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is mandatory

service *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **match-radius-proxy-cache server**

Description Service ID

Range 1 to 2147483647

Introduced 16.0.R1

mld-import [policy-name] *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*

Description Enter the mld-import context

Max. Elements 14

Introduced 16.0.R1

[policy-name] *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **mld-import** *string*

Description MLD import policy for this host

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

msap-defaults

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*

Description Enter the msap-defaults context

Introduced 16.0.R1

group-interface

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults**

Description Enter the group-interface context

Introduced 16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults group-interface**

Description IP interface name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is mandatory

prefix *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults group-interface**

Description prefix.

Options port-id

Introduced 16.0.R1

Notes This element is part of a choice

suffix *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults group-interface**

Description Suffix for the group interface

Options port-id

Introduced 16.0.R1

Notes This element is part of a choice

policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults**

Description MSAP policy

String Length 1 to 32

Introduced 16.0.R1

service *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **msap-defaults**

Description The service id.

Range 1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381

Introduced 16.0.R1

radius-accounting-policy

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*

Description Enter the radius-accounting-policy context

Introduced 16.0.R1

duplicate *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **radius-accounting-policy**

Description RADIUS accounting policy for generating duplicate accounting information

String Length 1 to 32

Introduced 16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **radius-accounting-policy**

Description RADIUS accounting policy for generating accounting information

String Length 1 to 32

Introduced 16.0.R1

retail-service-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Configure the retail service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381
Introduced	16.0.R4

rip-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	RIP policy
String Length	1 to 32
Introduced	16.0.R1

to-client-options

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the to-client-options context
Introduced	16.0.R1

ipv4-option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options**
Description	Enter the ipv4-option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)

Description ASCII string for DHCP option

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

duration *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)

Description DHCP option as time duration

Range 10 to 315446399

Units seconds

Introduced 16.0.R4

Notes This element is part of a choice

empty

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)

Description Empty DHCP option.

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)

Description DHCP option as hexadecimal string

String Length 1 to 256

Introduced 16.0.R1

Notes This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv4-option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

ipv6-option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options**
Description	Enter the ipv6-option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)

Description ASCII string for DHCP option

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

domain-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)

Description DHCP option as domain name

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

empty

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)

Description Empty DHCP option.

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)

Description DHCP option as hexadecimal string

String Length 1 to 256

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

to-server-options

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description	Enter the to-server-options context
Introduced	16.0.R1

ipv6-option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options**
Description	Enter the ipv6-option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **to-server-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

wpp

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string*
Description Enter the wpp context
Introduced 16.0.R1

initial

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp**
Description Enter the initial context
Introduced 16.0.R1

sla-profile *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp initial**
Description Initial SLA profile
String Length 1 to 32
Introduced 16.0.R1

sub-profile *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp initial**
Description Initial subscriber profile
String Length 1 to 32
Introduced 16.0.R1

portal

Context **configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp**
Description Enter the portal context
Introduced 16.0.R1

name *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp portal**
Description	Name for the WPP portal of the hosts
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

portal-group *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp portal**
Description	WPP portal group for this interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance (*keyword* | *number*)

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp portal**
Description	The virtual router instance of the WPP portal for the hosts
Default	base
Options	base
Introduced	16.0.R1
Notes	This element is part of a choice

restore-to-initial-on-disconnect *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe host** *string* **wpp**
Description	Restore initial profiles after a host has disconnected
Options	restore, no-restore
Introduced	16.0.R1

mask type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe**
Description	Enter the mask context
Introduced	16.0.R1

type *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword*

Description Matching type to identify a host

Options circuit-id, remote-id, sap-id, string, system-id, option60

Introduced 16.0.R1

Notes This element is part of a list key

prefix

Context **configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword*

Description Enter the prefix context

Introduced 16.0.R1

length *number*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword* **prefix**

Description Prefix length

Range 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword* **prefix**

Description Prefix string

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

suffix

Context **configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword*

Description Enter the suffix context

Introduced 16.0.R1

length *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword* **suffix**
Description	Suffix length
Range	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe mask type** *keyword* **suffix**
Description	Suffix string
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

match-list *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ipoe**
Description	IPoE host match type
Options	circuit-id, mac, remote-id, sap-id, service-id, string, system-id, option60, encap-tag-range, dual-stack-remote-id, derived-id, ip
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

ppp

Context	**configure subscriber-mgmt local-user-db** *string*
Description	Enter the ppp context
Introduced	16.0.R1

host [host-name] *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp**
Description	Enter the host context
Introduced	16.0.R1

[host-name] *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Host key
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

access-loop-encapsulation

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the access-loop-encapsulation context
Introduced	16.0.R1

encap-offset

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-encapsulation**
Description	Enter the encap-offset context
Introduced	16.0.R1

type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-encapsulation encap-offset**
Description	Egress encapsulation type
Options	pppoa-llc, pppoa-null, pppoeoa-llc, pppoeoa-llc-fcs, pppoeoa-llc-tagged, pppoeoa-llc-tagged-fcs, pppoeoa-null, pppoeoa-null-fcs, pppoeoa-null-tagged, pppoeoa-null-tagged-fcs, ipoa-llc, ipoa-null, ipoeoa-llc, ipoeoa-llc-fcs, ipoeoa-llc-tagged, ipoeoa-llc-tagged-fcs, ipoeoa-null, ipoeoa-null-fcs, ipoeoa-null-tagged, ipoeoa-null-tagged-fcs, pppoe, pppoe-tagged, ipoe, ipoe-tagged
Introduced	16.0.R1

rate-down *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-encapsulation**
Description	Last mile link downstream rate in the access loop
Range	1 to 100000
Units	kilobps
Introduced	16.0.R1

access-loop-information

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the access-loop-information context
Introduced	16.0.R1

circuit-id

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information**
Description	Enter the circuit-id context
Introduced	16.0.R1

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information circuit-id**
Description	Circuit ID as an ASCII string
String Length	1 to 63
Introduced	16.0.R1
Notes	This element is part of a choice

sap-id *boolean*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information circuit-id**
Description	SAP ID as circuit ID
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information**

Description Enter the remote-id context

Introduced 16.0.R1

ascii-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information remote-id**

Description Remote-id as an ASCII string.

String Length 1 to 63

Introduced 16.0.R1

Notes This element is part of a choice

mac *boolean*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **access-loop-information remote-id**

Description Use MAC address as remote ID

Introduced 16.0.R1

Notes This element is part of a choice

admin-state *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Administrative state of this IPOE host

Default disable

Options enable, disable

Introduced 16.0.R1

authentication

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Enter the authentication context

Introduced 16.0.R1

gx-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Diameter application policy

String Length 1 to 32

Introduced 16.0.R1

nasreq-auth-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Diameter NASREQ application policy to use for authentication

String Length 1 to 32

Introduced 16.0.R1

padi-auth-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Authentication policy name

String Length 1 to 32

Introduced 16.0.R1

pre-auth-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Pre-authentication policy of this host

String Length 1 to 32

Introduced 16.0.R1

radius-auth-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Host authentication policy

String Length 1 to 32

Introduced 16.0.R1

user-db *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **authentication**

Description Local user DB to use for PPP PAP/CHAP authentication

String Length 1 to 32

Introduced 16.0.R1

host-identification

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Enter the host-identification context

Introduced 16.0.R1

circuit-id

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**

Description Enter the circuit-id context

Introduced 16.0.R1

ascii-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification circuit-id**

Description Circuit ID as ASCII string

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification circuit-id**

Description Circuit ID as hexadecimal string

String Length 1 to 256

Introduced 16.0.R1

Notes This element is part of a choice

derived-id *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**
Description	Derived ID string
String Length	1 to 255
Introduced	16.0.R1

encap-tag-range

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**
Description	Enter the encap-tag-range context
Introduced	16.0.R1

from *atm-or-vlan-encap*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification encap-tag-range**
Description	Start tag
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is mandatory

to *atm-or-vlan-encap*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification encap-tag-range**
Description	End tag
String Length	1 to 11
Introduced	16.0.R1
Notes	This element is mandatory

mac *mac-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**
Description	MAC address
Introduced	16.0.R1

remote-id

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**

Description Enter the remote-id context

Introduced 16.0.R1

ascii-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification remote-id**

Description Remote ID as ASCII string

String Length 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification remote-id**

Description Remote ID as hexadecimal string

String Length 1 to 512

Introduced 16.0.R1

Notes This element is part of a choice

sap-id *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**

Description SAP ID

String Length 1 to 255

Introduced 16.0.R1

service-name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**

Description Service name

String Length 1 to 255

Introduced 16.0.R1

user-name

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification**

Description Enter the user-name context

Introduced 16.0.R1

format *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification user-name**

Description User name format.

Default full

Options full, no-domain, domain-only

Introduced 16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **host-identification user-name**

Description Full or part of PPP user name as specified with the format.

String Length 1 to 253

Introduced 16.0.R1

Notes This element is mandatory

identification

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Enter the identification context

Introduced 16.0.R1

ancp-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**

Description ANCP string

String Length 1 to 63

Introduced 16.0.R1

category-map-name *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**
Description	Category map name
String Length	1 to 32
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

option-number *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**
Description	The option number used to return the strings in case the LUDB is linked to a DHCP server.
Range	1 to 254
Default	254
Introduced	16.0.R1

sla-profile-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**
Description	SLA profile string
String Length	1 to 16
Introduced	16.0.R1

spi-sharing-group-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**
Description	Group ID for SLA Profile Instance sharing per group
Range	0 to 65535
Introduced	16.0.R1

sub-profile-string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**

Description Sub profile string

String Length 1 to 16

Introduced 16.0.R1

subscriber-id *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **identification**

Description Subscriber ID

String Length 1 to 32

Introduced 16.0.R1

ipv4

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Enter the ipv4 context

Introduced 16.0.R1

address

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4**

Description Enter the address context

Introduced 16.0.R1

gi-address *keyword*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address**

Description Use gi-address to select a pool with the given scope

Options subnet-scope, pool-scope

Introduced 16.0.R1

Notes This element is part of a choice

ip-address *ipv4-unicast-address*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address**
Description IPv4 host address
Introduced 16.0.R1
Notes This element is part of a choice

pool

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address**
Description Enter the **pool** context
Introduced 16.0.R1

delimiter *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address pool**
Description Delimiter character to combine primary and secondary pool names
String Length 1
Introduced 16.0.R1
Notes This element is part of a choice

primary *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address pool**
Description Primary pool name
String Length 1 to 32
Introduced 16.0.R1
Notes This element is mandatory
This element is part of a choice

secondary *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address pool**
Description Secondary pool name
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a choice

use-pool-from-client

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address**
Description	Enter the **use-pool-from-client** context
Introduced	16.0.R1

delimiter *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 address use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1
Notes	This element is part of a choice

ignore-df-bit *boolean*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4**
Description	Fragment frames if necessary, even if they have the Don't Fragment (DF) bit set in the IPv4 header.
Default	false
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv4 option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

ipv6

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the ipv6 context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	IPv6 address of this host
Introduced	16.0.R1

address-pool *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	IPv6 address pool name
String Length	1 to 32
Introduced	16.0.R1

delegated-prefix *ipv6-unicast-prefix*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**

Description IPv6 delegated prefix of this host

Introduced 16.0.R1

delegated-prefix-length *number*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**

Description Delegated prefix length

Range 48 to 64

Introduced 16.0.R1

delegated-prefix-pool *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**

Description Delegated prefix pool

String Length 1 to 32

Introduced 16.0.R1

force-ipv6cp *boolean*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**

Description forces ipv6 control protocol.

Default false

Introduced 16.0.R1

option [number] (*number* | *keyword*)

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**

Description Enter the option context

Introduced 16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 option** (*number* | *keyword*)
Description	The number of the DHCPv6 option.
Range	23
Options	dns-server
Introduced	16.0.R5
Notes	This element is part of a list key

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R5
Notes	This element is part of a choice

router-advertisement-policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	IPv6 router advertisement policy
String Length	1 to 32
Introduced	16.0.R1

slaac-prefix *ipv6-unicast-prefix*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	IPv6 SLAAC prefix of this host
Introduced	16.0.R1

slaac-prefix-pool *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	IPv6 SLAAC prefix pool of this host
String Length	1 to 32
Introduced	16.0.R1

timers

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6**
Description	Enter the timers context
Introduced	16.0.R1

preferred-lifetime (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 timers**
Description	Time for a lease to remain preferred
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1

rebind *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 timers**
Description	Rebind timer (T2)
Range	0 to 1209600
Units	seconds
Introduced	16.0.R1

renew *number*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 timers**
Description Renew timer (T1)
Range 0 to 604800
Units seconds
Introduced 16.0.R1

valid-lifetime (*number* | *keyword*)

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **ipv6 timers**
Description Time for a lease to remain valid
Range 300 to 315446399
Units seconds
Options infinite
Introduced 16.0.R1

l2tp

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description Enter the l2tp context
Introduced 16.0.R1

group

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **l2tp**
Description Enter the group context
Introduced 16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **l2tp group**
Description Tunnel group name
String Length 1 to 63
Introduced 16.0.R1
Notes This element is mandatory

service-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **l2tp group**
Description	Service-id for group.
Range	1 to 2147483647
Introduced	16.0.R1

lns-interface

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the lns-interface context
Introduced	16.0.R1

name *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **lns-interface**
Description	IP interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-id *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **lns-interface**
Description	Service ID
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381
Introduced	16.0.R1
Notes	This element is mandatory

mld-import [policy-name] *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the mld-import context
Max. Elements	14
Introduced	16.0.R1

[policy-name] *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **mld-import** *string*
Description	MLD import policy for this host
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

msap-defaults

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the msap-defaults context
Introduced	16.0.R1

group-interface

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults**
Description	Enter the group-interface context
Introduced	16.0.R1

name *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults group-interface**
Description	IP interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

prefix *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults group-interface**
Description	prefix.
Options	port-id
Introduced	16.0.R1
Notes	This element is part of a choice

suffix *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults group-interface**
Description	Suffix for the group interface
Options	port-id
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults**
Description	MSAP policy
String Length	1 to 32
Introduced	16.0.R1

service *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **msap-defaults**
Description	The service id.
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381
Introduced	16.0.R1

pado-delay *number*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Delay timeout before sending a PADO
Range	1 to 30
Units	seconds
Introduced	16.0.R1

password

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the password context
Introduced	16.0.R1

chap *encrypted-leaf*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **password**
Description	CHAP protocol
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is part of a choice

ignore

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **password**
Description	Ignore.
Introduced	16.0.R1
Notes	This element is part of a choice

pap *encrypted-leaf*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **password**
Description	PAP protocol.
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is part of a choice

radius-accounting-policy

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string*
Description	Enter the radius-accounting-policy context
Introduced	16.0.R1

duplicate *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **radius-accounting-policy**
Description	RADIUS accounting policy for generating duplicate accounting information
String Length	1 to 32
Introduced	16.0.R1

name *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **radius-accounting-policy**

Description RADIUS accounting policy for generating accounting information

String Length 1 to 32

Introduced 16.0.R1

retail-service-id *number*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Configure the retail service-id

Range 1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381

Introduced 16.0.R4

rip-policy *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description RIP policy

String Length 1 to 32

Introduced 16.0.R1

steering-profile *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Steering profile

String Length 1 to 32

Introduced 16.0.R1

to-client-options

Context **configure subscriber-mgmt local-user-db** *string* **ppp host** *string*

Description Enter the to-client-options context

Introduced 16.0.R1

ipv6-option [number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options**
Description	Enter the ipv6-option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp host** *string* **to-client-options ipv6-option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

mask type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp**
Description	Enter the mask context
Introduced	16.0.R1

type *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword*
Description	Matching type to identify a host
Options	circuit-id, mac, remote-id, user-name, service-name, sap-id
Introduced	16.0.R1
Notes	This element is part of a list key

prefix

Context **configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword*

Description Enter the prefix context

Introduced 16.0.R1

length *number*

Context **configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword* **prefix**

Description Prefix length

Range 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context **configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword* **prefix**

Description Prefix string

String Length 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

suffix

Context **configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword*

Description Enter the suffix context

Introduced 16.0.R1

length *number*

Context **configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword* **suffix**

Description Suffix length

Range 1 to 127

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp mask type** *keyword* **suffix**
Description	Suffix string
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

match-list *keyword*

Context	**configure subscriber-mgmt local-user-db** *string* **ppp**
Description	PPP host match criteria
Options	circuit-id, mac, remote-id, user-name, service-name, sap-id, encap-tag-range, derived-id
Max. Elements	3
Introduced	16.0.R1
Notes	This element is ordered by user

mld-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the mld-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress-rate-modify

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Enter the egress-rate-modify context
Introduced	16.0.R1

agg-rate

Context	**configure subscriber-mgmt mld-policy** *string* **egress-rate-modify**
Description	Aggregate rate that applies for modification
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt mld-policy** *string* **egress-rate-modify**
Description	Scheduler to be applied for rate modification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

fast-leave *boolean*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Enable fast leave
Default	true
Introduced	16.0.R1

import-policy *string*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context **configure subscriber-mgmt mld-policy** *string*

Description Maximum number of group sources

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure subscriber-mgmt mld-policy** *string*

Description Max groups number for which IGMP can have local receiver information based on received IGMP reports

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure subscriber-mgmt mld-policy** *string*

Description Maximum number of sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

query-interval *number*

Context **configure subscriber-mgmt mld-policy** *string*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure subscriber-mgmt mld-policy** *string*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

redirection-policy *string*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Policy for redirection.
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

replication *keyword*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Specifies where outgoing traffic will be replicated.
Default	per-sap
Options	per-sap, per-host
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

static

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context	**configure subscriber-mgmt mld-policy** *string* **static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv6-multicast-address*

Context	**configure subscriber-mgmt mld-policy** *string* **static group** *ipv6-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure subscriber-mgmt mld-policy** *string* **static group** *ipv6-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure subscriber-mgmt mld-policy** *string* **static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure subscriber-mgmt mld-policy** *string* **static group** *ipv6-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

use-multicast-destination-mac *boolean*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	Use multicast destination mac address for outgoing traffic.
Default	false
Introduced	16.0.R4

version *keyword*

Context	**configure subscriber-mgmt mld-policy** *string*
Description	MLD protocol version
Default	2
Options	1, 2
Introduced	16.0.R1

msap-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the msap-policy context
Max. Elements	256
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Managed SAP policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cpu-protection

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Enter the cpu-protection context
Introduced	16.0.R1

ip-src-monitoring

Context	**configure subscriber-mgmt msap-policy** *string* **cpu-protection**
Description	Apply the CPU protection policy per-source-rate on IP sources.
Introduced	16.0.R3
Notes	This element is part of a choice

mac-monitoring

Context	**configure subscriber-mgmt msap-policy** *string* **cpu-protection**
Description	Apply the CPU protection policy per-source-rate on MAC sources.
Introduced	16.0.R3
Notes	This element is part of a choice

policy-id *string*

Context	**configure subscriber-mgmt msap-policy** *string* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Distributed CPU protection policy
String Length	1 to 32
Introduced	16.0.R1

ies-vprn-only-sap-parameters

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Enter the ies-vprn-only-sap-parameters context
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters**
Description	Anti-spoof filtering for the MSAP
Default	source-ip-and-mac-addr
Options	source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1

egress

Context	**configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters**
Description	Enter the egress context
Introduced	16.0.R1

qos

Context	**configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters egress**
Description	Enter the qos context
Introduced	16.0.R1

policy-name *string*

Context	**configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters egress qos**
Description	SAP-egress QoS policy
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

ingress

Context	**configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters**
Description	Enter the ingress context
Introduced	16.0.R1

qos

Context **configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters ingress**

Description Enter the qos context

Introduced 16.0.R4

policy-name *string*

Context **configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters ingress qos**

Description Configure the SAP-ingress QoS policy.

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R4

queuing-type *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **ies-vprn-only-sap-parameters ingress qos**

Description Configure the ingress queuing type.

Default shared

Options shared, service

Introduced 16.0.R4

igmp-host-tracking

Context **configure subscriber-mgmt msap-policy** *string*

Description Enter the igmp-host-tracking context

Introduced 16.0.R1

expiry-time *number*

Context **configure subscriber-mgmt msap-policy** *string* **igmp-host-tracking**

Description Time during which the system continues to track inactive hosts

Range 1 to 65535

Units seconds

Introduced 16.0.R1

import-policy *string*

Context **configure subscriber-mgmt msap-policy** *string* **igmp-host-tracking**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-group-sources *number*

Context **configure subscriber-mgmt msap-policy** *string* **igmp-host-tracking**

Description Maximum number of multicast groups to be tracked per group

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure subscriber-mgmt msap-policy** *string* **igmp-host-tracking**

Description Maximum number of multicast groups to be tracked

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure subscriber-mgmt msap-policy** *string* **igmp-host-tracking**

Description Maximum number of multicast sources to be tracked

Range 1 to 1000

Introduced 16.0.R1

lag-link-map-profile *number*

Context **configure subscriber-mgmt msap-policy** *string*

Description Map profile for LAG link

Range 1 to 64

Introduced 16.0.R1

sticky-msaps *boolean*

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Prevent MSAPs associated with specified MSAP policy from being deleted without manual clear command
Default	false
Introduced	16.0.R1

sub-sla-mgmt

Context	**configure subscriber-mgmt msap-policy** *string*
Description	Enter the sub-sla-mgmt context
Introduced	16.0.R1

defaults

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt**
Description	Enter the defaults context
Introduced	16.0.R1

int-dest-id

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults**
Description	Enter the int-dest-id context
Introduced	16.0.R1

string *int-dest-id*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults int-dest-id**
Description	String to be used as the int-dest-id
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

top-q-tag

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults int-dest-id**
Description	Derive string based on top most delineating Dot1Q tag from SAP's encapsulation
Introduced	16.0.R1
Notes	This element is part of a choice

sla-profile *string*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults**
Description	Default SLA profile
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults**
Description	Subscriber profile
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults**
Description	Enter the subscriber-id context
Introduced	16.0.R1

auto-id

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults subscriber-id**
Description	Autogenerated sub-id as default sub-id
Introduced	16.0.R1
Notes	This element is part of a choice

sap-id

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults subscriber-id**
Description	SAP-id as default sub-id
Introduced	16.0.R1
Notes	This element is part of a choice

string *subscriber-id*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt defaults subscriber-id**
Description	String to be used as default sub-id
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

single-sub-parameters

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt**
Description	Enter the single-sub-parameters context
Introduced	16.0.R1

non-sub-traffic-profiles

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt single-sub-parameters**
Description	Enter the non-sub-traffic-profiles context
Introduced	16.0.R1

sla-profile *string*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt single-sub-parameters non-sub-traffic-profiles**
Description	SLA profile name
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

sub-profile *string*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt single-sub-parameters non-sub-traffic-profiles**
Description	Subscriber profile
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

subscriber-id *subscriber-id*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt single-sub-parameters non-sub-traffic-profiles**
Description	Subscriber identification string
String Length	1 to 32
Introduced	16.0.R1

profiled-traffic-only *boolean*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt single-sub-parameters**
Description	Enable/disable profiled-traffic-only.
Default	false
Introduced	16.0.R1

sub-ident-policy *string*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt**
Description	Configure subscriber identification policy
Reference	configure **subscriber-mgmt sub-ident-policy** *external-named-item*
Introduced	16.0.R1

subscriber-limit *sap-subscriber-limit*

Context	**configure subscriber-mgmt msap-policy** *string* **sub-sla-mgmt**
Description	Maximum subscribers on this SAP
Default	1
Introduced	16.0.R1

vpls-only-sap-parameters

Context **configure subscriber-mgmt msap-policy** *string*
Description Enter the vpls-only-sap-parameters context
Introduced 16.0.R1

arp-host

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**
Description Enter the arp-host context
Introduced 16.0.R1

host-limit *sap-host-limit*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters arp-host**
Description Maximum number of ARP hosts
Range 1 to 131071
Default 1
Introduced 16.0.R1

min-auth-interval *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters arp-host**
Description The minimum authentication interval.
Range 1 to 6000
Default 15
Units minutes
Introduced 16.0.R1

arp-reply-agent *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**
Description Enable arp-reply-agent function
Options true, with-subscr-ident
Introduced 16.0.R1

dhcp

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**

Description Enter the dhcp context

Introduced 16.0.R1

lease-populate *sap-lease-state-limit*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp**

Description Maximum number of DHCPv4 leases per managed SAP

Range 1 to 131071

Default 1

Introduced 16.0.R1

option-82

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp**

Description Enter the option-82 context

Introduced 16.0.R1

action *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82**

Description DHCP relay forwarding policy action

Default keep

Options replace, drop, keep

Introduced 16.0.R1

circuit-id *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82**

Description Circuit ID suboption of the IPOE relay

Default ascii-tuple

Options none, ascii-tuple, vlan-ascii-tuple

Introduced 16.0.R1

remote-id

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82**

Description Enter the remote-id context

Introduced 16.0.R1

mac

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 remote-id**

Description MAC address of the remote end that is encoded in the suboption

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 remote-id**

Description String to encode in the suboption

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

vendor-specific-option

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R1

client-mac-address *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 vendor-specific-option**

Description Enable/disable sending of the MAC address in the Nokia vendor specific suboption of the IPOE Relay packet.

Default false

Introduced 16.0.R1

sap-id *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 vendor-specific-option**

Description Enable/disable sending of the SAP-id in the Nokia vendor specific suboption of the IPOE Relay packet.

Default false

Introduced 16.0.R1

service-id *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 vendor-specific-option**

Description Enable/disable sending of the service-id in the Nokia vendor specific suboption of the IPOE Relay packet.

Default false

Introduced 16.0.R1

string *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 vendor-specific-option**

Description Specifies the string in the Nokia vendor specific suboption of the IPOE Relay packet.

String Length 1 to 32

Introduced 16.0.R1

system-id *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp option-82 vendor-specific-option**

Description Enable/disable sending of the system-id in the Nokia vendor specific suboption of the IPOE Relay packet.

Default false

Introduced 16.0.R1

proxy-server

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp**

Description Enter the proxy-server context

Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp proxy-server**

Description Administrative state of DHCP proxy

Default disable

Options enable, disable

Introduced 16.0.R1

emulated-server *ipv4-unicast-address*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp proxy-server**

Description IP address used as the DHCP server address in the context of this service

Introduced 16.0.R1

lease-time

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp proxy-server lease-time**

Description Use lease time information provided by RADIUS server

Default false

Introduced 16.0.R1

value *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters dhcp proxy-server lease-time**

Description DHCP lease time

Range 300 to 315446399

Units seconds

Introduced 16.0.R1

egress

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**

Description Enter the egress context

Introduced 16.0.R1

qos

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters egress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters egress qos**

Description SAP-egress QoS policy

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

igmp-snooping

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**

Description Enter the igmp-snooping context

Introduced 16.0.R1

fast-leave *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Allow IGMP fast leave processing

Default false

Introduced 16.0.R1

import-policy *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-groups (*keyword* | *number*)

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Maximum number of multicast groups

Range 1 to 16000

Default unlimited

Options unlimited

Introduced 16.0.R1

mcac

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac**

Description Multicast CAC interface-policy name.

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints**

Description Enter the level context

Introduced 16.0.R1

[level-id] *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints level** *number*

Description Bandwidth level ID for a multicast CAC constraint

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

bandwidth *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints level** *number*

Description Bandwidth available for this level

Default 1

Introduced 16.0.R1

number-down [number-lag-port-down] *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints**

Description Enter the number-down context

Introduced 16.0.R1

[number-lag-port-down] *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints number-down** *number*

Description Number of lag ports down

Range 1 to 64

Introduced 16.0.R1

Notes This element is part of a list key

level *number*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints number-down** *number*

Description Level to be associated with this number of lag ports that are down

Range 1 to 8

Introduced 16.0.R1

Notes This element is mandatory

use-lag-port-weight *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac mc-constraints**

Description Use LAG port weight while calculating Multicast CAC constraints

Default false

Introduced 16.0.R1

policy *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

mvr

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Enter the mvr context

Introduced 16.0.R1

from-vpls *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping mvr**

Description MVR VPLS from which the multicast channels are taken

Reference configure **service vpls** *service-name*

Introduced 16.0.R1

query-interval *number*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**
Description	Time between group-specific query messages
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**
Description	Number of retries to cope with message loss
Range	2 to 7
Default	2
Introduced	16.0.R1

send-queries *boolean*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description Generate IGMP general queries

Default false

Introduced 16.0.R1

version *keyword*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters igmp-snooping**

Description IGMP version

Default 3

Options 1, 2, 3

Introduced 16.0.R1

ingress

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**

Description Enter the ingress context

Introduced 16.0.R1

qos

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters ingress**

Description Enter the qos context

Introduced 16.0.R4

policy-name *string*

Context **configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters ingress qos**

Description Configure the SAP-ingress QoS policy.

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R4

queuing-type *keyword*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters ingress qos**
Description	Configure the ingress queuing type.
Default	multipoint-shared
Options	multipoint-shared, service
Introduced	16.0.R4

mac-da-hashing *boolean*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**
Description	Include hashing on MAC DA ISO subscriber ID
Default	false
Introduced	16.0.R1

split-horizon-group *string*

Context	**configure subscriber-mgmt msap-policy** *string* **vpls-only-sap-parameters**
Description	Name of the split horizon group for the MSAP
String Length	1 to 32
Introduced	16.0.R1

pim-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the pim-policy context
Max. Elements	1
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt pim-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt pim-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ppp-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the ppp-policy context
Max. Elements	256
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

allow-same-circuit-id-for-dhcp *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Allow multiple PPPoE sessions with the same MAC address and circuit ID for a specific SAP
Default	false
Introduced	16.0.R1

cookies *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Enable/disable the use of AC-Cookie tags.
Default	true
Introduced	16.0.R1

default-pap-password *encrypted-leaf*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Default PAP password to be used when the PPP client does not provide a password
String Length	1 to 114
Introduced	16.0.R1

default-user-name *string*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Default PPP username to be used when the PPP client does not provide a username
String Length	1 to 253
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

force-ppp-mtu-gt-1492 *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Force the PPPoE MTU size to go above 1492 without RFC 4638.
Default	false
Introduced	16.0.R1

ipcp-subnet-negotiation *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Allow IPCP subnet negotiation for PPPoE hosts
Default	false
Introduced	16.0.R1

keepalive

Context **configure subscriber-mgmt ppp-policy** *string*

Description Enter the keepalive context

Introduced 16.0.R1

hold-up-multiplier *number*

Context **configure subscriber-mgmt ppp-policy** *string* **keepalive**

Description PPP keepalive multiplier

Range 1 to 5

Default 3

Introduced 16.0.R1

interval *number*

Context **configure subscriber-mgmt ppp-policy** *string* **keepalive**

Description PPP keepalive interval

Range 4 to 300

Default 30

Units seconds

Introduced 16.0.R1

lcp-ignore-magic-numbers *boolean*

Context **configure subscriber-mgmt ppp-policy** *string*

Description Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked

Default false

Introduced 16.0.R1

max-sessions-per-mac *number*

Context **configure subscriber-mgmt ppp-policy** *string*

Description Maximum sessions per MAC

Range 1 to 8191

Default 1

Introduced 16.0.R1

mlppp

Context **configure subscriber-mgmt ppp-policy** *string*

Description Enter the mlppp context

Introduced 16.0.R1

accept-mrru *boolean*

Context **configure subscriber-mgmt ppp-policy** *string* **mlppp**

Description Accept multilink MRRU LCP option

Default false

Introduced 16.0.R1

endpoint

Context **configure subscriber-mgmt ppp-policy** *string* **mlppp**

Description Enter the endpoint context

Introduced 16.0.R1

ip (*string* | *keyword*)

Context **configure subscriber-mgmt ppp-policy** *string* **mlppp endpoint**

Description Endpoint ID as an IP address

Introduced 16.0.R1

Notes This element is part of a choice

mac (*string* | *keyword*)

Context **configure subscriber-mgmt ppp-policy** *string* **mlppp endpoint**

Description Endpoint ID as a MAC address

Introduced 16.0.R1

Notes This element is part of a choice

short-sequence-numbers *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string* **mlppp**
Description	Request a peer to send short sequence numbers
Default	false
Introduced	16.0.R1

pado-ac-name *string*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Configure the Access-Concentrator-Name to send with a PADO.
String Length	1 to 128
Introduced	16.0.R1

pado-delay *number*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Delay timeout before sending a PADO
Range	1 to 30
Units	deciseconds
Introduced	16.0.R1

ppp-authentication *keyword*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	PPP authentication protocol to negotiate
Default	pref-chap
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1

ppp-chap-challenge-length

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Enter the ppp-chap-challenge-length context
Introduced	16.0.R1

max *number*

Context **configure subscriber-mgmt ppp-policy** *string* **ppp-chap-challenge-length**

Description Maximum length for the PPP CHAP challenge

Range 8 to 64

Default 64

Introduced 16.0.R1

min *number*

Context **configure subscriber-mgmt ppp-policy** *string* **ppp-chap-challenge-length**

Description Minimum length for the PPP CHAP challenge

Range 8 to 64

Default 32

Introduced 16.0.R1

ppp-initial-delay *boolean*

Context **configure subscriber-mgmt ppp-policy** *string*

Description Select delay timeout before starting the PPP stack

Default false

Introduced 16.0.R1

ppp-mtu *number*

Context **configure subscriber-mgmt ppp-policy** *string*

Description Maximum PPP MTU size

Range 512 to 9212

Introduced 16.0.R1

ppp-options

Context **configure subscriber-mgmt ppp-policy** *string*

Description Enter the ppp-options context

Introduced 16.0.R1

custom-option protocol *keyword* **option-number** *number*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options**
Description	Enter the custom-option context
Introduced	16.0.R1

protocol *keyword*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	Protocol for the custom PPP option
Options	lcp, ipcp, ipv6cp
Introduced	16.0.R1
Notes	This element is part of a list key

option-number *number*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	PPP option number
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv4-address*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	IP address for the custom PPP option
Introduced	16.0.R1
Notes	This element is part of a choice

ascii-string *string*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	ASCII string for the customer PPP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	Configure an empty PPP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure subscriber-mgmt ppp-policy** *string* **ppp-options custom-option protocol** *keyword* **option-number** *number*
Description	Hexadecimal string for the custom PPP option
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

re-establish-session *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Reconnect and override an existing session
Default	false
Introduced	16.0.R1

reject-unconfigured-ncp *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Enable/disable reject unconfigured NCP.
Default	false
Introduced	16.0.R1

reply-on-padt *boolean*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Enable/disable reply on PADT packets.
Default	false
Introduced	16.0.R1

session-timeout *number*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Session timeout interval
Range	1 to 31104000
Units	seconds
Introduced	16.0.R1

unique-sid *keyword*

Context	**configure subscriber-mgmt ppp-policy** *string*
Description	Mode that the session-ids is allocated
Default	per-sap-mac
Options	per-sap, per-sap-mac, per-msap
Introduced	16.0.R1

pppoe-client-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the pppoe-client-policy context
Max. Elements	256
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt pppoe-client-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt pppoe-client-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

keepalive

Context	**configure subscriber-mgmt pppoe-client-policy** *string*
Description	Enter the keepalive context
Introduced	16.0.R1

hold-up-multiplier *number*

Context	**configure subscriber-mgmt pppoe-client-policy** *string* **keepalive**
Description	PPPoE keepalive multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure subscriber-mgmt pppoe-client-policy** *string* **keepalive**
Description	PPPoE keepalive interval
Range	10 to 300
Default	30
Units	seconds
Introduced	16.0.R1

mru *number*

Context	**configure subscriber-mgmt pppoe-client-policy** *string*
Description	PPPoE MRU
Range	512 to 9154
Default	1492
Introduced	16.0.R1

mtu *number*

Context **configure subscriber-mgmt pppoe-client-policy** *string*
Description PPPoE MTU
Range 512 to 9154
Default 1492
Introduced 16.0.R1

python-policy *string*

Context **configure subscriber-mgmt pppoe-client-policy** *string*
Description Python policy to be applied to all messages in the PPPoE client policy
Reference configure **python python-policy** *string*
Introduced 16.0.R1

restart-backoff

Context **configure subscriber-mgmt pppoe-client-policy** *string*
Description Enter the restart-backoff context
Introduced 16.0.R1

initial-time *number*

Context **configure subscriber-mgmt pppoe-client-policy** *string* **restart-backoff**
Description Initial backoff time
Range 10 to 3600
Default 30
Units seconds
Introduced 16.0.R1

max-time *number*

Context **configure subscriber-mgmt pppoe-client-policy** *string* **restart-backoff**
Description Maximum backoff time
Range 10 to 3600
Default 600
Units seconds
Introduced 16.0.R1

stack

Context	**configure subscriber-mgmt pppoe-client-policy** *string*
Description	Enter the stack context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure subscriber-mgmt pppoe-client-policy** *string* **stack**
Description	Start IPCP to retrieve an IPv4 address
Default	true
Introduced	16.0.R1

ipv6-slaac *boolean*

Context	**configure subscriber-mgmt pppoe-client-policy** *string* **stack**
Description	Start IPv6CP and use SLAAC to retrieve an IPv6 prefix
Default	false
Introduced	16.0.R1

radius-accounting-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the radius-accounting-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

acct-tunnel-connection-fmt *ascii-specification*

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Configure the accounting tunnel connection ascii-specification.
String Length	1 to 253
Default	%n
Introduced	16.0.R1

custom-record

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Enter the custom-record context
Introduced	16.0.R1

override-counter [id] *number*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record**
Description	Enter the override-counter context
Introduced	16.0.R1

[id] *number*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number*
Description	Identification of a custom-record HSMDA override counter
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

e-counters

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number*
Description	Enter the e-counters context
Introduced	16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the out-profile octets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the out-profile packets discarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **e-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

i-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number*

Description Enter the i-counters context

Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the all octets offered count

Default false

Introduced 16.0.R1

all-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include all packets offered count

Default false

Introduced 16.0.R1

high-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the high octets discarded count

Default false

Introduced 16.0.R1

high-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the high packets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

low-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the low octets discarded count

Default false

Introduced 16.0.R1

low-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the low packets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number* **i-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

queue [id] *number*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record**

Description Enter the queue context

Introduced 16.0.R1

[id] *number*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number*

Description Custom record queue ID

Range 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

e-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number*

Description Enter the e-counters context

Introduced 16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the out-profile octets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the out-profile packets discarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **e-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

i-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number*

Description Enter the i-counters context

Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the all octets offered count

Default false

Introduced 16.0.R1

all-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include all packets offered count

Default false

Introduced 16.0.R1

high-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the high octets discarded count

Default false

Introduced 16.0.R1

high-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the high octets offered count

Default false

Introduced 16.0.R1

high-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the high packets discarded count

Default false

Introduced 16.0.R1

high-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the high packets offered count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

low-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the low octets discarded count

Default false

Introduced 16.0.R1

low-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the low octets offered count

Default false

Introduced 16.0.R1

low-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the low packets discarded count

Default false

Introduced 16.0.R1

low-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the low packets offered count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

uncoloured-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the uncolored octets offered count

Default false

Introduced 16.0.R1

uncoloured-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number* **i-counters**

Description Include the uncolored packets offered count

Default false

Introduced 16.0.R1

ref-override-counter

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record**

Description Enter the ref-override-counter context

Introduced 16.0.R1

all

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter**

Description Override counters that are referenced

Introduced 16.0.R1

Notes This element is part of a choice

e-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter**

Description Enter the e-counters context

Introduced 16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the out-profile octets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the out-profile packets discarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter e-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

i-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter**

Description Enter the i-counters context

Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include the all octets offered count

Default false

Introduced 16.0.R1

all-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include all packets offered count

Default false

Introduced 16.0.R1

high-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include the high octets discarded count

Default false

Introduced 16.0.R1

high-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include the high packets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

low-octets-discarded-count *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**
Description	Include the low octets discarded count
Default	false
Introduced	16.0.R1

low-packets-discarded-count *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**
Description	Include the low packets discarded count
Default	false
Introduced	16.0.R1

out-profile-octets-forwarded-count *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**
Description	Include the out-of-profile octets forwarded count
Default	false
Introduced	16.0.R1

out-profile-packets-forwarded-count *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter i-counters**
Description	Include the out-of-profile packets forwarded count
Default	false
Introduced	16.0.R1

id *string*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-override-counter**

Description Override counter identity

Reference configure **subscriber-mgmt radius-accounting-policy** *string* **custom-record override-counter** *number*

Introduced 16.0.R1

Notes This element is part of a choice

ref-queue

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record**

Description Enter the ref-queue context

Introduced 16.0.R1

all

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue**

Description All referenced queues

Introduced 16.0.R1

Notes This element is part of a choice

e-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue**

Description Enter the e-counters context

Introduced 16.0.R1

in-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the in-profile octets discarded count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the in-profile packets discarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

out-profile-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the out-profile octets discarded count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the out-profile packets discarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue e-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

i-counters

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue**

Description Enter the i-counters context

Introduced 16.0.R1

all-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the all octets offered count

Default false

Introduced 16.0.R1

all-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include all packets offered count

Default false

Introduced 16.0.R1

high-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the high octets discarded count

Default false

Introduced 16.0.R1

high-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the high octets offered count

Default false

Introduced 16.0.R1

high-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the high packets discarded count

Default false

Introduced 16.0.R1

high-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the high packets offered count

Default false

Introduced 16.0.R1

in-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the in-profile octets forwarded count

Default false

Introduced 16.0.R1

in-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the in-profile packets forwarded count

Default false

Introduced 16.0.R1

low-octets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the low octets discarded count

Default false

Introduced 16.0.R1

low-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the low octets offered count

Default false

Introduced 16.0.R1

low-packets-discarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the low packets discarded count

Default false

Introduced 16.0.R1

low-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the low packets offered count

Default false

Introduced 16.0.R1

out-profile-octets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the out-of-profile octets forwarded count

Default false

Introduced 16.0.R1

out-profile-packets-forwarded-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the out-of-profile packets forwarded count

Default false

Introduced 16.0.R1

uncoloured-octets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the uncolored octets offered count

Default false

Introduced 16.0.R1

uncoloured-packets-offered-count *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue i-counters**

Description Include the uncolored packets offered count

Default false

Introduced 16.0.R1

id *string*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record ref-queue**
Description	Queue ID
Reference	configure **subscriber-mgmt radius-accounting-policy** *string* **custom-record queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

significant-change *number*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **custom-record**
Description	Significant change required to generate the record
Range	0 to max
Introduced	16.0.R1

delay-start-time *number*

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Accounting start delay
Range	1 to 10
Units	seconds
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

host-accounting

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Enter the host-accounting context
Introduced	16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **host-accounting**
Description Administrative state of per-host accounting
Default disable
Options enable, disable
Introduced 16.0.R1

interim-update *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **host-accounting**
Description Allow interim-update accounting messages to be sent
Default false
Introduced 16.0.R1

include-radius-attribute

Context **configure subscriber-mgmt radius-accounting-policy** *string*
Description Enter the include-radius-attribute context
Introduced 16.0.R1

access-loop-options *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Enable/disable include of the access-loop-options attribute.
Default false
Introduced 16.0.R1

acct-authentic *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Enable/disable include of the acct-authentic attribute.
Default false
Introduced 16.0.R1

acct-delay-time *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the acct-delay-time attribute.

Default false

Introduced 16.0.R1

acct-triggered-reason *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include Alc-Acct-Triggered-Reason attribute

Default false

Introduced 16.0.R1

all-authorized-session-addresses *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include all included and authorized address/prefix attributes in session accounting

Default false

Introduced 16.0.R1

apn *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the APN attribute.

Default false

Introduced 16.0.R1

bearer-fteid *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include bearer-fteid attribute

Default false

Introduced 16.0.R1

bonding-active-connections *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable including the Radius attribute Alc-Bonding-Active-Connections.

Default false

Introduced 16.0.R1

bonding-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable including the Radius attribute Alc-Bonding-Id.

Default false

Introduced 16.0.R1

brg-num-active-sessions *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable including the Radius attribute Alc-BRG-Num-Active-Sessions.

Default false

Introduced 16.0.R1

called-station-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include called-station-id attribute

Default false

Introduced 16.0.R1

calling-station-id

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enter the calling-station-id context

Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute calling-station-id**

Description Specifies the calling-station-id type.

Default sap-string

Options sap-string, mac, sap-id, remote-id, llid

Introduced 16.0.R1

circuit-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include circuit-id attribute

Default false

Introduced 16.0.R1

delegated-ipv6-prefix *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include delegated-ipv6-prefix attribute

Default false

Introduced 16.0.R1

detailed-acct-attributes *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include more detailed accounting attributes

Default true

Introduced 16.0.R1

dhcp-vendor-class-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the IPOE-Vendor-Class-Id RADIUS attribute.

Default false

Introduced 16.0.R1

error-code *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include detailed error codes
Default false
Introduced 16.0.R1

firewall-info *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Enable/disable include of the firewall information attribute.
Default false
Introduced 16.0.R1

framed-interface-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include framed-interface-id attribute
Default false
Introduced 16.0.R1

framed-ip-address *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include framed-ip-address attribute
Default false
Introduced 16.0.R1

framed-ip-netmask *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include framed-ip-netmask attribute
Default false
Introduced 16.0.R1

framed-ipv6-prefix *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include framed-ipv6-prefix attribute

Default false

Introduced 16.0.R1

framed-ipv6-route *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include framed-ipv6-route attribute

Default false

Introduced 16.0.R1

framed-route *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include framed-route attribute

Default false

Introduced 16.0.R1

imei *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the IMEI attribute.

Default false

Introduced 16.0.R1

ipv6-address *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include IPv6 address attribute

Default false

Introduced 16.0.R1

lanext-bridge-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the lanext-bridge-id attribute.

Default false

Introduced 16.0.R1

lanext-device-type *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the lanext-device-type attribute.

Default false

Introduced 16.0.R1

lanext-route-distinguisher *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the lanext-route-distinguisher attribute.

Default false

Introduced 16.0.R1

lanext-route-target *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the lanext-route-target attribute.

Default false

Introduced 16.0.R1

lanext-vni *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the lanext-vni attribute.

Default false

Introduced 16.0.R1

mac-address *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the MAC-Address attribute.
Default	false
Introduced	16.0.R1

msisdn *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the MSISDN attribute.
Default	false
Introduced	16.0.R1

nas-identifier *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the NAS-Identifier attribute.
Default	false
Introduced	16.0.R1

nas-port

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enter the nas-port context
Introduced	16.0.R1

bit-spec *binary-specification*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute nas-port**
Description	RADIUS NAS-Port attribute
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

nas-port-id

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enter the nas-port-id context

Introduced 16.0.R1

prefix-string *string*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute nas-port-id**

Description String to be prefixed to the NAS-Port-Id attribute

String Length 1 to 8

Introduced 16.0.R1

suffix *keyword*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute nas-port-id**

Description String to be suffixed to the NAS-Port-Id attribute

Options circuit-id, remote-id

Introduced 16.0.R1

nas-port-type

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enter the nas-port-type context

Introduced 16.0.R1

type (*keyword* | *number*)

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute nas-port-type**

Description Value for RADIUS NAS-Port-Type attribute

Range 0 to 255

Default rfc-aligned

Options rfc-aligned

Introduced 16.0.R1

nat-port-range *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include NAT port range attribute
Default false
Introduced 16.0.R1

remote-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include remote-id attribute
Default false
Introduced 16.0.R1

sla-profile *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include sla-profile attribute
Default false
Introduced 16.0.R1

spi-sharing-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include spi-sharing-id attribute
Default false
Introduced 16.0.R1

std-acct-attributes *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description Include standard accounting attributes
Default false
Introduced 16.0.R1

steering-profile *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable including the Radius attribute Alc-Steering-Profile.

Default false

Introduced 16.0.R1

sub-profile *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include sub-profile attribute

Default false

Introduced 16.0.R1

subscriber-id *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Include subscriber-id attribute

Default false

Introduced 16.0.R1

tunnel-client-attrs *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of tunnel-client attributes.

Default false

Introduced 16.0.R1

tunnel-server-attrs *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of tunnel-server attributes.

Default false

Introduced 16.0.R1

uli *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Generate the ULI RADIUS attribute

Default false

Introduced 16.0.R1

user-name *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of user-name attribute.

Default false

Introduced 16.0.R1

v6-aggregate-stats *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Report IPv6 aggregated forwarded octet and packet counters using RADIUS VSAs

Default false

Introduced 16.0.R1

wifi-num-attached-ues *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable including the Alc-Num-Attached-UEs RADIUS attribute.

Default false

Introduced 16.0.R1

wifi-rssi *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**

Description Enable/disable include of the 802.11 Received Signal Strength Indication attribute.

Default false

Introduced 16.0.R1

wifi-ssid-vlan *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enable/disable including the per-SSID VLAN ID in Alc-Wlan-SSID-VLAN.
Default	false
Introduced	16.0.R1

xconnect-tunnel-home-address *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **include-radius-attribute**
Description	Enable/disable include of Alc-Xconnect-Tunnel-Home-Ipv6 attribute.
Default	false
Introduced	16.0.R3

queue-instance-accounting

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Enter the queue-instance-accounting context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **queue-instance-accounting**
Description	Administrative state of per-queue-instance accounting
Default	enable
Options	enable, disable
Introduced	16.0.R1

interim-update *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **queue-instance-accounting**
Description	Send accounting interim-update messages for the queue instance
Default	true
Introduced	16.0.R1

radius-server-policy *string*

Context **configure subscriber-mgmt radius-accounting-policy** *string*

Description RADIUS server policy

Reference configure **aaa radius server-policy** *string*

Introduced 16.0.R1

session-accounting

Context **configure subscriber-mgmt radius-accounting-policy** *string*

Description Enter the session-accounting context

Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **session-accounting**

Description Administrative state of per-session accounting

Default disable

Options enable, disable

Introduced 16.0.R1

host-update *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **session-accounting**

Description Allow host updates

Default false

Introduced 16.0.R1

interim-update *boolean*

Context **configure subscriber-mgmt radius-accounting-policy** *string* **session-accounting**

Description Allow interim-update accounting messages to be sent

Default false

Introduced 16.0.R1

session-id-format *keyword*

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Format used in accounting session ID attributes
Default	description
Options	description, number
Introduced	16.0.R1

triggered-updates

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Enter the triggered-updates context
Introduced	16.0.R1

gtp-mobility *boolean*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **triggered-updates**
Description	Enable/disable gtp triggered updates.
Default	false
Introduced	16.0.R1

update-interval

Context	**configure subscriber-mgmt radius-accounting-policy** *string*
Description	Enter the update-interval context
Introduced	16.0.R1

interval *number*

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **update-interval**
Description	Intermediate update interval
Range	5 to 259200
Units	minutes
Introduced	16.0.R1

jitter (*keyword* | *number*)

Context	**configure subscriber-mgmt radius-accounting-policy** *string* **update-interval**
Description	Intermediate update interval jitter
Range	0 to 3600
Default	auto
Units	seconds
Options	auto
Introduced	16.0.R1

radius-authentication-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the radius-authentication-policy context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fallback

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	Enter the fallback context
Introduced	16.0.R1

action

Context **configure subscriber-mgmt radius-authentication-policy** *string* **fallback**
Description Enter the action context
Introduced 16.0.R1

accept

Context **configure subscriber-mgmt radius-authentication-policy** *string* **fallback action**
Description Automatically accept all authentication requests
Introduced 16.0.R1
Notes This element is part of a choice

user-db *string*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **fallback action**
Description Local user database used to authenticate to the server
String Length 0 to 255
Introduced 16.0.R1
Notes This element is part of a choice

force-probing *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **fallback**
Description Enable force probing
Default false
Introduced 16.0.R1

include-radius-attribute

Context **configure subscriber-mgmt radius-authentication-policy** *string*
Description Enter the include-radius-attribute context
Introduced 16.0.R1

access-loop-options *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enable/disable include of the access-loop-options attribute.

Default false

Introduced 16.0.R1

acct-session-id

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enter the acct-session-id context

Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute acct-session-id**

Description Specifies the accounting-session-id type.

Default host

Options host, session

Introduced 16.0.R1

apn *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enable/disable include of the APN attribute.

Default false

Introduced 16.0.R1

called-station-id *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Include called-station-id attribute

Default false

Introduced 16.0.R1

calling-station-id

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enter the calling-station-id context

Introduced 16.0.R1

type *keyword*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute calling-station-id**

Description Specifies the calling-station-id type.

Default sap-string

Options sap-string, mac, sap-id, remote-id, llid

Introduced 16.0.R1

circuit-id *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Include circuit-id attribute

Default false

Introduced 16.0.R1

dhcp-options *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Generate the DHCP options RADIUS attribute

Default false

Introduced 16.0.R1

dhcp-vendor-class-id *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enable/disable include of the IPOE-Vendor-Class-Id RADIUS attribute.

Default false

Introduced 16.0.R1

dhcp6-options *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Generate the DHCPv6 options RADIUS attribute
Default	false
Introduced	16.0.R1

gprs-negotiated-qos-profile *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Generate the GPRS negotiated QoS profile RADIUS attribute
Default	false
Introduced	16.0.R1

imei *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the IMEI attribute.
Default	false
Introduced	16.0.R1

mac-address *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the MAC-Address attribute.
Default	false
Introduced	16.0.R1

msisdn *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the MSISDN attribute.
Default	false
Introduced	16.0.R1

nas-identifier *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable include of the NAS-Identifier attribute.
Default	false
Introduced	16.0.R1

nas-port

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enter the nas-port context
Introduced	16.0.R1

bit-spec *binary-specification*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute nas-port**
Description	RADIUS NAS-Port attribute
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

nas-port-id

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enter the nas-port-id context
Introduced	16.0.R1

prefix-string *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute nas-port-id**
Description	String to be prefixed to the NAS-Port-Id attribute
String Length	1 to 8
Introduced	16.0.R1

suffix *keyword*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute nas-port-id**

Description String to be suffixed to the NAS-Port-Id attribute

Options circuit-id, remote-id

Introduced 16.0.R1

nas-port-type

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enter the nas-port-type context

Introduced 16.0.R1

type (*keyword* | *number*)

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute nas-port-type**

Description Value for RADIUS NAS-Port-Type attribute

Range 0 to 255

Default rfc-aligned

Options rfc-aligned

Introduced 16.0.R1

pppoe-service-name *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Generate the pppoe-service-name RADIUS attribute

Default false

Introduced 16.0.R1

rat-type *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Generate the RAT type RADIUS attribute

Default false

Introduced 16.0.R1

remote-id *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Include remote-id attribute

Default false

Introduced 16.0.R1

sap-session-index *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Generate the per-SAP unique session index

Default false

Introduced 16.0.R1

tunnel-server-attrs *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Enable/disable include of tunnel-server attributes.

Default false

Introduced 16.0.R1

uli *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**

Description Generate the ULI RADIUS attribute

Default false

Introduced 16.0.R1

wifi-num-attached-ues *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable including the Alc-Num-Attached-UEs RADIUS attribute.
Default	false
Introduced	16.0.R1

wifi-ssid-vlan *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable including the per-SSID VLAN ID in Alc-Wlan-SSID-VLAN.
Default	false
Introduced	16.0.R1

xconnect-tunnel-home-address *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **include-radius-attribute**
Description	Enable/disable include of Alc-Xconnect-Tunnel-Home-Ipv6 attribute.
Default	false
Introduced	16.0.R5

password *encrypted-leaf*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	RADIUS request password
String Length	1 to 114
Introduced	16.0.R1

ppp-user-name

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	Enter the ppp-user-name context
Introduced	16.0.R1

domain-name *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **ppp-user-name**
Description	Specifies the domain-name to use with user-name operations.
String Length	1 to 128
Introduced	16.0.R1

domain-operation *user-name-format-domain-operation*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **ppp-user-name**
Description	Specifies the operation to perform on the user-name.
Options	append, strip, replace, default
Introduced	16.0.R1

pppoe-access-method *keyword*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	PPPoE access method
Default	padi
Options	none, padi, pap-chap
Introduced	16.0.R1

radius-server-policy *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	RADIUS server policy
Reference	configure **aaa radius server-policy** *string*
Introduced	16.0.R1

re-authentication *boolean*

Context	**configure subscriber-mgmt radius-authentication-policy** *string*
Description	Enable re-authentication on IPOE renewal
Default	false
Introduced	16.0.R1

send-acct-stop-on-fail

Context **configure subscriber-mgmt radius-authentication-policy** *string*

Description Enter the send-acct-stop-on-fail context

Introduced 16.0.R1

on-accept-failure *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **send-acct-stop-on-fail**

Description Send accounting-stop on host authentication and instantiation failure after access-accept.

Default false

Introduced 16.0.R1

on-reject *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **send-acct-stop-on-fail**

Description Send accounting-stop on access-reject.

Default false

Introduced 16.0.R1

on-request-failure *boolean*

Context **configure subscriber-mgmt radius-authentication-policy** *string* **send-acct-stop-on-fail**

Description Send accounting-stop on request failure.

Default false

Introduced 16.0.R1

user-name

Context **configure subscriber-mgmt radius-authentication-policy** *string*

Description Enter the user-name context

Introduced 16.0.R1

domain-name *string*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **user-name**
Description	Specifies the domain-name to use with user-name operations.
String Length	1 to 128
Introduced	16.0.R1

domain-operation *user-name-format-domain-operation*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **user-name**
Description	Specifies the operation to perform on the user-name.
Options	append, strip, replace, default
Introduced	16.0.R1

format *keyword*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **user-name**
Description	How user is represented when contacting RADIUS server
Default	mac
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, ppp-user-name
Introduced	16.0.R1

gtp-format *keyword*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **user-name**
Description	Format of the GTP username
Default	imsi
Options	imsi, imsi-apn
Introduced	16.0.R1

mac-format *mac-specification*

Context	**configure subscriber-mgmt radius-authentication-policy** *string* **user-name**
Description	Specifies how the MAC address gets formatted.
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

rip-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the rip-policy context
Max. Elements	255
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt rip-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

authentication-key *encrypted-leaf*

Context	**configure subscriber-mgmt rip-policy** *string*
Description	Set authentication key.
String Length	1 to 50
Introduced	16.0.R1

authentication-type *keyword*

Context	**configure subscriber-mgmt rip-policy** *string*
Description	Set authentication type.
Options	password, message-digest, message-digest-20
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt rip-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

router-advertisement-policy [name] *external-named-item*

Context	**configure subscriber-mgmt**
Description	Enter the router-advertisement-policy context
Max. Elements	16
Introduced	16.0.R1

[name] *external-named-item*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item*
Description	Router advertisement policy name
Introduced	16.0.R1
Notes	This element is part of a list key

force-mcast *keyword*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item*
Description	Send router advertisement to a multicast address instead of unicast for IPoE
Options	ip, ip-mac
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item*
Description	Maximum advertisement interval
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item*
Description	Minimum advertisement interval
Range	900 to 1350
Default	900
Units	seconds
Introduced	16.0.R1

options

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item*

Description Enter the options context

Introduced 16.0.R1

current-hop-limit *number*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**

Description Hop limit to be advertised

Range 0 to 255

Default 64

Introduced 16.0.R1

dns

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**

Description Enter the dns context

Introduced 16.0.R1

include-rdnss *boolean*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options dns**

Description Include the RDNSS server option 25

Default false

Introduced 16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options dns**

Description Maximum time for the RDNSS address to remain valid

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

managed-configuration *boolean*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description Managed address configuration flag
Default false
Introduced 16.0.R1

mtu (*number* | *keyword*)

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description Advertised MTU value
Range 1280 to 9212
Default not-included
Units bytes
Options not-included
Introduced 16.0.R1

other-stateful-configuration *boolean*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description Other stateful configuration flag
Default false
Introduced 16.0.R1

reachable-time *number*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description Neighbor discovery reachable time that is advertised for this group interface
Range 0 to 3600000
Default 0
Units milliseconds
Introduced 16.0.R1

retransmit-timer *number*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description	Neighbor discovery retrasnmit timer that is advertised for this group interface
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1

router-lifetime (*number* | *keyword*)

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **options**
Description	Router lifetime
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1

prefix-options

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item*
Description	Enter the prefix-options context
Introduced	16.0.R1

stateful

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options**
Description	Enter the stateful context
Introduced	16.0.R1

auto-lifetimes *boolean*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateful**
Description	Use automatic lifetimes for stateful prefixes
Default	false
Introduced	16.0.R1

on-link *boolean*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateful**
Description	Assign the prefix to an interface on the specified link
Default	true
Introduced	16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateful**
Description	Time for a prefix to remain preferred
Default	3600
Units	seconds
Introduced	16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateful**
Description	Time for a prefix to remain valid
Default	86400
Units	seconds
Introduced	16.0.R1

stateless

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options**

Description Enter the stateless context

Introduced 16.0.R1

on-link *boolean*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateless**

Description Assign the prefix to an interface on the specified link

Default true

Introduced 16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateless**

Description Time for a prefix to remain preferred

Default 3600

Units seconds

Introduced 16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context **configure subscriber-mgmt router-advertisement-policy** *external-named-item* **prefix-options stateless**

Description Time for a prefix to remain valid

Default 86400

Units seconds

Introduced 16.0.R1

shcv-policy [name] *external-named-item*

Context **configure subscriber-mgmt**

Description Enter the shcv-policy context

Max. Elements 64

Introduced 16.0.R1

[name] *external-named-item*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Policy name
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

layer-3

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Enter the layer-3 context
Introduced	16.0.R1

source-ip-origin *host-connectivity-verify-source-ip-origin*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **layer-3**
Description	Origin of the source IP address for connectivity verification.
Default	interface
Options	interface, vrrp
Introduced	16.0.R1

periodic

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Enter the periodic context
Introduced	16.0.R1

action *host-connectivity-verify-action*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **periodic**
Description	Action when periodic connectivity verification fails
Default	alarm
Options	alarm, remove
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **periodic**
Description	Administrative state of periodic connectivity verification
Default	enable
Options	enable, disable
Introduced	16.0.R1

interval *host-connectivity-verify-interval*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **periodic**
Description	Interval between periodic connectivity verification.
Range	1 to 6000
Default	30
Introduced	16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **periodic**
Description	Number of retransmissions in periodic connectivity verification.
Range	1 to 29
Default	2
Introduced	16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **periodic**
Description	Timeout before a periodic connectivity verification is retransmitted.
Range	1 to 60
Default	10
Introduced	16.0.R1

trigger

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Enter the trigger context
Introduced	16.0.R1

host-limit-exceeded

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger**
Description	Enter the host-limit-exceeded context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger host-limit-exceeded**
Description	Administrative state of the host-limit-exceeded periodic connectivity verification
Default	enable
Options	enable, disable
Introduced	16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger host-limit-exceeded**
Description	Number of retransmissions in host-limit-exceeded periodic connectivity verification
Range	1 to 29
Default	1
Introduced	16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger host-limit-exceeded**
Description	Timeout before a host-limit-exceeded periodic connectivity verification is retransmitted
Range	1 to 60
Default	1
Introduced	16.0.R1

inactivity

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger**
Description	Enter the inactivity context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger inactivity**
Description	Administrative state of the inactivity periodic connectivity verification
Default	enable
Options	enable, disable
Introduced	16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger inactivity**
Description	Number of retransmissions in inactivity periodic connectivity verification
Range	1 to 29
Default	2
Introduced	16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger inactivity**
Description	Timeout before an inactivity periodic connectivity verification is retransmitted
Range	1 to 60
Default	10
Introduced	16.0.R1

ip-conflict

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger**

Description Enter the ip-conflict context

Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger ip-conflict**

Description Administrative state of the IP conflict periodic connectivity verification

Default enable

Options enable, disable

Introduced 16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger ip-conflict**

Description Number of retransmissions in ip-conflict periodic connectivity verification

Range 1 to 29

Default 1

Introduced 16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger ip-conflict**

Description Timeout before an ip-conflict periodic connectivity verification is retransmitted

Range 1 to 60

Default 1

Introduced 16.0.R1

mac-learning

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger**

Description Enter the mac-learning context

Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mac-learning**
Description Administrative state of the MAC learning periodic connectivity verification
Default enable
Options enable, disable
Introduced 16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mac-learning**
Description Number of retransmissions in mac-learning periodic connectivity verification
Range 1 to 29
Default 2
Introduced 16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mac-learning**
Description Timeout before an mac-learning periodic connectivity verification is retransmitted
Range 1 to 60
Default 10
Introduced 16.0.R1

mobility

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger**
Description Enter the mobility context
Introduced 16.0.R1

admin-state *keyword*

Context **configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mobility**
Description Administrative state of the mobility periodic connectivity verification
Default enable
Options enable, disable
Introduced 16.0.R1

retry-count *host-connectivity-verify-retry-count*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mobility**
Description	Number of retransmissions in mobility periodic connectivity verification
Range	1 to 29
Default	1
Introduced	16.0.R1

timeout *host-connectivity-verify-retry-timeout*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **trigger mobility**
Description	Timeout before an mobility periodic connectivity verification is retransmitted
Range	1 to 60
Default	1
Introduced	16.0.R1

vpls

Context	**configure subscriber-mgmt shcv-policy** *external-named-item*
Description	Enter the vpls context
Introduced	16.0.R1

source-ip *ipv4-unicast-address*

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **vpls**
Description	Source IPv4 address for connectivity verification.
Introduced	16.0.R1

source-mac *mac-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt shcv-policy** *external-named-item* **vpls**
Description	Source MAC address for connectivity verification.
Introduced	16.0.R1

sla-profile [name] *external-named-item*

Context	**configure subscriber-mgmt**
Description	Enter the sla-profile context
Introduced	16.0.R1

[name] *external-named-item*

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Profile name
Introduced	16.0.R1
Notes	This element is part of a list key

credit-control-policy *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Credit policy for this SLA profile
Reference	configure **subscriber-mgmt credit-control-policy** *string*
Introduced	16.0.R1

def-instance-sharing *keyword*

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Default method for SLA Profile Instance sharing of IPoE and PPPoE sessions
Default	per-sap
Options	per-sap, per-session
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context **configure subscriber-mgmt sla-profile** *external-named-item*

Description Enter the egress context

Introduced 16.0.R1

bonding-selection

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress**

Description Enter the bonding-selection context

Introduced 16.0.R1

rate-thresholds

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection**

Description Enter the rate-thresholds context

Introduced 16.0.R1

high *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection rate-thresholds**

Description High threshold rate percentage

Range 56 to 99

Default 90

Units percent

Introduced 16.0.R1

low *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection rate-thresholds**

Description Low threshold rate percentage

Range 55 to 98

Default 80

Units percent

Introduced 16.0.R1

weight

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection**

Description Enter the weight context

Introduced 16.0.R1

change *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection weight**

Description Weight change of the preferred connection

Range 0 to 10

Default 5

Units percent

Introduced 16.0.R1

initial *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress bonding-selection weight**

Description Initial weight of the preferred connection

Range 1 to 100

Default 100

Units percent

Introduced 16.0.R1

ip-filter *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6-filter *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress**
Description	IPv6 filter
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1

qos

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress**
Description	Enter the qos context
Introduced	16.0.R1

hs-agg-rate *number*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos**
Description	Maximum rate for expanded egress HS queues
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1

qos-marking-from-sap *boolean*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos**
Description	Define the sap-egress qos-policy from which the egress qos marking rules are taken.
Default	true
Introduced	16.0.R1

sap-egress

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos**
Description	Enter the sap-egress context
Introduced	16.0.R1

overrides

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress**

Description Enter the overrides context

Introduced 16.0.R1

hs-queue-stat-mode *keyword*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides**

Description Egress HS queue stats mode

Options v4-v6

Introduced 16.0.R1

hs-wrr-group [id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides**

Description Enter the hs-wrr-group context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides hs-wrr-group** *string*

Description HS WRR group ID

Reference configure **qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*

Introduced 16.0.R1

Notes This element is part of a list key

hs-class-weight *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides hs-wrr-group** *string*

Description Class weight override for WRR group

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides hs-wrr-group** *string*

Description PIR rate override for WRR group

Units kilobps

Introduced 16.0.R1

policer [id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides**

Description Enter the policer context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description Policer ID

Reference configure **qos sap-egress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

Notes This element is part of a list key

cbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description CBS

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description MBS

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description Packet byte offset

Range -64 to 31

Introduced 16.0.R1

rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string* **rate**

Description Specifies CIR override

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string* **rate**

Description Specifies PIR override

Units kilobps

Introduced 16.0.R1

stat-mode *subscriber-egress-policer-stat-mode-type*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides policer** *string*

Description Stat mode for the policer

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, v4-v6, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile

Introduced 16.0.R1

queue [id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides**

Description Enter the queue context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Queue ID

Reference configure **qos sap-egress** *qos-policy-name* **queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

avg-frame-overhead *decimal-number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Average frame overhead

Range 0.00 to 100.00

Units percent

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description CBS

Introduced 16.0.R1

high-prio-only (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description High priority burst size

Units percent

Introduced 16.0.R1

hs-class-weight *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Class-weight override for expanded egress HS queues

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

hs-wred-queue

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Enter the hs-wred-queue context

Introduced 16.0.R4

policy *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string* **hs-wred-queue**

Description Name of slope-policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R4

hs-wrr-weight *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Maximum rate for expanded egress HS queues

Range 1 to 127

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description MBS

Introduced 16.0.R1

rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string* **rate**

Description Specifies CIR override

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string* **rate**

Description Specifies PIR override

Units kilobps

Introduced 16.0.R1

stat-mode *keyword*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress overrides queue** *string*

Description Stat mode for the policer

Options v4-v6

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress**

Description SAP-egress QoS policy

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

port-parent-location *keyword*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos sap-egress**
Description	Scheduling type for queued traffic
Default	port
Options	port, vport
Introduced	16.0.R1

scheduler-policy

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy**
Description	Enter the overrides context
Introduced	16.0.R1

scheduler [scheduler-name] *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy overrides**
Description	Enter the scheduler context
Introduced	16.0.R1

[scheduler-name] *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string*
Description	Scheduler name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Administrative CIR

Default sum

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Administrative PIR

Default max

Units kilobps

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos scheduler-policy**

Description Egress scheduler policy

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

use-ingress-l2tp-dscp *boolean*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress qos**

Description Specify that the DSCP of the ingress L2TP header be used to do egress reclassification.

Default false

Introduced 16.0.R1

report-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress**

Description Enter the report-rate context

Introduced 16.0.R1

agg-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress report-rate**

Description Report the aggregate rate

Introduced 16.0.R1

Notes This element is part of a choice

policer *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress report-rate**

Description Report the rate of the specified policer

Range 1 to 63

Introduced 16.0.R1

Notes This element is part of a choice

pppoe-actual-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress report-rate**

Description Report the rate of the DSL-Forum Vendor-Specific PPPoE Tag.

Introduced 16.0.R1

Notes This element is part of a choice

rfc5515-actual-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **egress report-rate**

Description Report the rate as specified in RFC5515

Introduced 16.0.R1

Notes This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **egress report-rate**
Description	Report the rate of the specified scheduler
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

host-limits

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Enter the host-limits context
Introduced	16.0.R1

ipv4

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits**
Description	Enter the ipv4 context
Introduced	16.0.R1

arp *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv4**
Description	Maximum number of IPv4 ARP hosts
Range	0 to 131071
Introduced	16.0.R1

dhcp *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv4**
Description	Maximum number of IPv4 DHCP hosts
Range	0 to 131071
Introduced	16.0.R1

overall *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv4**

Description Maximum number of IPv4 hosts

Range 0 to 131071

Introduced 16.0.R1

ppp *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv4**

Description Maximum number of IPv4 PPP hosts

Range 0 to 131071

Introduced 16.0.R1

ipv6

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits**

Description Enter the ipv6 context

Introduced 16.0.R1

overall *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**

Description Maximum number of IPv6 hosts

Range 0 to 131071

Introduced 16.0.R1

pd-ipoe-dhcp *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**

Description Maximum number of IPv6-PD IPOE DHCP hosts.

Range 0 to 131071

Introduced 16.0.R1

pd-overall *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**
Description	Maximum number of IPv6-PD hosts.
Range	0 to 131071
Introduced	16.0.R1

pd-ppp-dhcp *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**
Description	Maximum number of IPv6-PD PPP DHCP hosts.
Range	0 to 131071
Introduced	16.0.R1

wan-ipoe-dhcp *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**
Description	Maximum number of IPv6-Wan IPOE DHCP hosts.
Range	0 to 131071
Introduced	16.0.R1

wan-ipoe-slaac *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**
Description	Maximum number of IPv6-Wan IPOE SLAAC hosts.
Range	0 to 131071
Introduced	16.0.R1

wan-overall *sla-profile-host-limit-with-zero*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**
Description	Maximum number of IPv6-Wan hosts.
Range	0 to 131071
Introduced	16.0.R1

wan-ppp-dhcp *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**

Description Maximum number of IPv6-Wan PPP DHCP hosts.

Range 0 to 131071

Introduced 16.0.R1

wan-ppp-slaac *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits ipv6**

Description Maximum number of IPv6-Wan PPP SLAAC hosts.

Range 0 to 131071

Introduced 16.0.R1

lac-overall *sla-profile-host-limit-with-zero*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits**

Description Maximum number of L2TP LAC hosts.

Range 0 to 131071

Introduced 16.0.R1

overall *sla-profile-host-limit*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits**

Description Maximum number of hosts

Range 1 to 131071

Introduced 16.0.R1

remove-oldest *boolean*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **host-limits**

Description Remove oldest

Default false

Introduced 16.0.R1

idle-timeout

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Enter the idle-timeout context
Introduced	16.0.R1

category [category-name] *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **idle-timeout**
Description	Enter the category context
Max. Elements	16
Introduced	16.0.R4

[category-name] *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **idle-timeout category** *string*
Description	Name for the credit control category associated with this SLA profile
Reference	configure **subscriber-mgmt category-map** *string* **category** *string*
Introduced	16.0.R4
Notes	This element is part of a list key

action *keyword*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **idle-timeout category** *string*
Description	The action to be taken when the idle timeout has occurred.
Default	terminate
Options	terminate, shcv
Introduced	16.0.R4

timeout *number*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **idle-timeout category** *string*
Description	The time that this category can stay below its activity-threshold before action is taken.
Range	60 to 15552000
Units	seconds
Introduced	16.0.R4

category-map-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **idle-timeout**
Description	The name of the credit control category map to be used when idle-timeout is enabled for this SLA profile.
Reference	configure **subscriber-mgmt category-map** *string*
Introduced	16.0.R4
Notes	This element is mandatory

ingress

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Enter the ingress context
Introduced	16.0.R1

ip-filter *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress**
Description	IP filter
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6-filter *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress**
Description	IPv6 filter
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1

qos

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress**
Description	Enter the qos context
Introduced	16.0.R1

sap-ingress

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

overrides

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress**

Description Enter the overrides context

Introduced 16.0.R1

policer [id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides**

Description Enter the policer context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description Policer ID

Reference configure **qos sap-ingress** *qos-policy-name* **policer** *number*

Introduced 16.0.R1

Notes This element is part of a list key

cbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description CBS

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description MBS

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description Packet byte offset

Range -32 to 31

Introduced 16.0.R1

rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string* **rate**

Description Specifies CIR override

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string* **rate**

Description Specifies PIR override

Units kilobps

Introduced 16.0.R1

stat-mode *subscriber-ingress-policer-stat-mode-type*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides policer** *string*

Description Stat mode for the policer

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir, v4-v6

Introduced 16.0.R1

queue [id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides**

Description Enter the queue context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides queue** *string*

Description Queue ID

Reference configure **qos sap-ingress** *qos-policy-name* **queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides queue** *string* **rate**

Description Specifies CIR override

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides queue** *string* **rate**

Description Specifies PIR override

Units kilobps

Introduced 16.0.R1

stat-mode *keyword*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress overrides queue** *string*

Description Stat mode for the policer

Options v4-v6

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress**
Description SAP-ingress QoS policy
Reference configure **qos sap-ingress** *qos-policy-name*
Introduced 16.0.R1

queuing-type *keyword*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress qos sap-ingress**
Description Ingress queuing type
Default service
Options service, shared, multipoint-shared
Introduced 16.0.R1

report-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress**
Description Enter the report-rate context
Introduced 16.0.R1

agg-rate

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress report-rate**
Description Report the aggregate rate
Introduced 16.0.R1
Notes This element is part of a choice

policer *number*

Context **configure subscriber-mgmt sla-profile** *external-named-item* **ingress report-rate**
Description Report the rate of the specified policer
Range 1 to 63
Introduced 16.0.R1
Notes This element is part of a choice

pppoe-actual-rate

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress report-rate**
Description	Report the rate of the DSL-Forum Vendor-Specific PPPoE Tag.
Introduced	16.0.R1
Notes	This element is part of a choice

rfc5515-actual-rate

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress report-rate**
Description	Report the rate as specified in RFC5515
Introduced	16.0.R1
Notes	This element is part of a choice

scheduler *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **ingress report-rate**
Description	Report the rate of the specified scheduler
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

one-time-http-redirection

Context	**configure subscriber-mgmt sla-profile** *external-named-item*
Description	Enter the one-time-http-redirection context
Introduced	16.0.R1

ip-filter *string*

Context	**configure subscriber-mgmt sla-profile** *external-named-item* **one-time-http-redirection**
Description	One time HTTP redirection IP filter
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

steering-profile [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the steering-profile context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt steering-profile** *string*
Description	The name of this steering profile.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure subscriber-mgmt steering-profile** *string*
Description	Enter the access context
Introduced	16.0.R1

router-instance *string*

Context	**configure subscriber-mgmt steering-profile** *string* **access**
Description	Specifies the routing instance used for access next-hop.
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt steering-profile** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

network

Context	**configure subscriber-mgmt steering-profile** *string*
Description	Enter the network context
Introduced	16.0.R1

next-hop *ipv4-unicast-address*

Context	**configure subscriber-mgmt steering-profile** *string* **network**
Description	Next-hop IP address used for network next-hop
Introduced	16.0.R1

router-instance *string*

Context	**configure subscriber-mgmt steering-profile** *string* **network**
Description	Specifies the (optional) routing instance used for network next-hop. If not specified, the routing instance that receives downstream packets is used to redirect packets to network next-hop
Introduced	16.0.R1

sub-ident-policy [name] *external-named-item*

Context	**configure subscriber-mgmt**
Description	Enter the sub-ident-policy context
Max. Elements	4
Introduced	16.0.R1

[name] *external-named-item*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Policy name
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

primary

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Enter the primary context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **primary**
Description	Administrative state of script execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

script-url *url*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **primary**
Description	Identification script URL
String Length	1 to 180
Introduced	16.0.R1

secondary

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Enter the secondary context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **secondary**
Description	Administrative state of script execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

script-url *url*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **secondary**
Description	Identification script URL
String Length	1 to 180
Introduced	16.0.R1

sla-profile-map

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Enter the sla-profile-map context
Introduced	16.0.R1

entry [sla-profile-string] *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sla-profile-map**
Description	Enter the entry context
Introduced	16.0.R1

[sla-profile-string] *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sla-profile-map entry** *string*
Description	SLA profile string
String Length	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

sla-profile *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sla-profile-map entry** *string*
Description	SLA profile
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

use-direct-map-as-default *boolean*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sla-profile-map**
Description	Allow direct mapping of SLA profile as default
Default	false
Introduced	16.0.R1

strings-from-option *number*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	IPOE option to get the identification strings
Range	1 to 254
Introduced	16.0.R1

sub-profile-map

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Enter the sub-profile-map context
Introduced	16.0.R1

entry [sub-profile-string] *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sub-profile-map**
Description	Enter the entry context
Introduced	16.0.R1

[sub-profile-string] *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sub-profile-map entry** *string*
Description	Subscriber identification string
String Length	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

sub-profile *string*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sub-profile-map entry** *string*
Description	Subscriber profile
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

use-direct-map-as-default *boolean*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **sub-profile-map**
Description	Allow direct mapping of subscriber profile as default
Default	false
Introduced	16.0.R1

tertiary

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item*
Description	Enter the tertiary context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **tertiary**
Description	Administrative state of script execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

script-url *url*

Context	**configure subscriber-mgmt sub-ident-policy** *external-named-item* **tertiary**
Description	Identification script URL
String Length	1 to 180
Introduced	16.0.R1

sub-mcac-policy [name] *string*

Context	**configure subscriber-mgmt**
Description	Enter the sub-mcac-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure subscriber-mgmt sub-mcac-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure subscriber-mgmt sub-mcac-policy** *string*
Description	Administrative state for this policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

bandwidth

Context	**configure subscriber-mgmt sub-mcac-policy** *string*
Description	Enter the bandwidth context
Introduced	16.0.R1

mandatory (*number* | *keyword*)

Context **configure subscriber-mgmt sub-mcac-policy** *string* **bandwidth**
Description Pre-reserved bandwidth for all mandatory channels.
Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure subscriber-mgmt sub-mcac-policy** *string* **bandwidth**
Description Maximum allowed bandwidth.
Introduced 16.0.R1

description *string*

Context **configure subscriber-mgmt sub-mcac-policy** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

sub-profile [name] *external-named-item*

Context **configure subscriber-mgmt**
Description Enter the sub-profile context
Introduced 16.0.R1

[name] *external-named-item*

Context **configure subscriber-mgmt sub-profile** *external-named-item*
Description Profile name
Introduced 16.0.R1
Notes This element is part of a list key

accounting-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item*
Description Accounting policy
Reference configure **log accounting-policy** *number*
Introduced 16.0.R1

accu-stats-policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Accumulated statistics policy
Reference	configure **subscriber-mgmt accu-stats-policy** *string*
Introduced	16.0.R1

ancp

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Enter the ancp context
Introduced	16.0.R1

ancp-policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **ancp**
Description	ANCP policy for this subscriber profile
Reference	configure **subscriber-mgmt ancp ancp-policy** *string*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Collect statistics
Default	false
Introduced	16.0.R1

description *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description Enter the egress context

Introduced 16.0.R1

lag-per-link-hash

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress**

Description Enter the lag-per-link-hash context

Introduced 16.0.R1

class *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress lag-per-link-hash**

Description Class used to select a LAG link

Range 1 to 3

Default 1

Introduced 16.0.R1

weight *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress lag-per-link-hash**

Description Weight to be associated with SAP when selecting a LAG link

Range 1 to 1024

Default 1

Introduced 16.0.R1

qos

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress**

Description Enter the qos context

Introduced 16.0.R1

agg-rate

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	Enter the agg-rate context
Introduced	16.0.R1

queue-frame-based-accounting *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos agg-rate**
Description	Enable frame-based accounting on all policers and queues associated with context
Default	false
Introduced	16.0.R1

rate *number*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos agg-rate**
Description	Maximum total rate of all egress queues
Range	1 to 800000000
Units	kilobps
Introduced	16.0.R1

encap-offset

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	Enter the encap-offset context
Introduced	16.0.R1

type *keyword*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos encap-offset**
Description	Offset type
Options	pppoa-llc, pppoa-null, pppoeoa-llc, pppoeoa-llc-fcs, pppoeoa-llc-tagged, pppoeoa-llc-tagged-fcs, pppoeoa-null, pppoeoa-null-fcs, pppoeoa-null-tagged, pppoeoa-null-tagged-fcs, ipoa-llc, ipoa-null, ipoeoa-llc, ipoeoa-llc-fcs, ipoeoa-llc-tagged, ipoeoa-llc-tagged-fcs, ipoeoa-null, ipoeoa-null-fcs, ipoeoa-null-tagged, ipoeoa-null-tagged-fcs, pppoe, pppoe-tagged, ipoe, ipoe-tagged
Introduced	16.0.R1

hs-agg-rate *number*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	Maximum rate for single egress HS queues
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1

hs-low-burst-max-class *number*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	The class value that separates what classes use the low priority burst threshold and what classes use the high priority burst threshold.
Range	1 to 6
Default	6
Introduced	16.0.R1

hsmda

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	Enter the hsmda context
Introduced	16.0.R1

agg-rate *number*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda**
Description	HSMDA-2 egress aggregate rate limit
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1

sap-egress

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda**
Description	Enter the sap-egress context
Introduced	16.0.R1

overrides

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress**

Description Enter the overrides context

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides**

Description Specify a packet offset for HSMDA-2 queue accounting.

Range -64 to 31

Introduced 16.0.R1

queue [id] *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides**

Description Enter the queue context

Introduced 16.0.R1

[id] *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides queue** *string*

Description Queue ID

Reference configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

mbs (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides queue** *string*

Description MBS

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides queue** *string*

Description PIR percent rate

Units kilobps

Introduced 16.0.R1

slope-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides queue** *string*

Description HSMDA-2 slope policy

Reference configure **qos hsmda-slope-policy** *string*

Introduced 16.0.R1

wrr-weight *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides queue** *string*

Description HSMDA-2 WRR policy

Range 1 to 32

Introduced 16.0.R1

wrr-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress overrides**

Description HSMDA-2 WRR policy

Reference configure **qos hsmda-wrr-policy** *string*

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress**

Description SAP-egress QoS policy

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

stat-mode *keyword*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos hsmda sap-egress**

Description Specify stat-mode.

Options v4-v6

Introduced 16.0.R5

policer-control-policy

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R1

max-rate (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root**

Description Maximum rate

Units kilobps

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R1

min-thresh-separation (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum threshold separation

Introduced 16.0.R1

priority [level] *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R1

[level] *number*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Specifies the priority level.

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description MBS size

Introduced 16.0.R1

policy-name *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos policer-control-policy**
Description	Policer control policy
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

scheduler-policy

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy**
Description	Enter the overrides context
Introduced	16.0.R1

scheduler [scheduler-name] *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy overrides**
Description	Enter the scheduler context
Introduced	16.0.R1

[scheduler-name] *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string*
Description	Scheduler name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

rate

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR.

Default sum

Units kilobps

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR.

Default max

Units kilobps

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **egress qos scheduler-policy**

Description Sheduler policy

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

firewall-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description Firewall policy

Reference configure **service nat firewall-policy** *external-named-item*

Introduced 16.0.R1

host-tracking-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description Host tracking policy

Reference configure **subscriber-mgmt host-tracking-policy** *string*

Introduced 16.0.R1

hs-sla-mode *keyword*

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description HS board subscriber SLA mode

Default expanded

Options expanded, single

Introduced 16.0.R1

igmp-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description IGMP policy

Reference configure **subscriber-mgmt igmp-policy** *string*

Introduced 16.0.R1

ingress

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description Enter the ingress context

Introduced 16.0.R1

qos

Context **configure subscriber-mgmt sub-profile** *external-named-item* **ingress**

Description Enter the qos context

Introduced 16.0.R1

Units kilobps

Introduced 16.0.R1

policy-name *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item* **ingress qos scheduler-policy**

Description Sheduler policy

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

mld-policy *string*

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description MLD policy

Reference configure **subscriber-mgmt mld-policy** *string*

Introduced 16.0.R1

nat

Context **configure subscriber-mgmt sub-profile** *external-named-item*

Description Enter the nat context

Introduced 16.0.R1

policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **nat**
Description	Apply a NAT policy.
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

prefix-list *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **nat**
Description	Apply a Layer-2-Aware NAT prefix list.
Reference	configure **service nat prefix-list** *string*
Introduced	16.0.R1

pim-policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Protocol Independent Multicast (PIM) policy
Reference	configure **subscriber-mgmt pim-policy** *string*
Introduced	16.0.R1

preference *number*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Preference of this subscriber profile.
Range	1 to 10
Default	5
Introduced	16.0.R1

radius-accounting

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Enter the radius-accounting context
Introduced	16.0.R1

policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **radius-accounting**
Description	RADIUS accounting policies
Reference	configure **subscriber-mgmt radius-accounting-policy** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

session-optimized-stop *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **radius-accounting**
Description	Optimize PPPoE session accounting stop behavior
Default	false
Introduced	16.0.R1

secondary-shaper-hashing *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Include LAG hashing on secondary shaper
Default	false
Introduced	16.0.R1

sla-profile-map

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Enter the sla-profile-map context
Introduced	16.0.R1

entry [sla-profile-string] *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **sla-profile-map**
Description	Enter the entry context
Introduced	16.0.R1

[sla-profile-string] *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **sla-profile-map entry** *string*
Description	SLA profile string
String Length	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

sla-profile *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **sla-profile-map entry** *string*
Description	SLA profile
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

use-direct-map-as-default *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item* **sla-profile-map**
Description	Allow direct mapping of SLA profile as default
Default	false
Introduced	16.0.R1

sub-mcac-policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Subscriber MCAC policy
Reference	configure **subscriber-mgmt sub-mcac-policy** *string*
Introduced	16.0.R1

upnp-policy *string*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Universal Plug 'n Play (UPnP) policy
Reference	configure **service upnp policy** *external-named-item*
Introduced	16.0.R1

volume-stats-type *keyword*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Include non-IP headers in the accounting statistics
Default	l2
Options	l2, ip
Introduced	16.0.R1

vport-hashing *boolean*

Context	**configure subscriber-mgmt sub-profile** *external-named-item*
Description	Include LAG hashing on Vport
Default	false
Introduced	16.0.R1

svlan-statistics

Context	**configure subscriber-mgmt**
Description	Enter the svlan-statistics context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure subscriber-mgmt svlan-statistics**
Description	The administrative state of the collection of Subscriber VLAN statistics
Default	disable
Options	enable, disable
Introduced	16.0.R4

vrgw

Context	**configure subscriber-mgmt**
Description	Enter the vrgw context
Introduced	16.0.R1

brg-profile [brg-profile-name] *string*

Context	**configure subscriber-mgmt vrgw**
Description	Enter the brg-profile context
Max. Elements	16
Introduced	16.0.R4

[brg-profile-name] *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	A brg profile name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

connectivity-verification

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Enter the connectivity-verification context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **connectivity-verification**
Description	Administrative state of connectivity verification
Default	enable
Options	enable, disable
Introduced	16.0.R4

count *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **connectivity-verification**
Description	Total number of consecutive unanswered messages that should be sent before the BRG is considered disconnected
Range	1 to 5
Introduced	16.0.R4

retry-time *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **connectivity-verification**
Description	Time the system will wait after a successful connectivity check before starting a new check
Range	300 to 3600
Introduced	16.0.R4

timeout *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **connectivity-verification**
Description	Timeout after which a message is considered unanswered
Range	5 to 60
Introduced	16.0.R4

description *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

dhcp-pool

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Enter the dhcp-pool context
Introduced	16.0.R4

lease-time *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool**
Description	The lease time.
Range	300 to 315446399
Default	21600
Units	seconds
Introduced	16.0.R4

option [number] (*number* | *keyword*)

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool**

Description Enter the option context

Introduced 16.0.R4

[number] (*number* | *keyword*)

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description DHCP option for sending identification strings to DHCP client

Range 1 to 254

Options subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time

Introduced 16.0.R4

Notes This element is part of a list key

ascii-string *string*

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description ASCII string for DHCP option

String Length 1 to 127

Introduced 16.0.R4

Notes This element is part of a choice

duration *number*

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description DHCP option as time duration.

Range 10 to 315446399

Units seconds

Introduced 16.0.R4

Notes This element is part of a choice

empty

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description Empty DHCP option.

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description DHCP option as hexadecimal string

String Length 1 to 256

Introduced 16.0.R4

Notes This element is part of a choice

ipv4-address *ipv4-address*

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description DHCP option as a list of IPv4 addresses.

Max. Elements 4

Introduced 16.0.R4

Notes This element is part of a choice

netbios-node-type *keyword*

Context **configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool option** (*number* | *keyword*)

Description DHCP option as NetBIOS node type.

Options b-node, p-node, m-node, h-node

Introduced 16.0.R4

Notes This element is part of a choice

standby-ip-lifetime *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool**
Description	The lifetime of the standby IP addresses
Range	300 to 315446399
Default	21600
Units	seconds
Introduced	16.0.R4

subnet

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool**
Description	Enter the subnet context
Introduced	16.0.R4

end *ipv4-unicast-address*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool subnet**
Description	End address of the range used for dynamic IP address allocation
Default	192.168.0.254
Introduced	16.0.R4

prefix *ipv4-prefix-with-host-bits*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool subnet**
Description	Prefix and default-gateway to be used inside the home
Default	192.168.0.1/24
Introduced	16.0.R4

start *ipv4-unicast-address*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **dhcp-pool subnet**
Description	Start address of the range used for dynamic IP address allocation
Default	192.168.0.2
Introduced	16.0.R4

hold-time *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	The time to hold on to a BRG after it went down
Range	0 | 30 to 2592000
Default	0
Units	seconds
Introduced	16.0.R4

initial-hold-time *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	The minimum time to hold on to a BRG after creation, even if no devices are linked to it yet
Range	0 to 900
Default	300
Units	seconds
Introduced	16.0.R4

radius-authentication

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Enter the radius-authentication context
Introduced	16.0.R4

password *encrypted-leaf*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **radius-authentication**
Description	Password used for authentication
String Length	1 to 114
Introduced	16.0.R4

server-policy *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **radius-authentication**
Description	Radius servers to be used for authentication
Reference	configure **aaa radius server-policy** *string*
Introduced	16.0.R4

radius-proxy-server [router-instance] *string* **name** *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Enter the radius-proxy-server context
Max. Elements	4
Introduced	16.0.R4

[router-instance] *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **radius-proxy-server** *string* **name** *string*
Description	router-instance
Introduced	16.0.R4
Notes	This element is part of a list key

name *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string* **radius-proxy-server** *string* **name** *string*
Description	server-name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

sla-profile-string *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Default SLA profile string on BRG level, overridable via AAA
String Length	0 to 32
Introduced	16.0.R4

sub-profile-string *string*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Default subscriber profile string on BRG level, overridable via AAA
String Length	0 to 32
Introduced	16.0.R4

uplink-initial-wait *number*

Context	**configure subscriber-mgmt vrgw brg-profile** *string*
Description	Time needed in case of a non-routed uplink to block host set-up while waiting for the uplink to become operational
Range	10 to 300
Default	30
Units	seconds
Introduced	16.0.R4

lanext

Context	**configure subscriber-mgmt vrgw**
Description	Enter the lanext context
Introduced	16.0.R1

router-target-as-number *number*

Context	**configure subscriber-mgmt vrgw lanext**
Description	AS number that derives the route target and distinguisher for vRGW LAN Extension bridge domains
Range	1 to 65535
Introduced	16.0.R1

wlan-gw

Context	**configure subscriber-mgmt**
Description	Enter the wlan-gw context
Introduced	16.0.R4

virtual-chassis-identifier *string*

Context	**configure subscriber-mgmt wlan-gw**
Description	WLAN Gateway virtual chassis ID or dual homing key
String Length	1 to 16
Introduced	16.0.R4

38.1 system Command Descriptions

system

Context	**configure**
Description	Enter the system context
Introduced	16.0.R1

alarm-contact-in-power *boolean*

Context	**configure system**
Description	Supply +24V output power on the +24DC pin of the Alarm Interface Port of the CPM
Default	false
Introduced	16.0.R1

alarm-contact-input [input-pin-number] *number*

Context	**configure system**
Description	Enter the alarm-contact-input context
Introduced	16.0.R1

[input-pin-number] *number*

Context	**configure system alarm-contact-input** *number*
Description	PIN of the alarm contact input
Range	1 to 4
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system alarm-contact-input** *number*
Description	Administrative state of the alarm contact input
Default	disable
Options	enable, disable
Introduced	16.0.R1

clear-message *string*

Context	**configure system alarm-contact-input** *number*
Description	Text message sent in the log event when the input returns back to normal state
String Length	1 to 80
Default	Alarm Input Cleared
Introduced	16.0.R1

description *string*

Context	**configure system alarm-contact-input** *number*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

normal-state *keyword*

Context	**configure system alarm-contact-input** *number*
Description	Alarm normal state
Default	open
Options	open, closed
Introduced	16.0.R1

trigger-message *string*

Context	**configure system alarm-contact-input** *number*
Description	Text message sent in the log event when the input changes from normal state
String Length	1 to 80
Default	Alarm Input Triggered
Introduced	16.0.R1

alarms

Context	**configure system**
Description	Enter the alarms context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system alarms**
Description	Specifies whether or not alarm management is enabled on the system.
Default	enable
Options	enable, disable
Introduced	16.0.R1

max-cleared *number*

Context	**configure system alarms**
Description	Configure the maximum number of cleared alarms.
Range	0 to 500
Default	500
Introduced	16.0.R1

allow-boot-license-violations *boolean*

Context	**configure system**
Description	Configures whether the system should allow successful execution of the boot-up configuration file even if it contains license violations. When enabled, the system will not error on any configuration that causes a license violation permitting the system to come into service. However, if violations are detected the system will reboot after one hour if the violations are not fixed.
Default	true
Introduced	16.0.R1

bluetooth

Context	**configure system**
Description	Enter the bluetooth context
Introduced	16.0.R1

advertising-timeout *number*

Context	**configure system bluetooth**
Description	Bluetooth advertising timeout.
Range	30 to 3600
Units	seconds
Introduced	16.0.R1

device [mac-address] *mac-address*

Context	**configure system bluetooth**
Description	Enter the device context
Introduced	16.0.R1

[mac-address] *mac-address*

Context	**configure system bluetooth device** *mac-address*
Description	Bluetooth client device MAC address.
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system bluetooth device** *mac-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

module [cpm-slot] *cpm-card-slot*

Context	**configure system bluetooth**
Description	Enter the module context
Introduced	16.0.R1

[cpm-slot] *cpm-card-slot*

Context	**configure system bluetooth module** *cpm-card-slot*
Description	CPM slot on which the module resides.
Introduced	16.0.R1
Notes	This element is part of a list key

provisioned-identifier *string*

Context	**configure system bluetooth module** *cpm-card-slot*
Description	The user configured identifier for this Bluetooth module.
String Length	1 to 32
Introduced	16.0.R1

pairing-button *boolean*

Context	**configure system bluetooth**
Description	Enable/Disable the pairing button.
Default	false
Introduced	16.0.R1

passkey *string*

Context	**configure system bluetooth**
Description	Bluetooth passkey. Must be comprised of 6 digits (0-9).
String Length	6
Default	123456
Introduced	16.0.R1

power *keyword*

Context	**configure system bluetooth**
Description	Bluetooth module(s) power state.
Options	manual, automatic
Introduced	16.0.R1

boot-bad-exec *url*

Context	**configure system**
Description	Location and name of CLI script file executed after a failed boot-up configuration file execution
String Length	1 to 180
Introduced	16.0.R1

boot-good-exec *url*

Context	**configure system**
Description	Location and name of CLI script file executed after a successful boot-up configuration file execution
String Length	1 to 180
Introduced	16.0.R1

central-frequency-clock

Context	**configure system**
Description	Enter the central-frequency-clock context
Introduced	16.0.R1

bits

Context	**configure system central-frequency-clock**
Description	Enter the bits context
Introduced	16.0.R1

input

Context	**configure system central-frequency-clock bits**
Description	Enter the input context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system central-frequency-clock bits input**
Description	Administrative state of BITS input timing reference
Default	disable
Options	enable, disable
Introduced	16.0.R1

interface-type *keyword*

Context	**configure system central-frequency-clock bits**
Description	Interface type of the BITS timing reference
Default	ds1-esf
Options	ds1-esf, ds1-sf, e1-pcm30crc, e1-pcm31crc, g703-2048khz
Introduced	16.0.R1

output

Context	**configure system central-frequency-clock bits**
Description	Enter the output context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system central-frequency-clock bits output**
Description	Administrative state of the BITS output timing reference
Options	enable, disable
Introduced	16.0.R1

line-length *keyword*

Context	**configure system central-frequency-clock bits output**
Description	Line length for the BITS output timing reference
Options	length-not-applicable, 110, 220, 330, 440, 550, 660
Introduced	16.0.R1

ql-minimum *keyword*

Context	**configure system central-frequency-clock bits output**
Description	Minimum acceptable QL value for signal to be considered for selection for the BITSout port
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Introduced	16.0.R1

source *keyword*

Context	**configure system central-frequency-clock bits output**
Description	Source of the BITS output timing reference
Default	line-ref
Options	line-ref, internal-clock
Introduced	16.0.R1

squelch *boolean*

Context	**configure system central-frequency-clock bits output**
Description	Squelch the signal of the BITS output timing reference
Default	false
Introduced	16.0.R1

ql-override *keyword*

Context	**configure system central-frequency-clock bits**
Description	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Introduced	16.0.R1

ssm-bit *number*

Context	**configure system central-frequency-clock bits**
Description	SSM information conveyed by sa-bit
Range	4 to 8
Default	8
Introduced	16.0.R1

ptp

Context	**configure system central-frequency-clock**
Description	Enter the ptp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system central-frequency-clock ptp**
Description	Administrative state of the PTP timing reference
Default	disable
Options	enable, disable
Introduced	16.0.R1

ql-override *keyword*

Context	**configure system central-frequency-clock ptp**
Description	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Introduced	16.0.R1

ql-minimum *keyword*

Context	**configure system central-frequency-clock**
Description	Minimum acceptable QL value for signal to be considered for selection by system timing module
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Introduced	16.0.R1

ql-selection *boolean*

Context	**configure system central-frequency-clock**
Description	System timing reference and BITS output timing reference
Default	false
Introduced	16.0.R1

ref-order

Context	**configure system central-frequency-clock**
Description	Enter the ref-order context
Introduced	16.0.R1

first *keyword*

Context	**configure system central-frequency-clock ref-order**
Description	Highly preferred timing reference source for the synchronous equipment timing subsystem
Options	ref1, ref2, bits, ptp, none
Introduced	16.0.R1

fourth *keyword*

Context	**configure system central-frequency-clock ref-order**
Description	Fourth preferred timing reference source for the synchronous equipment timing subsystem
Options	ref1, ref2, bits, ptp, none
Introduced	16.0.R1

second *keyword*

Context **configure system central-frequency-clock ref-order**

Description Second preferred timing reference source for the synchronous equipment timing subsystem

Options ref1, ref2, bits, ptp, none

Introduced 16.0.R1

third *keyword*

Context **configure system central-frequency-clock ref-order**

Description Third preferred timing reference source for the synchronous equipment timing subsystem

Options ref1, ref2, bits, ptp, none

Introduced 16.0.R1

ref1

Context **configure system central-frequency-clock**

Description Enter the ref1 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure system central-frequency-clock ref1**

Description Administrative state of the first timing reference

Default disable

Options enable, disable

Introduced 16.0.R1

bits-interface-type *keyword*

Context **configure system central-frequency-clock ref1**

Description Interface type of the BITS timing reference

Default ds1-esf

Options ds1-esf, ds1-sf, e1-pcm30crc, e1-pcm31crc, g703-2048khz

Introduced 16.0.R1

ql-override *keyword*

Context	**configure system central-frequency-clock ref1**
Description	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Introduced	16.0.R1

source-bits *slot-mda*

Context	**configure system central-frequency-clock ref1**
Description	Source bits for the first timing reference
Introduced	16.0.R1

source-port *string*

Context	**configure system central-frequency-clock ref1**
Description	Source port for the first timing reference
Reference	configure **port** *port*
Introduced	16.0.R1

ssm-bit *number*

Context	**configure system central-frequency-clock ref1**
Description	SSM information conveyed by sa-bit
Range	4 to 8
Default	8
Introduced	16.0.R1

ref2

Context	**configure system central-frequency-clock**
Description	Enter the ref2 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system central-frequency-clock ref2**
Description	Administrative state of the second timing reference
Default	disable
Options	enable, disable
Introduced	16.0.R1

bits-interface-type *keyword*

Context	**configure system central-frequency-clock ref2**
Description	Interface type of the BITS timing reference
Default	ds1-esf
Options	ds1-esf, ds1-sf, e1-pcm30crc, e1-pcm31crc, g703-2048khz
Introduced	16.0.R1

ql-override *keyword*

Context	**configure system central-frequency-clock ref2**
Description	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Default	unused
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Introduced	16.0.R1

source-bits *slot-mda*

Context	**configure system central-frequency-clock ref2**
Description	Source bits for the first timing reference
Introduced	16.0.R1

source-port *string*

Context	**configure system central-frequency-clock ref2**
Description	Source port for the first timing reference
Reference	configure **port** *port*
Introduced	16.0.R1

ssm-bit *number*

Context	**configure system central-frequency-clock ref2**
Description	SSM information conveyed by sa-bit
Range	4 to 8
Default	8
Introduced	16.0.R1

revert *boolean*

Context	**configure system central-frequency-clock**
Description	Higher priority re-validated reference source to revert
Default	false
Introduced	16.0.R1

wait-to-restore *number*

Context	**configure system central-frequency-clock**
Description	Time for failed input reference to be valid before using it for BITS output or central clock input
Range	1 to 12
Units	minutes
Introduced	16.0.R1

clli-code *clli-description*

Context	**configure system**
Description	Common Language Location Identifier (CLLI) code value for the system
String Length	11
Introduced	16.0.R1

congestion-management *boolean*

Context	**configure system**
Description	Virtual Service Router congestion management
Default	false
Introduced	16.0.R1

contact *string*

Context	**configure system**
Description	Textual identification of contact person for this managed node, and information on how to contact
String Length	1 to 80
Introduced	16.0.R1

coordinates *string*

Context	**configure system**
Description	Global Positioning System (GPS) coordinates for the system location
String Length	1 to 80
Introduced	16.0.R1

cpm-http-redirect

Context	**configure system**
Description	Enter the cpm-http-redirect context
Introduced	16.0.R1

optimized-mode *boolean*

Context	**configure system cpm-http-redirect**
Description	Optimized mode for CPM HTTP redirect messages
Default	true
Introduced	16.0.R1

cron

Context	**configure system**
Description	Enter the cron context
Introduced	16.0.R1

schedule [schedule-name] *string* **owner** *string*

Context	**configure system cron**
Description	Enter the schedule context
Max. Elements	255
Introduced	16.0.R1

[schedule-name] *string*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Schedule name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

owner *string*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Schedule owner
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Administrative state of the cron schedule
Default	disable
Options	enable, disable
Introduced	16.0.R1

count *number*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Number of times to repeat periodic schedule run
Range	1 to 65535
Introduced	16.0.R1

day-of-month *number*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Days in a month when a schedule runs
Range	-31 to -1 | 1 to 31
Max. Elements	62
Introduced	16.0.R1

description *string*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

end-time

Context	**configure system cron schedule** *string* **owner** *string*
Description	Enter the end-time context
Introduced	16.0.R1

date-and-time *date-and-time*

Context	**configure system cron schedule** *string* **owner** *string* **end-time**
Description	Date and hour and minute to stop triggering this schedule
Introduced	16.0.R1
Notes	This element is part of a choice

day *keyword*

Context	**configure system cron schedule** *string* **owner** *string* **end-time**
Description	Day to stop triggering this schedule
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Introduced	16.0.R1
Notes	This element is part of a choice

time *hours-minutes-twenty-four*

Context	**configure system cron schedule** *string* **owner** *string* **end-time**
Description	Time to stop triggering this schedule
String Length	5
Introduced	16.0.R1
Notes	This element is part of a choice

hour *number*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Hours within a day when a schedule runs
Range	0 to 23
Max. Elements	24
Introduced	16.0.R1

interval *number*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Time between each periodic schedule run
Range	30 to 42949672
Units	seconds
Introduced	16.0.R1

minute *number*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Minutes in an hour when a schedule runs
Range	0 to 59
Max. Elements	60
Introduced	16.0.R1

month (*keyword* | *number*)

Context	**configure system cron schedule** *string* **owner** *string*
Description	Months when a schedule runs
Range	1 to 12
Options	january, february, march, april, may, june, july, august, september, october, november, december
Max. Elements	12
Introduced	16.0.R1

script-policy

Context	**configure system cron schedule** *string* **owner** *string*
Description	Enter the script-policy context
Introduced	16.0.R1

name *string*

Context	**configure system cron schedule** *string* **owner** *string* **script-policy**
Description	Script policy name
String Length	1 to 32
Introduced	16.0.R1

owner *string*

Context	**configure system cron schedule** *string* **owner** *string* **script-policy**
Description	Script policy owner
String Length	1 to 32
Default	TiMOS CLI
Introduced	16.0.R1

type *keyword*

Context	**configure system cron schedule** *string* **owner** *string*
Description	Schedule type
Default	periodic
Options	periodic, calendar, oneshot
Introduced	16.0.R1

weekday (*keyword* | *number*)

Context	**configure system cron schedule** *string* **owner** *string*
Description	Weekdays when the schedule runs
Range	1 to 7
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Max. Elements	7
Introduced	16.0.R1

dhcp6

Context	**configure system**
Description	Enter the dhcp6 context
Introduced	16.0.R4

adv-noaddrs-global *keyword*

Context	**configure system dhcp6**
Description	Specifies the composition of DHCPv6 Advertise Messages in case a DHCP6 application in this system will not assign any addresses to any Identity Association (IA) in a subsequent Request from the client. DHCP6 applications in this system are Server and ESM Relay, which must be set together.
Options	esm-relay, server
Max. Elements	2
Introduced	16.0.R4

dns

Context	**configure system**
Description	Enter the dns context
Introduced	16.0.R1

address-pref *keyword*

Context	**configure system dns**
Description	Preference in DNS address resolving order
Options	ipv4-only, ipv6-first
Introduced	16.0.R1

dnssec

Context	**configure system dns**
Description	Enter the dnssec context
Introduced	16.0.R1

ad-validation *keyword*

Context	**configure system dns dnssec**
Description	Response to DNSSEC validation of presence of AD-bit in responses from DNS servers
Options	fall-through, drop
Introduced	16.0.R1

efm-oam

Context	**configure system**
Description	Enter the efm-oam context
Introduced	16.0.R1

dying-gasp-tx-on-reset *boolean*

Context	**configure system efm-oam**
Description	Allow generation of Information OAM PDU when EFM application receives soft reset notification
Default	false
Introduced	16.0.R1

grace-tx *boolean*

Context	**configure system efm-oam**
Description	Allow sending of EFM OAM grace period messages
Default	false
Introduced	16.0.R1

eth-cfm

Context	**configure system**
Description	Enter the eth-cfm context
Introduced	16.0.R1

grace *boolean*

Context	**configure system eth-cfm**
Description	Allow overall system level capability of grace messaging for ETH-CFM MEPs
Default	true
Introduced	16.0.R1

md-auto-id

Context	**configure system eth-cfm**
Description	Enter the md-auto-id context
Introduced	16.0.R1

ma-index-range

Context	**configure system eth-cfm md-auto-id**
Description	Enter the ma-index-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system eth-cfm md-auto-id ma-index-range**
Description	End of the range
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system eth-cfm md-auto-id ma-index-range**
Description	Start of the range
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

md-index-range

Context	**configure system eth-cfm md-auto-id**
Description	Enter the md-index-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system eth-cfm md-auto-id md-index-range**
Description	End of the range
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system eth-cfm md-auto-id md-index-range**
Description	Start of the range
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

redundancy

Context **configure system eth-cfm**
Description Enter the redundancy context
Introduced 16.0.R1

mc-lag

Context **configure system eth-cfm redundancy**
Description Enter the mc-lag context
Introduced 16.0.R1

propagate-hold-time (*number* | *keyword*)

Context **configure system eth-cfm redundancy mc-lag**
Description Delay timer value for the fault propagation caused by port, or MC-LAG state changes
Range 1 to 60
Default 1
Units seconds
Options none
Introduced 16.0.R1

standby-mep *boolean*

Context **configure system eth-cfm redundancy mc-lag**
Description Allow MEPs on the standby MC-LAG to act administratively down
Default false
Introduced 16.0.R1

sender-id

Context **configure system eth-cfm**
Description Enter the sender-id context
Introduced 16.0.R1

local-name *string*

Context	**configure system eth-cfm sender-id**
Description	Local name in CFM PDUs
String Length	1 to 45
Introduced	16.0.R1

type *keyword*

Context	**configure system eth-cfm sender-id**
Description	ETH-CFM sender ID to be used in CFM PDUs
Options	system, local
Introduced	16.0.R1

slm

Context	**configure system eth-cfm**
Description	Enter the slm context
Introduced	16.0.R1

inactivity-timer *number*

Context	**configure system eth-cfm slm**
Description	SLR inactivity timer to maintain the stale test data
Range	10 to 100
Default	100
Units	seconds
Introduced	16.0.R1

grpc

Context	**configure system**
Description	Enter the grpc context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system grpc**
Description	Administrative state of gRPC server
Default	disable
Options	enable, disable
Introduced	16.0.R1

allow-unsecure-connection

Context	**configure system grpc**
Description	Server gRPC to run without secured transport protocol
Introduced	16.0.R1
Notes	This element is part of a choice

gnmi

Context	**configure system grpc**
Description	Enter the gnmi context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system grpc gnmi**
Description	Administrative state of gNMI service
Default	enable
Options	enable, disable
Introduced	16.0.R1

auto-config-save *boolean*

Context	**configure system grpc gnmi**
Description	Automatically save the configuration as part of a commit operation
Default	false
Introduced	16.0.R1

max-msg-size *number*

Context	**configure system grpc**
Description	Maximum size of received message
Range	1 to 1024
Default	512
Units	megabytes
Introduced	16.0.R1

rib-api

Context	**configure system grpc**
Description	Enter the rib-api context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure system grpc rib-api**
Description	Administrative state of RibApi service.
Default	disable
Options	enable, disable
Introduced	16.0.R4

purge-timeout *number*

Context	**configure system grpc rib-api**
Description	Number of seconds until stale entries are purged.
Range	1 to 100000
Units	seconds
Introduced	16.0.R4

tcp-keepalive

Context	**configure system grpc**
Description	Enter the tcp-keepalive context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure system grpc tcp-keepalive**
Description	Administrative state of the TCP keep-alive algorithm.
Default	disable
Options	enable, disable
Introduced	16.0.R4

idle-time *number*

Context	**configure system grpc tcp-keepalive**
Description	Number of seconds until the first TCP keep-alive probe is sent.
Range	1 to 100000
Default	600
Units	seconds
Introduced	16.0.R4

interval *number*

Context	**configure system grpc tcp-keepalive**
Description	Number of seconds between TCP keep-alive probes.
Range	1 to 100000
Default	15
Units	seconds
Introduced	16.0.R4

retries *number*

Context	**configure system grpc tcp-keepalive**
Description	Number of missed keep-alives before the TCP connection is declared down.
Range	3 to 100
Default	4
Introduced	16.0.R4

tls-server-profile *string*

Context	**configure system grpc**
Description	Preferred TLS server profile
Reference	configure **system security tls server-tls-profile** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

icmp-vse *boolean*

Context	**configure system**
Description	vendor-specific extensions to ICMP
Default	false
Introduced	16.0.R1

ip

Context	**configure system**
Description	Enter the ip context
Introduced	16.0.R1

allow-qinq-network-interface *boolean*

Context	**configure system ip**
Description	Allow QinQ encapsulation for network interfaces
Default	false
Introduced	16.0.R1

enforce-unique-if-index *boolean*

Context	**configure system ip**
Description	Option to force the creation of IP interface indexes to be globally unique across all contexts
Default	false
Introduced	16.0.R1

l2tp

Context **configure system**
Description Enter the l2tp context
Introduced 16.0.R1

non-multi-chassis-tunnel-id-range

Context **configure system l2tp**
Description Enter the non-multi-chassis-tunnel-id-range context
Introduced 16.0.R1

end *number*

Context **configure system l2tp non-multi-chassis-tunnel-id-range**
Description End value of the range
Range 0 to 16383
Default 16383
Introduced 16.0.R1

start *number*

Context **configure system l2tp non-multi-chassis-tunnel-id-range**
Description Start value of range
Range 0 to 16383
Default 1
Introduced 16.0.R1

lacp

Context **configure system**
Description Enter the lacp context
Introduced 16.0.R1

system-priority *number*

Context	**configure system lacp**
Description	LACP system priority that is combined with the system MAC address to create a unique system ID
Range	1 to 65535
Default	32768
Introduced	16.0.R1

lldp

Context	**configure system**
Description	Enter the lldp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system lldp**
Description	Administrative state of LLDP to be operationally enabled on the system
Default	enable
Options	enable, disable
Introduced	16.0.R1

message-fast-tx *number*

Context	**configure system lldp**
Description	Interval at which LLDP frames are transmitted on behalf of this LLDP
Range	1 to 3600
Default	1
Units	seconds
Introduced	16.0.R1

message-fast-tx-init *number*

Context	**configure system lldp**
Description	Number of PDUs to transmit during a fast transmission period
Range	1 to 8
Default	4
Introduced	16.0.R1

notification-interval *number*

Context	**configure system lldp**
Description	Transmission interval of LLDP notifications
Range	5 to 3600
Default	5
Units	seconds
Introduced	16.0.R1

reinit-delay *number*

Context	**configure system lldp**
Description	Time required before reinitializing LLDP on a port
Range	1 to 10
Default	2
Units	seconds
Introduced	16.0.R1

tx-credit-max *number*

Context	**configure system lldp**
Description	Maximum number for the consecutive LLDPDUs to be transmitted
Range	1 to 100
Default	5
Introduced	16.0.R1

tx-hold-multiplier *number*

Context	**configure system lldp**
Description	LLDP transmit interval time
Range	2 to 10
Default	4
Introduced	16.0.R1

tx-interval *number*

Context	**configure system lldp**
Description	Interval at which LLDP frames are transmitted on behalf of this LLDP
Range	5 to 32768
Default	30
Units	seconds
Introduced	16.0.R1

load-balancing

Context	**configure system**
Description	Enter the load-balancing context
Introduced	16.0.R1

l2tp-load-balancing *boolean*

Context	**configure system load-balancing**
Description	L2TP header load balancing.
Default	false
Introduced	16.0.R4

l4-load-balancing *boolean*

Context	**configure system load-balancing**
Description	Use load balancing based on Layer 4 fields
Default	false
Introduced	16.0.R1

lsr-load-balancing *keyword*

Context	**configure system load-balancing**
Description	Hashing algorithm for system-wide LSR load balancing
Default	lbl-only
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1

mc-enh-load-balancing *boolean*

Context	**configure system load-balancing**
Description	Enable enhanced egress multicast load balancing behavior for Layer 3 multicast
Default	false
Introduced	16.0.R1

service-id-lag-hashing *boolean*

Context	**configure system load-balancing**
Description	Enable enhanced VLL LAG service ID hashing
Default	false
Introduced	16.0.R1

system-ip-load-balancing *boolean*

Context	**configure system load-balancing**
Description	Use the system IP address in the ECMP and LAG load balancing calculation
Default	false
Introduced	16.0.R1

location *string*

Context	**configure system**
Description	Site location of this system
String Length	1 to 80
Introduced	16.0.R1

login-control

Context	**configure system**
Description	Enter the login-control context
Introduced	16.0.R1

exponential-backoff *boolean*

Context	**configure system login-control**
Description	Login exponential-backoff to deter brute force attack
Default	false
Introduced	16.0.R1

ftp

Context	**configure system login-control**
Description	Enter the ftp context
Introduced	16.0.R1

inbound-max-sessions *number*

Context	**configure system login-control ftp**
Description	Maximum number of concurrent inbound FTP sessions
Range	0 to 5
Default	3
Introduced	16.0.R1

idle-timeout (*keyword* | *number*)

Context	**configure system login-control**
Description	Idle timeout for FTP, console, or Telnet sessions before the system terminate the session
Range	1 to 1440
Default	30
Units	minutes
Options	none
Introduced	16.0.R1

login-banner *boolean*

Context	**configure system login-control**
Description	Display login banner
Default	true
Introduced	16.0.R1

login-scripts

Context	**configure system login-control**
Description	Enter the login-scripts context
Introduced	16.0.R1

global-script *string*

Context	**configure system login-control login-scripts**
Description	URL of the global login script
String Length	1 to 180
Introduced	16.0.R1

per-user-script

Context	**configure system login-control login-scripts**
Description	Enter the per-user-script context
Introduced	16.0.R1

file-name *filename*

Context	**configure system login-control login-scripts per-user-script**
Description	File name of the per-user login script
String Length	1 to 180
Introduced	16.0.R1

user-directory *string*

Context	**configure system login-control login-scripts per-user-script**
Description	Users to define their own login scripts that can be executed when they first log in to CLI
String Length	1 to 180
Introduced	16.0.R1

motd

Context	**configure system login-control**
Description	Enter the motd context
Introduced	16.0.R1

text *string*

Context	**configure system login-control motd**
Description	Message to display in text format
String Length	1 to 900
Introduced	16.0.R1
Notes	This element is part of a choice

url *string*

Context	**configure system login-control motd**
Description	URL from where a message of the day is fetched
String Length	1 to 180
Introduced	16.0.R1
Notes	This element is part of a choice

pre-login-message

Context	**configure system login-control**
Description	Enter the pre-login-message context
Introduced	16.0.R1

message *string*

Context	**configure system login-control pre-login-message**
Description	Message to display prior to the login prompt of an inbound FTP, Telnet, or SSH session
String Length	1 to 900
Introduced	16.0.R1

name *boolean*

Context	**configure system login-control pre-login-message**
Description	Pre login message included in the system name
Default	false
Introduced	16.0.R1

ssh

Context	**configure system login-control**
Description	Enter the ssh context
Introduced	16.0.R1

graceful-shutdown *boolean*

Context	**configure system login-control ssh**
Description	Allow graceful shutdown of SSH sessions
Default	true
Introduced	16.0.R1

inbound-max-sessions *number*

Context	**configure system login-control ssh**
Description	Maximum number of concurrent inbound sessions
Range	0 to 50
Default	5
Introduced	16.0.R1

outbound-max-sessions *number*

Context	**configure system login-control ssh**
Description	Maximum number of concurrent outbound sessions
Range	0 to 15
Default	5
Introduced	16.0.R1

ttl-security *number*

Context	**configure system login-control ssh**
Description	Minimum TTL value for incoming BGP packet
Range	1 to 255
Introduced	16.0.R1

telnet

Context	**configure system login-control**
Description	Enter the telnet context
Introduced	16.0.R1

graceful-shutdown *boolean*

Context	**configure system login-control telnet**
Description	Allow graceful shutdown of Telnet sessions
Default	false
Introduced	16.0.R1

inbound-max-sessions *number*

Context	**configure system login-control telnet**
Description	Maximum number of concurrent inbound sessions
Range	0 to 50
Default	5
Introduced	16.0.R1

outbound-max-sessions *number*

Context	**configure system login-control telnet**
Description	Maximum number of concurrent outbound sessions
Range	0 to 15
Default	5
Introduced	16.0.R1

ttl-security *number*

Context	**configure system login-control telnet**
Description	Minimum TTL value for incoming BGP packet
Range	1 to 255
Introduced	16.0.R1

management-interface

Context	**configure system**
Description	Enter the management-interface context
Introduced	16.0.R1

cli

Context	**configure system management-interface**
Description	Enter the cli context
Introduced	16.0.R1

classic-cli

Context	**configure system management-interface cli**
Description	Enter the classic-cli context
Introduced	16.0.R1

allow-immediate *boolean*

Context	**configure system management-interface cli classic-cli**
Description	Allow writable access in the classic CLI configure branch
Default	true
Introduced	16.0.R1

rollback

Context	**configure system management-interface cli classic-cli**
Description	Enter the rollback context
Introduced	16.0.R1

local-checkpoints *number*

Context	**configure system management-interface cli classic-cli rollback**
Description	Maximum number of rollback files on compact flash
Range	1 to 50
Default	10
Introduced	16.0.R1

location *url*

Context	**configure system management-interface cli classic-cli rollback**
Description	Location and filename of the rollback checkpoint files
String Length	1 to 180
Introduced	16.0.R1

remote-checkpoints *number*

Context	**configure system management-interface cli classic-cli rollback**
Description	Maximum number of rollback files saved at a remote location
Range	1 to 200
Default	10
Introduced	16.0.R1

rescue

Context	**configure system management-interface cli classic-cli rollback**
Description	Enter the rescue context
Introduced	16.0.R1

location *url*

Context	**configure system management-interface cli classic-cli rollback rescue**
Description	Location of the rollback rescue file
String Length	1 to 180
Introduced	16.0.R1

cli-engine *keyword*

Context	**configure system management-interface cli**
Description	System wide CLI engine access
Options	classic-cli, md-cli
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

md-cli

Context	**configure system management-interface cli**
Description	Enter the md-cli context
Introduced	16.0.R1

auto-config-save *boolean*

Context	**configure system management-interface cli md-cli**
Description	Automatically save the configuration as part of a commit operation
Default	false
Introduced	16.0.R1

environment

Context **configure system management-interface cli md-cli**
Description Enter the environment context
Introduced 16.0.R1

command-completion

Context **configure system management-interface cli md-cli environment**
Description Enter the command-completion context
Introduced 16.0.R1

enter *boolean*

Context **configure system management-interface cli md-cli environment command-completion**
Description Command completion control when the enter key is pressed
Default true
Introduced 16.0.R1

space *boolean*

Context **configure system management-interface cli md-cli environment command-completion**
Description Command completion control when the space key is pressed
Default true
Introduced 16.0.R1

tab *boolean*

Context **configure system management-interface cli md-cli environment command-completion**
Description Command completion control when the tab key is pressed
Default true
Introduced 16.0.R1

console

Context **configure system management-interface cli md-cli environment**
Description Enter the console context
Introduced 16.0.R1

length *number*

Context	**configure system management-interface cli md-cli environment console**
Description	Number of lines displayed on the screen
Range	24 to 512
Default	24
Introduced	16.0.R1

width *number*

Context	**configure system management-interface cli md-cli environment console**
Description	Number of columns displayed on the screen
Range	80 to 512
Default	80
Introduced	16.0.R1

message-severity-level

Context	**configure system management-interface cli md-cli environment**
Description	Enter the message-severity-level context
Introduced	16.0.R1

cli *keyword*

Context	**configure system management-interface cli md-cli environment message-severity-level**
Description	Message severity threshold for CLI messages
Default	info
Options	warning, info
Introduced	16.0.R1

more *boolean*

Context	**configure system management-interface cli md-cli environment**
Description	Paging control of the output text
Default	true
Introduced	16.0.R1

progress-indicator

Context	**configure system management-interface cli md-cli environment**
Description	Enter the progress-indicator context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system management-interface cli md-cli environment progress-indicator**
Description	Administrative state of the progress indicator
Default	enable
Options	enable, disable
Introduced	16.0.R1

delay *number*

Context	**configure system management-interface cli md-cli environment progress-indicator**
Description	Delay before progress indicator is displayed
Range	0 to 10000
Default	1000
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure system management-interface cli md-cli environment progress-indicator**
Description	Progress indicator output style
Default	dots
Options	dots
Introduced	16.0.R1

prompt

Context	**configure system management-interface cli md-cli environment**
Description	Enter the prompt context
Introduced	16.0.R1

context *boolean*

Context	**configure system management-interface cli md-cli environment prompt**
Description	Current command context
Default	true
Introduced	16.0.R1

newline *boolean*

Context	**configure system management-interface cli md-cli environment prompt**
Description	New line before every prompt line
Default	true
Introduced	16.0.R1

timestamp *boolean*

Context	**configure system management-interface cli md-cli environment prompt**
Description	Time to display timestamp before prompt
Default	false
Introduced	16.0.R1

uncommitted-changes-indicator *boolean*

Context	**configure system management-interface cli md-cli environment prompt**
Description	Indicator of uncommitted changes
Default	true
Introduced	16.0.R1

time-display *keyword*

Context	**configure system management-interface cli md-cli environment**
Description	Time to display timestamp before prompt
Default	local
Options	local, utc
Introduced	16.0.R1

configuration-mode *keyword*

Context	**configure system management-interface**
Description	Mode of the management interface configuration in the system
Default	classic
Options	classic, model-driven, mixed
Introduced	16.0.R1

configuration-save

Context	**configure system management-interface**
Description	Enter the configuration-save context
Introduced	16.0.R1

configuration-backups *number*

Context	**configure system management-interface configuration-save**
Description	Maximum number of backup revisions maintained for a configuration file This value also applies to the number of revisions maintained for the BOF file and debug save files.
Range	1 to 200
Default	5
Introduced	16.0.R1

netconf

Context	**configure system management-interface**
Description	Enter the netconf context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system management-interface netconf**
Description	Administrative state of NETCONF
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-config-save *boolean*

Context	**configure system management-interface netconf**
Description	Automatically save the configuration as part of a commit operation
Default	false
Introduced	16.0.R1

capabilities

Context	**configure system management-interface netconf**
Description	Enter the capabilities context
Introduced	16.0.R1

candidate *boolean*

Context	**configure system management-interface netconf capabilities**
Description	Allow the NETCONF server to access the candidate datastore
Default	true
Introduced	16.0.R1

writable-running *boolean*

Context	**configure system management-interface netconf capabilities**
Description	Allow the NETCONF server to access the writable running datastore
Default	true
Introduced	16.0.R1

schema-path *url*

Context	**configure system management-interface**
Description	Location of schema files used by the system.
String Length	1 to 180
Default	cf3:/YANG
Introduced	16.0.R4

snmp

Context **configure system management-interface**
Description Enter the snmp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure system management-interface snmp**
Description Administrative state of the SNMP daemon
Default enable
Options enable, disable
Introduced 16.0.R1

engine-id *string*

Context **configure system management-interface snmp**
Description SNMP engine ID to uniquely identify the SNMPv3 node
String Length 10 to 64
Introduced 16.0.R1

general-port *number*

Context **configure system management-interface snmp**
Description Port number to be used to send general SNMP messages.
Range 0 | 1 to 65535
Default 161
Introduced 16.0.R1

packet-size *number*

Context **configure system management-interface snmp**
Description Max size SNMP packet generated by this node.
Range 484 to 9216
Default 1500
Introduced 16.0.R1

streaming

Context **configure system management-interface snmp**

Description Enter the streaming context

Introduced 16.0.R1

admin-state *keyword*

Context **configure system management-interface snmp streaming**

Description Administrative state of the streaming daemon

Default disable

Options enable, disable

Introduced 16.0.R1

yang-modules

Context **configure system management-interface**

Description Enter the yang-modules context

Introduced 16.0.R1

base-r13-modules *boolean*

Context **configure system management-interface yang-modules**

Description Support base release 13 YANG models

Default true

Introduced 16.0.R1

nokia-combined-modules *boolean*

Context **configure system management-interface yang-modules**

Description Specifies whether or not the combined Nokia YANG models are supported. When set to 'true', network managers have access to combined Nokia YANG models.

Default false

Introduced 16.0.R1

nokia-modules *boolean*

Context	**configure system management-interface yang-modules**
Description	Support Nokia YANG models
Default	true
Introduced	16.0.R1

openconfig-modules *boolean*

Context	**configure system management-interface yang-modules**
Description	Support OpenConfig YANG models
Default	false
Introduced	16.0.R1

mixed-mode *boolean*

Context	**configure system**
Description	System allowed functionally to run with a combination of forwarding hardware
Default	false
Introduced	16.0.R1

name *string*

Context	**configure system**
Description	Administrative name assigned to the system
String Length	1 to 32
Introduced	16.0.R1

persistence

Context	**configure system**
Description	Enter the persistence context
Introduced	16.0.R1

ancp

Context	**configure system persistence**
Description	Enter the ancp context
Introduced	16.0.R1

description *string*

Context	**configure system persistence ancp**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *keyword*

Context	**configure system persistence ancp**
Description	CPM flash card where the information is stored
Options	cf1, cf2, cf3
Introduced	16.0.R1

application-assurance

Context	**configure system persistence**
Description	Enter the application-assurance context
Introduced	16.0.R1

description *string*

Context	**configure system persistence application-assurance**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *keyword*

Context **configure system persistence application-assurance**

Description CPM flash card where the information is stored

Options cf1, cf2, cf3

Introduced 16.0.R1

dhcp-server

Context **configure system persistence**

Description Enter the dhcp-server context

Introduced 16.0.R1

description *string*

Context **configure system persistence dhcp-server**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

location *keyword*

Context **configure system persistence dhcp-server**

Description CPM flash card where the information is stored

Options cf1, cf2, cf3

Introduced 16.0.R1

nat-port-forwarding

Context **configure system persistence**

Description Enter the nat-port-forwarding context

Introduced 16.0.R1

description *string*

Context	**configure system persistence nat-port-forwarding**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *keyword*

Context	**configure system persistence nat-port-forwarding**
Description	CPM flash card where the information is stored
Options	cf1, cf2, cf3
Introduced	16.0.R1

options

Context	**configure system persistence**
Description	Enter the options context
Introduced	16.0.R1

dhcp-leasetime-threshold *number*

Context	**configure system persistence options**
Description	Threshold time for DHCP leases to be eligible for persistence
Range	1 to 631152000
Introduced	16.0.R1

python-policy-cache

Context	**configure system persistence**
Description	Enter the python-policy-cache context
Introduced	16.0.R1

description *string*

Context	**configure system persistence python-policy-cache**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *keyword*

Context	**configure system persistence python-policy-cache**
Description	CPM flash card where the information is stored
Options	cf1, cf2, cf3
Introduced	16.0.R1

subscriber-mgmt

Context	**configure system persistence**
Description	Enter the subscriber-mgmt context
Introduced	16.0.R1

description *string*

Context	**configure system persistence subscriber-mgmt**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *keyword*

Context	**configure system persistence subscriber-mgmt**
Description	CPM flash card where the information is stored
Options	cf1, cf2, cf3
Introduced	16.0.R1

power-management power-zone *number*

Context	**configure system**
Description	Enter the power-management context
Introduced	16.0.R1

power-zone *number*

Context	**configure system power-management power-zone** *number*
Description	Power mode
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

mode *keyword*

Context	**configure system power-management power-zone** *number*
Description	Power capacity mode algorithm
Default	basic
Options	none, basic, advanced
Introduced	16.0.R1

power-safety-alert *number*

Context	**configure system power-management power-zone** *number*
Description	Power capacity to trigger a safety alert event
Range	0 to 120000
Default	0
Units	watts
Introduced	16.0.R1

power-safety-level *number*

Context	**configure system power-management power-zone** *number*
Description	Minimum threshold to power off devices
Range	0 to 100
Default	100
Units	percent
Introduced	16.0.R1

ptp

Context	**configure system**
Description	Enter the ptp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system ptp**
Description	Administrative state of PTP
Default	disable
Options	enable, disable
Introduced	16.0.R2

anno-rx-timeout *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system ptp**
Description	The PTP Announce Receipt Timeout, in Announce Intervals.
Range	2 to 10
Default	3
Introduced	16.0.R2

clock-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system ptp**
Description	The PTP clock type
Default	ordinary-slave
Options	ordinary-slave, ordinary-master, boundary
Introduced	16.0.R2

domain *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system ptp**
Description	The domain in which PTP runs on the system.
Range	0 to 255
Introduced	16.0.R2

local-priority *number*

Context	**configure system ptp**
Description	The PTP clock's G.8275.1 Local Priority.
Range	1 to 255
Default	128
Introduced	16.0.R2

log-anno-interval *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system ptp**
Description	The PTP Announce Interval (as the logarithm to the base 2, in seconds).
Range	-3 to 4
Introduced	16.0.R2

network-type *keyword*

Context	**configure system ptp**
Description	The PTP network type.
Default	sdh
Options	sonet, sdh
Introduced	16.0.R2

port [port-id] *string*

Context	**configure system ptp**
Description	Enter the port context
Introduced	16.0.R1

[port-id] *string*

Context	**configure system ptp port** *string*
Description	The ethernet PTP port.
Reference	configure **port** *port*
Introduced	16.0.R2
Notes	This element is part of a list key

address *mac-address*

Context	**configure system ptp port** *string*
Description	The PTP port multicast address.
Default	01:1B:19:00:00:00
Introduced	16.0.R2

admin-state *keyword*

Context	**configure system ptp port** *string*
Description	Administrative state of the PTP port
Default	enable
Options	enable, disable
Introduced	16.0.R2

local-priority *number*

Context	**configure system ptp port** *string*
Description	The PTP port's G.8257.1 local priority
Range	1 to 255
Default	128
Introduced	16.0.R2

log-delay-interval *number*

Context	**configure system ptp port** *string*
Description	The PTP port delay message interval (specified as the logarithm to the base 2 in seconds).
Range	-6 to 0
Introduced	16.0.R2

log-sync-interval *number*

Context	**configure system ptp port** *string*
Description	The PTP port sync message interval (specified as the logarithm to the base 2 in seconds).
Range	-6 to 0
Introduced	16.0.R2

master-only *boolean*

Context	**configure system ptp port** *string*
Description	Restrict the local port from entering the slave state
Introduced	16.0.R2

priority1 *number*

Context	**configure system ptp**
Description	The PTP Priority1
Range	0 to 255
Default	128
Introduced	16.0.R2

priority2 *number*

Context	**configure system ptp**
Description	The PTP Priority2
Range	0 to 255
Default	128
Introduced	16.0.R2

profile *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system ptp**
Description	The PTP Profile
Default	g8265dot1-2010
Options	g8265dot1-2010, ieee1588-2008, g8275dot1-2014
Introduced	16.0.R2

router [router-instance] *string*

Context	**configure system ptp**
Description	Enter the router context
Introduced	16.0.R2

[router-instance] *string*

Context	**configure system ptp router** *string*
Description	Router instance name
Introduced	16.0.R2
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system ptp router** *string*
Description	Administrative state of PTP on the VPRN service
Default	enable
Options	enable, disable
Introduced	16.0.R2

peer [ip-address] *ipv4-unicast-address*

Context	**configure system ptp router** *string*
Description	Enter the peer context
Introduced	16.0.R2

[ip-address] *ipv4-unicast-address*

Context	**configure system ptp router** *string* **peer** *ipv4-unicast-address*
Description	The address of the PTP peer.
Introduced	16.0.R2
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system ptp router** *string* **peer** *ipv4-unicast-address*
Description	Administrative state of PTP peer
Default	enable
Options	enable, disable
Introduced	16.0.R2

local-priority *number*

Context	**configure system ptp router** *string* **peer** *ipv4-unicast-address*
Description	The PTP peer local priority.
Range	1 to 255
Default	128
Introduced	16.0.R2

log-sync-interval *number*

Context	**configure system ptp router** *string* **peer** *ipv4-unicast-address*
Description	The PTP peer sync message interval (specified as the logarithm to the base 2 in seconds).
Range	-6 to 0
Introduced	16.0.R2

peer-limit *number*

Context	**configure system ptp router** *string*
Description	The maximum number of PTP slave peers that can be dynamically created on the router-instance.
Range	0 to 512
Introduced	16.0.R2

script-control

Context	**configure system**
Description	Enter the script-control context
Introduced	16.0.R1

script [script-name] *string* **owner** *string*

Context	**configure system script-control**
Description	Enter the script context
Max. Elements	1500
Introduced	16.0.R1

[script-name] *string*

Context	**configure system script-control script** *string* **owner** *string*
Description	Script name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

owner *string*

Context	**configure system script-control script** *string* **owner** *string*
Description	Script owner
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system script-control script** *string* **owner** *string*
Description	Administrative state of the policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure system script-control script** *string* **owner** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

location *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system script-control script** *string* **owner** *string*
Description	Script location
String Length	1 to 255
Introduced	16.0.R1

script-policy [policy-name] *string* **owner** *string*

Context	**configure system script-control**
Description	Enter the script-policy context
Max. Elements	1500
Introduced	16.0.R1

[policy-name] *string*

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Script policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

owner *string*

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Script policy owner
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Administrative state of the script policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

expire-time (*number* | *keyword*)

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Maximum amount of time to keep the run history status from a script run
Range	0 to 21474836
Default	3600
Units	seconds
Options	forever
Introduced	16.0.R1

lifetime (*number* | *keyword*)

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Maximum amount of time the script may run.
Range	0 to 21474836
Default	3600
Units	seconds
Options	forever
Introduced	16.0.R1

max-completed *number*

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Maximum number of script run history status entries to keep.
Range	1 to 1500
Default	1
Introduced	16.0.R1

results *string*

Context	**configure system script-control script-policy** *string* **owner** *string*
Description	Location to receive CLI output of a script run
String Length	1 to 255
Introduced	16.0.R1

script

Context **configure system script-control script-policy** *string* **owner** *string*

Description Enter the script context

Introduced 16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure system script-control script-policy** *string* **owner** *string* **script**

Description Script name

String Length 1 to 32

Introduced 16.0.R1

owner *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure system script-control script-policy** *string* **owner** *string* **script**

Description Script owner

String Length 1 to 32

Default TiMOS CLI

Introduced 16.0.R1

security

Context **configure system**

Description Enter the security context

Introduced 16.0.R1

aaa

Context **configure system security**

Description Enter the aaa context

Introduced 16.0.R1

cli-session-group [cli-session-group-name] *string*

Context	**configure system security aaa**
Description	Enter the cli-session-group context
Max. Elements	16
Introduced	16.0.R1

[cli-session-group-name] *string*

Context	**configure system security aaa cli-session-group** *string*
Description	The name of the cli session group.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a list key

combined-max-sessions *number*

Context	**configure system security aaa cli-session-group** *string*
Description	Maximum number of concurrent SSH and Telnet sessions
Range	0 to 50
Introduced	16.0.R1

description *string*

Context	**configure system security aaa cli-session-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ssh-max-sessions *number*

Context	**configure system security aaa cli-session-group** *string*
Description	Maximum number of concurrent SSH sessions
Range	0 to 50
Introduced	16.0.R1

telnet-max-sessions *number*

Context	**configure system security aaa cli-session-group** *string*
Description	Maximum number of concurrent TELNET sessions
Range	0 to 50
Introduced	16.0.R1

health-check (*number* | *keyword*)

Context	**configure system security aaa**
Description	Polling interval of RADIUS, TACACS+, and LDAP servers
Range	6 to 1500
Default	30
Units	seconds
Options	none
Introduced	16.0.R1

local-profiles

Context	**configure system security aaa**
Description	Enter the local-profiles context
Introduced	16.0.R1

profile [user-profile-name] *string*

Context	**configure system security aaa local-profiles**
Description	Enter the profile context
Max. Elements	128
Introduced	16.0.R1

[user-profile-name] *string*

Context	**configure system security aaa local-profiles profile** *string*
Description	Profile name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cli-session-group *string*

Context	**configure system security aaa local-profiles profile** *string*
Description	CLI session group to which the profile belongs
Reference	configure **system security aaa cli-session-group** *string*
Introduced	16.0.R1

combined-max-sessions *number*

Context	**configure system security aaa local-profiles profile** *string*
Description	Maximum number of concurrent SSH and Telnet sessions
Range	0 to 50
Introduced	16.0.R1

default-action *keyword*

Context	**configure system security aaa local-profiles profile** *string*
Description	Action for non-matching entry
Default	none
Options	deny-all, permit-all, none, read-only-all
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security aaa local-profiles profile** *string*
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security aaa local-profiles profile** *string* **entry** *number*
Description	User profile entry identifier
Range	1 to 9999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context	**configure system security aaa local-profiles profile** *string* **entry** *number*
Description	Action when a user command matches this entry
Default	none
Options	deny, permit, none, read-only
Introduced	16.0.R1

description *string*

Context	**configure system security aaa local-profiles profile** *string* **entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

match *string*

Context	**configure system security aaa local-profiles profile** *string* **entry** *number*
Description	Command to match this entry
String Length	1 to 255
Introduced	16.0.R1

grpc

Context	**configure system security aaa local-profiles profile** *string*
Description	Enter the grpc context
Introduced	16.0.R1

rpc-authorization

Context	**configure system security aaa local-profiles profile** *string* **grpc**
Description	Enter the rpc-authorization context
Introduced	16.0.R1

gnmi-capabilities *keyword*

Context **configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**

Description Capability RPC use

Options permit, deny

Introduced 16.0.R1

gnmi-get *keyword*

Context **configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**

Description Service gNMI Get RPC

Options permit, deny

Introduced 16.0.R1

gnmi-set *keyword*

Context **configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**

Description Service gNMI Get RPC

Options permit, deny

Introduced 16.0.R1

gnmi-subscribe *keyword*

Context **configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**

Description Service gNMI Subscribe RPC

Options permit, deny

Introduced 16.0.R1

rib-api-getversion *keyword*

Context **configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**

Description Allow RibApi GetVersion RPC.

Options permit, deny

Introduced 16.0.R4

rib-api-modify *keyword*

Context	**configure system security aaa local-profiles profile** *string* **grpc rpc-authorization**
Description	Allow RibApi Modify RPC.
Options	permit, deny
Introduced	16.0.R4

netconf

Context	**configure system security aaa local-profiles profile** *string*
Description	Enter the netconf context
Introduced	16.0.R1

base-op-authorization

Context	**configure system security aaa local-profiles profile** *string* **netconf**
Description	Enter the base-op-authorization context
Introduced	16.0.R1

kill-session *boolean*

Context	**configure system security aaa local-profiles profile** *string* **netconf base-op-authorization**
Description	Send a kill session NETCONF operation
Default	false
Introduced	16.0.R1

lock *boolean*

Context	**configure system security aaa local-profiles profile** *string* **netconf base-op-authorization**
Description	Send a lock session NETCONF operation
Default	false
Introduced	16.0.R1

ssh-max-sessions *number*

Context	**configure system security aaa local-profiles profile** *string*
Description	Maximum number of concurrent SSH sessions
Range	0 to 50
Introduced	16.0.R1

telnet-max-sessions *number*

Context	**configure system security aaa local-profiles profile** *string*
Description	Maximum number of concurrent TELNET sessions
Range	0 to 50
Introduced	16.0.R1

remote-servers

Context	**configure system security aaa**
Description	Enter the remote-servers context
Introduced	16.0.R1

ldap

Context	**configure system security aaa remote-servers**
Description	Enter the ldap context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security aaa remote-servers ldap**
Description	Administrative state of the LDAP protocol
Default	enable
Options	enable, disable
Introduced	16.0.R1

public-key-authentication *boolean*

Context	**configure system security aaa remote-servers ldap**
Description	Allow SSH public key authentication from LDAP server
Default	false
Introduced	16.0.R1

server [index] *number*

Context	**configure system security aaa remote-servers ldap**
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[index] *number*

Context	**configure system security aaa remote-servers ldap server** *number*
Description	Unique value which identifies a specific LDAP server.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system security aaa remote-servers ldap server** *number*
Description	Enter the address context
Max. Elements	1
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system security aaa remote-servers ldap server** *number* **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	LDAP server address
Introduced	16.0.R1
Notes	This element is part of a list key

port *number*

Context	**configure system security aaa remote-servers ldap server** *number* **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Port number on which to contact the LDAP server.
Range	1 to 65535
Default	389
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security aaa remote-servers ldap server** *number*
Description	Administrative state of this LDAP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

bind-authentication

Context	**configure system security aaa remote-servers ldap server** *number*
Description	Enter the bind-authentication context
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure system security aaa remote-servers ldap server** *number* **bind-authentication**
Description	Password used for authentication with the LDAP server.
String Length	1 to 198
Introduced	16.0.R1

root-dn *string*

Context	**configure system security aaa remote-servers ldap server** *number* **bind-authentication**
Description	Root domain used for authentication with the LDAP server.
String Length	1 to 512
Introduced	16.0.R1

search

Context	**configure system security aaa remote-servers ldap server** *number*
Description	Enter the search context
Introduced	16.0.R1

base-dn *string*

Context	**configure system security aaa remote-servers ldap server** *number* **search**
Description	LDAP server search domain
String Length	1 to 512
Introduced	16.0.R1

server-name *string*

Context	**configure system security aaa remote-servers ldap server** *number*
Description	LDAP server name
String Length	1 to 32
Introduced	16.0.R1

tls-profile *string*

Context	**configure system security aaa remote-servers ldap server** *number*
Description	TLS client transport profile
Reference	configure **system security tls client-tls-profile** *string*
Introduced	16.0.R1

server-retry *number*

Context	**configure system security aaa remote-servers ldap**
Description	Number of attempts to retry contacting an LDAP server
Range	1 to 10
Default	3
Introduced	16.0.R1

server-timeout *number*

Context	**configure system security aaa remote-servers ldap**
Description	Timeout for a response from an LDAP server
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R1

use-default-template *boolean*

Context	**configure system security aaa remote-servers ldap**
Description	Use LDAP default template
Default	true
Introduced	16.0.R1

radius

Context	**configure system security aaa remote-servers**
Description	Enter the radius context
Introduced	16.0.R1

access-algorithm *keyword*

Context	**configure system security aaa remote-servers radius**
Description	Configure the algorithm used to access the set of RADIUS servers.
Default	direct
Options	direct, round-robin
Introduced	16.0.R1

accounting *boolean*

Context	**configure system security aaa remote-servers radius**
Description	Enable/disable RADIUS command accounting.
Default	false
Introduced	16.0.R1

accounting-port *number*

Context	**configure system security aaa remote-servers radius**
Description	Port number on which to contact RADIUS server for accounting requests.
Range	1 to 65535
Default	1813
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security aaa remote-servers radius**
Description	Enable/disable RADIUS protocol operation.
Default	enable
Options	enable, disable
Introduced	16.0.R1

authorization *boolean*

Context	**configure system security aaa remote-servers radius**
Description	Enable/disable RADIUS command authorization.
Default	false
Introduced	16.0.R1

interactive-authentication *boolean*

Context	**configure system security aaa remote-servers radius**
Description	Enable/disable RADIUS interactive authentication.
Default	false
Introduced	16.0.R1

port *number*

Context	**configure system security aaa remote-servers radius**
Description	Port number on which to contact RADIUS server.
Range	1 to 65535
Default	1812
Introduced	16.0.R1

server [index] *number*

Context	**configure system security aaa remote-servers radius**
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[index] *number*

Context	**configure system security aaa remote-servers radius server** *number*
Description	Unique number which identifies a specific RADIUS server.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system security aaa remote-servers radius server** *number*
Description	IP address of Radius server.
Introduced	16.0.R1
Notes	This element is mandatory

secret *encrypted-leaf*

Context	**configure system security aaa remote-servers radius server** *number*
Description	The secret key associated with RADIUS server. The value of secret cannot be set to an empty string.
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is mandatory

server-retry *number*

Context	**configure system security aaa remote-servers radius**
Description	Number of attempts to retry contacting RADIUS.
Range	1 to 10
Default	3
Introduced	16.0.R1

server-timeout *number*

Context	**configure system security aaa remote-servers radius**
Description	Timeout for a response from RADIUS server.
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R1

use-default-template *boolean*

Context	**configure system security aaa remote-servers radius**
Description	Enable/disable RADIUS default template.
Default	false
Introduced	16.0.R1

tacplus

Context	**configure system security aaa remote-servers**
Description	Enter the tacplus context
Introduced	16.0.R1

accounting

Context	**configure system security aaa remote-servers tacplus**
Description	Enter the accounting context
Introduced	16.0.R1

record-type *keyword*

Context	**configure system security aaa remote-servers tacplus accounting**
Description	Configure the type of accounting record packet that is to be sent to the TACACS+ server.
Default	stop-only
Options	start-stop, stop-only
Introduced	16.0.R1

admin-control

Context	**configure system security aaa remote-servers tacplus**
Description	Enter the admin-control context
Introduced	16.0.R1

tacplus-map-to-priv-lvl *number*

Context	**configure system security aaa remote-servers tacplus admin-control**
Description	Interactive authentication exchange from the node to the TACACS+ server
Range	0 to 15
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security aaa remote-servers tacplus**
Description	Enable/disable TACACS+ protocol operation.
Default	enable
Options	enable, disable
Introduced	16.0.R1

authorization

Context	**configure system security aaa remote-servers tacplus**
Description	Enter the authorization context
Introduced	16.0.R1

use-priv-lvl *boolean*

Context	**configure system security aaa remote-servers tacplus authorization**
Description	Enable/disable the privilege level mapping.
Default	false
Introduced	16.0.R1

interactive-authentication *boolean*

Context	**configure system security aaa remote-servers tacplus**
Description	Enable/disable TACACS+ interactive authentication.
Default	false
Introduced	16.0.R1

priv-lvl-map

Context	**configure system security aaa remote-servers tacplus**
Description	Enter the priv-lvl-map context
Introduced	16.0.R1

priv-lvl [level] *number*

Context	**configure system security aaa remote-servers tacplus priv-lvl-map**
Description	Enter the priv-lvl context
Introduced	16.0.R1

[level] *number*

Context	**configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl** *number*
Description	Specifies the privilege level for this mapping.
Range	0 to 15
Introduced	16.0.R1
Notes	This element is part of a list key

user-profile-name *string*

Context	**configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl** *number*
Description	Specifies the user profile for this mapping.
Reference	configure **system security aaa local-profiles profile** *string*
Introduced	16.0.R1
Notes	This element is mandatory

server [index] *number*

Context	**configure system security aaa remote-servers tacplus**
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[index] *number*

Context	**configure system security aaa remote-servers tacplus server** *number*
Description	Identifies a specific TACACS+ server.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system security aaa remote-servers tacplus server** *number*
Description	IP address of TACACS+ server.
Introduced	16.0.R1
Notes	This element is mandatory

port *number*

Context	**configure system security aaa remote-servers tacplus server** *number*
Description	TCP port number on which to contact TACACS+ server.
Range	0 | 1 to 65535
Default	49
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure system security aaa remote-servers tacplus server** *number*
Description	The secret key associated with the TACACS+ server. The value of secret cannot be set to an empty string.
String Length	1 to 198
Introduced	16.0.R1
Notes	This element is mandatory

server-timeout *number*

Context	**configure system security aaa remote-servers tacplus**
Description	Timeout for a response from an TACACS+ server.
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R1

use-default-template *boolean*

Context	**configure system security aaa remote-servers tacplus**
Description	Enable/disable TACACS+ default template.
Default	true
Introduced	16.0.R1

user-template [user-template-name] *keyword*

Context	**configure system security aaa**
Description	Enter the user-template context
Introduced	16.0.R1

[user-template-name] *keyword*

Context	**configure system security aaa user-template** *keyword*
Description	Template value to derive a system user
Options	ldap-default, radius-default, tacplus-default
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure system security aaa user-template** *keyword*
Description	Enter the access context
Introduced	16.0.R1

console *boolean*

Context **configure system security aaa user-template** *keyword* **access**
Description Allow console access (serial port or Telnet)
Default true
Introduced 16.0.R1

ftp *boolean*

Context **configure system security aaa user-template** *keyword* **access**
Description Allow FTP access
Default false
Introduced 16.0.R1

grpc *boolean*

Context **configure system security aaa user-template** *keyword* **access**
Description Allow gRPC access
Default false
Introduced 16.0.R1

netconf *boolean*

Context **configure system security aaa user-template** *keyword* **access**
Description Allow NETCONF session access
Default false
Introduced 16.0.R1

console

Context **configure system security aaa user-template** *keyword*
Description Enter the console context
Introduced 16.0.R1

login-exec *string*

Context	**configure system security aaa user-template** *keyword* **console**
Description	File to execute when a user, who derived from the template, logs in successfully
String Length	1 to 200
Introduced	16.0.R1

home-directory (*sat-url* | *cflash-without-slot-url*)

Context	**configure system security aaa user-template** *keyword*
Description	Home directory for the user based on this template
Introduced	16.0.R1

profile *string*

Context	**configure system security aaa user-template** *keyword*
Description	User profile based on this template
String Length	1 to 32
Introduced	16.0.R1

restricted-to-home *boolean*

Context	**configure system security aaa user-template** *keyword*
Description	Users to prevent from navigating above their home directories to access file
Default	false
Introduced	16.0.R1

cli-script

Context	**configure system security**
Description	Enter the cli-script context
Introduced	16.0.R1

authorization

Context	**configure system security cli-script**
Description	Enter the authorization context
Introduced	16.0.R1

cron

Context	**configure system security cli-script authorization**
Description	Enter the cron context
Introduced	16.0.R1

cli-user *string*

Context	**configure system security cli-script authorization cron**
Description	User profile name for command authorization when executing a CLI command script
Reference	configure **system security user-params local-user user** *string*
Introduced	16.0.R1

event-handler

Context	**configure system security cli-script authorization**
Description	Enter the event-handler context
Introduced	16.0.R1

cli-user *string*

Context	**configure system security cli-script authorization event-handler**
Description	User profile name for command authorization when executing a CLI command script
Reference	configure **system security user-params local-user user** *string*
Introduced	16.0.R1

vsd

Context	**configure system security cli-script authorization**
Description	Enter the vsd context
Introduced	16.0.R1

cli-user *string*

Context	**configure system security cli-script authorization vsd**
Description	User profile name for command authorization when executing a CLI command script
Reference	configure **system security user-params local-user user** *string*
Introduced	16.0.R1

cpm-filter

Context **configure system security**
Description Enter the cpm-filter context
Introduced 16.0.R1

default-action *keyword*

Context **configure system security cpm-filter**
Description Action for packets that do not match any filter entries
Default accept
Options drop, accept
Introduced 16.0.R1

ip-filter

Context **configure system security cpm-filter**
Description Enter the ip-filter context
Introduced 16.0.R1

admin-state *keyword*

Context **configure system security cpm-filter ip-filter**
Description Administrative state of this CPM filter
Default disable
Options enable, disable
Introduced 16.0.R1

entry [entry-id] *number*

Context **configure system security cpm-filter ip-filter**
Description Enter the entry context
Introduced 16.0.R1

[entry-id] *number*

Context **configure system security cpm-filter ip-filter entry** *number*
Description The id used to uniquely identify this filter entry.
Range 1 to 131072
Introduced 16.0.R5
Notes This element is part of a list key

action

Context **configure system security cpm-filter ip-filter entry** *number*
Description Enter the action context
Introduced 16.0.R1

accept

Context **configure system security cpm-filter ip-filter entry** *number* **action**
Description Packets matching the filter entry are forwarded
Introduced 16.0.R1
Notes This element is part of a choice

default

Context **configure system security cpm-filter ip-filter entry** *number* **action**
Description Action to take on the traffic when the filter entry matches
Introduced 16.0.R1
Notes This element is part of a choice

drop

Context **configure system security cpm-filter ip-filter entry** *number* **action**
Description Drop packet matching this entry
Introduced 16.0.R1
Notes This element is part of a choice

queue *string*

Context	**configure system security cpm-filter ip-filter entry** *number* **action**
Description	Packets matching the filter entry to be sent to this queue
Reference	configure **system security cpm-queue queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure system security cpm-filter ip-filter entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

log *string*

Context	**configure system security cpm-filter ip-filter entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context	**configure system security cpm-filter ip-filter entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dscp *keyword*

Context	**configure system security cpm-filter ip-filter entry** *number* **match**
Description	Specifies the DSCP to be matched on the packet.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R5

dst-ip

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the dst-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure system security cpm-filter ip-filter entry** *number* **match dst-ip**

Description IP address to match

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure system security cpm-filter ip-filter entry** *number* **match dst-ip**

Description IP prefix list as match criterion for IP address

Reference configure **filter match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure system security cpm-filter ip-filter entry** *number* **match dst-ip**

Description Mask as an AND to the IP address

Introduced 16.0.R1

Notes This element is part of a choice

dst-port

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the **dst-port** context

Introduced 16.0.R5

eq *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match dst-port**
Description	Port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match dst-port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ip-filter entry** *number* **match dst-port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ip-filter entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

start *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match dst-port range**

Description Lower bound port to match

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

fragment *keyword*

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description If not default, matches fragmented/unfragmented packets as per value of the object.

Options false, true

Introduced 16.0.R5

icmp

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the icmp context

Introduced 16.0.R1

code *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match icmp**

Description ICMP code to match

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

type *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

ip-option

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the ip-option context

Introduced 16.0.R1

mask *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match ip-option**

Description Mask that is ANDed with ip-option value in the packet header

Range 1 to 255

Default 255

Introduced 16.0.R1

type *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match ip-option**

Description Specific IP option to match

Introduced 16.0.R1

Notes This element is mandatory

multiple-option *boolean*

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Specifies whether multiple options are to be matched.

Introduced 16.0.R5

option-present *boolean*

Context	**configure system security cpm-filter ip-filter entry** *number* **match**
Description	Specifies whether IP options matching is enabled.
Introduced	16.0.R5

port

Context	**configure system security cpm-filter ip-filter entry** *number* **match**
Description	Enter the **port** context
Introduced	16.0.R5

eq *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match port**
Description	Port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ip-filter entry** *number* **match port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ip-filter entry** *number* **match port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

protocol (*number* | *keyword*)

Context	**configure system security cpm-filter ip-filter entry** *number* **match**
Description	Specifies the IP protocol to match. It can be set to -1 to disable matching cpm protocol.
Introduced	16.0.R5

router-instance *string*

Context	**configure system security cpm-filter ip-filter entry** *number* **match**
Description	Specifies router instance to be matched.
String Length	1 to 64
Introduced	16.0.R5

src-ip

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure system security cpm-filter ip-filter entry** *number* **match src-ip**

Description IP address to match

Introduced 16.0.R1

Notes This element is part of a choice

ip-prefix-list *string*

Context **configure system security cpm-filter ip-filter entry** *number* **match src-ip**

Description IP prefix list as match criterion for IP address

Reference configure **filter match-list ip-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure system security cpm-filter ip-filter entry** *number* **match src-ip**

Description Mask as an AND to the IP address

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the **src-port** context

Introduced 16.0.R5

eq *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match src-port**
Description	Port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match src-port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ip-filter entry** *number* **match src-port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ip-filter entry** *number* **match src-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ip-filter entry** *number* **match src-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

This element is part of a choice

start *number*

Context **configure system security cpm-filter ip-filter entry** *number* **match src-port range**

Description Lower bound port to match

Range 0 to 65535

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

tcp-flags

Context **configure system security cpm-filter ip-filter entry** *number* **match**

Description Enter the tcp-flags context

Introduced 16.0.R1

ack *boolean*

Context **configure system security cpm-filter ip-filter entry** *number* **match tcp-flags**

Description TCP ACK packet to match

Introduced 16.0.R1

syn *boolean*

Context **configure system security cpm-filter ip-filter entry** *number* **match tcp-flags**

Description TCP SYN packet to match

Introduced 16.0.R1

ipv6-filter

Context **configure system security cpm-filter**

Description Enter the ipv6-filter context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure system security cpm-filter ipv6-filter**
Description	Administrative state of this CPM filter
Default	disable
Options	enable, disable
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security cpm-filter ipv6-filter**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number*
Description	The id used to uniquely identify this filter entry.
Range	1 to 131072
Introduced	16.0.R5
Notes	This element is part of a list key

action

Context	**configure system security cpm-filter ipv6-filter entry** *number*
Description	Enter the action context
Introduced	16.0.R1

accept

Context	**configure system security cpm-filter ipv6-filter entry** *number* **action**
Description	Packets matching the filter entry are forwarded
Introduced	16.0.R1
Notes	This element is part of a choice

default

Context	**configure system security cpm-filter ipv6-filter entry** *number* **action**
Description	Action to take on the traffic when the filter entry matches
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure system security cpm-filter ipv6-filter entry** *number* **action**
Description	Drop packet matching this entry
Introduced	16.0.R1
Notes	This element is part of a choice

queue *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **action**
Description	Packets matching the filter entry to be sent to this queue
Reference	configure **system security cpm-queue queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

log *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context **configure system security cpm-filter ipv6-filter entry** *number*

Description Enter the match context

Introduced 16.0.R1

dscp *keyword*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description Specifies the DSCP to be matched on the packet.

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R5

dst-ip

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description Enter the dst-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure system security cpm-filter ipv6-filter entry** *number* **match dst-ip**

Description IP address to match

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-prefix-list *string*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match dst-ip**

Description IP prefix list as match criterion for IP address

Reference configure **filter match-list ipv6-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-ip**
Description	Mask as an AND to IPv6 address
Introduced	16.0.R1
Notes	This element is part of a choice

dst-port

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Enter the **dst-port** context
Introduced	16.0.R5

eq *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port**
Description	Port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match dst-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

extension-header

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Enter the extension-header context
Introduced	16.0.R1

hop-by-hop *boolean*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match extension-header**
Description	Match a packet as per the existence of a Hop-By-Hop options Extension Header
Introduced	16.0.R1

flow-label *number*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description Specifies the flow label to be matched.

Range 0 to 1048575

Introduced 16.0.R5

fragment *keyword*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description If not default, matches fragmented/unfragmented packets as per value of the object.

Options false, true

Introduced 16.0.R5

icmp

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description Enter the icmp context

Introduced 16.0.R1

code *number*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match icmp**

Description ICMP code to match

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

type *number*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match icmp**

Description ICMP type to match

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

next-header (*number* | *keyword*)

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	IPv6 next header to match. Because the match criteria only pertains to the last next-header, the following values will not match a filter entry: 0, 43, 44, 50, 51, and 60.
Introduced	16.0.R5

port

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Enter the **port** context
Introduced	16.0.R5

eq *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port**
Description	Port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

router-instance *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Specifies router instance to be matched.
String Length	1 to 64
Introduced	16.0.R5

src-ip

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Enter the src-ip context
Introduced	16.0.R1

address (*string* | *string*)

Context **configure system security cpm-filter ipv6-filter entry** *number* **match src-ip**

Description IP address to match

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-prefix-list *string*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match src-ip**

Description IP prefix list as match criterion for IP address

Reference configure **filter match-list ipv6-prefix-list** *string*

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match src-ip**

Description Mask as an AND to IPv6 address

Introduced 16.0.R1

Notes This element is part of a choice

src-port

Context **configure system security cpm-filter ipv6-filter entry** *number* **match**

Description Enter the **src-port** context

Introduced 16.0.R5

eq *number*

Context **configure system security cpm-filter ipv6-filter entry** *number* **match src-port**

Description Port to match

Range 0 to 65535

Introduced 16.0.R1

Notes This element is part of a choice

mask *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match src-port**
Description	Mask to apply when matching the port
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Notes	This element is part of a choice

port-list *string*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match src-port**
Description	Parameter port list as match criterion
Reference	configure **filter match-list port-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

range

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match src-port**
Description	Enter the **range** context
Introduced	16.0.R1

end *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match src-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match src-port range**
Description	Lower bound port to match
Range	0 to 65535
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

tcp-flags

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match**
Description	Enter the tcp-flags context
Introduced	16.0.R1

ack *boolean*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match tcp-flags**
Description	TCP ACK packet to match
Introduced	16.0.R1

syn *boolean*

Context	**configure system security cpm-filter ipv6-filter entry** *number* **match tcp-flags**
Description	TCP SYN packet to match
Introduced	16.0.R1

mac-filter

Context	**configure system security cpm-filter**
Description	Enter the mac-filter context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security cpm-filter mac-filter**
Description	Administrative state of this CPM filter
Default	disable
Options	enable, disable
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security cpm-filter mac-filter**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security cpm-filter mac-filter entry** *number*
Description	The id used to uniquely identify this filter entry.
Range	1 to 131072
Introduced	16.0.R5
Notes	This element is part of a list key

action

Context	**configure system security cpm-filter mac-filter entry** *number*
Description	Enter the action context
Introduced	16.0.R1

accept

Context	**configure system security cpm-filter mac-filter entry** *number* **action**
Description	Packets matching the filter entry are forwarded
Introduced	16.0.R1
Notes	This element is part of a choice

default

Context	**configure system security cpm-filter mac-filter entry** *number* **action**
Description	Action to take on the traffic when the filter entry matches
Introduced	16.0.R1
Notes	This element is part of a choice

drop

Context	**configure system security cpm-filter mac-filter entry** *number* **action**
Description	Drop packet matching this entry
Introduced	16.0.R1
Notes	This element is part of a choice

queue *string*

Context	**configure system security cpm-filter mac-filter entry** *number* **action**
Description	Packets matching the filter entry to be sent to this queue
Reference	configure **system security cpm-queue queue** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

description *string*

Context	**configure system security cpm-filter mac-filter entry** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

log *string*

Context	**configure system security cpm-filter mac-filter entry** *number*
Description	Log that is used for packets matching this entry
Reference	configure **filter log** *number*
Introduced	16.0.R1

match

Context **configure system security cpm-filter mac-filter entry** *number*

Description Enter the match context

Introduced 16.0.R1

cfm-opcode

Context **configure system security cpm-filter mac-filter entry** *number* **match**

Description Enter the cfm-opcode context

Introduced 16.0.R1

eq *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode**

Description Value of the opcode to match

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode**

Description Lower bound for the range of opcode to match

Range 0 to 254

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode**

Description Upper bound for the range of opcode to match

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode range**

Description Upper bound for the range of opcode to match

Range 1 to 255

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

start *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match cfm-opcode range**

Description Lower bound for the range of opcode to match

Range 0 to 254

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

dst-mac

Context **configure system security cpm-filter mac-filter entry** *number* **match**

Description Enter the dst-mac context

Introduced 16.0.R1

address *mac-address*

Context **configure system security cpm-filter mac-filter entry** *number* **match dst-mac**

Description MAC address

Introduced 16.0.R1

Notes This element is mandatory

mask *mac-address*

Context	**configure system security cpm-filter mac-filter entry** *number* **match dst-mac**
Description	MAC address mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

etype *etype-value*

Context	**configure system security cpm-filter mac-filter entry** *number* **match**
Description	Ethernet type
String Length	5 to 6
Introduced	16.0.R1

frame-type *keyword*

Context	**configure system security cpm-filter mac-filter entry** *number* **match**
Description	MAC frame as match criteria
Options	802dot2-llc, ethernet-ii
Introduced	16.0.R1

llc-dsap

Context	**configure system security cpm-filter mac-filter entry** *number* **match**
Description	Enter the llc-dsap context
Introduced	16.0.R1

dsap *number*

Context	**configure system security cpm-filter mac-filter entry** *number* **match llc-dsap**
Description	DSAP value
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

mask *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match llc-dsap**
Description DSAP mask
Range 1 to 255
Default 255
Introduced 16.0.R1

llc-ssap

Context **configure system security cpm-filter mac-filter entry** *number* **match**
Description Enter the llc-ssap context
Introduced 16.0.R1

mask *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match llc-ssap**
Description SAP mask
Range 1 to 255
Default 255
Introduced 16.0.R1

ssap *number*

Context **configure system security cpm-filter mac-filter entry** *number* **match llc-ssap**
Description SSAP value
Range 0 to 255
Introduced 16.0.R1
Notes This element is mandatory

service *string*

Context **configure system security cpm-filter mac-filter entry** *number* **match**
Description Specifies the VPLS service in which the packet is to be received for this entry to match.
Reference configure **service vpls** *service-name*
Introduced 16.0.R1

src-mac

Context **configure system security cpm-filter mac-filter entry** *number* **match**

Description Enter the src-mac context

Introduced 16.0.R1

address *mac-address*

Context **configure system security cpm-filter mac-filter entry** *number* **match src-mac**

Description MAC address

Introduced 16.0.R1

Notes This element is mandatory

mask *mac-address*

Context **configure system security cpm-filter mac-filter entry** *number* **match src-mac**

Description MAC address mask

Default ff:ff:ff:ff:ff:ff

Introduced 16.0.R1

cpm-queue

Context **configure system security**

Description Enter the cpm-queue context

Introduced 16.0.R1

queue [queue-id] *number*

Context **configure system security cpm-queue**

Description Enter the queue context

Introduced 16.0.R1

[queue-id] *number*

Context	**configure system security cpm-queue queue** *number*
Description	Unique identifier of a CPM queue
Range	33 to 2000
Introduced	16.0.R1
Notes	This element is part of a list key

cbs *number*

Context	**configure system security cpm-queue queue** *number*
Description	CBS (Committed Burst Excess) associated with this queue
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1

mbs *number*

Context	**configure system security cpm-queue queue** *number*
Description	MBS (Maximum Burst Size) associated with this queue
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1

rate

Context	**configure system security cpm-queue queue** *number*
Description	Enter the rate context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure system security cpm-queue queue** *number* **rate**
Description	Amount of bandwidth committed to the queue
Default	max
Units	kilobps
Introduced	16.0.R1

pir (*number* | *keyword*)

Context **configure system security cpm-queue queue** *number* **rate**
Description Peak information rate associated with this queue
Default max
Units kilobps
Introduced 16.0.R1

cpu-protection

Context **configure system security**
Description Enter the cpu-protection context
Introduced 16.0.R1

ip-src-monitoring

Context **configure system security cpu-protection**
Description Enter the ip-src-monitoring context
Introduced 16.0.R1

included-protocols

Context **configure system security cpu-protection ip-src-monitoring**
Description Enter the included-protocols context
Introduced 16.0.R1

dhcp *boolean*

Context **configure system security cpu-protection ip-src-monitoring included-protocols**
Description DHCP protocol packets for IP source monitoring
Default true
Introduced 16.0.R1

gtp *boolean*

Context **configure system security cpu-protection ip-src-monitoring included-protocols**
Description GTP protocol packets for IP source monitoring
Default false
Introduced 16.0.R1

icmp *boolean*

Context **configure system security cpu-protection ip-src-monitoring included-protocols**
Description ICMP protocol packets for IP source monitoring
Default false
Introduced 16.0.R1

igmp *boolean*

Context **configure system security cpu-protection ip-src-monitoring included-protocols**
Description IGMP protocol for IP source monitoring
Default false
Introduced 16.0.R1

link-specific-rate (*number* | *keyword*)

Context **configure system security cpu-protection**
Description Limit of packet arrival rate limit for link level protocols
Units packets per second
Introduced 16.0.R1

policy [policy-id] *number*

Context **configure system security cpu-protection**
Description Enter the policy context
Introduced 16.0.R1

[policy-id] *number*

Context	**configure system security cpu-protection policy** *number*
Description	Number that identifies this CPU protection policy
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

alarm *boolean*

Context	**configure system security cpu-protection policy** *number*
Description	Notification sent when a packet arrival rate limits is reached
Default	true
Introduced	16.0.R1

description *string*

Context	**configure system security cpu-protection policy** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-cfm

Context	**configure system security cpu-protection policy** *number*
Description	Enter the eth-cfm context
Introduced	16.0.R1

entry [id] *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm**
Description	Enter the entry context
Max. Elements	10
Introduced	16.0.R1

[id] *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number*
Description	Number to identify this entry
Range	1 to 100
Introduced	16.0.R1
Notes	This element is part of a list key

level start *number* **end** *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number*
Description	Enter the level context
Min. Elements	1
Introduced	16.0.R1

start *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number* **level start** *number* **end** *number*
Description	First level in the range
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number* **level start** *number* **end** *number*
Description	Last level in the range
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

opcode start *number* **end** *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number*
Description	Enter the opcode context
Min. Elements	1
Introduced	16.0.R1

start *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number* **opcode start** *number* **end** *number*
Description	First opcode in the range
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number* **opcode start** *number* **end** *number*
Description	Last opcode in the range
Range	0 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

pir (*number* | *keyword*)

Context	**configure system security cpu-protection policy** *number* **eth-cfm entry** *number*
Description	Packet arrival rate limit for this set of Ethernet CFM packets
Range	0 to 65534
Default	max
Units	packets per second
Options	max
Introduced	16.0.R1

out-profile-rate

Context	**configure system security cpu-protection policy** *number*
Description	Enter the out-profile-rate context
Introduced	16.0.R1

log-events *boolean*

Context	**configure system security cpu-protection policy** *number* **out-profile-rate**
Description	Log events to generate when the out profile rate PIR is exceeded
Default	false
Introduced	16.0.R1

pir (*number* | *keyword*)

Context	**configure system security cpu-protection policy** *number* **out-profile-rate**
Description	Packet arrival threshold PIR above which incoming control packets are discarded
Units	packets per second
Introduced	16.0.R1

overall-rate (*number* | *keyword*)

Context	**configure system security cpu-protection policy** *number*
Description	Overall packet arrival rate limit to apply for all sources of packets
Units	packets per second
Introduced	16.0.R1

per-source-parameters

Context	**configure system security cpu-protection policy** *number*
Description	Enter the per-source-parameters context
Introduced	16.0.R1

ip-src-monitoring

Context	**configure system security cpu-protection policy** *number* **per-source-parameters**
Description	Enter the ip-src-monitoring context
Introduced	16.0.R1

limit-dhcp-ci-addr-zero *boolean*

Context	**configure system security cpu-protection policy** *number* **per-source-parameters ip-src-monitoring**
Description	Apply per-source rate limiting to DHCP packets containing Client IP address zero
Default	false
Introduced	16.0.R1

per-source-rate (*number* | *keyword*)

Context	**configure system security cpu-protection policy** *number*
Description	Per-source packet arrival rate limit
Default	max
Units	packets per second
Introduced	16.0.R1

port-overall-rate

Context	**configure system security cpu-protection**
Description	Enter the port-overall-rate context
Introduced	16.0.R1

action-low-priority *boolean*

Context	**configure system security cpu-protection port-overall-rate**
Description	Mark packets that exceed the rate as low-priority instead of discarding them immediately
Default	false
Introduced	16.0.R1

pir (*number* | *keyword*)

Context	**configure system security cpu-protection port-overall-rate**
Description	Per-port packet arrival rate limit applied to all protocol messages to be processed by CPM
Units	packets per second
Introduced	16.0.R1

protocol-protection

Context	**configure system security cpu-protection**
Description	Enter the protocol-protection context
Introduced	16.0.R1

allow-sham-links *boolean*

Context	**configure system security cpu-protection protocol-protection**
Description	Allow OSPF sham-link traffic over VPRN transport tunnels
Default	false
Introduced	16.0.R1

block-pim-tunneled *boolean*

Context	**configure system security cpu-protection protocol-protection**
Description	Block extraction and processing of PIM packets that arrive inside a tunnel
Default	false
Introduced	16.0.R1

dist-cpu-protection

Context	**configure system security**
Description	Enter the dist-cpu-protection context
Introduced	16.0.R1

policy [policy-name] *string*

Context	**configure system security dist-cpu-protection**
Description	Enter the policy context
Max. Elements	18
Introduced	16.0.R1

[policy-name] *string*

Context	**configure system security dist-cpu-protection policy** *string*
Description	Name for the distributed CPU protection policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system security dist-cpu-protection policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

local-monitoring-policer [policer-name] *string*

Context	**configure system security dist-cpu-protection policy** *string*
Description	Enter the local-monitoring-policer context
Max. Elements	1
Introduced	16.0.R1

[policer-name] *string*

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*
Description	Name for the distributed CPU protection local monitoring policer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

exceed-action *keyword*

Context **configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*

Description Action to perform upon the extracted control packets when configured policer rates are exceeded

Options discard, low-priority, none

Introduced 16.0.R1

log-events *keyword*

Context **configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*

Description Control of log events creation for static policer status and activity

Default true

Options false, true, verbose

Introduced 16.0.R1

rate

Context **configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*

Description Enter the rate context

Introduced 16.0.R1

kbps

Context **configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate**

Description Enter the **kbps** context

Introduced 16.0.R1

limit (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate kbps**
Description	Limiting rate and burst tolerance for the policer in a packet rate, or a bit rate
Range	1 to 20000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

mbs *number*

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate kbps**
Description	Buffer space assigned
Range	0 to 4194304
Units	bytes
Introduced	16.0.R1
Notes	This element is part of a choice

packets

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate**
Description	Enter the **packets** context
Introduced	16.0.R1

initial-delay *number*

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate packets**
Description	Number of packets allowed in an initial burst or burst after the policer bucket drained to zero
Range	0 to 255
Default	0
Units	packets
Introduced	16.0.R1
Notes	This element is part of a choice

limit (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate packets**
Description	Overall packet arrival rate limit to be applied to all sources of packets
Range	0 to 255
Default	max
Units	packets per interval
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

within *number*

Context	**configure system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string* **rate packets**
Description	Measurement interval for packets rate
Range	1 to 32767
Default	1
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

protocol [protocol-name] *keyword*

Context	**configure system security dist-cpu-protection policy** *string*
Description	Enter the protocol context
Introduced	16.0.R1

[protocol-name] *keyword*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword*
Description	Protocol name that is monitored by the distributed CPU protection policy
Options	arp, dhcp, http-redirect, icmp, igmp, mld, ndis, pppoe-pppoa, all-unspecified, mpls-ttl, bfd-cpm, bgp, eth-cfm, isis, ldp, ospf, pim, rsvp
Introduced	16.0.R1
Notes	This element is part of a list key

dynamic-parameters

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword*
Description	Enter the dynamic-parameters context
Introduced	16.0.R1

detection-time *number*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters**
Description	Minimum time that an instantiated dynamic enforcing policer remains allocated
Range	1 to 128000
Default	30
Units	seconds
Introduced	16.0.R1

exceed-action

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters**
Description	Enter the exceed-action context
Introduced	16.0.R1

action *keyword*

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters exceed-action**

Description Action to perform upon the extracted control packets when configured policer rates are exceeded

Options discard, low-priority, none

Introduced 16.0.R1

hold-down (*keyword* | *number*)

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters exceed-action**

Description Hold down behavior

Range 1 to 10080

Default none

Units seconds

Options indefinite, none

Introduced 16.0.R1

log-events *keyword*

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters**

Description Control of log events creation for static policer status and activity

Default true

Options false, true, verbose

Introduced 16.0.R1

rate

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters**

Description Enter the rate context

Introduced 16.0.R1

kbps

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate**

Description Enter the **kbps** context

Introduced 16.0.R1

limit (*keyword* | *number*)

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate kbps**

Description Limiting rate and burst tolerance for the policer in a packet rate, or a bit rate

Range 1 to 20000000

Default max

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

mbs *number*

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate kbps**

Description Buffer space assigned

Range 0 to 4194304

Units bytes

Introduced 16.0.R1

Notes This element is part of a choice

packets

Context **configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate**

Description Enter the **packets** context

Introduced 16.0.R1

initial-delay *number*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate packets**
Description	Number of packets allowed in an initial burst or burst after the policer bucket drained to zero
Range	0 to 255
Default	0
Units	packets
Introduced	16.0.R1
Notes	This element is part of a choice

limit (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate packets**
Description	Overall packet arrival rate limit to be applied to all sources of packets
Range	0 to 255
Default	max
Units	packets per interval
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

within *number*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **dynamic-parameters rate packets**
Description	Measurement interval for packets rate
Range	1 to 32767
Default	1
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

enforcement

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword*
Description	Enter the enforcement context
Introduced	16.0.R1

dynamic

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **enforcement**
Description	Enter the **dynamic** context
Introduced	16.0.R1

mon-policer-name *string*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **enforcement dynamic**
Description	Name for the dynamic enforcement policer
Reference	configure **system security dist-cpu-protection policy** *string* **local-monitoring-policer** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

dynamic-local-mon-bypass

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **enforcement**
Description	Do not include packets from this protocol in the local monitoring function
Introduced	16.0.R1
Notes	This element is part of a choice

static

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **enforcement**
Description	Enter the **static** context
Introduced	16.0.R1

policer-name *string*

Context	**configure system security dist-cpu-protection policy** *string* **protocol** *keyword* **enforcement static**
Description	Static enforcement policer name
Reference	configure **system security dist-cpu-protection policy** *string* **static-policer** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

static-policer [policer-name] *string*

Context	**configure system security dist-cpu-protection policy** *string*
Description	Enter the static-policer context
Max. Elements	18
Introduced	16.0.R1

[policer-name] *string*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Name for the distributed CPU protection static policer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

detection-time *number*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Minimum time that an instantiated dynamic enforcing policer remains allocated
Range	1 to 128000
Default	30
Units	seconds
Introduced	16.0.R1

exceed-action

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Enter the exceed-action context
Introduced	16.0.R1

action *keyword*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **exceed-action**
Description	Action to perform upon the extracted control packets when configured policer rates are exceeded
Options	discard, low-priority, none
Introduced	16.0.R1

hold-down (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **exceed-action**
Description	Hold down behavior
Range	1 to 10080
Default	none
Units	seconds
Options	indefinite, none
Introduced	16.0.R1

log-events *keyword*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Control of log events creation for static policer status and activity
Default	true
Options	false, true, verbose
Introduced	16.0.R1

rate

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string*
Description	Enter the rate context
Introduced	16.0.R1

kbps

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate**
Description	Enter the **kbps** context
Introduced	16.0.R1

limit (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate kbps**
Description	Limiting rate and burst tolerance for the policer in a packet rate, or a bit rate
Range	1 to 20000000
Default	max
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

mbs *number*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate kbps**
Description	Buffer space assigned
Range	0 to 4194304
Units	bytes
Introduced	16.0.R1
Notes	This element is part of a choice

packets

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate**
Description	Enter the **packets** context
Introduced	16.0.R1

initial-delay *number*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate packets**
Description	Number of packets allowed in an initial burst or burst after the policer bucket drained to zero
Range	0 to 255
Default	0
Units	packets
Introduced	16.0.R1
Notes	This element is part of a choice

limit (*keyword* | *number*)

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate packets**
Description	Overall packet arrival rate limit to be applied to all sources of packets
Range	0 to 255
Default	max
Units	packets per interval
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

within *number*

Context	**configure system security dist-cpu-protection policy** *string* **static-policer** *string* **rate packets**
Description	Measurement interval for packets rate
Range	1 to 32767
Default	1
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

dot1x

Context	**configure system security**
Description	Enter the dot1x context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security dot1x**
Description	Administrative state of port access control in a system
Default	disable
Options	enable, disable
Introduced	16.0.R1

radius-policy [policy-name] *string*

Context	**configure system security dot1x**
Description	Enter the radius-policy context
Introduced	16.0.R1

[policy-name] *string*

Context	**configure system security dot1x radius-policy** *string*
Description	RADIUS server policy to use for 802.1X authentication
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security dot1x radius-policy** *string*
Description	Administrative state of this RADIUS server policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

retry *number*

Context	**configure system security dot1x radius-policy** *string*
Description	Number of RADIUS requests toward the same RADIUS server
Range	1 to 10
Default	3
Introduced	16.0.R1

server [server-index] *number*

Context	**configure system security dot1x radius-policy** *string*
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[server-index] *number*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	RADIUS server index
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-port *number*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	UDP port number on which to contact the RADIUS server for accounting requests
Range	1 to 65535
Default	1813
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	IP address of the RADIUS server
Introduced	16.0.R1
Notes	This element is mandatory

authentication-port *number*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	UDP port number on which to contact the RADIUS server for authentication
Range	1 to 65535
Default	1812
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	Secret key associated with the RADIUS server
String Length	1 to 54
Introduced	16.0.R1
Notes	This element is mandatory

type *keyword*

Context	**configure system security dot1x radius-policy** *string* **server** *number*
Description	RADIUS server type
Default	authorization
Options	authorization, accounting, combined
Introduced	16.0.R1

source-address *ipv4-unicast-address*

Context	**configure system security dot1x radius-policy** *string*
Description	Source address of the RADIUS packet
Introduced	16.0.R1

timeout *number*

Context	**configure system security dot1x radius-policy** *string*
Description	Time assigned between the request retries toward the same RADIUS server
Range	1 to 90
Default	5
Units	seconds
Introduced	16.0.R1

ftp-server *boolean*

Context	**configure system security**
Description	Enable FTP servers running on the system
Default	false
Introduced	16.0.R1

hash-control

Context	**configure system security**
Description	Enter the hash-control context
Introduced	16.0.R1

management-interface

Context	**configure system security hash-control**
Description	Enter the management-interface context
Introduced	16.0.R1

classic-cli

Context	**configure system security hash-control management-interface**
Description	Enter the classic-cli context
Introduced	16.0.R1

read-algorithm *keyword*

Context	**configure system security hash-control management-interface classic-cli**
Description	Changes input of secret values
Default	all-hash
Options	all-hash, hash, hash2
Introduced	16.0.R1

write-algorithm *keyword*

Context	**configure system security hash-control management-interface classic-cli**
Description	Changes output of secret values
Default	hash2
Options	cleartext, hash, hash2
Introduced	16.0.R1

grpc

Context	**configure system security hash-control management-interface**
Description	Enter the grpc context
Introduced	16.0.R1

hash-algorithm *keyword*

Context	**configure system security hash-control management-interface grpc**
Description	Changes output of secret values
Default	hash2
Options	cleartext, hash, hash2
Introduced	16.0.R1

md-cli

Context	**configure system security hash-control management-interface**
Description	Enter the md-cli context
Introduced	16.0.R1

hash-algorithm *keyword*

Context	**configure system security hash-control management-interface md-cli**
Description	Changes output of secret values
Default	hash2
Options	cleartext, hash, hash2
Introduced	16.0.R1

netconf

Context	**configure system security hash-control management-interface**
Description	Enter the netconf context
Introduced	16.0.R1

hash-algorithm *keyword*

Context	**configure system security hash-control management-interface netconf**
Description	Changes output of secret values
Default	hash2
Options	cleartext, hash, hash2
Introduced	16.0.R1

keychains

Context	**configure system security**
Description	Enter the keychains context
Introduced	16.0.R1

keychain [keychain-name] *string*

Context	**configure system security keychains**
Description	Enter the keychain context
Max. Elements	256
Introduced	16.0.R1

[keychain-name] *string*

Context	**configure system security keychains keychain** *string*
Description	Keychain name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security keychains keychain** *string*
Description	Administrative state of the keychain
Default	enable
Options	enable, disable
Introduced	16.0.R1

bidirectional

Context	**configure system security keychains keychain** *string*
Description	Enter the bidirectional context
Introduced	16.0.R1

entry [keychain-entry-index] *number*

Context	**configure system security keychains keychain** *string* **bidirectional**
Description	Enter the entry context
Introduced	16.0.R1

[keychain-entry-index] *number*

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Keychain identifier
Range	0 to 63 | 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Administrative state of the keychain
Default	enable
Options	enable, disable
Introduced	16.0.R1

algorithm *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Encryption algorithm used by the keychain key
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	The key used by the encryption algorithm to sign and authenticate protocol packets.
String Length	1 to 54
Introduced	16.0.R4

begin-time *date-and-time*

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Calendar date and time when the system starts using the key
Introduced	16.0.R1

option *keyword*

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Keychain key option
Default	none
Options	none, basic, isis-enhanced
Introduced	16.0.R1

tolerance (*number* | *keyword*)

Context	**configure system security keychains keychain** *string* **bidirectional entry** *number*
Description	Time within which an eligible receive key should overlap with the active send key
Range	0 to 4294967294
Default	300
Options	infinite
Introduced	16.0.R1

description *string*

Context	**configure system security keychains keychain** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

receive

Context	**configure system security keychains keychain** *string*
Description	Enter the receive context
Introduced	16.0.R1

entry [keychain-entry-index] *number*

Context	**configure system security keychains keychain** *string* **receive**
Description	Enter the entry context
Introduced	16.0.R1

[keychain-entry-index] *number*

Context	**configure system security keychains keychain** *string* **receive entry** *number*
Description	Keychain identifier
Range	0 to 63 | 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security keychains keychain** *string* **receive entry** *number*
Description	Administrative state of the keychain
Default	enable
Options	enable, disable
Introduced	16.0.R1

algorithm *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **receive entry** *number*
Description	Encryption algorithm used by the keychain key
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **receive entry** *number*
Description	The key used by the encryption algorithm to sign and authenticate protocol packets.
String Length	1 to 54
Introduced	16.0.R4

begin-time *date-and-time*

Context **configure system security keychains keychain** *string* **receive entry** *number*

Description Calendar date and time when the system starts using the key

Introduced 16.0.R1

end-time *date-and-time*

Context **configure system security keychains keychain** *string* **receive entry** *number*

Description Calendar date and time when the system should stop using the key

Introduced 16.0.R1

tolerance (*number* | *keyword*)

Context **configure system security keychains keychain** *string* **receive entry** *number*

Description Time within which an eligible receive key should overlap with the active send key

Range 0 to 4294967294

Default 300

Options infinite

Introduced 16.0.R1

send

Context **configure system security keychains keychain** *string*

Description Enter the send context

Introduced 16.0.R1

entry [keychain-entry-index] *number*

Context **configure system security keychains keychain** *string* **send**

Description Enter the entry context

Introduced 16.0.R1

[keychain-entry-index] *number*

Context	**configure system security keychains keychain** *string* **send entry** *number*
Description	Keychain identifier
Range	0 to 63 | 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security keychains keychain** *string* **send entry** *number*
Description	Administrative state of the keychain
Default	enable
Options	enable, disable
Introduced	16.0.R1

algorithm *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **send entry** *number*
Description	Encryption algorithm used by the keychain key
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security keychains keychain** *string* **send entry** *number*
Description	The key used by the encryption algorithm to sign and authenticate protocol packets.
String Length	1 to 54
Introduced	16.0.R4

begin-time *date-and-time*

Context	**configure system security keychains keychain** *string* **send entry** *number*
Description	Calendar date and time when the system starts using the key
Introduced	16.0.R1

tcp-option-number

Context	**configure system security keychains keychain** *string*
Description	Enter the tcp-option-number context
Introduced	16.0.R1

receive *keyword*

Context	**configure system security keychains keychain** *string* **tcp-option-number**
Description	TCP option value expected in the TCP header of received packets
Default	option-254
Options	option-253, option-254, both, tcp-ao
Introduced	16.0.R1

send *keyword*

Context	**configure system security keychains keychain** *string* **tcp-option-number**
Description	TCP option value assigned in the TCP header of transmitted packets
Default	option-254
Options	option-253, option-254, tcp-ao
Introduced	16.0.R1

management

Context	**configure system security**
Description	Enter the **management** context
Introduced	16.0.R5

allow-ssh *boolean*

Context	**configure system security management**
Description	Allow/disallow access to ssh server.
Default	true
Introduced	16.0.R5

allow-telnet *boolean*

Context	**configure system security management**
Description	Allow/disallow access to telnet server.
Default	true
Introduced	16.0.R5

allow-telnet6 *boolean*

Context	**configure system security management**
Description	Allow/disallow access to telnet IPv6 server.
Default	true
Introduced	16.0.R5

management-access-filter

Context	**configure system security**
Description	Enter the management-access-filter context
Introduced	16.0.R1

ip-filter

Context	**configure system security management-access-filter**
Description	Enter the ip-filter context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security management-access-filter ip-filter**
Description	Administrative state of the MAF.
Default	enable
Options	enable, disable
Introduced	16.0.R1

default-action *keyword*

Context	**configure system security management-access-filter ip-filter**
Description	Specifies the default action for management access in the absence of a specific management access filter entry match.
Default	ignore-match
Options	ignore-match, accept, drop, reject
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security management-access-filter ip-filter**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security management-access-filter ip-filter entry** *number*
Description	The id used to uniquely identify this filter entry.
Range	1 to 9999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context	**configure system security management-access-filter ip-filter entry** *number*
Description	Specifies the default action for management access in the absence of a specific management access filter entry match.
Default	ignore-match
Options	ignore-match, accept, drop, reject
Introduced	16.0.R1

description *string*

Context	**configure system security management-access-filter ip-filter entry** *number*
Description	Description for this entry
String Length	1 to 80
Introduced	16.0.R1

log-events *boolean*

Context	**configure system security management-access-filter ip-filter entry** *number*
Description	If is 'true', entry match logging is enabled.
Default	false
Introduced	16.0.R1

match

Context	**configure system security management-access-filter ip-filter entry** *number*
Description	Enter the match context
Introduced	16.0.R1

dst-port

Context	**configure system security management-access-filter ip-filter entry** *number* **match**
Description	Enter the dst-port context
Introduced	16.0.R1

mask *number*

Context **configure system security management-access-filter ip-filter entry** *number* **match dst-port**

Description Specifies mask to match.

Range 1 to 65535

Default 65535

Introduced 16.0.R1

port *number*

Context **configure system security management-access-filter ip-filter entry** *number* **match dst-port**

Description Specifies port to match.

Range 1 to 65535

Introduced 16.0.R1

Notes This element is mandatory

mgmt-port

Context **configure system security management-access-filter ip-filter entry** *number* **match**

Description Enter the mgmt-port context

Introduced 16.0.R1

cpm

Context **configure system security management-access-filter ip-filter entry** *number* **match mgmt-port**

Description Specifies source cpm.

Introduced 16.0.R1

Notes This element is part of a choice

lag-id *number*

Context **configure system security management-access-filter ip-filter entry** *number* **match mgmt-port**

Description Specifies source lag.

Range 1 to 800

Introduced 16.0.R1

Notes This element is part of a choice

port-id *port*

Context **configure system security management-access-filter ip-filter entry** *number* **match mgmt-port**

Description Specifies source port.

Introduced 16.0.R1

Notes This element is part of a choice

protocol (*number* | *keyword*)

Context **configure system security management-access-filter ip-filter entry** *number* **match**

Description Specifies protocol to match.

Introduced 16.0.R5

router-instance *string*

Context **configure system security management-access-filter ip-filter entry** *number* **match**

Description Specifies router instance to be matched.

Introduced 16.0.R5

src-ip

Context **configure system security management-access-filter ip-filter entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure system security management-access-filter ip-filter entry** *number* **match src-ip**

Description IP address or IP prefix.

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv4-address*

Context **configure system security management-access-filter ip-filter entry** *number* **match src-ip**

Description IP address mask.

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-filter

Context **configure system security management-access-filter**

Description Enter the ipv6-filter context

Introduced 16.0.R1

admin-state *keyword*

Context **configure system security management-access-filter ipv6-filter**

Description Administrative state of the MAF.

Default enable

Options enable, disable

Introduced 16.0.R1

default-action *keyword*

Context **configure system security management-access-filter ipv6-filter**

Description Specifies the default action for management access in the absence of a specific management access filter entry match.

Default ignore-match

Options ignore-match, accept, drop, reject

Introduced 16.0.R1

entry [entry-id] *number*

Context	**configure system security management-access-filter ipv6-filter**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security management-access-filter ipv6-filter entry** *number*
Description	The id used to uniquely identify this filter entry.
Range	1 to 9999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context	**configure system security management-access-filter ipv6-filter entry** *number*
Description	Specifies the default action for management access in the absence of a specific management access filter entry match.
Default	ignore-match
Options	ignore-match, accept, drop, reject
Introduced	16.0.R1

description *string*

Context	**configure system security management-access-filter ipv6-filter entry** *number*
Description	Description for this entry
String Length	1 to 80
Introduced	16.0.R1

log-events *boolean*

Context	**configure system security management-access-filter ipv6-filter entry** *number*
Description	If is 'true', entry match logging is enabled.
Default	false
Introduced	16.0.R1

match

Context **configure system security management-access-filter ipv6-filter entry** *number*

Description Enter the match context

Introduced 16.0.R1

dst-port

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description Enter the dst-port context

Introduced 16.0.R1

mask *number*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match dst-port**

Description Specifies mask to match.

Range 1 to 65535

Default 65535

Introduced 16.0.R1

port *number*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match dst-port**

Description Specifies port to match.

Range 1 to 65535

Introduced 16.0.R1

Notes This element is mandatory

flow-label *number*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description Specifies the flow label to be matched.

Range 0 to 1048575

Introduced 16.0.R5

mgmt-port

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description Enter the mgmt-port context

Introduced 16.0.R1

cpm

Context **configure system security management-access-filter ipv6-filter entry** *number* **match mgmt-port**

Description Specifies source cpm.

Introduced 16.0.R1

Notes This element is part of a choice

lag-id *number*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match mgmt-port**

Description Specifies source lag.

Range 1 to 800

Introduced 16.0.R1

Notes This element is part of a choice

port-id *port*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match mgmt-port**

Description Specifies source port.

Introduced 16.0.R1

Notes This element is part of a choice

next-header (*number* | *keyword*)

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description IPv6 next header to match. Because the match criteria only pertains to the last next-header, the following values will not match a filter entry: 0, 43, 44, 50, 51, and 60.

Introduced 16.0.R5

router-instance *string*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description Specifies router instance to be matched.

Introduced 16.0.R5

src-ip

Context **configure system security management-access-filter ipv6-filter entry** *number* **match**

Description Enter the src-ip context

Introduced 16.0.R1

address (*string* | *string*)

Context **configure system security management-access-filter ipv6-filter entry** *number* **match src-ip**

Description IPv6 address or IPv6 prefix.

Introduced 16.0.R1

Notes This element is part of a choice

mask *ipv6-address*

Context **configure system security management-access-filter ipv6-filter entry** *number* **match src-ip**

Description IPv6 address mask.

Introduced 16.0.R1

Notes This element is part of a choice

mac-filter

Context **configure system security management-access-filter**

Description Enter the mac-filter context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure system security management-access-filter mac-filter**
Description	Administrative state of the MAF.
Default	enable
Options	enable, disable
Introduced	16.0.R1

default-action *keyword*

Context	**configure system security management-access-filter mac-filter**
Description	Specifies the default action for management access in the absence of a specific management access filter entry match.
Default	ignore-match
Options	ignore-match, accept, drop
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security management-access-filter mac-filter**
Description	Enter the entry context
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security management-access-filter mac-filter entry** *number*
Description	The id used to uniquely identify this filter entry.
Range	1 to 9999
Introduced	16.0.R1
Notes	This element is part of a list key

action *keyword*

Context	**configure system security management-access-filter mac-filter entry** *number*
Description	Specifies the default action for management access in the absence of a specific management access filter entry match.
Default	ignore-match
Options	ignore-match, accept, drop
Introduced	16.0.R1

description *string*

Context	**configure system security management-access-filter mac-filter entry** *number*
Description	Description for this entry
String Length	1 to 80
Introduced	16.0.R1

log-events *boolean*

Context	**configure system security management-access-filter mac-filter entry** *number*
Description	If is 'true', entry match logging is enabled.
Default	false
Introduced	16.0.R1

match

Context	**configure system security management-access-filter mac-filter entry** *number*
Description	Enter the match context
Introduced	16.0.R1

cfm-opcode

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the cfm-opcode context
Introduced	16.0.R1

eq *number*

Context **configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode**

Description Specifies the operator for op-code matching.

Range 0 to 255

Introduced 16.0.R1

Notes This element is part of a choice

gt *number*

Context **configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode**

Description Specifies the operator for op-code matching.

Range 0 to 254

Introduced 16.0.R1

Notes This element is part of a choice

lt *number*

Context **configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode**

Description Specifies the operator for op-code matching.

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

range

Context **configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode**

Description Enter the **range** context

Introduced 16.0.R1

end *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode range**
Description	Specifies upper bound for the range of op-code to match.
Range	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

start *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match cfm-opcode range**
Description	Specifies lower bound for the range of op-code to match.
Range	0 to 254
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

dot1p

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the dot1p context
Introduced	16.0.R1

mask *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match dot1p**
Description	Specifies a Dot1p value to assign to the traffic generated by this application.
Range	1 to 7
Default	7
Introduced	16.0.R1

priority *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match dot1p**
Description	Specifies a Dot1p value to assign to the traffic generated by this application.
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

dst-mac

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the dst-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure system security management-access-filter mac-filter entry** *number* **match dst-mac**
Description	MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure system security management-access-filter mac-filter entry** *number* **match dst-mac**
Description	MAC address mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

etype *etype-value*

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Specifies the Ethertype for this MAC filter entry. This object has no significance if the object frame-type is not set to Ethernet_II.
String Length	5 to 6
Introduced	16.0.R1

frame-type *keyword*

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Specifies the type of mac frame for which we are defining this match criteria.
Default	802dot3
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Introduced	16.0.R1

llc-dsap

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the llc-dsap context
Introduced	16.0.R1

dsap *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match llc-dsap**
Description	Specifies DSAP value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

mask *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match llc-dsap**
Description	Specifies DSAP mask.
Range	1 to 255
Default	255
Introduced	16.0.R1

llc-ssap

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the llc-ssap context
Introduced	16.0.R1

mask *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match llc-ssap**
Description	Specifies SSAP mask.
Range	1 to 255
Default	255
Introduced	16.0.R1

ssap *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match llc-ssap**
Description	Specifies SSAP value.
Range	0 to 255
Introduced	16.0.R1
Notes	This element is mandatory

service *service-name*

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Specifies the service id in which the packet is to be received for this entry to match.
String Length	1 to 64
Introduced	16.0.R1

snap-oui *keyword*

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Specifies snap-oui Match Criteria.
Options	zero, non-zero
Introduced	16.0.R1

snap-pid *number*

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Specifies snap-pid Match Criteria.
Range	0 to 65535
Introduced	16.0.R1

src-mac

Context	**configure system security management-access-filter mac-filter entry** *number* **match**
Description	Enter the src-mac context
Introduced	16.0.R1

address *mac-address*

Context	**configure system security management-access-filter mac-filter entry** *number* **match src-mac**
Description	MAC address
Introduced	16.0.R1
Notes	This element is mandatory

mask *mac-address*

Context	**configure system security management-access-filter mac-filter entry** *number* **match src-mac**
Description	MAC address mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

per-peer-queuing *boolean*

Context	**configure system security**
Description	Allow a separate control plane queue for each LDP and BGP peering session to improve DoS protection
Introduced	16.0.R1

pki

Context	**configure system security**
Description	Enter the pki context
Introduced	16.0.R1

ca-profile [ca-profile-name] *string*

Context	**configure system security pki**
Description	Enter the ca-profile context
Max. Elements	128
Introduced	16.0.R1

[ca-profile-name] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string*
Description	Certificate Authority (CA) profile name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security pki ca-profile** *string*
Description	Administrative state of the CA profile
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-crl-update

Context	**configure system security pki ca-profile** *string*
Description	Enter the auto-crl-update context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Administrative state of the automatic CRL update
Default	disable
Options	enable, disable
Introduced	16.0.R1

crl-urls

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Enter the crl-urls context
Introduced	16.0.R1

url-entry [entry-id] *number*

Context	**configure system security pki ca-profile** *string* **auto-crl-update crl-urls**
Description	Enter the url-entry context
Introduced	16.0.R1

[entry-id] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update crl-urls url-entry** *number*
Description	URL on this system
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

transmission-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update crl-urls url-entry** *number*
Description	File transmission profile to update CRL
Reference	configure **system transmission-profile** *string*
Introduced	16.0.R1

url *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update crl-urls url-entry** *number*
Description	Location of updated CRL
Introduced	16.0.R1

periodic-update-interval *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Interval between two consecutive CRL updates
Range	3600 to 31622400
Default	86400
Units	seconds
Introduced	16.0.R1

pre-update-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Time prior to the next update time of the current CRL
Range	0 to 31622400
Default	3600
Units	seconds
Introduced	16.0.R1

retry-interval *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Interval before retrying to update CRL
Range	0 to 31622400
Default	3600
Units	seconds
Introduced	16.0.R1

schedule-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **auto-crl-update**
Description	Time scheduler type for an automated CRL update
Default	next-update-based
Options	next-update-based, periodic
Introduced	16.0.R1

cert-file *pki-file-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string*
Description	Certificate file name
String Length	1 to 95
Introduced	16.0.R1

cmpv2

Context	**configure system security pki ca-profile** *string*
Description	Enter the cmpv2 context
Introduced	16.0.R1

accept-unprotected-message

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Enter the accept-unprotected-message context
Introduced	16.0.R1

error-message *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 accept-unprotected-message**
Description	Accept unprotected error messages
Default	false
Introduced	16.0.R1

pkiconf-message *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 accept-unprotected-message**
Description	Accept unprotected PKI confirmation messages
Default	false
Introduced	16.0.R1

always-set-sender-for-ir *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Subject name in CMPv2 header for all Initial Registration (IR) messages
Default	false
Introduced	16.0.R1

http

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Enter the http context
Introduced	16.0.R1

response-timeout *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 http**
Description	HTTP response timeout
Range	1 to 3600
Default	30
Units	seconds
Introduced	16.0.R1

version *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 http**
Description	HTTP version for CMPv2 messages
Default	1.1
Options	1.0, 1.1
Introduced	16.0.R1

key-list

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Enter the key-list context
Introduced	16.0.R1

key [reference-number] *string*

Context	**configure system security pki ca-profile** *string* **cmpv2 key-list**
Description	Enter the key context
Max. Elements	128
Introduced	16.0.R1

[reference-number] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 key-list key** *string*
Description	Unique identifier for the CA initial authentication key
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

password *encrypted-leaf*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 key-list key** *string*
Description	Shared secret for this CA initial authentication key
String Length	1 to 114
Introduced	16.0.R1

response-signing-cert *pki-file-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	File name of the certificate to verify the signature of received CMPv2 responses
String Length	1 to 95
Introduced	16.0.R1

same-recipient-nonce-for-poll-request *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Same recipNonce as the last CMPv2 response for a poll request
Default	false
Introduced	16.0.R1

url

Context	**configure system security pki ca-profile** *string* **cmpv2**
Description	Enter the url context
Introduced	16.0.R1

service-name *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 url**
Description	Service name for the CMPv2 URL
String Length	1 to 64
Introduced	16.0.R1

url-string *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **cmpv2 url**
Description	URL for CMPv2
Introduced	16.0.R1

crl-file *pki-file-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string*
Description	Certificate Revocation List (CRL) file name
String Length	1 to 95
Introduced	16.0.R1

description *string*

Context	**configure system security pki ca-profile** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ocsp

Context	**configure system security pki ca-profile** *string*
Description	Enter the ocsp context
Introduced	16.0.R1

responder-url *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **ocsp**
Description	HTTP URL of the OCSP responder for the CA
Introduced	16.0.R1

service-name *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string* **ocsp**
Description	Service name for the OCSP URL
String Length	1 to 64
Introduced	16.0.R1

revocation-check *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure system security pki ca-profile** *string*
Description	Method to verify the revocation status of certificates issued by the CA
Default	crl
Options	crl, crl-optional
Introduced	16.0.R1

certificate-display-format *keyword*

Context	**configure system security pki**
Description	Display format for certificates and Certificate Revocation Lists (CRLs)
Default	ascii
Options	ascii, utf8
Introduced	16.0.R1

certificate-expiration-warning

Context	**configure system security pki**
Description	Enter the certificate-expiration-warning context
Introduced	16.0.R1

hours *number*

Context	**configure system security pki certificate-expiration-warning**
Description	Time at which the system generates the certificate expiration warning trap for in-use certificates
Range	0 to 8760
Units	hours
Introduced	16.0.R1

repeat-hours *number*

Context	**configure system security pki certificate-expiration-warning**
Description	Time period when the system repeatedly generates the certificate expiration warning trap
Range	0 to 8760
Default	0
Units	hours
Introduced	16.0.R1

common-name-list [cn-list-name] *string*

Context	**configure system security pki**
Description	Enter the common-name-list context
Max. Elements	64
Introduced	16.0.R1

[cn-list-name] *string*

Context	**configure system security pki common-name-list** *string*
Description	Name for the common name list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

common-name [cn-index] *number*

Context **configure system security pki common-name-list** *string*
Description Enter the common-name context
Introduced 16.0.R1

[cn-index] *number*

Context **configure system security pki common-name-list** *string* **common-name** *number*
Description Common name index
Range 1 to 128
Introduced 16.0.R1
Notes This element is part of a list key

cn-type *keyword*

Context **configure system security pki common-name-list** *string* **common-name** *number*
Description Common name type
Options ip-address, domain-name
Introduced 16.0.R1
Notes This element is mandatory

cn-value *regular-expression-not-all-spaces*

Context **configure system security pki common-name-list** *string* **common-name** *number*
Description Common name value
String Length 1 to 255
Introduced 16.0.R1
Notes This element is mandatory

crl-expiration-warning

Context **configure system security pki**
Description Enter the crl-expiration-warning context
Introduced 16.0.R1

hours *number*

Context	**configure system security pki crl-expiration-warning**
Description	Time when the system generates the Certificate Revocation List (CRL) expiration warning trap
Range	0 to 8760
Units	hours
Introduced	16.0.R1

repeat-hours *number*

Context	**configure system security pki crl-expiration-warning**
Description	Time when the system repeatedly generates the Certificate Revocation List (CRL) expiration warning trap
Range	0 to 8760
Default	0
Units	hours
Introduced	16.0.R1

maximum-cert-chain-depth *number*

Context	**configure system security pki**
Description	Maximum depth of certificate chain verification
Range	1 to 7
Default	7
Introduced	16.0.R1

snmp

Context	**configure system security**
Description	Enter the snmp context
Introduced	16.0.R1

access [group] *string* **context** *string* **security-model** *keyword* **security-level** *keyword*

Context	**configure system security snmp**
Description	Enter the access context
Introduced	16.0.R1

[group] *string*

Context	**configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*
Description	Group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

context *string*

Context	**configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*
Description	String against which the context name should match to gain access rights
String Length	1 to 32
Default	_sros_none
Introduced	16.0.R1
Notes	This element is part of a list key

security-model *keyword*

Context	**configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*
Description	Security model
Options	snmpv1, snmpv2c, usm
Introduced	16.0.R1
Notes	This element is part of a list key

security-level *keyword*

Context	**configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*
Description	Minimum level of security required to gain the access rights allowed by this entry
Options	no-auth-no-privacy, auth-no-privacy, privacy
Introduced	16.0.R1
Notes	This element is part of a list key

notify *string*

Context **configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*

Description MIB view of SNMP context to which access for notifications is authorized by this conceptual row

String Length 1 to 32

Introduced 16.0.R1

prefix-match *keyword*

Context **configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*

Description Type of the context name match

Options exact, prefix

Introduced 16.0.R1

read *string*

Context **configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*

Description Specifies the MIB view of the SNMP context to which this conceptual row authorizes read access.

String Length 1 to 32

Introduced 16.0.R1

write *string*

Context **configure system security snmp access** *string* **context** *string* **security-model** *keyword* **security-level** *keyword*

Description Specifies the MIB view of the SNMP context to which this conceptual row authorizes write access.

String Length 1 to 32

Introduced 16.0.R1

attempts

Context **configure system security snmp**

Description Enter the attempts context

Introduced 16.0.R1

count *number*

Context	**configure system security snmp attempts**
Description	Maximum unsuccessful SNMP attempts that are allowed for the specified time
Range	1 to 64
Default	20
Introduced	16.0.R1

lockout *number*

Context	**configure system security snmp attempts**
Description	Lockout period during which the host is not allowed to log in
Range	0 to 1440
Default	10
Units	minutes
Introduced	16.0.R1

time *number*

Context	**configure system security snmp attempts**
Description	Time when a number of unsuccessful attempts are made before the host is locked out
Range	0 to 60
Default	5
Units	minutes
Introduced	16.0.R1

community [community-string] *encrypted-leaf*

Context	**configure system security snmp**
Description	Enter the community context
Introduced	16.0.R1

[community-string] *encrypted-leaf*

Context	**configure system security snmp community** *encrypted-leaf*
Description	Management information that is accessed when using the community string
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is part of a list key

access-permissions *keyword*

Context	**configure system security snmp community** *encrypted-leaf*
Description	SNMP community name(s) to be used with the associated VPRN instance
Options	r, rw, rwa, mgmt, vpls-mgmt
Introduced	16.0.R1
Notes	This element is mandatory

source-access-list *string*

Context	**configure system security snmp community** *encrypted-leaf*
Description	Management information to be accessed when using the community string
Reference	configure **system security snmp source-access-list** *string*
Introduced	16.0.R1

version *keyword*

Context	**configure system security snmp community** *encrypted-leaf*
Description	SNMP version
Default	both
Options	v1, v2c, both
Introduced	16.0.R1

source-access-list [list-name] *string*

Context	**configure system security snmp**
Description	Enter the source-access-list context
Max. Elements	16
Introduced	16.0.R1

[list-name] *string*

Context	**configure system security snmp source-access-list** *string*
Description	Value for the name given to source access list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

source-host [host-name] *string*

Context	**configure system security snmp source-access-list** *string*
Description	Enter the source-host context
Max. Elements	16
Introduced	16.0.R1

[host-name] *string*

Context	**configure system security snmp source-access-list** *string* **source-host** *string*
Description	Source host entry name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system security snmp source-access-list** *string* **source-host** *string*
Description	Address of the source host entry
Introduced	16.0.R1
Notes	This element is mandatory

usm-community [community-string] *encrypted-leaf*

Context	**configure system security snmp**
Description	Enter the usm-community context
Introduced	16.0.R1

[community-string] *encrypted-leaf*

Context	**configure system security snmp usm-community** *encrypted-leaf*
Description	SNMPv1/SNMPv2 community string to determine the SNMPv3 access permission
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is part of a list key

group *string*

Context	**configure system security snmp usm-community** *encrypted-leaf*
Description	Group to manage the access rights of the community string
String Length	1 to 32
Introduced	16.0.R1

source-access-list *string*

Context	**configure system security snmp usm-community** *encrypted-leaf*
Description	Management information to be accessed when using the community string
Reference	configure **system security snmp source-access-list** *string*
Introduced	16.0.R1

view [view-name] *string* **subtree** *string*

Context	**configure system security snmp**
Description	Enter the view context
Introduced	16.0.R1

[view-name] *string*

Context	**configure system security snmp view** *string* **subtree** *string*
Description	Name of the view to display output
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

subtree *string*

Context	**configure system security snmp view** *string* **subtree** *string*
Description	Object Identifier (OID) value
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a list key

mask *string*

Context	**configure system security snmp view** *string* **subtree** *string*
Description	Mask value as binary value, or hex value
String Length	1 to 16
Introduced	16.0.R1

type *keyword*

Context	**configure system security snmp view** *string* **subtree** *string*
Description	Type of SNMP security view mask
Options	included, excluded
Introduced	16.0.R1

source-address

Context	**configure system security**
Description	Enter the source-address context
Introduced	16.0.R1

ipv4 [application] *keyword*

Context	**configure system security source-address**
Description	Enter the ipv4 context
Introduced	16.0.R1

[application] *keyword*

Context	**configure system security source-address ipv4** *keyword*
Description	Source IP address for the application
Options	telnet, ftp, ssh, radius, tacplus, snmptrap, syslog, ping, traceroute, dns, sntp, ntp, cflowd, ptp, mcreporter, sflow, icmp-error, ldap
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security source-address ipv4** *keyword*
Description	Source IPv4 address to be used in all packets sent by the application
Introduced	16.0.R1
Notes	This element is part of a choice

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security source-address ipv4** *keyword*
Description	Interface name whose IP address to be used in all packets sent by the application
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6 [application] *keyword*

Context	**configure system security source-address**
Description	Enter the ipv6 context
Introduced	16.0.R1

[application] *keyword*

Context	**configure system security source-address ipv6** *keyword*
Description	Source IPv6 address for the application
Options	telnet, ftp, radius, tacplus, snmptrap, syslog, ping, traceroute, dns, cflowd, ntp, sflow, icmp6-error, ldap
Introduced	16.0.R1
Notes	This element is part of a list key

address *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure system security source-address ipv6** *keyword*
Description	Source IPv6 address to be used in all packets sent by the application
Introduced	16.0.R1
Notes	This element is mandatory

ssh

Context	**configure system security**
Description	Enter the ssh context
Introduced	16.0.R1

client-cipher-list-v1

Context	**configure system security ssh**
Description	Enter the client-cipher-list-v1 context
Introduced	16.0.R1

cipher [index] *number*

Context	**configure system security ssh client-cipher-list-v1**
Description	Enter the cipher context
Introduced	16.0.R1

[index] *number*

Context **configure system security ssh client-cipher-list-v1 cipher** *number*
Description Index of the cipher
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a list key

name *keyword*

Context **configure system security ssh client-cipher-list-v1 cipher** *number*
Description Cipher name value
Options des, 3des, blowfish
Introduced 16.0.R1
Notes This element is mandatory

client-cipher-list-v2

Context **configure system security ssh**
Description Enter the client-cipher-list-v2 context
Introduced 16.0.R1

cipher [index] *number*

Context **configure system security ssh client-cipher-list-v2**
Description Enter the cipher context
Introduced 16.0.R1

[index] *number*

Context **configure system security ssh client-cipher-list-v2 cipher** *number*
Description Index of the cipher
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a list key

name *keyword*

Context	**configure system security ssh client-cipher-list-v2 cipher** *number*
Description	Cipher name value
Options	3des-cbc, blowfish-cbc, cast128-cbc, arcfour, aes128-cbc, aes192-cbc, aes256-cbc, rijndael-cbc, aes128-ctr, aes192-ctr, aes256-ctr
Introduced	16.0.R1
Notes	This element is mandatory

client-mac-list-v2

Context	**configure system security ssh**
Description	Enter the client-mac-list-v2 context
Introduced	16.0.R1

mac [index] *number*

Context	**configure system security ssh client-mac-list-v2**
Description	Enter the mac context
Introduced	16.0.R1

[index] *number*

Context	**configure system security ssh client-mac-list-v2 mac** *number*
Description	MAC algorithm index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security ssh client-mac-list-v2 mac** *number*
Description	MAC algorithm that performs encryption or decryption
Options	hmac-sha2-512, hmac-sha2-256, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-ripemd160, hmac-ripemd160-openssh-com, hmac-md5-96
Introduced	16.0.R1
Notes	This element is mandatory

key-re-exchange

Context	**configure system security ssh**
Description	Enter the key-re-exchange context
Introduced	16.0.R1

client

Context	**configure system security ssh key-re-exchange**
Description	Enter the client context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security ssh key-re-exchange client**
Description	Administrative state of the key re-exchange
Default	enable
Options	enable, disable
Introduced	16.0.R1

mbytes (*number* | *keyword*)

Context	**configure system security ssh key-re-exchange client**
Description	Number of megabytes on a SSH session after which the SSH client initiates the key-re-exchange
Range	1 to 64000
Default	1024
Units	megabytes
Options	infinite
Introduced	16.0.R1

minutes (*number* | *keyword*)

Context	**configure system security ssh key-re-exchange client**
Description	Time interval after which the SSH client initiates the key-re-exchange
Range	1 to 1440
Default	60
Units	minutes
Options	infinite
Introduced	16.0.R1

server

Context	**configure system security ssh key-re-exchange**
Description	Enter the server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system security ssh key-re-exchange server**
Description	Administrative state of the key re-exchange
Default	enable
Options	enable, disable
Introduced	16.0.R1

mbytes (*number* | *keyword*)

Context	**configure system security ssh key-re-exchange server**
Description	Number of megabytes on a SSH session after which the SSH client initiates the key-re-exchange
Range	1 to 64000
Default	1024
Units	megabytes
Options	infinite
Introduced	16.0.R1

minutes (*number* | *keyword*)

Context	**configure system security ssh key-re-exchange server**
Description	Time interval after which the SSH client initiates the key-re-exchange
Range	1 to 1440
Default	60
Units	minutes
Options	infinite
Introduced	16.0.R1

preserve-key *boolean*

Context	**configure system security ssh**
Description	Save keys on SSH server and restore following a system reboot or SSH server restart
Default	false
Introduced	16.0.R1

server-admin-state *keyword*

Context	**configure system security ssh**
Description	Administrative state of the SSH server
Default	enable
Options	enable, disable
Introduced	16.0.R1

server-cipher-list-v1

Context	**configure system security ssh**
Description	Enter the server-cipher-list-v1 context
Introduced	16.0.R1

cipher [index] *number*

Context	**configure system security ssh server-cipher-list-v1**
Description	Enter the cipher context
Introduced	16.0.R1

[index] *number*

Context	**configure system security ssh server-cipher-list-v1 cipher** *number*
Description	Index of the cipher
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security ssh server-cipher-list-v1 cipher** *number*
Description	Cipher name value
Options	des, 3des, blowfish
Introduced	16.0.R1
Notes	This element is mandatory

server-cipher-list-v2

Context	**configure system security ssh**
Description	Enter the server-cipher-list-v2 context
Introduced	16.0.R1

cipher [index] *number*

Context	**configure system security ssh server-cipher-list-v2**
Description	Enter the cipher context
Introduced	16.0.R1

[index] *number*

Context	**configure system security ssh server-cipher-list-v2 cipher** *number*
Description	Index of the cipher
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security ssh server-cipher-list-v2 cipher** *number*
Description	Cipher name value
Options	3des-cbc, blowfish-cbc, cast128-cbc, arcfour, aes128-cbc, aes192-cbc, aes256-cbc, rijndael-cbc, aes128-ctr, aes192-ctr, aes256-ctr
Introduced	16.0.R1
Notes	This element is mandatory

server-mac-list-v2

Context	**configure system security ssh**
Description	Enter the server-mac-list-v2 context
Introduced	16.0.R1

mac [index] *number*

Context	**configure system security ssh server-mac-list-v2**
Description	Enter the mac context
Introduced	16.0.R1

[index] *number*

Context	**configure system security ssh server-mac-list-v2 mac** *number*
Description	MAC algorithm index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security ssh server-mac-list-v2 mac** *number*
Description	MAC algorithm that performs encryption or decryption
Options	hmac-sha2-512, hmac-sha2-256, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-ripemd160, hmac-ripemd160-openssh-com, hmac-md5-96
Introduced	16.0.R1
Notes	This element is mandatory

version *keyword*

Context	**configure system security ssh**
Description	SSH protocol version to be supported by the SSH server
Default	2
Options	1, 2, 1-2
Introduced	16.0.R1

system-passwords

Context	**configure system security**
Description	Enter the system-passwords context
Introduced	16.0.R1

admin-password *hashed-leaf*

Context	**configure system security system-passwords**
Description	Password that assigns the user as administrator
String Length	3 to 102
Introduced	16.0.R1

vsd-password *hashed-leaf*

Context	**configure system security system-passwords**
Description	Password that allows the user to assign VSD services
String Length	3 to 102
Introduced	16.0.R1

tech-support

Context	**configure system security**
Description	Enter the tech-support context
Introduced	16.0.R1

ts-location (*ts-sat-url* | *ts-cflash-url* | *string*)

Context	**configure system security tech-support**
Description	Default file path for generated tech-support files
Introduced	16.0.R1

telnet-server *boolean*

Context	**configure system security**
Description	Enable telnet servers running on the system
Default	false
Introduced	16.0.R1

telnet6-server *boolean*

Context	**configure system security**
Description	Enable telnet IPv6 servers running on the system
Default	false
Introduced	16.0.R1

tls

Context	**configure system security**
Description	Enter the tls context
Introduced	16.0.R1

cert-profile [cert-profile-name] *string*

Context	**configure system security tls**
Description	Enter the cert-profile context
Max. Elements	16
Introduced	16.0.R1

[cert-profile-name] *string*

Context	**configure system security tls cert-profile** *string*
Description	TLS certificate profile name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security tls cert-profile** *string*
Description	Administrative state of the certificate profile
Default	disable
Options	enable, disable
Introduced	16.0.R1

entry [entry-id] *number*

Context	**configure system security tls cert-profile** *string*
Description	Enter the entry context
Max. Elements	8
Introduced	16.0.R1

[entry-id] *number*

Context	**configure system security tls cert-profile** *string* **entry** *number*
Description	Certificate profile ID
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

certificate-file *string*

Context	**configure system security tls cert-profile** *string* **entry** *number*
Description	Certificate file name
String Length	1 to 95
Introduced	16.0.R1

key-file *string*

Context	**configure system security tls cert-profile** *string* **entry** *number*
Description	Key file name
String Length	1 to 95
Introduced	16.0.R1

send-chain

Context	**configure system security tls cert-profile** *string* **entry** *number*
Description	Enter the send-chain context
Introduced	16.0.R1

ca-profile [ca-profile-name] *string*

Context	**configure system security tls cert-profile** *string* **entry** *number* **send-chain**
Description	Enter the ca-profile context
Max. Elements	7
Introduced	16.0.R1

[ca-profile-name] *string*

Context	**configure system security tls cert-profile** *string* **entry** *number* **send-chain ca-profile** *string*
Description	Certificate Authority (CA) profile name
Reference	configure **system security pki ca-profile** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

client-cipher-list [client-cipher-list-name] *string*

Context	**configure system security tls**
Description	Enter the client-cipher-list context
Max. Elements	16
Introduced	16.0.R1

[client-cipher-list-name] *string*

Context	**configure system security tls client-cipher-list** *string*
Description	TLS client cipher list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cipher [index] *number*

Context	**configure system security tls client-cipher-list** *string*
Description	Enter the cipher context
Introduced	16.0.R1

[index] *number*

Context	**configure system security tls client-cipher-list** *string* **cipher** *number*
Description	Index of the cipher
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security tls client-cipher-list** *string* **cipher** *number*
Description	Value for the cipher suite code
Options	tls-rsa-with-null-md5, tls-rsa-with-null-sha, tls-rsa-with3des-ede-cbc-sha, tls-rsa-with-aes128-cbc-sha, tls-rsa-with-aes256-cbc-sha, tls-rsa-with-null-sha256, tls-rsa-with-aes128-cbc-sha256, tls-rsa-with-aes256-cbc-sha256
Introduced	16.0.R1
Notes	This element is mandatory

client-tls-profile [client-profile-name] *string*

Context	**configure system security tls**
Description	Enter the client-tls-profile context
Max. Elements	16
Introduced	16.0.R1

[client-profile-name] *string*

Context	**configure system security tls client-tls-profile** *string*
Description	Name of TLS client profile.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security tls client-tls-profile** *string*
Description	Administrative state of the client TLS profile
Default	disable
Options	enable, disable
Introduced	16.0.R1

cert-profile *string*

Context	**configure system security tls client-tls-profile** *string*
Description	Certificate profile ID
Reference	configure **system security tls cert-profile** *string*
Introduced	16.0.R1

cipher-list *string*

Context	**configure system security tls client-tls-profile** *string*
Description	Specifies the ordered list of supported cipher suite codes associated with this TLS client profile.
Reference	configure **system security tls client-cipher-list** *string*
Introduced	16.0.R1

trust-anchor-profile *string*

Context	**configure system security tls client-tls-profile** *string*
Description	Trust anchor profile
Reference	configure **system security tls trust-anchor-profile** *string*
Introduced	16.0.R1

server-cipher-list [server-cipher-list-name] *string*

Context	**configure system security tls**
Description	Enter the server-cipher-list context
Max. Elements	16
Introduced	16.0.R1

[server-cipher-list-name] *string*

Context	**configure system security tls server-cipher-list** *string*
Description	Name of TLS server cipher list.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

cipher [index] *number*

Context	**configure system security tls server-cipher-list** *string*
Description	Enter the cipher context
Introduced	16.0.R1

[index] *number*

Context	**configure system security tls server-cipher-list** *string* **cipher** *number*
Description	Index of the cipher
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

name *keyword*

Context	**configure system security tls server-cipher-list** *string* **cipher** *number*
Description	Value for the cipher suite code
Options	tls-rsa-with-null-md5, tls-rsa-with-null-sha, tls-rsa-with3des-ede-cbc-sha, tls-rsa-with-aes128-cbc-sha, tls-rsa-with-aes256-cbc-sha, tls-rsa-with-null-sha256, tls-rsa-with-aes128-cbc-sha256, tls-rsa-with-aes256-cbc-sha256
Introduced	16.0.R1
Notes	This element is mandatory

server-tls-profile [server-profile-name] *string*

Context	**configure system security tls**
Description	Enter the server-tls-profile context
Max. Elements	16
Introduced	16.0.R1

[server-profile-name] *string*

Context	**configure system security tls server-tls-profile** *string*
Description	Name of TLS server profile.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure system security tls server-tls-profile** *string*
Description	Administrative state of the server TLS profile
Default	disable
Options	enable, disable
Introduced	16.0.R1

authenticate-client

Context	**configure system security tls server-tls-profile** *string*
Description	Enter the authenticate-client context
Introduced	16.0.R1

common-name-list *string*

Context	**configure system security tls server-tls-profile** *string* **authenticate-client**
Description	Common name list for TLS client certificate authentication
Reference	configure **system security pki common-name-list** *string*
Introduced	16.0.R1

trust-anchor-profile *string*

Context	**configure system security tls server-tls-profile** *string* **authenticate-client**
Description	Trust anchor profile for TLS client certificate authentication
Reference	configure **system security tls trust-anchor-profile** *string*
Introduced	16.0.R1

cert-profile *string*

Context	**configure system security tls server-tls-profile** *string*
Description	Certificate profile ID
Reference	configure **system security tls cert-profile** *string*
Introduced	16.0.R1

cipher-list *string*

Context	**configure system security tls server-tls-profile** *string*
Description	Specifies the ordered list of supported cipher suite codes associated with this TLS client profile.
Reference	configure **system security tls server-cipher-list** *string*
Introduced	16.0.R1

tls-re-negotiate-timer *number*

Context	**configure system security tls server-tls-profile** *string*
Description	TLS HELLO request timer
Range	0 to 65000
Default	0
Units	minutes
Introduced	16.0.R1

trust-anchor-profile [trust-anchor-profile-name] *string*

Context	**configure system security tls**
Description	Enter the trust-anchor-profile context
Max. Elements	16
Introduced	16.0.R1

[trust-anchor-profile-name] *string*

Context	**configure system security tls trust-anchor-profile** *string*
Description	Name of TLS trust anchor profile
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

trust-anchor [ca-profile-name] *string*

Context	**configure system security tls trust-anchor-profile** *string*
Description	Enter the trust-anchor context
Max. Elements	8
Introduced	16.0.R1

[ca-profile-name] *string*

Context	**configure system security tls trust-anchor-profile** *string* **trust-anchor** *string*
Description	Trusted CA profile
Reference	configure **system security pki ca-profile** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

user-params

Context	**configure system security**
Description	Enter the user-params context
Introduced	16.0.R1

attempts

Context	**configure system security user-params**
Description	Enter the attempts context
Introduced	16.0.R1

count *number*

Context	**configure system security user-params attempts**
Description	Number of unsuccessful login attempts
Range	1 to 64
Default	3
Introduced	16.0.R1

lockout *number*

Context	**configure system security user-params attempts**
Description	Lockout period after unsuccessful login attempts
Range	0 to 1440
Default	10
Units	minutes
Introduced	16.0.R1

time *number*

Context	**configure system security user-params attempts**
Description	Time frame of unsuccessful login attempts
Range	0 to 60
Default	5
Units	minutes
Introduced	16.0.R1

authentication-order

Context	**configure system security user-params**
Description	Enter the authentication-order context
Introduced	16.0.R1

exit-on-reject *boolean*

Context	**configure system security user-params authentication-order**
Description	Ignore subsequent AAA methods in authentication order when a reject is received
Default	false
Introduced	16.0.R1

order *keyword*

Context	**configure system security user-params authentication-order**
Description	Sequence of password authentication, authorization, and accounting
Options	local, radius, tacplus, ldap
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

local-user

Context	**configure system security user-params**
Description	Enter the local-user context
Introduced	16.0.R1

password

Context	**configure system security user-params local-user**
Description	Enter the password context
Introduced	16.0.R1

aging *number*

Context	**configure system security user-params local-user password**
Description	Maximum time during which a user password is valid
Range	1 to 500
Units	days
Introduced	16.0.R1

complexity-rules

Context	**configure system security user-params local-user password**
Description	Enter the complexity-rules context
Introduced	16.0.R1

allow-user-name *boolean*

Context	**configure system security user-params local-user password complexity-rules**
Description	User name as part of the password
Default	false
Introduced	16.0.R1

credits

Context	**configure system security user-params local-user password complexity-rules**
Description	Enter the **credits** context
Introduced	16.0.R1

lowercase *number*

Context	**configure system security user-params local-user password complexity-rules credits**
Description	Maximum credits given for the usage of lowercase letters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

numeric *number*

Context	**configure system security user-params local-user password complexity-rules credits**
Description	Maximum credits given for the usage of numeric characters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

special-character *number*

Context	**configure system security user-params local-user password complexity-rules credits**
Description	Maximum credits given for the usage of special characters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

uppercase *number*

Context	**configure system security user-params local-user password complexity-rules credits**
Description	Maximum credits given for the usage of uppercase letters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

minimum-classes *number*

Context	**configure system security user-params local-user password complexity-rules**
Description	Force the use of different character classes for a minimum number
Range	2 to 4
Introduced	16.0.R1

minimum-length *number*

Context	**configure system security user-params local-user password complexity-rules**
Description	Minimum length required for local passwords
Range	6 to 50
Default	6
Introduced	16.0.R1

repeated-characters *number*

Context	**configure system security user-params local-user password complexity-rules**
Description	Number of times the same character appears consecutively
Range	2 to 8
Introduced	16.0.R1

required

Context	**configure system security user-params local-user password complexity-rules**
Description	Enter the **required** context
Introduced	16.0.R1

lowercase *number*

Context	**configure system security user-params local-user password complexity-rules required**
Description	Number required for lowercase letters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

numeric *number*

Context	**configure system security user-params local-user password complexity-rules required**
Description	Number required for numeric characters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

special-character *number*

Context	**configure system security user-params local-user password complexity-rules required**
Description	Number required for special characters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

uppercase *number*

Context	**configure system security user-params local-user password complexity-rules required**
Description	Number required for uppercase letters
Range	1 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

history-size *number*

Context	**configure system security user-params local-user password**
Description	New password to match against previous ones
Range	0 to 20
Introduced	16.0.R1

minimum-age *number*

Context	**configure system security user-params local-user password**
Description	Minimum age required for a password before changing it
Range	0 to 86400
Default	600
Units	seconds
Introduced	16.0.R1

minimum-change *number*

Context	**configure system security user-params local-user password**
Description	Minimum distance required between the old and the new password
Range	1 to 20
Default	5
Introduced	16.0.R1

user [user-name] *string*

Context	**configure system security user-params local-user**
Description	Enter the user context
Introduced	16.0.R1

[user-name] *string*

Context	**configure system security user-params local-user user** *string*
Description	Local user name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

access

Context	**configure system security user-params local-user user** *string*
Description	Enter the access context
Introduced	16.0.R1

console *boolean*

Context	**configure system security user-params local-user user** *string* **access**
Description	Allow console access (serial port or Telnet)
Default	false
Introduced	16.0.R1

ftp *boolean*

Context	**configure system security user-params local-user user** *string* **access**
Description	Allow FTP access
Default	false
Introduced	16.0.R1

grpc *boolean*

Context	**configure system security user-params local-user user** *string* **access**
Description	Allow gRPC access
Default	false
Introduced	16.0.R1

netconf *boolean*

Context	**configure system security user-params local-user user** *string* **access**
Description	Allow NETCONF session access
Default	false
Introduced	16.0.R1

snmp *boolean*

Context	**configure system security user-params local-user user** *string* **access**
Description	Allow SNMP access
Default	false
Introduced	16.0.R1

cli-engine *keyword*

Context	**configure system security user-params local-user user** *string*
Description	User level override for CLI engine access
Options	classic-cli, md-cli
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

console

Context	**configure system security user-params local-user user** *string*
Description	Enter the console context
Introduced	16.0.R1

cannot-change-password *boolean*

Context	**configure system security user-params local-user user** *string* **console**
Description	Change password privileges
Default	false
Introduced	16.0.R1

login-exec (*string* | *string* | *string* | *string*)

Context	**configure system security user-params local-user user** *string* **console**
Description	File to execute when a user successfully logs in
Introduced	16.0.R1

member *string*

Context	**configure system security user-params local-user user** *string* **console**
Description	User profiles for this user
Reference	configure **system security aaa local-profiles profile** *string*
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

new-password-at-login *boolean*

Context	**configure system security user-params local-user user** *string* **console**
Description	Prompt a user to change password at next console login
Default	false
Introduced	16.0.R1

home-directory (*sat-url* | *cflash-without-slot-url*)

Context	**configure system security user-params local-user user** *string*
Description	Home directory for the user
Introduced	16.0.R1

password *hashed-leaf*

Context	**configure system security user-params local-user user** *string*
Description	Password to authenticate the user for console and FTP access
String Length	3 to 60
Introduced	16.0.R1
Notes	This element is mandatory

public-keys

Context	**configure system security user-params local-user user** *string*
Description	Enter the public-keys context
Introduced	16.0.R1

ecdsa

Context	**configure system security user-params local-user user** *string* **public-keys**
Description	Enter the ecdsa context
Introduced	16.0.R1

ecdsa-key [ecdsa-public-key-id] *number*

Context	**configure system security user-params local-user user** *string* **public-keys ecdsa**
Description	Enter the ecdsa-key context
Introduced	16.0.R1

[ecdsa-public-key-id] *number*

Context	**configure system security user-params local-user user** *string* **public-keys ecdsa ecdsa-key** *number*
Description	Number of the Secure Shell version 2 (SSHv2) ECDSA public key that is associated with system user
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system security user-params local-user user** *string* **public-keys ecdsa ecdsa-key** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

key-value *string*

Context	**configure system security user-params local-user user** *string* **public-keys ecdsa ecdsa-key** *number*
Description	Number of the Secure Shell version 2 (SSHv2) ECDSA public key that is associated with system user
String Length	1 to 255
Introduced	16.0.R1

rsa

Context	**configure system security user-params local-user user** *string* **public-keys**
Description	Enter the rsa context
Introduced	16.0.R1

rsa-key [rsa-public-key-id] *number*

Context	**configure system security user-params local-user user** *string* **public-keys rsa**
Description	Enter the rsa-key context
Introduced	16.0.R1

[rsa-public-key-id] *number*

Context	**configure system security user-params local-user user** *string* **public-keys rsa rsa-key** *number*
Description	Number of the Secure Shell version 2 (SSHv2) RSA public key that is associated with system user
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system security user-params local-user user** *string* **public-keys rsa rsa-key** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

key-value *string*

Context	**configure system security user-params local-user user** *string* **public-keys rsa rsa-key** *number*
Description	Number of the Secure Shell version 2 (SSHv2) RSA public key that is associated with system user
String Length	1 to 800
Introduced	16.0.R1

restricted-to-home *boolean*

Context	**configure system security user-params local-user user** *string*
Description	Users prevented from navigating above their home directories to access file
Default	false
Introduced	16.0.R1

snmp

Context	**configure system security user-params local-user user** *string*
Description	Enter the snmp context
Introduced	16.0.R1

authentication

Context	**configure system security user-params local-user user** *string* **snmp**
Description	Enter the authentication context
Introduced	16.0.R1

authentication-key *encrypted-leaf-hex-without-prefix*

Context	**configure system security user-params local-user user** *string* **snmp authentication**
Description	Authentication key for authentication protocol
String Length	1 to 54
Introduced	16.0.R1

authentication-protocol *keyword*

Context	**configure system security user-params local-user user** *string* **snmp authentication**
Description	Authentication protocol
Options	md5, sha
Introduced	16.0.R1

privacy

Context	**configure system security user-params local-user user** *string* **snmp authentication**
Description	Enter the privacy context
Introduced	16.0.R1

privacy-key *encrypted-leaf-hex-without-prefix*

Context	**configure system security user-params local-user user** *string* **snmp authentication privacy**
Description	Localized privacy key for authentication
String Length	1 to 50
Introduced	16.0.R1
Notes	This element is mandatory

privacy-protocol *keyword*

Context	**configure system security user-params local-user user** *string* **snmp authentication privacy**
Description	Encryption protocol for authentication
Options	des, aes-128-cfb
Introduced	16.0.R1
Notes	This element is mandatory

group *string*

Context	**configure system security user-params local-user user** *string* **snmp**
Description	User to associate with a group name
String Length	1 to 32
Introduced	16.0.R1

vprn-network-exceptions

Context	**configure system security**
Description	Enter the vprn-network-exceptions context
Introduced	16.0.R1

count *number*

Context	**configure system security vprn-network-exceptions**
Description	Number of MPLS exception messages to be received in the assigned time frame
Range	10 to 1000
Default	100
Introduced	16.0.R1

window *number*

Context	**configure system security vprn-network-exceptions**
Description	Time frame to limit the number of MPLS exception messages issued per time frame
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

selective-fib *boolean*

Context	**configure system**
Description	FIB assigned to the system
Default	false
Introduced	16.0.R1

software-repository [repository-name] *string*

Context	**configure system**
Description	Enter the software-repository context
Introduced	16.0.R1

[repository-name] *string*

Context	**configure system software-repository** *string*
Description	Unique name for the system software repository
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system software-repository** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

primary-location *string*

Context	**configure system software-repository** *string*
Description	Primary location for the files in the software repository
String Length	1 to 180
Introduced	16.0.R1

secondary-location *string*

Context	**configure system software-repository** *string*
Description	Secondary location for the files in the software repository
String Length	1 to 180
Introduced	16.0.R1

tertiary-location *string*

Context	**configure system software-repository** *string*
Description	Tertiary location for the files in the software repository
String Length	1 to 180
Introduced	16.0.R1

thresholds

Context	**configure system**
Description	Enter the thresholds context
Introduced	16.0.R1

cflash-cap-alarm-percent [cflash-id] *thresholds-cflash-url*

Context	**configure system thresholds**
Description	Enter the cflash-cap-alarm-percent context
Introduced	16.0.R1

[cflash-id] *thresholds-cflash-url*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Capacity that monitors the cflash (compact flash) assigned in this command
String Length	1 to 200
Introduced	16.0.R1
Notes	This element is part of a list key

falling-threshold *number*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Specifies the falling threshold percentage value for sampled statistics of cflash capacity alarm entry.
Range	0 to 100
Units	percent
Introduced	16.0.R1

interval *number*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Interval for the cflash capacity alarm
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

rising-threshold *number*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Specifies the rising threshold percentage value for sampled statistics of cflash capacity alarm entry.
Range	0 to 100
Units	percent
Introduced	16.0.R1
Notes	This element is mandatory

rmon-event-type *keyword*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Notification type for the cflash capacity alarm
Options	none, log, trap, both
Introduced	16.0.R1

startup-alarm *keyword*

Context	**configure system thresholds cflash-cap-alarm-percent** *thresholds-cflash-url*
Description	Type of the start-up alarm for the cflash capacity alarm
Options	rising, falling, either
Introduced	16.0.R1

cflash-cap-warn-percent [cflash-id] *thresholds-cflash-url*

Context	**configure system thresholds**
Description	Enter the cflash-cap-warn-percent context
Introduced	16.0.R1

[cflash-id] *thresholds-cflash-url*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Capacity that monitors the cflash (compact flash) assigned in this command
String Length	1 to 200
Introduced	16.0.R1
Notes	This element is part of a list key

falling-threshold *number*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Specifies the falling threshold percentage value for sampled statistics of cflash capacity alarm entry.
Range	0 to 100
Units	percent
Introduced	16.0.R1

interval *number*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Interval for the cflash capacity alarm
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

rising-threshold *number*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Specifies the rising threshold percentage value for sampled statistics of cflash capacity alarm entry.
Range	0 to 100
Units	percent
Introduced	16.0.R1
Notes	This element is mandatory

rmon-event-type *keyword*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Notification type for the cflash capacity alarm
Options	none, log, trap, both
Introduced	16.0.R1

startup-alarm *keyword*

Context	**configure system thresholds cflash-cap-warn-percent** *thresholds-cflash-url*
Description	Type of the start-up alarm for the cflash capacity alarm
Options	rising, falling, either
Introduced	16.0.R1

kb-memory-use-alarm

Context	**configure system thresholds**
Description	Enter the kb-memory-use-alarm context
Introduced	16.0.R4

falling-threshold *number*

Context	**configure system thresholds kb-memory-use-alarm**
Description	Specifies the threshold for the sampled statistic for the falling threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R4

interval *number*

Context	**configure system thresholds kb-memory-use-alarm**
Description	Interval for the cflash capacity alarm
Range	1 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory

rising-threshold *number*

Context	**configure system thresholds kb-memory-use-alarm**
Description	Specifies the threshold for the sampled statistic for the rising threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory

rmon-event-type *keyword*

Context	**configure system thresholds kb-memory-use-alarm**
Description	Notification type for the cflash capacity alarm
Options	none, log, trap, both
Introduced	16.0.R4

startup-alarm *keyword*

Context	**configure system thresholds kb-memory-use-alarm**
Description	Type of the start-up alarm for the cflash capacity alarm
Options	rising, falling, either
Introduced	16.0.R4

kb-memory-use-warn

Context	**configure system thresholds**
Description	Enter the kb-memory-use-warn context
Introduced	16.0.R4

falling-threshold *number*

Context	**configure system thresholds kb-memory-use-warn**
Description	Specifies the threshold for the sampled statistic for the falling threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R4

interval *number*

Context	**configure system thresholds kb-memory-use-warn**
Description	Interval for the cflash capacity alarm
Range	1 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory

rising-threshold *number*

Context	**configure system thresholds kb-memory-use-warn**
Description	Specifies the threshold for the sampled statistic for the rising threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R4
Notes	This element is mandatory

rmon-event-type *keyword*

Context	**configure system thresholds kb-memory-use-warn**
Description	Notification type for the cflash capacity alarm
Options	none, log, trap, both
Introduced	16.0.R4

startup-alarm *keyword*

Context	**configure system thresholds kb-memory-use-warn**
Description	Type of the start-up alarm for the cflash capacity alarm
Options	rising, falling, either
Introduced	16.0.R4

rmon

Context	**configure system thresholds**
Description	Enter the rmon context
Introduced	16.0.R1

alarm [rmon-alarm-id] *number*

Context	**configure system thresholds rmon**
Description	Enter the alarm context
Max. Elements	1200
Introduced	16.0.R1

[rmon-alarm-id] *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Index ID for an entry in the alarm table
Range	0 to 65400
Introduced	16.0.R1
Notes	This element is part of a list key

falling-event *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Identifier of the rmon>event to perform an action for a falling threshold crossing event
Range	0 to 65400
Introduced	16.0.R1

falling-threshold *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Specifies the threshold for the sampled statistic for the falling threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R1

interval *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Interval when data is sampled and compared with the rising and falling thresholds
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

owner *string*

Context	**configure system thresholds rmon alarm** *number*
Description	Owner that created this entry and uses the resources
String Length	1 to 80
Default	TiMOS CLI
Introduced	16.0.R1

rising-event *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Identifier of the rmon>event to perform an action for a rising threshold crossing event
Range	0 to 65400
Introduced	16.0.R1

rising-threshold *number*

Context	**configure system thresholds rmon alarm** *number*
Description	Specifies the threshold for the sampled statistic for the rising threshold event.
Range	-2147483648 to 2147483647
Introduced	16.0.R1

sample-type *keyword*

Context	**configure system thresholds rmon alarm** *number*
Description	Method to sample the selected variable and calculate the value comparing against the thresholds
Options	absolute, delta
Introduced	16.0.R1

startup-alarm *keyword*

Context	**configure system thresholds rmon alarm** *number*
Description	Alarm to send when this entry is first set to valid
Options	rising, falling, either
Introduced	16.0.R1

variable-oid *string*

Context	**configure system thresholds rmon alarm** *number*
Description	Object identifier to sample the specific variable
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is mandatory

event [rmon-event-id] *number*

Context	**configure system thresholds rmon**
Description	Enter the event context
Max. Elements	1200
Introduced	16.0.R1

[rmon-event-id] *number*

Context	**configure system thresholds rmon event** *number*
Description	Index ID for an entry in the event table
Range	1 to 65400
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure system thresholds rmon event** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

event-type *keyword*

Context	**configure system thresholds rmon event** *number*
Description	Type of notification action to be taken when this event occurs
Options	none, log, trap, both
Introduced	16.0.R1

owner *string*

Context	**configure system thresholds rmon event** *number*
Description	Owner that created this entry and uses the resources
String Length	1 to 80
Default	TiMOS CLI
Introduced	16.0.R1

time

Context	**configure system**
Description	Enter the time context
Introduced	16.0.R1

dst-zone [summer-time-zone] *string*

Context	**configure system time**
Description	Enter the dst-zone context
Max. Elements	1
Introduced	16.0.R1

[summer-time-zone] *string*

Context	**configure system time dst-zone** *string*
Description	Name of a summer time zone
String Length	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

end

Context	**configure system time dst-zone** *string*
Description	Enter the end context
Introduced	16.0.R1

day *keyword*

Context	**configure system time dst-zone** *string* **end**
Description	Day of the week when the daylight savings time setting ends
Default	sunday
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Introduced	16.0.R1

hours-minutes *hours-minutes-twenty-four*

Context	**configure system time dst-zone** *string* **end**
Description	Hour and number of minutes after which the daylight savings time ends
String Length	5
Default	00:00
Introduced	16.0.R1

month *keyword*

Context	**configure system time dst-zone** *string* **end**
Description	Month of the week when the daylight savings time setting ends
Default	january
Options	january, february, march, april, may, june, july, august, september, october, november, december
Introduced	16.0.R1

week *keyword*

Context	**configure system time dst-zone** *string* **end**
Description	Week of the month when the daylight savings time setting ends
Default	first
Options	first, second, third, fourth, last
Introduced	16.0.R1

offset *number*

Context	**configure system time dst-zone** *string*
Description	Offset for summer time setting
Range	0 to 60
Default	60
Units	minutes
Introduced	16.0.R1

start

Context	**configure system time dst-zone** *string*
Description	Enter the start context
Introduced	16.0.R1

day *keyword*

Context	**configure system time dst-zone** *string* **start**
Description	Day of the week when the daylight savings time setting starts
Default	sunday
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Introduced	16.0.R1

hours-minutes *hours-minutes-twenty-four*

Context	**configure system time dst-zone** *string* **start**
Description	Hour and number of minutes after which the daylight savings time starts
String Length	5
Default	00:00
Introduced	16.0.R1

month *keyword*

Context	**configure system time dst-zone** *string* **start**
Description	Month of the week when the daylight savings time setting starts
Default	january
Options	january, february, march, april, may, june, july, august, september, october, november, december
Introduced	16.0.R1

week *keyword*

Context	**configure system time dst-zone** *string* **start**
Description	Week of the month when the daylight savings time setting starts
Default	first
Options	first, second, third, fourth, last
Introduced	16.0.R1

ntp

Context	**configure system time**
Description	Enter the ntp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system time ntp**
Description	Administrative state of NTP protocol execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

authentication-check *boolean*

Context	**configure system time ntp**
Description	Reject NTP PDUs that do not match the authentication key-id, type, or key requirements
Default	true
Introduced	16.0.R1

authentication-key [key-id] *number*

Context	**configure system time ntp**
Description	Enter the authentication-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure system time ntp authentication-key** *number*
Description	Index of the NTP authentication key table that uniquely identifies an authentication key and type
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

key *encrypted-leaf*

Context	**configure system time ntp authentication-key** *number*
Description	Key to authenticate NTP packets
String Length	1 to 70
Introduced	16.0.R1
Notes	This element is mandatory

type *keyword*

Context	**configure system time ntp authentication-key** *number*
Description	Type of authentication method to authenticate NTP packet
Options	des, message-digest
Introduced	16.0.R1
Notes	This element is mandatory

broadcast [router-instance] *string* **interface-name** *interface-name*

Context	**configure system time ntp**
Description	Enter the broadcast context
Introduced	16.0.R1

[router-instance] *string*

Context	**configure system time ntp broadcast** *string* **interface-name** *interface-name*
Description	Administrative name for this virtual router
Reference	configure **router** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

interface-name *interface-name*

Context	**configure system time ntp broadcast** *string* **interface-name** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

key-id *string*

Context	**configure system time ntp broadcast** *string* **interface-name** *interface-name*
Description	Specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node.
Reference	configure **system time ntp authentication-key** *number*
Introduced	16.0.R1

ttl *number*

Context	**configure system time ntp broadcast** *string* **interface-name** *interface-name*
Description	TTL value of messages transmitted by this broadcast address
Range	1 to 255
Default	127
Introduced	16.0.R1

version *number*

Context	**configure system time ntp broadcast** *string* **interface-name** *interface-name*
Description	NTP version number generated or accepted by this node in NTP packets
Range	2 to 4
Default	4
Introduced	16.0.R1

broadcast-client [router-instance] *string* **interface-name** *interface-name*

Context	**configure system time ntp**
Description	Enter the broadcast-client context
Introduced	16.0.R1

[router-instance] *string*

Context	**configure system time ntp broadcast-client** *string* **interface-name** *interface-name*
Description	Administrative name for this virtual router
Introduced	16.0.R1
Notes	This element is part of a list key

interface-name *interface-name*

Context	**configure system time ntp broadcast-client** *string* **interface-name** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

authenticate *boolean*

Context	**configure system time ntp broadcast-client** *string* **interface-name** *interface-name*
Description	NTP PDUs authentication required when acting as a broadcast client
Default	false
Introduced	16.0.R1

multicast

Context	**configure system time ntp**
Description	Enter the multicast context
Introduced	16.0.R1

key-id *string*

Context	**configure system time ntp multicast**
Description	Specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node.
Reference	configure **system time ntp authentication-key** *number*
Introduced	16.0.R1

version *number*

Context	**configure system time ntp multicast**
Description	Specifies the NTP version number generated or accepted by this node in NTP packets.
Range	2 to 4
Default	4
Introduced	16.0.R1

multicast-client

Context	**configure system time ntp**
Description	Enter the multicast-client context
Introduced	16.0.R1

authenticate *boolean*

Context	**configure system time ntp multicast-client**
Description	Authentication of NTP PDUs required when acting as a client
Default	false
Introduced	16.0.R1

ntp-server

Context	**configure system time ntp**
Description	Enter the ntp-server context
Introduced	16.0.R1

authenticate *boolean*

Context	**configure system time ntp ntp-server**
Description	Authentication of NTP PDUs when acting as a server
Default	false
Introduced	16.0.R1

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*

Context	**configure system time ntp**
Description	Enter the peer context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system time ntp peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*
Description	Identifies a node that will provide time to the NTP client of this system.
Introduced	16.0.R4
Notes	This element is part of a list key

router-instance *string*

Context	**configure system time ntp peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*
Description	Routing context containing the interface
Introduced	16.0.R4
Notes	This element is part of a list key

key-id *string*

Context	**configure system time ntp peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*
Description	Specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node.
Reference	configure **system time ntp authentication-key** *number*
Introduced	16.0.R1

prefer *boolean*

Context	**configure system time ntp peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*
Description	NTP server from which is preferred to receive time
Default	false
Introduced	16.0.R1

version *number*

Context	**configure system time ntp peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router-instance** *string*
Description	Specifies the NTP version number generated or accepted by this node in NTP packets.
Range	2 to 4
Default	4
Introduced	16.0.R1

server [ip-address] (*union* | *keyword*) **router-instance** *string*

Context	**configure system time ntp**
Description	Enter the server context
Introduced	16.0.R1

[ip-address] (*union* | *keyword*)

Context	**configure system time ntp server** (*union* | *keyword*) **router-instance** *string*
Description	Node that provides time to the NTP client of this system
Options	ptp
Introduced	16.0.R1
Notes	This element is part of a list key

router-instance *string*

Context	**configure system time ntp server** (*union* | *keyword*) **router-instance** *string*
Description	Routing context containing the interface
Introduced	16.0.R4
Notes	This element is part of a list key

key-id *string*

Context	**configure system time ntp server** (*union* | *keyword*) **router-instance** *string*
Description	Specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node.
Reference	configure **system time ntp authentication-key** *number*
Introduced	16.0.R1

prefer *boolean*

Context	**configure system time ntp server** (*union* | *keyword*) **router-instance** *string*
Description	NTP server from which is preferred to receive time
Default	false
Introduced	16.0.R1

version *number*

Context	**configure system time ntp server** (*union* | *keyword*) **router-instance** *string*
Description	Specifies the NTP version number generated or accepted by this node in NTP packets.
Range	2 to 4
Default	4
Introduced	16.0.R1

prefer-local-time *boolean*

Context	**configure system time**
Description	Use local time over UTC time in the system
Default	false
Introduced	16.0.R1

sntp

Context	**configure system time**
Description	Enter the sntp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure system time sntp**
Description	Administrative state of the SNTP protocol execution
Default	disable
Options	enable, disable
Introduced	16.0.R1

server [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system time sntp**
Description	Enter the server context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure system time sntp server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Node that provides time to the NTP client of this system
Introduced	16.0.R1
Notes	This element is part of a list key

interval *number*

Context	**configure system time sntp server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Frequency of querying the server
Range	64 to 1024
Default	64
Units	seconds
Introduced	16.0.R1

prefer *boolean*

Context	**configure system time sntp server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Preference value for this SNTP server
Default	false
Introduced	16.0.R1

version *number*

Context	**configure system time sntp server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	SNTP version supported by this server
Range	1 to 3
Default	3
Introduced	16.0.R1

sntp-state *keyword*

Context	**configure system time sntp**
Description	Mode for Simple Network Time Protocol (SNTP)
Default	unicast
Options	unicast, broadcast
Introduced	16.0.R1

zone

Context	**configure system time**
Description	Enter the zone context
Introduced	16.0.R1

non-standard

Context	**configure system time zone**
Description	Enter the **non-standard** context
Introduced	16.0.R1

name *string*

Context	**configure system time zone non-standard**
Description	Active non-standard time zone in this managed system
String Length	1 to 5
Introduced	16.0.R1
Notes	This element is part of a choice

offset *hours-minutes-with-range*

Context	**configure system time zone non-standard**
Description	Number of hours and minutes by which the time zone offsets from UTC
String Length	5 to 6
Introduced	16.0.R1
Notes	This element is part of a choice

standard

Context	**configure system time zone**
Description	Enter the **standard** context
Introduced	16.0.R1

name *keyword*

Context	**configure system time zone standard**
Description	Active standard time zone in this managed system
Default	utc
Options	hst, akst, pst, mst, cst, est, ast, nst, utc, gmt, wet, cet, eet, msk, msd, awst, acst, aest, nzst
Introduced	16.0.R1
Notes	This element is part of a choice

transmission-profile [name] *string*

Context	**configure system**
Description	Enter the transmission-profile context
Introduced	16.0.R1

[name] *string*

Context	**configure system transmission-profile** *string*
Description	Name of file transmission profile
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

ipv4-source-address *ipv4-unicast-address*

Context	**configure system transmission-profile** *string*
Description	IPv4 source address of the file transmission connections
Introduced	16.0.R1

ipv6-source-address *ipv6-address*

Context	**configure system transmission-profile** *string*
Description	IPv6 source address of the file transmission connections
Introduced	16.0.R1

redirection *number*

Context	**configure system transmission-profile** *string*
Description	Maximum level of redirection
Range	1 to 8
Introduced	16.0.R1

retry *number*

Context	**configure system transmission-profile** *string*
Description	Number of attempts to reconnecting to the server
Range	1 to 256
Introduced	16.0.R1

router-instance *router-instance-base-management-vprn-loose*

Context	**configure system transmission-profile** *string*
Description	Router instance that hosts the file transmission connection
String Length	1 to 64
Default	Base
Introduced	16.0.R1

timeout *number*

Context	**configure system transmission-profile** *string*
Description	Timeout for a response from the server
Range	1 to 3600
Default	60
Units	seconds
Introduced	16.0.R1

39 test-oam Commands

configure
- — **test-oam**
  - — **twamp**
    - — **server**
      - — **admin-state** *keyword*
      - — **inactivity-timeout** *number*
      - — **max-connections** *number*
      - — **max-sessions** *number*
      - — **prefix** (*ipv4-prefix* | *ipv6-prefix*)
        - — **description** *string*
        - — **max-connections** *number*
        - — **max-sessions** *number*
    - — **twamp-light**
      - — **inactivity-timeout** *number*

39.1 test-oam Command Descriptions

test-oam

Context **configure**
Description Enter the test-oam context
Introduced 16.0.R4

twamp

Context **configure test-oam**
Description Enter the twamp context
Introduced 16.0.R4

server

Context **configure test-oam twamp**
Description Enter the server context
Introduced 16.0.R4

admin-state *keyword*

Context **configure test-oam twamp server**
Description Specifies if the TWAMP server is administratively enabled or disabled
Default disable
Options enable, disable
Introduced 16.0.R4

inactivity-timeout *number*

Context **configure test-oam twamp server**
Description System wide inactivity timeout for each TWAMP server control connection
Range 60 to 3600
Default 900
Units seconds
Introduced 16.0.R4

max-connections *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure test-oam twamp server**
Description	System wide maximum number of concurrent TWAMP server control connections
Range	0 to 64
Default	32
Introduced	16.0.R4

max-sessions *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure test-oam twamp server**
Description	System wide maximum number of concurrent TWAMP server test sessions
Range	0 to 128
Default	32
Introduced	16.0.R4

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure test-oam twamp server**
Description	Enter the prefix context
Max. Elements	100
Introduced	16.0.R4

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure test-oam twamp server prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Prefix to be matched against a TWAMP client address Best-fit is used when matching a TWAMP client's IP address against the set of configured prefixes. For example, suppose the first row of this table has the prefix 138.120.0.0/16, and the second row has the prefix 138.120.214.0/24. The TWAMP client address 138.120.214.52 matches the second row.
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure test-oam twamp server prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Description for the TWAMP prefix identified by the key value
String Length	1 to 80
Introduced	16.0.R4

max-connections *number*

Context	**configure test-oam twamp server prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Maximum number of concurrent TWAMP control connections allowed for the TWAMP prefix identified by the index values In addition, the number of concurrent TWAMP control connections for this prefix is limited by the system maximum '/configure test-oam twamp server max-connections'.
Range	0 to 64
Default	32
Introduced	16.0.R4

max-sessions *number*

Context	**configure test-oam twamp server prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Maximum number of concurrent TWAMP test sessions allowed for the TWAMP prefix identified by the key value In addition, the number of concurrent TWAMP test sessions for this prefix is limited by the system maximum '/configure test-oam twamp server max-sessions'.
Range	0 to 128
Default	32
Introduced	16.0.R4

twamp-light

Context	**configure test-oam twamp**
Description	Enter the twamp-light context
Introduced	16.0.R4

inactivity-timeout *number*

Context	**configure test-oam twamp twamp-light**
Description	System inactivity timeout for TWAMP-Light reflectors A TWAMP-Light reflector replies to TWAMP-Test PDUs. When a reflector sees a TWAMP-Test PDU for a new session (i.e. a {source IP address, source UDP port, destination IP address} triple which is not known to the reflector), the reflector allocates a record for the session. The record is used to ensure that reply PDUs sent for the session have consecutive sequence numbers. When a reflector sees 'inactivity-timeout' seconds pass without receiving a TWAMP-Test PDU for a particular session, an inactivity timeout has occurred, so the record allocated to the session is freed.
Range	10 to 100
Default	100
Units	seconds
Introduced	16.0.R4

40.1 vrrp Command Descriptions

vrrp

Context	**configure**
Description	Enter the vrrp context
Introduced	16.0.R1

policy [policy-id] *number*

Context	**configure vrrp**
Description	Enter the policy context
Introduced	16.0.R1

[policy-id] *number*

Context	**configure vrrp policy** *number*
Description	Policy ID that is be used when creating a Priority Control Policy
Range	1 to 9999
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure vrrp policy** *number*
Description	Administrative state of VRRP policy
Default	enable
Options	enable, disable
Introduced	16.0.R1

context *service-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure vrrp policy** *number*
Description	The value specifies the service name to which this policy applies. If not configured, this policy does not apply to a service, but to the base router instance.
String Length	1 to 64
Introduced	16.0.R1

delta-in-use-limit *number*

Context	**configure vrrp policy** *number*
Description	Limit on the in-use priority that is derived from delta priority control events
Range	1 to 254
Default	1
Introduced	16.0.R1

description *string*

Context	**configure vrrp policy** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

priority-event

Context	**configure vrrp policy** *number*
Description	Enter the priority-event context
Introduced	16.0.R1

host-unreachable [ip-address] (*ipv4-address* | *ipv6-address*)

Context	**configure vrrp policy** *number* **priority-event**
Description	Enter the host-unreachable context
Introduced	16.0.R1

[ip-address] (*ipv4-address* | *ipv6-address*)

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Priority control event that monitors the ability to receive ICMP Echo Reply packets from a host
Introduced	16.0.R1
Notes	This element is part of a list key

drop-count *number*

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Limit on number of consecutive ICMP echo request transmit failures
Range	1 to 60
Default	3
Introduced	16.0.R1

hold-clear *number*

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Delay time for a cleared event on associated virtual router instance
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

hold-set *number*

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Hold time before transitioning to cleared state to dampen flapping events
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

padding-size *number*

Context **configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)

Description Packet length padding of the ICMP packet

Range 0 to 16384

Default 56

Units bytes

Introduced 16.0.R1

priority

Context **configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)

Description Enter the priority context

Introduced 16.0.R1

event-type *keyword*

Context **configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*) **priority**

Description Effect of the priority-level value on the base priority value

Default delta

Options delta, explicit

Introduced 16.0.R1

priority-level *number*

Context **configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*) **priority**

Description Priority level associated with this event

Range 1 to 254

Introduced 16.0.R1

request-interval *number*

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Time interval between consecutive ICMP echo requests
Range	1 to 60
Default	1
Units	seconds
Introduced	16.0.R1

timeout *number*

Context	**configure vrrp policy** *number* **priority-event host-unreachable** (*ipv4-address* | *ipv6-address*)
Description	Timeout for ICMP echo request messages
Range	1 to 60
Default	1
Units	seconds
Introduced	16.0.R1

lag-port-down [lag-id] *number*

Context	**configure vrrp policy** *number* **priority-event**
Description	Enter the lag-port-down context
Introduced	16.0.R1

[lag-id] *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number*
Description	LAG ID for the reduced LAG ports
Range	1 to 800
Introduced	16.0.R1
Notes	This element is part of a list key

hold-clear *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number*
Description	Delay time for a cleared event on associated virtual router instance
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

hold-set *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number*
Description	Hold time before transitioning to cleared state to dampen flapping events
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

number-down [number-of-lag-ports-down] *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number*
Description	Enter the number-down context
Introduced	16.0.R1

[number-of-lag-ports-down] *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **number-down** *number*
Description	Number of LAG ports down that create a set event threshold
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

priority

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **number-down** *number*
Description	Enter the priority context
Introduced	16.0.R1

event-type *keyword*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **number-down** *number* **priority**
Description	Effect of the priority-level value on the base priority value
Default	delta
Options	delta, explicit
Introduced	16.0.R1

priority-level *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **number-down** *number* **priority**
Description	Priority level associated with this event
Range	1 to 254
Introduced	16.0.R1

weight-down [lag-ports-down-weight] *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number*
Description	Enter the weight-down context
Introduced	16.0.R1

[lag-ports-down-weight] *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **weight-down** *number*
Description	LAG ID for the reduced LAG ports
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

priority

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **weight-down** *number*
Description	Enter the priority context
Introduced	16.0.R1

event-type *keyword*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **weight-down** *number* **priority**
Description	Effect of the priority-level value on the base priority value
Default	delta
Options	delta, explicit
Introduced	16.0.R1

priority-level *number*

Context	**configure vrrp policy** *number* **priority-event lag-port-down** *number* **weight-down** *number* **priority**
Description	Priority level associated with this event
Range	1 to 254
Introduced	16.0.R1

mc-ipsec-non-forwarding [tunnel-group-id] *number*

Context	**configure vrrp policy** *number* **priority-event**
Description	Enter the mc-ipsec-non-forwarding context
Introduced	16.0.R1

[tunnel-group-id] *number*

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number*
Description	Multi-chassis IPSEC tunnel group whose non-forwarding state is monitored by priority control event
Range	1 to 16
Introduced	16.0.R1
Notes	This element is part of a list key

hold-clear *number*

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number*
Description	Delay time for a cleared event on associated virtual router instance
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

hold-set *number*

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number*
Description	Hold time before transitioning to cleared state to dampen flapping events
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

priority

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number*
Description	Enter the priority context
Introduced	16.0.R1

event-type *keyword*

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number* **priority**
Description	Event type
Default	delta
Options	delta, explicit
Introduced	16.0.R1

priority-level *number*

Context	**configure vrrp policy** *number* **priority-event mc-ipsec-non-forwarding** *number* **priority**
Description	Priority level associated with this event
Range	1 to 254
Introduced	16.0.R1

port-down [port-id] *port*

Context	**configure vrrp policy** *number* **priority-event**
Description	Enter the port-down context
Introduced	16.0.R1

[port-id] *port*

Context	**configure vrrp policy** *number* **priority-event port-down** *port*
Description	Port ID for the reduced LAG ports
Introduced	16.0.R1
Notes	This element is part of a list key

hold-clear *number*

Context	**configure vrrp policy** *number* **priority-event port-down** *port*
Description	Delay time for a cleared event on associated virtual router instance
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

hold-set *number*

Context	**configure vrrp policy** *number* **priority-event port-down** *port*
Description	Hold time before transitioning to cleared state to dampen flapping events
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

priority

Context	**configure vrrp policy** *number* **priority-event port-down** *port*
Description	Enter the priority context
Introduced	16.0.R1

event-type *keyword*

Context	**configure vrrp policy** *number* **priority-event port-down** *port* **priority**
Description	Effect of the priority-level value on the base priority value
Default	delta
Options	delta, explicit
Introduced	16.0.R1

priority-level *number*

Context	**configure vrrp policy** *number* **priority-event port-down** *port* **priority**
Description	Priority level associated with this event
Range	1 to 254
Introduced	16.0.R1

route-unknown [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure vrrp policy** *number* **priority-event**
Description	Enter the route-unknown context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP prefix of the route that is monitored by this priority control event
Introduced	16.0.R1
Notes	This element is part of a list key

hold-clear *number*

Context	**configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)
Description	Delay time for a cleared event on associated virtual router instance
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

hold-set *number*

Context	**configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)
Description	Hold time before transitioning to cleared state to dampen flapping events
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

less-specific

Context **configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the less-specific context

Introduced 16.0.R1

allow-default *boolean*

Context **configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **less-specific**

Description Match on default route

Default false

Introduced 16.0.R1

priority

Context **configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the priority context

Introduced 16.0.R1

event-type *keyword*

Context **configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **priority**

Description Effect of the priority-level value on the base priority value

Default delta

Options delta, explicit

Introduced 16.0.R1

priority-level *number*

Context **configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **priority**

Description Priority level associated with this event

Range 1 to 254

Introduced 16.0.R1

protocol *keyword*

Context	**configure vrrp policy** *number* **priority-event route-unknown** (*ipv4-prefix* | *ipv6-prefix*)
Description	Routing protocol as match criterion
Options	bgp, ospf, isis, rip, static, bgp-vpn
Max. Elements	6
Introduced	16.0.R1

RFC 4878, *Definitions and Managed Objects for Operations, Administration, and Maintenance (OAM) Functions on Ethernet-Like Interfaces*

RFC 5101, *Specification of the IP Flow Information Export (IPFIX) Protocol for the Exchange of IP Traffic Flow Information*

RFC 5102, *Information Model for IP Flow Information Export*

RFC 5246, *The Transport Layer Security (TLS) Protocol Version 1.2* (TLS client, RSA public key)

RFC 6424, *Mechanism for Performing Label Switched Path Ping (LSP Ping) over MPLS Tunnels*

RFC 6425, *Detecting Data Plane Failures in Point-to-Multipoint Multiprotocol Label Switching (MPLS) - Extensions to LSP Ping*

RFC 6991, *Common YANG Data Types*

RFC 7420, *Path Computation Element Communication Protocol (PCEP) Management Information Base (MIB) Module*

RFC 7950, *The YANG 1.1 Data Modeling Language*

SFLOW-MIB, *sFlow MIB Version 1.3 (Draft 5)*

Multiprotocol Label Switching — Transport Profile (MPLS-TP)

RFC 5586, *MPLS Generic Associated Channel*

RFC 5921, *A Framework for MPLS in Transport Networks*

RFC 5960, *MPLS Transport Profile Data Plane Architecture*

RFC 6370, *MPLS Transport Profile (MPLS-TP) Identifiers*

RFC 6378, *MPLS Transport Profile (MPLS-TP) Linear Protection*

RFC 6426, *MPLS On-Demand Connectivity and Route Tracing*

RFC 6427, *MPLS Fault Management Operations, Administration, and Maintenance (OAM)*

RFC 6428, *Proactive Connectivity Verification, Continuity Check and Remote Defect indication for MPLS Transport Profile*

RFC 6478, *Pseudowire Status for Static Pseudowires*

RFC 7213, *MPLS Transport Profile (MPLS-TP) Next-Hop Ethernet Addressing*

Multiprotocol Label Switching (MPLS)

draft-ietf-teas-sr-rsvp-coexistence-rec-02, *Recommendations for RSVP-TE and Segment Routing LSP co-existence*

RFC 3031, *Multiprotocol Label Switching Architecture*

RFC 3032, *MPLS Label Stack Encoding*

RFC 3443, *Time To Live (TTL) Processing in Multi-Protocol Label Switching (MPLS) Networks*

RFC 4023, *Encapsulating MPLS in IP or Generic Routing Encapsulation (GRE)*

RFC 4182, *Removing a Restriction on the use of MPLS Explicit NULL*

RFC 5332, *MPLS Multicast Encapsulations*

RFC 5884, *Bidirectional Forwarding Detection (BFD) for MPLS Label Switched Paths (LSPs)*

RFC 6790, *The Use of Entropy Labels in MPLS Forwarding*

RFC 7510, *Encapsulating MPLS in UDP*

Network Address Translation (NAT)

draft-ietf-behave-address-format-10, *IPv6 Addressing of IPv4/IPv6 Translators*

draft-ietf-behave-v6v4-xlate-23, *IP/ICMP Translation Algorithm*

draft-miles-behave-l2nat-00, *Layer2-Aware NAT*

draft-nishitani-cgn-02, *Common Functions of Large Scale NAT (LSN)*

RFC 4787, *Network Address Translation (NAT) Behavioral Requirements for Unicast UDP*

RFC 5382, *NAT Behavioral Requirements for TCP*

RFC 5508, *NAT Behavioral Requirements for ICMP*

RFC 6146, *Stateful NAT64: Network Address and Protocol Translation from IPv6 Clients to IPv4 Servers*

RFC 6333, *Dual-Stack Lite Broadband Deployments Following IPv4 Exhaustion*

RFC 6334, *Dynamic Host Configuration Protocol for IPv6 (DHCPv6) Option for Dual-Stack Lite*

RFC 6887, *Port Control Protocol (PCP)*

RFC 6888, *Common Requirements For Carrier-Grade NATs (CGNs)*

RFC 7915, *IP/ICMP Translation Algorithm*

Network Configuration Protocol (NETCONF)

RFC 5277, *NETCONF Event Notifications*

RFC 6022, *YANG Module for NETCONF Monitoring*

RFC 6241, *Network Configuration Protocol (NETCONF)*

RFC 6242, *Using the NETCONF Protocol over Secure Shell (SSH)*

RFC 6243, *With-defaults Capability for NETCONF*

RFC 7895, *YANG Module Library*

Open Shortest Path First (OSPF)

draft-ietf-ospf-ospfv3-lsa-extend-13, *OSPFv3 LSA Extendibility*

RFC 1586, *Guidelines for Running OSPF Over Frame Relay Networks*

RFC 1765, *OSPF Database Overflow*

RFC 2328, *OSPF Version 2*

RFC 3101, *The OSPF Not-So-Stubby Area (NSSA) Option*

RFC 3509, *Alternative Implementations of OSPF Area Border Routers*

RFC 3623, *Graceful OSPF Restart Graceful OSPF Restart* (helper mode)

RFC 3630, *Traffic Engineering (TE) Extensions to OSPF Version 2*

RFC 4203, *OSPF Extensions in Support of Generalized Multi-Protocol Label Switching (GMPLS)*

RFC 4222, *Prioritized Treatment of Specific OSPF Version 2 Packets and Congestion Avoidance*

RFC 4552, *Authentication/Confidentiality for OSPFv3*

RFC 4576, *Using a Link State Advertisement (LSA) Options Bit to Prevent Looping in BGP/MPLS IP Virtual Private Networks (VPNs)*

RFC 4577, *OSPF as the Provider/Customer Edge Protocol for BGP/MPLS IP Virtual Private Networks (VPNs)*

RFC 5185, *OSPF Multi-Area Adjacency*

RFC 5187, *OSPFv3 Graceful Restart* (helper mode)

RFC 5243, *OSPF Database Exchange Summary List Optimization*

RFC 5250, *The OSPF Opaque LSA Option*

RFC 5309, *Point-to-Point Operation over LAN in Link State Routing Protocols*

RFC 5340, *OSPF for IPv6*

RFC 5709, *OSPFv2 HMAC-SHA Cryptographic Authentication*

RFC 5838, *Support of Address Families in OSPFv3*

RFC 6987, *OSPF Stub Router Advertisement*

RFC 7684, *OSPFv2 Prefix/Link Attribute Advertisement*

RFC 7770, *Extensions to OSPF for Advertising Optional Router Capabilities*

OpenFlow

TS-007, *OpenFlow Switch Specification Version 1.3.1* (OpenFlow-hybrid switches)

Path Computation Element Protocol (PCEP)

draft-alvarez-pce-path-profiles-04, *PCE Path Profiles*

draft-ietf-pce-segment-routing-08, *PCEP Extensions for Segment Routing*

draft-ietf-pce-stateful-pce-14, *PCEP Extensions for Stateful PCE*

RFC 5440, *Path Computation Element (PCE) Communication Protocol (PCEP)*

Point-to-Point Protocol (PPP)

RFC 1332, *The PPP Internet Protocol Control Protocol (IPCP)*

RFC 1377, *The PPP OSI Network Layer Control Protocol (OSINLCP)*

RFC 1661, *The Point-to-Point Protocol (PPP)*

RFC 1662, *PPP in HDLC-like Framing*

RFC 1877, *PPP Internet Protocol Control Protocol Extensions for Name Server Addresses*

RFC 1989, *PPP Link Quality Monitoring*

RFC 1990, *The PPP Multilink Protocol (MP)*

RFC 1994, *PPP Challenge Handshake Authentication Protocol (CHAP)*

RFC 2153, *PPP Vendor Extensions*

RFC 2516, *A Method for Transmitting PPP Over Ethernet (PPPoE)*

RFC 2615, *PPP over SONET/SDH*

RFC 2686, *The Multi-Class Extension to Multi-Link PPP*

RFC 2878, *PPP Bridging Control Protocol (BCP)*

RFC 4638, *Accommodating a Maximum Transit Unit/Maximum Receive Unit (MTU/MRU) Greater Than 1492 in the Point-to-Point Protocol over Ethernet (PPPoE)*

RFC 5072, *IP Version 6 over PPP*

Policy Management and Credit Control

3GPP TS 29.212 Release 11, *Policy and Charging Control (PCC); Reference points* (Gx support as it applies to wireline environment (BNG))

RFC 3588, *Diameter Base Protocol*

RFC 4006, *Diameter Credit-Control Application*

Pseudowire

draft-ietf-l2vpn-vpws-iw-oam-04, *OAM Procedures for VPWS Interworking*

MFA Forum 12.0.0, *Multiservice Interworking - Ethernet over MPLS*
