empty

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	IPv6 prefix
Introduced	16.0.R1
Notes	This element is part of a list key

drain *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Prevent new leases from setting up in this prefix
Default	false
Introduced	16.0.R1

failover-control-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Failover control type for this range
Default	local
Options	local, remote, access-driven
Introduced	16.0.R1

options

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

preferred-lifetime *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Time for the prefix to remain preferred.
Range	300 to 315446399
Default	3600
Units	seconds
Introduced	16.0.R4

prefix-length-threshold [prefix-length] *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the prefix-length-threshold context
Max. Elements	8
Introduced	16.0.R1

[prefix-length] *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Delegated prefix length
Range	1 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

absolute *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Absolute minimum number for free addresses
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Minimum percentage of free addresses
Range	1 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-type

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the prefix-type context
Introduced	16.0.R1

pd *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-type**
Description	Aggregate prefix to be used by IPv6 ESM hosts for DHCPv6 prefix delegation
Default	true
Introduced	16.0.R1

wan-host *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-type**
Description	Aggregate prefix to be used by IPv6 ESM hosts, or by routing gateway WAN interface
Default	true
Introduced	16.0.R1

rebind-time *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Rebind time for the prefix.
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R4

renew-time *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Renew time for the prefix.
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R4

valid-lifetime *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Time for the prefix to remain valid.
Range	300 to 315446399
Default	86400
Units	seconds
Introduced	16.0.R4

prefix-length-threshold [prefix-length] *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the prefix-length-threshold context
Max. Elements	8
Introduced	16.0.R1

[prefix-length] *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Delegated prefix length
Range	1 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

event-when-depleted *boolean*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

minimum-free-percent *number*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Percentage of free prefixes for this prefix length
Range	0 to 100
Default	0
Introduced	16.0.R1

pool-selection

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the pool-selection context
Introduced	16.0.R1

use-link-address

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool-selection**
Description	Enter the use-link-address context
Introduced	16.0.R1

scope *keyword*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool-selection use-link-address**
Description	Match a specific pool or prefix using the DHCPv6 relay link address.
Default	subnet
Options	subnet, pool
Introduced	16.0.R4

use-pool-from-client

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool-selection**
Description	Enter the use-pool-from-client context
Introduced	16.0.R1

delimiter *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **pool-selection use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1

server-id

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	Enter the server-id context
Introduced	16.0.R1

duid-enterprise

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **server-id**
Description	Enter the **duid-enterprise** context
Introduced	16.0.R1

ascii-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **server-id duid-enterprise**
Description	DUID enterprise value as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **server-id duid-enterprise**
Description	DUID enterprise value as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-link-local

Context	**configure router** *string* **dhcp-server dhcpv6** *string* **server-id**
Description	DUID (DHCP Unique Identifier) type code link local
Introduced	16.0.R1
Notes	This element is part of a choice

user-identification *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **dhcp-server dhcpv6** *string*
Description	User identification for DHCPv6
Default	duid
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1

ecmp *number*

Context	**configure router** *string*
Description	Maximum number of equal cost routes allowed on this routing table instance
Range	1 to 64
Default	1
Introduced	16.0.R1

entropy-label *boolean*

Context	**configure router** *string*
Description	Use entropy label
Default	false
Introduced	16.0.R1

fib-priority *keyword*

Context	**configure router** *string*
Description	FIB (Forwarding Information Base) priority
Default	standard
Options	standard, high
Introduced	16.0.R1

fib-telemetry *boolean*

Context	**configure router** *string*
Description	Enable/disable fib telemetry collection.
Default	false
Introduced	16.0.R4

firewall

Context	**configure router** *string*
Description	Enter the firewall context
Introduced	16.0.R1

domain [name] *string*

Context	**configure router** *string* **firewall**
Description	Enter the domain context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **firewall domain** *string*
Description	Firewall domain name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **firewall domain** *string*
Description	Administrative state of the firewall domain
Default	disable
Options	enable, disable
Introduced	16.0.R1

dhcpv6-server

Context	**configure router** *string* **firewall domain** *string*
Description	Enter the dhcpv6-server context
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **firewall domain** *string* **dhcpv6-server**
Description	DHCPv6 server name
String Length	1 to 32
Introduced	16.0.R1

router-instance *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **firewall domain** *string* **dhcpv6-server**
Description	Router name
Introduced	16.0.R1

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **firewall domain** *string*
Description	NAT group
Reference	configure **isa nat-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

prefix [ip-prefix] *ipv6-unicast-prefix*

Context	**configure router** *string* **firewall domain** *string*
Description	Enter the prefix context
Max. Elements	4096
Introduced	16.0.R1

[ip-prefix] *ipv6-unicast-prefix*

Context	**configure router** *string* **firewall domain** *string* **prefix** *ipv6-unicast-prefix*
Description	Prefix attribute and prefix length
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **firewall domain** *string* **prefix** *ipv6-unicast-prefix*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **firewall domain** *string*
Description	WLAN GW group used for NAT
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

flowspec

Context	**configure router** *string*
Description	Enter the flowspec context
Introduced	16.0.R1

ip-filter-max-size *number*

Context	**configure router** *string* **flowspec**
Description	Maximum number of entries in IP filter for flowspec rules
Range	0 to 262143
Default	512
Introduced	16.0.R1

ipv6-filter-max-size *number*

Context	**configure router** *string* **flowspec**
Description	Maximum number of entries in IPv6 filter for flowspec rules
Range	0 to 262143
Default	512
Introduced	16.0.R1

gtp

Context	**configure router** *string*
Description	Enter the gtp context
Introduced	16.0.R1

s11

Context	**configure router** *string* **gtp**
Description	Enter the s11 context
Introduced	16.0.R1

interface [interface-name] *string*

Context	**configure router** *string* **gtp s11**
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *string*

Context	**configure router** *string* **gtp s11 interface** *string*
Description	Name for the s11 interface
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

apn-policy *string*

Context **configure router** *string* **gtp s11 interface** *string*

Description APN policy for the S11 interface

Reference configure **subscriber-mgmt gtp apn-policy** *string*

Introduced 16.0.R1

peer-profile-map

Context **configure router** *string* **gtp s11**

Description Enter the peer-profile-map context

Introduced 16.0.R1

prefix [peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure router** *string* **gtp s11 peer-profile-map**

Description Enter the prefix context

Introduced 16.0.R1

[peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure router** *string* **gtp s11 peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)

Description IP prefix and prefix length for the subnet

Introduced 16.0.R1

Notes This element is part of a list key

peer-profile *string*

Context **configure router** *string* **gtp s11 peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)

Description Peer profile used for peers in this prefix

Reference configure **subscriber-mgmt gtp peer-profile** *string*

Introduced 16.0.R1

Notes This element is mandatory

uplink

Context **configure router** *string* **gtp**

Description Enter the uplink context

Introduced 16.0.R1

apn *string*

Context **configure router** *string* **gtp uplink**

Description Network Identifier part of APN

String Length 1 to 80

Introduced 16.0.R1

pdn-type *keyword*

Context **configure router** *string* **gtp uplink**

Description Default 3GPP PDN in GTP

Default ipv4

Options ipv4, ipv6, ipv4v6

Introduced 16.0.R1

peer-profile-map

Context **configure router** *string* **gtp uplink**

Description Enter the peer-profile-map context

Introduced 16.0.R1

prefix [peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure router** *string* **gtp uplink peer-profile-map**

Description Enter the prefix context

Introduced 16.0.R1

[peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **gtp uplink peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP prefix and prefix length of the subnet
Introduced	16.0.R1
Notes	This element is part of a list key

peer-profile *string*

Context	**configure router** *string* **gtp uplink peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Peer profile name
Reference	configure **subscriber-mgmt gtp peer-profile** *string*
Introduced	16.0.R1
Notes	This element is mandatory

icmp-tunneling *boolean*

Context	**configure router** *string*
Description	Allow tunneling of ICMP reply packets over MPLS LSP at an LSR node
Default	false
Introduced	16.0.R1

igmp

Context	**configure router** *string*
Description	Enter the igmp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **igmp**
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

group-if-query-source-address *ipv4-unicast-address*

Context	**configure router** *string* **igmp**
Description	Source address in queries for group interfaces when not configured at group interface level
Introduced	16.0.R1

group-interface [group-interface-name] *interface-name*

Context	**configure router** *string* **igmp**
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Maximum number of group sources

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Max groups number for which IGMP can have local receiver information based on received IGMP reports

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Maximum number of sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

mcac

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure router** *string* **igmp group-interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure router** *string* **igmp group-interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure router** *string* **igmp group-interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure router** *string* **igmp group-interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure router** *string* **igmp group-interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure router** *string* **igmp group-interface** *interface-name*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

query-source-address *ipv4-unicast-address*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Source address for IGMP queries
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

sub-hosts-only *boolean*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Allow IGMP traffic from known hosts only
Default	true
Introduced	16.0.R1

subnet-check *boolean*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure router** *string* **igmp group-interface** *interface-name*
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

interface [ip-interface-name] *interface-name*

Context	**configure router** *string* **igmp**
Description	Enter the interface context
Introduced	16.0.R1

[ip-interface-name] *interface-name*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context	**configure router** *string* **igmp interface** *interface-name* **mcac**
Description	Enter the bandwidth context
Introduced	16.0.R1

mandatory (*number* | *keyword*)

Context	**configure router** *string* **igmp interface** *interface-name* **mcac bandwidth**
Description	Pre-reserved bandwidth for all mandatory channels.
Introduced	16.0.R1

total (*number* | *keyword*)

Context **configure router** *string* **igmp interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure router** *string* **igmp interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure router** *string* **igmp interface** *interface-name* **mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context **configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints**

Description Enter the level context

Introduced 16.0.R1

[level-id] *number*

Context **configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints level** *number*

Description Bandwidth level ID for a multicast CAC constraint

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

bandwidth *number*

Context	**configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure router** *string* **igmp interface** *interface-name* **mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context **configure router** *string* **igmp interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure router** *string* **igmp interface** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure router** *string* **igmp interface** *interface-name*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context **configure router** *string* **igmp interface** *interface-name*

Description Time to wait for a response to the host-query messages

Range 1 to 1023

Introduced 16.0.R1

redundant-mcast *boolean*

Context **configure router** *string* **igmp interface** *interface-name*

Description Exchange the interface state information with MCS

Default false

Introduced 16.0.R1

router-alert-check *boolean*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

ssm-translate

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv4-multicast-address* **end** *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

static

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure router** *string* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

group-range start *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Start of group range of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-multicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	End of group range for multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

step *ipv4-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Step interval for the group-range addresses
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure router** *string* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

subnet-check *boolean*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure router** *string* **igmp interface** *interface-name*
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

query-interval *number*

Context	**configure router** *string* **igmp**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure router** *string* **igmp**
Description	Time between group-specific query messages
Range	1 to 1023
Default	1
Units	seconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure router** *string* **igmp**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure router** *string* **igmp**
Description	Number of retries after message loss
Range	2 to 10
Default	2
Introduced	16.0.R1

ssm-translate

Context	**configure router** *string* **igmp**
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv4-multicast-address* **end** *ipv4-multicast-address*

Context	**configure router** *string* **igmp ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv4-multicast-address*

Context	**configure router** *string* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-multicast-address*

Context	**configure router** *string* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

tunnel-interface

Context	**configure router** *string* **igmp**
Description	Enter the tunnel-interface context
Introduced	16.0.R1

ldp-p2mp-root [p2mp-id] *string* **sender-address** *string*

Context	**configure router** *string* **igmp tunnel-interface**
Description	Enter the ldp-p2mp-root context
Introduced	16.0.R1

[p2mp-id] *string*

Context	**configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string*
Description	LDP p2mp Id.
Reference	configure **router** *string* **tunnel-interface ldp-p2mp-root** *number* **sender-address** *ipv4-unicast-address*
Introduced	16.0.R1
Notes	This element is part of a list key

sender-address *string*

Context	**configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string*
Description	The sender address of the root node.
Reference	configure **router** *string* **tunnel-interface ldp-p2mp-root** *number* **sender-address** *ipv4-unicast-address*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

static

Context	**configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context **configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string* **static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv4-multicast-address*

Context **configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string* **static group** *ipv4-multicast-address*

Description Group address of multicast channel

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context **configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string* **static group** *ipv4-multicast-address*

Description Enter the **source** context

Introduced 16.0.R3

[source-address] *ipv4-unicast-address*

Context **configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string* **static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*

Description Source address of multicast channel.

Introduced 16.0.R3

Notes This element is part of a choice

This element is part of a list key

starg

Context **configure router** *string* **igmp tunnel-interface ldp-p2mp-root** *string* **sender-address** *string* **static group** *ipv4-multicast-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

rsvp-p2mp-root [lsp-name] *string*

Context	**configure router** *string* **igmp tunnel-interface**
Description	Enter the rsvp-p2mp-root context
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string*
Description	RSVP p2mp lsp name.
Reference	configure **router** *string* **tunnel-interface rsvp-p2mp-root** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

static

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string* **static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv4-multicast-address*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string* **static group** *ipv4-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string* **static group** *ipv4-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string* **static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure router** *string* **igmp tunnel-interface rsvp-p2mp-root** *string* **static group** *ipv4-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

interface [interface-name] *interface-name*

Context	**configure router** *string*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name*
Description	Administrative state of the interface
Options	enable, disable
Introduced	16.0.R1

cflowd-parameters

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R1

sampling [sampling-type] *keyword*

Context	**configure router** *string* **interface** *interface-name* **cflowd-parameters**
Description	Enter the sampling context
Introduced	16.0.R1

[sampling-type] *keyword*

Context	**configure router** *string* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	Cflowd sampling type for virtual router interface
Options	unicast, multicast
Introduced	16.0.R1
Notes	This element is part of a list key

direction *keyword*

Context	**configure router** *string* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The direction of the Cflowd analysis that is applied to the given interface.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4

type *keyword*

Context	**configure router** *string* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The type of Cflowd analysis that is applied to the given interface.
Options	acl, interface
Introduced	16.0.R4
Notes	This element is mandatory

cpu-protection *string*

Context	**configure router** *string* **interface** *interface-name*
Description	CPU protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure router** *string* **interface** *interface-name*
Description	Distributed CPU protection policy
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

egress

Context **configure router** *string* **interface** *interface-name*
Description Enter the egress context
Introduced 16.0.R1

filter

Context **configure router** *string* **interface** *interface-name* **egress**
Description Enter the filter context
Introduced 16.0.R1

ip *string*

Context **configure router** *string* **interface** *interface-name* **egress filter**
Description IP filter
Reference configure **filter ip-filter** *filter-name*
Introduced 16.0.R1

ipv6 *string*

Context **configure router** *string* **interface** *interface-name* **egress filter**
Description IPv6 filter
Reference configure **filter ipv6-filter** *filter-name*
Introduced 16.0.R1

eth-cfm

Context **configure router** *string* **interface** *interface-name*
Description Enter the eth-cfm context
Introduced 16.0.R1

mep **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Context **configure router** *string* **interface** *interface-name* **eth-cfm**
Description Enter the mep context
Max. Elements 1
Introduced 16.0.R1

md-admin-name *string*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

alarm-notification

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

ccm-tlv-ignore *keyword*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	TLV to ignore on reception
Options	interface-status, port-status
Max. Elements	2
Introduced	16.0.R1

collect-lmm-fc-stats

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

facility-fault *boolean*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Allow the facility MEP to move from alarming only to network actionable function

Default false

Introduced 16.0.R1

grace

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

lbm-svc-act-responder *boolean*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Process service activation streams encapsulated in ETH-CFM request Loopback Message
Default	false
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect for MEP AIS generation
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure router** *string* **interface** *interface-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

flavor *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name*
Description	Network interface flavor
Default	regular
Options	regular, control-tunnel, pdn, unnumbered-mpls-tp, gmpls-loopback
Introduced	16.0.R1

gre-termination *boolean*

Context	**configure router** *string* **interface** *interface-name*
Description	GRE termination that is selected in virtual router for the primary subnet
Default	false
Introduced	16.0.R1

hold-time

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the hold-time context
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **interface** *interface-name* **hold-time**
Description	Enter the ipv4 context
Introduced	16.0.R1

down

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv4**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv4 down**
Description	Apply down delay only when interface is configured or after reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv4 down**
Description	Down hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv4**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv4 up**
Description	Up hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **interface** *interface-name* **hold-time**
Description	Enter the ipv6 context
Introduced	16.0.R1

down

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv6**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv6 down**
Description	Apply hold time only when IP interface is first configured or after system reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv6 down**
Description	Down hold time for the IPv6 interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv6**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **hold-time ipv6 up**
Description	Up hold time for the IPv6 interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

if-attribute

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the if-attribute context
Introduced	16.0.R1

admin-group *string*

Context	**configure router** *string* **interface** *interface-name* **if-attribute**
Description	Name of the Admin group membership of the interface
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

srlg-group [name] *string*

Context	**configure router** *string* **interface** *interface-name* **if-attribute**
Description	Enter the srlg-group context
Introduced	16.0.R1

[name] *string*

Context **configure router** *string* **interface** *interface-name* **if-attribute srlg-group** *string*

Description Shared Risk Link Group (SRLG) name

Reference configure **routing-options if-attribute srlg-group** *string*

Introduced 16.0.R1

Notes This element is part of a list key

ingress

Context **configure router** *string* **interface** *interface-name*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure router** *string* **interface** *interface-name* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure router** *string* **interface** *interface-name* **ingress filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure router** *string* **interface** *interface-name* **ingress filter**

Description IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

ingress-stats *boolean*

Context	**configure router** *string* **interface** *interface-name*
Description	Collect ingress statistics
Default	false
Introduced	16.0.R1

ip-mtu *number*

Context	**configure router** *string* **interface** *interface-name*
Description	IP MTU interface
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

ip-tunnel

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the ip-tunnel context
Introduced	16.0.R1

remote-ip *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ip-tunnel**
Description	IP address of the remote end of the IP tunnel
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

allow-directed-broadcasts *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Forward directed broadcasts
Default	false
Introduced	16.0.R1

bfd

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	BFD transmit interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 bfd**
Description	BFD session termination
Default	auto
Options	cpm-np, auto
Introduced	16.0.R1

dhcp

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Administratively enable/disable DHCP.
Default	disable
Options	enable, disable
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Add/remove a text description for DHCP.
String Length	1 to 80
Introduced	16.0.R4

gi-address *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Configure the gateway interface address for the DHCP relay.
Introduced	16.0.R4

option-82

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Enter the option-82 context
Introduced	16.0.R4

action *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82**
Description	What to do with DHCP option 82.
Default	keep
Options	replace, drop, keep
Introduced	16.0.R4

circuit-id

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the circuit-id context

Introduced 16.0.R4

ascii-tuple

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

if-name

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use interface name in the option.

Introduced 16.0.R4

Notes This element is part of a choice

ifindex

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ifindex in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Do not include the circuit-id.

Introduced 16.0.R4

Notes This element is part of a choice

port-id

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**
Description	Use port ID in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

vlan-ascii-tuple

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**
Description	Use vlan-ascii-tuple in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

remote-id

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82**
Description	Enter the remote-id context
Introduced	16.0.R4

ascii-string *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Use user-defined ASCII string in the option.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

mac

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Use MAC address in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

none

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Do not include the remote-id.
Introduced	16.0.R4
Notes	This element is part of a choice

vendor-specific-option

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82**
Description	Enter the vendor-specific-option context
Introduced	16.0.R4

client-mac-address *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**
Description	Send the MAC address in the Nokia vendor specific suboption.
Default	false
Introduced	16.0.R4

pool-name *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**
Description	Send the pool name in the Nokia vendor specific suboption.
Default	false
Introduced	16.0.R4

port-id *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**
Description	Send the port ID in the Nokia vendor specific suboption.
Default	false
Introduced	16.0.R4

service-id *boolean*

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

python-policy *string*

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp**

Description Python policy.

Reference configure **python python-policy** *string*

Introduced 16.0.R4

relay-plain-bootp *boolean*

Context **configure router** *string* **interface** *interface-name* **ipv4 dhcp**

Description Enable/disable relaying of plain BOOTP packets.

Default false

Introduced 16.0.R4

server *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

trusted *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of untrusted packets.
Default	false
Introduced	16.0.R4

icmp

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the icmp context
Introduced	16.0.R1

mask-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp**
Description	Allow responses to ICMP mask requests
Default	true
Introduced	16.0.R1

param-problem

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp**

Description Enter the param-problem context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp param-problem**

Description Administrative state of sending parameter-problem messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp param-problem**

Description Number of parameter-problem ICMP messages to send in specified time interval

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp param-problem**

Description Time used to limit number of parameter-problem ICMP messages issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

redirects

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp redirects**
Description	Administrative state of sending ICMP redirects
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp redirects**
Description	Maximum number of ICMP redirect messages to send
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp redirects**
Description	Time to limit the number of ICMP redirect messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ttl-expired

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp**
Description	Enter the ttl-expired context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description Maximum number of TTL expired messages to send
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description Time to limit the number of ICMP TTL expired messages that can be issued
Range 1 to 60
Default 10
Units seconds
Introduced 16.0.R1

unreachables

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp**
Description Enter the unreachables context
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp unreachables**
Description Administrative state of sending unreachable messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv4 icmp unreachables**
Description Maximum number of unreachable messages to send
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 icmp unreachables**
Description	Time to limit the number of unreachable messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ip-helper-address *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Gateway address
Introduced	16.0.R1

local-dhcp-server *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	DHCP server for the interface
Reference	configure **router** *string* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

neighbor-discovery

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

learn-unsolicited *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow ARP application to learn new entries based on any received ARP message
Default	false
Introduced	16.0.R1

limit

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 524288
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-arp *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable local proxy ARP on interface
Default	false
Introduced	16.0.R1

proactive-refresh *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Send a single refresh message with no retries 30 seconds prior to entry timeout
Default	false
Introduced	16.0.R1

proxy-arp-policy *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Proxy ARP policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

remote-proxy-arp *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable remote proxy ARP on interface
Default	false
Introduced	16.0.R1

retry-timer *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP retry interval
Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1

static-neighbor [ipv4-address] *ipv4-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv4-address] *ipv4-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	IPv4 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

static-neighbor-unnumbered

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor-unnumbered context
Introduced	16.0.R1

mac-address *mac-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor-unnumbered**
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

primary

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the primary context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is mandatory

broadcast *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 primary**
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

prefix-length *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 primary**
Description	Track the state of the SRRP instance on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

qos-route-lookup *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Perform QoS Route lookup
Options	destination, source
Introduced	16.0.R1

secondary [address] *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the secondary context
Introduced	16.0.R1

[address] *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

broadcast *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

igp-inhibit *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Secondary IP address that is not recognized as local interface by the running IGP
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Track the state of the SRRP instance on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

tcp-mss *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	TCP maximum segment size for the interface
Range	384 to 9158
Introduced	16.0.R1

unnumbered

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the unnumbered context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 unnumbered**
Description	IP address of the interface
Introduced	16.0.R1
Notes	This element is part of a choice

ip-int-name *interface-name*

Context	**configure router** *string* **interface** *interface-name* **ipv4 unnumbered**
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

system

Context	**configure router** *string* **interface** *interface-name* **ipv4 unnumbered**
Description	IP interface as an unnumbered interface
Introduced	16.0.R1
Notes	This element is part of a choice

urpf-check

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the urpf-check context
Introduced	16.0.R1

ignore-default *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 urpf-check**
Description	Ignore default route when performing a uRPF check
Default	false
Introduced	16.0.R1

mode *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 urpf-check**
Description	Unicast RPF check mode
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1

vrrp [virtual-router-id] *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4**
Description	Enter the vrrp context
Introduced	16.0.R1

[virtual-router-id] *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

authentication-key *encrypted-leaf*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Password for simple text authentication
String Length	1 to 38
Introduced	16.0.R1

backup *ipv4-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	16
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Destination IP address to be used for BFD session
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 2559
Default	10
Units	deciseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

ssh-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to SSH requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

standby-forwarding *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

address [ipv6-address] *ipv6-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Enable/disable Duplicate Address Detection.
Default	true
Introduced	16.0.R1

eui-64 *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Form complete IPv6 address from supplied prefix and 64-bit interface identifier
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is mandatory

primary-preference *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Order to enforce in which the address is used from control plane protocols and applications
Range	1 to 4294967295
Introduced	16.0.R1

track-srrp *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Track the state of the SRRP instance on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

bfd

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	BFD transmit interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 bfd**
Description	BFD session termination
Default	auto
Options	cpm-np, auto
Introduced	16.0.R1

duplicate-address-detection *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enable/disable Duplicate Address Detection.
Default	true
Introduced	16.0.R1

icmp6

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the icmp6 context
Introduced	16.0.R1

packet-too-big

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6**
Description	Enter the packet-too-big context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description	Administrative state of packet-too-big messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description	Number of packet-too-big messages
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description Time to limit packet-too-big messages
Range 1 to 60
Default 10
Introduced 16.0.R1

param-problem

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6**
Description Enter the param-problem context
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Administrative state of param-problem messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Number of parameter-problem messages
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Time to limit parameter problem messages
Range 1 to 60
Default 10
Introduced 16.0.R1

redirects

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6**
Description	Enter the redirects context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6 redirects**
Description	Administrative state of the redirect messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6 redirects**
Description	Number of redirect messages
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6 redirects**
Description	Time to limit redirect messages
Range	1 to 60
Default	10
Introduced	16.0.R1

time-exceeded

Context	**configure router** *string* **interface** *interface-name* **ipv6 icmp6**
Description	Enter the time-exceeded context
Introduced	16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 time-exceeded**

Description Administrative state of the time-exceeded messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 time-exceeded**

Description Number of time-exceeded messages

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 time-exceeded**

Description Time to limit time-exceeded messages

Range 1 to 60

Default 10

Introduced 16.0.R1

unreachables

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6**

Description Enter the unreachables context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 unreachables**

Description Administrative state of the unreachable messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 unreachables**

Description Number of unreachable messages

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure router** *string* **interface** *interface-name* **ipv6 icmp6 unreachables**

Description Time to limit unreachable messages

Range 1 to 60

Default 10

Introduced 16.0.R1

link-local-address

Context **configure router** *string* **interface** *interface-name* **ipv6**

Description Enter the link-local-address context

Introduced 16.0.R1

address *ipv6-address*

Context **configure router** *string* **interface** *interface-name* **ipv6 link-local-address**

Description Link-local IPv6 address of this router interface

Introduced 16.0.R1

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure router** *string* **interface** *interface-name* **ipv6 link-local-address**

Description Enable/disable Duplicate Address Detection.

Default true

Introduced 16.0.R1

local-dhcp-server *string*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	DHCP server for the interface
Reference	configure **router** *string* **dhcp-server dhcpv6** *string*
Introduced	16.0.R1

neighbor-discovery

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

learn-unsolicited *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Type of entries learned from unsolicited NA messages
Options	global, link-local, both
Introduced	16.0.R1

limit

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 102400
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-nd *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enable neighbor discovery on interface
Default	false
Introduced	16.0.R1

proactive-refresh *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Neighbor entries to be refreshed proactively
Options	global, link-local, both
Introduced	16.0.R1

proxy-nd-policy *string*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Name of the proxy Neighbor Discovery policies for the interface
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

reachable-time *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Timer for neighbor reachability detection
Range	30 to 3600
Introduced	16.0.R1

secure-nd

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the secure-nd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Administrative state of secure neighbor discovery
Default	disable
Options	enable, disable
Introduced	16.0.R1

allow-unsecured-msgs *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Accept unsecured messages
Default	true
Introduced	16.0.R1

public-key-min-bits *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Minimum acceptable key length for public keys
Range	512 to 1024
Default	1024
Introduced	16.0.R1

security-parameter *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Security parameter in the generation of a cryptographical address
Range	0 to 1
Default	1
Introduced	16.0.R1

stale-time *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Time during which a neighbor discovery cache entry remains stale
Range	60 to 65535
Introduced	16.0.R1

static-neighbor [ipv6-address] *ipv6-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv6-address] *ipv6-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*
Description	IPv6 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

qos-route-lookup *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Perform QoS Route lookup
Options	destination, source
Introduced	16.0.R1

tcp-mss *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	TCP maximum segment size for the interface
Range	1220 to 9138
Introduced	16.0.R1

urpf-check

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the urpf-check context
Introduced	16.0.R1

ignore-default *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 urpf-check**
Description	Ignore default route when performing a uRPF check
Default	false
Introduced	16.0.R1

mode *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 urpf-check**
Description	Unicast RPF check mode
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1

vrrp [virtual-router-id] *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6**
Description	Enter the vrrp context
Max. Elements	1
Introduced	16.0.R1

[virtual-router-id] *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

backup *ipv6-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	4
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	ip-address.
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 4095
Default	100
Units	centiseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

standby-forwarding *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure router** *string* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

lag

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the lag context
Introduced	16.0.R1

link-map-profile *number*

Context	**configure router** *string* **interface** *interface-name* **lag**
Description	LAG link map profile applied to a SAP or network interface
Range	1 to 64
Introduced	16.0.R1

per-link-hash

Context	**configure router** *string* **interface** *interface-name* **lag**
Description	Enter the per-link-hash context
Introduced	16.0.R1

class *number*

Context	**configure router** *string* **interface** *interface-name* **lag per-link-hash**
Description	Class used on LAG egress when using weighted per-link-hash
Range	1 to 3
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure router** *string* **interface** *interface-name* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

ldp-sync-timer

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the ldp-sync-timer context
Introduced	16.0.R1

end-of-lib *boolean*

Context	**configure router** *string* **interface** *interface-name* **ldp-sync-timer**
Description	Terminate LDP sync timer
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure router** *string* **interface** *interface-name* **ldp-sync-timer**
Description	Value for the LDP SYNC timer
Range	1 to 1800
Introduced	16.0.R1

load-balancing

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the load-balancing context
Introduced	16.0.R1

ip-load-balancing *keyword*

Context	**configure router** *string* **interface** *interface-name* **load-balancing**
Description	Configure IP load balancing algorithm.
Default	both
Options	both, destination, source, inner-ip
Introduced	16.0.R3

lsr-load-balancing *keyword*

Context	**configure router** *string* **interface** *interface-name* **load-balancing**
Description	LSR load balancing algorithm
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1

spi-load-balancing *boolean*

Context	**configure router** *string* **interface** *interface-name* **load-balancing**
Description	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Default	false
Introduced	16.0.R1

teid-load-balancing *boolean*

Context	**configure router** *string* **interface** *interface-name* **load-balancing**
Description	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Default	false
Introduced	16.0.R1

loopback

Context	**configure router** *string* **interface** *interface-name*
Description	Use interface as a loopback interface
Introduced	16.0.R1
Notes	This element is part of a choice

mac *mac-unicast-address*

Context	**configure router** *string* **interface** *interface-name*
Description	MAC address for the interface
Introduced	16.0.R1

mac-accounting *boolean*

Context	**configure router** *string* **interface** *interface-name*
Description	MAC Accounting functionality
Default	false
Introduced	16.0.R1

network-domains

Context	**configure router** *string* **interface** *interface-name*
Description	Enter the network-domains context
Introduced	16.0.R4

network-domain [domain-name] *string*

Context	**configure router** *string* **interface** *interface-name* **network-domains**
Description	Enter the network-domain context
Max. Elements	5
Introduced	16.0.R4

[domain-name] *string*

Context	**configure router** *string* **interface** *interface-name* **network-domains network-domain** *string*
Description	Specifies the network-domain name.
Reference	configure **router** *string* **network-domains network-domain** *string*
Introduced	16.0.R4
Notes	This element is part of a list key

port (*string* | *keyword*)

Context	**configure router** *string* **interface** *interface-name*
Description	Port to bind this interface
Introduced	16.0.R1
Notes	This element is part of a choice

ptp-hw-assist

Context **configure router** *string* **interface** *interface-name*

Description Enter the ptp-hw-assist context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **interface** *interface-name* **ptp-hw-assist**

Description Administrative state of the port-based timestamping assist function for the interface

Default disable

Options enable, disable

Introduced 16.0.R1

qos

Context **configure router** *string* **interface** *interface-name*

Description Enter the qos context

Introduced 16.0.R1

egress-instance *number*

Context **configure router** *string* **interface** *interface-name* **qos**

Description Instance of the port egress queue group for this interface

Range 1 to 65535

Introduced 16.0.R1

egress-port-redirect-group *string*

Context **configure router** *string* **interface** *interface-name* **qos**

Description QoS queue group name

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

ingress-fp-redirect-group *string*

Context	**configure router** *string* **interface** *interface-name* **qos**
Description	Forwarding-plane queue group policy for this interface
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1

ingress-instance *number*

Context	**configure router** *string* **interface** *interface-name* **qos**
Description	Instance of the forwarding-plane ingress queue group for this interface
Range	1 to 65535
Introduced	16.0.R1

network-policy *string*

Context	**configure router** *string* **interface** *interface-name* **qos**
Description	Pre-existing network policy ID associated with a network interface
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

strip-label *boolean*

Context	**configure router** *string* **interface** *interface-name*
Description	Strip all MPLS labels before packets are handed over for possible filter (PBR) processing
Default	false
Introduced	16.0.R1

tos-marking-state *keyword*

Context	**configure router** *string* **interface** *interface-name*
Description	TOS marking state
Default	trusted
Options	trusted, untrusted
Introduced	16.0.R1

untrusted

Context **configure router** *string* **interface** *interface-name*

Description Enter the untrusted context

Introduced 16.0.R4

default-forwarding *keyword*

Context **configure router** *string* **interface** *interface-name* **untrusted**

Description Configure the default action for Selective ILM (Incoming Label Map).

Default forward

Options forward, drop

Introduced 16.0.R4

urpf-selected-vprns *boolean*

Context **configure router** *string* **interface** *interface-name*

Description Enable/disable per-VPRN selective URPF treatment. This applies to packets associated with a VPRN.

Default false

Introduced 16.0.R1

vas-if-type *keyword*

Context **configure router** *string* **interface** *interface-name*

Description VAS interface type

Options to-from-access, to-from-network, to-from-both

Introduced 16.0.R1

ipv6

Context **configure router** *string*

Description Enter the ipv6 context

Introduced 16.0.R1

neighbor-discovery

Context **configure router** *string* **ipv6**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

reachable-time *number*

Context **configure router** *string* **ipv6 neighbor-discovery**

Description Timer for neighbor reachability detection

Range 30 to 3600

Default 30

Introduced 16.0.R1

stale-time *number*

Context **configure router** *string* **ipv6 neighbor-discovery**

Description Time during which a neighbor discovery cache entry remains stale before removal

Range 60 to 65535

Default 14400

Introduced 16.0.R1

router-advertisement

Context **configure router** *string* **ipv6**

Description Enter the router-advertisement context

Introduced 16.0.R1

dns-options

Context **configure router** *string* **ipv6 router-advertisement**

Description Enter the dns-options context

Introduced 16.0.R1

rdnss-lifetime (*keyword* | *number*)

Context	**configure router** *string* **ipv6 router-advertisement dns-options**
Description	Maximum time over which the RDNSS address is valid
Range	0 | 4 to 3600
Default	infinite
Units	seconds
Options	infinite
Introduced	16.0.R1

server *ipv6-address*

Context	**configure router** *string* **ipv6 router-advertisement dns-options**
Description	Router advertisements that are forwarded to servers
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

interface [ip-int-name] *interface-name*

Context	**configure router** *string* **ipv6 router-advertisement**
Description	Enter the interface context
Introduced	16.0.R1

[ip-int-name] *interface-name*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Administrative state of router advertisement on an interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

current-hop-limit *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Hop limit to advertise in ICMPv6 ND router advertisement messages
Range	0 to 255
Default	64
Introduced	16.0.R1

dns-options

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Enter the dns-options context
Introduced	16.0.R1

include-rdnss *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **dns-options**
Description	Include the RDNSS option in the router advertisement sent from this interface
Default	true
Introduced	16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **dns-options**
Description	Maximum time over which the RDNSS address 25 is valid
Range	0 | 4 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1

server *ipv6-address*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **dns-options**
Description	Router advertisements that are forwarded to servers
Max. Elements	4
Introduced	16.0.R1
Notes	This element is ordered by user

managed-configuration *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Managed address configuration flag in ICMPv6 ND router advertisement messages
Default	false
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Maximum time between sending ICMPv6 ND router advertisement messages
Range	4 to 1800
Default	600
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Minimum time between sending ICMPv6 ND router advertisement messages
Range	3 to 1350
Default	200
Units	seconds
Introduced	16.0.R1

mtu *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	MTU for sending packets to the router
Range	1280 to 9212
Introduced	16.0.R1

other-stateful-configuration *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Other configuration flag to assign in ICMPv6 ND router advertisement messages
Default	false
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Enter the prefix context
Max. Elements	254
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **prefix** *ipv6-prefix*
Description	IPv6 address prefix
Introduced	16.0.R1
Notes	This element is part of a list key

autonomous *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **prefix** *ipv6-prefix*
Description	Autonomous flag value
Default	true
Introduced	16.0.R1

on-link *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **prefix** *ipv6-prefix*
Description	Use prefix for onlink determination
Default	true
Introduced	16.0.R1

preferred-lifetime (*keyword* | *number*)

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **prefix** *ipv6-prefix*
Description	Remaining time that the prefix remains preferred
Range	0 to 4294967294
Default	604800
Units	seconds
Options	infinite
Introduced	16.0.R1

valid-lifetime (*keyword* | *number*)

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name* **prefix** *ipv6-prefix*
Description	Remaining time during which the prefix continues to be valid
Range	0 to 4294967294
Default	2592000
Units	seconds
Options	infinite
Introduced	16.0.R1

reachable-time *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Time during which this router is considered reachable by other hosts or nodes on the subnet
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-time *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Interval to advertise in ICMPv6 ND router advertisement messages
Range	0 to 1800000
Default	0
Units	milliseconds
Introduced	16.0.R1

router-lifetime *number*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Lifetime value that the router advertises in ICMPv6 ND router advertisement messages
Range	0 | 4 to 9000
Default	1800
Units	seconds
Introduced	16.0.R1

use-virtual-mac *boolean*

Context	**configure router** *string* **ipv6 router-advertisement interface** *interface-name*
Description	Router advertisement messages to send using VRRP virtual MAC address
Default	false
Introduced	16.0.R1

isa-service-chaining

Context	**configure router** *string*
Description	Enter the isa-service-chaining context
Introduced	16.0.R1

nat-group [id] *number*

Context	**configure router** *string* **isa-service-chaining**
Description	Enter the nat-group context
Introduced	16.0.R1

[id] *number*

Context	**configure router** *string* **isa-service-chaining nat-group** *number*
Description	ISA NAT group or ISA WLAN GW group used for the pools in EVPNs
Introduced	16.0.R4
Notes	This element is part of a list key

vxlan-vtep-range

Context	**configure router** *string* **isa-service-chaining**
Description	Enter the vxlan-vtep-range context
Introduced	16.0.R1

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **isa-service-chaining vxlan-vtep-range**
Description	End of the VXLAN VTEP range
Introduced	16.0.R1
Notes	This element is mandatory

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **isa-service-chaining vxlan-vtep-range**
Description	Start of the VXLAN VTEP range
Introduced	16.0.R1
Notes	This element is mandatory

isis [isis-instance] *number*

Context	**configure router** *string*
Description	Enter the isis context
Introduced	16.0.R1

[isis-instance] *number*

Context	**configure router** *string* **isis** *number*
Description	Instance ID for IS-IS instance
Range	0 to 31
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **isis** *number*
Description	Administrative state of IS-IS instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-passive-only *boolean*

Context	**configure router** *string* **isis** *number*
Description	Advertise only prefixes that belong to passive interfaces
Default	false
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure router** *string* **isis** *number*
Description	Advertise router capabilities to neighbors for information and troubleshooting purposes
Options	area, as
Introduced	16.0.R1

advertise-tunnel-link *boolean*

Context	**configure router** *string* **isis** *number*
Description	Allow use of forwarding adjacency
Default	false
Introduced	16.0.R1

all-l1isis *mac-address*

Context	**configure router** *string* **isis** *number*
Description	Destination MAC address for all L1 ISIS neighbors on the link for this ISIS instance
Default	01:80:C2:00:00:14
Introduced	16.0.R1

all-l2isis *mac-address*

Context	**configure router** *string* **isis** *number*
Description	Destination MAC address for all L1 ISIS routers
Default	01:80:C2:00:00:15
Introduced	16.0.R1

area-address *area-address*

Context	**configure router** *string* **isis** *number*
Description	Area address portion of NSAP address
String Length	2 to 38
Max. Elements	3
Introduced	16.0.R1

authentication-check *boolean*

Context	**configure router** *string* **isis** *number*
Description	Perform authentication check to reject PDUs that do not match the type or key requirements
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **isis** *number*
Description	Authentication key to verify PDUs sent by neighboring routers
String Length	1 to 366
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **isis** *number*
Description	The keychain used to sign and/or authenticate.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure router** *string* **isis** *number*
Description	Authentication type
Options	password, message-digest
Introduced	16.0.R1

csnp-authentication *boolean*

Context	**configure router** *string* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of complete sequence number PDU (CSNP) type
Default	true
Introduced	16.0.R1

database-export

Context	**configure router** *string* **isis** *number*
Description	Enter the database-export context
Introduced	16.0.R1

bgp-ls-identifier

Context	**configure router** *string* **isis** *number* **database-export**
Description	Enter the bgp-ls-identifier context
Introduced	16.0.R1

value *number*

Context **configure router** *string* **isis** *number* **database-export bgp-ls-identifier**
Description BGP-LS identifier that is sent in the BGP-LS NLRI
Default 0
Introduced 16.0.R1

igp-identifier *number*

Context **configure router** *string* **isis** *number* **database-export**
Description Unique identifier of the IGP instance in the BGP-LS NLRI
Introduced 16.0.R1

default-route-tag *number*

Context **configure router** *string* **isis** *number*
Description Route tag for default route
Range 1 to max
Introduced 16.0.R1

entropy-label

Context **configure router** *string* **isis** *number*
Description Enter the entropy-label context
Introduced 16.0.R1

override-tunnel-elc *boolean*

Context **configure router** *string* **isis** *number* **entropy-label**
Description Received entropy label capability advertisement to override
Default false
Introduced 16.0.R1

export-limit

Context **configure router** *string* **isis** *number*
Description Enter the export-limit context
Introduced 16.0.R1

log-percent *number*

Context	**configure router** *string* **isis** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **isis** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure router** *string* **isis** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

graceful-restart

Context	**configure router** *string* **isis** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure router** *string* **isis** *number* **graceful-restart**
Description	Enable graceful restart helper for IS-IS
Default	true
Introduced	16.0.R1

hello-authentication *boolean*

Context	**configure router** *string* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of Hello type
Default	true
Introduced	16.0.R1

hello-padding *keyword*

Context	**configure router** *string* **isis** *number*
Description	Padding on IS-IS Hello packets
Options	adaptive, loose, strict, none
Introduced	16.0.R1

ignore-attached-bit *boolean*

Context	**configure router** *string* **isis** *number*
Description	Ignore attached bit on received L1 LSPs to disable installation of default routes
Default	false
Introduced	16.0.R1

ignore-lsp-errors *boolean*

Context	**configure router** *string* **isis** *number*
Description	Ignore LSP packets with errors
Default	false
Introduced	16.0.R1

ignore-narrow-metric *boolean*

Context	**configure router** *string* **isis** *number*
Description	Ignore links with narrow metrics when wide-metrics support is enabled
Default	false
Introduced	16.0.R1

igp-shortcut

Context **configure router** *string* **isis** *number*

Description Enter the igp-shortcut context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **isis** *number* **igp-shortcut**

Description Administrative state of RSVP-TE or SR-TE shortcut

Default disable

Options enable, disable

Introduced 16.0.R1

tunnel-next-hop

Context **configure router** *string* **isis** *number* **igp-shortcut**

Description Enter the tunnel-next-hop context

Introduced 16.0.R1

family [family-type] *keyword*

Context **configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop**

Description Enter the family context

Introduced 16.0.R1

[family-type] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop family** *keyword*

Description Address family type for tunnel next-hop

Options ipv4, ipv6, srv4, srv6

Introduced 16.0.R1

Notes This element is part of a list key

resolution *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Resolution state for IGP shortcut tunnels
Options	none, filter, any, match-family-ip
Introduced	16.0.R1

resolution-filter

Context	**configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Enter the resolution-filter context
Introduced	16.0.R1

rsvp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use RSVP tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

sr-te *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use SR-TE tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

iid-tlv *boolean*

Context	**configure router** *string* **isis** *number*
Description	Use IID TLVs with IS-IS multi-instance (MI)
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **isis** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure router** *string* **isis** *number*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adjacency-set [id] *string*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the adjacency-set context
Introduced	16.0.R1

[id] *string*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **adjacency-set** *string*
Description	Adjacency set identity
Reference	configure **router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Administrative state of interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **bfd-liveness**
Description	Enter the ipv4 context
Introduced	16.0.R1

include-bfd-tlv *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **bfd-liveness ipv4**
Description	BFD-enabled TLV for IPv4 to include on this IS-IS interface
Default	false
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **bfd-liveness**
Description	Enter the ipv6 context
Introduced	16.0.R1

include-bfd-tlv *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **bfd-liveness ipv6**
Description	BFD-enabled TLV for IPv4 to include on this IS-IS interface
Default	false
Introduced	16.0.R1

csnp-interval *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Time interval between successive CSN PDUs sent from interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

default-instance *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Allow non-MI capable router to establish an adjacency and operate with a router in non-zero instance
Default	false
Introduced	16.0.R1

hello-authentication *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Authenticate individual IS-IS protocol packets of Hello type
Default	true
Introduced	16.0.R1

hello-authentication-key *encrypted-leaf*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Authentication key or hash string for Hello PDUs
String Length	1 to 366
Introduced	16.0.R1

hello-authentication-keychain *string*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

hello-authentication-type *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Hello authentication type
Options	password, message-digest
Introduced	16.0.R1

hello-padding *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Padding on IS-IS Hello packets
Options	adaptive, loose, strict, none
Introduced	16.0.R1

interface-type *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Interface type to broadcast, point-to-point, or to be default
Options	point-to-point, broadcast
Introduced	16.0.R1

ipv4-adjacency-sid

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the ipv4-adjacency-sid context
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv4-adjacency-sid**
Description	Adjacency SID
Range	1 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-multicast *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Clear IPv4 multicast routing for interface
Default	true
Introduced	16.0.R1

ipv4-node-sid

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the ipv4-node-sid context
Introduced	16.0.R1

clear-n-flag *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv4-node-sid**
Description	Clear the node-sid flag (N-flag)
Default	false
Introduced	16.0.R1

index *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv4-node-sid**
Description	IPvX node SID index for this interface
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

label *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv4-node-sid**
Description	Specifies IPvX node SID label for this interface.
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-adjacency-sid

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the ipv6-adjacency-sid context
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv6-adjacency-sid**
Description	Adjacency SID
Range	1 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-multicast *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Clear IPv4 multicast routing for interface
Default	true
Introduced	16.0.R1

ipv6-node-sid

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the ipv6-node-sid context
Introduced	16.0.R1

clear-n-flag *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv6-node-sid**
Description	Clear the node-sid flag (N-flag)
Default	false
Introduced	16.0.R1

index *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv6-node-sid**
Description	IPvX node SID index for this interface
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

label *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **ipv6-node-sid**
Description	Specifies IPvX node SID label for this interface.
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-unicast *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Clear IPv4 multicast routing for interface
Default	true
Introduced	16.0.R1

level [level-number] *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

hello-authentication-key *encrypted-leaf*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Authentication or hash key string.
String Length	1 to 366
Introduced	16.0.R4

hello-authentication-keychain *string*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R4

hello-authentication-type *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Hello-authentication-type to be enabled.
Options	password, message-digest
Introduced	16.0.R4

hello-interval *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Interval between Hello messages sent on this level
Range	1 to 20000
Default	9
Introduced	16.0.R1

hello-multiplier *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Hello messages missed from neighbor before router declares adjacency down
Range	2 to 100
Default	3
Introduced	16.0.R1

hello-padding *keyword*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Padding on IS-IS Hello packets
Options	adaptive, loose, strict, none
Introduced	16.0.R1

ipv4-multicast-metric *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS interface metric applied for IPv4 multicast
Range	1 to 16777215
Introduced	16.0.R1

ipv6-multicast-metric *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS interface metric applied for IPv6 multicast
Range	1 to 16777215
Introduced	16.0.R1

ipv6-unicast-metric *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS interface metric applied for for IPv6 unicast
Range	1 to 16777215
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	IS-IS interface metric applied for for IPv4 unicast
Range	1 to 16777215
Introduced	16.0.R1

passive *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Passive interface
Default	false
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Router to become the designated router on a multi-access network
Range	0 to 127
Default	64
Introduced	16.0.R1

sd-offset *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*
Description	Value of the signal degrade offset
Range	1 to 16777215
Introduced	16.0.R1

sf-offset *number*

Context **configure router** *string* **isis** *number* **interface** *interface-name* **level** *keyword*

Description Value of the signal fail offset

Range 1 to 16777215

Introduced 16.0.R1

level-capability *keyword*

Context **configure router** *string* **isis** *number* **interface** *interface-name*

Description IS-IS levels for this interface

Options 1, 2, 1/2

Introduced 16.0.R1

load-balancing-weight *number*

Context **configure router** *string* **isis** *number* **interface** *interface-name*

Description Load balancing weight

Introduced 16.0.R1

loopfree-alternate

Context **configure router** *string* **isis** *number* **interface** *interface-name*

Description Enter the loopfree-alternate context

Introduced 16.0.R3

exclude *boolean*

Context **configure router** *string* **isis** *number* **interface** *interface-name* **loopfree-alternate**

Description Enable/disable Loopfree Alternative at interface level.

Default false

Introduced 16.0.R3

policy-map

Context **configure router** *string* **isis** *number* **interface** *interface-name* **loopfree-alternate**

Description Enter the policy-map context

Introduced 16.0.R1

route-nh-template *string*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsp-pacing-interval *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Interval for sending LSPs from interface
Range	0 to 65535
Default	100
Introduced	16.0.R1

mesh-group

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Enter the mesh-group context
Introduced	16.0.R1

blocked

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **mesh-group**
Description	Prevent the interface from flooding LSPs
Introduced	16.0.R1
Notes	This element is part of a choice

value *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name* **mesh-group**
Description	Mesh group for the interface
Range	1 to 2000000000
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Passive interface
Default	false
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Minimum time between LSP PDU retransmissions on point-to-point interface
Range	1 to 65535
Default	5
Units	seconds
Introduced	16.0.R1

sid-protection *boolean*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Allow adjacency SID protection by LFA and remote LFA
Default	true
Introduced	16.0.R1

tag *number*

Context	**configure router** *string* **isis** *number* **interface** *interface-name*
Description	Route tag for IP address of interface
Range	1 to max
Introduced	16.0.R1

ipv4-multicast-routing *keyword*

Context	**configure router** *string* **isis** *number*
Description	IS-IS topology for IPv4 multicast routing
Default	native
Options	false, native, mt
Introduced	16.0.R1

ipv4-routing *boolean*

Context	**configure router** *string* **isis** *number*
Description	Support IPv4 routing for IS-IS instance
Default	true
Introduced	16.0.R1

ipv6-multicast-routing *keyword*

Context	**configure router** *string* **isis** *number*
Description	Topology to populate the IPv6 multicast RTM
Options	false, native, mt
Introduced	16.0.R1

ipv6-routing *keyword*

Context	**configure router** *string* **isis** *number*
Description	Routing topology for IPv6
Default	false
Options	false, native, mt
Introduced	16.0.R1

ldp-over-rsvp *boolean*

Context	**configure router** *string* **isis** *number*
Description	Allow LDP over RSVP processing
Default	false
Introduced	16.0.R1

ldp-sync *boolean*

Context	**configure router** *string* **isis** *number*
Description	Use IGP-LDP synchronization feature on all interfaces participating in IS-IS routing protocol
Default	true
Introduced	16.0.R1

level [level-number] *keyword*

Context	**configure router** *string* **isis** *number*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Authentication or hash key string.
String Length	1 to 366
Introduced	16.0.R4

authentication-keychain *string*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	The keychain used to sign and/or authenticate.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Configure the authentication type to be used.
Options	password, message-digest
Introduced	16.0.R4

bier

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Enter the bier context
Introduced	16.0.R5

admin-state *keyword*

Context	**configure router** *string* **isis** *number* **level** *keyword* **bier**
Description	Administratively enable/disable BIER.
Default	disable
Options	enable, disable
Introduced	16.0.R5

template *string*

Context	**configure router** *string* **isis** *number* **level** *keyword* **bier**
Description	Specify BIER template name.
String Length	1 to 32
Introduced	16.0.R5

csnp-authentication *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Enable/disable authentication on received ISIS protocol packets of type CSNP.
Default	true
Introduced	16.0.R4

database-export-exclude *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Exclude IGP link-state information of a specific IS-IS level from being exported into extended TE-DB
Default	false
Introduced	16.0.R1

default-ipv4-multicast-metric *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Default metric for IPv4 unicast
Range	1 to 16777215
Default	10
Introduced	16.0.R1

default-ipv6-multicast-metric *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Default metric for IPv6 unicast
Range	1 to 16777215
Default	10
Introduced	16.0.R1

default-ipv6-unicast-metric *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Default metric for IPv6 unicast
Range	1 to 16777215
Default	10
Introduced	16.0.R1

default-metric *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Default metric
Range	1 to 16777215
Default	10
Introduced	16.0.R1

external-preference *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	External route preference for IS-IS level
Range	1 to 255
Introduced	16.0.R1

hello-authentication *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Authenticate individual IS-IS protocol packets of Hello type
Default	true
Introduced	16.0.R1

hello-padding *keyword*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Padding on IS-IS Hello packets
Options	adaptive, loose, strict, none
Introduced	16.0.R1

loopfree-alternate-exclude *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Exclude interface participating in specific IS-IS level in SPF LFA computation
Default	false
Introduced	16.0.R1

lsp-mtu-size *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	LSP MTU size
Range	490 to 9190
Default	1492
Units	bytes
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	External route preference at level
Range	1 to 255
Introduced	16.0.R1

psnp-authentication *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Enable/disable authentication on received ISIS protocol packets of type PSNP.
Default	true
Introduced	16.0.R4

wide-metrics-only *boolean*

Context	**configure router** *string* **isis** *number* **level** *keyword*
Description	Use wide metrics advertisements in the LSPs
Default	false
Introduced	16.0.R1

level-capability *keyword*

Context	**configure router** *string* **isis** *number*
Description	Routing level for instance
Options	1, 2, 1/2
Introduced	16.0.R1

link-group [link-group-name] *string*

Context	**configure router** *string* **isis** *number*
Description	Enter the link-group context
Introduced	16.0.R1

[link-group-name] *string*

Context	**configure router** *string* **isis** *number* **link-group** *string*
Description	Link group name for the IS-IS protocol
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *very-long-description*

Context	**configure router** *string* **isis** *number* **link-group** *string*
Description	Text description
String Length	1 to 255
Introduced	16.0.R1

level [level-number] *keyword*

Context	**configure router** *string* **isis** *number* **link-group** *string*
Description	Enter the level context
Max. Elements	2
Introduced	16.0.R1

[level-number] *keyword*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	IS-IS protocol level to which these attributes apply
Options	1, 2
Introduced	16.0.R1
Notes	This element is part of a list key

ipv4-multicast-metric-offset *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv4 multicast address family
Range	1 to 16777215
Introduced	16.0.R1

ipv4-unicast-metric-offset *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv4 unicast address family
Range	1 to 16777215
Introduced	16.0.R1

ipv6-multicast-metric-offset *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv6 multicast address family
Range	1 to 16777215
Introduced	16.0.R1

ipv6-unicast-metric-offset *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Offset value for the IPv6 unicast address family
Range	1 to 16777215
Introduced	16.0.R1

member [interface-name] *string*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Enter the member context
Max. Elements	8
Introduced	16.0.R1

[interface-name] *string*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword* **member** *string*
Description	Router interface name for this link group
Reference	configure **router** *string* **isis** *number* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

oper-members *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Minimum number of operational links
Range	1 to 8
Introduced	16.0.R1

revert-members *number*

Context	**configure router** *string* **isis** *number* **link-group** *string* **level** *keyword*
Description	Minimum number of operational links to return link group to normal state and remove offsets
Range	1 to 8
Introduced	16.0.R1

loopfree-alternate

Context	**configure router** *string* **isis** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure router** *string* **isis** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure router** *string* **isis** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

remote-lfa

Context	**configure router** *string* **isis** *number* **loopfree-alternate**
Description	Enter the remote-lfa context
Introduced	16.0.R1

max-pq-cost *number*

Context	**configure router** *string* **isis** *number* **loopfree-alternate remote-lfa**
Description	Maximum cost of destination node during reverse SPF calculation
Default	4261412864
Introduced	16.0.R1

node-protect

Context	**configure router** *string* **isis** *number* **loopfree-alternate remote-lfa**
Description	Enter the node-protect context
Introduced	16.0.R4

max-pq-nodes *number*

Context	**configure router** *string* **isis** *number* **loopfree-alternate remote-lfa node-protect**
Description	Specifies the maximum number of PQ nodes.
Range	1 to 32
Default	16
Introduced	16.0.R4

ti-lfa

Context	**configure router** *string* **isis** *number* **loopfree-alternate**
Description	Enter the ti-lfa context
Introduced	16.0.R1

max-sr-frr-labels *number*

Context	**configure router** *string* **isis** *number* **loopfree-alternate ti-lfa**
Description	Maximum number of labels that TI-LFA backup next hop can use
Range	0 to 3
Default	2
Introduced	16.0.R1

node-protect

Context	**configure router** *string* **isis** *number* **loopfree-alternate ti-lfa**
Description	Enter the node-protect context
Introduced	16.0.R1

lsp-lifetime *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure router** *string* **isis** *number*
Description	Amount of time during which an LSP is considered valid
Range	350 to 65535
Default	1200
Units	seconds
Introduced	16.0.R1

lsp-mtu-size *number*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure router** *string* **isis** *number*
Description	LSP MTU size
Range	490 to 9190
Default	1492
Units	bytes
Introduced	16.0.R1

lsp-refresh

Context	**configure router** *string* **isis** *number*
Description	Enter the lsp-refresh context
Introduced	16.0.R1

half-lifetime *boolean*

Context	**configure router** *string* **isis** *number* **lsp-refresh**
Description	Set the refresh interval to always be half the LSP lifetime
Default	true
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **isis** *number* **lsp-refresh**
Description	Refresh timer interval
Range	150 to 65535
Default	600
Units	seconds
Introduced	16.0.R1

multi-topology

Context	**configure router** *string* **isis** *number*
Description	Enter the multi-topology context
Introduced	16.0.R1

ipv4-multicast *boolean*

Context	**configure router** *string* **isis** *number* **multi-topology**
Description	Support IPv4 topology (MT3)
Default	false
Introduced	16.0.R1

ipv6-multicast *boolean*

Context	**configure router** *string* **isis** *number* **multi-topology**
Description	Support IPv6 topology (MT4)
Default	false
Introduced	16.0.R1

ipv6-unicast *boolean*

Context	**configure router** *string* **isis** *number* **multi-topology**
Description	Support multi-topology TLVs
Default	false
Introduced	16.0.R1

multicast-import

Context	**configure router** *string* **isis** *number*
Description	Enter the multicast-import context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **isis** *number* **multicast-import**
Description	Submit IPv4 routes into the multicast RPF of the RTM
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **isis** *number* **multicast-import**
Description	Submit IPv6 routes into the multicast RPF of the RTM
Default	false
Introduced	16.0.R1

overload

Context	**configure router** *string* **isis** *number*
Description	Enter the overload context
Introduced	16.0.R1

max-metric *boolean*

Context	**configure router** *string* **isis** *number* **overload**
Description	Advertise transit links with maximum metric instead of setting overload bit
Default	false
Introduced	16.0.R1

overload-export-external *boolean*

Context	**configure router** *string* **isis** *number*
Description	Advertise the external routes when router is in overloaded
Default	false
Introduced	16.0.R1

overload-export-interlevel *boolean*

Context	**configure router** *string* **isis** *number*
Description	Advertise the inter-level routes when router is overloaded
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure router** *string* **isis** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

max-metric *boolean*

Context	**configure router** *string* **isis** *number* **overload-on-boot**
Description	Advertise transit links with maximum metric instead of setting overload bit
Default	false
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **isis** *number* **overload-on-boot**
Description	Time during which the router operates in overload state after reboot
Range	60 to 1800
Units	seconds
Introduced	16.0.R1

poi-tlv *boolean*

Context	**configure router** *string* **isis** *number*
Description	Purge Originator Identification TLV
Default	false
Introduced	16.0.R1

prefix-attributes-tlv *boolean*

Context	**configure router** *string* **isis** *number*
Description	Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information
Default	false
Introduced	16.0.R1

prefix-limit

Context	**configure router** *string* **isis** *number*
Description	Enter the prefix-limit context
Introduced	16.0.R1

limit *number*

Context	**configure router** *string* **isis** *number* **prefix-limit**
Description	Maximum number of prefixes for IS-IS instance
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

log-only *boolean*

Context	**configure router** *string* **isis** *number* **prefix-limit**
Description	Send warning message at specified threshold or when limit is reached, without going into overload
Default	false
Introduced	16.0.R1

overload-timeout (*number* | *keyword*)

Context	**configure router** *string* **isis** *number* **prefix-limit**
Description	Time router remains in overload after prefix limit is exceeded before restarting
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure router** *string* **isis** *number* **prefix-limit**
Description	Specifies the percentage of the value defined by prefix-limit, at which a warning log message and SNMP notification would be sent. This would only be a warning and additional prefixes will be learned up to 100% of prefix-limit. A value of 0 indicates that the threshold is disabled and no log message or SNMP notification will be sent.
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

psnp-authentication *boolean*

Context	**configure router** *string* **isis** *number*
Description	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Default	true
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure router** *string* **isis** *number*
Description	Reference bandwidth for bandwidth relative costing
Range	1 to 4000000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context	**configure router** *string* **isis** *number*
Description	Enter the rib-priority context
Introduced	16.0.R1

high

Context	**configure router** *string* **isis** *number* **rib-priority**
Description	Enter the high context
Introduced	16.0.R1

prefix-list *string*

Context	**configure router** *string* **isis** *number* **rib-priority high**
Description	List used to select routes processed at higher priority through OSPF route calculation process
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

tag *number*

Context	**configure router** *string* **isis** *number* **rib-priority high**
Description	Value that matches IS-IS routes processed at higher priority through route calculation process
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a choice

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number*
Description	Unique router ID for ISIS instance
Introduced	16.0.R1

segment-routing

Context	**configure router** *string* **isis** *number*
Description	Enter the segment-routing context
Introduced	16.0.R1

adj-sid-hold (*number* | *keyword*)

Context **configure router** *string* **isis** *number* **segment-routing**
Description Adjacency SID hold time
Default 15
Units seconds
Introduced 16.0.R1

adjacency-set [id] *number*

Context **configure router** *string* **isis** *number* **segment-routing**
Description Enter the adjacency-set context
Introduced 16.0.R1

[id] *number*

Context **configure router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Description Identifier for specified adjacency set
Range 1 to max
Introduced 16.0.R1
Notes This element is part of a list key

advertise *boolean*

Context **configure router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Description Advertise the adjacency set when all links terminate on the same neighboring node
Default true
Introduced 16.0.R1

family *keyword*

Context **configure router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Description Address family for the adjacency set
Default ipv4
Options ipv4, ipv6
Introduced 16.0.R1

parallel *boolean*

Context	**configure router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Description	Require all members of the adjacency set to terminate on the same neighboring node
Default	true
Introduced	16.0.R1

sid

Context	**configure router** *string* **isis** *number* **segment-routing adjacency-set** *number*
Description	Enter the sid context
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **isis** *number* **segment-routing adjacency-set** *number* **sid**
Description	Adjacency SID
Range	1 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

admin-state *keyword*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Administrative state of segment routing
Default	disable
Options	enable, disable
Introduced	16.0.R1

entropy-label *boolean*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Entropy label capability
Default	true
Introduced	16.0.R1

export-tunnel-table *keyword*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Tunnel table export policies to export tunneled routes
Options	ldp
Introduced	16.0.R1

mapping-server

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Enter the mapping-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server**
Description	Administrative state of ISIS segment routing mapping server
Default	disable
Options	enable, disable
Introduced	16.0.R1

node-sid-map [sid-index] *number*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server**
Description	Enter the node-sid-map context
Introduced	16.0.R1

[sid-index] *number*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	SID index of a mapping server Prefix-SID
Introduced	16.0.R1
Notes	This element is part of a list key

clear-n-flag *boolean*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Clear the node-sid flag (N-flag)
Default	false
Introduced	16.0.R1

ip-prefix *ipv4-unicast-prefix*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Prefix of a mapping server Prefix-SID
Introduced	16.0.R1
Notes	This element is mandatory

level-capability *keyword*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Flags to assign in SID Label Binding TLV advertised by Segment Routing Mapping Server
Options	1, 2, 1/2
Introduced	16.0.R1

range *number*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Range of addresses and their associated prefix SIDs
Range	0 to 65535
Default	1
Introduced	16.0.R1

set-flags

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Enter the set-flags context
Introduced	16.0.R1

bit-s *boolean*

Context	**configure router** *string* **isis** *number* **segment-routing mapping-server node-sid-map** *number* **set-flags**
Description	SID Label Binding TLV to be flooded across the entire routing domain
Default	false
Introduced	16.0.R1

prefix-sid-range

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Enter the prefix-sid-range context
Introduced	16.0.R1

global

Context	**configure router** *string* **isis** *number* **segment-routing prefix-sid-range**
Description	Use global SR range
Introduced	16.0.R1
Notes	This element is part of a choice

max-index *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number* **segment-routing prefix-sid-range**
Description	Maximum local SID index
Range	1 to 524287
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

start-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **isis** *number* **segment-routing prefix-sid-range**
Description	Value for the local label starting offset
Range	0 to 524287
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

srlb *string*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Routing local block
Reference	configure **router** *string* **mpls-labels reserved-label-block** *string*
Introduced	16.0.R1

tunnel-mtu *number*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Tunnel MTU size
Range	512 to 9198
Introduced	16.0.R1

tunnel-table-pref *number*

Context	**configure router** *string* **isis** *number* **segment-routing**
Description	Preference of SR tunnels created by the IGP instance
Range	1 to 255
Default	11
Introduced	16.0.R1

standard-multi-instance *boolean*

Context	**configure router** *string* **isis** *number*
Description	Enable RFC standards compliant multi-instance behavior
Default	false
Introduced	16.0.R1

strict-adjacency-check *boolean*

Context	**configure router** *string* **isis** *number*
Description	Enable strict checking of address families for IS-IS adjacencies
Default	false
Introduced	16.0.R1

summary-address [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **isis** *number*
Description	Enter the summary-address context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	Summary IP prefix
Introduced	16.0.R1
Notes	This element is part of a list key

level-capability *keyword*

Context	**configure router** *string* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	IS-IS Level from which the prefix should be summarized
Options	1, 2, 1/2
Introduced	16.0.R1

route-tag *number*

Context	**configure router** *string* **isis** *number* **summary-address** (*ipv4-prefix* | *ipv6-prefix*)
Description	Route tag assigned to the summary address
Range	1 to max
Introduced	16.0.R1

suppress-attached-bit *boolean*

Context	**configure router** *string* **isis** *number*
Description	Allow IS-IS to suppress setting the attached bit on LSPs
Default	false
Introduced	16.0.R1

system-id *system-id*

Note: Modifying this element requires the parent element's **admin-state** to be toggled manually for the new value to take effect.

Context	**configure router** *string* **isis** *number*
Description	System ID
String Length	14
Introduced	16.0.R1

timers

Context	**configure router** *string* **isis** *number*
Description	Enter the timers context
Introduced	16.0.R1

lsp-wait

Context	**configure router** *string* **isis** *number* **timers**
Description	Enter the lsp-wait context
Introduced	16.0.R1

lsp-initial-wait *number*

Context	**configure router** *string* **isis** *number* **timers lsp-wait**
Description	Initial LSP generation delay
Range	10 to 100000
Default	10
Units	milliseconds
Introduced	16.0.R1

lsp-max-wait *number*

Context	**configure router** *string* **isis** *number* **timers lsp-wait**
Description	Maximum time between two consecutive occurrences of LSP generation
Range	10 to 120000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsp-second-wait *number*

Context	**configure router** *string* **isis** *number* **timers lsp-wait**
Description	Delay between first and second LSP generation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-wait

Context	**configure router** *string* **isis** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure router** *string* **isis** *number* **timers spf-wait**
Description	Initial SPF calculation delay after topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure router** *string* **isis** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure router** *string* **isis** *number* **timers spf-wait**
Description	Hold time between first and second SPF calculations
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

traffic-engineering *boolean*

Context	**configure router** *string* **isis** *number*
Description	Traffic engineering for router
Default	false
Introduced	16.0.R1

unicast-import

Context	**configure router** *string* **isis** *number*
Description	Enter the unicast-import context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **isis** *number* **unicast-import**
Description	Submit IPv4 routes into unicast RTM
Default	true
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **isis** *number* **unicast-import**
Description	Submit IPv6 routes into unicast RTM
Default	true
Introduced	16.0.R1

l2tp

Context	**configure router** *string*
Description	Enter the l2tp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **l2tp**
Description	Administrative state of L2TP
Default	disable
Options	enable, disable
Introduced	16.0.R1

avp-hiding *keyword*

Context	**configure router** *string* **l2tp**
Description	Attribute of the Value Pair (AVP) hiding algorithm
Options	sensitive, always
Introduced	16.0.R1

challenge *boolean*

Context	**configure router** *string* **l2tp**
Description	Use challenge-response authentication
Default	false
Introduced	16.0.R1

destruct-timeout *number*

Context **configure router** *string* **l2tp**
Description Destruction timeout
Range 60 to 86400
Introduced 16.0.R1

ethernet-tunnel

Context **configure router** *string* **l2tp**
Description Enter the ethernet-tunnel context
Introduced 16.0.R4

reconnect-timeout (*number* | *keyword*)

Context **configure router** *string* **l2tp ethernet-tunnel**
Description Timeout for a session setup retry
Introduced 16.0.R4

exclude-avps

Context **configure router** *string* **l2tp**
Description Enter the exclude-avps context
Introduced 16.0.R1

calling-number *boolean*

Context **configure router** *string* **l2tp exclude-avps**
Description Calling Number AVP to exclude
Default false
Introduced 16.0.R1

initial-rx-lcp-conf-req *boolean*

Context **configure router** *string* **l2tp exclude-avps**
Description Initial Received LCP ConfReq AVP to exclude
Default false
Introduced 16.0.R1

failover

Context	**configure router** *string* **l2tp**
Description	Enter the failover context
Introduced	16.0.R1

recovery-max-session-lifetime *number*

Context	**configure router** *string* **l2tp failover**
Description	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Range	2 to 4294967295
Default	2
Units	centiseconds
Introduced	16.0.R1

recovery-method *keyword*

Context	**configure router** *string* **l2tp failover**
Description	Recovery method of the sequence numbers after failover
Options	mcs, recovery-tunnel
Introduced	16.0.R1

recovery-time *number*

Context	**configure router** *string* **l2tp failover**
Description	Time requested from the L2TP peer before assuming failover as failed
Range	0 to 900
Introduced	16.0.R1

track-srrp [id] *number*

Context	**configure router** *string* **l2tp failover**
Description	Enter the track-srrp context
Introduced	16.0.R1

[id] *number*

Context	**configure router** *string* **l2tp failover track-srrp** *number*
Description	SRRP instance ID that this interface route needs to track
Introduced	16.0.R1
Notes	This element is part of a list key

peer *string*

Context	**configure router** *string* **l2tp failover track-srrp** *number*
Description	Multi-chassis peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is mandatory

sync-tag *string*

Context	**configure router** *string* **l2tp failover track-srrp** *number*
Description	Synchronization tag on the multi-chassis peer
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

group [tunnel-group-name] *string*

Context	**configure router** *string* **l2tp**
Description	Enter the group context
Introduced	16.0.R1

[tunnel-group-name] *string*

Context	**configure router** *string* **l2tp group** *string*
Description	Tunnel group name
String Length	1 to 63
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **l2tp group** *string*
Description	Administrative state of the L2TP tunnel group
Default	disable
Options	enable, disable
Introduced	16.0.R1

avp-hiding *keyword*

Context	**configure router** *string* **l2tp group** *string*
Description	The AVP hiding algorithm
Options	never, sensitive, always
Introduced	16.0.R4

challenge *keyword*

Context	**configure router** *string* **l2tp group** *string*
Description	Enable/disable the use of challenge-response authentication.
Options	false, true
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **l2tp group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destruct-timeout *number*

Context	**configure router** *string* **l2tp group** *string*
Description	Destruction timeout
Range	60 to 86400
Introduced	16.0.R1

ethernet-tunnel

Context **configure router** *string* **l2tp group** *string*

Description Enter the ethernet-tunnel context

Introduced 16.0.R4

reconnect-timeout (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **ethernet-tunnel**

Description Timeout for a session setup retry at group level

Introduced 16.0.R4

failover

Context **configure router** *string* **l2tp group** *string*

Description Enter the failover context

Introduced 16.0.R1

recovery-method *keyword*

Context **configure router** *string* **l2tp group** *string* **failover**

Description Recovery method of the sequence numbers after failover

Options mcs, recovery-tunnel

Introduced 16.0.R1

recovery-time *number*

Context **configure router** *string* **l2tp group** *string* **failover**

Description Time requested from the L2TP peer before assuming failover as failed

Range 0 to 900

Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string*

Description Hello interval

Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context	**configure router** *string* **l2tp group** *string*
Description	Idle timeout
Introduced	16.0.R1

l2tpv3

Context	**configure router** *string* **l2tp group** *string*
Description	Enter the l2tpv3 context
Introduced	16.0.R1

cookie-length (*number* | *keyword*)

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	Cookie field length
Introduced	16.0.R1

digest-type *keyword*

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	Hashing algorithm that calculates the message digest
Options	none, md5, sha1
Introduced	16.0.R1

nonce-length *number*

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	Length for the local L2TPv3 nonce (random number)
Range	0 | 16 to 64
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	L2TPv3 password
String Length	1 to 114
Introduced	16.0.R1

private-tcp-mss-adjust (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **l2tpv3**

Description TCP maximum segment size (MSS) on private network

Introduced 16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **l2tpv3**

Description TCP Maximum Segment Size (MSS) on public network

Introduced 16.0.R1

pw-cap-list

Context **configure router** *string* **l2tp group** *string* **l2tpv3**

Description Enter the pw-cap-list context

Introduced 16.0.R1

ethernet *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure router** *string* **l2tp group** *string* **l2tpv3 pw-cap-list**

Description Advertise Ethernet pseudowire type

Default false

Introduced 16.0.R1

ethernet-vlan *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure router** *string* **l2tp group** *string* **l2tpv3 pw-cap-list**

Description Advertise Ethernet VLAN pseudowire type

Default false

Introduced 16.0.R1

rem-router-id *ipv4-address*

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	Filter on remote router ID
Default	0.0.0.0
Introduced	16.0.R1

track-password-change *boolean*

Context	**configure router** *string* **l2tp group** *string* **l2tpv3**
Description	Enable tracking of password changes
Default	false
Introduced	16.0.R1

lac

Context	**configure router** *string* **l2tp group** *string*
Description	Enter the lac context
Introduced	16.0.R1

df-bit *keyword*

Context	**configure router** *string* **l2tp group** *string* **lac**
Description	DF (do not fragment) bit in data traffic transmitted as LAC
Options	false, true
Introduced	16.0.R1

lns

Context	**configure router** *string* **l2tp group** *string*
Description	Enter the lns context
Introduced	16.0.R1

lns-group *string*

Context	**configure router** *string* **l2tp group** *string* **lns**
Description	ISA LNS group
Reference	configure **isa lns-group** *number*
Introduced	16.0.R1

load-balance-method *keyword*

Context	**configure router** *string* **l2tp group** *string* **lns**
Description	New sessions for L2TP ISA MDA
Default	per-session
Options	per-session, per-tunnel
Introduced	16.0.R1

mlppp

Context	**configure router** *string* **l2tp group** *string* **lns**
Description	Enter the mlppp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Administrative state of MLPPP in this L2TP tunnel group
Default	disable
Options	enable, disable
Introduced	16.0.R1

endpoint

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Enter the endpoint context
Introduced	16.0.R1

ip (*string* | *keyword*)

Context	**configure router** *string* **l2tp group** *string* **lns mlppp endpoint**
Description	Endpoint ID as an IP address
Introduced	16.0.R1
Notes	This element is part of a choice

mac (*string* | *keyword*)

Context	**configure router** *string* **l2tp group** *string* **lns mlppp endpoint**
Description	Endpoint ID as a MAC address
Introduced	16.0.R1
Notes	This element is part of a choice

interleave *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Enable link fragmentation and interleaving
Default	false
Introduced	16.0.R1

max-fragment-delay (*number* | *keyword*)

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Maximum fragment delay caused by transmission on a link
Default	no-fragmentation
Introduced	16.0.R1

max-links *number*

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Maximum MLPPP links
Range	1 to 8
Default	1
Introduced	16.0.R1

reassembly-timeout *number*

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Reassembly timeout
Range	100 | 1000
Default	1000
Introduced	16.0.R1

short-sequence-numbers *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns mlppp**
Description	Request a peer to send short sequence numbers
Default	false
Introduced	16.0.R1

ppp

Context	**configure router** *string* **l2tp group** *string* **lns**
Description	Enter the ppp context
Introduced	16.0.R1

authentication *keyword*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	PPP authentication protocol to negotiate
Default	pref-chap
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1

authentication-policy *string*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Authentication policy when a DHCP message is received
String Length	1 to 32
Introduced	16.0.R1

chap-challenge-length

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Enter the chap-challenge-length context
Introduced	16.0.R1

end *number*

Context	**configure router** *string* **l2tp group** *string* **lns ppp chap-challenge-length**
Description	Maximum PPP CHAP challenge length
Range	8 to 64
Default	64
Introduced	16.0.R1

start *number*

Context	**configure router** *string* **l2tp group** *string* **lns ppp chap-challenge-length**
Description	Minimum PPP CHAP challenge length
Range	8 to 64
Default	32
Introduced	16.0.R1

default-group-interface

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Enter the default-group-interface context
Introduced	16.0.R1

interface *string*

Context	**configure router** *string* **l2tp group** *string* **lns ppp default-group-interface**
Description	Group interface
String Length	1 to 32
Introduced	16.0.R1

service-name *service-name*

Context	**configure router** *string* **l2tp group** *string* **lns ppp default-group-interface**
Description	Service name
String Length	1 to 64
Introduced	16.0.R1

ipcp-subnet-negotiation *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Allow IPCP subnet negotiation for PPPoE hosts
Default	false
Introduced	16.0.R1

keepalive

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Enter the keepalive context
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **l2tp group** *string* **lns ppp keepalive**
Description	PPP keepalive interval
Range	10 to 300
Default	30
Introduced	16.0.R1

multiplier *number*

Context	**configure router** *string* **l2tp group** *string* **lns ppp keepalive**
Description	PPP keepalive multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1

lcp-force-ack-accm *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Default	false
Introduced	16.0.R1

lcp-ignore-magic-numbers *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Check Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages
Default	false
Introduced	16.0.R1

mtu *number*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Maximum PPP MTU size
Range	512 to 9212
Default	1500
Introduced	16.0.R1

proxy-authentication *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Use authentication AVPs that are received from LAC
Default	false
Introduced	16.0.R1

proxy-lcp *boolean*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Proxy LCP AVPs that are received from LAC
Default	false
Introduced	16.0.R1

user-db *string*

Context	**configure router** *string* **l2tp group** *string* **lns ppp**
Description	Local user database for PPP PAP and CHAP authentication
String Length	1 to 32
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Context	**configure router** *string* **l2tp group** *string*
Description	Local address
Introduced	16.0.R1

local-name *host-name*

Context	**configure router** *string* **l2tp group** *string*
Description	The local host name.
String Length	1 to 64
Introduced	16.0.R4

max-retries-estab *number*

Context	**configure router** *string* **l2tp group** *string*
Description	Maximum retries for established tunnels
Range	2 to 7
Introduced	16.0.R1

max-retries-not-estab *number*

Context	**configure router** *string* **l2tp group** *string*
Description	Maximum retries for unestablished tunnels
Range	2 to 7
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure router** *string* **l2tp group** *string*
Description	The password.
String Length	1 to 114
Introduced	16.0.R4

protocol *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **l2tp group** *string*
Description	Protocol version
Options	v2, v3, v3draft
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure router** *string* **l2tp group** *string*
Description	RADIUS accounting policy
Reference	configure **aaa radius l2tp-accounting-policy** *string*
Introduced	16.0.R1

receive-window-size *number*

Context	**configure router** *string* **l2tp group** *string*
Description	L2TP receive window size
Range	4 to 1024
Introduced	16.0.R1

session-assign-method *keyword*

Context	**configure router** *string* **l2tp group** *string*
Description	Session assignment method
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1

session-limit (*number* | *keyword*)

Context	**configure router** *string* **l2tp group** *string*
Description	Session limit
Introduced	16.0.R1

tunnel [tunnel-name] *string*

Context	**configure router** *string* **l2tp group** *string*
Description	Enter the tunnel context
Max. Elements	31
Introduced	16.0.R1

[tunnel-name] *string*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Tunnel name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Administrative state of the L2TP tunnel
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-establish *boolean*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Allow the tunnel to be automatically set up by the system
Default	false
Introduced	16.0.R1

avp-hiding *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	The AVP hiding algorithm
Options	never, sensitive, always
Introduced	16.0.R4

challenge *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Enable/disable the use of challenge-response authentication.
Options	false, true
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destruct-timeout *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Destruction timeout
Range	60 to 86400
Introduced	16.0.R1

failover

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Enter the failover context
Introduced	16.0.R1

recovery-method *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **failover**

Description Recovery method of the sequence numbers after failover

Options mcs, recovery-tunnel

Introduced 16.0.R1

recovery-time *number*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **failover**

Description Time requested from the L2TP peer before assuming failover as failed

Range 0 to 900

Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string*

Description Hello interval

Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string*

Description Idle timeout

Introduced 16.0.R1

l2tpv3

Context **configure router** *string* **l2tp group** *string* **tunnel** *string*

Description Enter the l2tpv3 context

Introduced 16.0.R1

private-tcp-mss-adjust (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **l2tpv3**

Description TCP maximum segment size (MSS) on private network

Introduced 16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **l2tpv3**
Description TCP maximum segment size (MSS) on public network
Introduced 16.0.R1

lac

Context **configure router** *string* **l2tp group** *string* **tunnel** *string*
Description Enter the lac context
Introduced 16.0.R1

df-bit *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lac**
Description DF (do not fragment) bit in data traffic transmitted as LAC
Options false, true
Introduced 16.0.R1

lns

Context **configure router** *string* **l2tp group** *string* **tunnel** *string*
Description Enter the lns context
Introduced 16.0.R1

lns-group *string*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns**
Description ISA LNS group
Reference configure **isa lns-group** *number*
Introduced 16.0.R1

load-balance-method *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns**
Description New sessions for L2TP ISA MDA
Options per-session, per-tunnel
Introduced 16.0.R1

mlppp

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns**

Description Enter the mlppp context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Administrative state of MLPPP in the L2TP tunnel

Options enable, disable

Introduced 16.0.R1

endpoint

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**

Description Enter the endpoint context

Introduced 16.0.R1

ip (*string* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp endpoint**

Description Endpoint ID as an IP address

Introduced 16.0.R1

Notes This element is part of a choice

mac (*string* | *keyword*)

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp endpoint**

Description Endpoint ID as a MAC address

Introduced 16.0.R1

Notes This element is part of a choice

interleave *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**
Description	Use of Link fragmentation and interleaving
Options	false, true
Introduced	16.0.R1

max-fragment-delay *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**
Description	Maximum fragment delay caused by transmission on a link
Range	5 to 1000
Introduced	16.0.R1

max-links *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**
Description	Maximum MLPPP links
Range	1 to 8
Introduced	16.0.R1

reassembly-timeout *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**
Description	Reassembly timeout
Range	100 | 1000
Introduced	16.0.R1

short-sequence-numbers *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns mlppp**
Description	Request a peer to send short sequence numbers
Options	false, true
Introduced	16.0.R1

ppp

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns**
Description Enter the ppp context
Introduced 16.0.R1

authentication *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description PPP authentication protocol to negotiate
Options pap, chap, pref-chap, pref-pap
Introduced 16.0.R1

authentication-policy *string*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description Authentication policy when a DHCP message is received
String Length 1 to 32
Introduced 16.0.R1

chap-challenge-length

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description Enter the chap-challenge-length context
Introduced 16.0.R1

end *number*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp chap-challenge-length**
Description Minimum PPP CHAP challenge length
Range 8 to 64
Introduced 16.0.R1

start *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp chap-challenge-length**
Description	Minimum PPP CHAP challenge length
Range	8 to 64
Introduced	16.0.R1

default-group-interface

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Enter the default-group-interface context
Introduced	16.0.R1

interface *string*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface**
Description	Group interface
String Length	1 to 32
Introduced	16.0.R1

service-name *service-name*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface**
Description	Service name
String Length	1 to 64
Introduced	16.0.R1

ipcp-subnet-negotiation *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Use of IPCP subnet negotiation for PPPoE hosts
Options	false, true
Introduced	16.0.R1

keepalive

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Enter the keepalive context

Introduced 16.0.R1

interval *number*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive**

Description PPP keepalive interval

Range 10 to 300

Introduced 16.0.R1

multiplier *number*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive**

Description PPP keepalive multiplier

Range 1 to 5

Introduced 16.0.R1

lcp-force-ack-accm *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option

Options false, true

Introduced 16.0.R1

lcp-ignore-magic-numbers *keyword*

Context **configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**

Description Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked

Options false, true

Introduced 16.0.R1

mtu *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Maximum PPP MTU size
Range	512 to 9212
Introduced	16.0.R1

proxy-authentication *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Authentication AVPs that are received from LAC
Options	false, true
Introduced	16.0.R1

proxy-lcp *keyword*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Use the Proxy LCP AVPs that are received from the LAC
Options	false, true
Introduced	16.0.R1

user-db *string*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string* **lns ppp**
Description	Local user database for PPP PAP and CHAP authentication
String Length	1 to 32
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Local address
Introduced	16.0.R1

local-name *host-name*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	The local host name.
String Length	1 to 64
Introduced	16.0.R4

max-retries-estab *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Maximum retries for established tunnels
Range	2 to 7
Introduced	16.0.R1

max-retries-not-estab *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Maximum retries for unestablished tunnels
Range	2 to 7
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	The password.
String Length	1 to 114
Introduced	16.0.R4

peer *ipv4-unicast-address*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Peer address
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Tunnel preference number with its group
Range	0 to 16777215
Default	50
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	RADIUS accounting policy
Reference	configure **aaa radius l2tp-accounting-policy** *string*
Introduced	16.0.R1

receive-window-size *number*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	L2TP receive window size
Range	4 to 1024
Introduced	16.0.R1

remote-name *host-name*

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	Remote host name for tunnel
String Length	1 to 64
Introduced	16.0.R1

session-limit (*number* | *keyword*)

Context	**configure router** *string* **l2tp group** *string* **tunnel** *string*
Description	L2TP session limit for each tunnel of this router
Introduced	16.0.R1

group-session-limit *number*

Context **configure router** *string* **l2tp**

Description L2TP session limit for each group of this router

Range 1 to 250000

Introduced 16.0.R1

hello-interval (*number* | *keyword*)

Context **configure router** *string* **l2tp**

Description Hello interval

Introduced 16.0.R1

idle-timeout (*number* | *keyword*)

Context **configure router** *string* **l2tp**

Description Idle timeout

Introduced 16.0.R1

ignore-avps

Context **configure router** *string* **l2tp**

Description Enter the ignore-avps context

Introduced 16.0.R1

sequencing-required *boolean*

Context **configure router** *string* **l2tp ignore-avps**

Description Ignore Sequencing Required AVP

Default false

Introduced 16.0.R1

l2tpv3

Context **configure router** *string* **l2tp**

Description Enter the l2tpv3 context

Introduced 16.0.R1

cookie-length *number*

Context **configure router** *string* **l2tp l2tpv3**

Description Cookie field length

Range 4 | 8

Introduced 16.0.R1

digest-type *keyword*

Context **configure router** *string* **l2tp l2tpv3**

Description Hashing algorithm that calculates the message digest

Options md5, sha1

Introduced 16.0.R1

nonce-length *number*

Context **configure router** *string* **l2tp l2tpv3**

Description Length of the local L2TPv3 nonce (random number)

Range 0 | 16 to 64

Introduced 16.0.R1

password *encrypted-leaf*

Context **configure router** *string* **l2tp l2tpv3**

Description L2TPv3 password

String Length 1 to 114

Introduced 16.0.R1

private-tcp-mss-adjust *number*

Context **configure router** *string* **l2tp l2tpv3**

Description TCP maximum segment size (MSS) on private network

Range 512 to 9000

Introduced 16.0.R1

public-tcp-mss-adjust *number*

Context	**configure router** *string* **l2tp l2tpv3**
Description	TCP maximum segment size (MSS) on public network
Range	512 to 9000
Introduced	16.0.R1

transport-type

Context	**configure router** *string* **l2tp l2tpv3**
Description	Enter the transport-type context
Introduced	16.0.R1

ip *boolean*

Context	**configure router** *string* **l2tp l2tpv3 transport-type**
Description	Transport type that carries L2TPv3 tunnel
Default	false
Introduced	16.0.R1

lac

Context	**configure router** *string* **l2tp**
Description	Enter the lac context
Introduced	16.0.R1

calling-number-format *ascii-specification*

Context	**configure router** *string* **l2tp lac**
Description	Calling Number AVP for L2TP control messages
String Length	1 to 255
Default	%S %s
Introduced	16.0.R1

cisco-nas-port

Context	**configure router** *string* **l2tp lac**
Description	Enter the cisco-nas-port context
Introduced	16.0.R1

ethernet *binary-specification*

Context	**configure router** *string* **l2tp lac cisco-nas-port**
Description	L2TP Cisco NAS port AVP with binary patterns for Ethernet
String Length	1 to 255
Introduced	16.0.R1

df-bit *boolean*

Context	**configure router** *string* **l2tp lac**
Description	Send all L2TP packets with DF bit set to 1
Default	true
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Context	**configure router** *string* **l2tp**
Description	Local address
Introduced	16.0.R1

local-name *host-name*

Context	**configure router** *string* **l2tp**
Description	Local host name
String Length	1 to 64
Introduced	16.0.R1

max-retries-estab *number*

Context	**configure router** *string* **l2tp**
Description	Maximum retries for established tunnels
Range	2 to 7
Introduced	16.0.R1

max-retries-not-estab *number*

Context	**configure router** *string* **l2tp**
Description	Maximum retries for unestablished tunnels
Range	2 to 7
Introduced	16.0.R1

next-attempt *keyword*

Context	**configure router** *string* **l2tp**
Description	Tunnel that is selected when previous session setup failed
Default	next-preference-level
Options	same-preference-level, next-preference-level
Introduced	16.0.R1

password *encrypted-leaf*

Context	**configure router** *string* **l2tp**
Description	L2TP password
String Length	1 to 114
Introduced	16.0.R1

peer-address-change-policy *keyword*

Context	**configure router** *string* **l2tp**
Description	Reaction when a L2TP response is received from a different address
Options	accept, ignore, reject
Introduced	16.0.R1

radius-accounting-policy *string*

Context	**configure router** *string* **l2tp**
Description	RADIUS accounting policy
Reference	configure **aaa radius l2tp-accounting-policy** *string*
Introduced	16.0.R1

receive-window-size *number*

Context	**configure router** *string* **l2tp**
Description	L2TP receive window size
Range	4 to 1024
Introduced	16.0.R1

replace-result-code

Context	**configure router** *string* **l2tp**
Description	Enter the replace-result-code context
Introduced	16.0.R1

cdn-invalid-dst *boolean*

Context	**configure router** *string* **l2tp replace-result-code**
Description	Enable/disable replacing result code 'Invalid destination' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.
Default	false
Introduced	16.0.R4

cdn-permanent-no-facilities *boolean*

Context	**configure router** *string* **l2tp replace-result-code**
Description	Enable/disable replacing result code 'Call failed due to lack of appropriate facilities being available (permanent condition)"Invalid destination' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.
Default	false
Introduced	16.0.R4

cdn-temporary-no-facilities *boolean*

Context	**configure router** *string* **l2tp replace-result-code**
Description	Enable/disable replacing result code 'Call failed due to lack of appropriate facilities being available (temporary condition)' by result code 'General error' and general error code 'Insufficient resources to handle this operation now'.
Default	false
Introduced	16.0.R4

rtm-debounce-time (*number* | *keyword*)

Context	**configure router** *string* **l2tp**
Description	Debounce timer that declares L2TP action for route table management events
Introduced	16.0.R1

session-assign-method *keyword*

Context	**configure router** *string* **l2tp**
Description	Session assignment method
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1

session-limit *number*

Context	**configure router** *string* **l2tp**
Description	L2TP session limit of this router
Range	1 to 250000
Introduced	16.0.R1

tunnel-selection-blacklist

Context	**configure router** *string* **l2tp**
Description	Enter the tunnel-selection-blacklist context
Introduced	16.0.R1

add-tunnel-on

Context	**configure router** *string* **l2tp tunnel-selection-blacklist**
Description	Enter the add-tunnel-on context
Introduced	16.0.R1

address-change-timeout *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case of an address change timeout.
Default	false
Introduced	16.0.R4

cdn-err-code *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a CDN is received with code: General error
Default	false
Introduced	16.0.R1

cdn-invalid-dst *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Invalid destination'.
Default	false
Introduced	16.0.R4

cdn-permanent-no-facilities *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Call failed due to lack of appropriate facilities being available (permanent condition)'.
Default	false
Introduced	16.0.R4

cdn-temporary-no-facilities *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to the blacklist in case a CDN is received with result code 'Call failed due to lack of appropriate facilities being available (temporary condition)'.
Default	false
Introduced	16.0.R4

stop-ccn-err-code *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a StopCNN is received with code: General error
Default	false
Introduced	16.0.R1

stop-ccn-other *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if a StopCNN is received with code: other than general error
Default	false
Introduced	16.0.R1

tx-cdn-not-established-in-time *boolean*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist add-tunnel-on**
Description	Add to blacklist if CDN transmitted with code: Call not established within time allotted by LAC
Default	false
Introduced	16.0.R1

max-list-length (*number* | *keyword*)

Context	**configure router** *string* **l2tp tunnel-selection-blacklist**
Description	Tunnels or peers in the blacklist
Range	1 to 65535
Default	infinite
Units	minutes
Options	infinite
Introduced	16.0.R1

max-time *number*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist**
Description	Maximum time that a tunnel or peer can remain in the tunnel selection blacklist
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1

timeout-action *keyword*

Context	**configure router** *string* **l2tp tunnel-selection-blacklist**
Description	Action when a tunnel or peer remained in the blacklist for maximum time
Default	remove-from-blacklist
Options	remove-from-blacklist, try-one-session
Introduced	16.0.R1

tunnel-session-limit *number*

Context	**configure router** *string* **l2tp**
Description	L2TP session limit for each tunnel of this router
Range	1 to 65534
Introduced	16.0.R1

ldp

Context	**configure router** *string*
Description	Enter the ldp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ldp**
Description	Administrative state of the LDP instance
Default	enable
Options	enable, disable
Introduced	16.0.R1

aggregate-prefix-match

Context	**configure router** *string* **ldp**
Description	Enter the aggregate-prefix-match context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ldp aggregate-prefix-match**
Description	Administrative state of the LDP aggregate prefix match
Default	disable
Options	enable, disable
Introduced	16.0.R1

prefix-exclude *string*

Context	**configure router** *string* **ldp aggregate-prefix-match**
Description	Import policies to filter LDP label bindings received from LDP peers
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

class-forwarding *keyword*

Context	**configure router** *string* **ldp**
Description	Allow class-based forwarding for LDP over RSVP
Options	lsr, ler, lsr-and-ler
Introduced	16.0.R1

consider-system-ip-in-gep *boolean*

Context	**configure router** *string* **ldp**
Description	Use Global Export Policies to determine whether to create a FEC for the system IP addresses
Default	false
Introduced	16.0.R1

egress-statistics

Context	**configure router** *string* **ldp**
Description	Enter the egress-statistics context
Introduced	16.0.R1

fec-prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ldp egress-statistics**
Description	Enter the fec-prefix context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ldp egress-statistics fec-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP prefix
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure router** *string* **ldp egress-statistics fec-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ldp egress-statistics fec-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Administrative state of the LDP egress statistics
Default	disable
Options	enable, disable
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure router** *string* **ldp egress-statistics fec-prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Collect statistics
Default	false
Introduced	16.0.R1

entropy-label-capability *boolean*

Context	**configure router** *string* **ldp**
Description	Allow receiving and processing of the entropy label and ELI on incoming packets of LDP LSPs
Default	false
Introduced	16.0.R1

export-policy *string*

Context	**configure router** *string* **ldp**
Description	First export policies to filter LDP label bindings advertised to LDP peers
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

export-tunnel-table *string*

Context	**configure router** *string* **ldp**
Description	Tunnel table export policies to export tunneled routes
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

fast-reroute

Context	**configure router** *string* **ldp**
Description	Enter the fast-reroute context
Introduced	16.0.R1

backup-sr-tunnel *boolean*

Context	**configure router** *string* **ldp fast-reroute**
Description	Use SR tunnel as a remote LFA backup tunnel next-hop by an LDP FEC
Default	false
Introduced	16.0.R1

fec-originate [fec-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ldp**
Description	Enter the fec-originate context
Introduced	16.0.R1

[fec-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Static FEC IP prefix
Introduced	16.0.R1
Notes	This element is part of a list key

advertised-label *number*

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Label that is advertised to upstream peer
Range	32 to 1048575
Introduced	16.0.R1

interface *string*

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Interface name for this static FEC prefix
String Length	0 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address of the next hop
Introduced	16.0.R1
Notes	This element is part of a choice

pop *boolean*

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Pop the label and transmit without the label
Introduced	16.0.R1
Notes	This element is part of a choice

swap-label *number*

Context	**configure router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Value mapped to egress label associated with next-hop entry that LSR uses to swap incoming label
Range	6 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

generate-basic-fec-only *boolean*

Context	**configure router** *string* **ldp**
Description	Ability for mLDP to generate a basic FEC despite the actual root node being resolved using BGP
Default	false
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **ldp**
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure router** *string* **ldp graceful-restart**
Description	Enable graceful restart helper
Default	false
Introduced	16.0.R1

maximum-recovery-time *number*

Context	**configure router** *string* **ldp graceful-restart**
Description	Value for the local maximum recovery time
Range	15 to 1800
Default	120
Units	seconds
Introduced	16.0.R1

neighbor-liveness-time *number*

Context	**configure router** *string* **ldp graceful-restart**
Description	Value for the neighbor liveness timer
Range	5 to 300
Default	120
Units	seconds
Introduced	16.0.R1

implicit-null-label *boolean*

Context	**configure router** *string* **ldp**
Description	Signal the implicit null label value for all LDP FECs for which the node is the egress LER
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **ldp**
Description	Import policies to filter LDP label bindings received from LDP peers
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import-tunnel-table *string*

Context	**configure router** *string* **ldp**
Description	Tunnel table import policies to control the insertion of non-host prefixes resolved by LDP
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface-parameters

Context	**configure router** *string* **ldp**
Description	Enter the interface-parameters context
Introduced	16.0.R1

interface [ip-int-name] *string*

Context	**configure router** *string* **ldp interface-parameters**
Description	Enter the interface context
Introduced	16.0.R1

[ip-int-name] *string*

Context	**configure router** *string* **ldp interface-parameters interface** *string*
Description	Interface name
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context **configure router** *string* **ldp interface-parameters interface** *string*

Description Administrative state of LDP

Default enable

Options enable, disable

Introduced 16.0.R1

bfd-liveness

Context **configure router** *string* **ldp interface-parameters interface** *string*

Description Enter the bfd-liveness context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **bfd-liveness**

Description Allow BFD tracking of IPv4 LDP Session for interface

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **bfd-liveness**

Description Allow BFD tracking of IPv4 LDP Session for interface

Default false

Introduced 16.0.R1

ipv4

Context **configure router** *string* **ldp interface-parameters interface** *string*

Description Enter the ipv4 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv4**

Description Administrative state of LDP

Default enable

Options enable, disable

Introduced 16.0.R1

fec-type-capability

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv4**

Description Enter the fec-type-capability context

Introduced 16.0.R1

p2mp-ipv4 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv4 fec-type-capability**

Description Enable IPv4 P2MP FEC capability

Default true

Introduced 16.0.R1

p2mp-ipv6 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv4 fec-type-capability**

Description Enable IPv6 P2MP FEC capability

Default true

Introduced 16.0.R1

prefix-ipv4 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv4 fec-type-capability**

Description Enable IPv4 prefix FEC capability

Default true

Introduced 16.0.R1

prefix-ipv6 *boolean*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 fec-type-capability**
Description	Enable IPv6 prefix FEC capability
Default	true
Introduced	16.0.R1

hello

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4**
Description	Enter the hello context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 hello**
Description	Factor value for Hello
Range	1 to 255
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 hello**
Description	Timeout value for Hello
Range	3 to 65535
Introduced	16.0.R1

keepalive

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4**
Description	Enter the keepalive context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 keepalive**
Description	Factor value for keepalive
Range	1 to 255
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 keepalive**
Description	Time that LDP waits before tearing down session
Range	3 to 65535
Introduced	16.0.R1

local-lsr-id

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4**
Description	Enter the local-lsr-id context
Introduced	16.0.R1

interface-name *string*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4 local-lsr-id**
Description	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1

transport-address *keyword*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv4**
Description	Transport address to set up the LDP TCP sessions
Options	interface, system
Introduced	16.0.R1

ipv6

Context **configure router** *string* **ldp interface-parameters interface** *string*

Description Enter the ipv6 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6**

Description Administrative state of LDP

Default enable

Options enable, disable

Introduced 16.0.R1

fec-type-capability

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6**

Description Enter the fec-type-capability context

Introduced 16.0.R1

p2mp-ipv4 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 fec-type-capability**

Description Enable IPv4 P2MP FEC capability

Default true

Introduced 16.0.R1

p2mp-ipv6 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 fec-type-capability**

Description Enable IPv6 P2MP FEC capability

Default true

Introduced 16.0.R1

prefix-ipv4 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 fec-type-capability**
Description Enable IPv4 prefix FEC capability
Default true
Introduced 16.0.R1

prefix-ipv6 *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 fec-type-capability**
Description Enable IPv6 prefix FEC capability
Default true
Introduced 16.0.R1

hello

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6**
Description Enter the hello context
Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 hello**
Description Factor value for Hello
Range 1 to 255
Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 hello**
Description Timeout value for Hello
Range 3 to 65535
Introduced 16.0.R1

keepalive

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6**

Description Enter the keepalive context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 keepalive**

Description Factor value for keepalive

Range 1 to 255

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 keepalive**

Description Time that LDP waits before tearing down session

Range 3 to 65535

Introduced 16.0.R1

local-lsr-id

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6**

Description Enter the local-lsr-id context

Introduced 16.0.R1

format-32bit *boolean*

Context **configure router** *string* **ldp interface-parameters interface** *string* **ipv6 local-lsr-id**

Description Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR

Default false

Introduced 16.0.R1

interface-name *string*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv6 local-lsr-id**
Description	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1

transport-address *keyword*

Context	**configure router** *string* **ldp interface-parameters interface** *string* **ipv6**
Description	Transport address to set up the LDP TCP sessions
Options	interface, system
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **ldp interface-parameters**
Description	Enter the ipv4 context
Introduced	16.0.R1

hello

Context	**configure router** *string* **ldp interface-parameters ipv4**
Description	Enter the hello context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp interface-parameters ipv4 hello**
Description	Value for the Hello factor
Range	1 to 255
Default	3
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp interface-parameters ipv4 hello**
Description	Timeout value for Hello
Range	3 to 65535
Default	15
Units	seconds
Introduced	16.0.R1

keepalive

Context	**configure router** *string* **ldp interface-parameters ipv4**
Description	Enter the keepalive context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp interface-parameters ipv4 keepalive**
Description	Value for the keep-alive factor
Range	1 to 255
Default	3
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp interface-parameters ipv4 keepalive**
Description	Timeout value for keepalive
Range	3 to 65535
Default	30
Units	seconds
Introduced	16.0.R1

transport-address *keyword*

Context	**configure router** *string* **ldp interface-parameters ipv4**
Description	Transport address to set up the LDP TCP sessions
Default	system
Options	interface, system
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **ldp interface-parameters**
Description	Enter the ipv6 context
Introduced	16.0.R1

hello

Context	**configure router** *string* **ldp interface-parameters ipv6**
Description	Enter the hello context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp interface-parameters ipv6 hello**
Description	Value for the Hello factor
Range	1 to 255
Default	3
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp interface-parameters ipv6 hello**
Description	Timeout value for Hello
Range	3 to 65535
Default	15
Units	seconds
Introduced	16.0.R1

keepalive

Context **configure router** *string* **ldp interface-parameters ipv6**

Description Enter the keepalive context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp interface-parameters ipv6 keepalive**

Description Value for the keep-alive factor

Range 1 to 255

Default 3

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp interface-parameters ipv6 keepalive**

Description Timeout value for keepalive

Range 3 to 65535

Default 30

Units seconds

Introduced 16.0.R1

transport-address *keyword*

Context **configure router** *string* **ldp interface-parameters ipv6**

Description Transport address to set up the LDP TCP sessions

Default system

Options interface, system

Introduced 16.0.R1

label-withdrawal-delay *number*

Context **configure router** *string* **ldp**

Description Time interval during which LDP delays for the withdrawal of FEC-label binding

Range 3 to 120

Units seconds

Introduced 16.0.R1

ldp-shortcut

Context	**configure router** *string* **ldp**
Description	Enter the ldp-shortcut context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **ldp ldp-shortcut**
Description	Forward IPv4 packets by using LDP shortcuts
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **ldp ldp-shortcut**
Description	Forward IPv6 packets by using LDP shortcuts
Default	false
Introduced	16.0.R1

legacy-ipv4-lsr-interop *boolean*

Context	**configure router** *string* **ldp**
Description	Allow interoperability with legacy IPv4 LSR implementations
Default	false
Introduced	16.0.R1

lsp-bfd [prefix-list] *string*

Context	**configure router** *string* **ldp**
Description	Enter the lsp-bfd context
Max. Elements	16
Introduced	16.0.R1

[prefix-list] *string*

Context	**configure router** *string* **ldp lsp-bfd** *string*
Description	Name of a router policy options prefix list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

bfd-liveness *boolean*

Context	**configure router** *string* **ldp lsp-bfd** *string*
Description	Enable BFD on LDP LSPs with FECs that match the prefix list
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure router** *string* **ldp lsp-bfd** *string*
Description	BFD template to apply to BFD sessions associated with the prefix list
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

failure-action *keyword*

Context	**configure router** *string* **ldp lsp-bfd** *string*
Description	Reaction to BFD session failure for the prefix list
Options	down
Introduced	16.0.R1

lsp-ping-interval (*number* | *keyword*)

Context	**configure router** *string* **ldp lsp-bfd** *string*
Description	LSP ping transmit interval for periodic verification
Range	60 to 300
Default	60
Units	seconds
Options	none
Introduced	16.0.R1

priority *number*

Context **configure router** *string* **ldp lsp-bfd** *string*
Description Prefix list to control the search order
Range 1 to 99
Default 1
Introduced 16.0.R1

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure router** *string* **ldp lsp-bfd** *string*
Description Source address in LSP ping packets and BFD control packets associated with prefix list
Introduced 16.0.R1

mcast-upstream-asbr-frr *boolean*

Context **configure router** *string* **ldp**
Description Enable ASBR MoFRR to allow local leaf to perform MoFRR for multiple ASBRs
Default false
Introduced 16.0.R1

mcast-upstream-frr *boolean*

Context **configure router** *string* **ldp**
Description Use fast upstream switchover for mLDP FECs
Default false
Introduced 16.0.R1

mp-mbb-time *number*

Context **configure router** *string* **ldp**
Description MP MBB time
Range 0 to 10
Default 3
Units seconds
Introduced 16.0.R1

prefer-tunnel-in-tunnel *boolean*

Context	**configure router** *string* **ldp**
Description	Preference tunnel-in-tunnel over a simple LDP tunnel
Default	true
Introduced	16.0.R1

resolve-root-using *keyword*

Context	**configure router** *string* **ldp**
Description	Resolution route table for multicast FECs
Default	ucast-rtm
Options	ucast-rtm, mcast-rtm
Introduced	16.0.R1

session-parameters

Context	**configure router** *string* **ldp**
Description	Enter the session-parameters context
Introduced	16.0.R1

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ldp session-parameters**
Description	Enter the peer context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address for server
Introduced	16.0.R1
Notes	This element is part of a list key

adv-adj-addr-only *boolean*

Context **configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Distribute only the local addresses used to establish the Hello adjacencies with a peer

Default false

Introduced 16.0.R1

adv-local-lsr-id *boolean*

Context **configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Advertise local LSR ID over a specified LDP session

Default false

Introduced 16.0.R1

community *string*

Context **configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Community string associated with a session to a specified peer

Introduced 16.0.R1

dod-label-distribution *boolean*

Context **configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Use LDP Downstream-on-Demand (DoD) label distribution procedures

Default false

Introduced 16.0.R1

export-addresses *string*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Export policies to determine which local addresses should be distributed to this peer
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

export-prefixes *string*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Export policies to determine which FEC prefixes are redistributed to LDP and TLDP peers
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

fec-limit

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the fec-limit context
Introduced	16.0.R1

limit *number*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-limit**
Description	Maximum number of FECs to be accepted from this peer LSR
Range	0 | 1 to 4294967295
Default	0
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-limit**
Description	Trap and syslog message to generate when reaching the threshold and limit
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-limit**
Description	Threshold when a trap and a syslog message are generated as warning and when limit is reached
Range	1 to 100
Default	90
Introduced	16.0.R1

fec-type-capability

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the fec-type-capability context
Introduced	16.0.R1

p2mp *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-type-capability**
Description	Enable P2MP FEC capability for the session
Default	true
Introduced	16.0.R1

prefix-ipv4 *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-type-capability**
Description	Enable IPv4 prefix FEC capability for the session
Default	true
Introduced	16.0.R1

prefix-ipv6 *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **fec-type-capability**
Description	Enable IPv6 prefix FEC capability
Default	true
Introduced	16.0.R1

fec129-cisco-interop *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Allow translation between non-compliant FEC 129 formats of Cisco
Default	false
Introduced	16.0.R1

import-prefixes *string*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	FEC prefixes to be redistributed to this LDP peer
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

pe-id-mac-flush-interop *boolean*

Context	**configure router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	LDP to send the non-standard PE-ID TLV in an address withdraw message
Default	false
Introduced	16.0.R1

shortcut-local-ttl-propagate *boolean*

Context	**configure router** *string* **ldp**
Description	Propagate TTL over LSP shortcut for local packets
Default	true
Introduced	16.0.R1

shortcut-transit-ttl-propagate *boolean*

Context	**configure router** *string* **ldp**
Description	Enable/disable TTL propagation over LSP shortcut for transit packets.
Default	true
Introduced	16.0.R1

targeted-session

Context	**configure router** *string* **ldp**
Description	Enter the targeted-session context
Introduced	16.0.R1

export-prefixes *string*

Context	**configure router** *string* **ldp targeted-session**
Description	Export route policy to determine which routes are exported to this targeted LDP session
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import-prefixes *string*

Context	**configure router** *string* **ldp targeted-session**
Description	Import route policy to determine which routes are accepted from targeted LDP neighbors
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

ipv4

Context **configure router** *string* **ldp targeted-session**

Description Enter the ipv4 context

Introduced 16.0.R1

hello

Context **configure router** *string* **ldp targeted-session ipv4**

Description Enter the hello context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session ipv4 hello**

Description Factor value for Hello

Range 1 to 255

Default 3

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session ipv4 hello**

Description Timeout value for Hello

Range 3 to 65535

Default 45

Units seconds

Introduced 16.0.R1

hello-reduction

Context **configure router** *string* **ldp targeted-session ipv4**

Description Enter the hello-reduction context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ldp targeted-session ipv4 hello-reduction**
Description	Administrative state of suppression of periodic targeted Hello messages between LDP peers
Default	disable
Options	enable, disable
Introduced	16.0.R3

factor *number*

Context	**configure router** *string* **ldp targeted-session ipv4 hello-reduction**
Description	Hello reduction dampening factor
Range	3 to 20
Default	3
Introduced	16.0.R1

keepalive

Context	**configure router** *string* **ldp targeted-session ipv4**
Description	Enter the keepalive context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp targeted-session ipv4 keepalive**
Description	Factor value for keepalive
Range	1 to 255
Default	4
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp targeted-session ipv4 keepalive**
Description	Timeout value for keepalive
Range	3 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

ipv6

Context **configure router** *string* **ldp targeted-session**

Description Enter the ipv6 context

Introduced 16.0.R1

hello

Context **configure router** *string* **ldp targeted-session ipv6**

Description Enter the hello context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session ipv6 hello**

Description Factor value for Hello

Range 1 to 255

Default 3

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session ipv6 hello**

Description Timeout value for Hello

Range 3 to 65535

Default 45

Units seconds

Introduced 16.0.R1

hello-reduction

Context **configure router** *string* **ldp targeted-session ipv6**

Description Enter the hello-reduction context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ldp targeted-session ipv6 hello-reduction**
Description	Administrative state of suppression of periodic targeted Hello messages between LDP peers
Default	disable
Options	enable, disable
Introduced	16.0.R3

factor *number*

Context	**configure router** *string* **ldp targeted-session ipv6 hello-reduction**
Description	Hello reduction dampening factor
Range	3 to 20
Default	3
Introduced	16.0.R1

keepalive

Context	**configure router** *string* **ldp targeted-session ipv6**
Description	Enter the keepalive context
Introduced	16.0.R1

factor *number*

Context	**configure router** *string* **ldp targeted-session ipv6 keepalive**
Description	Factor value for keepalive
Range	1 to 255
Default	4
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ldp targeted-session ipv6 keepalive**
Description	Timeout value for keepalive
Range	3 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure router** *string* **ldp targeted-session**

Description Enter the peer context

Introduced 16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description IP address of the peer

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Administrative state of the peer

Default enable

Options enable, disable

Introduced 16.0.R1

bfd-liveness *boolean*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enable BFD tracking of LDP session for the peer

Default false

Introduced 16.0.R1

hello

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the hello context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello**

Description Factor value for Hello

Range 1 to 255

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello**

Description Timeout value for Hello

Range 3 to 65535

Introduced 16.0.R1

hello-reduction

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the hello-reduction context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello-reduction**

Description Enable/disable hello-reduction.

Options enable, disable

Introduced 16.0.R3

factor *number*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello-reduction**

Description Hello reduction dampening factor

Range 3 to 20

Introduced 16.0.R1

keepalive

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the keepalive context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **keepalive**

Description Factor value for keepalive

Range 1 to 255

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **keepalive**

Description Time that LDP waits before tearing down session

Range 3 to 65535

Introduced 16.0.R1

local-lsr-id

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the local-lsr-id context

Introduced 16.0.R1

format-32bit *boolean*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **local-lsr-id**

Description Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR

Default false

Introduced 16.0.R1

interface-name *string*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **local-lsr-id**

Description Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Reference configure **router** *string* **interface** *interface-name*

Introduced 16.0.R1

tunneling

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the tunneling context

Introduced 16.0.R1

lsp [lsp-name] *string*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunneling**

Description Enter the lsp context

Max. Elements 4

Introduced 16.0.R1

[lsp-name] *string*

Context **configure router** *string* **ldp targeted-session peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunneling lsp** *string*

Description LSP name

String Length 1 to 64

Introduced 16.0.R1

Notes This element is part of a list key

peer-template [template-name] *string*

Context **configure router** *string* **ldp targeted-session**

Description Enter the peer-template context

Max. Elements 500

Introduced 16.0.R1

[template-name] *string*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Name for the targeted peer template
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Administrative state of the peer template
Default	enable
Options	enable, disable
Introduced	16.0.R1

adv-local-lsr-id *boolean*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Advertise local LSR ID over a specified LDP session
Default	false
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Enable BFD tracking of LDP session for sessions created by peer template
Default	false
Introduced	16.0.R1

community *string*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Community string associated with a session to a specified peer
Introduced	16.0.R1

hello

Context **configure router** *string* **ldp targeted-session peer-template** *string*

Description Enter the hello context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **hello**

Description Factor value for Hello

Range 1 to 255

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **hello**

Description Timeout value for Hello

Range 3 to 65535

Introduced 16.0.R1

hello-reduction

Context **configure router** *string* **ldp targeted-session peer-template** *string*

Description Enter the hello-reduction context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **hello-reduction**

Description Enable/disable hello-reduction.

Options enable, disable

Introduced 16.0.R3

factor *number*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **hello-reduction**

Description Hello reduction dampening factor

Range 3 to 20

Introduced 16.0.R1

keepalive

Context **configure router** *string* **ldp targeted-session peer-template** *string*

Description Enter the keepalive context

Introduced 16.0.R1

factor *number*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **keepalive**

Description Factor value for keepalive

Range 1 to 255

Introduced 16.0.R1

timeout *number*

Context **configure router** *string* **ldp targeted-session peer-template** *string* **keepalive**

Description Time that LDP waits before tearing down session

Range 3 to 65535

Introduced 16.0.R1

local-lsr-id

Context **configure router** *string* **ldp targeted-session peer-template** *string*

Description Enter the local-lsr-id context

Introduced 16.0.R1

interface-name *string*

Context	**configure router** *string* **ldp targeted-session peer-template** *string* **local-lsr-id**
Description	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1

tunneling *boolean*

Context	**configure router** *string* **ldp targeted-session peer-template** *string*
Description	Allow LDP over tunnels for sessions created by peer template
Default	false
Introduced	16.0.R1

peer-template-map [template-map-name] *string*

Context	**configure router** *string* **ldp targeted-session**
Description	Enter the peer-template-map context
Max. Elements	500
Introduced	16.0.R1

[template-map-name] *string*

Context	**configure router** *string* **ldp targeted-session peer-template-map** *string*
Description	Name to identify the targeted peer template
Reference	configure **router** *string* **ldp targeted-session peer-template** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

policy-map *string*

Context	**configure router** *string* **ldp targeted-session peer-template-map** *string*
Description	Targeted peer template to apply to the given policies
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

sdp-auto-targeted-session *boolean*

Context	**configure router** *string* **ldp targeted-session**
Description	Allow auto-creation of targeted sessions by SDP
Default	true
Introduced	16.0.R1

tcp-session-parameters

Context	**configure router** *string* **ldp**
Description	Enter the tcp-session-parameters context
Introduced	16.0.R1

peer-transport [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ldp tcp-session-parameters**
Description	Enter the peer-transport context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ldp tcp-session-parameters peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address of an LDP peer
Introduced	16.0.R1
Notes	This element is part of a list key

authentication-key *encrypted-leaf*

Context	**configure router** *string* **ldp tcp-session-parameters peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Authentication key for the peer
String Length	1 to 50
Introduced	16.0.R1

authentication-keychain *string*

Context **configure router** *string* **ldp tcp-session-parameters peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description TCP authentication keychain to use for the session

Reference configure **system security keychains keychain** *string*

Introduced 16.0.R3

path-mtu-discovery *boolean*

Context **configure router** *string* **ldp tcp-session-parameters peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Allow Path MTU Discovery for associated TCP connections

Default false

Introduced 16.0.R1

ttl-security *number*

Context **configure router** *string* **ldp tcp-session-parameters peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Minimum TTL value for incoming BGP packet

Range 1 to 255

Introduced 16.0.R1

tunnel-down-damp-time *number*

Context **configure router** *string* **ldp**

Description Time interval for an LDP to damp a tunnel down event before posting to the Route Table Manager (RTM)

Range 0 to 20

Default 3

Units seconds

Introduced 16.0.R1

weighted-ecmp *boolean*

Context	**configure router** *string* **ldp**
Description	Allow weighted load-balancing
Default	false
Introduced	16.0.R1

leak-export

Context	**configure router** *string*
Description	Enter the leak-export context
Introduced	16.0.R1

leak-export-limit *number*

Context	**configure router** *string* **leak-export**
Description	Maximum number of routes exported due to leak-export policies.
Range	1 to 10000
Default	5
Introduced	16.0.R1

policy-name *string*

Context	**configure router** *string* **leak-export**
Description	Attribute policy-name for leak-export.
String Length	1 to 255
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

lsp-bfd

Context	**configure router** *string*
Description	Enter the lsp-bfd context
Introduced	16.0.R1

bfd-sessions *number*

Context	**configure router** *string* **lsp-bfd**
Description	Maximum number of the dynamically created LSP BFD session tail-ends
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

mc-maximum-routes

Context	**configure router** *string*
Description	Enter the mc-maximum-routes context
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **mc-maximum-routes**
Description	Action when the maximum number of multicast routes, held within a VRF context, is reached
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure router** *string* **mc-maximum-routes**
Description	Mid-level water marker for the number of multicast routes which this VRF holds
Range	1 to 100
Units	percent
Introduced	16.0.R1

value *number*

Context	**configure router** *string* **mc-maximum-routes**
Description	Maximum number of multicast routes to be configured on this virtual router
Range	1 to 2147483647
Introduced	16.0.R1

mld

Context	**configure router** *string*
Description	Enter the mld context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mld**
Description	Administrative state of MLD operation
Default	enable
Options	enable, disable
Introduced	16.0.R1

group-if-query-source-address *ipv6-unicast-or-linklocal-address*

Context	**configure router** *string* **mld**
Description	Source address in queries for group interfaces when not configured at group interface level
Introduced	16.0.R1

group-interface [group-interface-name] *interface-name*

Context	**configure router** *string* **mld**
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context **configure router** *string* **mld group-interface** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure router** *string* **mld group-interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure router** *string* **mld group-interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure router** *string* **mld group-interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure router** *string* **mld group-interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure router** *string* **mld group-interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Time between two consecutive host-query messages
Range	2 to 1024
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Time between group-specific query messages
Range	1 to 1023
Introduced	16.0.R1

query-response-interval *number*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

query-source-address *ipv6-unicast-or-linklocal-address*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Source address for MLD queries
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

sub-hosts-only *boolean*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Allow MLD traffic from known hosts only
Default	true
Introduced	16.0.R1

subnet-check *boolean*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure router** *string* **mld group-interface** *interface-name*
Description	MLD protocol version
Default	2
Options	1, 2
Introduced	16.0.R1

interface [ip-interface-name] *interface-name*

Context	**configure router** *string* **mld**
Description	Enter the interface context
Introduced	16.0.R1

[ip-interface-name] *interface-name*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Import policy to filter MLD packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context **configure router** *string* **mld interface** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure router** *string* **mld interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure router** *string* **mld interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure router** *string* **mld interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure router** *string* **mld interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure router** *string* **mld interface** *interface-name* **mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints**
Description	Enter the level context
Introduced	16.0.R1

[level-id] *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth level ID for a multicast CAC constraint
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure router** *string* **mld interface** *interface-name* **mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **mld interface** *interface-name* **mcac**
Description	Multicast CAC policy name
Reference	configure **mcac policy** *string*
Introduced	16.0.R1

query-interval *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Time between two consecutive host-query messages
Range	2 to 1024
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Time between group-specific query messages
Range	1 to 1023
Introduced	16.0.R1

query-response-interval *number*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure router** *string* **mld interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

ssm-translate

Context	**configure router** *string* **mld interface** *interface-name*
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

static

Context	**configure router** *string* **mld interface** *interface-name*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure router** *string* **mld interface** *interface-name* **static group** *ipv6-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*

Context	**configure router** *string* **mld interface** *interface-name* **static**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Start of group range of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	End of group range for multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

step *ipv6-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Step interval for the group-range addresses
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context **configure router** *string* **mld interface** *interface-name* **static group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **step** *ipv6-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

version *keyword*

Context **configure router** *string* **mld interface** *interface-name*

Description MLD protocol version

Default 2

Options 1, 2

Introduced 16.0.R1

query-interval *number*

Context **configure router** *string* **mld**

Description Time between two consecutive host-query messages

Range 2 to 1024

Default 125

Units seconds

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure router** *string* **mld**

Description Time between group-specific query messages

Range 1 to 1023

Default 1

Units seconds

Introduced 16.0.R1

query-response-interval *number*

Context	**configure router** *string* **mld**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure router** *string* **mld**
Description	Robust count to tune for the expected packet loss on a subnet
Range	2 to 10
Default	2
Introduced	16.0.R1

ssm-translate

Context	**configure router** *string* **mld**
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv6-multicast-address* **end** *ipv6-multicast-address*

Context	**configure router** *string* **mld ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv6-multicast-address*

Context	**configure router** *string* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv6-multicast-address*

Context	**configure router** *string* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure router** *string* **mld ssm-translate group-range start** *ipv6-multicast-address* **end** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

mpls

Context	**configure router** *string*
Description	Enter the mpls context
Introduced	16.0.R1

admin-group-frr *boolean*

Context	**configure router** *string* **mpls**
Description	Use admin group constraints for FRR path computation
Default	false
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls**
Description	Administrative state of the MPLS instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-bandwidth-multipliers

Context	**configure router** *string* **mpls**
Description	Enter the auto-bandwidth-multipliers context
Introduced	16.0.R1

adjust-multiplier *number*

Context	**configure router** *string* **mpls auto-bandwidth-multipliers**
Description	Collection intervals in a sample interval
Range	1 to 16383
Default	288
Introduced	16.0.R1

sample-multiplier *number*

Context	**configure router** *string* **mpls auto-bandwidth-multipliers**
Description	Collection intervals in a sample interval
Range	1 to 511
Default	1
Introduced	16.0.R1

auto-lsp [template-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the auto-lsp context
Max. Elements	500
Introduced	16.0.R1

[template-name] *string*

Context	**configure router** *string* **mpls auto-lsp** *string*
Description	Name of the LSP template used to automatically create and signal multiple LSP instances
Reference	configure **router** *string* **mpls lsp-template** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

one-hop *boolean*

Context	**configure router** *string* **mpls auto-lsp** *string*
Description	Enable the automatic signaling of one-hop point-to-point LSPs
Default	false
Introduced	16.0.R3
Notes	This element is part of a choice

policy *string*

Context	**configure router** *string* **mpls auto-lsp** *string*
Description	Specify policies to bind to this LSP template to enable automatic creation of mesh point to point (P2P) LSPs.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is part of a choice This element is ordered by user

aux-stats

Context	**configure router** *string* **mpls**
Description	Enter the aux-stats context
Introduced	16.0.R1

sr *boolean*

Context	**configure router** *string* **mpls aux-stats**
Description	Count Segment Routing (SR) traffic in the auxiliary MPLS statistics table
Default	false
Introduced	16.0.R1

bypass-resignal-timer *number*

Context	**configure router** *string* **mpls**
Description	Value for the LSP resignal timer
Range	30 to 10080
Units	minutes
Introduced	16.0.R1

class-forwarding-policy [policy-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the class-forwarding-policy context
Max. Elements	15
Introduced	16.0.R1

[policy-name] *string*

Context	**configure router** *string* **mpls class-forwarding-policy** *string*
Description	Name of class forwarding policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

default-set *number*

Context	**configure router** *string* **mpls class-forwarding-policy** *string*
Description	Default forwarding set ID
Range	1 to 6
Default	1
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure router** *string* **mpls class-forwarding-policy** *string*
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure router** *string* **mpls class-forwarding-policy** *string* **fc** *keyword*
Description	Forwarding class name for LSP
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

forwarding-set *number*

Context	**configure router** *string* **mpls class-forwarding-policy** *string* **fc** *keyword*
Description	Forwarding set ID for forwarding classes
Range	1 to 6
Default	1
Introduced	16.0.R1

cspf-on-loose-hop *boolean*

Context	**configure router** *string* **mpls**
Description	Calculate CSPF until next loose hop on LSR
Default	false
Introduced	16.0.R1

dynamic-bypass *boolean*

Context	**configure router** *string* **mpls**
Description	Create dynamic bypass LSPs in FRR
Default	true
Introduced	16.0.R1

entropy-label

Context **configure router** *string* **mpls**

Description Enter the entropy-label context

Introduced 16.0.R1

rsvp-te *boolean*

Context **configure router** *string* **mpls entropy-label**

Description Apply entropy labels to RSVP-TE LSPs

Default true

Introduced 16.0.R1

sr-te *boolean*

Context **configure router** *string* **mpls entropy-label**

Description Apply entropy labels to SR-TE LSPs

Default true

Introduced 16.0.R1

exponential-backoff-retry *boolean*

Context **configure router** *string* **mpls**

Description Use exponential back-off timer when retrying an LSP

Default false

Introduced 16.0.R1

forwarding-policies

Context **configure router** *string* **mpls**

Description Enter the forwarding-policies context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls forwarding-policies**
Description	Administrative state of MPLS forwarding policies
Default	disable
Options	enable, disable
Introduced	16.0.R1

forwarding-policy [policy-name] *string*

Context	**configure router** *string* **mpls forwarding-policies**
Description	Enter the forwarding-policy context
Max. Elements	65536
Introduced	16.0.R1

[policy-name] *string*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Forwarding policy name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Administrative state of the forwarding policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

binding-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Binding label
Range	32 to 1048575
Introduced	16.0.R1

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Configure endpoint address.
Introduced	16.0.R1

ingress-statistics

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Enter the ingress-statistics context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **ingress-statistics**
Description	Administrative state of egress or ingress statistics
Default	disable
Options	enable, disable
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Configure metric.
Range	1 to 16777215
Introduced	16.0.R4

next-hop-group [index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Enter the next-hop-group context
Max. Elements	32
Introduced	16.0.R1

[index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Index for next hop group
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Administrative state of next hop group
Default	disable
Options	enable, disable
Introduced	16.0.R1

backup-next-hop

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Enter the backup-next-hop context
Introduced	16.0.R1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **backup-next-hop**
Description	Next hop address
Introduced	16.0.R1

pushed-labels [index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **backup-next-hop**
Description	Enter the pushed-labels context
Max. Elements	10
Introduced	16.0.R4

[index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **backup-next-hop pushed-labels** *number*
Description	Index for push-label.
Range	1 to 10
Introduced	16.0.R4
Notes	This element is part of a list key

label *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **backup-next-hop pushed-labels** *number*
Description	Push label value.
Range	1 to 1048575
Introduced	16.0.R4
Notes	This element is mandatory

load-balancing-weight *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Configure load balancing weight.
Range	1 to max
Introduced	16.0.R1

primary-next-hop

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Enter the primary-next-hop context
Introduced	16.0.R1

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **primary-next-hop**
Description	Next hop address
Introduced	16.0.R1

pushed-labels [index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **primary-next-hop**
Description	Enter the pushed-labels context
Max. Elements	10
Introduced	16.0.R4

[index] *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **primary-next-hop pushed-labels** *number*
Description	Index for push-label.
Range	1 to 10
Introduced	16.0.R4
Notes	This element is part of a list key

label *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number* **primary-next-hop pushed-labels** *number*
Description	Push label value.
Range	1 to 1048575
Introduced	16.0.R4
Notes	This element is mandatory

resolution-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string* **next-hop-group** *number*
Description	Resolution type for next hop group
Options	direct, indirect
Introduced	16.0.R1
Notes	This element is mandatory

preference *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Preference number
Range	1 to 255
Default	255
Introduced	16.0.R1

revert-timer *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Revert timer
Range	1 to 600
Units	seconds
Introduced	16.0.R1

tunnel-table-pref *number*

Context	**configure router** *string* **mpls forwarding-policies forwarding-policy** *string*
Description	Configure tunnel table preference.
Range	1 to 255
Default	255
Introduced	16.0.R4

reserved-label-block *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls forwarding-policies**
Description	Reserved label block
Reference	configure **router** *string* **mpls-labels reserved-label-block** *string*
Introduced	16.0.R1

frr-object *boolean*

Context	**configure router** *string* **mpls**
Description	Signal with fast reroute object
Default	true
Introduced	16.0.R1

hold-timer *number*

Context	**configure router** *string* **mpls**
Description	Hold timer value
Range	0 to 10
Default	1
Units	seconds
Introduced	16.0.R1

ingress-statistics

Context	**configure router** *string* **mpls**
Description	Enter the ingress-statistics context
Introduced	16.0.R1

lsp sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*) lsp-name *string*

Context	**configure router** *string* **mpls ingress-statistics**
Description	Enter the lsp context
Introduced	16.0.R1

sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls ingress-statistics lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*
Description	Sender address
Introduced	16.0.R1
Notes	This element is part of a list key

lsp-name *string*

Context	**configure router** *string* **mpls ingress-statistics lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*
Description	Administrative name for Labeled Switch Path.
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure router** *string* **mpls ingress-statistics lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls ingress-statistics lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*
Description	Administrative state of ingress statistics for LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure router** *string* **mpls ingress-statistics lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*
Description	Collect statistics
Default	false
Introduced	16.0.R1

p2mp-template-lsp sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Context	**configure router** *string* **mpls ingress-statistics**
Description	Enter the p2mp-template-lsp context
Introduced	16.0.R1

sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Sender address
Introduced	16.0.R1
Notes	This element is part of a list key

rsvp-session-name *string*

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	RSVP session name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Administrative state of ingress statistics for LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Collect statistics
Default	false
Introduced	16.0.R1

max-stats *number*

Context	**configure router** *string* **mpls ingress-statistics p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Maximum number of statistic indices
Range	1 to 8191
Default	8191
Introduced	16.0.R1

p2p-template-lsp sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Context	**configure router** *string* **mpls ingress-statistics**
Description	Enter the p2p-template-lsp context
Introduced	16.0.R1

sender (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	Sender address
Introduced	16.0.R1
Notes	This element is part of a list key

rsvp-session-name *string*

Context	**configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*
Description	RSVP session name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context **configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Description Accounting policy ID

Reference configure **log accounting-policy** *number*

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Description Administrative state of ingress statistics for LSP

Default disable

Options enable, disable

Introduced 16.0.R1

collect-stats *boolean*

Context **configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Description Collect statistics

Default false

Introduced 16.0.R1

max-stats *number*

Context **configure router** *string* **mpls ingress-statistics p2p-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Description Maximum number of statistic indices

Range 1 to 8191

Default 8191

Introduced 16.0.R1

interface [interface-name] *string*

Context **configure router** *string* **mpls**

Description Enter the interface context

Introduced 16.0.R1

[interface-name] *string*

Context	**configure router** *string* **mpls interface** *string*
Description	Router interface name
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-group *string*

Context	**configure router** *string* **mpls interface** *string*
Description	Name of the admin group membership of the MPLS interface
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls interface** *string*
Description	Administrative state of MPLS
Default	enable
Options	enable, disable
Introduced	16.0.R1

label-map [in-label] *number*

Context	**configure router** *string* **mpls interface** *string*
Description	Enter the label-map context
Introduced	16.0.R1

[in-label] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls interface** *string* **label-map** *number*
Description	Match the incoming MPLS label
Range	32 to 1048575
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls interface** *string* **label-map** *number*
Description	Administrative state of the label map
Default	disable
Options	enable, disable
Introduced	16.0.R1

pop

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls interface** *string* **label-map** *number*
Description	Pop (remove) the incoming label and forward packet based on service header
Introduced	16.0.R1
Notes	This element is part of a choice

swap

Context	**configure router** *string* **mpls interface** *string* **label-map** *number*
Description	Enter the **swap** context
Introduced	16.0.R1

next-hop *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls interface** *string* **label-map** *number* **swap**
Description	IP address for the next hop
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

out-label (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls interface** *string* **label-map** *number* **swap**
Description	Push specific label onto the top of the outgoing packet's label stack
Range	16 to 1048575
Options	implicit-null-label
Introduced	16.0.R1
Notes	This element is mandatory
	This element is part of a choice

srlg-group [name] *string*

Context	**configure router** *string* **mpls interface** *string*
Description	Enter the srlg-group context
Max. Elements	64
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **mpls interface** *string* **srlg-group** *string*
Description	Shared Risk Link Group (SRLG) name
Reference	configure **routing-options if-attribute srlg-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

te-metric *number*

Context	**configure router** *string* **mpls interface** *string*
Description	TE metric for the interface
Range	1 to 16777215
Introduced	16.0.R1

least-fill-min-thd *number*

Context	**configure router** *string* **mpls**
Description	Percentage of the least fill minimum threshold value
Range	0 to 100
Default	5
Introduced	16.0.R1

least-fill-reoptim-thd *number*

Context	**configure router** *string* **mpls**
Description	Percentage of the least fill reoptimization threshold value
Range	0 to 100
Default	10
Introduced	16.0.R1

logger-event-bundling *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls**
Description	Merge and bundle MPLS traps
Default	false
Introduced	16.0.R1

lsp [lsp-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the lsp context
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Labeled Switch path name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

adaptive *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enable/disable make-before-break functionality.
Default	true
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string*
Description	Administrative state of the LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

admin-tag [name] *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the admin-tag context
Max. Elements	4
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **mpls lsp** *string* **admin-tag** *string*
Description	Name of the admin tags
Reference	configure **routing-options admin-tags admin-tag** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

adspec *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enable/disable inclusion of ADSPEC object in RSVP messages.
Default	false
Introduced	16.0.R1

auto-bandwidth

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the auto-bandwidth context
Introduced	16.0.R1

adjust-down

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the adjust-down context
Introduced	16.0.R1

bw *number*

Context **configure router** *string* **mpls lsp** *string* **auto-bandwidth adjust-down**

Description Minimum difference in absolute bandwidth between LSP bandwidth reservation and max average data rate

Range 0 to 100000

Default 0

Units megabps

Introduced 16.0.R1

percent *number*

Context **configure router** *string* **mpls lsp** *string* **auto-bandwidth adjust-down**

Description Minimum difference in percent between LSP bandwidth reservation and the maximum average data rate

Range 0 to 100

Default 5

Introduced 16.0.R1

adjust-up

Context **configure router** *string* **mpls lsp** *string* **auto-bandwidth**

Description Enter the adjust-up context

Introduced 16.0.R1

bw *number*

Context **configure router** *string* **mpls lsp** *string* **auto-bandwidth adjust-up**

Description Minimum difference in absolute bandwidth between LSP bandwidth reservation and max average data rate

Range 0 to 100000

Default 0

Units megabps

Introduced 16.0.R1

percent *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth adjust-up**
Description	Minimum difference in percent between LSP bandwidth reservation and the maximum average data rate
Range	0 to 100
Default	5
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the fc context
Max. Elements	8
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth fc** *keyword*
Description	Forwarding class name for LSP
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

sampling-weight *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth fc** *keyword*
Description	Forwarding class weight for LSP
Range	0 to 100
Default	100
Introduced	16.0.R1

max-bandwidth *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Maximum bandwidth of auto-bandwidth to request for the LSP
Range	0 to 100000
Default	100000
Units	megabps
Introduced	16.0.R1

min-bandwidth *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Minimum bandwidth of auto-bandwidth to request for the LSP
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

monitor-bandwidth *boolean*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Collect and display auto-bandwidth measurements for the LSP
Default	false
Introduced	16.0.R1

multipliers

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the multipliers context
Introduced	16.0.R1

adjust-multiplier *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth multipliers**
Description	Number of collection intervals in the adjust interval
Range	1 to 16383
Introduced	16.0.R1

sample-multiplier *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth multipliers**
Description	Multiplier for collection intervals in a sample interval
Range	1 to 511
Introduced	16.0.R1

overflow-limit

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the overflow-limit context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth overflow-limit**
Description	Minimum difference in absolute bandwidth between the LSP bandwidth and the sampled data rate
Range	1 to 100000
Units	megabps
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth overflow-limit**
Description	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

threshold *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth overflow-limit**
Description	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Range	0 to 100
Default	0
Introduced	16.0.R1

underflow-limit

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the underflow-limit context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth underflow-limit**
Description	Minimum difference in absolute bandwidth between the LSP bandwidth and the sampled data rate
Range	1 to 100000
Units	megabps
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth underflow-limit**
Description	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

threshold *number*

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth underflow-limit**
Description	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Range	0 to 100
Default	0
Introduced	16.0.R1

use-last-adj-bw

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth**
Description	Enter the **use-last-adj-bw** context
Introduced	16.0.R5

secondary-retry-limit (*number* | *keyword*)

Context	**configure router** *string* **mpls lsp** *string* **auto-bandwidth use-last-adj-bw**
Description	Specify the max number of retry attempts that will be made to signal the secondary path with the last adjusted bandwidth.
Default	5
Introduced	16.0.R5

bfd

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the bfd context
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **mpls lsp** *string* **bfd**
Description	Enable BFD
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure router** *string* **mpls lsp** *string* **bfd**
Description	BFD template
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

failure-action *keyword*

Context	**configure router** *string* **mpls lsp** *string* **bfd**
Description	Perform action when LSP BFD session fails
Default	none
Options	none, down, failover
Introduced	16.0.R1

lsp-ping-interval (*number* | *keyword*)

Context	**configure router** *string* **mpls lsp** *string* **bfd**
Description	Interval for periodic LSP ping for BFD bootstrapping
Range	60 to 300
Default	60
Units	seconds
Options	none
Introduced	16.0.R1

bgp-shortcut *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Include LSP for BGP routes
Introduced	16.0.R1

bgp-transport-tunnel *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Include LSP as transport LSP for labeled BGP routes
Introduced	16.0.R1

class-forwarding

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the class-forwarding context
Introduced	16.0.R1

default-lsp *boolean*

Context	**configure router** *string* **mpls lsp** *string* **class-forwarding**
Description	Use the default LSP configuration for specified LSP or LSP template
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

fc *keyword*

Context	**configure router** *string* **mpls lsp** *string* **class-forwarding**
Description	One or more forwarding classes for LSP instances
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1
Notes	This element is part of a choice

forwarding-set

Context	**configure router** *string* **mpls lsp** *string* **class-forwarding**
Description	Enter the **forwarding-set** context
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **mpls lsp** *string* **class-forwarding forwarding-set**
Description	Name for the class based forwarding policy for LSP instances
Reference	configure **router** *string* **mpls class-forwarding-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

set *number*

Context	**configure router** *string* **mpls lsp** *string* **class-forwarding forwarding-set**
Description	Forwarding set ID
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a choice

class-type *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Configure class type.
Range	0 to 7
Default	0
Introduced	16.0.R1

cspf

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the cspf context
Introduced	16.0.R1

use-te-metric *boolean*

Context	**configure router** *string* **mpls lsp** *string* **cspf**
Description	TE metric to the LSP path computation by CSPF
Default	false
Introduced	16.0.R1

egress-statistics

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the egress-statistics context
Introduced	16.0.R1

accounting-policy *string*

Context	**configure router** *string* **mpls lsp** *string* **egress-statistics**
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **egress-statistics**
Description	Administrative state of ingress statistics for LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure router** *string* **mpls lsp** *string* **egress-statistics**
Description	Collect statistics
Default	false
Introduced	16.0.R1

entropy-label *keyword*

Context	**configure router** *string* **mpls lsp** *string*
Description	Entropy label
Options	false, true
Introduced	16.0.R1

exclude-admin-group *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Name of admin group excluded when LSP is set up
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

exclude-node (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls lsp** *string*
Description	Exclude Routers object to be included in the bypass path message
Introduced	16.0.R1

fast-reroute

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the fast-reroute context
Introduced	16.0.R1

frr-method *keyword*

Context	**configure router** *string* **mpls lsp** *string* **fast-reroute**
Description	Fast Reroute method
Options	one-to-one, facility
Introduced	16.0.R1

hop-limit *number*

Context	**configure router** *string* **mpls lsp** *string* **fast-reroute**
Description	Total number of hops a detour or backup LSP can take before merging back onto the main LSP path
Range	0 to 255
Default	16
Introduced	16.0.R1

node-protect *boolean*

Context	**configure router** *string* **mpls lsp** *string* **fast-reroute**
Description	Enable node and link protection for the specified LSP
Introduced	16.0.R1

propagate-admin-group *boolean*

Context	**configure router** *string* **mpls lsp** *string* **fast-reroute**
Description	Enable signaling of the primary LSP path admin-group constraints in the FRR object at ingress
Default	false
Introduced	16.0.R1

from (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp** *string*
Description	Source IP address of this LSP
Introduced	16.0.R1

hop-limit *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Maximum number of hops that an LSP can traverse including ingress and egress routers
Range	2 to 255
Default	255
Introduced	16.0.R1

igp-shortcut

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the igp-shortcut context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **igp-shortcut**
Description	Administrative state of the LSP to be used as a shortcut while resolving IGP routes
Options	enable, disable
Introduced	16.0.R1

lfa-type *keyword*

Context	**configure router** *string* **mpls lsp** *string* **igp-shortcut**
Description	Specific RSVP LSP by IS-IS and OSPF routing protocols to assign as shortcut or as forwarding adjacency
Options	lfa-protect, lfa-only
Introduced	16.0.R1
Notes	This element is part of a choice

relative-metric *number*

Context	**configure router** *string* **mpls lsp** *string* **igp-shortcut**
Description	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Range	-10 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

include-admin-group *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Admin group name included when LSP is set up
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

ingress-statistics

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the ingress-statistics context
Introduced	16.0.R1

accounting-policy *string*

Context	**configure router** *string* **mpls lsp** *string* **ingress-statistics**
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **ingress-statistics**
Description	Administrative state of ingress statistics for LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure router** *string* **mpls lsp** *string* **ingress-statistics**
Description	Collect statistics
Default	false
Introduced	16.0.R1

ldp-over-rsvp *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Include this LSP in LDP over RSVP
Introduced	16.0.R1

least-fill *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Configure use of least-fill path selection method.
Default	false
Introduced	16.0.R1

load-balancing-weight *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Configure load balancing weight.
Range	1 to max
Introduced	16.0.R1

main-ct-retry-limit *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Max number of attempts before switching to backup class type.
Range	1 to 10000
Introduced	16.0.R1

max-sr-labels

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the max-sr-labels context
Introduced	16.0.R1

additional-frr-labels *number*

Context	**configure router** *string* **mpls lsp** *string* **max-sr-labels**
Description	Value for the maximum additional overhead labels
Range	0 to 4
Default	1
Introduced	16.0.R1

label-stack-size *number*

Context	**configure router** *string* **mpls lsp** *string* **max-sr-labels**
Description	Maximum Label Stack size
Range	1 to 11
Default	6
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	LSP metric that forces to a constant value
Range	0 to 16777215
Introduced	16.0.R1

p2mp-id *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Unique identifier as Point-to-Multipoint (P2MP) identifier
Range	1 to 65535
Introduced	16.0.R1

path-profile [profile-id] *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the path-profile context
Max. Elements	5
Introduced	16.0.R1

[profile-id] *number*

Context	**configure router** *string* **mpls lsp** *string* **path-profile** *number*
Description	Profile ID for the specified LSP
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a list key

path-group *number*

Context	**configure router** *string* **mpls lsp** *string* **path-profile** *number*
Description	Profile ID for the specified LSP
Default	0
Introduced	16.0.R1

pce-computation *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	LSP path computation request sent to local CSPF or to PCE
Default	false
Introduced	16.0.R1

pce-control *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Control of path (delegation) to Path Computation Engine (PCE) to be used
Default	false
Introduced	16.0.R1

pce-report *keyword*

Context	**configure router** *string* **mpls lsp** *string*
Description	Global configuration of reporting to PCE to override
Options	false, true
Introduced	16.0.R1

primary [path-name] *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the primary context
Max. Elements	1
Introduced	16.0.R1

[path-name] *string*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Path name
Reference	configure **router** *string* **mpls path** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptive *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enable/disable make-before-break functionality.
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Administrative state of LSP path
Default	enable
Options	enable, disable
Introduced	16.0.R1

backup-class-type *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Class-type for the LSP or LSP path
Range	0 to 7
Introduced	16.0.R1

bandwidth *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Amount of bandwidth to be reserved.
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

bfd

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enter the bfd context
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **bfd**
Description	Enable BFD
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **bfd**
Description	BFD template
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

lsp-ping-interval (*number* | *keyword*)

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **bfd**
Description	Interval for periodic LSP ping for BFD bootstrapping
Range	60 to 300
Default	60
Units	seconds
Options	none
Introduced	16.0.R1

class-type *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Class-type
Range	0 to 7
Introduced	16.0.R1

exclude-admin-group

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enter the exclude-admin-group context
Introduced	16.0.R1

group *string*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **exclude-admin-group**
Description	Groups to exclude when the LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R1

hop-limit *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	The maximum number of hops that an LSP will traverse including the ingress and egress LSRs.
Range	2 to 255
Introduced	16.0.R1

include-admin-group

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enter the include-admin-group context
Introduced	16.0.R1

group *string*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **include-admin-group**
Description	Groups that are included when LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R1

priority

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enter the priority context
Introduced	16.0.R1

hold-priority *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **priority**
Description	Hold priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	0
Introduced	16.0.R1

setup-priority *number*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string* **priority**
Description	Setup priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	7
Introduced	16.0.R1

record *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enable/disable recording of all hops.
Default	true
Introduced	16.0.R1

record-label *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary** *string*
Description	Enable/disable recording of labels at each node or instance.
Default	true
Introduced	16.0.R1

primary-p2mp-instance [instance-name] *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the primary-p2mp-instance context
Max. Elements	1
Introduced	16.0.R4

[instance-name] *string*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	The unique name which identifies this P2MP LSP for this virtual router.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

adaptive *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enable/disable make-before-break functionality.
Introduced	16.0.R4

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Administrative state of LSP path
Default	enable
Options	enable, disable
Introduced	16.0.R4

bandwidth *number*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Amount of bandwidth to be reserved.
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R4

exclude-admin-group

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enter the exclude-admin-group context
Introduced	16.0.R4

group *string*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string* **exclude-admin-group**
Description	Groups to exclude when the LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R4

hop-limit *number*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	The maximum number of hops that an LSP will traverse including the ingress and egress LSRs.
Range	2 to 255
Introduced	16.0.R4

include-admin-group

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enter the include-admin-group context
Introduced	16.0.R4

group *string*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string* **include-admin-group**
Description	Groups that are included when LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R4

record *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enable/disable recording of all hops.
Default	true
Introduced	16.0.R4

record-label *boolean*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enable/disable recording of labels at each node or instance.
Default	true
Introduced	16.0.R4

s2l-path [path-name] *string* **to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string*
Description	Enter the s2l-path context
Max. Elements	650
Introduced	16.0.R4

[path-name] *string*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string* **s2l-path** *string* **to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	A label switch path (P2MP LSP) name.
Reference	configure **router** *string* **mpls path** *string*
Introduced	16.0.R4
Notes	This element is part of a list key

to (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string* **s2l-path** *string* **to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	The IP address of the destination address of the S2L sub LSP.
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **primary-p2mp-instance** *string* **s2l-path** *string* **to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Administratively enable/disable the P2MP S2L sub LSP.
Default	enable
Options	enable, disable
Introduced	16.0.R4

propagate-admin-group *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enable/disable admin groups via session attribute object.
Default	false
Introduced	16.0.R1

retry-limit *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Max number of attempts made to reestablish the LSP after it has failed.
Range	1 to 10000
Introduced	16.0.R1

retry-timer *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Time between attempts to reestablish the LSP after it has failed.
Range	1 to 600
Default	30
Units	seconds
Introduced	16.0.R1

revert-timer *number*

Context	**configure router** *string* **mpls lsp** *string*
Description	Revert timer for this LSP
Range	1 to 4320
Units	minutes
Introduced	16.0.R1

rsvp-resv-style *keyword*

Context	**configure router** *string* **mpls lsp** *string*
Description	Reservation style for RSVP
Default	se
Options	se, ff
Introduced	16.0.R1

secondary [path-name] *string*

Context	**configure router** *string* **mpls lsp** *string*
Description	Enter the secondary context
Max. Elements	8
Introduced	16.0.R1

[path-name] *string*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Path name
Reference	configure **router** *string* **mpls path** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptive *boolean*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enable/disable make-before-break functionality.
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Administrative state of LSP path
Default	enable
Options	enable, disable
Introduced	16.0.R1

bandwidth *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Amount of bandwidth to be reserved.
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

class-type *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Class-type
Range	0 to 7
Introduced	16.0.R1

exclude-admin-group

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enter the exclude-admin-group context
Introduced	16.0.R1

group *string*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string* **exclude-admin-group**
Description	Groups to exclude when the LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R1

hop-limit *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	The maximum number of hops that an LSP will traverse including the ingress and egress LSRs.
Range	2 to 255
Introduced	16.0.R1

include-admin-group

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enter the include-admin-group context
Introduced	16.0.R1

group *string*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string* **include-admin-group**
Description	Groups that are included when LSP path is setup
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Min. Elements	1
Introduced	16.0.R1

path-preference *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Path preference for the secondary standby path
Range	0 to 255
Default	255
Introduced	16.0.R1

priority

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enter the priority context
Introduced	16.0.R1

hold-priority *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string* **priority**
Description	Hold priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	0
Introduced	16.0.R1

setup-priority *number*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string* **priority**
Description	Setup priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	7
Introduced	16.0.R1

record *boolean*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enable/disable recording of all hops.
Default	true
Introduced	16.0.R1

record-label *boolean*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Enable/disable recording of labels at each node or instance.
Default	true
Introduced	16.0.R1

srlg *boolean*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Use SRLG constraint in secondary path computation for an LSP at the head-end LER
Default	false
Introduced	16.0.R1

standby *boolean*

Context	**configure router** *string* **mpls lsp** *string* **secondary** *string*
Description	Maintain secondary path LSP indefinitely in hot standby state
Default	false
Introduced	16.0.R1

to (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp** *string*
Description	Destination IP address or the egress router for the LSP
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp** *string*
Description	LSP for bypass protection, point to multipoint, segment routing or MPLS-TP static LSP
Options	p2p-rsvp, p2p-static-mpls, p2p-rsvp-bypass, p2mp-rsvp, p2mp-rsvp-auto, p2p-rsvp-mesh, p2p-rsvp-one-hop, p2p-sr-te, p2p-sr-te-mesh, p2p-sr-te-one-hop, p2p-sr-te-pce-init
Introduced	16.0.R1
Notes	This element is mandatory

vprn-auto-bind *boolean*

Context	**configure router** *string* **mpls lsp** *string*
Description	Include this LSP in auto-bind for VPRN services
Introduced	16.0.R1

lsp-init-retry-timeout *number*

Context	**configure router** *string* **mpls**
Description	LSP initial retry timeout
Range	10 to 600
Default	30
Units	seconds
Introduced	16.0.R1

lsp-template [template-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the lsp-template context
Max. Elements	4096
Introduced	16.0.R1

[template-name] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Name of the LSP template to automatically create and signal multiple LSP instances
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adaptive *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable make-before-break functionality.
Default	true
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Administrative state of LSP template
Default	disable
Options	enable, disable
Introduced	16.0.R1

admin-tag [name] *string*

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the admin-tag context
Max. Elements	4
Introduced	16.0.R1

[name] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **admin-tag** *string*
Description	Name of the admin tags
Reference	configure **routing-options admin-tags admin-tag** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

adspec *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable inclusion of ADSPEC objects in RSVP messages.
Default	false
Introduced	16.0.R1

auto-bandwidth

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the auto-bandwidth context
Introduced	16.0.R1

adjust-down

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the adjust-down context
Introduced	16.0.R1

bw *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth adjust-down**
Description	Minimum difference in absolute bandwidth between LSP bandwidth reservation and max average data rate
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

percent *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth adjust-down**
Description	Minimum difference in percent between LSP bandwidth reservation and the maximum average data rate
Range	0 to 100
Default	5
Introduced	16.0.R1

adjust-up

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the adjust-up context
Introduced	16.0.R1

bw *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth adjust-up**
Description	Minimum difference in absolute bandwidth between LSP bandwidth reservation and max average data rate
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

percent *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth adjust-up**
Description	Minimum difference in percent between LSP bandwidth reservation and the maximum average data rate
Range	0 to 100
Default	5
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the fc context
Max. Elements	8
Introduced	16.0.R1

[fc-name] *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth fc** *keyword*
Description	Forwarding class name for LSP
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

sampling-weight *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth fc** *keyword*
Description	Forwarding class weight for LSP
Range	0 to 100
Default	100
Introduced	16.0.R1

max-bandwidth *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Maximum bandwidth of auto-bandwidth to request for the LSP
Range	0 to 100000
Default	100000
Units	megabps
Introduced	16.0.R1

min-bandwidth *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Minimum bandwidth of auto-bandwidth to request for the LSP
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

monitor-bandwidth *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Collect and display auto-bandwidth measurements for the LSP
Default	false
Introduced	16.0.R1

multipliers

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the multipliers context
Introduced	16.0.R1

adjust-multiplier *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth multipliers**
Description	Number of collection intervals in the adjust interval
Range	1 to 16383
Introduced	16.0.R1

sample-multiplier *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth multipliers**
Description	Multiplier for collection intervals in a sample interval
Range	1 to 511
Introduced	16.0.R1

overflow-limit

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the overflow-limit context
Introduced	16.0.R1

bw *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth overflow-limit**
Description	Minimum difference in absolute bandwidth between the LSP bandwidth and the sampled data rate
Range	1 to 100000
Units	megabps
Introduced	16.0.R1

number *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth overflow-limit**
Description	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

threshold *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth overflow-limit**
Description	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Range	0 to 100
Default	0
Introduced	16.0.R1

underflow-limit

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth**
Description	Enter the underflow-limit context
Introduced	16.0.R1

bw *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth underflow-limit**
Description	Minimum difference in absolute bandwidth between the LSP bandwidth and the sampled data rate
Range	1 to 100000
Units	megabps
Introduced	16.0.R1

number *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth underflow-limit**
Description	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

threshold *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **auto-bandwidth underflow-limit**
Description	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Range	0 to 100
Default	0
Introduced	16.0.R1

backup-class-type *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure backup-class-type for this LSP template.
Range	0 to 7
Default	0
Introduced	16.0.R1

bandwidth *number*

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Specify bandwidth in mbps for LSP instances created using this LSP template.
Range	0 to 100000
Default	0
Units	megabps
Introduced	16.0.R1

bfd

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the bfd context
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **mpls lsp-template** *string* **bfd**
Description	Enable BFD
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure router** *string* **mpls lsp-template** *string* **bfd**
Description	BFD template
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

failure-action *keyword*

Context	**configure router** *string* **mpls lsp-template** *string* **bfd**
Description	Indicates the action to be taken when LSP BFD session fails
Default	none
Options	none, down
Introduced	16.0.R1

lsp-ping-interval (*number* | *keyword*)

Context	**configure router** *string* **mpls lsp-template** *string* **bfd**
Description	Interval for periodic LSP ping for BFD bootstrapping
Range	60 to 300
Default	60
Units	seconds
Options	none
Introduced	16.0.R1

bgp-shortcut *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable use of RSVP LSP for IPv4 BGP routes.
Default	true
Introduced	16.0.R1

bgp-transport-tunnel *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Include/exclude use of RSVP LSP as transport LSP for labeled IPv4 BGP routes.
Default	true
Introduced	16.0.R1

class-forwarding

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the class-forwarding context
Introduced	16.0.R1

default-lsp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **class-forwarding**
Description	Use the default LSP configuration for specified LSP or LSP template
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

fc *keyword*

Context	**configure router** *string* **mpls lsp-template** *string* **class-forwarding**
Description	One or more forwarding classes for LSP instances
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1
Notes	This element is part of a choice

forwarding-set

Context	**configure router** *string* **mpls lsp-template** *string* **class-forwarding**
Description	Enter the **forwarding-set** context
Introduced	16.0.R1

policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **class-forwarding forwarding-set**
Description	Name for the class based forwarding policy for LSP instances
Reference	configure **router** *string* **mpls class-forwarding-policy** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

set *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **class-forwarding forwarding-set**
Description	Forwarding set ID
Range	1 to 6
Introduced	16.0.R1
Notes	This element is part of a choice

class-type *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure class-type.
Range	0 to 7
Default	0
Introduced	16.0.R1

cspf

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the cspf context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **cspf**
Description	Administrative state of the CSPF support for LSP
Options	enable, disable
Introduced	16.0.R1

use-te-metric *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **cspf**
Description	TE metric for the LSP path computation by CSPF
Default	false
Introduced	16.0.R1

default-path *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Specify default path to be used for signaling LSP instances created using this LSP template.
Reference	configure **router** *string* **mpls path** *string*
Introduced	16.0.R1

egress-statistics

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the egress-statistics context
Introduced	16.0.R1

accounting-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **egress-statistics**
Description	Accounting policy ID
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

collect-stats *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **egress-statistics**
Description	Collect statistics
Default	false
Introduced	16.0.R1

entropy-label *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure Entropy Label for LSP Template.
Options	false, true
Introduced	16.0.R1

exclude-admin-group *string*

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Admin group name excluded when LSP is set up
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

fast-reroute

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the fast-reroute context
Introduced	16.0.R1

frr-method *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **fast-reroute**
Description	Fast Reroute method for the LSPs that are dynamically created using this LSP template
Default	facility
Options	one-to-one, facility
Introduced	16.0.R1

hop-limit *number*

Context	**configure router** *string* **mpls lsp-template** *string* **fast-reroute**
Description	Total number of hops a detour or backup LSP can take before merging back onto the main LSP path
Range	0 to 255
Default	16
Introduced	16.0.R1

node-protect *boolean*

Context	**configure router** *string* **mpls lsp-template** *string* **fast-reroute**
Description	Enable node and link protection for the specified LSP
Default	false
Introduced	16.0.R1

propagate-admin-group *boolean*

Context	**configure router** *string* **mpls lsp-template** *string* **fast-reroute**
Description	Enable signaling of the primary LSP path admin-group constraints in the FRR object at ingress
Default	false
Introduced	16.0.R1

from (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	IP address of the ingress router for the LSP template.
Introduced	16.0.R1

hop-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure maximum number of hops that can be traversed by LSP instances created using this LSP template.
Range	2 to 255
Introduced	16.0.R1

igp-shortcut

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the igp-shortcut context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **igp-shortcut**
Description	Administrative state of the RSVP LSP to be used as a shortcut while resolving IGP routes
Default	enable
Options	enable, disable
Introduced	16.0.R1

lfa-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **igp-shortcut**
Description	Specific RSVP LSP by IS-IS and OSPF routing protocols to assign as shortcut or as forwarding adjacency
Options	lfa-protect, lfa-only
Introduced	16.0.R1
Notes	This element is part of a choice

relative-metric *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **igp-shortcut**
Description	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Range	-10 to 10
Introduced	16.0.R1
Notes	This element is part of a choice

include-admin-group *string*

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Admin group name included when LSP is set up
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

ldp-over-rsvp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure if this LSP will be included in LDP over RSVP.
Default	true
Introduced	16.0.R1

least-fill *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure use of least-fill path selection method.
Default	false
Introduced	16.0.R1

load-balancing-weight *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure load balancing weight.
Range	1 to max
Introduced	16.0.R1

main-ct-retry-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Max number of attempts before switching to backup class type.
Range	1 to 10000
Introduced	16.0.R1

max-sr-labels

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the max-sr-labels context
Introduced	16.0.R1

additional-frr-labels *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **max-sr-labels**
Description	Maximum number of additional overhead labels
Range	0 to 4
Default	1
Introduced	16.0.R1

label-stack-size *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **max-sr-labels**
Description	Size for the maximum segment routing label stack
Range	1 to 11
Default	6
Introduced	16.0.R1

metric *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure LSP template metric.
Range	0 to 16777215
Default	0
Introduced	16.0.R1

pce-report *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Specifies whether to override the global configuration of reporting to PCE.
Options	false, true
Introduced	16.0.R1

priority

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enter the priority context
Introduced	16.0.R1

hold-priority *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **priority**
Description	Hold priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	0
Introduced	16.0.R1

setup-priority *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string* **priority**
Description	Setup priority when insufficient bandwidth is available to set up LSP
Range	0 to 7
Default	7
Introduced	16.0.R1

propagate-admin-group *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable admin groups via session attribute object.
Default	false
Introduced	16.0.R1

record *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable recording of all hops.
Default	true
Introduced	16.0.R1

record-label *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Enable/disable recording of labels at each node or instance.
Default	true
Introduced	16.0.R1

retry-limit *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Max number of attempts made to reestablish the LSP after it has failed.
Range	1 to 10000
Introduced	16.0.R1

retry-timer *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Time between attempts to reestablish the LSP after it has failed.
Range	1 to 600
Default	30
Units	seconds
Introduced	16.0.R1

template-id (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	The value indicates lsp template-id. Configure this if LSP Template is of type p2p-sr-te-pce-init.
Range	1 to max
Options	default
Introduced	16.0.R5

type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure type of the LSP template.
Options	p2mp-rsvp, p2p-rsvp-one-hop, p2p-rsvp-mesh, p2p-sr-te-one-hop, p2p-sr-te-mesh, p2p-sr-te-pce-init
Introduced	16.0.R1
Notes	This element is mandatory

vprn-auto-bind *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls lsp-template** *string*
Description	Configure if this LSP will be included in auto-bind for VPRN services.
Default	true
Introduced	16.0.R1

max-bypass-associations *number*

Context	**configure router** *string* **mpls**
Description	Maximum number of LSPs to be associated with a bypass tunnel
Range	100 to 131072
Default	1000
Introduced	16.0.R1

mbb-prefer-current-hops *boolean*

Context	**configure router** *string* **mpls**
Description	Select preference to use the current hops for Make-Before-Break (MBB)
Default	false
Introduced	16.0.R1

p2mp-resignal-timer *number*

Context	**configure router** *string* **mpls**
Description	Resignal timer for P2MP LSPs
Range	60 to 10080
Units	minutes
Introduced	16.0.R1

p2mp-s2l-fast-retry *number*

Context	**configure router** *string* **mpls**
Description	Fast retry timer for P2MP S2L paths
Range	1 to 10
Units	seconds
Introduced	16.0.R1

p2p-active-path-fast-retry *number*

Context	**configure router** *string* **mpls**
Description	Fast retry timer for P2P active paths
Range	1 to 10
Units	seconds
Introduced	16.0.R1

path [path-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the path context
Max. Elements	65535
Introduced	16.0.R1

[path-name] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls path** *string*
Description	Name for this LSP path
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls path** *string*
Description	Administrative state of this tunnel
Default	disable
Options	enable, disable
Introduced	16.0.R1

hop [hop-index] *number*

Context	**configure router** *string* **mpls path** *string*
Description	Enter the hop context
Max. Elements	255
Introduced	16.0.R1

[hop-index] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls path** *string* **hop** *number*
Description	Index to identify a particular hop
Range	1 to 1024
Introduced	16.0.R1
Notes	This element is part of a list key

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mpls path** *string* **hop** *number*
Description	IPv4 address of this hop
Introduced	16.0.R1
Notes	This element is mandatory

type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls path** *string* **hop** *number*
Description	Tunnel hop type
Options	strict, loose
Introduced	16.0.R1
Notes	This element is mandatory

pce-init-lsp

Context	**configure router** *string* **mpls**
Description	Enter the **pce-init-lsp** context
Introduced	16.0.R5

sr-te

Context	**configure router** *string* **mpls pce-init-lsp**
Description	Enter the **sr-te** context
Introduced	16.0.R5

admin-state *keyword*

Context	**configure router** *string* **mpls pce-init-lsp sr-te**
Description	Administratively enable or disable PCE initiated SR-TE LSPs.
Default	disable
Options	enable, disable
Introduced	16.0.R5

pce-report

Context	**configure router** *string* **mpls**
Description	Enter the pce-report context
Introduced	16.0.R1

rsvp-te *boolean*

Context	**configure router** *string* **mpls pce-report**
Description	Allow PCE reporting for all TE LSPs of RSVP-TE type
Default	false
Introduced	16.0.R1

sr-te *boolean*

Context	**configure router** *string* **mpls pce-report**
Description	Allow PCE reporting for all TE LSPs of SR-TE type
Default	false
Introduced	16.0.R1

resignal-timer *number*

Context	**configure router** *string* **mpls**
Description	Resignal timer for P2MP LSPs
Range	30 to 10080
Units	minutes
Introduced	16.0.R1

retry-on-igp-overload *boolean*

Context	**configure router** *string* **mpls**
Description	Tear down LSPs when IGP is in overload state
Default	false
Introduced	16.0.R1

secondary-fast-retry-timer *number*

Context	**configure router** *string* **mpls**
Description	Fast retry timer for secondary paths
Range	1 to 10
Units	seconds
Introduced	16.0.R1

shortcut-local-ttl-propagate *boolean*

Context	**configure router** *string* **mpls**
Description	Propagate TTL over LSP shortcut for local packets
Default	true
Introduced	16.0.R1

shortcut-transit-ttl-propagate *boolean*

Context	**configure router** *string* **mpls**
Description	Propagate TTL over LSP shortcut for local packets for transit packets
Default	true
Introduced	16.0.R1

srlg-database

Context	**configure router** *string* **mpls**
Description	Enter the srlg-database context
Introduced	16.0.R1

router-id [router-address] *ipv4-address*

Context	**configure router** *string* **mpls srlg-database**
Description	Enter the router-id context
Introduced	16.0.R1

[router-address] *ipv4-address*

Context	**configure router** *string* **mpls srlg-database router-id** *ipv4-address*
Description	Specifies a unique identifier of the router in the Autonomous System.
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **mpls srlg-database router-id** *ipv4-address*
Description	Administrative state of the interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

interface [interface-address] *ipv4-address* **srlg-group** *string*

Context	**configure router** *string* **mpls srlg-database router-id** *ipv4-address*
Description	Enter the interface context
Introduced	16.0.R1

[interface-address] *ipv4-address*

Context	**configure router** *string* **mpls srlg-database router-id** *ipv4-address* **interface** *ipv4-address* **srlg-group** *string*
Description	Indicates the IP address of the interface.
Introduced	16.0.R1
Notes	This element is part of a list key

srlg-group *string*

Context	**configure router** *string* **mpls srlg-database router-id** *ipv4-address* **interface** *ipv4-address* **srlg-group** *string*
Description	SRLG group name
Reference	configure **routing-options if-attribute srlg-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

srlg-frr *keyword*

Context	**configure router** *string* **mpls**
Description	Use of Shared Risk Link Group (SRLG) constraint for FRR path computation
Options	loose, strict
Introduced	16.0.R1

static-lsp [lsp-name] *string*

Context	**configure router** *string* **mpls**
Description	Enter the static-lsp context
Max. Elements	1000
Introduced	16.0.R1

[lsp-name] *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string*
Description	Labeled Switch path name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string*
Description	Administrative state of the static LSP
Default	disable
Options	enable, disable
Introduced	16.0.R1

metric *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string*
Description	MPLS static LSP metric to select an LSP
Range	1 to 16777215
Introduced	16.0.R1

push

Context	**configure router** *string* **mpls static-lsp** *string*
Description	Enter the push context
Introduced	16.0.R1

next-hop *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string* **push**
Description	IP address for the next hop
Introduced	16.0.R1
Notes	This element is mandatory

out-label (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string* **push**
Description	Push specific label onto the top of the outgoing packet's label stack
Range	16 to 1048575
Options	implicit-null-label
Introduced	16.0.R1
Notes	This element is mandatory

to *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **mpls static-lsp** *string*
Description	Destination IP address or the egress router for the LSP
Introduced	16.0.R1

static-lsp-fast-retry *number*

Context	**configure router** *string* **mpls**
Description	Fast retry timer for static LSPs
Range	1 to 30
Default	30
Units	seconds
Introduced	16.0.R1

user-srlg-db *boolean*

Context	**configure router** *string* **mpls**
Description	Enable/disable use of user SRLG database.
Default	false
Introduced	16.0.R1

mpls-labels

Context	**configure router** *string*
Description	Enter the mpls-labels context
Introduced	16.0.R1

bgp-labels-hold-timer *number*

Context	**configure router** *string* **mpls-labels**
Description	BGP labels hold timer for the ingress router
Range	0 to 255
Default	0
Introduced	16.0.R1

reserved-label-block [label-block-name] *string*

Context	**configure router** *string* **mpls-labels**
Description	Enter the reserved-label-block context
Max. Elements	4
Introduced	16.0.R1

[label-block-name] *string*

Context	**configure router** *string* **mpls-labels reserved-label-block** *string*
Description	Name for the reserved label block
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

end-label *number*

Context	**configure router** *string* **mpls-labels reserved-label-block** *string*
Description	End label for the reserved label block
Range	18432 to 1048575
Introduced	16.0.R1

start-label *number*

Context **configure router** *string* **mpls-labels reserved-label-block** *string*

Description Start label value for the reserved label block

Range 18432 to 1048575

Introduced 16.0.R1

sr-labels

Context **configure router** *string* **mpls-labels**

Description Enter the sr-labels context

Introduced 16.0.R1

end *number*

Context **configure router** *string* **mpls-labels sr-labels**

Description End label for the SRGB

Range 32 to 1048575

Introduced 16.0.R1

start *number*

Context **configure router** *string* **mpls-labels sr-labels**

Description Start label value for the SRGB

Range 32 to 1048575

Introduced 16.0.R1

static-label-range *number*

Context **configure router** *string* **mpls-labels**

Description Static label range on the ingress router

Range 0 to 1048544

Default 18400

Introduced 16.0.R1

mss-adjust

Context	**configure router** *string*
Description	Enter the mss-adjust context
Introduced	16.0.R1

nat-group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **mss-adjust**
Description	NAT group (including WLAN Gateway group) that executes the adjustment
Introduced	16.0.R1
Notes	This element is mandatory

segment-size *number*

Context	**configure router** *string* **mss-adjust**
Description	Intended value for the Maximum Segment Size (MSS) option in transmitted TCP SYN requests
Range	160 to 10240
Introduced	16.0.R1
Notes	This element is mandatory

mtrace2

Context	**configure router** *string*
Description	Enter the mtrace2 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **mtrace2**
Description	Administrative state of UDP based multicast traceroute tests (mstat2 and mtrace2)
Default	disable
Options	enable, disable
Introduced	16.0.R1

udp-port *number*

Context	**configure router** *string* **mtrace2**
Description	Destination UDP port for mstat2|mtrace2 test, or unsolicited mstat2|mtrace2 packets
Range	1024 to 49151
Default	5000
Introduced	16.0.R1

multicast-info-policy *string*

Context	**configure router** *string*
Description	Multicast policy name for virtual router
Reference	configure **multicast-management multicast-info-policy** *string*
Introduced	16.0.R1

nat

Context	**configure router** *string*
Description	Enter the nat context
Introduced	16.0.R1

inside

Context	**configure router** *string* **nat**
Description	Enter the inside context
Introduced	16.0.R1

l2-aware

Context	**configure router** *string* **nat inside**
Description	Enter the l2-aware context
Introduced	16.0.R1

subscribers [prefix] *ipv4-prefix-with-host-bits*

Context	**configure router** *string* **nat inside l2-aware**
Description	Enter the subscribers context
Introduced	16.0.R1

[prefix] *ipv4-prefix-with-host-bits*

Context **configure router** *string* **nat inside l2-aware subscribers** *ipv4-prefix-with-host-bits*

Description Layer-2 Aware NAT subscriber prefix

Introduced 16.0.R1

Notes This element is part of a list key

large-scale

Context **configure router** *string* **nat inside**

Description Enter the large-scale context

Introduced 16.0.R1

dnat-only

Context **configure router** *string* **nat inside large-scale**

Description Enter the dnat-only context

Introduced 16.0.R1

source-prefix-list *string*

Context **configure router** *string* **nat inside large-scale dnat-only**

Description NAT prefix list that contains source IP addresses

Reference configure **service nat prefix-list** *string*

Introduced 16.0.R1

dual-stack-lite

Context **configure router** *string* **nat inside large-scale**

Description Enter the dual-stack-lite context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite**
Description	Administrative state of Dual Stack Lite
Default	disable
Options	enable, disable
Introduced	16.0.R1

deterministic

Context	**configure router** *string* **nat inside large-scale dual-stack-lite**
Description	Enter the deterministic context
Introduced	16.0.R1

policy-map [source-prefix] *ipv6-unicast-prefix*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic**
Description	Enter the policy-map context
Introduced	16.0.R1

[source-prefix] *ipv6-unicast-prefix*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Source prefix that adds traffic to NAT pool
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Administrative state of this prefix
Default	disable
Options	enable, disable
Introduced	16.0.R1

map [from] *ipv6-prefix* **to** *ipv6-prefix*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	Enter the map context
Introduced	16.0.R1

[from] *ipv6-prefix*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	Beginning of the range for IPv6 addresses that is mapped on the inside to outside IPv6addresses
Introduced	16.0.R1
Notes	This element is part of a list key

to *ipv6-prefix*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	Ending of the range for IPv6 addresses that is mapped on the inside to outside IPv6 addresses
Introduced	16.0.R1
Notes	This element is part of a list key

first-outside-address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix* **map** *ipv6-prefix* **to** *ipv6-prefix*
Description	IPv6 address range that is mapped to outside IPv4 address
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat inside large-scale dual-stack-lite deterministic policy-map** *ipv6-unicast-prefix*
Description	NAT policy
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

endpoint [address] *ipv6-address*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite**
Description	Enter the endpoint context
Max. Elements	128
Introduced	16.0.R1

[address] *ipv6-address*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Dual Stack Lite IPv6 address
Introduced	16.0.R1
Notes	This element is part of a list key

ip-fragmentation *keyword*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Fragmentation control of the AFTR originated downstream IPv6 traffic
Options	fragment-ipv6, fragment-ipv6-unless-ipv4-df-set
Introduced	16.0.R1

reassembly *boolean*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Reassembly of IPv6 payload datagrams
Default	false
Introduced	16.0.R1

tunnel-mtu *number*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite endpoint** *ipv6-address*
Description	Maximum size of IPv4 packet inside of DS-Lite tunnel
Range	512 to 9212
Default	1500
Introduced	16.0.R1

max-subscriber-limit *number*

Context	**configure router** *string* **nat inside large-scale dual-stack-lite**
Description	Largest value for all subscriber limits in each deterministic pool
Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768
Introduced	16.0.R1

subscriber-prefix-length *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **nat inside large-scale dual-stack-lite**
Description	IPv6 prefix length of the Dual Stack Lite subscribers
Range	32 to 64 | 128
Introduced	16.0.R1

nat-policy *string*

Context	**configure router** *string* **nat inside large-scale**
Description	NAT policy for LSN
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

nat44

Context **configure router** *string* **nat inside large-scale**

Description Enter the nat44 context

Introduced 16.0.R1

destination-prefix [ip-prefix-length] *ipv4-unicast-prefix*

Context **configure router** *string* **nat inside large-scale nat44**

Description Enter the destination-prefix context

Max. Elements 1024

Introduced 16.0.R1

[ip-prefix-length] *ipv4-unicast-prefix*

Context **configure router** *string* **nat inside large-scale nat44 destination-prefix** *ipv4-unicast-prefix*

Description Traffic sent to destinations within this prefix will be NATed

Introduced 16.0.R1

Notes This element is part of a list key

nat-policy *string*

Context **configure router** *string* **nat inside large-scale nat44 destination-prefix** *ipv4-unicast-prefix*

Description NAT policy

Reference configure **service nat nat-policy** *external-named-item*

Introduced 16.0.R1

deterministic

Context **configure router** *string* **nat inside large-scale nat44**

Description Enter the deterministic context

Introduced 16.0.R1

policy-map [source-prefix] *ipv4-unicast-prefix*

Context **configure router** *string* **nat inside large-scale nat44 deterministic**

Description Enter the policy-map context

Introduced 16.0.R1

[source-prefix] *ipv4-unicast-prefix*

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*
Description	Source prefix that adds traffic to NAT pool
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*
Description	Administrative state of this prefix
Default	disable
Options	enable, disable
Introduced	16.0.R1

map [from] *ipv4-address* **to** *ipv4-address*

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*
Description	Enter the map context
Introduced	16.0.R1

[from] *ipv4-address*

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*
Description	Beginning of the range for IPv4 addresses that is mapped on the inside to outside IPv4 addresses
Introduced	16.0.R1
Notes	This element is part of a list key

to *ipv4-address*

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*
Description	Ending of the range for IPv4 addresses that is mapped on the inside to outside IPv4 addresses
Introduced	16.0.R1
Notes	This element is part of a list key

first-outside-address *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix* **map** *ipv4-address* **to** *ipv4-address*
Description	IPv6 address range that is mapped to outside IPv4 address
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat inside large-scale nat44 deterministic policy-map** *ipv4-unicast-prefix*
Description	NAT policy
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

max-subscriber-limit *number*

Context	**configure router** *string* **nat inside large-scale nat44**
Description	Largest value for all subscriber limits in each deterministic pool
Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768
Introduced	16.0.R1

nat64

Context **configure router** *string* **nat inside large-scale**

Description Enter the nat64 context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **nat inside large-scale nat64**

Description Administrative state of NAT65

Default disable

Options enable, disable

Introduced 16.0.R1

drop-zero-ipv4-checksum *boolean*

Context **configure router** *string* **nat inside large-scale nat64**

Description Drop UDP datagrams with zero IPv4 checksum

Default false

Introduced 16.0.R1

insert-ipv6-fragment-header *boolean*

Context **configure router** *string* **nat inside large-scale nat64**

Description Include IPv6 fragment header to indicate that the sender allows fragmentation

Default false

Introduced 16.0.R1

ip-fragmentation *keyword*

Context **configure router** *string* **nat inside large-scale nat64**

Description Control fragmentation of originated downstream IPv6 traffic

Options fragment-ipv6, fragment-ipv6-unless-ipv4-df-set

Introduced 16.0.R1

ipv6-mtu *number*

Context	**configure router** *string* **nat inside large-scale nat64**
Description	Size of the IPv6 downstream packet in NAT64
Range	1280 to 9212
Default	1520
Introduced	16.0.R1

prefix *ipv6-prefix*

Context	**configure router** *string* **nat inside large-scale nat64**
Description	IPv6 prefix to derive the IPv6 address from the IPv4 address
Default	64:ff9b::/96
Introduced	16.0.R1

subscriber-prefix-length *number*

Context	**configure router** *string* **nat inside large-scale nat64**
Description	IPv6 prefix length for the NAT64 subscribers
Range	32 to 64 | 128
Introduced	16.0.R1

tos

Context	**configure router** *string* **nat inside large-scale nat64**
Description	Enter the tos context
Introduced	16.0.R1

downstream

Context	**configure router** *string* **nat inside large-scale nat64 tos**
Description	Enter the downstream context
Introduced	16.0.R4

use-ipv4 *boolean*

Context	**configure router** *string* **nat inside large-scale nat64 tos downstream**
Description	Copy TOS/DSCP bits from the incoming IPv4 frame to the outgoing IPv6 frame
Default	false
Introduced	16.0.R4

upstream

Context	**configure router** *string* **nat inside large-scale nat64 tos**
Description	Enter the upstream context
Introduced	16.0.R4

set-tos (*keyword* | *number*)

Context	**configure router** *string* **nat inside large-scale nat64 tos upstream**
Description	TOS/DSCP bits in IPv4 frame in the upstream direction
Range	0 to 255
Default	use-ipv6
Options	use-ipv6
Introduced	16.0.R4

redundancy

Context	**configure router** *string* **nat inside large-scale**
Description	Enter the redundancy context
Introduced	16.0.R1

peer *ipv4-unicast-address*

Context	**configure router** *string* **nat inside large-scale redundancy**
Description	IP address of the NAT redundancy peer for this virtual router instance
Introduced	16.0.R1

peer6 *ipv6-unicast-address*

Context **configure router** *string* **nat inside large-scale redundancy**
Description IPv6 address of the NAT redundancy peer for this virtual router instance
Introduced 16.0.R1

steering-route (*ipv4-prefix* | *ipv6-prefix*)

Context **configure router** *string* **nat inside large-scale redundancy**
Description IP address and prefix length of the steering route
Introduced 16.0.R1

subscriber-identification

Context **configure router** *string* **nat inside large-scale**
Description Enter the subscriber-identification context
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **nat inside large-scale subscriber-identification**
Description Administrative state of subscriber identification
Default disable
Options enable, disable
Introduced 16.0.R1

attribute

Context **configure router** *string* **nat inside large-scale subscriber-identification**
Description Enter the attribute context
Introduced 16.0.R1

type *keyword*

Context **configure router** *string* **nat inside large-scale subscriber-identification attribute**

Description The RADIUS Vendor-Id value corresponding with this vendor.

Default alc-sub-string

Options alc-sub-string, user-name, class, station-id, imsi, imei

Introduced 16.0.R4

vendor *keyword*

Context **configure router** *string* **nat inside large-scale subscriber-identification attribute**

Description The RADIUS Vendor

Default nokia

Options standard, nokia, 3gpp

Introduced 16.0.R4

description *string*

Context **configure router** *string* **nat inside large-scale subscriber-identification**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

drop-unidentified-traffic *boolean*

Context **configure router** *string* **nat inside large-scale subscriber-identification**

Description Drop traffic from unidentified flows

Default false

Introduced 16.0.R1

radius-proxy-server

Context **configure router** *string* **nat inside large-scale subscriber-identification**

Description Enter the radius-proxy-server context

Introduced 16.0.R1

router-instance *string*

Context	**configure router** *string* **nat inside large-scale subscriber-identification radius-proxy-server**
Description	Router instance
Introduced	16.0.R1
Notes	This element is mandatory

server *string*

Context	**configure router** *string* **nat inside large-scale subscriber-identification radius-proxy-server**
Description	Server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

map

Context	**configure router** *string* **nat**
Description	Enter the map context
Introduced	16.0.R1

map-domain [domain-name] *string*

Context	**configure router** *string* **nat map**
Description	Enter the map-domain context
Introduced	16.0.R1

[domain-name] *string*

Context	**configure router** *string* **nat map map-domain** *string*
Description	MAP domain name
Reference	configure **service nat map-t domain** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

outside

Context **configure router** *string* **nat**
Description Enter the outside context
Introduced 16.0.R1

dnat-only

Context **configure router** *string* **nat outside**
Description Enter the dnat-only context
Introduced 16.0.R1

route-limit *number*

Context **configure router** *string* **nat outside dnat-only**
Description Number that is used to limit internal routes for downstream traffic
Range 1 to 131072
Default 32768
Introduced 16.0.R1

filters

Context **configure router** *string* **nat outside**
Description Enter the filters context
Introduced 16.0.R1

downstream

Context **configure router** *string* **nat outside filters**
Description Enter the downstream context
Introduced 16.0.R1

ipv4 *string*

Context **configure router** *string* **nat outside filters downstream**
Description IP filter for downstream traffic
Reference configure **filter ip-filter** *filter-name*
Introduced 16.0.R1

ipv6 *string*

Context **configure router** *string* **nat outside filters downstream**

Description IPv6 filter for downstream traffic

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

upstream

Context **configure router** *string* **nat outside filters**

Description Enter the upstream context

Introduced 16.0.R1

ipv4 *string*

Context **configure router** *string* **nat outside filters upstream**

Description IP filter for upstream traffic

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure router** *string* **nat outside filters upstream**

Description IPv6 filter for upstream traffic

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mtu *number*

Context **configure router** *string* **nat outside**

Description MTU for downstream traffic

Range 512 to 9000

Introduced 16.0.R1

pool [name] *string*

Context	**configure router** *string* **nat outside**
Description	Enter the pool context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **nat outside pool** *string*
Description	NAT pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address-range [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the address-range context
Max. Elements	4096
Introduced	16.0.R1

[start] *ipv4-unicast-address*

Context	**configure router** *string* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-unicast-address*

Context	**configure router** *string* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	End address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

drain *boolean*

Context	**configure router** *string* **nat outside pool** *string* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start or stop draining this NAT address range
Default	false
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **nat outside pool** *string*
Description	Administrative state of the outside NAT pool
Default	disable
Options	enable, disable
Introduced	16.0.R1

applications

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the applications context
Introduced	16.0.R1

agnostic *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat outside pool** *string* **applications**
Description	NAT pool to create in the outside routing context
Default	false
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **nat outside pool** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

l2-aware

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the l2-aware context
Introduced	16.0.R1

external-assignment *boolean*

Context	**configure router** *string* **nat outside pool** *string* **l2-aware**
Description	External IP address for Layer-2-aware
Default	false
Introduced	16.0.R1

large-scale

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the large-scale context
Introduced	16.0.R1

deterministic

Context	**configure router** *string* **nat outside pool** *string* **large-scale**
Description	Enter the deterministic context
Introduced	16.0.R1

port-reservation *number*

Context	**configure router** *string* **nat outside pool** *string* **large-scale deterministic**
Description	Number of ports per deterministic port-block
Range	1 to 65536
Introduced	16.0.R1

redundancy

Context	**configure router** *string* **nat outside pool** *string* **large-scale**
Description	Enter the redundancy context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy**
Description	Administrative state of multi-chassis redundancy
Default	disable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

export-route *ipv4-unicast-prefix*

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy**
Description	Route to export to the peer
Introduced	16.0.R1
Notes	This element is part of a choice

follow

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy**
Description	Enter the **follow** context
Introduced	16.0.R1

name *string*

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy follow**
Description	NAT pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy follow**
Description	The virtual router instance of the pool.
Introduced	16.0.R1
Notes	This element is part of a choice

monitor-route *ipv4-unicast-prefix*

Context	**configure router** *string* **nat outside pool** *string* **large-scale redundancy**
Description	Monitor the peer route
Introduced	16.0.R1
Notes	This element is part of a choice

subscriber-limit *number*

Context	**configure router** *string* **nat outside pool** *string* **large-scale**
Description	Maximum number of subscribers per IP address
Range	1 to 65535
Introduced	16.0.R1

mode *keyword*

Context	**configure router** *string* **nat outside pool** *string*
Description	Mode of operation of this NAT address pool
Options	auto, napt, one-to-one
Introduced	16.0.R1

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat outside pool** *string*
Description	Create a NAT group
Reference	configure **isa nat-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

port-forwarding

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the port-forwarding context
Introduced	16.0.R1

dynamic-block-reservation *boolean*

Context	**configure router** *string* **nat outside pool** *string* **port-forwarding**
Description	Dynamic block to reserve for each subscriber with a forwarding port
Default	false
Introduced	16.0.R1

range-end *number*

Context	**configure router** *string* **nat outside pool** *string* **port-forwarding**
Description	End of the wildcard range for port forwards
Range	0 | 1023 to 65535
Introduced	16.0.R1

port-reservation

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the port-reservation context
Introduced	16.0.R1

port-blocks *number*

Context	**configure router** *string* **nat outside pool** *string* **port-reservation**
Description	Number of dynamic port blocks per outside IP address
Range	1 to 64512
Introduced	16.0.R1
Notes	This element is part of a choice

ports *number*

Context	**configure router** *string* **nat outside pool** *string* **port-reservation**
Description	Number of ports in each dynamic port block within the pool
Range	1 to 32256
Introduced	16.0.R1
Notes	This element is part of a choice

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat outside pool** *string*
Description	NAT pool type
Options	large-scale, l2-aware, wlan-gw-anchor
Introduced	16.0.R1
Notes	This element is mandatory

watermarks

Context	**configure router** *string* **nat outside pool** *string*
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure router** *string* **nat outside pool** *string* **watermarks**
Description	Percentage for high watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure router** *string* **nat outside pool** *string* **watermarks**
Description	Percentage for low watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **nat outside pool** *string*
Description	Create a WLAN GW group for NAT
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

network-domains

Context	**configure router** *string*
Description	Enter the network-domains context
Introduced	16.0.R4

network-domain [domain-name] *string*

Context	**configure router** *string* **network-domains**
Description	Enter the network-domain context
Max. Elements	5
Introduced	16.0.R4

[domain-name] *string*

Context	**configure router** *string* **network-domains network-domain** *string*
Description	Specifies the network-domain name.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **network-domains network-domain** *string*
Description	Specifies a description for the network-domain.
String Length	1 to 80
Introduced	16.0.R4

ospf [ospf-instance] *number*

Context	**configure router** *string*
Description	Enter the ospf context
Max. Elements	32
Introduced	16.0.R1

[ospf-instance] *number*

Context	**configure router** *string* **ospf** *number*
Description	Value for the integrated OSPF instance
Range	0 to 31
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ospf** *number*
Description	Administrative state of the OSPF instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure router** *string* **ospf** *number*
Description	Allow router advertisement capabilities
Default	false
Options	false, link, area, as
Introduced	16.0.R1

advertise-tunnel-link *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Allow router advertisement capabilities
Default	false
Introduced	16.0.R1

area [area-id] *ipv4-address*

Context	**configure router** *string* **ospf** *number*
Description	Enter the area context
Introduced	16.0.R1

[area-id] *ipv4-address*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Area-ID attribute
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

area-range [ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **area-range** *ipv4-unicast-prefix*
Description	ip-prefix a.b.c.d (host bits must be 0) mask [0..32]
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **area-range** *ipv4-unicast-prefix*
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

blackhole-aggregate *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Install a low priority blackhole route to avoid loops
Default	true
Introduced	16.0.R1

database-export-exclude *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Exclude IGP link-state information of OSPF area from being exported into extended TE-DB
Default	false
Introduced	16.0.R1

export-policy *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Route that is exported as Type 3 Summary-LSAs or OSPFv3 Inter-Area-Prefix-LSA between areas
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import-policy *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Route that is imported as summary type 3/inter-area-prefix-LSA from another area into this area
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

adjacency-set [id] *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the adjacency-set context
Introduced	16.0.R1

[id] *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **adjacency-set** *string*
Description	Adjacency set identity
Reference	configure **router** *string* **ospf** *number* **segment-routing adjacency-set** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adjacency-sid

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the adjacency-sid context
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **adjacency-sid**
Description	Adjacency SID
Range	1 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

admin-state *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

advertise-subnet *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Advertise point-to-point interfaces as subnet routes
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Authentication key
String Length	1 to 38
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Configure TCP authentication keychain to use for the session
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Authentication type used on OSPF interface
Options	password, message-digest
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

remain-down-on-failure *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **bfd-liveness**
Description	Force adjacency down on BFD failure and remain down until BFD session returns
Default	false
Introduced	16.0.R1

dead-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

interface-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Interface type to broadcast or point-to-point
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1

loopfree-alternate

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the loopfree-alternate context
Introduced	16.0.R3

exclude *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enable/disable fast re-route capability for OSPF at interface level (only valid for primary interface)
Default	false
Introduced	16.0.R3

policy-map

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enter the policy-map context
Introduced	16.0.R1

route-nh-template *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsa-filter-out *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	LSA flooding reduction
Default	none
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Introduced	16.0.R1

message-digest-key [key-id] *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the message-digest-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **message-digest-key** *number*
Description	Message digest index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

md5 *encrypted-leaf*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **message-digest-key** *number*
Description	MD5 hash key
String Length	1 to 50
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Explicit route cost metric that is applied to the interface
Range	1 to 65535
Introduced	16.0.R1

mtu *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	MTU for the OSPF to use on the interface
Range	512 to 9198
Introduced	16.0.R1

neighbor [address] *ipv4-unicast-address*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the neighbor context
Introduced	16.0.R1

[address] *ipv4-unicast-address*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **neighbor** *ipv4-unicast-address*
Description	Neighbor address
Introduced	16.0.R1
Notes	This element is part of a list key

node-sid

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the node-sid context
Introduced	16.0.R1

clear-n-flag *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**
Description	Specifies whether the node-sid flag (N-flag) should be cleared.
Default	false
Introduced	16.0.R1

index *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**
Description	IPvX node SID index for this interface
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

label *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**
Description	Specifies IPvX node SID label for this interface.
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow interface to be advertised as an OSPF interface without running the OSPF protocol
Introduced	16.0.R1

poll-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between two Hello packets to a non-adjacent OSPF NBMA neighbor
Default	120
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Priority of the interface to apply in the designated router election on the subnet
Range	0 to 255
Default	1
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

rib-priority *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	RIB priority for OSPF
Options	high
Introduced	16.0.R1

sid-protection *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow adjacency SID protection by LFA and remote LFA
Default	true
Introduced	16.0.R1

transit-delay *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

loopfree-alternate-exclude *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Exclude specific interface or all interfaces participating in all OSPF areas in SPF LFA computation
Default	false
Introduced	16.0.R1

nssa

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Enter the nssa context
Introduced	16.0.R1

area-range [ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] *ipv4-unicast-prefix*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa area-range** *ipv4-unicast-prefix*
Description	ip-prefix a.b.c.d (host bits must be 0) mask [0..32]
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa area-range** *ipv4-unicast-prefix*
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

originate-default-route

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Enter the originate-default-route context
Introduced	16.0.R1

adjacency-check *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Default route to remove if there is no adjacency
Default	true
Introduced	16.0.R1

type-nssa *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Generate a default route using NSSA-LSA type
Default	false
Introduced	16.0.R1

redistribute-external *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Redistribute external routes into the NSSA
Default	true
Introduced	16.0.R1

summaries *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **nssa**
Description	Send summary (Type 3) LSAs into the NSSA on an ABR
Default	true
Introduced	16.0.R1

stub

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Enter the stub context
Introduced	16.0.R1

default-metric *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **stub**
Description	Metric used by the ABR for the default route into the stub area
Range	1 to 16777214
Default	1
Introduced	16.0.R1

summaries *boolean*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **stub**
Description	Send summary (Type 3) LSAs into the stub area on an ABR
Default	true
Introduced	16.0.R1

virtual-link [router-id] *ipv4-address* **transit-area** *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address*
Description	Enter the virtual-link context
Introduced	16.0.R1

[router-id] *ipv4-address*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Router identity of the virtual link neighbor
Introduced	16.0.R1
Notes	This element is part of a list key

transit-area *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Transit area that links backbone area to area without physical connection with the backbone
Reference	configure **router** *string* **ospf** *number* **area** *ipv4-address*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Authentication key
String Length	1 to 38
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Configure TCP authentication keychain to use for the session
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

authentication-type *keyword*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Authentication type used on OSPF interface
Options	password, message-digest
Introduced	16.0.R1

dead-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	60
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

message-digest-key [key-id] *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Enter the message-digest-key context
Introduced	16.0.R1

[key-id] *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string* **message-digest-key** *number*
Description	Message digest index
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

md5 *encrypted-leaf*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string* **message-digest-key** *number*
Description	key - [16 chars max] hash/hash2-key - [44 chars max] (for hash scheme)
String Length	1 to 50
Introduced	16.0.R4

retransmit-interval *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

transit-delay *number*

Context	**configure router** *string* **ospf** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

asbr

Context	**configure router** *string* **ospf** *number*
Description	Enter the asbr context
Introduced	16.0.R1

trace-path (*number* | *keyword*)

Context	**configure router** *string* **ospf** *number* **asbr**
Description	Domain identity
Range	0 to 31
Default	none
Options	none
Introduced	16.0.R1

compatible-rfc1583 *boolean*

Context	**configure router** *string* **ospf** *number*
Description	OSPF summary and external route calculations
Default	true
Introduced	16.0.R1

database-export

Context	**configure router** *string* **ospf** *number*
Description	Enter the database-export context
Introduced	16.0.R1

bgp-ls-identifier

Context **configure router** *string* **ospf** *number* **database-export**

Description Enter the bgp-ls-identifier context

Introduced 16.0.R1

value *number*

Context **configure router** *string* **ospf** *number* **database-export bgp-ls-identifier**

Description BGP-LS identifier that is sent in the BGP-LS NLRI

Default 0

Introduced 16.0.R1

igp-identifier *number*

Context **configure router** *string* **ospf** *number* **database-export**

Description Unique identifier for the IGP instance in the BGP-LS NLRI

Introduced 16.0.R4

entropy-label

Context **configure router** *string* **ospf** *number*

Description Enter the entropy-label context

Introduced 16.0.R1

override-tunnel-elc *boolean*

Context **configure router** *string* **ospf** *number* **entropy-label**

Description Received entropy label capability advertisement to override

Default false

Introduced 16.0.R1

export-limit

Context **configure router** *string* **ospf** *number*

Description Enter the export-limit context

Introduced 16.0.R1

log-percent *number*

Context	**configure router** *string* **ospf** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **ospf** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure router** *string* **ospf** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

external-db-overflow

Context	**configure router** *string* **ospf** *number*
Description	Enter the external-db-overflow context
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **ospf** *number* **external-db-overflow**
Description	Time during which the router operates in overload
Range	0 to 2147483647
Default	0
Units	seconds
Introduced	16.0.R1

limit *number*

Context	**configure router** *string* **ospf** *number* **external-db-overflow**
Description	Number of external LSA at which overload is triggered
Range	0 to 2147483647
Default	0
Introduced	16.0.R1

external-preference *number*

Context	**configure router** *string* **ospf** *number*
Description	Preference for OSPF external routes
Range	1 to 255
Default	150
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **ospf** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure router** *string* **ospf** *number* **graceful-restart**
Description	Enable graceful restart helper for OSPF
Default	true
Introduced	16.0.R1

strict-lsa-checking *boolean*

Context	**configure router** *string* **ospf** *number* **graceful-restart**
Description	Perform strict LSA checking during graceful restart helper
Default	true
Introduced	16.0.R1

igp-shortcut

Context	**configure router** *string* **ospf** *number*
Description	Enter the igp-shortcut context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ospf** *number* **igp-shortcut**
Description	Administrative state of the IGP shortcuts
Default	disable
Options	enable, disable
Introduced	16.0.R1

tunnel-next-hop

Context	**configure router** *string* **ospf** *number* **igp-shortcut**
Description	Enter the tunnel-next-hop context
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Address family type for tunnel next-hop
Options	ipv4, srv4
Introduced	16.0.R1
Notes	This element is part of a list key

resolution *keyword*

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Resolution state for IGP shortcut tunnels
Options	none, filter, any, match-family-ip
Introduced	16.0.R1

resolution-filter

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Enter the resolution-filter context
Introduced	16.0.R1

rsvp *boolean*

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use RSVP tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

sr-te *boolean*

Context	**configure router** *string* **ospf** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use SR-TE tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **ospf** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

ldp-over-rsvp *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Allow LSP over RSVP in this OSPF instance
Default	false
Introduced	16.0.R1

ldp-sync *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Use IGP-LDP synchronization feature on all interfaces participating in routing protocol
Default	true
Introduced	16.0.R1

loopfree-alternate

Context	**configure router** *string* **ospf** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure router** *string* **ospf** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure router** *string* **ospf** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

remote-lfa

Context	**configure router** *string* **ospf** *number* **loopfree-alternate**
Description	Enter the remote-lfa context
Introduced	16.0.R1

max-pq-cost *number*

Context	**configure router** *string* **ospf** *number* **loopfree-alternate remote-lfa**
Description	Maximum cost of a destination node during reverse SPF calculation
Default	65535
Introduced	16.0.R1

node-protect

Context	**configure router** *string* **ospf** *number* **loopfree-alternate remote-lfa**
Description	Enter the node-protect context
Introduced	16.0.R1

max-pq-nodes *number*

Context	**configure router** *string* **ospf** *number* **loopfree-alternate remote-lfa node-protect**
Description	Specifies the maximum number of PQ nodes.
Range	1 to 32
Default	16
Introduced	16.0.R4

ti-lfa

Context	**configure router** *string* **ospf** *number* **loopfree-alternate**
Description	Enter the ti-lfa context
Introduced	16.0.R1

max-sr-frr-labels *number*

Context	**configure router** *string* **ospf** *number* **loopfree-alternate ti-lfa**
Description	Maximum number of labels that TI-LFA backup next hop can use
Range	0 to 3
Default	2
Introduced	16.0.R1

node-protect

Context	**configure router** *string* **ospf** *number* **loopfree-alternate ti-lfa**
Description	Enter the node-protect context
Introduced	16.0.R1

multicast-import *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Submit routes into the multicast Route Table Manager
Default	false
Introduced	16.0.R1

overload *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Change overload state of the local router to appear to be overloaded
Default	false
Introduced	16.0.R1

overload-include-ext-2 *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Advertise external type-2 routes with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-include-stub *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Advertise all stub interfaces with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure router** *string* **ospf** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ospf** *number* **overload-on-boot**
Description	Time during which the router operates in overload state before reestablishing normal operations
Range	1 to 1800
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **ospf** *number*
Description	Preference for OSPF internal routes
Range	1 to 255
Default	10
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure router** *string* **ospf** *number*
Description	Bandwidth to reference the default costing of interfaces
Range	1 to 4000000000
Default	100000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context	**configure router** *string* **ospf** *number*
Description	Enter the rib-priority context
Introduced	16.0.R1

high

Context	**configure router** *string* **ospf** *number* **rib-priority**
Description	Enter the high context
Introduced	16.0.R1

prefix-list *string*

Context	**configure router** *string* **ospf** *number* **rib-priority high**
Description	List used to select routes processed at higher priority through OSPF route calculation process
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number*
Description	Unique router ID for OSPF instance
Introduced	16.0.R1

rtr-adv-lsa-limit

Context	**configure router** *string* **ospf** *number*
Description	Enter the rtr-adv-lsa-limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **ospf** *number* **rtr-adv-lsa-limit**
Description	Log the event, without triggering overload
Default	false
Introduced	16.0.R1

max-lsa-count *number*

Context	**configure router** *string* **ospf** *number* **rtr-adv-lsa-limit**
Description	Maximum number of LSAs allowed to be advertised by one router
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

overload-timeout (*number* | *keyword*)

Context	**configure router** *string* **ospf** *number* **rtr-adv-lsa-limit**
Description	Maximum timeout for overload when the maximum LSA count is reached
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure router** *string* **ospf** *number* **rtr-adv-lsa-limit**
Description	Percentage of the maximum LSA count at which a warning is given
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

segment-routing

Context	**configure router** *string* **ospf** *number*
Description	Enter the segment-routing context
Introduced	16.0.R1

adj-sid-hold (*number* | *keyword*)

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Adjacency SID hold time
Default	15
Units	seconds
Introduced	16.0.R1

adjacency-set [id] *number*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Enter the adjacency-set context
Introduced	16.0.R1

[id] *number*

Context	**configure router** *string* **ospf** *number* **segment-routing adjacency-set** *number*
Description	Non-zero identifier for a given adjacency set
Range	1 to max
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure router** *string* **ospf** *number* **segment-routing adjacency-set** *number*
Description	Advertise the adjacency set when all links terminate on the same neighboring node
Default	true
Introduced	16.0.R1

parallel *boolean*

Context	**configure router** *string* **ospf** *number* **segment-routing adjacency-set** *number*
Description	Require all members of the adjacency set to terminate on the same neighboring node
Default	true
Introduced	16.0.R1

sid

Context	**configure router** *string* **ospf** *number* **segment-routing adjacency-set** *number*
Description	Enter the sid context
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **ospf** *number* **segment-routing adjacency-set** *number* **sid**
Description	Adjacency SID
Range	1 to 1048575
Introduced	16.0.R1
Notes	This element is part of a choice

admin-state *keyword*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Administrative state of segment routing
Default	disable
Options	enable, disable
Introduced	16.0.R1

backup-node-sid

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Enter the backup-node-sid context
Introduced	16.0.R1

index *number*

Context	**configure router** *string* **ospf** *number* **segment-routing backup-node-sid**
Description	IPvX node SID index for this interface
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

ip-prefix *ipv4-unicast-prefix*

Context	**configure router** *string* **ospf** *number* **segment-routing backup-node-sid**
Description	IP prefix and prefix length for the backup-node-sid
Introduced	16.0.R1

label *number*

Context	**configure router** *string* **ospf** *number* **segment-routing backup-node-sid**
Description	Specifies IPvX node SID label for this interface.
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

entropy-label *boolean*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Entropy label capability
Default	true
Introduced	16.0.R1

export-tunnel-table *keyword*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Export tunnel table
Options	ldp
Introduced	16.0.R1

mapping-server

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Enter the mapping-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server**
Description	Administrative state of the OSPF segment routing mapping server
Default	disable
Options	enable, disable
Introduced	16.0.R1

node-sid-map [sid-index] *number*

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server**
Description	Enter the node-sid-map context
Introduced	16.0.R1

[sid-index] *number*

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Start SID index for the node SID mapping
Introduced	16.0.R1
Notes	This element is part of a list key

ip-prefix *ipv4-prefix*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Starting prefix of the mapping
Introduced	16.0.R1
Notes	This element is mandatory

range *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Number of prefixes to be mapped by the Extended Range Prefix TLV
Range	1 to 65535
Default	1
Introduced	16.0.R1

scope

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number*
Description	Enter the scope context
Introduced	16.0.R1

area *string*

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number* **scope**
Description	Area ID in which the advertise Extended Range TLV is advertised
Reference	configure **router** *string* **ospf** *number* **area** *ipv4-address*
Introduced	16.0.R1
Notes	This element is part of a choice

as

Context	**configure router** *string* **ospf** *number* **segment-routing mapping-server node-sid-map** *number* **scope**
Description	Advertise Extended Range TLV in whole autonomous system
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-sid-range

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Enter the prefix-sid-range context
Introduced	16.0.R1

global

Context	**configure router** *string* **ospf** *number* **segment-routing prefix-sid-range**
Description	Use global SR range
Introduced	16.0.R1
Notes	This element is part of a choice

max-index *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number* **segment-routing prefix-sid-range**
Description	Maximum local SID index
Range	1 to 524287
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

start-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf** *number* **segment-routing prefix-sid-range**
Description	Value for the local label starting offset
Range	0 to 524287
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

srlb *string*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Routing local block
Reference	configure **router** *string* **mpls-labels reserved-label-block** *string*
Introduced	16.0.R1

tunnel-mtu *number*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Tunnel MTU size
Range	512 to 9198
Introduced	16.0.R1

tunnel-table-pref *number*

Context	**configure router** *string* **ospf** *number* **segment-routing**
Description	Preference of SR tunnels created by the IGP instance
Range	1 to 255
Default	10
Introduced	16.0.R1

timers

Context	**configure router** *string* **ospf** *number*
Description	Enter the timers context
Introduced	16.0.R1

incremental-spf-wait *number*

Context	**configure router** *string* **ospf** *number* **timers**
Description	Delay time before an incremental SPF calculation is started
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-accumulate *number*

Context	**configure router** *string* **ospf** *number* **timers**
Description	Delay time for accumulating multiple LSAs before advertising them to neighbors
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-arrival *number*

Context	**configure router** *string* **ospf** *number* **timers**
Description	Minimum delay between receipt of the same LSAs arriving from neighbors
Range	0 to 600000
Default	1000
Introduced	16.0.R1

lsa-generate

Context	**configure router** *string* **ospf** *number* **timers**
Description	Enter the lsa-generate context
Introduced	16.0.R1

lsa-initial-wait *number*

Context	**configure router** *string* **ospf** *number* **timers lsa-generate**
Description	First waiting period between link state advertisements LSA originates
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsa-second-wait *number*

Context	**configure router** *string* **ospf** *number* **timers lsa-generate**
Description	Hold time between the first and second LSA generation
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

max-lsa-wait *number*

Context	**configure router** *string* **ospf** *number* **timers lsa-generate**
Description	Maximum time between two consecutive occurrences of an LSA being generated
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

redistribute-delay *number*

Context	**configure router** *string* **ospf** *number* **timers**
Description	Hold down timer for external routes that are redistributed in OSPF
Range	0 to 1000
Default	1000
Introduced	16.0.R1

spf-wait

Context	**configure router** *string* **ospf** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure router** *string* **ospf** *number* **timers spf-wait**
Description	Initial SPF calculation delay after a topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure router** *string* **ospf** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure router** *string* **ospf** *number* **timers spf-wait**
Description	Hold time between the first and second SPF calculation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

traffic-engineering *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Calculate traffic engineering route
Default	false
Introduced	16.0.R1

unicast-import *boolean*

Context	**configure router** *string* **ospf** *number*
Description	Submit routes into the unicast Route Table Manager
Default	true
Introduced	16.0.R1

ospf3 [ospf-instance] *number*

Context	**configure router** *string*
Description	Enter the ospf3 context
Max. Elements	32
Introduced	16.0.R1

[ospf-instance] *number*

Context	**configure router** *string* **ospf3** *number*
Description	Value for the integrated OSPF instance
Range	0 to 31 | 64 to 95
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ospf3** *number*
Description	Administrative state of the OSPF instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *keyword*

Context	**configure router** *string* **ospf3** *number*
Description	Allow router advertisement capabilities
Default	false
Options	false, link, area, as
Introduced	16.0.R1

area [area-id] *ipv4-address*

Context	**configure router** *string* **ospf3** *number*
Description	Enter the area context
Introduced	16.0.R1

[area-id] *ipv4-address*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Area-ID attribute
Introduced	16.0.R1
Notes	This element is part of a list key

advertise-router-capability *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

area-range [ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address ranges to create on an ABR for route summarization or suppression
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

blackhole-aggregate *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Install a low priority blackhole route to avoid loops
Default	true
Introduced	16.0.R1

database-export-exclude *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Exclude IGP link-state information of OSPF area from being exported into extended TE-DB
Default	false
Introduced	16.0.R1

export-policy *string*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Route that is exported as Type 3 Summary-LSAs or OSPFv3 Inter-Area-Prefix-LSA between areas
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

extended-lsa *keyword*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Extended LSA format in an OSPFv3 area
Options	only
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Route that is imported as summary type 3/inter-area-prefix-LSA from another area into this area
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-router-capability *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow router advertisement capabilities
Default	true
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

remain-down-on-failure *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **bfd-liveness**
Description	Force adjacency down on BFD failure and remain down until BFD session returns
Default	false
Introduced	16.0.R1

dead-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	40
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

interface-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Interface type to broadcast or point-to-point
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1

loopfree-alternate

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the loopfree-alternate context
Introduced	16.0.R3

exclude *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enable/disable fast re-route capability for OSPF at interface level (only valid for primary interface)
Default	false
Introduced	16.0.R3

policy-map

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate**
Description	Enter the policy-map context
Introduced	16.0.R1

route-nh-template *string*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **loopfree-alternate policy-map**
Description	Route next hop policy template that is applied to interface
Reference	configure **routing-options route-next-hop-policy template** *string*
Introduced	16.0.R3
Notes	This element is mandatory

lsa-filter-out *keyword*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	LSA flooding reduction
Default	none
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Explicit route cost metric that is applied to the interface
Range	1 to 65535
Introduced	16.0.R1

mtu *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	MTU for the OSPF to use on the interface
Range	512 to 9198
Introduced	16.0.R1

neighbor [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Enter the neighbor context
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **neighbor** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Neighbor link local address
Introduced	16.0.R1
Notes	This element is part of a list key

node-sid

Context **configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Enter the node-sid context

Introduced 16.0.R1

clear-n-flag *boolean*

Context **configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**

Description

Default false

Introduced 16.0.R1

index *number*

Context **configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**

Description IPvX node SID index for this interface

Range 0 to 4294967295

Introduced 16.0.R1

Notes This element is part of a choice

label *number*

Context **configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name* **node-sid**

Description IPvX node SID index for this interface

Range 1 to 4294967295

Introduced 16.0.R4

Notes This element is part of a choice

passive *boolean*

Context **configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*

Description Allow interface to be advertised as an OSPF interface without running the OSPF protocol

Introduced 16.0.R1

poll-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time between two Hello packets to a non-adjacent OSPF NBMA neighbor
Default	120
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Priority of the interface to apply in the designated router election on the subnet
Range	0 to 255
Default	1
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

rib-priority *keyword*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	RIB priority for OSPF
Options	high
Introduced	16.0.R1

sid-protection *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Allow adjacency SID protection by LFA and remote LFA
Default	true
Introduced	16.0.R1

transit-delay *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **interface** *interface-name*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

key-rollover-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Key rollover interval
Range	10 to 300
Default	10
Units	seconds
Introduced	16.0.R1

loopfree-alternate-exclude *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Exclude specific interface or all interfaces participating in all OSPF areas in SPF LFA computation
Default	false
Introduced	16.0.R1

nssa

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Enter the nssa context
Introduced	16.0.R1

area-range [ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Enter the area-range context
Introduced	16.0.R1

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address ranges to create on an ABR for route summarization or suppression
Introduced	16.0.R1
Notes	This element is part of a list key

advertise *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa area-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise summarized range of addresses to other areas
Default	true
Introduced	16.0.R1

originate-default-route

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Enter the originate-default-route context
Introduced	16.0.R1

adjacency-check *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Default route to remove if there is no adjacency
Default	true
Introduced	16.0.R1

type-nssa *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa originate-default-route**
Description	Generate a default route using NSSA-LSA type
Default	false
Introduced	16.0.R1

redistribute-external *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Redistribute external routes into the NSSA
Default	true
Introduced	16.0.R1

summaries *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **nssa**
Description	Send summary (Type 3) LSAs into the NSSA on an ABR
Default	true
Introduced	16.0.R1

stub

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Enter the stub context
Introduced	16.0.R1

default-metric *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **stub**
Description	Metric used by the ABR for the default route into the stub area
Range	1 to 16777214
Default	1
Introduced	16.0.R1

summaries *boolean*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **stub**
Description	Send summary (Type 3) LSAs into the stub area on an ABR
Default	true
Introduced	16.0.R1

virtual-link [router-id] *ipv4-address* **transit-area** *string*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address*
Description	Enter the virtual-link context
Introduced	16.0.R1

[router-id] *ipv4-address*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Router ID of the virtual link neighbor
Introduced	16.0.R1
Notes	This element is part of a list key

transit-area *string*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Transit area that links backbone area to area without physical connection with the backbone
Reference	configure **router** *string* **ospf3** *number* **area** *ipv4-address*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Administrative state of the OSPF
Default	enable
Options	enable, disable
Introduced	16.0.R1

dead-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Range	2 to 65535
Default	60
Units	seconds
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time between OSPF Hellos of this interface
Range	1 to 65535
Default	10
Units	seconds
Introduced	16.0.R1

retransmit-interval *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Range	1 to 1800
Default	5
Units	seconds
Introduced	16.0.R1

transit-delay *number*

Context	**configure router** *string* **ospf3** *number* **area** *ipv4-address* **virtual-link** *ipv4-address* **transit-area** *string*
Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Range	1 to 1800
Default	1
Units	seconds
Introduced	16.0.R1

asbr

Context	**configure router** *string* **ospf3** *number*
Description	Enter the asbr context
Introduced	16.0.R1

database-export

Context	**configure router** *string* **ospf3** *number*
Description	Enter the database-export context
Introduced	16.0.R1

bgp-ls-identifier

Context	**configure router** *string* **ospf3** *number* **database-export**
Description	Enter the bgp-ls-identifier context
Introduced	16.0.R1

value *number*

Context	**configure router** *string* **ospf3** *number* **database-export bgp-ls-identifier**
Description	BGP-LS identifier that is sent in the BGP-LS NLRI
Default	0
Introduced	16.0.R1

igp-identifier *number*

Context	**configure router** *string* **ospf3** *number* **database-export**
Description	Specifies the value of the unique identifier of the IGP instance in the BGP-LS NLRI.
Introduced	16.0.R4

export-limit

Context	**configure router** *string* **ospf3** *number*
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure router** *string* **ospf3** *number* **export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R1

number *number*

Context	**configure router** *string* **ospf3** *number* **export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

export-policy *string*

Context	**configure router** *string* **ospf3** *number*
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

extended-lsa *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf3** *number*
Description	Extended LSA format in an OSPFv3 area
Default	sparse
Options	sparse, only
Introduced	16.0.R1

external-db-overflow

Context	**configure router** *string* **ospf3** *number*
Description	Enter the external-db-overflow context
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **ospf3** *number* **external-db-overflow**
Description	Time during which the router operates in overload
Range	0 to 2147483647
Default	0
Units	seconds
Introduced	16.0.R1

limit *number*

Context	**configure router** *string* **ospf3** *number* **external-db-overflow**
Description	Number of external LSA at which overload is triggered
Range	0 to 2147483647
Default	0
Introduced	16.0.R1

external-preference *number*

Context	**configure router** *string* **ospf3** *number*
Description	Preference for OSPF external routes
Range	1 to 255
Default	150
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **ospf3** *number*
Description	Enter the graceful-restart context
Introduced	16.0.R1

helper-mode *boolean*

Context	**configure router** *string* **ospf3** *number* **graceful-restart**
Description	Enable graceful restart helper for OSPF
Default	true
Introduced	16.0.R1

strict-lsa-checking *boolean*

Context	**configure router** *string* **ospf3** *number* **graceful-restart**
Description	Perform strict LSA checking during graceful restart helper
Default	true
Introduced	16.0.R1

igp-shortcut

Context	**configure router** *string* **ospf3** *number*
Description	Enter the igp-shortcut context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut**
Description	Administrative state of the IGP shortcuts
Default	disable
Options	enable, disable
Introduced	16.0.R1

tunnel-next-hop

Context	**configure router** *string* **ospf3** *number* **igp-shortcut**
Description	Enter the tunnel-next-hop context
Introduced	16.0.R1

family [family-type] *keyword*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Specifies the address family for tunnel next hop.
Options	ipv4, ipv6, srv4, srv6
Introduced	16.0.R1
Notes	This element is part of a list key

resolution *keyword*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Resolution state for IGP shortcut tunnels
Options	none, filter, any, match-family-ip
Introduced	16.0.R1

resolution-filter

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop family** *keyword*
Description	Enter the resolution-filter context
Introduced	16.0.R1

rsvp *boolean*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use RSVP tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

sr-te *boolean*

Context	**configure router** *string* **ospf3** *number* **igp-shortcut tunnel-next-hop family** *keyword* **resolution-filter**
Description	Use SR-TE tunneling for next-hop resolution
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure router** *string* **ospf3** *number*
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

ldp-sync *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Use IGP-LDP synchronization feature on all interfaces participating in routing protocol
Default	true
Introduced	16.0.R1

loopfree-alternate

Context	**configure router** *string* **ospf3** *number*
Description	Enter the loopfree-alternate context
Introduced	16.0.R1

exclude

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate**
Description	Enter the exclude context
Introduced	16.0.R3

prefix-policy *string*

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate exclude**
Description	Loopfree Alternative (LFA) exclude policies from which prefixes are excluded. Prefixes excluded from LFA this way will not be used in the LFA calculation, regardless of their priority.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R3
Notes	This element is ordered by user

remote-lfa

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate**
Description	Enter the remote-lfa context
Introduced	16.0.R1

max-pq-cost *number*

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate remote-lfa**
Description	Maximum cost of a destination node during reverse SPF calculation
Default	65535
Introduced	16.0.R1

ti-lfa

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate**
Description	Enter the ti-lfa context
Introduced	16.0.R1

max-sr-frr-labels *number*

Context	**configure router** *string* **ospf3** *number* **loopfree-alternate ti-lfa**
Description	Maximum number of labels that TI-LFA backup next hop can use
Range	0 to 3
Default	2
Introduced	16.0.R1

multicast-import *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Submit routes into the multicast Route Table Manager
Default	false
Introduced	16.0.R1

overload *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Change overload state of the local router to appear to be overloaded
Default	false
Introduced	16.0.R1

overload-include-ext-2 *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Advertise external type-2 routes with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-include-stub *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Advertise all stub interfaces with maximum metric value in cases of overload
Default	false
Introduced	16.0.R1

overload-on-boot

Context	**configure router** *string* **ospf3** *number*
Description	Enter the overload-on-boot context
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **ospf3** *number* **overload-on-boot**
Description	Time during which the router operates in overload state before reestablishing normal operations
Range	60 to 1800
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure router** *string* **ospf3** *number*
Description	Preference for OSPF internal routes
Range	1 to 255
Default	10
Introduced	16.0.R1

reference-bandwidth *number*

Context	**configure router** *string* **ospf3** *number*
Description	Bandwidth to reference the default costing of interfaces
Range	1 to 4000000000
Default	100000000
Units	kilobps
Introduced	16.0.R1

rib-priority

Context	**configure router** *string* **ospf3** *number*
Description	Enter the rib-priority context
Introduced	16.0.R1

high

Context	**configure router** *string* **ospf3** *number* **rib-priority**
Description	Enter the high context
Introduced	16.0.R1

prefix-list *string*

Context	**configure router** *string* **ospf3** *number* **rib-priority high**
Description	List used to select routes processed at higher priority through OSPF route calculation process
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1

router-id *router-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf3** *number*
Description	Unique router ID for OSPF instance
Introduced	16.0.R1

rtr-adv-lsa-limit

Context	**configure router** *string* **ospf3** *number*
Description	Enter the rtr-adv-lsa-limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure router** *string* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Log the event, without triggering overload
Default	false
Introduced	16.0.R1

max-lsa-count *number*

Context	**configure router** *string* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Maximum number of LSAs allowed to be advertised by one router
Range	1 to max
Introduced	16.0.R1
Notes	This element is mandatory

overload-timeout (*number* | *keyword*)

Context	**configure router** *string* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Maximum timeout for overload when the maximum LSA count is reached
Default	forever
Introduced	16.0.R1

warning-threshold *number*

Context	**configure router** *string* **ospf3** *number* **rtr-adv-lsa-limit**
Description	Percentage of the maximum LSA count at which a warning is given
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

segment-routing

Context	**configure router** *string* **ospf3** *number*
Description	Enter the segment-routing context
Introduced	16.0.R1

adj-sid-hold (*number* | *keyword*)

Context **configure router** *string* **ospf3** *number* **segment-routing**

Description Adjacency SID hold time

Default 15

Units seconds

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **ospf3** *number* **segment-routing**

Description Administrative state of segment routing

Default disable

Options enable, disable

Introduced 16.0.R1

prefix-sid-range

Context **configure router** *string* **ospf3** *number* **segment-routing**

Description Enter the prefix-sid-range context

Introduced 16.0.R1

global

Context **configure router** *string* **ospf3** *number* **segment-routing prefix-sid-range**

Description Use global SR range

Introduced 16.0.R1

Notes This element is part of a choice

max-index *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf3** *number* **segment-routing prefix-sid-range**
Description	Maximum local SID index
Range	1 to 524287
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

start-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **ospf3** *number* **segment-routing prefix-sid-range**
Description	Value for the local label starting offset
Range	0 to 524287
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

tunnel-mtu *number*

Context	**configure router** *string* **ospf3** *number* **segment-routing**
Description	Tunnel MTU size
Range	512 to 9198
Introduced	16.0.R1

tunnel-table-pref *number*

Context	**configure router** *string* **ospf3** *number* **segment-routing**
Description	Preference of SR tunnels created by the IGP instance
Range	1 to 255
Default	10
Introduced	16.0.R1

timers

Context	**configure router** *string* **ospf3** *number*
Description	Enter the timers context
Introduced	16.0.R1

incremental-spf-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Delay time before an incremental SPF calculation is started
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-accumulate *number*

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Delay time for accumulating multiple LSAs before advertising them to neighbors
Range	0 to 1000
Default	1000
Introduced	16.0.R1

lsa-arrival *number*

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Minimum delay between receipt of the same LSAs arriving from neighbors
Range	0 to 600000
Default	1000
Introduced	16.0.R1

lsa-generate

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Enter the lsa-generate context
Introduced	16.0.R1

lsa-initial-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers lsa-generate**
Description	First waiting period between link state advertisements LSA originates
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

lsa-second-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers lsa-generate**
Description	Hold time between the first and second LSA generation
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

max-lsa-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers lsa-generate**
Description	Maximum time between two consecutive occurrences of an LSA being generated
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1

redistribute-delay *number*

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Hold down timer for external routes that are redistributed in OSPF
Range	0 to 1000
Default	1000
Introduced	16.0.R1

spf-wait

Context	**configure router** *string* **ospf3** *number* **timers**
Description	Enter the spf-wait context
Introduced	16.0.R1

spf-initial-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers spf-wait**
Description	Initial SPF calculation delay after a topology change
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

spf-max-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers spf-wait**
Description	Maximum interval between two consecutive SPF calculations
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1

spf-second-wait *number*

Context	**configure router** *string* **ospf3** *number* **timers spf-wait**
Description	Hold time between the first and second SPF calculation
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1

unicast-import *boolean*

Context	**configure router** *string* **ospf3** *number*
Description	Submit routes into the unicast Route Table Manager
Default	true
Introduced	16.0.R1

pcep

Context	**configure router** *string*
Description	Enter the pcep context
Introduced	16.0.R1

pcc

Context	**configure router** *string* **pcep**
Description	Enter the pcc context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pcep pcc**
Description	Administrative state
Default	disable
Options	enable, disable
Introduced	16.0.R1

dead-timer *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pcc**
Description	Configure dead timer
Range	1 to 255
Default	120
Units	seconds
Introduced	16.0.R1

keepalive *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pcc**
Description	Configure keepalive
Range	1 to 255
Default	30
Units	seconds
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pcc**
Description	Configure local IP
Introduced	16.0.R1

max-srte-pce-init-lsps *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pcc**
Description	Configure max sr te pce init LSP
Range	0 to 8191
Default	8191
Introduced	16.0.R5

peer [ip-address] *ipv4-unicast-address*

Context	**configure router** *string* **pcep pcc**
Description	Enter the peer context
Max. Elements	2
Introduced	16.0.R1

[ip-address] *ipv4-unicast-address*

Context	**configure router** *string* **pcep pcc peer** *ipv4-unicast-address*
Description	This value specifies the address of the PCE peer
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **pcep pcc peer** *ipv4-unicast-address*
Description	Administrative state of PCC peer
Default	disable
Options	enable, disable
Introduced	16.0.R1

preference *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **pcep pcc peer** *ipv4-unicast-address*
Description	The value indicates the preference value of this peer. If higher preference PCE is unavailable or not connected, PCE with the next preference is used.
Range	0 to 100
Default	0
Introduced	16.0.R1

redelegation-timer *number*

Context	**configure router** *string* **pcep pcc**
Description	Configure redelegation-timer
Range	1 to 3600
Default	90
Units	seconds
Introduced	16.0.R1

report-path-constraints *boolean*

Context	**configure router** *string* **pcep pcc**
Description	Specify whether to enable/disable path constraints in PCC report
Default	true
Introduced	16.0.R1

state-timer

Context	**configure router** *string* **pcep pcc**
Description	Enter the state-timer context
Introduced	16.0.R1

timer *number*

Context	**configure router** *string* **pcep pcc state-timer**
Description	Configure state-timer
Range	1 to 3600
Default	180
Units	seconds
Introduced	16.0.R1

timer-action *keyword*

Context	**configure router** *string* **pcep pcc state-timer**
Description	State timer action remove/none
Default	remove
Options	none, remove
Introduced	16.0.R1

unknown-message-rate *number*

Context	**configure router** *string* **pcep pcc**
Description	Configure unknown message rate
Range	1 to 255
Default	10
Introduced	16.0.R1

pce

Context	**configure router** *string* **pcep**
Description	Enter the pce context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pcep pce**
Description	Administrative state
Default	disable
Options	enable, disable
Introduced	16.0.R1

dead-timer *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pce**
Description	Configure dead timer
Range	1 to 255
Default	120
Units	seconds
Introduced	16.0.R1

keepalive *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pce**
Description	Configure keepalive
Range	1 to 255
Default	30
Units	seconds
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **pcep pce**
Description	Configure local IP
Introduced	16.0.R1

unknown-message-rate *number*

Context	**configure router** *string* **pcep pce**
Description	Configure unknown message rate
Range	1 to 255
Default	10
Introduced	16.0.R1

pcp

Context	**configure router** *string*
Description	Enter the pcp context
Introduced	16.0.R1

server [name] *string*

Context	**configure router** *string* **pcp**
Description	Enter the server context
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **pcp server** *string*
Description	PCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **pcp server** *string*
Description	Administrative state of this PCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **pcp server** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dual-stack-lite-address *ipv6-unicast-address*

Context	**configure router** *string* **pcp server** *string*
Description	Inside Dual Stack Lite AFTR address
Introduced	16.0.R1

fwd-inside-router *string*

Context	**configure router** *string* **pcp server** *string*
Description	PCP forwarding inside virtual router instance
Introduced	16.0.R1

interface [name] *string*

Context	**configure router** *string* **pcp server** *string*
Description	Enter the interface context
Max. Elements	32
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **pcp server** *string* **interface** *string*
Description	Interface name
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

policy *string*

Context	**configure router** *string* **pcp server** *string*
Description	PCP server policy
Reference	configure **service nat pcp-server-policy** *string*
Introduced	16.0.R1

pim

Context	**configure router** *string*
Description	Enter the pim context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim**
Description	Administrative state of PIM
Default	enable
Options	enable, disable
Introduced	16.0.R1

apply-to *keyword*

Context	**configure router** *string* **pim**
Description	IES and non-IES interfaces to create in PIM
Default	none
Options	ies, non-ies, all, none
Introduced	16.0.R1

import

Context	**configure router** *string* **pim**
Description	Enter the import context
Introduced	16.0.R1

join-policy *string*

Context	**configure router** *string* **pim import**
Description	Character limit for policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

register-policy *string*

Context	**configure router** *string* **pim import**
Description	Character limit for policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

interface [interface-name] *interface-name*

Context	**configure router** *string* **pim**
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Administrative state of this interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

assert-period *number*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Time for periodic refreshes of PIM Assert messages on an interface
Range	1 to 300
Default	60
Introduced	16.0.R1

bfd-liveness

Context	**configure router** *string* **pim interface** *interface-name*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **pim interface** *interface-name* **bfd-liveness**
Description	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **pim interface** *interface-name* **bfd-liveness**
Description	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Default	false
Introduced	16.0.R1

bsm-check-rtr-alert *boolean*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Check router alert option in bootstrap messages received
Default	false
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Frequency at which PIM Hello messages are sent over this interface
Range	0 to 255
Default	30
Introduced	16.0.R1

hello-multiplier *number*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Multiplier of Hello in multiples of 0.1
Range	20 to 100
Default	35
Introduced	16.0.R1

improved-assert *boolean*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Allow improved assert processing on interface
Default	true
Introduced	16.0.R1

instant-prune-echo *boolean*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Default	false
Introduced	16.0.R1

ipv4

Context	**configure router** *string* **pim interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

monitor-oper-group

Context	**configure router** *string* **pim interface** *interface-name* **ipv4**
Description	Enter the monitor-oper-group context
Introduced	16.0.R1

name *string*

Context **configure router** *string* **pim interface** *interface-name* **ipv4 monitor-oper-group**

Description Operational group to monitor for address family

Reference configure **service oper-group** *string*

Introduced 16.0.R1

operation *keyword*

Context **configure router** *string* **pim interface** *interface-name* **ipv4 monitor-oper-group**

Description Perform given operation when oper-group is active.

Options add, subtract, set

Introduced 16.0.R1

priority-delta *number*

Context **configure router** *string* **pim interface** *interface-name* **ipv4 monitor-oper-group**

Description Delta priority with operation when operational group is active

Range 1 to 4294967295

Introduced 16.0.R1

multicast *boolean*

Context **configure router** *string* **pim interface** *interface-name* **ipv4**

Description Enable PIM interface operation

Default true

Introduced 16.0.R1

ipv6

Context **configure router** *string* **pim interface** *interface-name*

Description Enter the ipv6 context

Introduced 16.0.R1

monitor-oper-group

Context **configure router** *string* **pim interface** *interface-name* **ipv6**
Description Enter the monitor-oper-group context
Introduced 16.0.R1

name *string*

Context **configure router** *string* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description Operational group to monitor for address family
Reference configure **service oper-group** *string*
Introduced 16.0.R1

operation *keyword*

Context **configure router** *string* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description Perform given operation when oper-group is active.
Options add, subtract, set
Introduced 16.0.R1

priority-delta *number*

Context **configure router** *string* **pim interface** *interface-name* **ipv6 monitor-oper-group**
Description Delta priority with operation when operational group is active
Range 1 to 4294967295
Introduced 16.0.R1

multicast *boolean*

Context **configure router** *string* **pim interface** *interface-name* **ipv6**
Description Enable PIM interface operation
Default true
Introduced 16.0.R1

max-groups *number*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Max number of groups for which PIM can have local receiver information based on received PIM reports
Range	0 | 1 to 16000
Default	0
Introduced	16.0.R1

mcac

Context	**configure router** *string* **pim interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context	**configure router** *string* **pim interface** *interface-name* **mcac**
Description	Enter the bandwidth context
Introduced	16.0.R1

mandatory (*number* | *keyword*)

Context	**configure router** *string* **pim interface** *interface-name* **mcac bandwidth**
Description	Pre-reserved bandwidth for all mandatory channels.
Introduced	16.0.R1

total (*number* | *keyword*)

Context	**configure router** *string* **pim interface** *interface-name* **mcac bandwidth**
Description	Maximum allowed bandwidth.
Introduced	16.0.R1

interface-policy *string*

Context	**configure router** *string* **pim interface** *interface-name* **mcac**
Description	Name for multicast CAC interface policy
Reference	configure **mcac interface-policy** *string*
Introduced	16.0.R1

mc-constraints

Context **configure router** *string* **pim interface** *interface-name* **mcac**
Description Enter the mc-constraints context
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **pim interface** *interface-name* **mcac mc-constraints**
Description Administrative state of constraint for multicast CAC policy
Default enable
Options enable, disable
Introduced 16.0.R1

level [level-id] *number*

Context **configure router** *string* **pim interface** *interface-name* **mcac mc-constraints**
Description Enter the level context
Introduced 16.0.R1

[level-id] *number*

Context **configure router** *string* **pim interface** *interface-name* **mcac mc-constraints level** *number*
Description Bandwidth level ID for a multicast CAC constraint
Range 1 to 8
Introduced 16.0.R1
Notes This element is part of a list key

bandwidth *number*

Context **configure router** *string* **pim interface** *interface-name* **mcac mc-constraints level** *number*
Description Bandwidth available for this level
Range 0 to 2147483647
Introduced 16.0.R1
Notes This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure router** *string* **pim interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure router** *string* **pim interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure router** *string* **pim interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure router** *string* **pim interface** *interface-name* **mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure router** *string* **pim interface** *interface-name* **mcac**
Description	Multicast CAC policy name
Reference	configure **mcac policy** *string*
Introduced	16.0.R1

multicast-senders *keyword*

Context	**configure router** *string* **pim interface** *interface-name*
Description	Subnet matching for the incoming data packets
Default	auto
Options	auto, always, never
Introduced	16.0.R1

p2mp-ldp-tree-join

Context	**configure router** *string* **pim interface** *interface-name*
Description	Enter the p2mp-ldp-tree-join context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure router** *string* **pim interface** *interface-name* **p2mp-ldp-tree-join**
Description	Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure router** *string* **pim interface** *interface-name* **p2mp-ldp-tree-join**
Description	Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Default	false
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **pim interface** *interface-name*
Description	DR election priority for this interface
Range	1 to max
Default	1
Introduced	16.0.R1

sticky-dr

Context **configure router** *string* **pim interface** *interface-name*

Description Enter the sticky-dr context

Introduced 16.0.R1

priority *number*

Context **configure router** *string* **pim interface** *interface-name* **sticky-dr**

Description DR election priority for this interface

Range 1 to max

Default 1024

Introduced 16.0.R1

three-way-hello *boolean*

Context **configure router** *string* **pim interface** *interface-name*

Description Allow three-way hello compatibility mode

Default false

Introduced 16.0.R1

tracking-support *boolean*

Context **configure router** *string* **pim interface** *interface-name*

Description Allow upstream routers to explicitly track join membership

Default false

Introduced 16.0.R1

ipv4

Context **configure router** *string* **pim**

Description Enter the ipv4 context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim ipv4**
Description	Administrative state of PIM operation for IPv4
Default	enable
Options	enable, disable
Introduced	16.0.R1

gtm

Context	**configure router** *string* **pim ipv4**
Description	Enter the gtm context
Introduced	16.0.R1

auto-discovery *keyword*

Context	**configure router** *string* **pim ipv4 gtm**
Description	Method for multicast VPN membership auto-discovery
Options	bgp
Introduced	16.0.R1

multicast-fast-failover *boolean*

Context	**configure router** *string* **pim ipv4**
Description	Use Multicast-Only Fast Reroute (MoFRR) functionality
Default	false
Introduced	16.0.R1

rpf-table *keyword*

Context	**configure router** *string* **pim ipv4**
Description	Route table(s) for the Reverse Path Forwarding (RPF) lookup
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1

ssm-assert-compatible-mode *boolean*

Context	**configure router** *string* **pim ipv4**
Description	Enable SSM assert compatible mode
Default	false
Introduced	16.0.R1

ssm-default-range *boolean*

Context	**configure router** *string* **pim ipv4**
Description	SSM default range
Default	true
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **pim**
Description	Enter the ipv6 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim ipv6**
Description	Administrative state of PIM operation for IPv6
Default	disable
Options	enable, disable
Introduced	16.0.R1

multicast-fast-failover *boolean*

Context	**configure router** *string* **pim ipv6**
Description	Use Multicast-Only Fast Reroute (MoFRR) functionality
Default	false
Introduced	16.0.R1

rpf-table *keyword*

Context	**configure router** *string* **pim ipv6**
Description	Route table(s) for the Reverse Path Forwarding (RPF) lookup
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1

ssm-default-range *boolean*

Context	**configure router** *string* **pim ipv6**
Description	SSM default range
Default	true
Introduced	16.0.R1

lag-usage-optimization *boolean*

Context	**configure router** *string* **pim**
Description	Optimize LAG usage
Default	false
Introduced	16.0.R1

mc-ecmp-balance *boolean*

Context	**configure router** *string* **pim**
Description	Enable multicast balancing of traffic over ECMP links
Default	true
Introduced	16.0.R1

mc-ecmp-balance-hold *number*

Context	**configure router** *string* **pim**
Description	Hold time for multicast balancing over ECMP links
Range	2 to 600
Units	minutes
Introduced	16.0.R1

mc-ecmp-hashing

Context	**configure router** *string* **pim**
Description	Enter the mc-ecmp-hashing context
Introduced	16.0.R1

rebalance *boolean*

Context	**configure router** *string* **pim mc-ecmp-hashing**
Description	Rebalance flows to newly added links immediately instead of waiting until they are pruned
Default	false
Introduced	16.0.R1

mdt-spt *boolean*

Context	**configure router** *string* **pim**
Description	Use SPT switchover for default MDT
Default	false
Introduced	16.0.R1

non-dr-attract-traffic *boolean*

Context	**configure router** *string* **pim**
Description	Attract traffic when the router is not the designated one
Default	false
Introduced	16.0.R1

rp

Context	**configure router** *string* **pim**
Description	Enter the rp context
Introduced	16.0.R1

bootstrap

Context	**configure router** *string* **pim rp**
Description	Enter the bootstrap context
Introduced	16.0.R1

export *string*

Context	**configure router** *string* **pim rp bootstrap**
Description	Character limit for policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

import *string*

Context	**configure router** *string* **pim rp bootstrap**
Description	Character limit for policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

ipv4

Context	**configure router** *string* **pim rp**
Description	Enter the ipv4 context
Introduced	16.0.R1

anycast [ipv4-address] *ipv4-unicast-address* **rp-set-peer** *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4**
Description	Enter the anycast context
Introduced	16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4 anycast** *ipv4-unicast-address* **rp-set-peer** *ipv4-unicast-address*
Description	Anycast RP address
Introduced	16.0.R1
Notes	This element is part of a list key

rp-set-peer *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4 anycast** *ipv4-unicast-address* **rp-set-peer** *ipv4-unicast-address*
Description	Configure a peer in the anycast rp-set.
Introduced	16.0.R1
Notes	This element is part of a list key

auto-rp-discovery *boolean*

Context	**configure router** *string* **pim rp ipv4**
Description	Enable auto RP discovery
Default	false
Introduced	16.0.R1

bsr-candidate

Context	**configure router** *string* **pim rp ipv4**
Description	Enter the bsr-candidate context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4 bsr-candidate**
Description	Static bootstrap address of the router
Default	0.0.0.0
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim rp ipv4 bsr-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

hash-mask-len *number*

Context **configure router** *string* **pim rp ipv4 bsr-candidate**
Description Length for bootstrap hash mask
Range 0 to 32
Default 30
Introduced 16.0.R1

priority *number*

Context **configure router** *string* **pim rp ipv4 bsr-candidate**
Description Bootstrap priority of the router
Range 0 to 255
Default 0
Introduced 16.0.R1

rp-candidate

Context **configure router** *string* **pim rp ipv4**
Description Enter the rp-candidate context
Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure router** *string* **pim rp ipv4 rp-candidate**
Description Bootstrap address of router
Default 0.0.0.0
Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **pim rp ipv4 rp-candidate**
Description Administrative state for participation of router in bootstrap election
Default disable
Options enable, disable
Introduced 16.0.R1

group-range [ipv4-prefix] *ipv4-multicast-prefix*

Context **configure router** *string* **pim rp ipv4 rp-candidate**

Description Enter the group-range context

Introduced 16.0.R1

[ipv4-prefix] *ipv4-multicast-prefix*

Context **configure router** *string* **pim rp ipv4 rp-candidate group-range** *ipv4-multicast-prefix*

Description IPv4 address and mask

Introduced 16.0.R1

Notes This element is part of a list key

holdtime *number*

Context **configure router** *string* **pim rp ipv4 rp-candidate**

Description Time during which the neighboring router considers this router to be up

Range 5 to 255

Default 150

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure router** *string* **pim rp ipv4 rp-candidate**

Description Candidate RP priority

Range 0 to 255

Default 192

Introduced 16.0.R1

static

Context **configure router** *string* **pim rp ipv4**

Description Enter the static context

Introduced 16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4 static**
Description	Enter the address context
Introduced	16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure router** *string* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Configure the address of the statically configured RP.
Introduced	16.0.R1
Notes	This element is part of a list key

group-prefix [ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure router** *string* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Enter the group-prefix context
Introduced	16.0.R1

[ipv4-prefix] *ipv4-multicast-prefix*

Context	**configure router** *string* **pim rp ipv4 static address** *ipv4-unicast-address* **group-prefix** *ipv4-multicast-prefix*
Description	IPv4 address and mask
Introduced	16.0.R1
Notes	This element is part of a list key

override *boolean*

Context	**configure router** *string* **pim rp ipv4 static address** *ipv4-unicast-address*
Description	Change the precedence for static RP over dynamically learnt RP
Default	false
Introduced	16.0.R1

ipv6

Context	**configure router** *string* **pim rp**
Description	Enter the ipv6 context
Introduced	16.0.R1

anycast [ipv6-address] *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6**
Description	Enter the anycast context
Introduced	16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 anycast** *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*
Description	Anycast RP address
Introduced	16.0.R1
Notes	This element is part of a list key

rp-set-peer *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 anycast** *ipv6-unicast-address* **rp-set-peer** *ipv6-unicast-address*
Description	Configure a peer in the anycast rp-set.
Introduced	16.0.R1
Notes	This element is part of a list key

bsr-candidate

Context	**configure router** *string* **pim rp ipv6**
Description	Enter the bsr-candidate context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 bsr-candidate**
Description	Bootstrap address of router
Default	::
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim rp ipv6 bsr-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

hash-mask-len *number*

Context	**configure router** *string* **pim rp ipv6 bsr-candidate**
Description	Length for bootstrap hash mask
Range	0 to 128
Default	126
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **pim rp ipv6 bsr-candidate**
Description	Bootstrap priority of the router
Range	0 to 255
Default	0
Introduced	16.0.R1

embedded-rp

Context	**configure router** *string* **pim rp ipv6**
Description	Enter the embedded-rp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim rp ipv6 embedded-rp**
Description	Administrative state of embedded RP
Default	disable
Options	enable, disable
Introduced	16.0.R1

group-range [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 embedded-rp**
Description	Enter the group-range context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 embedded-rp group-range** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

rp-candidate

Context	**configure router** *string* **pim rp ipv6**
Description	Enter the rp-candidate context
Introduced	16.0.R1

address *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 rp-candidate**
Description	Bootstrap address of router
Default	::
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **pim rp ipv6 rp-candidate**
Description	Administrative state for participation of router in bootstrap election
Default	disable
Options	enable, disable
Introduced	16.0.R1

group-range [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 rp-candidate**
Description	Enter the group-range context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 rp-candidate group-range** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

holdtime *number*

Context	**configure router** *string* **pim rp ipv6 rp-candidate**
Description	Time during which the neighboring router considers this router to be up
Range	5 to 255
Default	150
Units	seconds
Introduced	16.0.R1

priority *number*

Context	**configure router** *string* **pim rp ipv6 rp-candidate**
Description	Candidate RP priority
Range	0 to 255
Default	192
Introduced	16.0.R1

static

Context	**configure router** *string* **pim rp ipv6**
Description	Enter the static context
Introduced	16.0.R1

address [ipv6-address] *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 static**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context	**configure router** *string* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Configure the address of the statically configured RP.
Introduced	16.0.R1
Notes	This element is part of a list key

group-prefix [ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Enter the group-prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-multicast-prefix*

Context	**configure router** *string* **pim rp ipv6 static address** *ipv6-unicast-address* **group-prefix** *ipv6-multicast-prefix*
Description	IPv6 address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

override *boolean*

Context	**configure router** *string* **pim rp ipv6 static address** *ipv6-unicast-address*
Description	Change the precedence for static RP over dynamically learnt RP
Default	false
Introduced	16.0.R1

rpfv

Context	**configure router** *string* **pim**
Description	Enter the rpfv context
Introduced	16.0.R1

core *boolean*

Context	**configure router** *string* **pim rpfv**
Description	Include proxy RPF vector for core
Default	false
Introduced	16.0.R1

mvpn *boolean*

Context	**configure router** *string* **pim rpfv**
Description	Include proxy RPF vector for Inter-AS Rosen MVPN
Default	false
Introduced	16.0.R1

spt-switchover [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **pim**
Description	Enter the spt-switchover context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **pim spt-switchover** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

threshold (*number* | *keyword*)

Context	**configure router** *string* **pim spt-switchover** (*ipv4-prefix* | *ipv6-prefix*)
Description	SPT switchover threshold
Range	1 to 4294967294
Units	kilobps
Options	infinity
Introduced	16.0.R1
Notes	This element is mandatory

ssm-groups

Context	**configure router** *string* **pim**
Description	Enter the ssm-groups context
Introduced	16.0.R1

group-range [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **pim ssm-groups**
Description	Enter the group-range context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **pim ssm-groups group-range** (*ipv4-prefix* | *ipv6-prefix*)
Description	IP address and mask length
Introduced	16.0.R1
Notes	This element is part of a list key

radius

Context	**configure router** *string*
Description	Enter the radius context
Introduced	16.0.R1

proxy [name] *string*

Context	**configure router** *string* **radius**
Description	Enter the proxy context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **radius proxy** *string*
Description	RADIUS proxy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **radius proxy** *string*
Description	Administrative state of RADIUS proxy
Default	disable
Options	enable, disable
Introduced	16.0.R1

attribute-matching

Context	**configure router** *string* **radius proxy** *string*
Description	Enter the attribute-matching context
Introduced	16.0.R1

entry [index] *number*

Context	**configure router** *string* **radius proxy** *string* **attribute-matching**
Description	Enter the entry context
Introduced	16.0.R1

[index] *number*

Context	**configure router** *string* **radius proxy** *string* **attribute-matching entry** *number*
Description	Index of this entry
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-server-policy *string*

Context **configure router** *string* **radius proxy** *string* **attribute-matching entry** *number*

Description Accounting server policy

String Length 1 to 32

Introduced 16.0.R1

authentication-server-policy *string*

Context **configure router** *string* **radius proxy** *string* **attribute-matching entry** *number*

Description Authentication server policy

String Length 1 to 32

Introduced 16.0.R1

prefix-string *string*

Context **configure router** *string* **radius proxy** *string* **attribute-matching entry** *number*

Description Prefix string

String Length 1 to 128

Introduced 16.0.R1

suffix-string *string*

Context **configure router** *string* **radius proxy** *string* **attribute-matching entry** *number*

Description Prefix string

String Length 1 to 128

Introduced 16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **attribute-matching**

Description Matching attribute type to RADIUS server policy

Range 1 to 255

Introduced 16.0.R1

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **attribute-matching**

Description Matching Vendor ID to RADIUS server policy

Introduced 16.0.R1

cache

Context **configure router** *string* **radius proxy** *string*

Description Enter the cache context

Introduced 16.0.R1

admin-state *keyword*

Context **configure router** *string* **radius proxy** *string* **cache**

Description Administrative state of the RADIUS proxy cache

Default disable

Options enable, disable

Introduced 16.0.R1

key

Context **configure router** *string* **radius proxy** *string* **cache**

Description Enter the key context

Introduced 16.0.R1

attribute-type *number*

Context **configure router** *string* **radius proxy** *string* **cache key**

Description RADIUS attribute type to cache for this RADIUS proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is mandatory

packet-type *keyword*

Context	**configure router** *string* **radius proxy** *string* **cache key**
Description	Packet type of the RADIUS messages to generate the key for the cache of this RADIUS proxy server
Options	access-request, access-accept
Introduced	16.0.R1
Notes	This element is mandatory

vendor (*number* | *keyword*)

Context	**configure router** *string* **radius proxy** *string* **cache key**
Description	RADIUS Vendor ID
Introduced	16.0.R1

timeout *number*

Context	**configure router** *string* **radius proxy** *string* **cache**
Description	Idle timeout value
Range	60 to 3600
Default	300
Introduced	16.0.R1

track-accounting

Context	**configure router** *string* **radius proxy** *string* **cache**
Description	Enter the track-accounting context
Introduced	16.0.R1

accounting-off *boolean*

Context	**configure router** *string* **radius proxy** *string* **cache track-accounting**
Description	Remove all ESM hosts associated with the RADIUS client
Default	false
Introduced	16.0.R1

accounting-on *boolean*

Context	**configure router** *string* **radius proxy** *string* **cache track-accounting**
Description	Remove all ESM hosts associated with the RADIUS client
Default	false
Introduced	16.0.R1

interim-update *boolean*

Context	**configure router** *string* **radius proxy** *string* **cache track-accounting**
Description	Update the ESM host with the RADIUS client that generated the interim update
Default	false
Introduced	16.0.R1

start *boolean*

Context	**configure router** *string* **radius proxy** *string* **cache track-accounting**
Description	Update the ESM host with the RADIUS client that generated the accounting-start
Default	false
Introduced	16.0.R1

stop *boolean*

Context	**configure router** *string* **radius proxy** *string* **cache track-accounting**
Description	Remove the ESM host and forward the accounting-stop packet to the external RADIUS server
Default	false
Introduced	16.0.R1

track-authentication

Context	**configure router** *string* **radius proxy** *string* **cache**
Description	Enter the track-authentication context
Introduced	16.0.R1

accept *boolean*

Context **configure router** *string* **radius proxy** *string* **cache track-authentication**

Description Track Access-Accept message for mobility

Default true

Introduced 16.0.R1

track-delete-hold-time *number*

Context **configure router** *string* **radius proxy** *string* **cache**

Description Delete hold time

Range 0 to 6000

Default 0

Introduced 16.0.R1

defaults

Context **configure router** *string* **radius proxy** *string*

Description Enter the defaults context

Introduced 16.0.R1

accounting-server-policy *string*

Context **configure router** *string* **radius proxy** *string* **defaults**

Description Default accounting RADIUS server policy

String Length 1 to 32

Introduced 16.0.R1

authentication-server-policy *string*

Context **configure router** *string* **radius proxy** *string* **defaults**

Description Default authentication RADIUS server policy

String Length 1 to 32

Introduced 16.0.R1

description *string*

Context	**configure router** *string* **radius proxy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

interface [interface-name] *interface-name*

Context	**configure router** *string* **radius proxy** *string*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **radius proxy** *string* **interface** *interface-name*
Description	Specifies the interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

load-balance-key

Context	**configure router** *string* **radius proxy** *string*
Description	Enter the load-balance-key context
Introduced	16.0.R1

attribute-1

Context	**configure router** *string* **radius proxy** *string* **load-balance-key**
Description	Enter the **attribute-1** context
Introduced	16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-1**
Description Attribute type to cache for this RADIUS Proxy server
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-1**
Description Vendor-Id attribute
Introduced 16.0.R1
Notes This element is part of a choice

attribute-2

Context **configure router** *string* **radius proxy** *string* **load-balance-key**
Description Enter the **attribute-2** context
Introduced 16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-2**
Description Attribute type to cache for this RADIUS Proxy server
Range 1 to 255
Introduced 16.0.R1
Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-2**
Description Vendor-Id attribute
Introduced 16.0.R1
Notes This element is part of a choice

attribute-3

Context **configure router** *string* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-3** context

Introduced 16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-3**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-3**

Description Vendor-Id attribute

Introduced 16.0.R1

Notes This element is part of a choice

attribute-4

Context **configure router** *string* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-4** context

Introduced 16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-4**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-4**

Description Vendor-Id attribute

Introduced 16.0.R1

Notes This element is part of a choice

attribute-5

Context **configure router** *string* **radius proxy** *string* **load-balance-key**

Description Enter the **attribute-5** context

Introduced 16.0.R1

type *number*

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-5**

Description Attribute type to cache for this RADIUS Proxy server

Range 1 to 255

Introduced 16.0.R1

Notes This element is part of a choice

vendor (*number* | *keyword*)

Context **configure router** *string* **radius proxy** *string* **load-balance-key attribute-5**

Description Vendor-Id attribute

Introduced 16.0.R1

Notes This element is part of a choice

source-ip-udp

Context **configure router** *string* **radius proxy** *string* **load-balance-key**

Description Key to consist of the source IP address and source UDP port of the RADIUS message

Introduced 16.0.R1

Notes This element is part of a choice

purpose *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **radius proxy** *string*
Description	Purpose of the RADIUS proxy
Options	accounting, authentication, accounting-authentication
Introduced	16.0.R1
Notes	This element is mandatory

python-policy *string*

Context	**configure router** *string* **radius proxy** *string*
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure router** *string* **radius proxy** *string*
Description	Format of the secret key to access the RADIUS proxy server
String Length	1 to 114
Introduced	16.0.R1

send-accounting-response *boolean*

Context	**configure router** *string* **radius proxy** *string*
Description	Allow RADIUS proxy server to respond to Accounting-Response messages
Default	false
Introduced	16.0.R1

wlan-gw

Context	**configure router** *string* **radius proxy** *string*
Description	Enter the wlan-gw context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure router** *string* **radius proxy** *string* **wlan-gw**
Description	IP address of this RADIUS proxy server
Introduced	16.0.R1

ipv6-address *ipv6-unicast-address*

Context	**configure router** *string* **radius proxy** *string* **wlan-gw**
Description	IPv6 address of this RADIUS proxy server
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **radius proxy** *string*
Description	ISA WLAN gateway group
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

server [name] *string*

Context	**configure router** *string* **radius**
Description	Enter the server context
Max. Elements	64
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **radius server** *string*
Description	RADIUS server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

accept-coa *boolean*

Context	**configure router** *string* **radius server** *string*
Description	Allow the server to send Change of Authorization (CoA) messages
Default	false
Introduced	16.0.R1

acct-port *number*

Context	**configure router** *string* **radius server** *string*
Description	UDP port number of the RADIUS for accounting events
Range	1 to 65535
Default	1813
Introduced	16.0.R1

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **radius server** *string*
Description	IP address for server
Introduced	16.0.R1
Notes	This element is mandatory

auth-port *number*

Context	**configure router** *string* **radius server** *string*
Description	UDP port number of the RADIUS to be used as match criteria
Range	1 to 65535
Default	1812
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **radius server** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

pending-requests-limit *number*

Context	**configure router** *string* **radius server** *string*
Description	Limit of the number for pending RADIUS requests
Range	1 to 4096
Default	4096
Introduced	16.0.R1

python-policy *string*

Context	**configure router** *string* **radius server** *string*
Description	Python script policy to modify CoA messages
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure router** *string* **radius server** *string*
Description	Secret key associated with this RADIUS server
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is mandatory

reassembly

Context	**configure router** *string*
Description	Enter the reassembly context
Introduced	16.0.R1

nat-group *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **reassembly**
Description	NAT group (including WLAN Gateway group) that executes the reassembly
Introduced	16.0.R1
Notes	This element is mandatory

rib-api

Context	**configure router** *string*
Description	Enter the rib-api context
Introduced	16.0.R1

mpls

Context	**configure router** *string* **rib-api**
Description	Enter the mpls context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **rib-api mpls**
Description	Administrative state of mpls.
Default	disable
Options	enable, disable
Introduced	16.0.R1

label-name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **rib-api mpls**
Description	Configure reserved label block.
Reference	configure **router** *string* **mpls-labels reserved-label-block** *string*
Introduced	16.0.R1

rip

Context	**configure router** *string*
Description	Enter the rip context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure router** *string* **rip**
Description	Administratively enable/disable the RIP instance.
Default	enable
Options	enable, disable
Introduced	16.0.R4

authentication-key *encrypted-leaf*

Context	**configure router** *string* **rip**
Description	Authentication or hash key string.
String Length	1 to 50
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure router** *string* **rip**
Description	Authentication type to be used.
Default	none
Options	none, password, md5, md20
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **rip**
Description	Enable BFD monitoring of RIP peers.
Default	false
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **rip**
Description	Check for zero values in must-be-zero fields.
Default	false
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **rip**
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-limit

Context	**configure router** *string* **rip**
Description	Enter the export-limit context
Introduced	16.0.R4

log-percent *number*

Context	**configure router** *string* **rip export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R4

number *number*

Context	**configure router** *string* **rip export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R4
Notes	This element is mandatory

export-policy *string*

Context	**configure router** *string* **rip**
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

group [group-name] *string*

Context	**configure router** *string* **rip**
Description	Enter the group context
Introduced	16.0.R4

[group-name] *string*

Context	**configure router** *string* **rip group** *string*
Description	RIP group name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **rip group** *string*
Description	Administratively enable/disable the group.
Default	enable
Options	enable, disable
Introduced	16.0.R4

authentication-key *encrypted-leaf*

Context	**configure router** *string* **rip group** *string*
Description	Authentication or hash key string.
String Length	1 to 50
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure router** *string* **rip group** *string*
Description	Authentication type to be used.
Options	none, password, md5, md20
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **rip group** *string*
Description	Enable BFD monitoring of RIP peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **rip group** *string*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **rip group** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure router** *string* **rip group** *string*
Description	Apply export policies used to determine routes advertised to group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure router** *string* **rip group** *string*
Description	Apply import policies used to determine routes accepted from group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **rip group** *string*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **rip group** *string*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure router** *string* **rip group** *string*
Description	Metric added to routes exported into RIP.
Range	1 to 16
Introduced	16.0.R4

neighbor [interface-name] *interface-name*

Context	**configure router** *string* **rip group** *string*
Description	Enter the neighbor context
Introduced	16.0.R4

[interface-name] *interface-name*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Administratively enable/disable the neighbor.
Default	enable
Options	enable, disable
Introduced	16.0.R4

authentication-key *encrypted-leaf*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Authentication or hash key string.
String Length	1 to 50
Introduced	16.0.R4

authentication-type *keyword*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Authentication type to be used.
Options	none, password, md5, md20
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Enable BFD monitoring of RIP peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Apply export policies used to determine routes advertised to peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Apply import policies used to determine routes accepted from peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context **configure router** *string* **rip group** *string* **neighbor** *interface-name*

Description Metric added to routes exported into RIP.

Range 1 to 16

Introduced 16.0.R4

preference *number*

Context **configure router** *string* **rip group** *string* **neighbor** *interface-name*

Description Route preference.

Range 1 to 255

Introduced 16.0.R4

receive *keyword*

Context **configure router** *string* **rip group** *string* **neighbor** *interface-name*

Description Accepted version on received packets.

Options version-1, version-2, both, none

Introduced 16.0.R4

send *keyword*

Context **configure router** *string* **rip group** *string* **neighbor** *interface-name*

Description RIP version and method used to send RIP updates.

Options none, version-1, broadcast, multicast, unicast

Introduced 16.0.R4

split-horizon *boolean*

Context **configure router** *string* **rip group** *string* **neighbor** *interface-name*

Description Enable split-horizon.

Introduced 16.0.R4

timers

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

unicast-address [address] *ipv4-unicast-address*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name*
Description	Enter the unicast-address context
Introduced	16.0.R4

[address] *ipv4-unicast-address*

Context	**configure router** *string* **rip group** *string* **neighbor** *interface-name* **unicast-address** *ipv4-unicast-address*
Description	Create a unicast-address for the neighbor.
Introduced	16.0.R4
Notes	This element is part of a list key

preference *number*

Context	**configure router** *string* **rip group** *string*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure router** *string* **rip group** *string*
Description	Accepted version on received packets.
Options	version-1, version-2, both, none
Introduced	16.0.R4

send *keyword*

Context	**configure router** *string* **rip group** *string*
Description	RIP version and method used to send RIP updates.
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure router** *string* **rip group** *string*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure router** *string* **rip group** *string*
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure router** *string* **rip group** *string* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **rip group** *string* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **rip group** *string* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

import-policy *string*

Context	**configure router** *string* **rip**
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **rip**
Description	Maximum number of routes in message.
Range	25 to 255
Default	25
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **rip**
Description	Metric added to routes from neighbor.
Range	1 to 16
Default	1
Introduced	16.0.R4

metric-out *number*

Context	**configure router** *string* **rip**
Description	Metric added to routes exported into RIP.
Range	1 to 16
Default	1
Introduced	16.0.R4

preference *number*

Context	**configure router** *string* **rip**
Description	Route preference.
Range	1 to 255
Default	100
Introduced	16.0.R4

receive *keyword*

Context	**configure router** *string* **rip**
Description	Accepted version on received packets.
Default	both
Options	version-1, version-2, both, none
Introduced	16.0.R4

send *keyword*

Context	**configure router** *string* **rip**
Description	RIP version and method used to send RIP updates.
Default	broadcast
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure router** *string* **rip**
Description	Enable split-horizon.
Default	true
Introduced	16.0.R4

timers

Context	**configure router** *string* **rip**
Description	Enter the timers context
Introduced	16.0.R4

flush *number*

Context	**configure router** *string* **rip timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **rip timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **rip timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

ripng

Context	**configure router** *string*
Description	Enter the ripng context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure router** *string* **ripng**
Description	Administratively enable/disable the RIPng instance.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **ripng**
Description	Enable BFD monitoring of RIPng peers.
Default	false
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **ripng**
Description	Check for zero values in must-be-zero fields.
Default	false
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **ripng**
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-limit

Context	**configure router** *string* **ripng**
Description	Enter the export-limit context
Introduced	16.0.R1

log-percent *number*

Context	**configure router** *string* **ripng export-limit**
Description	Export limit at which warning a log message and SNMP notification are sent
Range	1 to 100
Introduced	16.0.R4

number *number*

Context	**configure router** *string* **ripng export-limit**
Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Range	1 to max
Introduced	16.0.R4
Notes	This element is mandatory

export-policy *string*

Context	**configure router** *string* **ripng**
Description	Configure names of export policies to be used for determining which routes are exported from the routing table to this IGP.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

group [group-name] *string*

Context	**configure router** *string* **ripng**
Description	Enter the group context
Introduced	16.0.R4

[group-name] *string*

Context	**configure router** *string* **ripng group** *string*
Description	RIP group name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ripng group** *string*
Description	Administratively enable/disable the group.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **ripng group** *string*
Description	Enable BFD monitoring of RIPng peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **ripng group** *string*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **ripng group** *string*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure router** *string* **ripng group** *string*
Description	Apply export policies used to determine routes advertised to group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure router** *string* **ripng group** *string*
Description	Apply import policies used to determine routes accepted from group peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **ripng group** *string*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **ripng group** *string*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure router** *string* **ripng group** *string*
Description	Metric added to routes exported into RIPng.
Range	1 to 16
Introduced	16.0.R4

neighbor [interface-name] *interface-name*

Context	**configure router** *string* **ripng group** *string*
Description	Enter the neighbor context
Introduced	16.0.R4

[interface-name] *interface-name*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Administratively enable/disable the neighbor.
Default	enable
Options	enable, disable
Introduced	16.0.R4

bfd-liveness *boolean*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Enable BFD monitoring of RIPng peers.
Introduced	16.0.R4

check-zero *boolean*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Check for zero values in must-be-zero fields.
Introduced	16.0.R4

description *string*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Text description.
String Length	1 to 80
Introduced	16.0.R4

export-policy *string*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Apply export policies used to determine routes advertised to peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

import-policy *string*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Apply import policies used to determine routes accepted from peers.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Maximum number of routes in message.
Range	25 to 255
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Metric added to routes from neighbor.
Range	1 to 16
Introduced	16.0.R4

metric-out *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Metric added to routes exported into RIPng.
Range	1 to 16
Introduced	16.0.R4

preference *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Accepted version on received packets.
Options	none, ripng
Introduced	16.0.R4

send *keyword*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	RIPng version and method used to send RIPng updates.
Options	none, ripng, unicast
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

unicast-address [address] *ipv6-unicast-address*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name*
Description	Enter the unicast-address context
Introduced	16.0.R4

[address] *ipv6-unicast-address*

Context	**configure router** *string* **ripng group** *string* **neighbor** *interface-name* **unicast-address** *ipv6-unicast-address*
Description	Create a unicast-address for the neighbor.
Introduced	16.0.R4
Notes	This element is part of a list key

preference *number*

Context	**configure router** *string* **ripng group** *string*
Description	Route preference.
Range	1 to 255
Introduced	16.0.R4

receive *keyword*

Context	**configure router** *string* **ripng group** *string*
Description	Accepted version on received packets.
Options	none, ripng
Introduced	16.0.R4

send *keyword*

Context	**configure router** *string* **ripng group** *string*
Description	RIPng version and method used to send RIPng updates.
Options	none, ripng
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure router** *string* **ripng group** *string*
Description	Enable split-horizon.
Introduced	16.0.R4

timers

Context	**configure router** *string* **ripng group** *string*
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure router** *string* **ripng group** *string* **timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **ripng group** *string* **timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **ripng group** *string* **timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

import-policy *string*

Context	**configure router** *string* **ripng**
Description	Configure names of import policies to be used for determining which routes are imported from this IGP to the routing table.
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R4
Notes	This element is ordered by user

message-size *number*

Context	**configure router** *string* **ripng**
Description	Maximum number of routes in message.
Range	25 to 255
Default	25
Introduced	16.0.R4

metric-in *number*

Context	**configure router** *string* **ripng**
Description	Metric added to routes from neighbor.
Range	1 to 16
Default	1
Introduced	16.0.R4

metric-out *number*

Context	**configure router** *string* **ripng**
Description	Metric added to routes exported into RIPng.
Range	1 to 16
Default	1
Introduced	16.0.R4

preference *number*

Context	**configure router** *string* **ripng**
Description	Route preference.
Range	1 to 255
Default	100
Introduced	16.0.R4

receive *keyword*

Context	**configure router** *string* **ripng**
Description	Accepted version on received packets.
Default	ripng
Options	none, ripng
Introduced	16.0.R4

send *keyword*

Context	**configure router** *string* **ripng**
Description	RIPng version and method used to send RIPng updates.
Default	ripng
Options	none, ripng
Introduced	16.0.R4

split-horizon *boolean*

Context	**configure router** *string* **ripng**
Description	Enable split-horizon.
Default	true
Introduced	16.0.R4

timers

Context	**configure router** *string* **ripng**
Description	Enter the timers context
Introduced	16.0.R1

flush *number*

Context	**configure router** *string* **ripng timers**
Description	Controls the time a route remains in the routing table since it was declared invalid.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

timeout *number*

Context	**configure router** *string* **ripng timers**
Description	Controls the amount of time before a route will be declared invalid in the routing table since the last time it was received from the peer.
Range	1 to 1200
Introduced	16.0.R4
Notes	This element is mandatory

update *number*

Context	**configure router** *string* **ripng timers**
Description	Controls how often updates are sent.
Range	1 to 600
Introduced	16.0.R4
Notes	This element is mandatory

router-id *router-id*

Context	**configure router** *string*
Description	Unique router ID for the router in the Autonomous System
Introduced	16.0.R1

rsvp

Context	**configure router** *string*
Description	Enter the rsvp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **rsvp**
Description	Administrative state of RSVP
Default	disable
Options	enable, disable
Introduced	16.0.R1

dbw-accounting

Context	**configure router** *string* **rsvp**
Description	Enter the dbw-accounting context
Introduced	16.0.R1

dbw-multiplier *number*

Context	**configure router** *string* **rsvp dbw-accounting**
Description	Dark Bandwidth multiplier
Range	0 to 1000
Default	100
Units	percent
Introduced	16.0.R1

down-threshold

Context	**configure router** *string* **rsvp dbw-accounting**
Description	Enter the down-threshold context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **rsvp dbw-accounting down-threshold**
Description	Minimum absolute difference between dark bandwidth and sampled data rate to trigger IGP-TE update
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **rsvp dbw-accounting down-threshold**
Description	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Range	0 to 100
Default	0
Introduced	16.0.R1

sample-interval *number*

Context	**configure router** *string* **rsvp dbw-accounting**
Description	Dark Bandwidth sample interval
Range	10 to 600
Default	30
Units	seconds
Introduced	16.0.R1

sample-multiplier *number*

Context	**configure router** *string* **rsvp dbw-accounting**
Description	Dark Bandwidth sample multiplier
Range	1 to 10
Default	3
Introduced	16.0.R1

up-threshold

Context	**configure router** *string* **rsvp dbw-accounting**
Description	Enter the up-threshold context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **rsvp dbw-accounting up-threshold**
Description	Minimum absolute difference between dark bandwidth and sampled data rate to trigger IGP-TE update
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **rsvp dbw-accounting up-threshold**
Description	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Range	0 to 100
Default	0
Introduced	16.0.R1

diffserv-te

Context	**configure router** *string* **rsvp**
Description	Enter the diffserv-te context
Introduced	16.0.R1

admission-control-model *keyword*

Context	**configure router** *string* **rsvp diffserv-te**
Description	Parameters for the DiffServ TE node
Options	mam, rdm
Introduced	16.0.R1
Notes	This element is mandatory

class-type-bw

Context	**configure router** *string* **rsvp diffserv-te**
Description	Enter the class-type-bw context
Introduced	16.0.R1

ct0 *number*

Context	**configure router** *string* **rsvp diffserv-te class-type-bw**
Description	Percentage of RSVP interface bandwidth for class type (CT) 0
Range	0 to 100
Default	0
Introduced	16.0.R1

ct1 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**

Description Percentage of RSVP interface bandwidth for class type (CT) 1

Range 0 to 100

Default 0

Introduced 16.0.R1

ct2 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**

Description Percentage of RSVP interface bandwidth for class type (CT) 2

Range 0 to 100

Default 0

Introduced 16.0.R1

ct3 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**

Description Percentage of RSVP interface bandwidth for class type (CT) 3

Range 0 to 100

Default 0

Introduced 16.0.R1

ct4 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**

Description Percentage of RSVP interface bandwidth for class type (CT) 4

Range 0 to 100

Default 0

Introduced 16.0.R1

ct5 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**
Description Percentage of RSVP interface bandwidth for class type (CT) 5
Range 0 to 100
Default 0
Introduced 16.0.R1

ct6 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**
Description Percentage of RSVP interface bandwidth for class type (CT) 6
Range 0 to 100
Default 0
Introduced 16.0.R1

ct7 *number*

Context **configure router** *string* **rsvp diffserv-te class-type-bw**
Description Percentage of RSVP interface bandwidth for class type (CT) 7
Range 0 to 100
Default 0
Introduced 16.0.R1

fc [fc-name] *keyword*

Context **configure router** *string* **rsvp diffserv-te**
Description Enter the fc context
Introduced 16.0.R1

[fc-name] *keyword*

Context **configure router** *string* **rsvp diffserv-te fc** *keyword*
Description Forwarding class for this mapping
Options be, l2, af, l1, h2, ef, h1, nc
Introduced 16.0.R1
Notes This element is part of a list key

class-type *number*

Context	**configure router** *string* **rsvp diffserv-te fc** *keyword*
Description	Diff-Serv Class Type (CT) for an LSP
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

te-class [te-class-number] *number*

Context	**configure router** *string* **rsvp diffserv-te**
Description	Enter the te-class context
Introduced	16.0.R1

[te-class-number] *number*

Context	**configure router** *string* **rsvp diffserv-te te-class** *number*
Description	Unique value that identifies the TE class.
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a list key

class-type *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **rsvp diffserv-te te-class** *number*
Description	Class type (CT) associated with the TE class
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

priority *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **rsvp diffserv-te te-class** *number*
Description	TE class priority
Range	0 to 7
Introduced	16.0.R1
Notes	This element is mandatory

entropy-label-capability *boolean*

Context	**configure router** *string* **rsvp**
Description	Allow receiving and processing of the entropy label and ELI on incoming packets of RSVP LSPs
Default	false
Introduced	16.0.R1

graceful-restart

Context	**configure router** *string* **rsvp**
Description	Enter the graceful-restart context
Introduced	16.0.R1

max-recovery *number*

Context	**configure router** *string* **rsvp graceful-restart**
Description	Maximum time to wait before a graceful helper recovers the session
Range	1 to 1800
Default	300
Units	seconds
Introduced	16.0.R1

max-restart *number*

Context	**configure router** *string* **rsvp graceful-restart**
Description	Maximum time that a graceful helper waits for session restart after the neighbor is considered down
Range	1 to 300
Default	120
Units	seconds
Introduced	16.0.R1

graceful-shutdown *boolean*

Context	**configure router** *string* **rsvp**
Description	Initiate a graceful shutdown of all RSVP interfaces on the node
Default	false
Introduced	16.0.R1

implicit-null-label *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **rsvp**
Description	Signal the implicit null option for all RSVP LSPs
Default	false
Introduced	16.0.R1

include-node-id-in-rro *boolean*

Context	**configure router** *string* **rsvp**
Description	Include the node-id sub-object in the RRO (Record Route Object) on the RSVP instance
Default	false
Introduced	16.0.R1

interface [interface-name] *string*

Context	**configure router** *string* **rsvp**
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *string*

Context	**configure router** *string* **rsvp interface** *string*
Description	Index for router RSVP interface
Reference	configure **router** *string* **interface** *interface-name*
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **rsvp interface** *string*
Description	Administrative state of RSVP on the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure router** *string* **rsvp interface** *string*
Description	Authentication or hash key string
String Length	1 to 50
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure router** *string* **rsvp interface** *string*
Description	Configure TCP authentication keychain to use for the session.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

bfd-liveness *boolean*

Context	**configure router** *string* **rsvp interface** *string*
Description	Enable BFD
Default	false
Introduced	16.0.R1

class-type-bw

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the class-type-bw context
Introduced	16.0.R1

ct0 *number*

Context	**configure router** *string* **rsvp interface** *string* **class-type-bw**
Description	Percentage of link bandwidth for class type (CT) 0
Range	0 to 100
Introduced	16.0.R1

ct1 *number*

Context	**configure router** *string* **rsvp interface** *string* **class-type-bw**
Description	Percentage of link bandwidth for class type (CT) 1
Range	0 to 100
Introduced	16.0.R1

ct2 *number*

Context	**configure router** *string* **rsvp interface** *string* **class-type-bw**
Description	Percentage of link bandwidth for class type (CT) 2
Range	0 to 100
Introduced	16.0.R1

ct3 *number*

Context **configure router** *string* **rsvp interface** *string* **class-type-bw**

Description Percentage of link bandwidth for class type (CT) 3

Range 0 to 100

Introduced 16.0.R1

ct4 *number*

Context **configure router** *string* **rsvp interface** *string* **class-type-bw**

Description Percentage of link bandwidth for class type (CT) 4

Range 0 to 100

Introduced 16.0.R1

ct5 *number*

Context **configure router** *string* **rsvp interface** *string* **class-type-bw**

Description Percentage of link bandwidth for class type (CT) 5

Range 0 to 100

Introduced 16.0.R1

ct6 *number*

Context **configure router** *string* **rsvp interface** *string* **class-type-bw**

Description Percentage of link bandwidth for class type (CT) 6

Range 0 to 100

Introduced 16.0.R1

ct7 *number*

Context **configure router** *string* **rsvp interface** *string* **class-type-bw**

Description Percentage of link bandwidth for class type (CT) 7

Range 0 to 100

Introduced 16.0.R1

dbw-down-threshold

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the dbw-down-threshold context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **rsvp interface** *string* **dbw-down-threshold**
Description	Minimum absolute difference between dark bandwidth and sampled data rate to trigger IGP-TE update
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **rsvp interface** *string* **dbw-down-threshold**
Description	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Range	0 to 100
Units	percent
Introduced	16.0.R1

dbw-multiplier *number*

Context	**configure router** *string* **rsvp interface** *string*
Description	Configure the Dark Bandwidth multiplier.
Range	0 to 1000
Units	percent
Introduced	16.0.R1

dbw-up-threshold

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the dbw-up-threshold context
Introduced	16.0.R1

bw *number*

Context	**configure router** *string* **rsvp interface** *string* **dbw-up-threshold**
Description	Minimum absolute difference between dark bandwidth and sampled data rate to trigger IGP-TE update
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1

percent *number*

Context	**configure router** *string* **rsvp interface** *string* **dbw-up-threshold**
Description	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Range	0 to 100
Units	percent
Introduced	16.0.R1

graceful-restart-helper-mode *boolean*

Context	**configure router** *string* **rsvp interface** *string*
Description	Enable graceful restart helper for the RSVP interface
Default	false
Introduced	16.0.R1

graceful-shutdown *boolean*

Context	**configure router** *string* **rsvp interface** *string*
Description	Initiate a graceful shutdown of RSVP interface
Default	false
Introduced	16.0.R1

hello-interval *number*

Context	**configure router** *string* **rsvp interface** *string*
Description	Time between RSVP Hello messages
Range	0 to 60
Default	3
Units	seconds
Introduced	16.0.R1

implicit-null-label *boolean*

Context	**configure router** *string* **rsvp interface** *string*
Description	Signal the implicit null label value for all LSPs
Introduced	16.0.R1

refresh-reduction

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the refresh-reduction context
Introduced	16.0.R1

reliable-delivery *boolean*

Context	**configure router** *string* **rsvp interface** *string* **refresh-reduction**
Description	Reliable delivery of RSVP messages over the RSVP interface
Default	false
Introduced	16.0.R1

subscription *number*

Context	**configure router** *string* **rsvp interface** *string*
Description	Percentage of the link bandwidth to use for reservation
Range	0 to 1000
Default	100
Introduced	16.0.R1

te-down-threshold

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the te-down-threshold context
Introduced	16.0.R1

value *number*

Context	**configure router** *string* **rsvp interface** *string* **te-down-threshold**
Description	Specifies down TE threshold levels.
Range	0 to 100
Max. Elements	16
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

te-up-threshold

Context	**configure router** *string* **rsvp interface** *string*
Description	Enter the te-up-threshold context
Introduced	16.0.R1

value *number*

Context	**configure router** *string* **rsvp interface** *string* **te-up-threshold**
Description	Specifies up TE threshold levels.
Range	0 to 100
Max. Elements	16
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

keep-multiplier *number*

Context	**configure router** *string* **rsvp**
Description	Value for the keep-multiplier to declare a reservation or neighbor as down
Range	1 to 255
Default	3
Introduced	16.0.R1

msg-pacing

Context	**configure router** *string* **rsvp**
Description	Enter the msg-pacing context
Introduced	16.0.R1

max-burst *number*

Context	**configure router** *string* **rsvp msg-pacing**
Description	Maximum RSVP messages that are sent over a specified period when message pacing is enabled
Range	100 to 1000
Default	650
Introduced	16.0.R1

period *number*

Context	**configure router** *string* **rsvp msg-pacing**
Description	Time for RSVP message pacing
Range	100 to 1000
Default	100
Units	milliseconds
Introduced	16.0.R1

p2mp-merge-point-abort-timer *number*

Context	**configure router** *string* **rsvp**
Description	Merge pointer timer for abort timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

p2p-merge-point-abort-timer *number*

Context	**configure router** *string* **rsvp**
Description	Merge pointer timer for P2P paths
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

preemption-timer *number*

Context	**configure router** *string* **rsvp**
Description	Preemption timer for the MPLS instance
Range	0 to 1800
Default	300
Units	seconds
Introduced	16.0.R1

rapid-retransmit-time *number*

Context	**configure router** *string* **rsvp**
Description	Rapid retransmission interval to reliably deliver RSVP messages
Range	1 to 100
Default	5
Units	deciseconds
Introduced	16.0.R1

rapid-retry-limit *number*

Context	**configure router** *string* **rsvp**
Description	Rapid retry limit to reliably deliver RSVP messages
Range	1 to 6
Default	3
Introduced	16.0.R1

refresh-reduction-over-bypass *boolean*

Context	**configure router** *string* **rsvp**
Description	Enable/disable refresh reduction capabilities over all bypass tunnels.
Default	false
Introduced	16.0.R1

refresh-time *number*

Context	**configure router** *string* **rsvp**
Description	Interval between refresh messages
Range	1 to 65535
Default	30
Units	seconds
Introduced	16.0.R1

te-down-threshold *number*

Context	**configure router** *string* **rsvp**
Description	Value for the te-down-threshold
Range	0 to 100
Max. Elements	16
Introduced	16.0.R1
Notes	This element is ordered by user

te-threshold-update

Context	**configure router** *string* **rsvp**
Description	Enter the te-threshold-update context
Introduced	16.0.R1

on-cac-failure *boolean*

Context	**configure router** *string* **rsvp te-threshold-update**
Description	CAC (Call Admission Control) failure-triggered IGP update
Default	false
Introduced	16.0.R1

update-timer *number*

Context	**configure router** *string* **rsvp te-threshold-update**
Description	Timer-based IGP updates
Range	1 to 300
Units	seconds
Introduced	16.0.R1

te-up-threshold *number*

Context	**configure router** *string* **rsvp**
Description	Value for the te-up-threshold
Range	0 to 100
Max. Elements	16
Introduced	16.0.R1
Notes	This element is ordered by user

segment-routing

Context	**configure router** *string*
Description	Enter the segment-routing context
Introduced	16.0.R1

sr-policies

Context	**configure router** *string* **segment-routing**
Description	Enter the sr-policies context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **segment-routing sr-policies**
Description	Administrative state of segment routing policy system
Default	disable
Options	enable, disable
Introduced	16.0.R1

ingress-statistics

Context	**configure router** *string* **segment-routing sr-policies**
Description	Enter the ingress-statistics context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **segment-routing sr-policies ingress-statistics**
Description	Administrative state of ingress statistics for the segment routing policies
Default	disable
Options	enable, disable
Introduced	16.0.R1

reserved-label-block *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies**
Description	Reserved local block for segment routing policies
Reference	configure **router** *string* **mpls-labels reserved-label-block** *string*
Introduced	16.0.R1

static-policy [name] *string*

Context	**configure router** *string* **segment-routing sr-policies**
Description	Enter the static-policy context
Max. Elements	8192
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Name for the segment routing static policy
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Administrative state of segment routing static policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

binding-sid *number*

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Segment ID that opaquely represents an SR policy to upstream routers
Range	32 to 1048575
Introduced	16.0.R1

color *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Traffic flows to be steered by this policy
Range	0 to 4294967295
Introduced	16.0.R1

distinguisher *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Unique value for a policy
Range	1 to max
Introduced	16.0.R1

endpoint *ipv4-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Destination of the source-routed path
Introduced	16.0.R1

head-end (*union* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Head end address for this static policy
Options	local
Introduced	16.0.R1

preference *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Preference value of this static policy
Default	100
Introduced	16.0.R1

segment [seg-list-index] *number*

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string*
Description	Enter the segment-list context
Max. Elements	32
Introduced	16.0.R1

[seg-list-index] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number*
Description	Index for identifying a particular segment list
Range	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number*
Description	Administrative state of the segment list of a static policy
Default	disable
Options	enable, disable
Introduced	16.0.R1

segment [segment-index] *number*

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number*
Description	Enter the segment context
Max. Elements	11
Introduced	16.0.R1

[segment-index] *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number* **segment** *number*
Description	Index for identifying a particular segment list
Range	1 to 11
Introduced	16.0.R1
Notes	This element is part of a list key

mpls-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number* **segment** *number*
Description	Value for the MPLS label
Range	0 to 1048575
Introduced	16.0.R1

weight *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **segment-routing sr-policies static-policy** *string* **segment-list** *number*
Description	Weight of this segment list
Default	1
Introduced	16.0.R1

selective-fib *boolean*

Context	**configure router** *string*
Description	Selective FIB
Default	true
Introduced	16.0.R1

sfm-overload

Context	**configure router** *string*
Description	Enter the sfm-overload context
Introduced	16.0.R1

holdoff-time *number*

Context	**configure router** *string* **sfm-overload**
Description	The delay between the detection of the SFM condition and the IGP entering the overload state.
Range	1 to 600
Units	seconds
Introduced	16.0.R3

sgt-qos

Context	**configure router** *string*
Description	Enter the sgt-qos context
Introduced	16.0.R1

dot1p

Context	**configure router** *string* **sgt-qos**
Description	Enter the dot1p context
Introduced	16.0.R1

application [dot1p-app-name] *keyword*

Context	**configure router** *string* **sgt-qos dot1p**
Description	Enter the application context
Introduced	16.0.R1

[dot1p-app-name] *keyword*

Context	**configure router** *string* **sgt-qos dot1p application** *keyword*
Description	Dot1p application identifier on the NOKIA SR OS router that generates control traffic over IP
Options	arp, isis, pppoe
Introduced	16.0.R1
Notes	This element is part of a list key

dot1p (*keyword* | *number*)

Context	**configure router** *string* **sgt-qos dot1p application** *keyword*
Description	Dot1p value to the traffic generated by this application
Range	0 to 7
Introduced	16.0.R1

dscp

Context	**configure router** *string* **sgt-qos**
Description	Enter the dscp context
Introduced	16.0.R1

application [dscp-app-name] *keyword*

Context	**configure router** *string* **sgt-qos dscp**
Description	Enter the application context
Introduced	16.0.R1

[dscp-app-name] *keyword*

Context	**configure router** *string* **sgt-qos dscp application** *keyword*
Description	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http
Introduced	16.0.R1
Notes	This element is part of a list key

dscp (*keyword* | *number*)

Context	**configure router** *string* **sgt-qos dscp application** *keyword*
Description	DSCP value to the traffic generated by this application
Range	0 to 63
Introduced	16.0.R1

dscp-map [dscp-name] *keyword*

Context	**configure router** *string* **sgt-qos dscp**
Description	Enter the dscp-map context
Introduced	16.0.R3

[dscp-name] *keyword*

Context	**configure router** *string* **sgt-qos dscp dscp-map** *keyword*
Description	DSCP name mapped to forwarding class
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R2
Notes	This element is part of a list key

fc *keyword*

Context	**configure router** *string* **sgt-qos dscp dscp-map** *keyword*
Description	Value for the forwarding class for this mapping
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2

static-routes

Context	**configure router** *string*
Description	Enter the static-routes context
Introduced	16.0.R1

hold-down

Context	**configure router** *string* **static-routes**
Description	Enter the hold-down context
Introduced	16.0.R1

initial *number*

Context	**configure router** *string* **static-routes hold-down**
Description	Value for the initial hold down time
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

max-value *number*

Context	**configure router** *string* **static-routes hold-down**
Description	Maximum value of the hold down time
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

multiplier *number*

Context	**configure router** *string* **static-routes hold-down**
Description	Value by which the previous hold-down time is multiplied to calculate the new one
Range	1 to 10
Introduced	16.0.R1
Notes	This element is mandatory

route [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*) route-type *keyword*

Context	**configure router** *string* **static-routes**
Description	Enter the route context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	IP prefix and prefix length for the static routes
Introduced	16.0.R1
Notes	This element is part of a list key

route-type *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Static route type for unicast or multicast RPF
Options	unicast, multicast
Introduced	16.0.R1
Notes	This element is part of a list key

blackhole

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Enter the blackhole context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

community *community*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dynamic-bgp *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Derive static route's next-hop from the best BGP route for the exact same IP prefix
Default	false
Introduced	16.0.R1

generate-icmp *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Send ICMP unreachable messages when received packets match a static route with black-hole next-hop
Default	false
Introduced	16.0.R1

metric *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Static route metric
Range	0 to 65535
Default	1
Introduced	16.0.R1

preference *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

tag *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**
Description	Static route tag
Range	1 to max
Introduced	16.0.R1

community *community*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Community ID associated with the static route
String Length	1 to 72
Max. Elements	12
Introduced	16.0.R1
Notes	This element is ordered by user

indirect [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Enter the indirect context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Indirect next hop for static routes
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

community *community*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the cpe-check context
Max. Elements	1
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address of the target CPE device
Introduced	16.0.R1
Notes	This element is part of a list key

drop-count *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Number of consecutive ping replies that are missed before declaring the CPE down
Range	1 to 255
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Time between ICMP pings to the target CPE IP address
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1

log *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Log the transitions between active and inactive based on the CPE connectivity check
Default	false
Introduced	16.0.R1

padding-size *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Padding size for the ICMP ping test packet of the CPE connectivity check
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Destination class for this static route

Range 1 to 255

Introduced 16.0.R1

metric *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **prefix-list**
Description	Static route match condition from prefixes in specified prefix list
Default	any
Options	any, all, none
Introduced	16.0.R1

name *string*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **prefix-list**
Description	Name of a prefix list to match
Reference	configure **policy-options prefix-list** *string*
Introduced	16.0.R1

qos

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Enter the qos context
Introduced	16.0.R1

forwarding-class *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos**
Description	Forwarding class associated with the static route
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1

priority *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos**
Description	Static route priority
Options	low, high
Introduced	16.0.R1

source-class *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Static route tag

Range 1 to max

Introduced 16.0.R1

tunnel-next-hop

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the tunnel-next-hop context

Introduced 16.0.R1

disallow-igp *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop**

Description Do not resolve indirect static routes using IGP next-hops in RTM if no tunnel next-hops found in TTM

Default false

Introduced 16.0.R1

resolution *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop**

Description Tunnel next hop resolution to resolve indirect static route

Default none

Options none, filter, any

Introduced 16.0.R1

resolution-filter

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop**

Description Enter the resolution-filter context

Introduced 16.0.R1

ldp *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Use LDP Route Forwarding Equivalence Class (FEC) tunneling for next-hop resolution

Default false

Introduced 16.0.R1

mpls-fwd-policy *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Enable/disable setting MPLS Forwarding Policy type for tunnel-next-hop.

Default false

Introduced 16.0.R1

rib-api *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Enable/disable setting RIB API type for tunnel-next-hop.

Default false

Introduced 16.0.R4

rsvp-te

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Enter the rsvp-te context

Introduced 16.0.R1

lsp [lsp-name] *string*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter rsvp-te**

Description Enter the lsp context

Introduced 16.0.R1

[lsp-name] *string*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter rsvp-te lsp** *string*

Description Labeled Switch Path name

String Length 1 to 64

Introduced 16.0.R1

Notes This element is part of a list key

sr-isis *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Use the SR ISIS tunneling mechanism to resolve next hop for the static route

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Use SR OSPF tunneling for next-hop resolution

Default false

Introduced 16.0.R1

sr-te

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter**

Description Enter the sr-te context

Introduced 16.0.R1

lsp [lsp-name] *string*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter sr-te**
Description	Enter the lsp context
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter sr-te lsp** *string*
Description	Labeled Switch Path name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

interface [interface-name] *interface-name*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Router interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

community *community*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Enter the cpe-check context
Max. Elements	1
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address of the target CPE device
Introduced	16.0.R1
Notes	This element is part of a list key

drop-count *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Number of consecutive ping replies that are missed before declaring the CPE down
Range	1 to 255
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Time between ICMP pings to the target CPE IP address
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1

log *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Log the transitions between active and inactive based on the CPE connectivity check
Default	false
Introduced	16.0.R1

padding-size *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Padding size for the ICMP ping test packet of the CPE connectivity check
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Destination class for this static route

Range 1 to 255

Introduced 16.0.R1

load-balancing-weight *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Load-balancing weight for all of the ECMP next hops

Range 1 to max

Introduced 16.0.R1

metric *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

qos

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name* **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *interface-name*

Description Static route tag

Range 1 to max

Introduced 16.0.R1

next-hop [ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Enter the next-hop context

Introduced 16.0.R1

[ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description IP address for the next hop

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Administrative state of the static route next hop
Options	enable, disable
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Use Bidirectional Forwarding Detection on this static route
Default	false
Introduced	16.0.R1

community *community*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Community ID associated with the static route
String Length	1 to 72
Introduced	16.0.R1

cpe-check [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Enter the cpe-check context
Max. Elements	1
Introduced	16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	IP address of the target CPE device
Introduced	16.0.R1
Notes	This element is part of a list key

drop-count *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Number of consecutive ping replies that are missed before declaring the CPE down
Range	1 to 255
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Time between ICMP pings to the target CPE IP address
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1

log *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Log the transitions between active and inactive based on the CPE connectivity check
Default	false
Introduced	16.0.R1

padding-size *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Padding size for the ICMP ping test packet of the CPE connectivity check
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1

description *description-allow-all-white-spaces*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

destination-class *number*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Destination class for this static route
Range	1 to 255
Introduced	16.0.R1

ldp-sync *boolean*

Context	**configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)
Description	Use LDP synchronization feature for a static route
Default	false
Introduced	16.0.R1

load-balancing-weight *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Load-balancing weight for all of the ECMP next hops

Range 1 to max

Introduced 16.0.R1

metric *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Static route metric

Range 0 to 65535

Default 1

Introduced 16.0.R1

preference *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Priority of this static route over the routes from different sources

Range 1 to 255

Default 5

Introduced 16.0.R1

prefix-list

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Enter the prefix-list context

Introduced 16.0.R1

flag *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **prefix-list**

Description Static route match condition from prefixes in specified prefix list

Default any

Options any, all, none

Introduced 16.0.R1

name *string*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **prefix-list**

Description Name of a prefix list to match

Reference configure **policy-options prefix-list** *string*

Introduced 16.0.R1

qos

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Enter the qos context

Introduced 16.0.R1

forwarding-class *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **qos**

Description Forwarding class associated with the static route

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 16.0.R1

priority *keyword*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*) **qos**

Description Static route priority

Options low, high

Introduced 16.0.R1

source-class *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Source class for this static route

Range 1 to 255

Introduced 16.0.R1

tag *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Static route tag

Range 1 to max

Introduced 16.0.R1

validate-next-hop *boolean*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address* | *ipv6-address*)

Description Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache

Default false

Introduced 16.0.R1

tag *number*

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Description Static route tag

Range 1 to max

Introduced 16.0.R1

triggered-policy *boolean*

Context **configure router** *string*

Description Trigger route policy re-evaluation

Default false

Introduced 16.0.R1

ttl-propagate

Context	**configure router** *string*
Description	Enter the ttl-propagate context
Introduced	16.0.R1

label-route-local *keyword*

Context	**configure router** *string* **ttl-propagate**
Description	TTL propagation from IP header into label stack for local packets
Default	none
Options	none, all
Introduced	16.0.R1

label-route-transit *keyword*

Context	**configure router** *string* **ttl-propagate**
Description	TTL propagation from IP header into label stack for transit packets
Default	none
Options	none, all
Introduced	16.0.R1

lsr-label-route *keyword*

Context	**configure router** *string* **ttl-propagate**
Description	TTL propagation from IP header into label stack
Default	none
Options	none, all
Introduced	16.0.R1

vprn-local *keyword*

Context	**configure router** *string* **ttl-propagate**
Description	TTL propagation from IP header into label stack for VPRN local packets
Default	vc-only
Options	none, all, vc-only
Introduced	16.0.R1

vprn-transit *keyword*

Context	**configure router** *string* **ttl-propagate**
Description	TTL propagation from IP header into label stack for VPRN transit packets
Default	vc-only
Options	none, all, vc-only
Introduced	16.0.R1

tunnel-interface

Context	**configure router** *string*
Description	Enter the tunnel-interface context
Introduced	16.0.R1

ldp-p2mp-leaf [p2mp-id] *number* **sender-address** *ipv4-unicast-address*

Context	**configure router** *string* **tunnel-interface**
Description	Enter the ldp-p2mp-leaf context
Introduced	16.0.R1

[p2mp-id] *number*

Context	**configure router** *string* **tunnel-interface ldp-p2mp-leaf** *number* **sender-address** *ipv4-unicast-address*
Description	Identifier used for signaling MLDP P2MP LSP
Introduced	16.0.R1
Notes	This element is part of a list key

sender-address *ipv4-unicast-address*

Context	**configure router** *string* **tunnel-interface ldp-p2mp-leaf** *number* **sender-address** *ipv4-unicast-address*
Description	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context **configure router** *string* **tunnel-interface ldp-p2mp-leaf** *number* **sender-address** *ipv4-unicast-address*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

ldp-p2mp-root [p2mp-id] *number* **sender-address** *ipv4-unicast-address*

Context **configure router** *string* **tunnel-interface**

Description Enter the ldp-p2mp-root context

Introduced 16.0.R1

[p2mp-id] *number*

Context **configure router** *string* **tunnel-interface ldp-p2mp-root** *number* **sender-address** *ipv4-unicast-address*

Description Identifier used for signaling MLDP P2MP LSP

Range 1 to 8192

Introduced 16.0.R1

Notes This element is part of a list key

sender-address *ipv4-unicast-address*

Context **configure router** *string* **tunnel-interface ldp-p2mp-root** *number* **sender-address** *ipv4-unicast-address*

Description Address of an LDP sender for the P2MP RSVP tunnel interface instance

Introduced 16.0.R1

Notes This element is part of a list key

description *string*

Context **configure router** *string* **tunnel-interface ldp-p2mp-root** *number* **sender-address** *ipv4-unicast-address*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

rsvp-p2mp-leaf [lsp-name] *string* **sender-address** *ipv4-unicast-address*

Context	**configure router** *string* **tunnel-interface**
Description	Enter the rsvp-p2mp-leaf context
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure router** *string* **tunnel-interface rsvp-p2mp-leaf** *string* **sender-address** *ipv4-unicast-address*
Description	LSP name of the P2MP RSVP tunnel interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

sender-address *ipv4-unicast-address*

Context	**configure router** *string* **tunnel-interface rsvp-p2mp-leaf** *string* **sender-address** *ipv4-unicast-address*
Description	Address of a sender for the P2MP RSVP tunnel interface instance
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **tunnel-interface rsvp-p2mp-leaf** *string* **sender-address** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

rsvp-p2mp-root [lsp-name] *string*

Context	**configure router** *string* **tunnel-interface**
Description	Enter the rsvp-p2mp-root context
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure router** *string* **tunnel-interface rsvp-p2mp-root** *string*
Description	LSP name of the P2MP RSVP tunnel interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **tunnel-interface rsvp-p2mp-root** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

twamp-light

Context	**configure router** *string*
Description	Enter the twamp-light context
Introduced	16.0.R1

reflector

Context	**configure router** *string* **twamp-light**
Description	Enter the reflector context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **twamp-light reflector**
Description	Administratively enable or disable TWAMP-Light reflector
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure router** *string* **twamp-light reflector**
Description	Descriptive text for the specified TWAMP-Light reflector
String Length	1 to 80
Introduced	16.0.R1

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **twamp-light reflector**
Description	Enter the prefix context
Max. Elements	50
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure router** *string* **twamp-light reflector prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Source prefix for the TWAMP-Light reflector
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure router** *string* **twamp-light reflector prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Descriptive text for the specified TWAMP-Light reflector prefix
String Length	1 to 80
Introduced	16.0.R1

udp-port *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **twamp-light reflector**
Description	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Range	862 | 64364 to 64373
Introduced	16.0.R1
Notes	This element is mandatory

vrgw

Context	**configure router** *string*
Description	Enter the vrgw context
Introduced	16.0.R1

lanext

Context	**configure router** *string* **vrgw**
Description	Enter the lanext context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **vrgw lanext**
Description	Administrative state of Home LAN Extension
Default	disable
Options	enable, disable
Introduced	16.0.R4

vxlan-port *number*

Context	**configure router** *string* **vrgw lanext**
Description	UDP port to be used by local or remote VXLAN VTEP
Range	4789 | 8472
Default	4789
Introduced	16.0.R1

vxlan-vtep-range

Context	**configure router** *string* **vrgw lanext**
Description	Enter the vxlan-vtep-range context
Introduced	16.0.R1

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **vrgw lanext vxlan-vtep-range**
Description	End address of this range
Introduced	16.0.R1

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **vrgw lanext vxlan-vtep-range**
Description	Start address of this range
Introduced	16.0.R1

wlan-gw-group *string*

Context	**configure router** *string* **vrgw lanext**
Description	WLAN-GW group used for Home LAN Extension
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

weighted-ecmp *boolean*

Context	**configure router** *string*
Description	Allow weighted load-balancing
Default	false
Introduced	16.0.R1

wlan-gw

Context	**configure router** *string*
Description	Enter the wlan-gw context
Introduced	16.0.R1

distributed-subscriber-mgmt

Context	**configure router** *string* **wlan-gw**
Description	Enter the distributed-subscriber-mgmt context
Introduced	16.0.R4

ipv6-tcp-mss-adjust *number*

Context	**configure router** *string* **wlan-gw distributed-subscriber-mgmt**
Description	Insert or decrease the TCP Maximum Segment Size option to this value for upstream IPv6 SYN messages
Range	160 to 10240
Introduced	16.0.R4

mobility-triggered-accounting

Context	**configure router** *string* **wlan-gw**
Description	Enter the mobility-triggered-accounting context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure router** *string* **wlan-gw mobility-triggered-accounting**
Description	Administrative state of mobility-triggered-accounting
Default	disable
Options	enable, disable
Introduced	16.0.R4

hold-down *number*

Context	**configure router** *string* **wlan-gw mobility-triggered-accounting**
Description	Hold additional mobility-triggered update until this timer expires
Range	60 to 86400
Units	seconds
Introduced	16.0.R4

include-counters *boolean*

Context	**configure router** *string* **wlan-gw mobility-triggered-accounting**
Description	Include counters in interim updates
Default	false
Introduced	16.0.R4

xconnect

Context	**configure router** *string* **wlan-gw**
Description	Enter the xconnect context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **wlan-gw xconnect**
Description	Administrative state of WLAN-GW cross-connect
Default	disable
Options	enable, disable
Introduced	16.0.R1

tunnel-source-ip *ipv6-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **wlan-gw xconnect**
Description	IPv6 address and prefix for the tunnel source
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure router** *string* **wlan-gw xconnect**
Description	ISA WLAN Gateway group
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

wpp

Context	**configure router** *string*
Description	Enter the wpp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure router** *string* **wpp**
Description	Administrative state of WPP
Default	disable
Options	enable, disable
Introduced	16.0.R1

portal [name] *string*

Context	**configure router** *string* **wpp**
Description	Enter the portal context
Introduced	16.0.R1

[name] *string*

Context	**configure router** *string* **wpp portal** *string*
Description	WPP portal name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

ack-auth-retry-count *number*

Context	**configure router** *string* **wpp portal** *string*
Description	Number of retransmissions of an ACK_OUT message
Range	0 to 5
Default	5
Introduced	16.0.R1

address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure router** *string* **wpp portal** *string*
Description	WPP portal address
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure router** *string* **wpp portal** *string*
Description	Administrative state of the WPP portal
Default	disable
Options	enable, disable
Introduced	16.0.R1

ntf-logout-retry-count *number*

Context	**configure router** *string* **wpp portal** *string*
Description	Number of retransmissions of an NTF_LOGOUT message
Range	0 to 5
Default	5
Introduced	16.0.R1

port-format *keyword*

Context	**configure router** *string* **wpp portal** *string*
Description	Format of the port in the ACK_INO message
Default	standard
Options	standard, vendor-specific
Introduced	16.0.R1

retry-interval *number*

Context	**configure router** *string* **wpp portal** *string*
Description	Time between two consecutive retransmissions
Range	10 to 2000
Default	2000
Units	milliseconds
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure router** *string* **wpp portal** *string*
Description	Message authentication between portal and BRAS by applying the secret used by WPPv2
String Length	1 to 114
Introduced	16.0.R1

version *number*

Context	**configure router** *string* **wpp portal** *string*
Description	Protocol version to be expected by the WPP portal
Range	1 | 2
Default	1
Introduced	16.0.R1

33 routing-options Commands

configure
- — **routing-options**
  - — **admin-tags**
    - — **admin-tag** *string*
    - — **route-admin-tag-policy** *string*
      - — **exclude** *string*
      - — **include** *string*
  - — **if-attribute**
    - — **admin-group** *string*
      - — **value** *number*
    - — **srlg-group** *string*
      - — **penalty-weight** *number*
      - — **value** *number*
  - — **ip-fast-reroute** *boolean*
  - — **route-next-hop-policy**
    - — **template** *string*
      - — **description** *string*
      - — **exclude-group** *string*
      - — **include-group** *string*
        - — **preference** *number*
      - — **nh-type** *keyword*
      - — **protection-type** *keyword*
      - — **srlg** *boolean*

33.1 routing-options Command Descriptions

routing-options

Context	**configure**
Description	Enter the routing-options context
Introduced	16.0.R1

admin-tags

Context	**configure routing-options**
Description	Enter the admin-tags context
Introduced	16.0.R1

admin-tag [tag] *string*

Context	**configure routing-options admin-tags**
Description	Enter the admin-tag context
Max. Elements	256
Introduced	16.0.R1

[tag] *string*

Context	**configure routing-options admin-tags admin-tag** *string*
Description	Specifies admin-tag.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

route-admin-tag-policy [policy-name] *string*

Context	**configure routing-options admin-tags**
Description	Enter the route-admin-tag-policy context
Max. Elements	2048
Introduced	16.0.R1

[policy-name] *string*

Context	**configure routing-options admin-tags route-admin-tag-policy** *string*
Description	Policy name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

exclude [tag] *string*

Context	**configure routing-options admin-tags route-admin-tag-policy** *string*
Description	Enter the exclude context
Max. Elements	8
Introduced	16.0.R1

[tag] *string*

Context	**configure routing-options admin-tags route-admin-tag-policy** *string* **exclude** *string*
Description	Specifies admin-tag.
Reference	configure **routing-options admin-tags admin-tag** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

include [tag] *string*

Context	**configure routing-options admin-tags route-admin-tag-policy** *string*
Description	Enter the include context
Max. Elements	8
Introduced	16.0.R1

[tag] *string*

Context	**configure routing-options admin-tags route-admin-tag-policy** *string* **include** *string*
Description	Specifies admin-tag.
Reference	configure **routing-options admin-tags admin-tag** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

if-attribute

Context	**configure routing-options**
Description	Enter the if-attribute context
Introduced	16.0.R1

admin-group [group-name] *string*

Context	**configure routing-options if-attribute**
Description	Enter the admin-group context
Max. Elements	32
Introduced	16.0.R1

[group-name] *string*

Context	**configure routing-options if-attribute admin-group** *string*
Description	Specifies interface admin group name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

value *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure routing-options if-attribute admin-group** *string*
Description	Specifies the group value associated with this administrative group.
Range	0 to 31
Introduced	16.0.R1
Notes	This element is mandatory

srlg-group [name] *string*

Context	**configure routing-options if-attribute**
Description	Enter the srlg-group context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure routing-options if-attribute srlg-group** *string*
Description	Specifies a name defined for the Shared Risk Link Group (SRLG).
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

penalty-weight *number*

Context	**configure routing-options if-attribute srlg-group** *string*
Description	Specifies the penalty weight associated with this SRLG group.
Range	0 to 65535
Default	0
Introduced	16.0.R1

value *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure routing-options if-attribute srlg-group** *string*
Description	Specifies the group value associated with this SRLG.
Range	0 to 4294967295
Introduced	16.0.R1
Notes	This element is mandatory

ip-fast-reroute *boolean*

Context	**configure routing-options**
Description	Enable IP fast reroute capability
Default	false
Introduced	16.0.R1

route-next-hop-policy

Context	**configure routing-options**
Description	Enter the route-next-hop-policy context
Introduced	16.0.R1

template [template-name] *string*

Context	**configure routing-options route-next-hop-policy**
Description	Enter the template context
Introduced	16.0.R1

[template-name] *string*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Template name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

exclude-group [group-name] *string*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Enter the exclude-group context
Max. Elements	32
Introduced	16.0.R1

[group-name] *string*

Context	**configure routing-options route-next-hop-policy template** *string* **exclude-group** *string*
Description	Group name out of which the next-hop link is selected
Reference	configure **routing-options if-attribute admin-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

include-group [group-name] *string*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Enter the include-group context
Max. Elements	32
Introduced	16.0.R1

[group-name] *string*

Context	**configure routing-options route-next-hop-policy template** *string* **include-group** *string*
Description	Group name out of which the next-hop link is selected
Reference	configure **routing-options if-attribute admin-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

preference *number*

Context	**configure routing-options route-next-hop-policy template** *string* **include-group** *string*
Description	Preference number for configured admin-group.
Range	1 to 255
Default	255
Introduced	16.0.R1

nh-type *keyword*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Preferred next hop
Default	ip
Options	ip, tunnel
Introduced	16.0.R1

protection-type *keyword*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Protection type used
Default	node
Options	link, node
Introduced	16.0.R1

srlg *boolean*

Context	**configure routing-options route-next-hop-policy template** *string*
Description	Select next hops from the SRLG
Default	false
Introduced	16.0.R1

34 saa Commands

configure
- **saa**
  - **owner** *string* **test** *string*
    - **accounting-policy** *string*
    - **admin-state** *keyword*
    - **continuous** *boolean*
    - **description** *string*
    - **jitter-event** *keyword* **threshold-type** *keyword*
      - **threshold** *number*
    - **latency-event** *keyword* **threshold-type** *keyword*
      - **threshold** *number*
    - **loss-event** *keyword* **threshold-type** *keyword*
      - **threshold** *number*
    - **probe-history** *keyword*
    - **type**
      - **icmp-ping**
        - **bypass-routing** *boolean*
        - **count** *number*
        - **destination-address** (*union* | *string*)
        - **do-not-fragment** *boolean*
        - **interface** *interface-name*
        - **interval** (*number* | *decimal-number*)
        - **next-hop-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **pattern** (*keyword* | *number*)
        - **qos**
          - **fc** *keyword*
          - **tos** *number*
        - **router-instance** *router-instance*
        - **size** *number*
        - **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
        - **timeout** *number*
        - **ttl** *number*

34.1 saa Command Descriptions

saa

Context	**configure**
Description	Enter the saa context
Introduced	16.0.R1

owner [owner-name] *string* test *string*

Context	**configure saa**
Description	Enter the owner context
Introduced	16.0.R1

[owner-name] *string*

Context	**configure saa owner** *string* **test** *string*
Description	An owner-name identifies a set of SAA tests.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

test *string*

Context	**configure saa owner** *string* **test** *string*
Description	An owner-name and a test-name identify an SAA test.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure saa owner** *string* **test** *string*
Description	Accounting policy used to record the results of an SAA test.
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure saa owner** *string* **test** *string*
Description	Administrative state of the test.
Default	disable
Options	enable, disable
Introduced	16.0.R1

continuous *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure saa owner** *string* **test** *string*
Description	Repeat the test automatically while it is administratively enabled.
Default	false
Introduced	16.0.R1

description *string*

Context	**configure saa owner** *string* **test** *string*
Description	Text description of the test.
String Length	1 to 80
Introduced	16.0.R1

jitter-event [direction] *keyword* **threshold-type** *keyword*

Context	**configure saa owner** *string* **test** *string*
Description	Enter the jitter-event context
Introduced	16.0.R1

[direction] *keyword*

Context	**configure saa owner** *string* **test** *string* **jitter-event** *keyword* **threshold-type** *keyword*
Description	Inbound, outbound, or round trip packet flow.
Options	inbound, outbound, round-trip
Introduced	16.0.R1
Notes	This element is part of a list key

threshold-type *keyword*

Context	**configure saa owner** *string* **test** *string* **jitter-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold.
Options	rising, falling
Introduced	16.0.R1
Notes	This element is part of a list key

threshold *number*

Context	**configure saa owner** *string* **test** *string* **jitter-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold (in microseconds) for jitter.
Range	0 to 2147483647
Units	microseconds
Introduced	16.0.R1
Notes	This element is mandatory

latency-event [direction] *keyword* **threshold-type** *keyword*

Context	**configure saa owner** *string* **test** *string*
Description	Enter the latency-event context
Introduced	16.0.R1

[direction] *keyword*

Context	**configure saa owner** *string* **test** *string* **latency-event** *keyword* **threshold-type** *keyword*
Description	Inbound, outbound, or round trip packet flow.
Options	inbound, outbound, round-trip
Introduced	16.0.R1
Notes	This element is part of a list key

threshold-type *keyword*

Context	**configure saa owner** *string* **test** *string* **latency-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold.
Options	rising, falling
Introduced	16.0.R1
Notes	This element is part of a list key

threshold *number*

Context	**configure saa owner** *string* **test** *string* **latency-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold (in microseconds) for packet latency.
Range	0 to 2147483647
Units	microseconds
Introduced	16.0.R1
Notes	This element is mandatory

loss-event [direction] *keyword* **threshold-type** *keyword*

Context	**configure saa owner** *string* **test** *string*
Description	Enter the loss-event context
Introduced	16.0.R1

[direction] *keyword*

Context	**configure saa owner** *string* **test** *string* **loss-event** *keyword* **threshold-type** *keyword*
Description	Inbound, outbound, or round trip packet flow.
Options	inbound, outbound, round-trip
Introduced	16.0.R1
Notes	This element is part of a list key

threshold-type *keyword*

Context	**configure saa owner** *string* **test** *string* **loss-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold.
Options	rising, falling
Introduced	16.0.R1
Notes	This element is part of a list key

threshold *number*

Context	**configure saa owner** *string* **test** *string* **loss-event** *keyword* **threshold-type** *keyword*
Description	Rising or falling threshold for packet loss.
Range	0 to 2147483647
Units	packets
Introduced	16.0.R1
Notes	This element is mandatory

probe-history *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure saa owner** *string* **test** *string*
Description	Keep or drop the per-probe test results after a test run completes. 'auto' allows SROS to decide.
Default	auto
Options	keep, drop, auto
Introduced	16.0.R1

type

Context	**configure saa owner** *string* **test** *string*
Description	Enter the type context
Introduced	16.0.R1

icmp-ping

Context	**configure saa owner** *string* **test** *string* **type**
Description	Enter the **icmp-ping** context
Introduced	16.0.R1

bypass-routing *boolean*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Bypass the routing table when sending to a host on a directly attached network.
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

count *number*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Number of ICMP Echo Request packet(s) to send.
Range	1 to 100000
Default	5
Units	packets
Introduced	16.0.R1
Notes	This element is part of a choice

destination-address (*union* | *string*)

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	IP address or DNS name to be pinged.
String Length	1 to 128
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

do-not-fragment *boolean*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Do not allow the ICMP Echo Request packet(s) to be fragmented (valid for IPv4 only).
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

interface *interface-name*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Sending interface for the ICMP Echo Request packet(s).
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

interval (*number* | *decimal-number*)

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Interval (in seconds) between ICMP Echo Request packets sent.
Range	1 to 10000
Default	1
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

next-hop-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Next hop IP address used when sending ICMP Echo Request packet(s).
Introduced	16.0.R1
Notes	This element is part of a choice

pattern (*keyword* | *number*)

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Two byte value used to pad the ICMP Echo Request packet(s). 'sequential' indicates bytes increasing by one.
Range	0 to 65535
Default	sequential
Options	sequential
Introduced	16.0.R1
Notes	This element is part of a choice

qos

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Enter the **qos** context
Introduced	16.0.R1

fc *keyword*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping qos**
Description	Forwarding Class for the transmitted ICMP Echo Request packet(s).
Default	nc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a choice

tos *number*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping qos**
Description	Type of Service value to be loaded into the DSCP and ECN fields of the IP header of the ICMP Echo Request packet(s).
Range	0 to 255
Default	0
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *router-instance*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Router used for the test ('Base', 'management', or a VPRN service name).
String Length	1 to 64
Default	Base
Introduced	16.0.R1
Notes	This element is part of a choice

size *number*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packet(s).
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1
Notes	This element is part of a choice

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Source IP address to be loaded into the IP header of the ICMP Echo Request packet(s). Default: a system-selected address.
Introduced	16.0.R1
Notes	This element is part of a choice

timeout *number*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Maximum time (in seconds) to wait for ICMP Echo Reply packet(s). The timer is started when the last ICMP Echo Request is sent.
Range	1 to 10
Default	5
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

ttl *number*

Context	**configure saa owner** *string* **test** *string* **type icmp-ping**
Description	Time To Live value (IPv4) or Hop Limit value (IPv6) to be loaded into the IP header of the ICMP Echo Request packet(s).
Range	1 to 128
Default	64
Introduced	16.0.R1
Notes	This element is part of a choice

35 service Commands

configure
- **service**
  - **customer** *customer-name*
    - **contact** *string*

35.1 service Command Descriptions

service

Context	**configure**
Description	Enter the service context
Introduced	16.0.R1

customer [customer-name] *customer-name*

Context	**configure service**
Description	Enter the customer context
Introduced	16.0.R1

[customer-name] *customer-name*

Context	**configure service customer** *customer-name*
Description	Customer name for a service
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

contact *string*

Context	**configure service customer** *customer-name*
Description	Service customer contact
String Length	1 to 80
Introduced	16.0.R1

customer-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service customer** *customer-name*
Description	Customer ID
Range	1 to 2147483647
Introduced	16.0.R1

description *string*

Context	**configure service customer** *customer-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

multi-service-site [multi-service-site-name] *string*

Context	**configure service customer** *customer-name*
Description	Enter the multi-service-site context
Introduced	16.0.R1

[multi-service-site-name] *string*

Context	**configure service customer** *customer-name* **multi-service-site** *string*
Description	Service customer multi-service site name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

assignment

Context	**configure service customer** *customer-name* **multi-service-site** *string*
Description	Enter the assignment context
Introduced	16.0.R1

card *number*

Context **configure service customer** *customer-name* **multi-service-site** *string* **assignment**

Description Card for this binding.

Range 1 to 20

Introduced 16.0.R1

Notes This element is part of a choice

port *port*

Context **configure service customer** *customer-name* **multi-service-site** *string* **assignment**

Description Port for this binding.

Introduced 16.0.R1

Notes This element is part of a choice

description *string*

Context **configure service customer** *customer-name* **multi-service-site** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

egress

Context **configure service customer** *customer-name* **multi-service-site** *string*

Description Enter the egress context

Introduced 16.0.R1

agg-rate

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress**

Description Enter the agg-rate context

Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **egress agg-rate**
Description	Enable aggregate rate overrun protection
Default	false
Introduced	16.0.R1

queue-frame-based-accounting *boolean*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **egress agg-rate**
Description	Enable frame-based accounting on all policers and queues associated with context
Default	false
Introduced	16.0.R1

rate *number*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **egress agg-rate**
Description	Rate limit
Range	1 to 3200000000
Introduced	16.0.R1

policer-control-policy *string*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **egress**
Description	Policer control policy
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

scheduler-policy

Context	**configure service customer** *customer-name* **multi-service-site** *string* **egress**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R1

scheduler [scheduler-name] *string*

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R1

[scheduler-name] *string*

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Description Multi-service site egress scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string* **rate**

Description Administrative CIR.

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string* **rate**

Description Administrative PIR.

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service customer** *customer-name* **multi-service-site** *string* **egress scheduler-policy**

Description Specify a scheduler-policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

ingress

Context **configure service customer** *customer-name* **multi-service-site** *string*

Description Enter the ingress context

Introduced 16.0.R1

policer-control-policy *string*

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress**

Description Policer control policy

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

scheduler-policy

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R1

scheduler [scheduler-name] *string*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides**
Description	Enter the scheduler context
Introduced	16.0.R1

[scheduler-name] *string*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string*
Description	Multi-service site ingress scheduler override policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

parent

Context	**configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string*
Description	Enter the parent context
Introduced	16.0.R1

cir-weight *number*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string* **parent**
Description	Weight that is used by the scheduler until the committed rate for feeding this queue
Range	0 to 100
Introduced	16.0.R1

weight *number*

Context	**configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string* **parent**
Description	Weight to be used by the scheduler for feeding this queue
Range	0 to 100
Introduced	16.0.R1

rate

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string* **rate**

Description Administrative CIR.

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy overrides scheduler** *string* **rate**

Description Administrative PIR.

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service customer** *customer-name* **multi-service-site** *string* **ingress scheduler-policy**

Description Specify a scheduler-policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

phone *string*

Context **configure service customer** *customer-name*

Description Service customer phone information

String Length 1 to 80

Introduced 16.0.R1

epipe [service-name] *service-name*

Context	**configure service**
Description	Enter the epipe context
Introduced	16.0.R1

[service-name] *service-name*

Context	**configure service epipe** *service-name*
Description	Name of the service
String Length	1 to 64
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name*
Description	Administrative state of the mirror destination service
Default	disable
Options	enable, disable
Introduced	16.0.R1

bgp [bgp-instance] *number*

Context	**configure service epipe** *service-name*
Description	Enter the bgp context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service epipe** *service-name* **bgp** *number*
Description	BGP instance
Range	1
Introduced	16.0.R1
Notes	This element is part of a list key

pw-template-binding [pw-template-name] *string*

Context	**configure service epipe** *service-name* **bgp** *number*
Description	Enter the pw-template-binding context
Max. Elements	100
Introduced	16.0.R1

[pw-template-name] *string*

Context	**configure service epipe** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	PW template policy name
Reference	configure **service pw-template** *pw-template-name*
Introduced	16.0.R1
Notes	This element is part of a list key

bfd-liveness *boolean*

Context	**configure service epipe** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Enable BFD
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure service epipe** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	BFD template name for PW-Template binding
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

import-rt *route-target*

Context	**configure service epipe** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Import route-target communities
String Length	10 to 28
Max. Elements	5
Introduced	16.0.R1

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Context **configure service epipe** *service-name* **bgp** *number*

Description High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI

Introduced 16.0.R1

route-target

Context **configure service epipe** *service-name* **bgp** *number*

Description Enter the route-target context

Introduced 16.0.R1

export *route-target*

Context **configure service epipe** *service-name* **bgp** *number* **route-target**

Description Extended community name for default import policy

String Length 10 to 28

Introduced 16.0.R1

import *route-target*

Context **configure service epipe** *service-name* **bgp** *number* **route-target**

Description Extended community name for default import policy

String Length 10 to 28

Introduced 16.0.R1

bgp-evpn

Context **configure service epipe** *service-name*

Description Enter the bgp-evpn context

Introduced 16.0.R1

evi *number*

Context **configure service epipe** *service-name* **bgp-evpn**

Description EVPN ID

Range 1 to 65535

Introduced 16.0.R1

local-ac

Context	**configure service epipe** *service-name* **bgp-evpn**
Description	Enter the local-ac context
Introduced	16.0.R1

eth-tag *number*

Context	**configure service epipe** *service-name* **bgp-evpn local-ac**
Description	Ethernet tag of the attachment circuit
Range	1 to 16777215
Introduced	16.0.R1

name *string*

Context	**configure service epipe** *service-name* **bgp-evpn local-ac**
Description	Attachment circuit name
String Length	1 to 32
Introduced	16.0.R1

mpls [bgp-instance] *number*

Context	**configure service epipe** *service-name* **bgp-evpn**
Description	Enter the mpls context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	BGP instance
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	Administrative state of BGP EVPN MPLS
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-bind-tunnel

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	Enter the auto-bind-tunnel context
Introduced	16.0.R1

enforce-strict-tunnel-tagging *boolean*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**
Description	Enable/disable enforcement of strict tunnel tagging
Default	false
Introduced	16.0.R4

resolution *keyword*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**
Description	Resolution method for tunnel selection
Default	none
Options	none, filter, any
Introduced	16.0.R1

resolution-filter

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**
Description	Enter the resolution-filter context
Introduced	16.0.R1

bgp *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Set BGP type for auto bind tunnel

Default false

Introduced 16.0.R1

ldp *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting LDP type for auto-bind-tunnel

Default false

Introduced 16.0.R1

rsvp *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting RSVP-TE type for auto-bind-tunnel

Default false

Introduced 16.0.R1

sr-isis *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting SR-ISIS type for auto-bind-tunnel

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Segment Routing (SR) tunnel type programed by an OSPF instance in TTM

Default false

Introduced 16.0.R1

sr-te *boolean*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**
Description	Enable/disable setting SR-TE type for auto-bind-tunnel
Default	false
Introduced	16.0.R1

udp *boolean*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**
Description	Set UDP type for auto-bind-tunnel
Default	false
Introduced	16.0.R1

control-word *boolean*

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	Enable/disable setting the CW bit in the label message.
Default	false
Introduced	16.0.R1

default-route-tag *one-byte-value*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	Default route tag to match against export policies: value as 0xXX.
Introduced	16.0.R4

ecmp *number*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description Maximum ECMP routes information
Range 1 to 32
Default 1
Introduced 16.0.R1

endpoint

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description Enter the **endpoint** context
Introduced 16.0.R5

name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number* **endpoint**
Description Name of endpoint the bgp-evpn mpls instance is associated with
Reference configure **service epipe** *service-name* **endpoint** *string*
Introduced 16.0.R5

entropy-label *boolean*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description Enable/disable use of entropy-label.
Default false
Introduced 16.0.R1

force-vc-forwarding *keyword*

Context **configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description VC forwarding status
Options vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced 16.0.R1

send-tunnel-encap

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number*
Description	Enter the send-tunnel-encap context
Introduced	16.0.R1

mpls *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **send-tunnel-encap**
Description	Enable/disable MPLS encapsulation for this service.
Default	true
Introduced	16.0.R1

mpls-over-udp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn mpls** *number* **send-tunnel-encap**
Description	Enable/disable MPLS over UDP encapsulation for this service.
Default	false
Introduced	16.0.R1

remote-ac

Context	**configure service epipe** *service-name* **bgp-evpn**
Description	Enter the remote-ac context
Introduced	16.0.R1

eth-tag *number*

Context	**configure service epipe** *service-name* **bgp-evpn remote-ac**
Description	Ethernet tag of the attachment circuit
Range	1 to 16777215
Introduced	16.0.R1

name *string*

Context	**configure service epipe** *service-name* **bgp-evpn remote-ac**
Description	Attachment circuit name
String Length	1 to 32
Introduced	16.0.R1

vxlan [bgp-instance] *number*

Context	**configure service epipe** *service-name* **bgp-evpn**
Description	Enter the vxlan context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	BGP instance
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	Administrative state of BGP EVPN VXLAN
Default	disable
Options	enable, disable
Introduced	16.0.R1

default-route-tag *one-byte-value*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	Default route tag to match against export policies: value as 0xXX.
Introduced	16.0.R4

ecmp *number*

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	Maximum ECMP routes information
Range	1 to 32
Default	1
Introduced	16.0.R1

send-tunnel-encap *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	Enable/Disable sending Vxlan Encap.
Default	true
Introduced	16.0.R1

vxlan-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-evpn vxlan** *number*
Description	VXLAN instance
Reference	configure **service epipe** *service-name* **vxlan instance** *number*
Introduced	16.0.R1
Notes	This element is mandatory

bgp-mh-site [site-name] *string*

Context	**configure service epipe** *service-name*
Description	Enter the bgp-mh-site context
Max. Elements	1
Introduced	16.0.R1

[site-name] *string*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Name for the specific site
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

activation-timer *number*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Time that the local sites are in standby status, waiting for BGP updates
Range	0 to 100
Units	seconds
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Administrative state of the site
Default	disable
Options	enable, disable
Introduced	16.0.R1

boot-timer *number*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Time that system waits after node reboot and before it runs DF election algorithm
Range	0 to 600
Units	seconds
Introduced	16.0.R1

id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	ID for the site
Range	1 to 65535
Introduced	16.0.R1

min-down-timer *number*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Minimum downtime for BGP multi-homing site after transition from up to down
Range	0 to 100
Units	seconds
Introduced	16.0.R1

preference *number*

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	Preference value to advertise in the NLRI L2 extended community
Range	1 to 65535
Introduced	16.0.R1

sap *sap*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-mh-site** *string*
Description	SAP to be associated with this site
Introduced	16.0.R1

bgp-vpws

Context	**configure service epipe** *service-name*
Description	Enter the bgp-vpws context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service epipe** *service-name* **bgp-vpws**
Description	Administrative state of the VPWS edge instance
Default	disable
Options	enable, disable
Introduced	16.0.R1

local-ve

Context	**configure service epipe** *service-name* **bgp-vpws**
Description	Enter the local-ve context
Introduced	16.0.R1

id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-vpws local-ve**
Description	VPWS edge identifier
Range	1 to 65535
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **bgp-vpws local-ve**
Description	VPWS edge name
String Length	1 to 32
Introduced	16.0.R1

remote-ve [name] *string*

Context	**configure service epipe** *service-name* **bgp-vpws**
Description	Enter the remote-ve context
Max. Elements	2
Introduced	16.0.R1

[name] *string*

Context	**configure service epipe** *service-name* **bgp-vpws remote-ve** *string*
Description	VPWS edge name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

id *number*

Context	**configure service epipe** *service-name* **bgp-vpws remote-ve** *string*
Description	VPWS edge identifier
Range	1 to 65535
Introduced	16.0.R1

customer *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name*
Description	Service customer ID
Reference	configure **service customer** *customer-name*
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service epipe** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

endpoint [name] *string*

Context	**configure service epipe** *service-name*
Description	Enter the endpoint context
Max. Elements	2
Introduced	16.0.R1

[name] *string*

Context	**configure service epipe** *service-name* **endpoint** *string*
Description	Service endpoint name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure service epipe** *service-name* **endpoint** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

hold-time-active *number*

Context	**configure service epipe** *service-name* **endpoint** *string*
Description	Time to hold the active state before entering standby when a local MC-LAG SAP goes down
Range	1 to 60
Introduced	16.0.R1

revert-time (*number* | *keyword*)

Context **configure service epipe** *service-name* **endpoint** *string*

Description Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint

Default immediate

Introduced 16.0.R1

standby-signaling *keyword*

Context **configure service epipe** *service-name* **endpoint** *string*

Description PW standby bit that is sent to T-LDP peer when spoke-SDPs are selected as standby

Options master, slave

Introduced 16.0.R1

load-balancing

Context **configure service epipe** *service-name*

Description Enter the load-balancing context

Introduced 16.0.R1

per-service-hashing *boolean*

Context **configure service epipe** *service-name* **load-balancing**

Description Service level hashing for Ethernet services

Default false

Introduced 16.0.R1

nat-outside [nat-group] *number*

Context **configure service epipe** *service-name*

Description Enter the nat-outside context

Introduced 16.0.R1

[nat-group] *number*

Context	**configure service epipe** *service-name* **nat-outside** *number*
Description	NAT group
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name* **nat-outside** *number*
Description	Administrative state of NAT in this service
Default	disable
Options	enable, disable
Introduced	16.0.R1

oper-group *string*

Context	**configure service epipe** *service-name*
Description	Oper-group name
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

pbb

Context	**configure service epipe** *service-name*
Description	Enter the pbb context
Introduced	16.0.R1

force-qtag-forwarding *boolean*

Context	**configure service epipe** *service-name* **pbb**
Description	Add an IEEE 802.1q tag after the Customer MAC address when the PBB header is built
Default	false
Introduced	16.0.R1

tunnel

Context	**configure service epipe** *service-name* **pbb**
Description	Enter the tunnel context
Introduced	16.0.R1

backbone-dest-mac *mac-unicast-address-no-zero*

Context	**configure service epipe** *service-name* **pbb tunnel**
Description	Backbone Destination MAC address
Introduced	16.0.R1
Notes	This element is part of a choice

backbone-dest-mac-name *string*

Context	**configure service epipe** *service-name* **pbb tunnel**
Description	Name for backbone Destination MAC address
Reference	configure **service pbb mac** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

backbone-vpls-service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **pbb tunnel**
Description	Backbone VPLS service
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

isid *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **pbb tunnel**
Description	Service instance ID
Range	0 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

sap [sap-id] *sap*

Context	**configure service epipe** *service-name*
Description	Enter the sap context
Max. Elements	2
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

bandwidth *number*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	SAP bandwidth
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

cflowd *boolean*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Enable Cflowd collection and analysis on this SAP
Default	false
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Collect accounting statistics
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service epipe** *service-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service epipe** *service-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service epipe** *service-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service epipe** *service-name* **sap** *sap* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context	**configure service epipe** *service-name* **sap** *sap* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R4

description *string*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context **configure service epipe** *service-name* **sap** *sap*

Description Distributed CPU protection policy for SAP

Reference configure **system security dist-cpu-protection policy** *string*

Introduced 16.0.R1

egress

Context **configure service epipe** *service-name* **sap** *sap*

Description Enter the egress context

Introduced 16.0.R1

agg-rate

Context **configure service epipe** *service-name* **sap** *sap* **egress**

Description Enter the agg-rate context

Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress agg-rate**

Description Maximum total rate of all egress queues in kbps.

Range 1 to 3200000000

Introduced 16.0.R1

filter

Context **configure service epipe** *service-name* **sap** *sap* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress filter**

Description MAC filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress filter**

Description MAC filter identifier

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service epipe** *service-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service epipe** *service-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Priority level

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Minimum amount of cumulative buffer space allowed

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

qinq-mark-top-only *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos**

Description Mark top Q-tags

Default false

Introduced 16.0.R1

sap-egress

Context **configure service epipe** *service-name* **sap** *sap* **egress qos**

Description Enter the sap-egress context

Introduced 16.0.R1

overrides

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress**

Description Enter the overrides context

Introduced 16.0.R1

hs-secondary-shaper *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	HS Secondary Shaper
String Length	1 to 32
Introduced	16.0.R1

hs-wrr-group [group-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hs-wrr-group context
Introduced	16.0.R4

[group-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	HS WRR group identifier
Reference	configure **qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

hs-class-weight *number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Weight of scheduling class.
Range	1 | 2 | 4 | 8
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR percent.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hsmda-queues context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Packet byte offset for HSMDA queue
Range	-64 to 31
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Egress HSMDA queue ID

Reference configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Buffer space allowed for the queue

Units bytes

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Administrative PIR rate.

Introduced 16.0.R1

slope-policy *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Name of the slope-policy which is used to override the default slope-policy for the named buffer pool.

Reference configure **qos hsmda-slope-policy** *string*

Introduced 16.0.R1

wrr-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Weight value for the HSMDA queue

Range 1 to 32

Introduced 16.0.R1

secondary-shaper *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Secondary shaper for the HSMDA queue
String Length	1 to 32
Introduced	16.0.R1

wrr-policy *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	WRR policy for the HSMDA queue
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

policer [policer-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the policer context
Introduced	16.0.R4

[policer-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description CBS

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -64 to 31

Introduced 16.0.R1

percent-rate

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

avg-frame-overhead *decimal-number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Encapsulation overhead, in centipercent, used to translate packet-based rate to frame-based rate and vice versa.

Range 0.00 to 100.00

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Explicit shaping burst size of a queue.

Range 1 to 14000000

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobytes

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

hs-class-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Scheduling class weight.

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

hs-wred-queue

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **hs-wred-queue**

Description Name of slope-policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler

Range 1 to 127

Default 1

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Units kilobytes

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Monitor queue depth

Default false

Introduced 16.0.R1

parent

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**

Description CIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**

Description PIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

percent-rate

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**

Description PIR rate

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress**

Description Policy identifier

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

port-redirect-group

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Policy for port redirect queue group

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Instance of port queue group

Range 1 to 65535

Introduced 16.0.R1

scheduler-policy

Context **configure service epipe** *service-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

scheduler [scheduler-name] *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

endpoint *string*

Context **configure service epipe** *service-name* **sap** *sap*

Description Name of the endpoint

Reference configure **service epipe** *service-name* **endpoint** *string*

Introduced 16.0.R1

eth-cfm

Context **configure service epipe** *service-name* **sap** *sap*

Description Enter the eth-cfm context

Introduced 16.0.R1

ais *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm**

Description Generate AIS frames for the SAP based on a facility fault.

Default false

Introduced 16.0.R1

collect-lmm-fc-stats

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the ais context

Introduced 16.0.R1

client-meg-level *number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**

Description Client MEG level for AIS message generation

Range 1 to 7

Max. Elements 7

Introduced 16.0.R1

interface-support *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**

Description Allow generation of AIS PDUs based on the associated endpoint state

Default false

Introduced 16.0.R1

interval *number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**

Description Transmission interval for AIS messages

Range 1 | 60

Default 1

Units seconds

Introduced 16.0.R1

low-priority-defect *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**

Description Receive period multiplier to time out CSF

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

description *string*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

direction *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Direction the MEP faces

Options down, up

Introduced 16.0.R1

eth-test

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

lbm-svc-act-responder *boolean*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Process service activation streams encapsulated in ETH-CFM request Loopback Message
Default	false
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

primary-vlan *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MEP provisioned using MA primary VLAN ID
Default	false
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service epipe** *service-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

ignore-oper-down *boolean*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Enable/disable whether service will ignore when sap is operationally down.
Default	false
Introduced	16.0.R1

ingress

Context **configure service epipe** *service-name* **sap** *sap*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service epipe** *service-name* **sap** *sap* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress filter**

Description MAC filter identifier

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service epipe** *service-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Priority level

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Minimum amount of cumulative buffer space allowed

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

sap-ingress

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

fp-redirect-group

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**

Description Forwarding-plane queue group policy

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**
Description	Queue group instance
Range	1 to 65535
Introduced	16.0.R1

overrides

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress**
Description	Enter the overrides context
Introduced	16.0.R4

policer [policer-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides**
Description	Enter the policer context
Introduced	16.0.R4

[policer-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	CBS
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -32 to 31

Introduced 16.0.R1

percent-rate

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**

Description CIR percent rate

Range 0.00 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobps

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Monitor queue depth

Default false

Introduced 16.0.R1

parent

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description CIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description PIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

percent-rate

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**

Description CIR percent rate

Range 0.00 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**

Description PIR percent rate

Range 0.01 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

rate

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the **rate** context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**

Description CIR rate

Range 0 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

pir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**

Description PIR rate

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress**

Description Policy identifier

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R1

queuing-type *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos sap-ingress**

Description Ingress queuing type

Options shared, multipoint-shared

Introduced 16.0.R4

scheduler-policy

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy**
Description	Enter the overrides context
Introduced	16.0.R4

scheduler [scheduler-name] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides**
Description	Enter the scheduler context
Introduced	16.0.R4

[scheduler-name] *string*

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*
Description	Scheduler override policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

parent

Context	**configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*
Description	Enter the parent context
Introduced	16.0.R1

cir-weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

qtag-manipulation

Context **configure service epipe** *service-name* **sap** *sap* **ingress**

Description Enter the qtag-manipulation context

Introduced 16.0.R1

c-tag *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qtag-manipulation**

Description Inner ingress VLAN translation for two service delimiting VLAN values

Range 0 to 4094

Introduced 16.0.R1

Notes This element is part of a choice

push-dot1q-vlan (*number* | *keyword*)

Context **configure service epipe** *service-name* **sap** *sap* **ingress qtag-manipulation**

Description VLAN translation information

Introduced 16.0.R1

Notes This element is part of a choice

s-tag *number*

Context **configure service epipe** *service-name* **sap** *sap* **ingress qtag-manipulation**

Description Outer ingress VLN translation for two service delimiting VLAN values

Range 0 to 4094

Introduced 16.0.R1

Notes This element is part of a choice

l2tpv3-session

Context **configure service epipe** *service-name* **sap** *sap*

Description Enter the l2tpv3-session context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service epipe** *service-name* **sap** *sap* **l2tpv3-session**

Description Adminstrative state of the entry.

Default disable

Options enable, disable

Introduced 16.0.R1

pseudo-wire

Context **configure service epipe** *service-name* **sap** *sap* **l2tpv3-session**

Description Enter the pseudo-wire context

Introduced 16.0.R1

ethernet

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service epipe** *service-name* **sap** *sap* **l2tpv3-session pseudo-wire**

Description Ethernet type.

Introduced 16.0.R1

Notes This element is part of a choice

ethernet-vlan-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **sap** *sap* **l2tpv3-session pseudo-wire**
Description	Ethernet VLAN identifier.
Range	0 to 4095
Introduced	16.0.R1
Notes	This element is part of a choice

router

Context	**configure service epipe** *service-name* **sap** *sap* **l2tpv3-session**
Description	Enter the router context
Introduced	16.0.R1

group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **sap** *sap* **l2tpv3-session router**
Description	Tunnel group name.
String Length	1 to 32
Introduced	16.0.R1

router-instance *router-instance-base-vprn-loose*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **sap** *sap* **l2tpv3-session router**
Description	Router instance hosting the l2tpv3 session.
String Length	1 to 64
Introduced	16.0.R1

vc-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **sap** *sap* **l2tpv3-session**
Description	VC identifier.
Range	1 to 4294967295
Introduced	16.0.R1

lag

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Enter the lag context
Introduced	16.0.R1

link-map-profile *number*

Context	**configure service epipe** *service-name* **sap** *sap* **lag**
Description	Configure LAG link map profile.
Range	1 to 64
Introduced	16.0.R1

per-link-hash

Context	**configure service epipe** *service-name* **sap** *sap* **lag**
Description	Enter the per-link-hash context
Introduced	16.0.R1

class *number*

Context	**configure service epipe** *service-name* **sap** *sap* **lag per-link-hash**
Description	Class used on LAG egress when using weighted per-link-hash
Range	1 to 3
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure service epipe** *service-name* **sap** *sap* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

mc-ring

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Enter the mc-ring context
Introduced	16.0.R1

ring-node *string*

Context	**configure service epipe** *service-name* **sap** *sap* **mc-ring**
Description	Name for the ring node associated with this SAP
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

monitor-oper-group *string*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Monitor operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

multi-service-site *string*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Multi service site name
String Length	1 to 32
Introduced	16.0.R1

oper-group *string*

Context	**configure service epipe** *service-name* **sap** *sap*
Description	Operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

service-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name*
Description	Unique service ID; cannot be used by any other service, regardless of service type
Range	1 to 2147483647
Introduced	16.0.R1

service-mtu *number*

Context	**configure service epipe** *service-name*
Description	MTU size
Range	1 to 9194
Default	1514
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service epipe** *service-name*
Description	Enter the spoke-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Policy to collect accounting statistics
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

bandwidth (*number* | *keyword*)

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Bandwidth that is reserved for this SDP binding
Default	0
Introduced	16.0.R1

bfd-liveness

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

encap *keyword*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **bfd-liveness**

Description BFD encapsulation used on this SDP binding

Default ipv4

Options ipv4

Introduced 16.0.R1

bfd-template *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description BFD template associated with SDP binding

Reference configure **bfd bfd-template** *string*

Introduced 16.0.R1

collect-stats *boolean*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Allow agent to collect accounting statistics

Default false

Introduced 16.0.R1

control-word *boolean*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Use the control word as preferred

Default false

Introduced 16.0.R1

cpu-protection

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the cpu-protection context

Introduced 16.0.R1

eth-cfm-monitoring

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

egress

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**
Description MAC filter ID
Reference configure **filter mac-filter** *filter-name*
Introduced 16.0.R1

l2tpv3

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description Enter the l2tpv3 context
Introduced 16.0.R1

cookie *cookie-value*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress l2tpv3**
Description Cookie parameters
String Length 18 to 23
Introduced 16.0.R1

qos

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description Enter the qos context
Introduced 16.0.R1

network

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos**
Description Enter the network context
Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network**
Description Egress network policy name applied to this SDP binding
Reference configure **qos network** *network-policy-name*
Introduced 16.0.R1

port-redirect-group

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Policy for port queue group for this SDP binding

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Instance of the port egress Queue Group for this SDP binding.

Range 1 to 65535

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

endpoint

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the endpoint context

Introduced 16.0.R1

icb *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Bind SDP as type Inter-Chassis Backup (ICB)
Default	false
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Name of endpoint to which this SDP bind is attached
Reference	configure **service epipe** *service-name* **endpoint** *string*
Introduced	16.0.R1

precedence (*number* | *keyword*)

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Precedence of this SDP bind when there are multiple SDP binds attached to one service endpoint
Default	4
Introduced	16.0.R1

entropy-label

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Whether the use of entropy-label is enabled or not.
Introduced	16.0.R1
Notes	This element is part of a choice

eth-cfm

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the eth-cfm context
Introduced	16.0.R1

collect-lmm-fc-stats

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the csf context
Introduced	16.0.R1

multiplier *decimal-number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

direction *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Direction the MEP faces
Options	down, up
Introduced	16.0.R1

eth-test

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Enter the test-pattern context
Introduced	16.0.R1

crc-tlv *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Generate a CRC checksum
Default	false
Introduced	16.0.R1

pattern *keyword*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

lbm-svc-act-responder *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Process service activation streams encapsulated in ETH-CFM request Loopback Message
Default	false
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

primary-vlan *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MEP provisioned using MA primary VLAN ID
Default	false
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

force-vc-forwarding *keyword*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	VC forwarding status
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1

hash-label

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **hash-label**
Description	To signal the hash label capability to the remote PE.
Introduced	16.0.R1
Notes	This element is part of a choice

ingress

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the ingress context
Introduced	16.0.R1

filter

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**
Description	IP filter ID
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6 *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**
Description	IPv6 filter identifier
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1

mac *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description MAC filter ID

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

l2tpv3

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the l2tpv3 context

Introduced 16.0.R1

cookie

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress l2tpv3**

Description Enter the cookie context

Introduced 16.0.R1

cookie1 *cookie-value*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress l2tpv3 cookie**

Description Value of cookie-1 for the tunnel

String Length 18 to 23

Introduced 16.0.R1

cookie2 *cookie-value*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress l2tpv3 cookie**

Description Value of cookie-1 for the tunnel

String Length 18 to 23

Introduced 16.0.R1

qos

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Forwarding-plane queue group policy for this SDP binding

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Instance of the forwarding-plane ingress Queue Group for this SDP binding

Range 1 to 65535

Introduced 16.0.R1

policy-name *string*

Context **configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**

Description Ingress network policy name applied to this SDP binding

Reference configure **qos network** *network-policy-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Operational group identifier that affect the state of this SDP bind
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

oper-group *string*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Operational group identifier
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

pw-status

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the pw-status context
Introduced	16.0.R1

block-on-peer-fault *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **pw-status**
Description	Block the user traffic on this SDP bind when peer PW status has fault bits set
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

signaling *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **pw-status**
Description	Allow SDP binding to support pseudowire status signaling
Default	true
Introduced	16.0.R1

standby-signaling-slave *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **pw-status**
Description	Block spoke transmission when the spoke receives standby status notification from peer
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

source-bmac

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the source-bmac context
Introduced	16.0.R1

use-sdp-bmac-lsb *boolean*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id* **source-bmac**
Description	Allow the spoke SDP to be part of a redundant pseudo-wire within PBB Epipe service
Default	false
Introduced	16.0.R1

vc-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Type of virtual circuit (VC) associated with the SDP binding
Default	ether
Options	ether, vlan
Introduced	16.0.R1

vlan-vc-tag *number*

Context	**configure service epipe** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP bind VC tag
Range	0 to 4094
Introduced	16.0.R1

test *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name*
Description	Designate as a test service
Default	false
Introduced	16.0.R1

vc-switching *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name*
Description	PW switching signaling to be used by the spokes in the service
Default	false
Introduced	16.0.R1

vpn-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name*
Description	VPN identifier for the service
Range	1 to 2147483647
Introduced	16.0.R1

vxlan

Context	**configure service epipe** *service-name*
Description	Enter the vxlan context
Introduced	16.0.R1

instance [vxlan-instance] *number*

Context	**configure service epipe** *service-name* **vxlan**
Description	Enter the instance context
Max. Elements	1
Introduced	16.0.R1

[vxlan-instance] *number*

Context	**configure service epipe** *service-name* **vxlan instance** *number*
Description	VXLAN instance
Range	1
Default	1
Introduced	16.0.R1
Notes	This element is part of a list key

egress-vtep

Context	**configure service epipe** *service-name* **vxlan instance** *number*
Description	Enter the egress-vtep context
Introduced	16.0.R1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service epipe** *service-name* **vxlan instance** *number* **egress-vtep**
Description	VXLAN egress VTEP address
Introduced	16.0.R1

oper-group *string*

Context	**configure service epipe** *service-name* **vxlan instance** *number* **egress-vtep**
Description	Operational group associated with egress VTEP address
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

vni *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service epipe** *service-name* **vxlan instance** *number*
Description	VNI of the VXLAN
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

source-vtep (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service epipe** *service-name* **vxlan**
Description	Vxlan source virtual tunnel endpoint information
Introduced	16.0.R4

ies [service-name] *service-name*

Context	**configure service**
Description	Enter the ies context
Introduced	16.0.R1

[service-name] *service-name*

Context	**configure service ies** *service-name*
Description	Name of the service
String Length	1 to 64
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name*
Description	Administrative state of the mirror destination service
Default	disable
Options	enable, disable
Introduced	16.0.R1

customer *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name*
Description	Service customer ID
Reference	configure **service customer** *customer-name*
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service ies** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

igmp-host-tracking

Context	**configure service ies** *service-name*
Description	Enter the igmp-host-tracking context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **igmp-host-tracking**
Description	Administrative state of IGMP host tracking
Default	disable
Options	enable, disable
Introduced	16.0.R1

expiry-time *number*

Context	**configure service ies** *service-name* **igmp-host-tracking**
Description	Time during which the system continues to track inactive hosts
Range	1 to 65535
Default	260
Units	seconds
Introduced	16.0.R1

interface [interface-name] *interface-name*

Context	**configure service ies** *service-name*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

cflowd-parameters

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R1

sampling [sampling-type] *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **cflowd-parameters**
Description	Enter the sampling context
Introduced	16.0.R1

[sampling-type] *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	Cflowd sampling type for virtual router interface
Options	unicast, multicast
Introduced	16.0.R5
Notes	This element is part of a list key

direction *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The direction of the Cflowd analysis that is applied to the given interface.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4

type *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The type of Cflowd analysis that is applied to the given interface.
Options	acl, interface
Introduced	16.0.R4
Notes	This element is mandatory

cpu-protection *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	CPU protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

hold-time

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the hold-time context
Introduced	16.0.R1

ipv4

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time**
Description	Enter the ipv4 context
Introduced	16.0.R1

down

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv4**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv4 down**
Description	Apply down delay only when interface is configured or after reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv4 down**
Description	Down hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv4**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv4 up**
Description	Up hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

ipv6

Context **configure service ies** *service-name* **interface** *interface-name* **hold-time**

Description Enter the ipv6 context

Introduced 16.0.R1

down

Context **configure service ies** *service-name* **interface** *interface-name* **hold-time ipv6**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **hold-time ipv6 down**

Description Apply hold time only when IP interface is first configured or after system reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **hold-time ipv6 down**

Description Down hold time for the IPv6 interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service ies** *service-name* **interface** *interface-name* **hold-time ipv6**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **hold-time ipv6 up**
Description	Up hold time for the IPv6 interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

if-attribute

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the if-attribute context
Introduced	16.0.R1

admin-group *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **if-attribute**
Description	Name of the Admin group membership of the interface
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

srlg-group [name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **if-attribute**
Description	Enter the srlg-group context
Introduced	16.0.R1

[name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **if-attribute srlg-group** *string*
Description	Shared Risk Link Group (SRLG) name.
Reference	configure **routing-options if-attribute srlg-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

ingress-stats *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Collect ingress statistics
Default	false
Introduced	16.0.R1

ip-mtu *number*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Interface IP MTU
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

ipv4

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

addresses

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the addresses context
Introduced	16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 addresses**
Description	Enter the address context
Introduced	16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 addresses address** *ipv4-unicast-address*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

prefix-length *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 addresses address** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

allow-directed-broadcasts *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Forward directed broadcasts
Default	false
Introduced	16.0.R1

bfd

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD transmit interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 bfd**

Description BFD session termination

Default auto

Options cpm-np, auto

Introduced 16.0.R1

dhcp

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4**

Description Enter the dhcp context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default disable

Options enable, disable

Introduced 16.0.R4

description *string*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

max-leases *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp lease-populate**

Description The maximum number of DHCPv4 leases.

Range 0 to 511999

Default 0

Introduced 16.0.R4

option-82

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

action *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description What to do with DHCP option 82.

Default keep

Options replace, drop, keep

Introduced 16.0.R4

circuit-id

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the circuit-id context

Introduced 16.0.R4

ascii-tuple

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

ifindex

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ifindex in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Do not include the circuit-id.

Introduced 16.0.R4

Notes This element is part of a choice

sap-id

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use SAP ID in the option.

Introduced 16.0.R4

Notes This element is part of a choice

vlan-ascii-tuple

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use vlan-ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

remote-id

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**
Description	Enter the remote-id context
Introduced	16.0.R4

ascii-string *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Use user-defined ASCII string in the option.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

mac

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Use MAC address in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

none

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**
Description	Do not include the remote-id.
Introduced	16.0.R4
Notes	This element is part of a choice

vendor-specific-option

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**
Description	Enter the vendor-specific-option context
Introduced	16.0.R4

client-mac-address *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

pool-name *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the pool name in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the proxy-server context

Introduced 16.0.R4

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server**

Description Administratively enable/disable DHCP proxy.

Default disable

Options enable, disable

Introduced 16.0.R1

emulated-server *ipv4-unicast-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server**

Description The address used as source and siaddr when emulating a DHCP server.

Introduced 16.0.R1

lease-time

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	Use lease time information provided by RADIUS server
Default	false
Introduced	16.0.R1

value *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	DHCP lease time
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Python policy.
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

relay-plain-bootp *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of plain BOOTP packets.
Default	false
Introduced	16.0.R4

relay-proxy

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enter the relay-proxy context
Introduced	16.0.R1

release-update-src-ip *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify whether or not to relay release messages.
Default	false
Introduced	16.0.R4

siaddr-override *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify the IP address to use.
Introduced	16.0.R4

server *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

trusted *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of untrusted packets.
Default	false
Introduced	16.0.R4

use-arp *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable the use of ARP to determine the destination Hw address.
Default	false
Introduced	16.0.R4

icmp

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the icmp context
Introduced	16.0.R1

mask-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Allow responses to ICMP mask requests
Default	true
Introduced	16.0.R1

param-problem

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Enter the param-problem context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description	Administrative state of sending parameter-problem messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description Number of parameter-problem ICMP messages to send in specified time interval
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp param-problem**
Description Time used to limit number of parameter-problem ICMP messages issued
Range 1 to 60
Default 10
Units seconds
Introduced 16.0.R1

redirects

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp**
Description Enter the redirects context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp redirects**
Description Administrative state of sending ICMP redirects
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp redirects**
Description Maximum number of ICMP redirect messages to send
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp redirects**
Description	Time to limit the number of ICMP redirect messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ttl-expired

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Enter the ttl-expired context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Maximum number of TTL expired messages to send
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Time to limit the number of ICMP TTL expired messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

unreachables

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp**
Description	Enter the unreachables context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description	Administrative state of sending unreachable messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description	Maximum number of unreachable messages to send
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 icmp unreachables**
Description	Time to limit the number of unreachable messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ip-helper-address *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Gateway address
Introduced	16.0.R1

local-dhcp-server *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	DHCP server for the interface
Reference	configure **router** *string* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

neighbor-discovery

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

learn-unsolicited *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow ARP application to learn new entries based on any received ARP message
Default	false
Introduced	16.0.R1

limit

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 524288
Introduced	16.0.R1

threshold *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-arp *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable local proxy ARP on interface
Default	false
Introduced	16.0.R1

populate *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow static and dynamic hosts to be populated in system ARP cache
Default	false
Introduced	16.0.R1

populate-host *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow addition or deletion of host routes in route table derived from ARP entries in ARP cache
Default	false
Introduced	16.0.R1

proactive-refresh *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Send a single refresh message with no retries 30 seconds prior to entry timeout
Default	false
Introduced	16.0.R1

proxy-arp-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Proxy ARP policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

remote-proxy-arp *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable remote proxy ARP on interface
Default	false
Introduced	16.0.R1

retry-timer *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP retry interval
Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1

route-tag *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP route tag
Range	1 to 255
Introduced	16.0.R1

static-neighbor [ipv4-address] *ipv4-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv4-address] *ipv4-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	IPv4 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

static-neighbor-unnumbered

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor-unnumbered context
Introduced	16.0.R1

mac-address *mac-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor-unnumbered**
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

timeout *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

primary

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the primary context
Introduced	16.0.R1

address *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is mandatory

broadcast *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 primary**
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

prefix-length *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 primary**
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

qos-route-lookup *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	QoS Route lookup
Options	destination, source
Introduced	16.0.R1

secondary [address] *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the secondary context
Introduced	16.0.R1

[address] *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

broadcast *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Broadcast address format
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1

igp-inhibit *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	Secondary IP address that is not recognized as local interface by the running IGP
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 secondary** *ipv4-unicast-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

tcp-mss *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	TCP maximum segment size for the interface
Range	384 to 9158
Introduced	16.0.R1

unnumbered

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the unnumbered context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 unnumbered**
Description	IP address of the interface
Introduced	16.0.R1
Notes	This element is part of a choice

ip-int-name *interface-name*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 unnumbered**
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

system

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 unnumbered**

Description IP interface as an unnumbered interface

Introduced 16.0.R1

Notes This element is part of a choice

urpf-check

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4**

Description Enter the urpf-check context

Introduced 16.0.R1

ignore-default *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 urpf-check**

Description Ignore default route when performing a uRPF check

Default false

Introduced 16.0.R1

mode *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4 urpf-check**

Description Unicast RPF check mode

Default strict

Options strict, loose, strict-no-ecmp

Introduced 16.0.R1

vrrp [virtual-router-id] *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv4**

Description Enter the vrrp context

Introduced 16.0.R1

[virtual-router-id] *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

authentication-key *encrypted-leaf*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Password for simple text authentication
String Length	1 to 38
Introduced	16.0.R1

backup *ipv4-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	16
Introduced	16.0.R1

bfd-liveness

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Destination IP address to be used for BFD session
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 2559
Default	10
Units	deciseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

ssh-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to SSH requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

standby-forwarding *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv4 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

address [ipv6-address] *ipv6-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Enable/disable Duplicate Address Detection.
Default	true
Introduced	16.0.R1

eui-64 *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Form complete IPv6 address from supplied prefix and 64-bit interface identifier
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is mandatory

primary-preference *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Order to enforce in which the address is used from control plane protocols and applications
Range	1 to 4294967295
Introduced	16.0.R1

track-srrp *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 address** *ipv6-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

bfd

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description BFD transmit interval over this interface
Range 10 to 100000
Default 100
Units milliseconds
Introduced 16.0.R1

type *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 bfd**
Description BFD session termination
Default auto
Options cpm-np, auto
Introduced 16.0.R1

dhcp6

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description Enter the dhcp6 context
Introduced 16.0.R1

relay

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6**
Description Enter the relay context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description Administrative state of DHCPv6 relay
Default disable
Options enable, disable
Introduced 16.0.R1

description *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

lease-populate

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Enter the lease-populate context
Introduced	16.0.R1

max-nbr-of-leases *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate**
Description	Maximum number of lease states allocated by the DHCPv6 relay function, allowed on interface
Range	0 to 32767
Default	0
Introduced	16.0.R1

route-populate

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate**
Description	Enter the route-populate context
Introduced	16.0.R1

na *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**
Description	Create route based on IA_NA prefix option in relay-reply message
Default	false
Introduced	16.0.R1

pd

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**

Description Enter the pd context

Introduced 16.0.R1

exclude *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate pd**

Description Create back hole route based on prefix exclude option in relay-reply message

Default false

Introduced 16.0.R1

ta *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay lease-populate route-populate**

Description Create route based on IA_TA prefix option in relay-reply message

Default false

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**

Description Link address of the DHCPv6 relay messages

Introduced 16.0.R1

neighbor-resolution *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**

Description Enable neighbor resolution via DHCPv6 relay

Default false

Introduced 16.0.R1

option

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Enter the option context
Introduced	16.0.R1

interface-id

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option**
Description	Enter the interface-id context
Introduced	16.0.R1

ascii-tuple

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**
Description	Use ASCII-encoded concatenated tuple in interface ID option in DHCPv6 relay packet
Introduced	16.0.R1
Notes	This element is part of a choice

if-index

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**
Description	Use interface index in interface ID option in DHCPv6 relay packet
Introduced	16.0.R1
Notes	This element is part of a choice

sap-id

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**
Description	Use SAP ID in interface ID option in DHCPv6 relay packet
Introduced	16.0.R1
Notes	This element is part of a choice

string *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option interface-id**
Description	String for interface ID option in DHCPv6 relay packet
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay option**
Description	Allow remote ID option to be sent in the DHCPv6 relay packet
Default	false
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Python policy name
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

server *ipv6-address-with-zone*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	DHCPv6 server to which the DHCPv6 requests are forwarded
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

source-address *ipv6-unicast-or-linklocal-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Source IPv6 address of the DHCPv6 relay messages
Introduced	16.0.R1

user-db *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 relay**
Description	Local user database for authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

server

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6**
Description	Enter the server context
Introduced	16.0.R1

max-nbr-of-leases *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server**
Description	DHCPv6 leases allowed
Range	0 to 8000
Default	8000
Introduced	16.0.R1

prefix-delegation

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server**
Description	Enter the prefix-delegation context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation**
Description	Administrative state of the prefix delegation
Default	disable
Options	enable, disable
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation**
Description	Enter the prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	IPv6 prefix to be delegated
Introduced	16.0.R1
Notes	This element is part of a list key

client-id

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	Enter the client-id context
Introduced	16.0.R1

duid *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix* **client-id**
Description	Requesting router ID
String Length	1 to 130
Introduced	16.0.R1

iaid *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix* **client-id**
Description	IAID from the requesting router that matches to delegate the prefix
Range	1 to 4294967295
Introduced	16.0.R1

preferred-lifetime (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	IPv6 prefix/mask preferred life time
Default	604800
Units	seconds
Introduced	16.0.R1

valid-lifetime (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 dhcp6 server prefix-delegation prefix** *ipv6-prefix*
Description	IPv6 prefix/mask valid life time
Default	2592000
Units	seconds
Introduced	16.0.R1

duplicate-address-detection *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enable/disable Duplicate Address Detection
Default	true
Introduced	16.0.R1

icmp6

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the icmp6 context
Introduced	16.0.R1

packet-too-big

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description	Enter the packet-too-big context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description Administrative state of packet-too-big messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description Number of packet-too-big messages
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 packet-too-big**
Description Time to limit packet-too-big messages
Range 1 to 60
Default 10
Introduced 16.0.R1

param-problem

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description Enter the param-problem context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Administrative state of param-problem messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Number of parameter-problem messages
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 param-problem**
Description Time to limit parameter problem messages
Range 1 to 60
Default 10
Introduced 16.0.R1

redirects

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description Enter the redirects context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**
Description Administrative state of the redirect messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**
Description Number of redirect messages
Range 10 to 1000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 redirects**
Description Time to limit redirect messages
Range 1 to 60
Default 10
Introduced 16.0.R1

time-exceeded

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description Enter the time-exceeded context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Administrative state of the time-exceeded messages
Default enable
Options enable, disable
Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Number of time-exceeded messages
Range 10 to 2000
Default 100
Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 time-exceeded**
Description Time to limit time-exceeded messages
Range 1 to 60
Default 10
Introduced 16.0.R1

unreachables

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6**
Description	Enter the unreachables context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description	Administrative state of the unreachable messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description	Number of unreachable messages
Range	10 to 2000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 icmp6 unreachables**
Description	Time to limit unreachable messages
Range	1 to 60
Default	10
Introduced	16.0.R1

link-local-address

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the link-local-address context
Introduced	16.0.R1

address *ipv6-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 link-local-address**

Description Link-local IPv6 address of this router interface

Introduced 16.0.R1

duplicate-address-detection *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 link-local-address**

Description Enable/disable Duplicate Address Detection.

Default true

Introduced 16.0.R1

local-dhcp-server *string*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6**

Description DHCP server for the interface

Reference configure **router** *string* **dhcp-server dhcpv6** *string*

Introduced 16.0.R1

neighbor-discovery

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

learn-unsolicited *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**

Description Type of entries learned from unsolicited NA messages

Options global, link-local, both

Introduced 16.0.R1

limit

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the limit context
Introduced	16.0.R1

log-only *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Log warning messages at threshold or when limit is exceeded, however entries are learned above limit
Default	false
Introduced	16.0.R1

max-entries *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Maximum number of entries that can be learned on an IP interface
Range	0 to 102400
Introduced	16.0.R1

threshold *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery limit**
Description	Threshold value that triggers a warning message to be sent
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

local-proxy-nd *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enable neighbor discovery on interface
Default	false
Introduced	16.0.R1

populate-host *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Allow addition or deletion of host routes in route table derived from ARP entries in ARP cache
Default	false
Introduced	16.0.R1

proactive-refresh *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Neighbor entries to be refreshed proactively
Options	global, link-local, both
Introduced	16.0.R1

proxy-nd-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Name of the proxy Neighbor Discovery policies for the interface
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

reachable-time *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Timer for neighbor reachability detection
Range	30 to 3600
Introduced	16.0.R1

route-tag *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	ARP route tag
Range	1 to 255
Introduced	16.0.R1

secure-nd

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**
Description	Enter the secure-nd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Administrative state of secure neighbor discovery
Default	disable
Options	enable, disable
Introduced	16.0.R1

allow-unsecured-msgs *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Accept unsecured messages
Default	true
Introduced	16.0.R1

public-key-min-bits *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**
Description	Minimum acceptable key length for public keys
Range	512 to 1024
Default	1024
Introduced	16.0.R1

security-parameter *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery secure-nd**

Description Security parameter in the generation of a cryptographical address

Range 0 to 1

Default 1

Introduced 16.0.R1

stale-time *number*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**

Description Time during which a neighbor discovery cache entry remains stale

Range 60 to 65535

Introduced 16.0.R1

static-neighbor [ipv6-address] *ipv6-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery**

Description Enter the static-neighbor context

Introduced 16.0.R1

[ipv6-address] *ipv6-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*

Description IPv6 address corresponding to the media-dependent physical address

Introduced 16.0.R1

Notes This element is part of a list key

mac-address *mac-address*

Context **configure service ies** *service-name* **interface** *interface-name* **ipv6 neighbor-discovery static-neighbor** *ipv6-address*

Description Media-dependent physical address

Introduced 16.0.R1

Notes This element is mandatory

qos-route-lookup *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	QoS Route lookup
Options	destination, source
Introduced	16.0.R1

tcp-mss *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	TCP maximum segment size for the interface
Range	1220 to 9138
Introduced	16.0.R1

urpf-check

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the urpf-check context
Introduced	16.0.R1

ignore-default *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 urpf-check**
Description	Ignore default route when performing a uRPF check
Default	false
Introduced	16.0.R1

mode *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 urpf-check**
Description	Unicast RPF check mode
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1

vrrp [virtual-router-id] *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6**
Description	Enter the vrrp context
Max. Elements	1
Introduced	16.0.R1

[virtual-router-id] *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual Router Identifier (VRID) for the VRRP virtual router instance
Range	1 to 255
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Administrative state of VRRP
Default	enable
Options	enable, disable
Introduced	16.0.R1
Notes	This element is part of a choice

backup *ipv6-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Virtual router IP addresses for the interface
Max. Elements	4
Introduced	16.0.R1

bfd-liveness

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv6-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	ip-address.
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

init-delay *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP initialization delay timer
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	MAC address used by virtual router instance overriding the VRRP default derived from the VRID
Introduced	16.0.R1

master-int-inherit *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the master instance to dictate the master down timer
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

message-interval *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Interval for sending VRRP Advertisement messages
Range	1 to 4095
Default	100
Units	centiseconds
Introduced	16.0.R1

oper-group *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Operational group name associated with VRRP
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

owner

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Designate virtual router instance as owning the virutal router IP addresses
Introduced	16.0.R1
Notes	This element is part of a choice

passive *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Suppress the transmission and reception of VRRP advertisement messages
Default	false
Introduced	16.0.R1

ping-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to ICMP echo requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	VRRP priority control policy associated with the virtual router instance
Reference	configure **vrrp policy** *number*
Introduced	16.0.R1
Notes	This element is part of a choice

preempt *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the VRRP to override an existing non-owner master
Default	true
Introduced	16.0.R1
Notes	This element is part of a choice

priority *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Base priority for the VRRP
Range	1 to 255
Introduced	16.0.R1

standby-forwarding *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow the forwarding of packets by a standby router
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

telnet-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to Telnet requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

traceroute-reply *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **ipv6 vrrp** *number*
Description	Allow non-owner master to reply to traceroute requests
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

load-balancing

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the load-balancing context
Introduced	16.0.R1

ip-load-balancing *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **load-balancing**
Description	Configure IP load balancing algorithm.
Default	both
Options	both, destination, source, inner-ip
Introduced	16.0.R3

spi-load-balancing *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **load-balancing**
Description	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Default	false
Introduced	16.0.R1

teid-load-balancing *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **load-balancing**
Description	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Default	false
Introduced	16.0.R1

loopback *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Use interface as a loopback interface
Default	false
Introduced	16.0.R1

mac *mac-unicast-address*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	MAC address for the interface
Introduced	16.0.R1

mac-accounting *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enable MAC accounting functionality
Default	false
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Operational group to monitor
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

multicast-network-domain *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Network domain name
Reference	configure **router** *string* **network-domains network-domain** *string*
Introduced	16.0.R1

ptp-hw-assist

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the ptp-hw-assist context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **ptp-hw-assist**
Description	Administrative state of the port-based timestamping assist function for the interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

radius-auth-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Authentication policy
Reference	configure **subscriber-mgmt radius-authentication-policy** *string*
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the sap context
Max. Elements	1
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Administrative state of the SAP

Default enable

Options enable, disable

Introduced 16.0.R1

anti-spoof *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Anti-spoof filtering

Options source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr

Introduced 16.0.R1

bandwidth *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description SAP bandwidth

Range 1 to 3200000000

Units kilobps

Introduced 16.0.R1

calling-station-id *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Calling station ID

String Length 1 to 64

Introduced 16.0.R1

collect-stats *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Collect accounting statistics

Default false

Introduced 16.0.R1

cpu-protection

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

ip-src-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enable IP source monitoring for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R4

description *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Distributed CPU protection policy for SAP
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

egress

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the egress context
Introduced	16.0.R1

agg-rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Enter the agg-rate context

Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Maximum total rate of all egress queues in kbps.

Range 1 to 3200000000

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress filter**

Description MAC filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Minimum amount of cumulative buffer space allowed
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

policy-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**
Description	Policer control policy name
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

qinq-mark-top-only *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**
Description	Mark top Q-tags
Default	false
Introduced	16.0.R1

sap-egress

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**
Description	Enter the sap-egress context
Introduced	16.0.R1

overrides

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**

Description Enter the overrides context

Introduced 16.0.R1

hs-secondary-shaper *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**

Description HS Secondary Shaper

String Length 1 to 32

Introduced 16.0.R1

hs-wrr-group [group-id] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**

Description Enter the hs-wrr-group context

Introduced 16.0.R4

[group-id] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*

Description HS WRR group identifier

Reference configure **qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*

Introduced 16.0.R1

Notes This element is part of a list key

hs-class-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*

Description Weight of scheduling class.

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

percent-rate *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR percent.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hsmda-queues context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Packet byte offset for HSMDA queue
Range	-64 to 31
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Egress HSMDA queue ID
Reference	configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

mbs (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Buffer space allowed for the queue
Units	bytes
Introduced	16.0.R1

rate (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Administrative PIR rate.
Introduced	16.0.R1

slope-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Name of the slope-policy which is used to override the default slope-policy for the named buffer pool.
Reference	configure **qos hsmda-slope-policy** *string*
Introduced	16.0.R1

wrr-weight *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Weight value for the HSMDA queue
Range	1 to 32
Introduced	16.0.R1

secondary-shaper *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Secondary shaper for the HSMDA queue
String Length	1 to 32
Introduced	16.0.R1

wrr-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	WRR policy for the HSMDA queue
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

policer [policer-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the policer context
Introduced	16.0.R4

[policer-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description CBS

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -64 to 31

Introduced 16.0.R1

percent-rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

avg-frame-overhead *decimal-number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Encapsulation overhead, in centipercent, used to translate packet-based rate to frame-based rate and vice versa.

Range 0.00 to 100.00

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Explicit shaping burst size of a queue.

Range 1 to 14000000

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobytes

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

hs-class-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Scheduling class weight.

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

hs-wred-queue

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **hs-wred-queue**

Description Name of slope-policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler

Range 1 to 127

Default 1

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Units kilobytes

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Monitor queue depth
Default	false
Introduced	16.0.R1

parent

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the parent context
Introduced	16.0.R1

cir-weight *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**
Description	CIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

weight *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**
Description	PIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

percent-rate

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

policy-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**
Description	Policy identifier
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

port-redirect-group

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress**
Description	Enter the port-redirect-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress port-redirect-group**
Description	Policy for port redirect queue group
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Instance of port queue group

Range 1 to 65535

Introduced 16.0.R1

scheduler-policy

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

scheduler [scheduler-name] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

queue-group-redirect-list *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **egress**

Description Assign queue-group redirect list

Reference configure **qos queue-group-redirect-list** *string*

Introduced 16.0.R1

eth-cfm

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**

Description Enter the collect-lmm-fc-stats context

Introduced 16.0.R1

fc *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate AIS frames from the Maintenance Entity Group (MEG).
Default	false
Introduced	16.0.R1

alarm-notification

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the csf context
Introduced	16.0.R1

multiplier *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

eth-test

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**
Description	Test pattern for eth-test frames
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1

fault-propagation *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Fault propagation for the MEP
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1

grace

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the grace context
Introduced	16.0.R1

eth-ed

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**
Description	Enter the eth-ed context
Introduced	16.0.R1

max-rx-defect-window *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**
Description	Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

priority *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

fwd-wholesale

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the fwd-wholesale context

Introduced 16.0.R4

pppoe-service *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **fwd-wholesale**

Description PPPoE service name

Reference configure **service epipe** *service-name*

Introduced 16.0.R4

host-admin-state *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Enable/disable administrative state of hosts

Default enable

Options enable, disable

Introduced 16.0.R1

host-lockout-policy *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Host lockout policy

Reference configure **subscriber-mgmt host-lockout-policy** *string*

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Priority level

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*

Description Minimum amount of cumulative buffer space allowed

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

sap-ingress

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

fp-redirect-group

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**

Description Forwarding-plane queue group policy

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**

Description Queue group instance

Range 1 to 65535

Introduced 16.0.R1

overrides

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Enter the overrides context

Introduced 16.0.R4

policer [policer-id] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides**

Description Enter the policer context

Introduced 16.0.R4

[policer-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	CBS
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

mbs (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	MBS
Range	0 to 1073741824
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Size of each packet, handled by the policer, to be modified
Range	-32 to 31
Introduced	16.0.R1

percent-rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**

Description CIR percent rate

Range 0.00 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**

Description PIR percent rate

Range 0.01 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **rate** context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**

Description CIR rate

Range 0 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

pir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**

Description PIR rate

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

stat-mode *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Mode of statistics collected by the policer

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir

Introduced 16.0.R1

queue [queue-id] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides**

Description Enter the queue context

Introduced 16.0.R4

[queue-id] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the adaptation-rule context
Introduced	16.0.R1

cir *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**
Description	Constraint used when deriving the operational CIR value
Options	max, min, closest
Introduced	16.0.R1

pir *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**
Description	Constraint used when deriving the operational PIR value
Options	max, min, closest
Introduced	16.0.R1

cbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobps

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Monitor queue depth

Default false

Introduced 16.0.R1

parent

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description CIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description PIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

percent-rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

policy-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**
Description	Policy identifier
Reference	configure **qos sap-ingress** *qos-policy-name*
Introduced	16.0.R1

queuing-type *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**
Description	Ingress queuing type
Options	shared, multipoint-shared
Introduced	16.0.R1

scheduler-policy

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos**
Description	Enter the scheduler-policy context
Introduced	16.0.R1

overrides

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**
Description	Enter the overrides context
Introduced	16.0.R4

scheduler [scheduler-name] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

queue-group-redirect-list *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ingress**

Description Queue group redirect list

Reference configure **qos queue-group-redirect-list** *string*

Introduced 16.0.R1

ip-tunnel [tunnel-name] *interface-name*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the ip-tunnel context
Max. Elements	1
Introduced	16.0.R1

[tunnel-name] *interface-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	IP tunnel name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Administrative state of the tunnel
Default	disable
Options	enable, disable
Introduced	16.0.R1

backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Backup remote IP address that is applied to this tunnel
Introduced	16.0.R1

clear-df-bit *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Clear the Do-not-Fragment bit
Default	false
Introduced	16.0.R1

delivery-service *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Delivery service name
String Length	1 to 64
Introduced	16.0.R1

description *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dest-ip [dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the dest-ip context
Introduced	16.0.R1

[dest-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **dest-ip** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Destination IP address of the tunnel
Introduced	16.0.R1
Notes	This element is part of a list key

dscp *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Differentiated Services Code Point (DSCP) name
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1

encapsulated-ip-mtu *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Encapsulated IP MTU of this tunnel
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

gre-header

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the gre-header context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header**
Description	Administrative state of the GRE header in the tunnel
Options	enable, disable
Introduced	16.0.R1

key

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header**
Description	Enter the key context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Administrative state of the keys in the GRE header
Default	disable
Options	enable, disable
Introduced	16.0.R1

receive *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Receive key of a GRE header
Default	0
Introduced	16.0.R1

send *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **gre-header key**
Description	Send key of a GRE header
Default	0
Introduced	16.0.R1

icmp6-generation

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Enter the icmp6-generation context
Introduced	16.0.R1

packet-too-big

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation**
Description	Enter the packet-too-big context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**
Description	Administrative state of packet-too-big messages
Options	enable, disable
Introduced	16.0.R1

number *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**
Description	Number of packet-too-big ICMPv6 messages issued in a specified time frame
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name* **icmp6-generation packet-too-big**
Description	Time frame to limit the number of packet-too-big ICMPv6 messages
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ip-mtu *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	IP MTU of this tunnel
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Local IP address of this tunnel
Introduced	16.0.R1

private-tcp-mss-adjust *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	TCP maximum segment size (MSS) on private network
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

public-tcp-mss-adjust (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	TCP maximum segment size (MSS) on private network
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1

reassembly (*number* | *keyword*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Reassembly wait time
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1

remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ip-tunnel** *interface-name*
Description	Remote IP address of this tunnel
Introduced	16.0.R1

ipsec-gateway [name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the ipsec-gateway context
Max. Elements	1
Introduced	16.0.R1

[name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	IPsec gateway name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	Administrative state of the IPsec gateway.
Default	disable
Options	enable, disable
Introduced	16.0.R1

default-secure-service

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	Enter the default-secure-service context
Introduced	16.0.R1

interface *interface-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **default-secure-service**
Description	The name of the default interface used by this IPsec gateway.
String Length	1 to 32
Introduced	16.0.R1

service-name *service-name*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **default-secure-service**
Description	The name of the default security service used by this IPsec gateway.
String Length	1 to 64
Introduced	16.0.R1

default-tunnel-template *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	The IPsec tunnel template ID.
Reference	configure **ipsec tunnel-template** *number*
Introduced	16.0.R1

ike-policy *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description IKE policy ID.

Reference configure **ipsec ike-policy** *number*

Introduced 16.0.R1

local

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*

Description Enter the local context

Introduced 16.0.R1

gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local**

Description The IPsec gateway address.

Introduced 16.0.R1

id

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local**

Description Enter the id context

Introduced 16.0.R1

auto

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	System picks a local ID automatically based on auth-method configured in ike-policy.
Introduced	16.0.R1
Notes	This element is part of a choice

fqdn *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The Fully Qualified Domain Name (FQDN) Local ID.
String Length	1 to 255
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4 *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The IPv4 Local ID.
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6 *ipv6-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **local id**
Description	The IPv6 Local ID.
Introduced	16.0.R1
Notes	This element is part of a choice

max-history-key-records

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	Enter the max-history-key-records context
Introduced	16.0.R1

esp *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **max-history-key-records**
Description	The maximum number of historical ESP keys which can be recorded by the system.
Range	1 to 48
Introduced	16.0.R1

ike *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string* **max-history-key-records**
Description	The maximum number of historical IKE keys which can be recorded by the system.
Range	1 to 3
Introduced	16.0.R1

pre-shared-key *encrypted-leaf*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **ipsec-gateway** *string*
Description	The pre-shared key used for authentication by two peers forming the tunnel for the IPSec gateway.
String Length	1 to 114
Introduced	16.0.R1

lag

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap*
Description	Enter the lag context
Introduced	16.0.R1

link-map-profile *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **lag**
Description	LAG link map profile applied to a SAP or network interface
Range	1 to 64
Introduced	16.0.R1

per-link-hash

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **lag**
Description	Enter the per-link-hash context
Introduced	16.0.R1

class *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **lag per-link-hash**
Description	Class used on LAG egress when using weighted per-link-hash
Range	1 to 3
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

multi-service-site *string*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Multi service site name

String Length 1 to 32

Introduced 16.0.R1

static-host

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap*

Description Enter the static-host context

Introduced 16.0.R1

ipv4 [ip] *ipv4-address* **mac** *mac-unicast-address*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host**

Description Enter the ipv4 context

Introduced 16.0.R1

[ip] *ipv4-address*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description IP address

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address*

Context **configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description MAC address

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Administrative state of the static host
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp-string *ancp-string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

sla-profile *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	SLA profile name
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Sub-profile name
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Enter the subscriber-id context
Introduced	16.0.R1

string *subscriber-id*

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Subscriber identification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

use-sap-id

Context	**configure service ies** *service-name* **interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Use the SAP id as subscriber ID
Introduced	16.0.R1
Notes	This element is part of a choice

shcv-policy-ipv4 *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Host connectivity IPv4 policy
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the spoke-sdp context
Max. Elements	1
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Policy to collect accounting statistics
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

encap *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **bfd-liveness**
Description	BFD encapsulation used on this SDP binding
Default	ipv4
Options	ipv4
Introduced	16.0.R1

bfd-template *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	BFD template associated with SDP binding
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Allow agent to collect accounting statistics
Default	false
Introduced	16.0.R1

control-word *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Use the control word as preferred
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

ip-src-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Enable IP source monitoring for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**

Description CPM protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R1

description *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

egress

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos**

Description Enter the network context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network**

Description Egress network policy name applied to this SDP binding

Reference configure **qos network** *network-policy-name*

Introduced 16.0.R1

port-redirect-group

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Policy for port queue group for this SDP binding

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**

Description Instance of the port egress Queue Group for this SDP binding.

Range 1 to 65535

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

entropy-label

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Whether the use of entropy-label is enabled or not.

Introduced 16.0.R1

Notes This element is part of a choice

eth-cfm

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais *boolean*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate AIS frames from the Maintenance Entity Group (MEG).
Default	false
Introduced	16.0.R1

alarm-notification

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate CCM messages

Default false

Introduced 16.0.R1

ccm-ltm-priority *number*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Priority of CCM and LTM messages transmitted by the MEP

Range 0 to 7

Default 7

Introduced 16.0.R1

ccm-padding-size *number*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Additional octets inserted into CCM PDU for data TLV padding

Range 3 to 1500

Introduced 16.0.R1

csf

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**
Description	Receive period multiplier to time out CSF
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the eth-test context
Introduced	16.0.R1

bit-error-threshold *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**
Description	Lowest priority defect threshold for the bit error trap to generate a fault alarm
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1

test-pattern

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP

Default true

Introduced 16.0.R1

low-priority-defect *keyword*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Lowest priority defect that is allowed to generate a fault alarm

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

one-way-delay-threshold *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

hash-label

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **hash-label**
Description	To signal the hash label capability to the remote PE.
Introduced	16.0.R1
Notes	This element is part of a choice

ingress

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the ingress context
Introduced	16.0.R1

filter

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**
Description	Enter the fp-redirect-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**
Description	Forwarding-plane queue group policy for this SDP binding
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**
Description	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Range	1 to 65535
Introduced	16.0.R1

policy-name *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**
Description	Ingress network policy name applied to this SDP binding
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

vc-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Type of virtual circuit (VC) associated with the SDP binding
Default	ether
Options	ether, ipipe
Introduced	16.0.R1

tos-marking-state *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	TOS marking state
Default	untrusted
Options	trusted, untrusted
Introduced	16.0.R1

tunnel *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enable/disable tunnel interface
Default	false
Introduced	16.0.R1

vas-if-type *keyword*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	VAS interface type
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1

vpls [vpls-name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name*
Description	Enter the vpls context
Max. Elements	1
Introduced	16.0.R1

[vpls-name] *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **vpls** *string*
Description	VPLS service
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

egress

Context	**configure service ies** *service-name* **interface** *interface-name* **vpls** *string*
Description	Enter the egress context
Introduced	16.0.R1

reclassify-using-qos *string*

Context	**configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **egress**
Description	Egress QoS policy
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

routed-override-filter

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **egress**

Description Enter the routed-override-filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **egress routed-override-filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **egress routed-override-filter**

Description IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string*

Description Enter the ingress context

Introduced 16.0.R1

routed-override-filter

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **ingress**

Description Enter the routed-override-filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **ingress routed-override-filter**

Description IP filter

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **interface** *interface-name* **vpls** *string* **ingress routed-override-filter**

Description IPv6 filter

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

redundant-interface [interface-name] *interface-name*

Context **configure service ies** *service-name*

Description Enter the redundant-interface context

Introduced 16.0.R1

[interface-name] *interface-name*

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Name of the interface

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Administrative state of the interface

Default enable

Options enable, disable

Introduced 16.0.R1

description *string*

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Text description

String Length 1 to 160

Introduced 16.0.R1

hold-time

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Enter the hold-time context

Introduced 16.0.R1

ipv4

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time**

Description Enter the ipv4 context

Introduced 16.0.R1

down

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time ipv4**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 down**

Description Apply down delay only when interface is configured or after reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 down**

Description Down hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time ipv4**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **hold-time ipv4 up**

Description Up hold time for the IP interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

ip-mtu *number*

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Interface IP MTU

Range 512 to 9000

Units bytes

Introduced 16.0.R1

ipv4

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

primary

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **ipv4**

Description Enter the primary context

Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description IPv4 address assigned to a redundant interface.

Introduced 16.0.R1

Notes This element is mandatory

prefix-length *number*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description The prefix length 0..32 for IPv4 Address.

Range 0 to 32

Introduced 16.0.R1

Notes This element is mandatory

remote-ip *ipv4-unicast-address*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **ipv4 primary**

Description IP address of the remote redundant interface.

Introduced 16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context **configure service ies** *service-name* **redundant-interface** *interface-name*

Description Enter the spoke-sdp context

Max. Elements 1

Introduced 16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

control-word *boolean*

Context	**configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Use the control word as preferred
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

egress

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Static MPLS VC label that is used to send packets to the far end device through this SDP

Range 16 to 1048575

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **redundant-interface** *interface-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Static MPLS VC label used by the far end device to send packets through this SDP

Range 1 to 1048575

Introduced 16.0.R1

service-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service ies** *service-name*

Description Unique service ID; cannot be used by any other service, regardless of service type

Range 1 to 2147483647

Introduced 16.0.R1

subscriber-interface [interface-name] *interface-name*

Context	**configure service ies** *service-name*
Description	Enter the subscriber-interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Administratively enable/disable the interface.
Default	enable
Options	enable, disable
Introduced	16.0.R4

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Description for the interface.
String Length	1 to 160
Introduced	16.0.R4

fwd-service *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Configure the forwarding service.
Reference	configure **service vprn** *service-name*
Introduced	16.0.R4

fwd-subscriber-interface *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Configure the forwarding subscriber interface.
Reference	configure **service vprn** *service-name* **subscriber-interface** *interface-name*
Introduced	16.0.R4

group-interface [group-interface-name] *interface-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

arp-host

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the arp-host context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Administrative state of ARP hosts

Default disable

Options enable, disable

Introduced 16.0.R1

host-limit *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Maximum number of ARP triggered hosts.

Range 1 to 524287

Default 1

Introduced 16.0.R1

min-auth-interval *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**

Description Minimal time that has to pass before incoming ARPs of an active ARP host are re-authenticated

Range 1 to 6000

Default 15

Units minutes

Introduced 16.0.R1

sap-host-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **arp-host**
Description	Maximum number of ARP triggered hosts allowed per SAP
Range	1 to 131071
Default	1
Introduced	16.0.R1

bonding-parameters

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the bonding-parameters context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Administrative state of ESM bonding
Default	disable
Options	enable, disable
Introduced	16.0.R1

connection [connection-index] *connection-index*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Enter the connection context
Introduced	16.0.R1

[connection-index] *bonding-connection-index*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters connection** *connection-index*
Description	Bonding connection index
Range	1 to 2
Introduced	16.0.R4
Notes	This element is part of a list key

service *service-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters connection** *connection-index*
Description	Connection service
String Length	1 to 64
Introduced	16.0.R4

fpe *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	FPE that provisions bonding functionality
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R1

multicast

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters**
Description	Enter the multicast context
Introduced	16.0.R1

connection *multicast-bonding-connection*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **bonding-parameters multicast**
Description	Multicast connection
Default	use-incoming
Introduced	16.0.R1

brg

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the brg context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Administrative state of BRG
Default	disable
Options	enable, disable
Introduced	16.0.R1

authenticated-brg-only *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Allow BRGs that have been pre-authenticated
Default	false
Introduced	16.0.R1

default-brg-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **brg**
Description	Default BRG profile that can be overridden during authentication
Reference	configure **subscriber-mgmt vrgw brg-profile** *string*
Introduced	16.0.R1

cflowd-parameters

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R4

sampling [sampling-type] *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters**
Description	Enter the sampling context
Introduced	16.0.R4

[sampling-type] *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	Cflowd sampling type for virtual router interface
Options	unicast, multicast
Introduced	16.0.R4
Notes	This element is part of a list key

direction *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The direction of the Cflowd analysis that is applied to the given interface.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4

type *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The type of Cflowd analysis that is applied to the given interface.
Options	acl, interface
Introduced	16.0.R4
Notes	This element is mandatory

data-trigger

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the data-trigger context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **data-trigger**
Description	Administrative state of data triggered host creation
Default	disable
Options	enable, disable
Introduced	16.0.R4

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dynamic-routes-track-srrp

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the dynamic-routes-track-srrp context
Introduced	16.0.R1

hold-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **dynamic-routes-track-srrp**
Description	Delay before updating the route state after the last SRRP transition
Range	1 to 50
Units	deciseconds
Introduced	16.0.R1

gtp-parameters

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the gtp-parameters context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **gtp-parameters**
Description	Administrative state of GTP Access
Default	disable
Options	enable, disable
Introduced	16.0.R1

fpe *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **gtp-parameters**
Description	PE that provisions the GTP user interface
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R1

gx-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Diameter application policy
Reference	configure **subscriber-mgmt diameter-gx-policy** *string*
Introduced	16.0.R1

ingress-stats *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Collect ingress interface statistics
Default	false
Introduced	16.0.R1

ip-mtu *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Interface IP MTU
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

ipoe-linking

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipoe-linking context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Administrative state of IPoE host linking
Default	disable
Options	enable, disable
Introduced	16.0.R1

gratuitous-router-advertisement *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Send unsolicited router advertisement after DHCP setup
Default	false
Introduced	16.0.R1

shared-circuit-id *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-linking**
Description	Block DHCPv6 with unknown interface-id (circuit-id) until a circuit-id is learned from DHCP.
Default	false
Introduced	16.0.R1

ipoe-session

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipoe-session context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Administrative state of IPoE session
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

force-auth

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**

Description Enter the force-auth context

Introduced 16.0.R1

cid-change *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session force-auth**

Description Ignore min-auth-interval when circuit ID changed

Introduced 16.0.R1

rid-change *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session force-auth**

Description Ignore min-auth-interval when remote ID changed

Introduced 16.0.R1

ipoe-session-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**

Description IPoE Session policy to be used for new sessions

Reference configure **subscriber-mgmt ipoe-session-policy** *string*

Introduced 16.0.R1

min-auth-interval *ipoe-session-min-auth-interval*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Minimum time between two authentication attempts
Default	infinite
Units	seconds
Introduced	16.0.R1

radius-session-timeout *ipoe-session-radius-session-timeout*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Session timeout attribute to be interpreted
Options	absolute, ignore, backwards-compatible
Introduced	16.0.R1

sap-session-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Maximum number of sessions per SAP
Range	1 to 131071
Introduced	16.0.R1

session-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Maximum number of sessions on this group interface
Range	1 to 500000
Introduced	16.0.R1

stateless-redundancy *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup
Default	false
Introduced	16.0.R1

user-db *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipoe-session**
Description	Local user database that is used to (pre-)authenticate new sessions
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

ipv4

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

dhcp

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default disable

Options enable, disable

Introduced 16.0.R4

client-applications

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the client-applications context

Introduced 16.0.R4

dhcp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable DHCP as client application.

Default true

Introduced 16.0.R4

ppp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable PPP as client application.

Default false

Introduced 16.0.R4

description *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

filter *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description DHCP filter.

Reference configure **filter dhcp-filter** *number*

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

l2-header

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate**

Description Enter the l2-header context

Introduced 16.0.R1

mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate l2-header**

Description Specify the MAC address.

Introduced 16.0.R4

max-leases *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp lease-populate**
Description	The maximum number of DHCPv4 leases.
Range	1 to 511999
Default	1
Introduced	16.0.R4

match-circuit-id *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Configure match Opt82 circuit ID on relayed DHCP packets.
Default	false
Introduced	16.0.R4

option-82

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Enter the option-82 context
Introduced	16.0.R4

action *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**
Description	What to do with DHCP option 82.
Default	keep
Options	replace, drop, keep
Introduced	16.0.R4

circuit-id

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**
Description	Enter the circuit-id context
Introduced	16.0.R4

ascii-tuple

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

ifindex

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ifindex in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Do not include the circuit-id.

Introduced 16.0.R4

Notes This element is part of a choice

sap-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use SAP ID in the option.

Introduced 16.0.R4

Notes This element is part of a choice

vlan-ascii-tuple

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use vlan-ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

remote-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the remote-id context

Introduced 16.0.R4

ascii-string *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use user-defined ASCII string in the option.

String Length 1 to 32

Introduced 16.0.R4

Notes This element is part of a choice

mac

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use MAC address in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Do not include the remote-id.

Introduced 16.0.R4

Notes This element is part of a choice

vendor-specific-option

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R4

client-mac-address *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

pool-name *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the pool name in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Enter the proxy-server context

Introduced 16.0.R4

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description Administrative state of DHCP proxy

Default disable

Options enable, disable

Introduced 16.0.R1

emulated-server *ipv4-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description IP address used as the DHCP server address in the context of this service

Introduced 16.0.R1

lease-time

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	Use lease time information provided by RADIUS server
Default	false
Introduced	16.0.R1

value *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	DHCP lease time
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Python policy.
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

relay-proxy

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Enter the relay-proxy context
Introduced	16.0.R1

release-update-src-ip *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify whether or not to relay release messages.
Default	false
Introduced	16.0.R4

siaddr-override *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify the IP address to use.
Introduced	16.0.R4

server *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

trusted *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable relaying of untrusted packets.
Default	false
Introduced	16.0.R4

user-db *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 dhcp**

Description Configure the local user database to use for authentication.

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R4

icmp

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the icmp context

Introduced 16.0.R1

mask-reply *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Allow responses to ICMP mask requests

Default true

Introduced 16.0.R1

param-problem

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the param-problem context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Administrative state of sending parameter-problem messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Number of parameter-problem ICMP messages to send in specified time interval

Range 10 to 1000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp param-problem**

Description Time used to limit number of parameter-problem ICMP messages issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

redirects

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the redirects context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**

Description Administrative state of sending ICMP redirects

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**
Description	Maximum number of ICMP redirect messages to send
Range	10 to 1000
Default	100
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp redirects**
Description	Time to limit the number of ICMP redirect messages that can be issued
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

ttl-expired

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**
Description	Enter the ttl-expired context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**
Description	Administrative state of sending TTL expired messages
Default	enable
Options	enable, disable
Introduced	16.0.R1

number *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**

Description Maximum number of TTL expired messages to send

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp ttl-expired**

Description Time to limit the number of ICMP TTL expired messages that can be issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

unreachables

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp**

Description Enter the unreachables context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Administrative state of sending unreachable messages

Default enable

Options enable, disable

Introduced 16.0.R1

number *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Maximum number of unreachable messages to send

Range 10 to 2000

Default 100

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 icmp unreachables**

Description Time to limit the number of unreachable messages that can be issued

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

neighbor-discovery

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

local-proxy-arp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**

Description Enable local proxy ARP on interface

Default true

Introduced 16.0.R1

populate *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Allow static and dynamic hosts to be populated in system ARP cache
Introduced	16.0.R1

proxy-arp-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Proxy ARP policy name
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

remote-proxy-arp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enable remote proxy ARP on interface
Default	false
Introduced	16.0.R1

timeout *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 neighbor-discovery**
Description	Timeout for an ARP entry learned on the interface
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

qos-route-lookup *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description QoS route lookup

Options destination

Introduced 16.0.R1

urpf-check

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4**

Description Enter the urpf-check context

Introduced 16.0.R1

mode *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv4 urpf-check**

Description Unicast RPF check mode

Default strict

Options strict, loose, strict-no-ecmp

Introduced 16.0.R1

ipv6

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the ipv6 context

Introduced 16.0.R1

allow-multiple-wan-addresses *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Configure if the interface will accept multiple WAN addresses.

Default false

Introduced 16.0.R4

auto-reply

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the auto-reply context

Introduced 16.0.R1

neighbor-solicitation *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 auto-reply**

Description Enable auto-reply for NS

Default false

Introduced 16.0.R1

router-solicitation *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 auto-reply**

Description Enable auto-reply for RS

Default false

Introduced 16.0.R1

dhcp6

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the dhcp6 context

Introduced 16.0.R1

filter *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description DHCPv6 filter

Reference configure **filter dhcp6-filter** *number*

Introduced 16.0.R1

option

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Enter the option context

Introduced 16.0.R1

interface-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option**

Description Enter the interface-id context

Introduced 16.0.R1

ascii-tuple

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use ASCII-encoded concatenated tuple in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

if-index

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use interface index in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

sap-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**

Description Use SAP ID in interface ID option in DHCPv6 relay packet

Introduced 16.0.R1

Notes This element is part of a choice

string *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option interface-id**
Description	String for interface ID option in DHCPv6 relay packet
String Length	1 to 80
Introduced	16.0.R1
Notes	This element is part of a choice

remote-id *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 option**
Description	Allow remote ID option to be sent in the DHCPv6 relay packet
Default	false
Introduced	16.0.R1

override-slaac *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Default	false
Introduced	16.0.R1

pd-managed-route

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the pd-managed-route context
Introduced	16.0.R1

next-hop *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 pd-managed-route**
Description	Next hop type
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1

proxy-server

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the proxy-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Administrative state of DHCPv6 proxy server
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the DHCP application to make use of the DHCP relay functionality on this interface.
Default	true
Introduced	16.0.R1

ppp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**

Description Allow the PPP application to use DHCP relay functionality

Default false

Introduced 16.0.R1

preferred-lifetime *dhcp6-prefix-lifetime*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Time for prefix to remain preferred on this interface

Default 3600

Introduced 16.0.R1

rebind-timer *dhcp6-rebind-timer*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Rebind timer (T2) for this interface

Range 0 to 1209600

Introduced 16.0.R1

renew-timer *dhcp6-renew-timer*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Renew timer (T1)

Range 0 to 604800

Introduced 16.0.R1

server-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**

Description Enter the server-id context

Introduced 16.0.R1

duid-en-ascii *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

duid-en-hex *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-ll

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Use link-layer address (DUID-LL) as DUID
Introduced	16.0.R1
Notes	This element is part of a choice

valid-lifetime *dhcp6-prefix-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain valid on this interface
Default	86400
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

relay

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the relay context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Administrative state of DHCvP6 relay
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay client-applications**
Description	Allow the DHCP application to make use of the DHCP relay functionality on this interface.
Default	true
Introduced	16.0.R1

ppp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay client-applications**

Description Allow the PPP application to use DHCP relay functionality

Default false

Introduced 16.0.R1

description *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description Link address for the DHCPv6 relay messages

Introduced 16.0.R1

server *ipv6-address-with-zone*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description DHCP6 server(s) to which the DHCP6 requests are forwarded

Max. Elements 8

Introduced 16.0.R1

Notes This element is ordered by user

source-address *ipv6-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 relay**

Description Source IPv6 address for the DHCPv6 relay messages

Introduced 16.0.R1

snooping

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Enter the snooping context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6 snooping**

Description Enable/disable DHCP6 snooping

Default disable

Options enable, disable

Introduced 16.0.R1

user-db *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description Assign a local user database.

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R1

user-ident *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 dhcp6**

Description DHCP6 user identification for this interface

Default mac

Options mac, mac-interface-id

Introduced 16.0.R1

ipoe-bridged-mode *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enable/Disable IPv6 IPoE Bridged Mode.

Default false

Introduced 16.0.R4

neighbor-discovery

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description Enter the neighbor-discovery context

Introduced 16.0.R1

dad-snooping *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 neighbor-discovery**

Description Duplicate address detection packets that are snooped to populate new neighbor entries for SLAAC hosts

Default false

Introduced 16.0.R1

neighbor-limit *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 neighbor-discovery**

Description Maximum number of neighbor entries learned per SLAAC host

Range 1 to 8

Default 1

Introduced 16.0.R1

qos-route-lookup *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**

Description QoS route lookup

Options destination

Introduced 16.0.R1

router-advertisements

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the router-advertisements context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Administrative state of router advertisement
Default	disable
Options	enable, disable
Introduced	16.0.R1

force-mcast *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Send router advertisement to a multicast address instead of unicast for IPoE
Options	ip, ip-mac
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Maximum advertisement interval
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**

Description Minimum advertisement interval

Range 900 to 1350

Default 900

Units seconds

Introduced 16.0.R1

options

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**

Description Enter the options context

Introduced 16.0.R1

current-hop-limit *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Hop limit to be advertised

Range 0 to 255

Default 64

Introduced 16.0.R1

dns

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**

Description Enter the dns context

Introduced 16.0.R1

include-rdnss *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options dns**
Description	Include the RDNSS server option 25
Default	false
Introduced	16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options dns**
Description	Maximum time for the RDNSS address to remain valid
Range	900 to 3600
Default	3600
Units	seconds
Options	infinite
Introduced	16.0.R1

managed-configuration *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Managed address configuration flag
Default	false
Introduced	16.0.R1

mtu (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Advertised MTU value
Range	1280 to 9212
Default	not-included
Units	bytes
Options	not-included
Introduced	16.0.R1

other-stateful-configuration *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Other stateful configuration flag
Default	false
Introduced	16.0.R1

reachable-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery reachable time that is advertised for this group interface
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-timer *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery retrasnmit timer that is advertised for this group interface
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1

router-lifetime (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements options**
Description	Router lifetime
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1

prefix-options

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the prefix-options context
Introduced	16.0.R1

autonomous *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Value of the autonomous flag
Default	false
Introduced	16.0.R1

on-link *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Assign the prefix to an interface on the specified link
Default	true
Introduced	16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain preferred
Default	3600
Units	seconds
Introduced	16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain valid
Default	86400
Units	seconds
Introduced	16.0.R1

router-solicit

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the router-solicit context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Administrative state of router-solicit based authentication
Default	disable
Options	enable, disable
Introduced	16.0.R1

inactivity-timer (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Timebefore an inactive host is removed
Range	1 to 31536000
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1

min-auth-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Minimum interval between two consecutive authentication attempts for the same host
Range	1 to 360000
Default	300
Units	seconds
Introduced	16.0.R1

user-db *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 router-solicit**
Description	Local user-database that is used for router solicit based authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

urpf-check

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6**
Description	Enter the urpf-check context
Introduced	16.0.R1

mode *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **ipv6 urpf-check**
Description	Unicast RPF check mode
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1

local-address-assignment

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the local-address-assignment context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**

Description Administrative state of local address assignment

Default disable

Options enable, disable

Introduced 16.0.R1

ipv4

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**

Description Enter the ipv4 context

Introduced 16.0.R1

client-applications

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**

Description Enter the client-applications context

Introduced 16.0.R1

ipoe *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4 client-applications**

Description Request local addresses for non-DHCP/managed IPoE hosts

Default false

Introduced 16.0.R1

ppp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4 client-applications**
Description	Request local addresses for PPP IPCP hosts
Default	false
Introduced	16.0.R1

default-pool *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**
Description	Default pools
String Length	1 to 32
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

server *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv4**
Description	Local DHCP server that contains pools for local address assignment
Reference	configure **router** *string* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

ipv6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment**
Description	Enter the ipv6 context
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6**
Description	Enter the client-applications context
Introduced	16.0.R1

ipoe-slaac *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for IPoE SLAAC hosts

Default false

Introduced 16.0.R1

ipoe-wan *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for IPoE IA NA hosts

Default false

Introduced 16.0.R1

ppp-slaac *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6 client-applications**

Description Request local addresses for PPP SLAAC hosts

Default false

Introduced 16.0.R1

server *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **local-address-assignment ipv6**

Description Local DHCPv6 server that contains pools for local address assignment

Reference configure **router** *string* **dhcp-server dhcpv6** *string*

Introduced 16.0.R1

mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description MAC address for the interface

Introduced 16.0.R1

nasreq-auth-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Diameter NASREQ application policy to use for authentication
Reference	configure **subscriber-mgmt diameter-nasreq-policy** *string*
Introduced	16.0.R1

oper-up-while-empty *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enable this group interface without any active SAPs
Default	false
Introduced	16.0.R1

pppoe

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the pppoe context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Administrative state of PPPoE
Default	disable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *pppoe-anti-spoof*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	PPPoE anti-spoof filtering
Default	mac-sid
Options	mac-sid, mac-sid-ip
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	PPPoE policy
Reference	configure **subscriber-mgmt ppp-policy** *string*
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Python policy used to modify PPPoE packets
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

sap-session-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Maximum PPPoE sessions per SAP
Range	1 to 131071
Default	1
Introduced	16.0.R1

session-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Maximum PPPoE sessions
Range	1 to 262143
Default	1
Introduced	16.0.R1

user-db *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **pppoe**
Description	Local user database for authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

radius-auth-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	RADIUS authentication policy
Reference	configure **subscriber-mgmt radius-authentication-policy** *string*
Introduced	16.0.R1

redundant-interface *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Redundant interface
Reference	configure **service ies** *service-name* **redundant-interface** *interface-name*
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the sap context
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Type of anti-spoof filtering
Default	source-ip-and-mac-addr
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1

calling-station-id *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Calling station ID
String Length	1 to 64
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Collect accounting statistics
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**

Description Apply rate limit to the sum of the per peer packet rates

Introduced 16.0.R1

Notes This element is part of a choice

car

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**

Description Eth-CFM packets to be ignored when enforcing overall rate

Introduced 16.0.R1

Notes This element is part of a choice

ip-src-monitoring

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description Enable IP source monitoring for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

mac-monitoring

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description Monitor MAC for CPU protection

Introduced 16.0.R1

Notes This element is part of a choice

policy-id *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **cpu-protection**

Description CPM protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R4

default-host

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the default-host context
Introduced	16.0.R1

ipv4 [address] *string* prefix-length *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host**
Description	Enter the ipv4 context
Introduced	16.0.R1

[address] *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*
Description	IPv4 default host address.
Reference	configure **service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Introduced	16.0.R1
Notes	This element is part of a list key

prefix-length *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

next-hop *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv4** *string* **prefix-length** *number*
Description	Next-hop used to forward default-host traffic on this SAP.
Introduced	16.0.R1
Notes	This element is mandatory

ipv6 [address] *ipv6-unicast-address* **prefix-length** *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host**
Description	Enter the ipv6 context
Introduced	16.0.R1

[address] *ipv6-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	IPv6 default host address.
Introduced	16.0.R1
Notes	This element is part of a list key

prefix-length *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

next-hop *ipv6-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **default-host ipv6** *ipv6-unicast-address* **prefix-length** *number*
Description	Next-hop used to forward default-host traffic on this SAP.
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Distributed CPU protection policy for SAP
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

egress

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the egress context
Introduced	16.0.R1

agg-rate

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**
Description	Enter the agg-rate context
Introduced	16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress agg-rate**

Description Maximum total rate of all egress queues in kbps.

Range 1 to 3200000000

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress filter**

Description MAC filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

qinq-mark-top-only *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Mark top Q-tags

Default false

Introduced 16.0.R1

sap-egress

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the sap-egress context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos sap-egress**

Description Policy identifier

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

scheduler-policy

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

eth-cfm

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the eth-cfm context
Introduced	16.0.R1

collect-lmm-fc-stats

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Administrative state of the MEP

Default disable

Options enable, disable

Introduced 16.0.R1

ais *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate AIS frames from the Maintenance Entity Group (MEG).

Default false

Introduced 16.0.R1

alarm-notification

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the alarm-notification context

Introduced 16.0.R1

fng-alarm-time *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**

Description Time to expire before a Fault Notification Generation (FNG) alarm

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

fng-reset-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**

Description Receive period multiplier to time out CSF

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

description *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

eth-test

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP
Default	true
Introduced	16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

fwd-wholesale

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the fwd-wholesale context
Introduced	16.0.R1

pppoe-service *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **fwd-wholesale**
Description	PPPoE service name
Reference	configure **service epipe** *service-name*
Introduced	16.0.R1

host-admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Administrative state of hosts
Default	enable
Options	enable, disable
Introduced	16.0.R1

host-lockout-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Host lockout policy
Reference	configure **subscriber-mgmt host-lockout-policy** *string*
Introduced	16.0.R1

igmp-host-tracking

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Enter the igmp-host-tracking context
Introduced	16.0.R1

expiry-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Time during which the system continues to track inactive hosts
Range	1 to 65535
Units	seconds
Introduced	16.0.R1

import-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**
Description	Maximum number of multicast groups to be tracked per group
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast groups to be tracked

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast sources to be tracked

Range 1 to 1000

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **igmp-host-tracking**

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos policer-control-policy**

Description Policer control policy name

Reference configure **qos policer-control-policy** *string*

Introduced 16.0.R1

sap-ingress

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the sap-ingress context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Policy identifier

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R1

queuing-type *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos sap-ingress**

Description Ingress queuing type

Options shared, multipoint-shared

Introduced 16.0.R4

scheduler-policy

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

lag

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the lag context

Introduced 16.0.R1

link-map-profile *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag**

Description LAG link map profile applied to a SAP or network interface

Range 1 to 64

Introduced 16.0.R1

per-link-hash

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag**

Description Enter the per-link-hash context

Introduced 16.0.R1

class *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag per-link-hash**

Description Class used on LAG egress when using weighted per-link-hash

Range 1 to 3

Default 1

Introduced 16.0.R1

weight *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Monitor operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

multi-service-site *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Multi service site name
String Length	1 to 32
Introduced	16.0.R1

oper-group *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Description	Operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

static-host

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the static-host context

Introduced 16.0.R1

ipv4 [ip] *ipv4-unicast-address* mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**

Description Enter the ipv4 context

Introduced 16.0.R1

[ip] *ipv4-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description IP address used by the static host.

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description MAC address of the static host.

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Administrative state of the static host

Default disable

Options enable, disable

Introduced 16.0.R1

ancp-string *ancp-string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

managed-route [prefix] *ipv4-unicast-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	Enter the managed-route context
Max. Elements	16
Introduced	16.0.R4

[prefix] *ipv4-unicast-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **managed-route** *ipv4-unicast-prefix*
Description	Managed route prefix.
Introduced	16.0.R4
Notes	This element is part of a list key

rip-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*
Description	RIP policy name
Reference	configure **subscriber-mgmt rip-policy** *string*
Introduced	16.0.R1

shcv

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Enter the shcv context

Introduced 16.0.R4

sla-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description SLA profile name

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Sub-profile name

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address*

Description Enter the subscriber-id context

Introduced 16.0.R1

string *subscriber-id*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **subscriber-id**

Description Subscriber identification

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

use-sap-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv4** *ipv4-unicast-address* **mac** *mac-unicast-address* **subscriber-id**

Description Use the SAP id as subscriber ID

Introduced 16.0.R1

Notes This element is part of a choice

ipv6 [prefix] *ipv6-unicast-prefix* mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**

Description Enter the ipv6 context

Introduced 16.0.R1

[prefix] *ipv6-unicast-prefix*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description IPv6 prefix

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description MAC address

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Administrative state of the static host

Default disable

Options enable, disable

Introduced 16.0.R1

ancp-string *ancp-string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	ANCP string
String Length	1 to 63
Introduced	16.0.R1

int-dest-id *int-dest-id*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	Intermediate destination ID
String Length	1 to 32
Introduced	16.0.R1

mac-linking *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	IPv6 host associated with the IPv4 host through the learned MAC address
Introduced	16.0.R1

managed-route [ipv6-prefix] *ipv6-unicast-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*
Description	Enter the managed-route context
Max. Elements	16
Introduced	16.0.R4

[ipv6-prefix] *ipv6-unicast-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **managed-route** *ipv6-unicast-prefix*
Description	Managed route prefix.
Introduced	16.0.R4
Notes	This element is part of a list key

metric *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **managed-route** *ipv6-unicast-prefix*

Description Managed route metric.

Default 0

Introduced 16.0.R4

retail-svc-id *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Retail service ID

Range 1 to 2147483647

Introduced 16.0.R1

shcv

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Enter the shcv context

Introduced 16.0.R4

sla-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description SLA profile name

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Sub-profile name

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address*

Description Enter the subscriber-id context

Introduced 16.0.R1

string *subscriber-id*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **subscriber-id**

Description Subscriber identification

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

use-sap-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host ipv6** *ipv6-unicast-prefix* **mac** *mac-unicast-address* **subscriber-id**

Description Use the SAP id as subscriber ID

Introduced 16.0.R1

Notes This element is part of a choice

mac-learning

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host**

Description Enter the mac-learning context

Introduced 16.0.R4

data-triggered *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host mac-learning**

Description Enable learning of MAC addresses from data packets.

Default false

Introduced 16.0.R4

single-mac *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **static-host mac-learning**

Description Enforce the limit of a single MAC address per SAP, learned by means of ICMPv6.

Default false

Introduced 16.0.R4

sub-sla-mgmt

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*

Description Enter the sub-sla-mgmt context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Administrative state of subscriber management on this SAP

Default disable

Options enable, disable

Introduced 16.0.R1

defaults

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Enter the defaults context

Introduced 16.0.R1

int-dest-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**

Description Enter the int-dest-id context

Introduced 16.0.R1

string *int-dest-id*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the configured string
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

top-q-tag

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the top Q-tag of this SAP
Introduced	16.0.R1
Notes	This element is part of a choice

sla-profile *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default SLA profile for hosts on this SAP
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default subscriber profile used for subscribers on this SAP
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Enter the subscriber-id context
Introduced	16.0.R1

auto-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Use auto-generated subscriber identification string

Introduced 16.0.R1

Notes This element is part of a choice

sap-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Use SAP ID as default subscriber identification string

Introduced 16.0.R1

Notes This element is part of a choice

string *subscriber-id*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**

Description Subscriber ID policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a choice

single-sub-parameters

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**

Description Enter the single-sub-parameters context

Introduced 16.0.R1

non-sub-traffic

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**

Description Enter the non-sub-traffic context

Introduced 16.0.R1

sla-profile *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	SLA profile applicable for all non-subscriber traffic
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

sub-profile *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	Subscriber IDprofile applied for all non-subscriber traffic
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

subscriber-id *subscriber-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	Subscriber ID applied for all non-subscriber traffic
String Length	1 to 32
Introduced	16.0.R1

profiled-traffic-only *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**
Description	Include all traffic in subscriber profile
Default	false
Introduced	16.0.R1

sub-ident-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**
Description	Subscriber identification policy used on this SAP
Reference	configure **subscriber-mgmt sub-ident-policy** *external-named-item*
Introduced	16.0.R1

subscriber-limit *sap-subscriber-limit*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap* **sub-sla-mgmt**
Description	Maximum number of subscribers on this SAP
Default	1
Introduced	16.0.R1

sap-parameters

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the sap-parameters context
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**
Description	Anti-spoofing type.
Default	ip-mac
Options	ip-mac, nh-mac
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

sub-sla-mgmt

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters**

Description Enter the sub-sla-mgmt context

Introduced 16.0.R1

defaults

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt**

Description Enter the defaults context

Introduced 16.0.R1

sla-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**

Description Default SLA profile

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**

Description Default subscriber profile

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults**

Description Enter the subscriber-id context

Introduced 16.0.R1

auto-id

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults subscriber-id**
Description	Subscriber ID that is autogenerated
Introduced	16.0.R1
Notes	This element is part of a choice

string *subscriber-id*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt defaults subscriber-id**
Description	String to be used as default subscriber ID
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

sub-ident-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap-parameters sub-sla-mgmt**
Description	Subscriber identification policy
Reference	configure **subscriber-mgmt sub-ident-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv4 and IPv6
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy-ipv4 *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv4
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

shcv-policy-ipv6 *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Subscriber host connectivity verification policy for IPv6
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

srrp [srrp-id] *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the srrp context
Max. Elements	1
Introduced	16.0.R1

[srrp-id] *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	SRRP instance ID
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Administrative state of SRRP
Default	disable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Destination IPv4 prefix
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Name of interface running BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

service-name *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **bfd-liveness**
Description	Service name of interface running BFD
String Length	1 to 64
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

gw-mac *mac-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Gateway MAC address
Introduced	16.0.R1

keep-alive-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Interval between SRRP advertisements
Range	1 to 100
Default	10
Units	deciseconds
Introduced	16.0.R1

message-path *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	SAP to use as the SRRP message path
Reference	configure **service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **sap** *sap*
Introduced	16.0.R1

monitor-oper-group

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Enter the monitor-oper-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **monitor-oper-group**
Description	Operational group name
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

priority-step *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number* **monitor-oper-group**
Description	Value with which the group priority increases or decreases if the state of this messaging-SAP changes.
Range	1 to 10
Introduced	16.0.R1

one-garp-per-sap *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Send one gratuitous ARP to each SAP
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	VRRP priority control policy associated with the SRRP
Reference	configure **vrrp policy** *number*
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

preempt *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Allow the SRRP instance to override an existing master
Default	true
Introduced	16.0.R1

priority *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Priority for this interface at this level
Range	1 to 254
Default	100
Introduced	16.0.R1

send-fib-population-packets *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **srrp** *number*
Description	Mode used to send FIB population packets (such as ARP) on switchover
Default	all
Options	all, outer-tag-only
Introduced	16.0.R1

suppress-aa-sub *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enable application assurance suppression for ESM subscribers
Default	false
Introduced	16.0.R1

tos-marking-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	TOS marking state
Default	untrusted
Options	trusted, untrusted
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Group interface type
Default	plain
Options	plain, lns, wlan-gw, gtp, bonding
Introduced	16.0.R1

wlan-gw

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*

Description Enter the wlan-gw context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Administrative state of WLAN Gateway on this group interface

Default disable

Options enable, disable

Introduced 16.0.R1

gateway-address [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the gateway-address context

Max. Elements 10

Introduced 16.0.R1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description The IP address of the WLAN Gateway tunnel function of this system on this group interface

Introduced 16.0.R1

Notes This element is part of a list key

purpose

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Description Enter the purpose context

Introduced 16.0.R1

xconnect *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **purpose**

Description Use tunnel IP address for crosse-connect traffic

Default false

Introduced 16.0.R1

gateway-router *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description The routing instance where the tunneled UE traffic is routed, or empty to specify that the routing instance corresponding to the service containing this interface is used.

Introduced 16.0.R1

l2-ap

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the l2-ap context

Introduced 16.0.R1

access-point [sap-id] *sap*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**

Description Enter the access-point context

Introduced 16.0.R1

[sap-id] *sap*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*

Description SAP ID for the Layer 2 access point

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*

Description Administrative state of this access point

Default disable

Options enable, disable

Introduced 16.0.R1

encap-type *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*

Description Service encapsulation type of this access point

Options null, dot1q, qinq

Introduced 16.0.R1

epipe-sap-template *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap access-point** *sap*

Description Parameters template for the internal connections with the ISA cards

Reference configure **service template epipe-sap-template** *string*

Introduced 16.0.R1

auto-sub-id-fmt *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**
Description	Format of the auto-generated subscriber ID
Default	include-ap-tags
Options	include-ap-tags, sap-only
Introduced	16.0.R1

default-encap-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw l2-ap**
Description	Default encapsulation type for Layer 2 access points
Default	null
Options	null, dot1q, qinq
Introduced	16.0.R1

lanext

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the lanext context
Introduced	16.0.R1

max-bd *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw lanext**
Description	Maximum number of bridge domains
Range	1 to 131071
Default	131071
Introduced	16.0.R1

learn-ap-mac

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the learn-ap-mac context
Introduced	16.0.R1

delay-auth *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw learn-ap-mac**
Description	Delay authentication until ARP/ND is answered or timed out, after which AP MAC can be included
Default	false
Introduced	16.0.R1

mobility

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the mobility context
Introduced	16.0.R1

hold-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Minimum time between two mobility events for a single UE
Range	0 to 255
Default	5
Units	seconds
Introduced	16.0.R1

inter-tunnel-type *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enable mobility between terminating tunnel types
Default	false
Introduced	16.0.R1

inter-vlan *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enable mobility within different VLANs within the same range of VLAN Q-tags
Default	false
Introduced	16.0.R1

trigger

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility**
Description	Enter the trigger context
Introduced	16.0.R1

control *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**
Description	Use control traffic (DHCP, DHCPv6, and ICMPv6-RS messages) as mobility trigger
Default	false
Introduced	16.0.R1

data *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**

Description Use data traffic as mobility trigger

Default false

Introduced 16.0.R1

iapp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw mobility trigger**

Description Use Inter Access Point Protocol (IAPP) messages as mobility trigger

Default false

Introduced 16.0.R1

oper-down-on-group-degrade *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Bring interface operationally down when its ISA WLAN Gateway becomes degraded

Default false

Introduced 16.0.R1

tcp-mss-adjust *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Value for the TCP Maximum Segment Size (MSS) option if not present, or if value is higher

Range 160 to 10240

Units bytes

Introduced 16.0.R1

tunnel-egress-qos

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**

Description Enter the tunnel-egress-qos context

Introduced 16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Administrative state of egress QoS
Default	disable
Options	enable, disable
Introduced	16.0.R1

agg-rate-limit (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Aggregate rate limit of each shaper associated with this interface
Default	max
Introduced	16.0.R1

granularity *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Granularity of the egress shaping for WLAN Gateway
Default	per-tunnel
Options	per-tunnel, per-retailer
Introduced	16.0.R1

hold-time (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Minimum time that the egress QoS resources associated with a tunnel (such as a shaper) are held
Range	1 to 86400
Units	seconds
Options	infinite
Introduced	16.0.R1

multi-client-only *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Tunnel traffic to shape when multiple UEs use this tunnel
Default	false
Introduced	16.0.R1

qos *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Identifier of the egress QoS policy associated with each tunnel of this interface
Reference	configure **qos sap-egress** *qos-policy-name*
Introduced	16.0.R1

scheduler-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-egress-qos**
Description	Identifier of the egress scheduler policy associated with each tunnel of this interface
Reference	configure **qos scheduler-policy** *string*
Introduced	16.0.R1

tunnel-encaps

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the tunnel-encaps context
Introduced	16.0.R1

learn-l2tp-cookie (*keyword* | *string*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw tunnel-encaps**
Description	System that learns the cookie from L2TP tunnels terminating on this interface
String Length	6
Default	never
Options	never, always
Introduced	16.0.R1

vlan-range [range] *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Enter the vlan-range context
Introduced	16.0.R1

[range] *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	IEEE 802.1q VLAN tag range
Introduced	16.0.R1
Notes	This element is part of a list key

authentication

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the authentication context

Introduced 16.0.R1

hold-time *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description Minimum time to hold a UE down after an authentication failure

Range 0 to 3600

Default 5

Units seconds

Introduced 16.0.R1

on-control-plane *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description Trigger authentication on first control plane packet instead of first data packet

Default false

Introduced 16.0.R1

policy *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**

Description RADIUS policy for authentication

Reference configure **aaa radius isa-policy** *string*

Introduced 16.0.R1

vlan-mismatch-timeout *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **authentication**
Description	Timeout value for the RADIUS proxy cache if a packet is received with a non-matching VLAN
Range	5 to 60
Units	seconds
Introduced	16.0.R1

data-triggered-ue-creation

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the data-triggered-ue-creation context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation**
Description	Administrative state of data triggered UE authentication
Default	disable
Options	enable, disable
Introduced	16.0.R1

create-proxy-cache-entry

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation**
Description	Enter the create-proxy-cache-entry context
Introduced	16.0.R1

mac-format *mac-specification*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry**
Description	MAC address format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1

proxy-server

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry**
Description	Enter the proxy-server context
Introduced	16.0.R1

name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry proxy-server**
Description	RADIUS Proxy server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

router-instance *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **data-triggered-ue-creation create-proxy-cache-entry proxy-server**
Description	The router instance of the RADIUS Proxy server.
Introduced	16.0.R1
Notes	This element is mandatory

dhcp4

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the dhcp4 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	Administrative state of the DHCPv4 protocol
Default	disable
Options	enable, disable
Introduced	16.0.R1

dns *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	DNS servers signaled in DHCP
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

l2-aware-ip-address (*string* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	IPv4 address for migrant or DSM Ues
Options	from-pool
Introduced	16.0.R1

lease-time

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	Enter the lease-time context
Introduced	16.0.R1

active *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4 lease-time**
Description	IP address lease time for the UE after successful (portal) authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4 lease-time**
Description	IP address lease time that is provided before and during (portal) authentication to the UE
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

nbns *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp4**
Description	NetBIOS servers signaled in DHCP
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

dhcp6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the dhcp6 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**
Description	Administrative state of this protocol
Default	disable
Options	enable, disable
Introduced	16.0.R1

preferred-lifetime

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**
Description	Enter the preferred-lifetime context
Introduced	16.0.R1

active *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 preferred-lifetime**
Description	Preferred signaled lifetime after full authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 preferred-lifetime**
Description	Preferred signaled lifetime when the UE is not fully authenticated
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

valid-lifetime

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6**

Description Enter the valid-lifetime context

Introduced 16.0.R1

active *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 valid-lifetime**

Description Signaled valid lifetime after full authentication

Range 300 to 3600

Default 600

Units seconds

Introduced 16.0.R1

initial *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dhcp6 valid-lifetime**

Description Valid signaled lifetime when the UE is not fully authenticated

Range 300 to 3600

Default 300

Units seconds

Introduced 16.0.R1

dsm

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*

Description Enter the dsm context

Introduced 16.0.R1

accounting-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	ISA Radius Policy for accounting
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

accounting-update

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Enter the accounting-update context
Introduced	16.0.R1

interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm accounting-update**
Description	Time interval between consecutive Interim accounting update messages
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Administrative state of DSM
Default	disable
Options	enable, disable
Introduced	16.0.R1

egress

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**
Description	Enter the egress context
Introduced	16.0.R1

policer *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm egress**

Description Policer for egress traffic

Reference configure **subscriber-mgmt isa-policer** *string*

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**

Description Enter the ingress context

Introduced 16.0.R1

ip-filter *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm ingress**

Description Filter for ingress traffic

Reference configure **subscriber-mgmt isa-filter** *string*

Introduced 16.0.R1

policer *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm ingress**

Description Policer for ingress traffic

Reference configure **subscriber-mgmt isa-policer** *string*

Introduced 16.0.R1

one-time-redirect

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm**

Description Enter the one-time-redirect context

Introduced 16.0.R1

port *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm one-time-redirect**
Description	Destination port of packets considered for HTTP redirect
Range	1 to 65535
Default	80
Introduced	16.0.R1

url *one-time-http-redirect-url*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **dsm one-time-redirect**
Description	URL for redirected HTTP protocol packets that can be overridden by AAA
Introduced	16.0.R1

http-redirect-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Default HTTP redirect policy for portal authentication
Reference	configure **subscriber-mgmt http-redirect-policy** *string*
Introduced	16.0.R1

idle-timeout-action *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Action to perform when the idle timeout expires
Default	remove
Options	remove, shcv
Introduced	16.0.R1

l2-service

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the l2-service context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Administrative state of the Layer 2 service
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

service *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **l2-service**
Description	Layer 2 service associated with this range
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is mandatory

nat-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	NAT policy for DSM and ISA portal authentication
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

retail-service *service-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Default retail service for new UEs in this range
String Length	1 to 64
Introduced	16.0.R1

slaac

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the slaac context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**
Description	Administrative state of this protocol
Default	disable
Options	enable, disable
Introduced	16.0.R1

preferred-lifetime

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**
Description	Enter the preferred-lifetime context
Introduced	16.0.R1

active *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac preferred-lifetime**
Description	Preferred signaled lifetime after full authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac preferred-lifetime**
Description	Preferred signaled lifetime when the UE is not fully authenticated
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

valid-lifetime

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac**
Description	Enter the valid-lifetime context
Introduced	16.0.R1

active *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac valid-lifetime**
Description	Signaled valid lifetime after full authentication
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1

initial *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **slaac valid-lifetime**
Description	Valid signaled lifetime when the UE is not fully authenticated
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

vrgw

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the vrgw context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Administrative state of VRGW
Default	disable
Options	enable, disable
Introduced	16.0.R1

brg

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Enter the brg context
Introduced	16.0.R1

authenticated-brg-only *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw brg**
Description	Only allow hosts from BRGs pre-authenticated using the radius-proxy
Default	false
Introduced	16.0.R1

default-brg-profile *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw brg**
Description	Default BRG profile to use if the AAA server does not specify one
Reference	configure **subscriber-mgmt vrgw brg-profile** *string*
Introduced	16.0.R1

lanext

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw**
Description	Enter the lanext context
Introduced	16.0.R1

access

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Enter the access context
Introduced	16.0.R1

max-mac *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext access**
Description	Maximum number of MAC entries in bridged domain from access side
Range	1 to 128
Default	20
Introduced	16.0.R1

multi-access *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext access**
Description	Allow multiple access points
Default	false
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Administrative state of HLE
Default	disable
Options	enable, disable
Introduced	16.0.R1

assistive-address-resolution *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	ISA assists in address resolution
Default	false
Introduced	16.0.R1

bd-mac-prefix *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Prefix from which BD MACs for MAC translation are derived
String Length	8
Introduced	16.0.R1

mac-translation *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Hide MAC address of home host by translating it to BD MAC
Default	false
Introduced	16.0.R1

network

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext**
Description	Enter the network context
Introduced	16.0.R1

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext network**
Description	Administrative state of network
Default	enable
Options	enable, disable
Introduced	16.0.R1

max-mac *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **vrgw lanext network**
Description	Maximum number of MAC entries in bridged domain from network side
Range	1 to 64
Default	20
Introduced	16.0.R1

xconnect

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string*
Description	Enter the xconnect context
Introduced	16.0.R1

accounting

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect**
Description	Enter the accounting context
Introduced	16.0.R1

mobility-updates *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	Accounting updates triggered by mobility
Default	false
Introduced	16.0.R1

policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	ISA RADIUS accounting policy for cross-connected UEs
Reference	configure **aaa radius isa-policy** *string*
Introduced	16.0.R1

update-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect accounting**
Description	Time between consecutive Interim accounting update messages
Range	5 to 259200
Units	minutes
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw vlan-range** *string* **xconnect**
Description	Administrative state of the cross-connect
Default	disable
Options	enable, disable
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wlan-gw**
Description	Identifier of the WLAN Gateway ISA group to terminate UEs for this group interface
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R1

wpp

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name*
Description	Enter the wpp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Administrative state of WPP
Default	disable
Options	enable, disable
Introduced	16.0.R1

initial

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Enter the initial context
Introduced	16.0.R1

sla-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp initial**

Description Initial SLA profile

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp initial**

Description Initial subscriber profile

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

lease-time *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**

Description Lease time

Range 10 to 315446399

Default 600

Introduced 16.0.R1

portal

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**

Description Enter the portal context

Introduced 16.0.R1

name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	Name for the WPP portal of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

portal-group *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	WPP portal group for this interface
Reference	configure **aaa wpp portal-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp portal**
Description	The virtual router instance of the WPP portal for this interface
Introduced	16.0.R1
Notes	This element is part of a choice

restore-to-initial-on-disconnect *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Restore initial profiles after a host has disconnected
Default	true
Introduced	16.0.R1

triggered-hosts *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	Enable/disable triggered hosts
Default	false
Introduced	16.0.R1

user-db *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **group-interface** *interface-name* **wpp**
Description	User database
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

hold-time

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the hold-time context
Introduced	16.0.R1

ipv4

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time**
Description	Enter the ipv4 context
Introduced	16.0.R1

down

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 down**
Description	Apply down delay only when interface is configured or after reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 down**
Description	Down hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv4 up**
Description	Up hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

ipv6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time**
Description	Enter the ipv6 context
Introduced	16.0.R1

down

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 down**

Description Apply hold time only when IP interface is first configured or after system reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 down**

Description Down hold time for the IPv6 interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

up

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6**

Description Enter the up context

Introduced 16.0.R1

seconds *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **hold-time ipv6 up**

Description Up hold time for the IPv6 interface

Range 1 to 1200

Units seconds

Introduced 16.0.R1

ipoe-linking

Context **configure service ies** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipoe-linking context

Introduced 16.0.R1

gratuitous-router-advertisement *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipoe-linking**

Description Send unsolicited router advertisement after DHCP setup

Default false

Introduced 16.0.R1

ipoe-session

Context **configure service ies** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipoe-session context

Introduced 16.0.R1

session-limit *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipoe-session**

Description Maximum number of sessions on this group interface

Range 1 to 500000

Introduced 16.0.R1

ipv4

Context **configure service ies** *service-name* **subscriber-interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**

Description Enter the address context

Introduced 16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	IP address or IP subnet applied to interface
Introduced	16.0.R1
Notes	This element is part of a list key

gateway *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Separate IP address within the subnet for SRRP routing purposes
Introduced	16.0.R1

holdup-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Time for the route before it accepts the new state attribute
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

populate-host-routes *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	Populate subscriber host routes in local FIB
Default	false
Introduced	16.0.R1

prefix-length *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 address** *ipv4-unicast-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

allow-unmatching-subnets *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Allow subscriber hosts without a matching subnet
Default	false
Introduced	16.0.R1

default-dns *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Default DNS server addresses
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

dhcp

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default enable

Options enable, disable

Introduced 16.0.R4

client-applications

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the client-applications context

Introduced 16.0.R4

dhcp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable DHCP as client application.

Default true

Introduced 16.0.R4

ppp *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp client-applications**

Description Enable/disable PPP as client application.

Default false

Introduced 16.0.R4

description *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

max-leases *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp lease-populate**

Description The maximum number of DHCPv4 leases.

Range 0 to 511999

Introduced 16.0.R4

option-82

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

vendor-specific-option

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R4

client-mac-address *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Enter the proxy-server context
Introduced	16.0.R4

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	Administratively enable/disable DHCP proxy.
Default	disable
Options	enable, disable
Introduced	16.0.R1

emulated-server *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	IP address used as the DHCP server address in the context of this service
Introduced	16.0.R1

lease-time

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server**
Description	Enter the lease-time context
Introduced	16.0.R1

radius-override *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	Use lease time information provided by RADIUS server
Default	false
Introduced	16.0.R1

value *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp proxy-server lease-time**
Description	DHCP lease time
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Python policy.
Reference	configure **python python-policy** *string*
Introduced	16.0.R4

relay-proxy

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Enter the relay-proxy context
Introduced	16.0.R1

release-update-src-ip *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify whether or not to relay release messages.
Default	false
Introduced	16.0.R4

siaddr-override *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp relay-proxy**
Description	Specify the IP address to use.
Introduced	16.0.R4

server *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Configure the DHCP server IP addresses.
Max. Elements	8
Introduced	16.0.R4
Notes	This element is ordered by user

src-ip-addr *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Specify what source address to use.
Default	auto
Options	auto, gi-address
Introduced	16.0.R4

virtual-subnet *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 dhcp**
Description	Enable/disable virtual subnetting.
Default	false
Introduced	16.0.R4

export-host-routes *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Allow export of subscriber management host routes
Default	false
Introduced	16.0.R1

unnumbered

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4**
Description	Enter the unnumbered context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 unnumbered**
Description	IP address of the interface
Introduced	16.0.R1
Notes	This element is part of a choice

ip-int-name *interface-name*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv4 unnumbered**
Description	Interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the ipv6 context
Introduced	16.0.R1

address [ipv6-address] *ipv6-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the address context
Introduced	16.0.R1

[ipv6-address] *ipv6-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

holdup-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Configures the time to wait, in milliseconds, for the route before it accepts the new state attribute.
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

host-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	Host type for subscriber interface addresses or prefixes
Options	pd, wan, pd-wan
Introduced	16.0.R1

prefix-length *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	IPv6 address prefix length
Range	0 to 128
Introduced	16.0.R1
Notes	This element is mandatory

track-srrp *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 address** *ipv6-address*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

allow-multiple-wan-addresses *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Configure if the interface will accept multiple WAN addresses.
Default	false
Introduced	16.0.R4

allow-unmatching-prefixes *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Allow subscriber hosts without a matching prefix
Default	false
Introduced	16.0.R1

default-dns *ipv6-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Default DNS server addresses
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

delegated-prefix-length (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	IPv6 delegated prefix length
Range	48 to 64
Default	64
Options	variable
Introduced	16.0.R1

dhcp6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the dhcp6 context
Introduced	16.0.R1

override-slaac *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Default	false
Introduced	16.0.R1

pd-managed-route

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the pd-managed-route context
Introduced	16.0.R1

next-hop *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 pd-managed-route**
Description	Next hop type
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1

proxy-server

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the proxy-server context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Administrative state of DHCPv6 proxy server
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the DHCP application to use DHCP relay functionality
Default	true
Introduced	16.0.R1

ppp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server client-applications**
Description	Allow the PPP application to use DHCP relay functionality
Default	false
Introduced	16.0.R1

preferred-lifetime *dhcp6-prefix-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain preferred on this interface
Default	3600
Introduced	16.0.R1

rebind-timer *dhcp6-rebind-timer*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Rebind timer (T2) for this interface
Range	0 to 1209600
Introduced	16.0.R1

renew-timer *dhcp6-renew-timer*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Renew timer (T1)
Range	0 to 604800
Introduced	16.0.R1

server-id

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Enter the server-id context
Introduced	16.0.R1

duid-en-ascii *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

duid-en-hex *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Vendor-assigned unique ID based on Enterprise Number (DUID-EN) as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-ll

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server server-id**
Description	Use link-layer address (DUID-LL) as DUID
Introduced	16.0.R1
Notes	This element is part of a choice

valid-lifetime *dhcp6-prefix-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 proxy-server**
Description	Time for prefix to remain valid on this interface
Default	86400
Introduced	16.0.R1

python-policy *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

relay

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6**
Description	Enter the relay context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Administrative state of DHCvP6 relay
Default	disable
Options	enable, disable
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Enter the client-applications context
Introduced	16.0.R1

dhcp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay client-applications**
Description	Allow the DHCP application to use DHCP relay functionality
Default	true
Introduced	16.0.R1

ppp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay client-applications**
Description	Allow the PPP application to use DHCP relay functionality
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

link-address *ipv6-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Link address for the DHCPv6 relay messages
Introduced	16.0.R1

server *ipv6-address-with-zone*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	DHCP6 server(s) to which the DHCP6 requests are forwarded
Max. Elements	8
Introduced	16.0.R1
Notes	This element is ordered by user

source-address *ipv6-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 dhcp6 relay**
Description	Source IPv6 address for the DHCPv6 relay messages
Introduced	16.0.R1

ipoe-bridged-mode *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enable/Disable IPv6 IPoE Bridged Mode.
Default	false
Introduced	16.0.R4

link-local-address

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the link-local-address context
Introduced	16.0.R1

address *ipv6-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 link-local-address**
Description	Link local address
Introduced	16.0.R1

prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	IPv6 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

holdup-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	Configures the time to wait, in milliseconds, for the route before it accepts the new state attribute.
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1

host-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	Host type for subscriber interface addresses or prefixes
Options	pd, wan, pd-wan
Introduced	16.0.R1

track-srrp *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 prefix** *ipv6-prefix*
Description	SRRP instance whose state is tracked on this IP address
Range	1 to 4294967295
Introduced	16.0.R1

router-advertisements

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the router-advertisements context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Administrative state of router advertisement
Default	disable
Options	enable, disable
Introduced	16.0.R1

force-mcast *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Send router advertisement to a multicast address instead of unicast for IPoE
Options	ip, ip-mac
Introduced	16.0.R1

max-advertisement-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Maximum advertisement interval
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1

min-advertisement-interval *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Minimum advertisement interval
Range	900 to 1350
Default	900
Units	seconds
Introduced	16.0.R1

options

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the options context
Introduced	16.0.R1

current-hop-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Hop limit to be advertised
Range	0 to 255
Default	64
Introduced	16.0.R1

dns

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**

Description Enter the dns context

Introduced 16.0.R1

include-rdnss *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Include the RDNSS server option 25

Default false

Introduced 16.0.R1

rdnss-lifetime (*number* | *keyword*)

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options dns**

Description Maximum time for the RDNSS address to remain valid

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

managed-configuration *boolean*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**

Description Managed address configuration flag

Default false

Introduced 16.0.R1

mtu (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Advertised MTU value
Range	1280 to 9212
Default	not-included
Units	bytes
Options	not-included
Introduced	16.0.R1

other-stateful-configuration *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Other stateful configuration flag
Default	false
Introduced	16.0.R1

reachable-time *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery reachable time that is advertised for this group interface
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1

retransmit-timer *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Neighbor discovery retrasnmit timer that is advertised for this group interface
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1

router-lifetime (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements options**
Description	Router lifetime
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1

prefix-options

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements**
Description	Enter the prefix-options context
Introduced	16.0.R1

autonomous *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Value of the autonomous flag
Default	false
Introduced	16.0.R1

on-link *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Assign the prefix to an interface on the specified link
Default	true
Introduced	16.0.R1

preferred-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain preferred
Default	3600
Units	seconds
Introduced	16.0.R1

valid-lifetime *router-advertisement-prefix-options-lifetime*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-advertisements prefix-options**
Description	Time for a prefix to remain valid
Default	86400
Units	seconds
Introduced	16.0.R1

router-solicit

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6**
Description	Enter the router-solicit context
Introduced	16.0.R1

inactivity-timer (*number* | *keyword*)

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **ipv6 router-solicit**
Description	Timebefore an inactive host is removed
Range	1 to 31536000
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1

local-address-assignment

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the local-address-assignment context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**
Description	Administrative state of local address assignment
Default	disable
Options	enable, disable
Introduced	16.0.R1

ipv4

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**
Description	Enter the ipv4 context
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**
Description	Enter the client-applications context
Introduced	16.0.R1

ppp *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4 client-applications**
Description	Request local addresses for PPP IPCP hosts
Default	false
Introduced	16.0.R1

default-pool *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**
Description	Default pools
String Length	1 to 32
Max. Elements	2
Introduced	16.0.R1
Notes	This element is ordered by user

server *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv4**
Description	Local DHCP server that contains pools for local address assignment
Reference	configure **router** *string* **dhcp-server dhcpv4** *string*
Introduced	16.0.R1

ipv6

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment**
Description	Enter the ipv6 context
Introduced	16.0.R1

client-applications

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6**
Description	Enter the client-applications context
Introduced	16.0.R1

ipoe-slaac *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**
Description	Request local addresses for IPoE SLAAC hosts
Default	false
Introduced	16.0.R1

ipoe-wan *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**
Description	Request local addresses for IPoE IA NA hosts
Default	false
Introduced	16.0.R1

ppp-slaac *boolean*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6 client-applications**
Description	Request local addresses for PPP SLAAC hosts
Default	false
Introduced	16.0.R1

server *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **local-address-assignment ipv6**
Description	Local DHCPv6 server that contains pools for local address assignment
Reference	configure **router** *string* **dhcp-server dhcpv6** *string*
Introduced	16.0.R1

pppoe

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the pppoe context
Introduced	16.0.R1

description *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **pppoe**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

session-limit *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **pppoe**
Description	Maximum PPPoE sessions
Range	1 to 262143
Default	1
Introduced	16.0.R1

wan-mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	The mode of operation for hosts that have a /128 WAN IPv6 address.
Default	mode64
Options	mode64, mode128
Introduced	16.0.R4

wlan-gw

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name*
Description	Enter the wlan-gw context
Introduced	16.0.R1

pool-manager

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw**
Description	Enter the pool-manager context
Introduced	16.0.R1

dhcp6-client

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**
Description	Enter the dhcp6-client context
Introduced	16.0.R1

dhcpv4-nat

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the dhcpv4-nat context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description Administrative state of the considered DHCPv6 client

Default disable

Options enable, disable

Introduced 16.0.R1

link-address *ipv6-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description The IPv6-address that should be included in the link-address field of the relay header.

Default ::

Introduced 16.0.R4

pool-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client dhcpv4-nat**

Description Pool name to be sent in the DHCPv6 messages

String Length 1 to 32

Introduced 16.0.R1

ia-na

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Enter the ia-na context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**
Description	Administrative state of the considered DHCPv6 client
Default	disable
Options	enable, disable
Introduced	16.0.R1

link-address *ipv6-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**
Description	The IPv6-address that should be included in the link-address field of the relay header.
Default	::
Introduced	16.0.R4

pool-name *string*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client ia-na**
Description	Pool name to be sent in the DHCPv6 messages
String Length	1 to 32
Introduced	16.0.R1

lease-query

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**
Description	Enter the lease-query context
Introduced	16.0.R1

max-retries *number*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client lease-query**
Description	Maximum number of retries before the lease query assumes that no existing subnets were allocated
Range	0 to 10
Default	2
Introduced	16.0.R1

servers *ipv6-unicast-address*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**
Description	DHCPv6 servers that are used for requesting addresses
Max. Elements	8
Introduced	16.0.R1

slaac

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**
Description	Enter the slaac context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**
Description	Administrative state of the considered DHCPv6 client
Default	disable
Options	enable, disable
Introduced	16.0.R1

link-address *ipv6-address*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**

Description The IPv6-address that should be included in the link-address field of the relay header.

Default ::

Introduced 16.0.R4

pool-name *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client slaac**

Description Pool name to be sent in the DHCPv6 messages

String Length 1 to 32

Introduced 16.0.R1

source-ip (*keyword* | *string*)

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager dhcp6-client**

Description Source IP address that is used by the DHCPv6 client

Default use-interface-ip

Options use-interface-ip

Introduced 16.0.R1

watermarks

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**

Description Enter the watermarks context

Introduced 16.0.R1

high *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager watermarks**

Description New prefix that is used when the ISA level reaches high watermark

Range 51 to 99

Default 95

Introduced 16.0.R1

low *number*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager watermarks**

Description Prefix that is released if the usage level without this prefix is below the low watermark

Range 50 to 98

Default 90

Introduced 16.0.R1

wlan-gw-group *string*

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw pool-manager**

Description Identifier of the WLAN Gateway ISA group on which the prefixes are installed

Reference configure **isa wlan-gw-group** *number*

Introduced 16.0.R1

redundancy

Context **configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw**

Description Enter the redundancy context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**
Description	Administrative state of redundancy
Default	disable
Options	enable, disable
Introduced	16.0.R1

export *ipv4-unicast-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**
Description	Route to export to peer
Introduced	16.0.R1

monitor *ipv4-unicast-prefix*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ies** *service-name* **subscriber-interface** *interface-name* **wlan-gw redundancy**
Description	Peer route to monitor
Introduced	16.0.R1

video-interface [interface-name] *interface-name*

Context	**configure service ies** *service-name*
Description	Enter the video-interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Interface name
String Length	1 to 29
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Accounting Policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

address [ip-address] *ipv4-prefix-with-host-bits*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Enter the address context
Max. Elements	16
Introduced	16.0.R1

[ip-address] *ipv4-prefix-with-host-bits*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **address** *ipv4-prefix-with-host-bits*
Description	IPv4 address for a router interface
Introduced	16.0.R1
Notes	This element is part of a list key

adi

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Enter the adi context
Introduced	16.0.R1

scte30

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi**
Description	Enter the scte30 context
Introduced	16.0.R1

ad-server [address] *ipv4-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi scte30**
Description	Enter the ad-server context
Max. Elements	4
Introduced	16.0.R1

[address] *ipv4-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi scte30 ad-server** *ipv4-address*
Description	Ad server address
Introduced	16.0.R1
Notes	This element is part of a list key

local-address

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi scte30**
Description	Enter the local-address context
Introduced	16.0.R1

control *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi scte30 local-address**
Description	Control
Introduced	16.0.R1
Notes	This element is mandatory

data *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **adi scte30 local-address**
Description	Data
Introduced	16.0.R1
Notes	This element is mandatory

admin-state *keyword*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Administrative state of the video interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

channel [mcast-address] *ipv4-multicast-address* **source** *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Enter the channel context
Introduced	16.0.R1

[mcast-address] *ipv4-multicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Multicast channel address
Introduced	16.0.R1
Notes	This element is part of a list key

source *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Unicast source address
Introduced	16.0.R1
Notes	This element is part of a list key

channel-name *string*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	max 32 chars.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

scte35-action *keyword*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Enable/disable forwarding scte 35 cue avails.
Default	forward
Options	forward, drop
Introduced	16.0.R1

zone-channel [zone-mcast-address] *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Enter the zone-channel context
Introduced	16.0.R1

[zone-mcast-address] *ipv4-multicast-address*

Context **configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Description Multicast zone channel address

Introduced 16.0.R1

Notes This element is part of a list key

zone-source *ipv4-unicast-address*

Context **configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Description Unicast source address

Introduced 16.0.R1

Notes This element is part of a list key

adi-channel-name *string*

Context **configure service ies** *service-name* **video-interface** *interface-name* **channel** *ipv4-multicast-address* **source** *ipv4-unicast-address* **zone-channel** *ipv4-multicast-address* **zone-source** *ipv4-unicast-address*

Description max 32 chars.

String Length 1 to 32

Introduced 16.0.R1

cpu-protection *string*

Context **configure service ies** *service-name* **video-interface** *interface-name*

Description CPU protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R1

description *string*

Context **configure service ies** *service-name* **video-interface** *interface-name*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

multicast-service *number*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Service ID of the associated multicast service.
Range	1 to 2147483647
Introduced	16.0.R1

output-format *keyword*

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Output format
Default	rtp-udp
Options	udp, rtp-udp
Introduced	16.0.R1

rt-client

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Enter the rt-client context
Introduced	16.0.R1

src-address *ipv4-unicast-address*

Context	**configure service ies** *service-name* **video-interface** *interface-name* **rt-client**
Description	An IP address for the RT client.
Introduced	16.0.R3
Notes	This element is mandatory

video-sap

Context	**configure service ies** *service-name* **video-interface** *interface-name*
Description	Enter the video-sap context
Introduced	16.0.R1

egress

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap**

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap egress filter**

Description ID for the IP filter policy

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap egress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap egress qos**

Description SAP-egress QoS policy

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

ingress

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap**

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap ingress filter**

Description ID for the IP filter policy

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap ingress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap ingress qos**

Description SAP-ingress QoS policy

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R1

video-group-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service ies** *service-name* **video-interface** *interface-name* **video-sap**

Description Group id for the video interface.

Reference configure **isa video-group** *number*

Introduced 16.0.R1

Notes This element is mandatory

vpn-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service ies** *service-name*
Description	VPN identifier for the service
Range	1 to 2147483647
Introduced	16.0.R1

ipfix

Context	**configure service**
Description	Enter the ipfix context
Introduced	16.0.R1

export-policy [name] *string*

Context	**configure service ipfix**
Description	Enter the export-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure service ipfix export-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

collector router-instance *string* **ip-address** *ipv4-unicast-address*

Context	**configure service ipfix export-policy** *string*
Description	Enter the collector context
Introduced	16.0.R1

router-instance *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Router where the collector is reached
Introduced	16.0.R1
Notes	This element is part of a list key

ip-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	IPv4 address of the collector
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Administrative state of the collector
Default	disable
Options	enable, disable
Introduced	16.0.R1

mtu *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Maximum Transmission Unit
Range	512 to 9212
Default	1500
Introduced	16.0.R1

refresh-timeout *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	IPFIX template refresh time
Range	240 to 86400
Default	600
Units	seconds
Introduced	16.0.R1

source-ip-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service ipfix export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Source IP address used in communication towards the collector
Introduced	16.0.R1

description *string*

Context	**configure service ipfix export-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

template-format *keyword*

Context	**configure service ipfix export-policy** *string*
Description	Template format used by this IPFIX export policy
Default	format1
Options	format1, format2
Introduced	16.0.R1

md-auto-id

Context	**configure service**
Description	Enter the md-auto-id context
Introduced	16.0.R1

customer-id-range

Context	**configure service md-auto-id**
Description	Enter the customer-id-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id customer-id-range**
Description	Upper value of the ID range, must be greater than or equal to start value
Range	2 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id customer-id-range**
Description	Lower value of the ID range, must be less than or equal to end value
Range	2 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

pw-template-id-range

Context	**configure service md-auto-id**
Description	Enter the pw-template-id-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id pw-template-id-range**
Description	Upper value of the ID range, must be greater than or equal to start value
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id pw-template-id-range**
Description	Lower value of the ID range, must be less than or equal to end value
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

service-id-range

Context	**configure service md-auto-id**
Description	Enter the service-id-range context
Introduced	16.0.R1

end *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id service-id-range**
Description	Upper value of the ID range, must be greater than or equal to start value
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

start *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service md-auto-id service-id-range**
Description	Lower value of the ID range, must be less than or equal to end value
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

nat

Context	**configure service**
Description	Enter the nat context
Introduced	16.0.R1

classifier [name] *string*

Context	**configure service nat**
Description	Enter the classifier context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure service nat classifier** *string*
Description	The name that identifies this NAT classifier
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

default

Context	**configure service nat classifier** *string*
Description	Enter the default context
Introduced	16.0.R1

action

Context	**configure service nat classifier** *string* **default**
Description	Enter the action context
Introduced	16.0.R1

dnat

Context	**configure service nat classifier** *string* **default action**
Description	Default destination IP address for DNAT action
Introduced	16.0.R1
Notes	This element is part of a choice

dnat-ip-address *ipv4-unicast-address*

Context	**configure service nat classifier** *string* **default action**
Description	Substitute IP address for the destination IP address of the packets matching this classifier
Introduced	16.0.R1
Notes	This element is part of a choice

forward

Context	**configure service nat classifier** *string* **default action**
Description	Forward mode of operation
Introduced	16.0.R1
Notes	This element is part of a choice

dnat-ip-address *ipv4-unicast-address*

Context	**configure service nat classifier** *string* **default**
Description	Default destination IP address for matching entries with dNAT action
Introduced	16.0.R1

description *string*

Context	**configure service nat classifier** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

entry [id] *number*

Context	**configure service nat classifier** *string*
Description	Enter the entry context
Max. Elements	32
Introduced	16.0.R1

[id] *number*

Context	**configure service nat classifier** *string* **entry** *number*
Description	Classifier rule ID
Range	1 to 1000
Introduced	16.0.R1
Notes	This element is part of a list key

action

Context	**configure service nat classifier** *string* **entry** *number*
Description	Enter the action context
Introduced	16.0.R1

dnat

Context	**configure service nat classifier** *string* **entry** *number* **action**
Description	Destination-NAT mode of operation
Introduced	16.0.R1
Notes	This element is part of a choice

dnat-ip-address *ipv4-unicast-address*

Context	**configure service nat classifier** *string* **entry** *number* **action**
Description	Substitute IP address for the destination IP address of the packets matching this classifier
Introduced	16.0.R1
Notes	This element is part of a choice

forward

Context **configure service nat classifier** *string* **entry** *number* **action**

Description Forward mode of operation

Introduced 16.0.R1

Notes This element is part of a choice

description *string*

Context **configure service nat classifier** *string* **entry** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

match

Context **configure service nat classifier** *string* **entry** *number*

Description Enter the match context

Introduced 16.0.R1

dst-port-range

Context **configure service nat classifier** *string* **entry** *number* **match**

Description Enter the dst-port-range context

Introduced 16.0.R1

end *number*

Context **configure service nat classifier** *string* **entry** *number* **match dst-port-range**

Description End port number

Range 0 | 1 to 65535

Default 65535

Introduced 16.0.R1

start *number*

Context	**configure service nat classifier** *string* **entry** *number* **match dst-port-range**
Description	Start of port number
Range	0 | 1 to 65535
Default	0
Introduced	16.0.R1

protocol *keyword*

Context	**configure service nat classifier** *string* **entry** *number* **match**
Description	IP protocol to match
Options	tcp, udp
Introduced	16.0.R1

deterministic-script

Context	**configure service nat**
Description	Enter the deterministic-script context
Introduced	16.0.R1

location *ftp-tftp-url*

Context	**configure service nat deterministic-script**
Description	URL for the generated script.
String Length	1 to 180
Introduced	16.0.R4

firewall-policy [name] *external-named-item*

Context	**configure service nat**
Description	Enter the firewall-policy context
Max. Elements	2048
Introduced	16.0.R1

[name] *external-named-item*

Context	**configure service nat firewall-policy** *external-named-item*
Description	Firewall policy name
Introduced	16.0.R1
Notes	This element is part of a list key

alg

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the alg context
Introduced	16.0.R1

ftp *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **alg**
Description	FTP ALG
Default	true
Introduced	16.0.R1

rtsp *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **alg**
Description	RTSP ALG
Default	false
Introduced	16.0.R1

sip *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **alg**
Description	SIP ALG
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service nat firewall-policy** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

domain

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the **domain** context
Introduced	16.0.R1

name *string*

Context	**configure service nat firewall-policy** *external-named-item* **domain**
Description	Domain name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure service nat firewall-policy** *external-named-item* **domain**
Description	Virtual router instance
Introduced	16.0.R1
Notes	This element is part of a choice

filtering *keyword*

Context	**configure service nat firewall-policy** *external-named-item*
Description	Filtering
Options	endpoint-independent, address-and-port-dependent
Introduced	16.0.R1

l2-outside

Context	**configure service nat firewall-policy** *external-named-item*
Description	Allow NAT policy to use Layer 2 outside service instead of Layer 3 outside service
Introduced	16.0.R1
Notes	This element is part of a choice

port-limits

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the port-limits context
Introduced	16.0.R1

forwarding *number*

Context	**configure service nat firewall-policy** *external-named-item* **port-limits**
Description	Maximum number of port forwarding entries
Range	1 to 64
Introduced	16.0.R1

priority-sessions

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the priority-sessions context
Introduced	16.0.R1

fc

Context	**configure service nat firewall-policy** *external-named-item* **priority-sessions**
Description	Enter the fc context
Introduced	16.0.R1

af *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description	Assign AF forwarding class as containing prioritized traffic
Default	false
Introduced	16.0.R1

be *boolean*

Context **configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description Assign BE forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

ef *boolean*

Context **configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description Assign EF forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

h1 *boolean*

Context **configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description Assign H1 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

h2 *boolean*

Context **configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description Assign H2 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

l1 *boolean*

Context **configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description Assign L1 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

l2 *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description	Assign L2 forwarding class as containing prioritized traffic
Default	false
Introduced	16.0.R1

nc *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **priority-sessions fc**
Description	Assign L2 forwarding class as containing prioritized traffic
Default	false
Introduced	16.0.R1

session-limits

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the session-limits context
Introduced	16.0.R1

max *number*

Context	**configure service nat firewall-policy** *external-named-item* **session-limits**
Description	Session limit
Range	1 to 65535
Default	65535
Introduced	16.0.R1

reserved *number*

Context	**configure service nat firewall-policy** *external-named-item* **session-limits**
Description	Number of sessions reserved for prioritized sessions
Range	1 to 65534
Introduced	16.0.R1

watermarks

Context	**configure service nat firewall-policy** *external-named-item* **session-limits**
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure service nat firewall-policy** *external-named-item* **session-limits watermarks**
Description	Percentage for high watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure service nat firewall-policy** *external-named-item* **session-limits watermarks**
Description	Percentage for low watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

tcp

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the tcp context
Introduced	16.0.R1

mss-adjust *number*

Context	**configure service nat firewall-policy** *external-named-item* **tcp**
Description	Value to adjust the TCP Maximum Segment Size (MSS) option
Range	160 to 10240
Introduced	16.0.R1

timeouts

Context **configure service nat firewall-policy** *external-named-item*
Description Enter the timeouts context
Introduced 16.0.R1

icmp6-query *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts**
Description Timeout applied to an ICMPv6 Query session
Range 60 to 240
Default 60
Introduced 16.0.R1

sip *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts**
Description SIP inactive media timeout
Range 10 to 7200
Default 120
Introduced 16.0.R1

tcp

Context **configure service nat firewall-policy** *external-named-item* **timeouts**
Description Enter the tcp context
Introduced 16.0.R1

established *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts tcp**
Description Idle timeout applied to a TCP session in the established state
Range 60 to 86400
Default 7440
Introduced 16.0.R1

rst *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts tcp**
Description Time after receiving RST before a TCP session can return to the state LISTEN
Range 0 to 240
Default 0
Introduced 16.0.R1

syn *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts tcp**
Description Timeout applied to a TCP session when synchronizing its initial sequence
Range 6 to 86400
Default 15
Introduced 16.0.R1

time-wait *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts tcp**
Description Timeout applied to a TCP session in the time-wait state
Range 0 to 240
Default 0
Introduced 16.0.R1

transitory *number*

Context **configure service nat firewall-policy** *external-named-item* **timeouts tcp**
Description Idle timeout applied to a TCP session in a transitory state
Range 60 to 86400
Default 240
Introduced 16.0.R1

udp

Context **configure service nat firewall-policy** *external-named-item* **timeouts**
Description Enter the udp context
Introduced 16.0.R1

dns *number*

Context	**configure service nat firewall-policy** *external-named-item* **timeouts udp**
Description	Timeout applied to a UDP session with destination port 53
Range	15 to 86400
Default	15
Introduced	16.0.R1

initial *number*

Context	**configure service nat firewall-policy** *external-named-item* **timeouts udp**
Description	UDP mapping timeout applied to new sessions
Range	10 to 300
Default	15
Introduced	16.0.R1

normal *number*

Context	**configure service nat firewall-policy** *external-named-item* **timeouts udp**
Description	UDP mapping timeouts
Range	60 to 86400
Default	300
Introduced	16.0.R1

unknown-protocol *number*

Context	**configure service nat firewall-policy** *external-named-item* **timeouts**
Description	Timeout for flows with an unknown protocol
Range	60 to 86400
Default	300
Introduced	16.0.R1

udp

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the udp context
Introduced	16.0.R1

inbound-refresh *boolean*

Context	**configure service nat firewall-policy** *external-named-item* **udp**
Description	Extend UDP session timeout on inbound traffic
Default	false
Introduced	16.0.R1

unknown-protocols

Context	**configure service nat firewall-policy** *external-named-item*
Description	Enter the unknown-protocols context
Introduced	16.0.R1

all

Context	**configure service nat firewall-policy** *external-named-item* **unknown-protocols**
Description	Flows with any protocol that are allowed
Introduced	16.0.R1
Notes	This element is part of a choice

protocol *number*

Context	**configure service nat firewall-policy** *external-named-item* **unknown-protocols**
Description	Protocol number
Range	0 to 255
Max. Elements	8
Introduced	16.0.R1
Notes	This element is part of a choice

map-t

Context	**configure service nat**
Description	Enter the map-t context
Introduced	16.0.R4

domain [name] *string*

Context	**configure service nat map-t**
Description	Enter the domain context
Max. Elements	31
Introduced	16.0.R4

[name] *string*

Context	**configure service nat map-t domain** *string*
Description	MAP-T domain name
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service nat map-t domain** *string*
Description	Disable or enable the map domain
Default	disable
Options	enable, disable
Introduced	16.0.R4

description *string*

Context	**configure service nat map-t domain** *string*
Description	The description
String Length	1 to 80
Introduced	16.0.R4

dmr-prefix *ipv6-prefix*

Context	**configure service nat map-t domain** *string*
Description	The Default Mapping Rule prefix
Introduced	16.0.R4

ip-fragmentation

Context	**configure service nat map-t domain** *string*
Description	Enter the ip-fragmentation context
Introduced	16.0.R4

v6-frag-header *boolean*

Context	**configure service nat map-t domain** *string* **ip-fragmentation**
Description	This specifies if an IPv6 fragmentation header is added when a non-fragmented IPv4 packet with the Don't Fragment bit cleared is translated into IPv6
Default	false
Introduced	16.0.R4

mapping-rule [rule-name] *string*

Context	**configure service nat map-t domain** *string*
Description	Enter the mapping-rule context
Max. Elements	256
Introduced	16.0.R4

[rule-name] *string*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The name that identifies this mapping rule
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	Disable or enable the mapping rule
Default	disable
Options	enable, disable
Introduced	16.0.R4

description *string*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The description
String Length	1 to 80
Introduced	16.0.R4

ea-length *number*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The length of the EA bits field in the End-user IPv6 prefix part of the IPv6 Map Address
Range	0 to 48
Default	0
Introduced	16.0.R4

ipv4-prefix *ipv4-prefix*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The IPv4 prefix
Introduced	16.0.R4

psid-offset *number*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The offset of the Port Set ID (PSID) within a 16 bits wide port space
Range	0 to 16
Default	6
Introduced	16.0.R4

rule-prefix *ipv6-prefix*

Context	**configure service nat map-t domain** *string* **mapping-rule** *string*
Description	The IPv6 prefix
Introduced	16.0.R4

mtu *number*

Context	**configure service nat map-t domain** *string*
Description	Configure the MTU
Range	160 to 8686
Default	8686
Introduced	16.0.R4

tcp-mss-adjust *number*

Context	**configure service nat map-t domain** *string*
Description	The value to adjust the TCP Maximum Segment Size (MSS) option
Range	0 | 160 to 8626
Default	0
Introduced	16.0.R4

nat-policy [name] *external-named-item*

Context	**configure service nat**
Description	Enter the nat-policy context
Max. Elements	2048
Introduced	16.0.R1

[name] *external-named-item*

Context	**configure service nat nat-policy** *external-named-item*
Description	Policy name
Introduced	16.0.R1
Notes	This element is part of a list key

alg

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the alg context
Introduced	16.0.R1

ftp *boolean*

Context **configure service nat nat-policy** *external-named-item* **alg**
Description FTP ALG
Default true
Introduced 16.0.R1

pptp *boolean*

Context **configure service nat nat-policy** *external-named-item* **alg**
Description PPTP ALG
Default false
Introduced 16.0.R1

rtsp *boolean*

Context **configure service nat nat-policy** *external-named-item* **alg**
Description RTSP ALG
Default false
Introduced 16.0.R1

sip *boolean*

Context **configure service nat nat-policy** *external-named-item* **alg**
Description SIP ALG
Default false
Introduced 16.0.R1

block-limit *number*

Context **configure service nat nat-policy** *external-named-item*
Description Maximum number of port blocks per subscriber
Range 1 to 40
Default 1
Introduced 16.0.R1

description *string*

Context	**configure service nat nat-policy** *external-named-item*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dnat

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the dnat context
Introduced	16.0.R1

classifier *string*

Context	**configure service nat nat-policy** *external-named-item* **dnat**
Description	NAT classifier
Reference	configure **service nat classifier** *string*
Introduced	16.0.R1

dnat-only

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the **dnat-only** context
Introduced	16.0.R1

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service nat nat-policy** *external-named-item* **dnat-only**
Description	NAT group
Reference	configure **isa nat-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

router-instance *string*

Context	**configure service nat nat-policy** *external-named-item* **dnat-only**
Description	Attribute router-instance for dnat-only
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service nat nat-policy** *external-named-item* **dnat-only**
Description	WLAN GW group used for NAT
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

filtering *keyword*

Context	**configure service nat nat-policy** *external-named-item*
Description	Filtering
Options	endpoint-independent, address-and-port-dependent
Introduced	16.0.R1

flow-log-policy

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the flow-log-policy context
Introduced	16.0.R1

ipfix *string*

Context	**configure service nat nat-policy** *external-named-item* **flow-log-policy**
Description	IPFIX export policy
Reference	configure **service ipfix export-policy** *string*
Introduced	16.0.R1

syslog *string*

Context	**configure service nat nat-policy** *external-named-item* **flow-log-policy**
Description	SYSLOG export policy
Reference	configure **service nat syslog export-policy** *string*
Introduced	16.0.R1

l2-outside

Context	**configure service nat nat-policy** *external-named-item*
Description	Allow NAT policy to use Layer 2 outside service instead of Layer 3 outside service
Introduced	16.0.R1
Notes	This element is part of a choice

pool

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the **pool** context
Introduced	16.0.R1

name *string*

Context	**configure service nat nat-policy** *external-named-item* **pool**
Description	NAT pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

router-instance *string*

Context	**configure service nat nat-policy** *external-named-item* **pool**
Description	The virtual router instance of the pool.
Introduced	16.0.R1
Notes	This element is part of a choice

port-forwarding-range-end *number*

Context **configure service nat nat-policy** *external-named-item*

Description End of the port forwarding range

Range 1023 to 65535

Default 1023

Introduced 16.0.R1

port-limits

Context **configure service nat nat-policy** *external-named-item*

Description Enter the port-limits context

Introduced 16.0.R1

forwarding *number*

Context **configure service nat nat-policy** *external-named-item* **port-limits**

Description Maximum number of port forwarding entries

Range 1 to 64

Introduced 16.0.R1

reserved *number*

Context **configure service nat nat-policy** *external-named-item* **port-limits**

Description Number of ports reserved for prioritized sessions

Range 1 to 65534

Introduced 16.0.R1

watermarks

Context **configure service nat nat-policy** *external-named-item* **port-limits**

Description Enter the watermarks context

Introduced 16.0.R1

high *number*

Context	**configure service nat nat-policy** *external-named-item* **port-limits watermarks**
Description	Percentage for high watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure service nat nat-policy** *external-named-item* **port-limits watermarks**
Description	Percentage for low watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

priority-sessions

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the priority-sessions context
Introduced	16.0.R1

fc

Context	**configure service nat nat-policy** *external-named-item* **priority-sessions**
Description	Enter the fc context
Introduced	16.0.R1

af *boolean*

Context	**configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description	Assign AF forwarding class as containing prioritized traffic
Default	false
Introduced	16.0.R1

be *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign BE forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

ef *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign EF forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

h1 *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign H1 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

h2 *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign H2 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

l1 *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign L1 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

l2 *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign L2 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

nc *boolean*

Context **configure service nat nat-policy** *external-named-item* **priority-sessions fc**
Description Assign L2 forwarding class as containing prioritized traffic
Default false
Introduced 16.0.R1

session-limits

Context **configure service nat nat-policy** *external-named-item*
Description Enter the session-limits context
Introduced 16.0.R1

max *number*

Context **configure service nat nat-policy** *external-named-item* **session-limits**
Description Session limit
Range 1 to 65535
Default 65535
Introduced 16.0.R1

reserved *number*

Context **configure service nat nat-policy** *external-named-item* **session-limits**
Description Number of sessions reserved for prioritized sessions
Range 1 to 65534
Introduced 16.0.R1

watermarks

Context	**configure service nat nat-policy** *external-named-item* **session-limits**
Description	Enter the watermarks context
Introduced	16.0.R1

high *number*

Context	**configure service nat nat-policy** *external-named-item* **session-limits watermarks**
Description	Percentage for high watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

low *number*

Context	**configure service nat nat-policy** *external-named-item* **session-limits watermarks**
Description	Percentage for low watermark
Range	0 to 100
Introduced	16.0.R1
Notes	This element is mandatory

tcp

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the tcp context
Introduced	16.0.R1

mss-adjust *number*

Context	**configure service nat nat-policy** *external-named-item* **tcp**
Description	Value to adjust the TCP Maximum Segment Size (MSS) option
Range	160 to 10240
Introduced	16.0.R1

reset-unknown *boolean*

Context	**configure service nat nat-policy** *external-named-item* **tcp**
Description	Send of TCP RST upon non-SYN TCP message for unknown flow
Default	false
Introduced	16.0.R1

timeouts

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the timeouts context
Introduced	16.0.R1

icmp-query *number*

Context	**configure service nat nat-policy** *external-named-item* **timeouts**
Description	Timeout applied to an ICMP Query session
Range	60 to 240
Default	60
Introduced	16.0.R1

sip *number*

Context	**configure service nat nat-policy** *external-named-item* **timeouts**
Description	SIP inactive media timeout
Range	10 to 7200
Default	120
Introduced	16.0.R1

subscriber-retention *number*

Context	**configure service nat nat-policy** *external-named-item* **timeouts**
Description	Time a subscribers' IP address is kept after all hosts and port blocks have expired
Range	0 to 1440
Default	0
Units	minutes
Introduced	16.0.R1

tcp

Context **configure service nat nat-policy** *external-named-item* **timeouts**

Description Enter the tcp context

Introduced 16.0.R1

established *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts tcp**

Description Idle timeout applied to a TCP session in the established state

Range 60 to 86400

Default 7440

Introduced 16.0.R1

rst *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts tcp**

Description Time after receiving RST before a TCP session can return to the state LISTEN

Range 0 to 240

Default 0

Introduced 16.0.R1

syn *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts tcp**

Description Timeout applied to a TCP session when synchronizing its initial sequence

Range 6 to 86400

Default 15

Introduced 16.0.R1

time-wait *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts tcp**

Description Timeout applied to a TCP session in the time-wait state

Range 0 to 240

Default 0

Introduced 16.0.R1

transitory *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts tcp**
Description Idle timeout applied to a TCP session in a transitory state
Range 60 to 86400
Default 240
Introduced 16.0.R1

udp

Context **configure service nat nat-policy** *external-named-item* **timeouts**
Description Enter the udp context
Introduced 16.0.R1

dns *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts udp**
Description Timeout applied to a UDP session with destination port 53
Range 15 to 86400
Default 15
Introduced 16.0.R1

initial *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts udp**
Description UDP mapping timeout applied to new sessions
Range 10 to 300
Default 15
Introduced 16.0.R1

normal *number*

Context **configure service nat nat-policy** *external-named-item* **timeouts udp**
Description UDP mapping timeouts
Range 60 to 86400
Default 300
Introduced 16.0.R1

udp

Context	**configure service nat nat-policy** *external-named-item*
Description	Enter the udp context
Introduced	16.0.R1

inbound-refresh *boolean*

Context	**configure service nat nat-policy** *external-named-item* **udp**
Description	Extend UDP session timeout on inbound traffic
Default	false
Introduced	16.0.R1

pcp-server-policy [name] *string*

Context	**configure service nat**
Description	Enter the pcp-server-policy context
Introduced	16.0.R1

[name] *string*

Context	**configure service nat pcp-server-policy** *string*
Description	Name of this policy
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure service nat pcp-server-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

lifetime

Context **configure service nat pcp-server-policy** *string*

Description Enter the lifetime context

Introduced 16.0.R1

maximum *number*

Context **configure service nat pcp-server-policy** *string* **lifetime**

Description Maximum lifetime of explicit mappings made by the PCP servers

Range 61 to 86400

Default 86400

Introduced 16.0.R1

minimum *number*

Context **configure service nat pcp-server-policy** *string* **lifetime**

Description Minimum lifetime of explicit mappings made by the PCP servers

Range 60 to 86399

Default 120

Introduced 16.0.R1

max-description-size *number*

Context **configure service nat pcp-server-policy** *string*

Description Maximum length of mapping descriptions made by the PCP servers

Range 1 to 64

Default 64

Introduced 16.0.R1

opcode

Context **configure service nat pcp-server-policy** *string*

Description Enter the opcode context

Introduced 16.0.R1

announce *boolean*

Context **configure service nat pcp-server-policy** *string* **opcode**
Description Process the announce PCP requests
Default false
Introduced 16.0.R1

get *boolean*

Context **configure service nat pcp-server-policy** *string* **opcode**
Description Process the get PCP requests
Default false
Introduced 16.0.R1

map *boolean*

Context **configure service nat pcp-server-policy** *string* **opcode**
Description Process the map PCP requests
Default false
Introduced 16.0.R1

option

Context **configure service nat pcp-server-policy** *string*
Description Enter the option context
Introduced 16.0.R1

description *boolean*

Context **configure service nat pcp-server-policy** *string* **option**
Description Text description
Default false
Introduced 16.0.R1

next *boolean*

Context	**configure service nat pcp-server-policy** *string* **option**
Description	Process the PCP requests that contain the next option
Default	false
Introduced	16.0.R1

port-reservation *boolean*

Context	**configure service nat pcp-server-policy** *string* **option**
Description	Process the PCP requests that contain the prefer failure option
Default	false
Introduced	16.0.R1

prefer-failure *boolean*

Context	**configure service nat pcp-server-policy** *string* **option**
Description	Process the PCP requests that contain the port reservation option
Default	false
Introduced	16.0.R1

third-party *boolean*

Context	**configure service nat pcp-server-policy** *string* **option**
Description	Process the PCP requests that contain the third party option
Default	false
Introduced	16.0.R1

version

Context	**configure service nat pcp-server-policy** *string*
Description	Enter the version context
Introduced	16.0.R1

maximum *number*

Context	**configure service nat pcp-server-policy** *string* **version**
Description	Maximum protocol version supported by the PCP servers
Range	1 to 255
Default	1
Introduced	16.0.R1

minimum *number*

Context	**configure service nat pcp-server-policy** *string* **version**
Description	Minimum protocol version supported by the PCP servers
Range	1 to 255
Default	1
Introduced	16.0.R1

prefix-list [name] *string*

Context	**configure service nat**
Description	Enter the prefix-list context
Introduced	16.0.R1

[name] *string*

Context	**configure service nat prefix-list** *string*
Description	Maps prefixes to policies
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

application *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service nat prefix-list** *string*
Description	Prefix list for the application
Options	l2-aware-dest-to-policy, dnat-only-subscribers
Introduced	16.0.R1

prefix [ip-prefix] *ipv4-prefix*

Context	**configure service nat prefix-list** *string*
Description	Enter the prefix context
Max. Elements	1024
Introduced	16.0.R1

[ip-prefix] *ipv4-prefix*

Context	**configure service nat prefix-list** *string* **prefix** *ipv4-prefix*
Description	NAT prefix
Introduced	16.0.R1
Notes	This element is part of a list key

nat-policy *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service nat prefix-list** *string* **prefix** *ipv4-prefix*
Description	NAT policy for LSN
Reference	configure **service nat nat-policy** *external-named-item*
Introduced	16.0.R1

syslog

Context	**configure service nat**
Description	Enter the syslog context
Introduced	16.0.R1

export-policy [name] *string*

Context	**configure service nat syslog**
Description	Enter the export-policy context
Max. Elements	8
Introduced	16.0.R1

[name] *string*

Context	**configure service nat syslog export-policy** *string*
Description	Policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

collector router-instance *string* **ip-address** *ipv4-unicast-address*

Context	**configure service nat syslog export-policy** *string*
Description	Enter the collector context
Max. Elements	2
Introduced	16.0.R1

router-instance *string*

Context	**configure service nat syslog export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Router instance
Introduced	16.0.R1
Notes	This element is part of a list key

ip-address *ipv4-unicast-address*

Context	**configure service nat syslog export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	IPv4 address of the collector
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service nat syslog export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Administrative state of this collector
Default	disable
Options	enable, disable
Introduced	16.0.R1

destination-port *number*

Context	**configure service nat syslog export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	Destination port
Range	1 to 65535
Default	514
Introduced	16.0.R1

ipv4-source-address *ipv4-unicast-address*

Context	**configure service nat syslog export-policy** *string* **collector router-instance** *string* **ip-address** *ipv4-unicast-address*
Description	IPv4 source address
Introduced	16.0.R1

description *string*

Context	**configure service nat syslog export-policy** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

facility *keyword*

Context	**configure service nat syslog export-policy** *string*
Description	Facility number in the PRI part of the NAT SYSLOG messages
Default	local0
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Introduced	16.0.R1

include

Context	**configure service nat syslog export-policy** *string*
Description	Enter the include context
Introduced	16.0.R1

destination-ip *boolean*

Context	**configure service nat syslog export-policy** *string* **include**
Description	Include the translated destination IP address
Default	false
Introduced	16.0.R1

foreign-ip *boolean*

Context	**configure service nat syslog export-policy** *string* **include**
Description	Include the original destination IPv4 address
Default	false
Introduced	16.0.R1

foreign-port *boolean*

Context	**configure service nat syslog export-policy** *string* **include**
Description	Include the original destination port
Default	false
Introduced	16.0.R1

nat-policy-name *boolean*

Context **configure service nat syslog export-policy** *string* **include**
Description Include the nat-policy name
Default false
Introduced 16.0.R1

sub-id *boolean*

Context **configure service nat syslog export-policy** *string* **include**
Description Subscriber ID in subscriber aware NAT
Default false
Introduced 16.0.R1

log-prefix *string*

Context **configure service nat syslog export-policy** *string*
Description Optional prefix text in the MSG part of the NAT syslog messages
String Length 1 to 32
Default TMNX
Introduced 16.0.R1

max-tx-delay *number*

Context **configure service nat syslog export-policy** *string*
Description Maximum time a syslog message delays in the output buffer to aggregate multiple events
Range 0 to 100
Default 3
Units deciseconds
Introduced 16.0.R1

mtu *number*

Context **configure service nat syslog export-policy** *string*
Description Maximum transmission unit
Range 512 to 9000
Default 1500
Introduced 16.0.R1

rate-limit *number*

Context	**configure service nat syslog export-policy** *string*
Description	Frame limit
Range	10 to 2147483647
Units	packets per second
Introduced	16.0.R1

severity-level *keyword*

Context	**configure service nat syslog export-policy** *string*
Description	Severity level in the PRI part of the syslog messages
Default	info
Options	emergency, alert, critical, error, warning, notice, info, debug
Introduced	16.0.R1

oper-group [name] *string*

Context	**configure service**
Description	Enter the oper-group context
Max. Elements	16384
Introduced	16.0.R1

[name] *string*

Context	**configure service oper-group** *string*
Description	Service operational group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

bfd-liveness

Context	**configure service oper-group** *string*
Description	Enter the bfd-liveness context
Introduced	16.0.R1

dest-ip *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service oper-group** *string* **bfd-liveness**
Description	Destination address for BFD
Introduced	16.0.R1
Notes	This element is mandatory

interface-name *interface-name*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service oper-group** *string* **bfd-liveness**
Description	Destination interface name for BFD
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

router-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service oper-group** *string* **bfd-liveness**
Description	Routing context used for route lookup.
Introduced	16.0.R1
Notes	This element is mandatory

hold-time

Context	**configure service oper-group** *string*
Description	Enter the hold-time context
Introduced	16.0.R1

down *number*

Context	**configure service oper-group** *string* **hold-time**
Description	Oper group hold down time
Range	1 to 3600
Units	seconds
Introduced	16.0.R3

up *number*

Context	**configure service oper-group** *string* **hold-time**
Description	Oper group hold up time
Range	0 to 3600
Default	4
Units	seconds
Introduced	16.0.R3

pbb

Context	**configure service**
Description	Enter the pbb context
Introduced	16.0.R1

mac [name] *string*

Context	**configure service pbb**
Description	Enter the mac context
Introduced	16.0.R1

[name] *string*

Context	**configure service pbb mac** *string*
Description	MAC address name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

address *mac-unicast-address-no-zero*

Context	**configure service pbb mac** *string*
Description	IEEE address for the MAC name
Introduced	16.0.R1
Notes	This element is mandatory

mac-notification

Context	**configure service pbb**
Description	Enter the mac-notification context
Introduced	16.0.R1

count *number*

Context	**configure service pbb mac-notification**
Description	MAC notification messages count
Range	1 to 10
Default	3
Introduced	16.0.R1

interval *number*

Context	**configure service pbb mac-notification**
Description	Interval for MAC-notification messages
Range	1 to 100
Default	1
Units	deciseconds
Introduced	16.0.R1

source-bmac

Context	**configure service pbb**
Description	Enter the source-bmac context
Introduced	16.0.R1

address *mac-unicast-address-no-zero*

Context	**configure service pbb source-bmac**
Description	Source b-vpls MAC address to use with PBB
Introduced	16.0.R1

evpn-etree-leaf-address *mac-unicast-address-no-zero*

Context	**configure service pbb source-bmac**
Description	Source Backbone VPLS MAC address to use with Provider Backbone Bridging (PBB)
Introduced	16.0.R1

proxy-arp-nd

Context	**configure service**
Description	Enter the proxy-arp-nd context
Introduced	16.0.R1

mac-list

Context	**configure service proxy-arp-nd**
Description	Enter the mac-list context
Introduced	16.0.R1

list [list-name] *string*

Context	**configure service proxy-arp-nd mac-list**
Description	Enter the list context
Introduced	16.0.R1

[list-name] *string*

Context	**configure service proxy-arp-nd mac-list list** *string*
Description	Specify name for mac list
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

mac [address] *mac-unicast-address-no-zero*

Context	**configure service proxy-arp-nd mac-list list** *string*
Description	Enter the mac context
Max. Elements	10
Introduced	16.0.R1

[address] *mac-unicast-address-no-zero*

Context	**configure service proxy-arp-nd mac-list list** *string* **mac** *mac-unicast-address-no-zero*
Description	Mac address in the proxy arp nd mac list
Introduced	16.0.R1
Notes	This element is part of a list key

pw-template [pw-template-name] *pw-template-name*

Context	**configure service**
Description	Enter the pw-template context
Max. Elements	2048
Introduced	16.0.R1

[pw-template-name] *pw-template-name*

Context	**configure service pw-template** *pw-template-name*
Description	PW template name
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *number*

Context	**configure service pw-template** *pw-template-name*
Description	Accounting policy
Range	1 to 99
Introduced	16.0.R1

allow-fragmentation *boolean*

Context	**configure service pw-template** *pw-template-name*
Description	Whether to allow gre encapsulated packets to be sent without setting the DF bit.
Default	false
Introduced	16.0.R1

auto-gre-sdp *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service pw-template** *pw-template-name*
Description	Use a GRE tunnel to automatically create an SDP
Default	false
Introduced	16.0.R1

block-on-peer-fault *boolean*

Context	**configure service pw-template** *pw-template-name*
Description	Enable block traffic on peer fault
Default	false
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service pw-template** *pw-template-name*
Description	Collect statistics
Default	false
Introduced	16.0.R1

control-word *boolean*

Context	**configure service pw-template** *pw-template-name*
Description	Enable/Disable the use of ControlWord
Default	false
Introduced	16.0.R1

egress

Context **configure service pw-template** *pw-template-name*
Description Enter the egress context
Introduced 16.0.R1

filter

Context **configure service pw-template** *pw-template-name* **egress**
Description Enter the filter context
Introduced 16.0.R1

ip *string*

Context **configure service pw-template** *pw-template-name* **egress filter**
Description IP filter
String Length 1 to 64
Introduced 16.0.R1

ipv6 *string*

Context **configure service pw-template** *pw-template-name* **egress filter**
Description IPv6 filter
String Length 1 to 64
Introduced 16.0.R1

mac *string*

Context **configure service pw-template** *pw-template-name* **egress filter**
Description IPv6 filter
String Length 1 to 64
Introduced 16.0.R1

mfib-allowed-mda-destinations

Context **configure service pw-template** *pw-template-name* **egress**
Description Enter the mfib-allowed-mda-destinations context
Introduced 16.0.R1

mda [mda-id] *slot-mda*

Context **configure service pw-template** *pw-template-name* **egress mfib-allowed-mda-destinations**

Description Enter the mda context

Introduced 16.0.R1

[mda-id] *slot-mda*

Context **configure service pw-template** *pw-template-name* **egress mfib-allowed-mda-destinations mda** *slot-mda*

Description MFIB allowed MDA destination

Introduced 16.0.R1

Notes This element is part of a list key

qos

Context **configure service pw-template** *pw-template-name* **egress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service pw-template** *pw-template-name* **egress qos**

Description Enter the network context

Introduced 16.0.R1

policy-name *string*

Context **configure service pw-template** *pw-template-name* **egress qos network**

Description Network policy identifier

String Length 1 to 64

Introduced 16.0.R1

port-redirect-group

Context **configure service pw-template** *pw-template-name* **egress qos network**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context	**configure service pw-template** *pw-template-name* **egress qos network port-redirect-group**
Description	Port redirect group
String Length	1 to 32
Introduced	16.0.R1

instance *number*

Context	**configure service pw-template** *pw-template-name* **egress qos network port-redirect-group**
Description	Instance for FP ingress queue group
Range	1 to 65535
Introduced	16.0.R1

entropy-label

Context	**configure service pw-template** *pw-template-name*
Description	Whether the use of entropy-label is enabled or not.
Introduced	16.0.R1
Notes	This element is part of a choice

fdb

Context	**configure service pw-template** *pw-template-name*
Description	Enter the fdb context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Enable automatic update of MAC protect list
Default	false
Introduced	16.0.R1

discard-unknown-source *boolean*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Discard frames with unknown source
Default	false
Introduced	16.0.R1

limit-mac-move *keyword*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	MAC move limit
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1

mac-learning

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Enter the mac-learning context
Introduced	16.0.R1

aging *boolean*

Context	**configure service pw-template** *pw-template-name* **fdb mac-learning**
Description	Enable aging of MAC addresses
Default	true
Introduced	16.0.R1

learning *boolean*

Context	**configure service pw-template** *pw-template-name* **fdb mac-learning**
Description	Enable learning of new MAC addresses
Default	true
Introduced	16.0.R1

mac-pinning *boolean*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Enable MAC address pinning on this spoke SDP
Default	false
Introduced	16.0.R1

maximum-mac-addresses *number*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Maximum number of MAC entries in the FDB
Range	1 to 511999
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service pw-template** *pw-template-name* **fdb**
Description	Action for protected source MAC restriction
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1

force-vc-forwarding *keyword*

Context	**configure service pw-template** *pw-template-name*
Description	vlan - Configure data-path forwarding to force vlan-vc-type. qinq-c-tag-c-tag - Configure data-path to forcefully insert two VLAN tags.Their vlan values are the same and obtained from the service-delimiting c-tag. qinq-s-tag-c-tag - Configure data-path to forcefully insert two VLAN tags.Their vlan values are obtained from the service-delimiting s-tag and c-tag respectively.
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R4

hash-label

Context	**configure service pw-template** *pw-template-name*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service pw-template** *pw-template-name* **hash-label**
Description	Hash label capability that is signaled to the remote PE
Introduced	16.0.R1
Notes	This element is part of a choice

igmp-snooping

Context	**configure service pw-template** *pw-template-name*
Description	Enter the igmp-snooping context
Introduced	16.0.R1

fast-leave *boolean*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Allow IGMP fast leave processing
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Import policy that filters IGMP packets
String Length	1 to 32
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Maximum multicast groups
Range	1 to 1000
Introduced	16.0.R1

query-interval *number*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Time between group-specific query messages
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service pw-template** *pw-template-name* **igmp-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

send-queries *boolean*

Context **configure service pw-template** *pw-template-name* **igmp-snooping**
Description Generate IGMP general queries
Default false
Introduced 16.0.R1

version *keyword*

Context **configure service pw-template** *pw-template-name* **igmp-snooping**
Description IGMP version
Default 3
Options 1, 2, 3
Introduced 16.0.R1

ingress

Context **configure service pw-template** *pw-template-name*
Description Enter the ingress context
Introduced 16.0.R1

filter

Context **configure service pw-template** *pw-template-name* **ingress**
Description Enter the filter context
Introduced 16.0.R1

ip *string*

Context **configure service pw-template** *pw-template-name* **ingress filter**
Description IP filter
String Length 1 to 64
Introduced 16.0.R1

ipv6 *string*

Context **configure service pw-template** *pw-template-name* **ingress filter**

Description IPv6 filter

String Length 1 to 64

Introduced 16.0.R1

mac *string*

Context **configure service pw-template** *pw-template-name* **ingress filter**

Description IPv6 filter

String Length 1 to 64

Introduced 16.0.R1

qos

Context **configure service pw-template** *pw-template-name* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service pw-template** *pw-template-name* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service pw-template** *pw-template-name* **ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service pw-template** *pw-template-name* **ingress qos network fp-redirect-group**

Description FP redirect group

String Length 1 to 32

Introduced 16.0.R1

instance *number*

Context **configure service pw-template** *pw-template-name* **ingress qos network fp-redirect-group**

Description Instance for FP ingress queue group

Range 1 to 65535

Introduced 16.0.R1

policy-name *string*

Context **configure service pw-template** *pw-template-name* **ingress qos network**

Description Network policy identifier

String Length 1 to 64

Introduced 16.0.R1

l2pt

Context **configure service pw-template** *pw-template-name*

Description Enter the l2pt context

Introduced 16.0.R1

termination

Context **configure service pw-template** *pw-template-name* **l2pt**

Description Enter the termination context

Introduced 16.0.R1

protocols

Context **configure service pw-template** *pw-template-name* **l2pt termination**

Description Enter the protocols context

Introduced 16.0.R1

cdp *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable Cisco discovery protocol

Default false

Introduced 16.0.R1

dtp *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable dynamic trunking protocol

Default false

Introduced 16.0.R1

pagp *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable/disable port aggregation protocol.

Default false

Introduced 16.0.R1

stp *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable/disable spanning tree protocols stp/mstp/pvst/rstp.

Default true

Introduced 16.0.R1

udld *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable/disable unidirectional link detection.

Default false

Introduced 16.0.R1

vtp *boolean*

Context **configure service pw-template** *pw-template-name* **l2pt termination protocols**

Description Enable/disable virtual trunk protocol.

Default false

Introduced 16.0.R1

provisioned-sdp *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service pw-template** *pw-template-name*
Description	Provisioned SDP type
Options	use, prefer
Introduced	16.0.R1

pw-template-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service pw-template** *pw-template-name*
Description	PW Template Id
Range	1 to 2147483647
Introduced	16.0.R1

sdp-exclude [group-name] *string*

Context	**configure service pw-template** *pw-template-name*
Description	Enter the sdp-exclude context
Introduced	16.0.R1

[group-name] *string*

Context	**configure service pw-template** *pw-template-name* **sdp-exclude** *string*
Description	Service Distribution Point (SDP) SDP Group Name.
Reference	configure **service sdp-group group-name** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

sdp-include [group-name] *string*

Context	**configure service pw-template** *pw-template-name*
Description	Enter the sdp-include context
Introduced	16.0.R1

[group-name] *string*

Context	**configure service pw-template** *pw-template-name* **sdp-include** *string*
Description	Service Distribution Point (SDP) SDP Group Name.
Reference	configure **service sdp-group group-name** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

split-horizon-group

Context	**configure service pw-template** *pw-template-name*
Description	Enter the split-horizon-group context
Introduced	16.0.R1

description *string*

Context	**configure service pw-template** *pw-template-name* **split-horizon-group**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fdb

Context	**configure service pw-template** *pw-template-name* **split-horizon-group**
Description	Enter the fdb context
Introduced	16.0.R1

saps

Context	**configure service pw-template** *pw-template-name* **split-horizon-group fdb**
Description	Enter the saps context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service pw-template** *pw-template-name* **split-horizon-group fdb saps**
Description	Enable automatic update of MAC protect list
Default	false
Introduced	16.0.R1

discard-unprotected-dest-mac *boolean*

Context	**configure service pw-template** *pw-template-name* **split-horizon-group fdb saps**
Description	Enable/disable unprotected dest MAC restriction
Default	false
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service pw-template** *pw-template-name* **split-horizon-group fdb saps**
Description	Action for protected source MAC restriction
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1

name *string*

Context	**configure service pw-template** *pw-template-name* **split-horizon-group**
Description	Specify name of the split-horizon group
String Length	1 to 32
Introduced	16.0.R1

stp

Context	**configure service pw-template** *pw-template-name*
Description	Enter the stp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Enable/disable spanning-tree-protocol
Default	enable
Options	enable, disable
Introduced	16.0.R1

auto-edge *boolean*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Enable/disable automatic detection of edge-port.
Default	true
Introduced	16.0.R1

edge-port *boolean*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Configure as edge-port.
Default	false
Introduced	16.0.R1

link-type *keyword*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Configure STP link-type
Default	pt-pt
Options	pt-pt, shared
Introduced	16.0.R1

path-cost *number*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Configure path-cost
Range	1 to 200000000
Default	10
Introduced	16.0.R1

priority *number*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Configure STP priority
Range	0 to 255
Default	128
Introduced	16.0.R1

root-guard *boolean*

Context	**configure service pw-template** *pw-template-name* **stp**
Description	Enable/disable STP root-guard
Default	false
Introduced	16.0.R1

vc-type *keyword*

Context	**configure service pw-template** *pw-template-name*
Description	Type of virtual circuit associated with the SDP bind.
Default	ether
Options	ether, vlan
Introduced	16.0.R1

vlan-vc-tag *number*

Context	**configure service pw-template** *pw-template-name*
Description	VLAN VC tag
Range	0 to 4094
Introduced	16.0.R1

sdp [sdp-id] *number*

Context	**configure service**
Description	Enter the sdp context
Introduced	16.0.R1

[sdp-id] *number*

Context	**configure service sdp** *number*
Description	Service Distribution Point (SDP) identifier
Range	1 to 32767
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service sdp** *number*
Description	Policy to use to collect accounting statistics on this SDP. The value zero indicates that default accounting policy to be used, if one exists.
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service sdp** *number*
Description	Administrative state of SDP
Default	disable
Options	enable, disable
Introduced	16.0.R1

adv-mtu-override *boolean*

Context	**configure service sdp** *number*
Description	Whether the advertised MTU of a VLL spoke SDP bind should include the 14-byte L2 header, so that it is backward compatible with pre-2.0 software.
Default	false
Introduced	16.0.R1

allow-fragmentation *boolean*

Context	**configure service sdp** *number*
Description	Whether to allow gre or gre-eth-bridged encapsulated packets to be sent without setting the DF bit.
Default	false
Introduced	16.0.R1

bgp-tunnel *boolean*

Context	**configure service sdp** *number*
Description	Whether the transport tunnel is BGP.
Default	false
Introduced	16.0.R1

booking-factor *number*

Context	**configure service sdp** *number*
Description	Percentage of the SDP max available bandwidth for VLL call admission. When the value is zero (0), no new VLL spoke-sdp bindings with non-zero bandwidth are permitted with this SDP. It is used to calculate the max SDP available bandwidth. Overbooking, >100% is allowed.
Range	0 to 1000
Default	100
Introduced	16.0.R1

class-forwarding

Context	**configure service sdp** *number*
Description	Enter the class-forwarding context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service sdp** *number* **class-forwarding**
Description	Administrative state of class-based forwarding on this SDP
Default	disable
Options	enable, disable
Introduced	16.0.R1

default-lsp *string*

Context	**configure service sdp** *number* **class-forwarding**
Description	LSP name that is used as a default when class-based forwarding is enabled on this SDP.
Reference	configure **service sdp** *number* **lsp** *string*
Introduced	16.0.R1
Notes	This element is mandatory

enforce-diffserv-lsp-fc *boolean*

Context	**configure service sdp** *number* **class-forwarding**
Description	Whether service manager must validate with RSVP the support of the FC by the LSP.
Default	false
Introduced	16.0.R1

fc [fc-name] *keyword*

Context	**configure service sdp** *number* **class-forwarding**
Description	Enter the fc context
Introduced	16.0.R1

[fc-name] *keyword*

Context	**configure service sdp** *number* **class-forwarding fc** *keyword*
Description	Forwarding class for which this mapping is defined.
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Notes	This element is part of a list key

lsp *string*

Context	**configure service sdp** *number* **class-forwarding fc** *keyword*
Description	LSP name that traffic corresponding to the forwarding class will be forwarded on. It MUST be specified at row creation time.
Reference	configure **service sdp** *number* **lsp** *string*
Introduced	16.0.R1
Notes	This element is mandatory

multicast-lsp *string*

Context	**configure service sdp** *number* **class-forwarding**
Description	LSP name that all multicast traffic will be forwarded on when class-based forwarding is enabled on this SDP.
Reference	configure **service sdp** *number* **lsp** *string*
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service sdp** *number*
Description	Collect accounting statistics for this SDP
Default	false
Introduced	16.0.R1

delivery-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service sdp** *number*
Description	Specifies the type of delivery used by this SDP
Default	gre
Options	gre, mpls, l2tpv3, gre-eth-bridged
Introduced	16.0.R1

description *string*

Context	**configure service sdp** *number*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

far-end

Context	**configure service sdp** *number*
Description	Enter the far-end context
Introduced	16.0.R1

global-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number* **far-end**
Description	Specifies the Global ID of the far-end.
Range	1 to 4294967295
Introduced	16.0.R3
Notes	This element is part of a choice

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number* **far-end**
Description	Specifies the IP address of the far-end.
Introduced	16.0.R3
Notes	This element is part of a choice

node-id *ipv4-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number* **far-end**
Description	Specifies the Node ID of the far-end.
Introduced	16.0.R3
Notes	This element is part of a choice

keep-alive

Context	**configure service sdp** *number*
Description	Enter the keep-alive context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service sdp** *number* **keep-alive**
Description	Administrative state of the keepalive protocol for the operating status of this SDP
Default	disable
Options	enable, disable
Introduced	16.0.R1

hello-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number* **keep-alive**
Description	How often the SDP Echo Request messages are transmitted on this SDP.
Range	1 to 3600
Default	10
Units	seconds
Introduced	16.0.R1

hold-down-time *number*

Context	**configure service sdp** *number* **keep-alive**
Description	Amount of time to wait before the keep-alive operating status is eligible to enter the 'alive' state.
Range	0 to 3600
Default	10
Units	seconds
Introduced	16.0.R1

maximum-drop-count *number*

Context	**configure service sdp** *number* **keep-alive**
Description	Maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keep-alive protocol reports a fault.
Range	1 to 5
Default	3
Introduced	16.0.R1

message-length *number*

Context	**configure service sdp** *number* **keep-alive**
Description	Length of the SDP Echo Request messages transmitted on this SDP. The default value of zero indicates that the message length should be equal to the SDP's operating path MTU
Range	40 to 9198
Introduced	16.0.R1

timeout *number*

Context	**configure service sdp** *number* **keep-alive**
Description	Number of seconds to wait for an SDP Echo Response message before declaring a timeout.
Range	1 to 10
Default	5
Units	seconds
Introduced	16.0.R1

ldp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number*
Description	LSPs to be signaled by LDP and not provisioned by static, or RSVP-signaled LSPs
Default	false
Introduced	16.0.R1

local-end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number*
Description	IP address of the local end of the tunnel defined by this SDP.
Introduced	16.0.R1

lsp [lsp-name] *string*

Context	**configure service sdp** *number*
Description	Enter the lsp context
Max. Elements	16
Introduced	16.0.R1

[lsp-name] *string*

Context	**configure service sdp** *number* **lsp** *string*
Description	LSP name.
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

metric *number*

Context	**configure service sdp** *number*
Description	Metric to be used within the Tunnel Table Manager for decision making purposes. When multiple SDPs going to the same destination exist, this value is used as a tie-breaker by Tunnel Table Manager users like MP-BGP to select route with lower value.
Range	1 to 65535
Introduced	16.0.R1

mixed-lsp-mode

Context	**configure service sdp** *number*
Description	Enter the mixed-lsp-mode context
Introduced	16.0.R1

revert-time (*number* | *keyword*)

Context	**configure service sdp** *number* **mixed-lsp-mode**
Description	Time to wait before reverting back from LDP to the configured LSPs, after having failed over to LDP.
Default	immediate
Introduced	16.0.R1

network-domain *string*

Context	**configure service sdp** *number*
Description	Network-domain name this SDP is associated with. The network-domain defines the list of network interfaces this SDP can send traffic on.
Reference	configure **router** *string* **network-domains network-domain** *string*
Introduced	16.0.R1

path-mtu *number*

Context	**configure service sdp** *number*
Description	Desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented. The default value of zero indicates that the path MTU should be computed dynamically from the corresponding MTU of the tunnel.
Range	576 to 9194
Units	bytes
Introduced	16.0.R1

pbb-etype *etype-value*

Context	**configure service sdp** *number*
Description	Ethertype used in frames sent out on this SDP when VC type is 'vlan' for Provider Backbone Bridging frames as 0xXXYY with range 0x0600-0xFFFF.
String Length	5 to 6
Default	0x88E7
Introduced	16.0.R1

pw-port

Context	**configure service sdp** *number*
Description	Enter the pw-port context
Introduced	16.0.R4

binding-port *port*

Context	**configure service sdp** *number* **pw-port**
Description	Binding port
Introduced	16.0.R4

sdp-group [group-name] *string*

Context	**configure service sdp** *number*
Description	Enter the sdp-group context
Introduced	16.0.R1

[group-name] *string*

Context	**configure service sdp** *number* **sdp-group** *string*
Description	Service Distribution Point (SDP) SDP Group Name.
Reference	configure **service sdp-group group-name** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

signaling *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number*
Description	Signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP. When the value is 'off' then the labels are manually assigned at the time the SDP is bound to a service. Default value of this object is set to 'off' when SDP delivery-type is set to 'l2tpv3' otherwise default value is set to 'tldp'.
Options	off, tldp, bgp
Introduced	16.0.R1

source-bmac-lsb

Context **configure service sdp** *number*

Description Enter the source-bmac-lsb context

Introduced 16.0.R1

control-pw-vc-id *number*

Context **configure service sdp** *number* **source-bmac-lsb**

Description Spoke-SDP VC identifier to be used as a control pseudo-wire to determine whether Shortest Path Bridging Module (SPBM) advertises the virtual backbone MAC.

Range 1 to 4294967295

Introduced 16.0.R1

value *bmac-lsb-no-zero*

Context **configure service sdp** *number* **source-bmac-lsb**

Description 16 least significant bits (lsb as 00:00 or 00-00) which when combined with the 32 most significant bits of the PBB source-bmac forms the virtual backbone MAC address.

Introduced 16.0.R1

sr-isis *boolean*

Context **configure service sdp** *number*

Description Whether Segment Routing is enabled for IS-IS.

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure service sdp** *number*

Description Whether Segment Routing is enabled for OSPF.

Default false

Introduced 16.0.R1

tunnel-far-end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service sdp** *number*
Description	IP address of the remote of the tunnel defined by this SDP.
Introduced	16.0.R1

vlan-vc-etype *etype-value*

Context	**configure service sdp** *number*
Description	Ethertype used in frames sent out this SDP, when the VC type is 'vlan' as 0xXXYY with range 0x0600-0xFFFF.
String Length	5 to 6
Default	0x8100
Introduced	16.0.R1

weighted-ecmp *boolean*

Context	**configure service sdp** *number*
Description	Allow weighted load-balancing on an SDP
Default	false
Introduced	16.0.R1

sdp-group

Context	**configure service**
Description	Enter the sdp-group context
Introduced	16.0.R1

group-name [group-name] *string*

Context	**configure service sdp-group**
Description	Enter the group-name context
Introduced	16.0.R1

[group-name] *string*

Context	**configure service sdp-group group-name** *string*
Description	Service Distribution Point (SDP) Group name.
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

value *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service sdp-group group-name** *string*
Description	Value associated with SDP Group.
Range	0 to 31
Introduced	16.0.R1
Notes	This element is mandatory

system

Context	**configure service**
Description	Enter the system context
Introduced	16.0.R1

bgp

Context	**configure service system**
Description	Enter the bgp context
Introduced	16.0.R1

evpn

Context	**configure service system bgp**
Description	Enter the evpn context
Introduced	16.0.R1

ad-per-es-route

Context	**configure service system bgp evpn**
Description	Enter the ad-per-es-route context
Introduced	16.0.R1

route-distinguisher-ip-address *ipv4-address*

Context	**configure service system bgp evpn ad-per-es-route**
Description	IP address for route distinguisher for EVPN AD-ES routes
Introduced	16.0.R1

route-target-type *keyword*

Context	**configure service system bgp evpn ad-per-es-route**
Description	Method for the AD per-ES routes advertisement
Default	evi-route-target
Options	evi-route-target, evi-route-target-set
Introduced	16.0.R1

ethernet-segment [ethernet-segment-name] *string*

Context	**configure service system bgp evpn**
Description	Enter the ethernet-segment context
Max. Elements	4095
Introduced	16.0.R1

[ethernet-segment-name] *string*

Context	**configure service system bgp evpn ethernet-segment** *string*
Description	Specify name for Ethernet segment
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service system bgp evpn ethernet-segment** *string*
Description	Administrative state of the Ethernet segment
Default	disable
Options	enable, disable
Introduced	16.0.R1

association

Context	**configure service system bgp evpn ethernet-segment** *string*
Description	Enter the association context
Introduced	16.0.R1

lag [lag-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association**
Description	Enter the **lag** context
Max. Elements	1
Introduced	16.0.R1

[lag-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string*
Description	Lag multi-homed with this Ethernet segment entry
Reference	configure **lag** *number*
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

virtual-ranges

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string*
Description	Enter the **virtual-ranges** context
Introduced	16.0.R1

dot1q

Context **configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges**

Description Enter the **dot1q** context

Introduced 16.0.R1

q-tag [start] (*number* | *keyword*)

Context **configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges dot1q**

Description Enter the **q-tag** context

Max. Elements 8

Introduced 16.0.R1

[start] (*number* | *keyword*)

Context **configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)

Description Starting value of the dot1q range associated with a virtual ethernet segment

Introduced 16.0.R1

Notes This element is part of a choice

This element is part of a list key

end (*number* | *keyword*)

Context **configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)

Description Ending value of the dot1q range associated with a virtual ethernet segment

Introduced 16.0.R1

Notes This element is mandatory

This element is part of a choice

qinq

Context **configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges**

Description Enter the **qinq** context

Introduced 16.0.R1

s-tag [start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq**
Description	Enter the **s-tag** context
Max. Elements	8
Introduced	16.0.R1

[start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Starting value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Ending value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

s-tag-c-tag [s-tag] (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq**
Description	Enter the **s-tag-c-tag** context
Max. Elements	8
Introduced	16.0.R1

[s-tag] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq s-tag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-start (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association lag** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Ending value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

network-interconnect-vxlan [network-interconnect-vxlan-id] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association**
Description	Enter the **network-interconnect-vxlan** context
Max. Elements	1
Introduced	16.0.R1

[network-interconnect-vxlan-id] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association network-interconnect-vxlan** *number*
Description	Vxlan instance id multi-homed with this Ethernet segment entry.
Range	1
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is part of a list key

virtual-ranges

Context	**configure service system bgp evpn ethernet-segment** *string* **association network-interconnect-vxlan** *number*
Description	Enter the **virtual-ranges** context
Introduced	16.0.R1

service-id [start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association network-interconnect-vxlan** *number* **virtual-ranges**
Description	Enter the **service-id** context
Max. Elements	8
Introduced	16.0.R1

[start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association network-interconnect-vxlan** *number* **virtual-ranges service-id** *number*
Description	Starting value of the service id range associated with a virtual ethernet segment
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is part of a list key

end *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association network-interconnect-vxlan** *number* **virtual-ranges service-id** *number*
Description	Ending value of the service id range associated with a virtual ethernet segment
Range	1 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

port [port-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association**
Description	Enter the **port** context
Max. Elements	1
Introduced	16.0.R1

[port-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string*
Description	Port multi-homed with this Ethernet segment entry
Reference	configure **port** *port*
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

virtual-ranges

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string*
Description	Enter the **virtual-ranges** context
Introduced	16.0.R1

dot1q

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges**
Description	Enter the **dot1q** context
Introduced	16.0.R1

q-tag [start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges dot1q**
Description	Enter the **q-tag** context
Max. Elements	8
Introduced	16.0.R1

[start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)
Description	Starting value of the dot1q range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)
Description	Ending value of the dot1q range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

qinq

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges**
Description	Enter the **qinq** context
Introduced	16.0.R1

s-tag [start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq**
Description	Enter the **s-tag** context
Max. Elements	8
Introduced	16.0.R1

[start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Starting value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Ending value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

s-tag-c-tag [s-tag] (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq**
Description	Enter the **s-tag-c-tag** context
Max. Elements	8
Introduced	16.0.R1

[s-tag] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq s-tag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-start (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Ending value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

pw-port [pw-port-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association**
Description	Enter the **pw-port** context
Max. Elements	1
Introduced	16.0.R1

[pw-port-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string*
Description	Pw-port multi-homed with this Ethernet segment entry
Reference	configure **pw-port** *number*
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is part of a list key

virtual-ranges

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string*
Description	Enter the **virtual-ranges** context
Introduced	16.0.R1

dot1q

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges**
Description	Enter the **dot1q** context
Introduced	16.0.R1

q-tag [start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges dot1q**
Description	Enter the **q-tag** context
Max. Elements	8
Introduced	16.0.R1

[start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)
Description	Starting value of the dot1q range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice
	This element is part of a list key

end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges dot1q q-tag** (*number* | *keyword*)
Description	Ending value of the dot1q range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

qinq

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges**
Description	Enter the **qinq** context
Introduced	16.0.R1

s-tag [start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq**
Description	Enter the **s-tag** context
Max. Elements	8
Introduced	16.0.R1

[start] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Starting value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq s-tag** (*number* | *keyword*)
Description	Ending value of the qinq stag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

s-tag-c-tag [s-tag] (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq**
Description	Enter the **s-tag-c-tag** context
Max. Elements	8
Introduced	16.0.R1

[s-tag] (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq s-tag range associated with a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-start (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Starting value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

c-tag-end (*number* | *keyword*)

Context	**configure service system bgp evpn ethernet-segment** *string* **association pw-port** *string* **virtual-ranges qinq s-tag-c-tag** (*number* | *keyword*) **c-tag-start** (*number* | *keyword*)
Description	Ending value of the qinq c-tag range associated with a specific s-tag on a virtual ethernet segment
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

sdp [sdp-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association**
Description	Enter the **sdp** context
Max. Elements	1
Introduced	16.0.R1

[sdp-id] *string*

Context	**configure service system bgp evpn ethernet-segment** *string* **association sdp** *string*
Description	Sdp multi-homed with this Ethernet segment entry
Reference	configure **service sdp** *number*
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

virtual-ranges

Context	**configure service system bgp evpn ethernet-segment** *string* **association sdp** *string*
Description	Enter the **virtual-ranges** context
Introduced	16.0.R1

vc-id [start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association sdp** *string* **virtual-ranges**
Description	Enter the **vc-id** context
Max. Elements	8
Introduced	16.0.R1

[start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association sdp** *string* **virtual-ranges vc-id** *number*
Description	Starting value of the vc-id range associated with a virtual ethernet segment
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice This element is part of a list key

end *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **association sdp** *string* **virtual-ranges vc-id** *number*
Description	Ending value of the vc-id range associated with a virtual ethernet segment
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is mandatory This element is part of a choice

df-election

Context	**configure service system bgp evpn ethernet-segment** *string*
Description	Enter the df-election context
Introduced	16.0.R1

es-activation-timer *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election**
Description	Activation timer per Ethernet segment
Range	0 to 100
Units	seconds
Introduced	16.0.R1

manual

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election**
Description	Enter the manual context
Introduced	16.0.R1

evi [start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual**
Description	Enter the evi context
Introduced	16.0.R1

[start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual evi** *number*
Description	Starting value of the EVI range associated with service-carving of the associated ethernet segment
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual evi** *number*
Description	Ending value of the EVI range associated with service-carving of the associated ethernet segment
Range	1 to 65535
Introduced	16.0.R1
Notes	This element is mandatory

isid [start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual**
Description	Enter the isid context
Introduced	16.0.R1

[start] *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual isid** *number*
Description	Starting value of the ISID range associated with service-carving of the associated ethernet segment
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual isid** *number*
Description	Ending value of the ISID range associated with service-carving of the associated ethernet segment
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

preference

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual**
Description	Enter the preference context
Introduced	16.0.R1

mode *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service system bgp evpn ethernet-segment** *string* **df-election manual preference**
Description	Method used to elect the DF
Default	revertive
Options	revertive, non-revertive
Introduced	16.0.R1

value *number*

Context **configure service system bgp evpn ethernet-segment** *string* **df-election manual preference**

Description Preference that is used to elect the designated forwarder

Range 0 to 65535

Default 32767

Introduced 16.0.R1

service-carving-mode *keyword*

Context **configure service system bgp evpn ethernet-segment** *string* **df-election**

Description Mode of service carving enabled per EVPN associated with this Ethernet segment entry

Default auto

Options auto, manual, off

Introduced 16.0.R1

esi *ethernet-segment-id-mac-based*

Context **configure service system bgp evpn ethernet-segment** *string*

Description Ethernet segment identifier

Introduced 16.0.R1

multi-homing-mode *keyword*

Context **configure service system bgp evpn ethernet-segment** *string*

Description Multi-homing mode of the Ethernet segment

Default none

Options none, single-active, single-active-no-esi-label, all-active

Introduced 16.0.R1

orig-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service system bgp evpn ethernet-segment** *string*

Description Specifies the ES route's originating IP address

Introduced 16.0.R4

pbb

Context **configure service system bgp evpn ethernet-segment** *string*

Description Enter the pbb context

Introduced 16.0.R1

es-bmac-table-size *number*

Context **configure service system bgp evpn ethernet-segment** *string* **pbb**

Description Size of virtual backbone mac table for this ethernet segment

Range 1 to 511999

Default 8

Introduced 16.0.R1

source-bmac-lsb *bmac-lsb-no-zero*

Context **configure service system bgp evpn ethernet-segment** *string* **pbb**

Description 16 least significant bits (lsb) which when combined with the 32 most significant bits of the PBB source-bmac in the associated service, forms the virtual backbone MAC address

Introduced 16.0.R1

route-next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service system bgp evpn ethernet-segment** *string*

Description Specifies the next-hop IP for ES and AD per-ES routes

Introduced 16.0.R4

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service system bgp evpn ethernet-segment** *string*

Description Type of the ethernet segment.

Default none

Options none, virtual

Introduced 16.0.R1

etree-leaf-label *boolean*

Context	**configure service system bgp evpn**
Description	E-Tree leaf label for PE
Default	false
Introduced	16.0.R1

route-distinguisher *vpn-route-distinguisher*

Context	**configure service system bgp evpn**
Description	Route distinguisher for ES routes
Introduced	16.0.R1

bgp-auto-rd-range

Context	**configure service system**
Description	Enter the bgp-auto-rd-range context
Introduced	16.0.R1

community-value

Context	**configure service system bgp-auto-rd-range**
Description	Enter the community-value context
Introduced	16.0.R1

end *number*

Context	**configure service system bgp-auto-rd-range community-value**
Description	End of BGP route-distinguisher community value.
Range	1 to 65535
Introduced	16.0.R1

start *number*

Context	**configure service system bgp-auto-rd-range community-value**
Description	Start of BGP route-distinguisher community value.
Range	1 to 65535
Introduced	16.0.R1

ip-address *ipv4-address*

Context **configure service system bgp-auto-rd-range**

Description IP address used for selecting route-distinguisher.

Introduced 16.0.R1

extended-default-qinq-sap-lookup *boolean*

Context **configure service system**

Description Control the forwarding of the packets

Introduced 16.0.R1

fdb

Context **configure service system**

Description Enter the fdb context

Introduced 16.0.R1

table-size *number*

Context **configure service system fdb**

Description Maximum FDB entries in the system

Range 4095 to 2047999

Introduced 16.0.R1

gre-eth-bridged

Context **configure service system**

Description Enter the gre-eth-bridged context

Introduced 16.0.R1

tunnel-termination [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context **configure service system gre-eth-bridged**

Description Enter the tunnel-termination context

Introduced 16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service system gre-eth-bridged tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Non system IP address to terminate the GRE tunnel
Introduced	16.0.R1
Notes	This element is part of a list key

fpe-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service system gre-eth-bridged tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	FPE ID
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R1
Notes	This element is mandatory

vpn-gre-source-ip *ipv4-unicast-address*

Context	**configure service system**
Description	VPN GRE source ip-address
Introduced	16.0.R4

vxlan

Context	**configure service system**
Description	Enter the vxlan context
Introduced	16.0.R1

assisted-replication

Context	**configure service system vxlan**
Description	Enter the assisted-replication context
Introduced	16.0.R1

ip-address *ipv4-unicast-address*

Context	**configure service system vxlan assisted-replication**
Description	VXLAN assisted replication address
Introduced	16.0.R1

tunnel-termination [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service system vxlan**
Description	Enter the tunnel-termination context
Introduced	16.0.R1

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service system vxlan tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	Non system IP address to terminate the VXLAN
Introduced	16.0.R4
Notes	This element is part of a list key

fpe-id *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service system vxlan tunnel-termination** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	FPE id for this entry
Reference	configure **fwd-path-ext fpe** *number*
Introduced	16.0.R4
Notes	This element is mandatory

template

Context	**configure service**
Description	Enter the template context
Introduced	16.0.R1

epipe-sap-template [name] *string*

Context	**configure service template**
Description	Enter the epipe-sap-template context
Introduced	16.0.R1

[name] *string*

Context	**configure service template epipe-sap-template** *string*
Description	SAP template name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

egress

Context	**configure service template epipe-sap-template** *string*
Description	Enter the egress context
Introduced	16.0.R1

filter

Context	**configure service template epipe-sap-template** *string* **egress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service template epipe-sap-template** *string* **egress filter**
Description	IPv4 filter identifier
String Length	1 to 64
Introduced	16.0.R1

ipv6 *string*

Context **configure service template epipe-sap-template** *string* **egress filter**
Description IPv6 filter identifier
String Length 1 to 64
Introduced 16.0.R1

mac *string*

Context **configure service template epipe-sap-template** *string* **egress filter**
Description MAC filter ID
String Length 1 to 64
Introduced 16.0.R1

qos

Context **configure service template epipe-sap-template** *string* **egress**
Description Enter the qos context
Introduced 16.0.R1

policy-name *string*

Context **configure service template epipe-sap-template** *string* **egress qos**
Description Sap-egress policy name applied to this SAP
String Length 1 to 64
Introduced 16.0.R1

ingress

Context **configure service template epipe-sap-template** *string*
Description Enter the ingress context
Introduced 16.0.R1

filter

Context **configure service template epipe-sap-template** *string* **ingress**
Description Enter the filter context
Introduced 16.0.R1

ip *string*

Context **configure service template epipe-sap-template** *string* **ingress filter**

Description IPv4 filter identifier

String Length 1 to 64

Introduced 16.0.R1

ipv6 *string*

Context **configure service template epipe-sap-template** *string* **ingress filter**

Description IPv6 filter identifier

String Length 1 to 64

Introduced 16.0.R1

mac *string*

Context **configure service template epipe-sap-template** *string* **ingress filter**

Description MAC filter ID

String Length 1 to 64

Introduced 16.0.R1

qos

Context **configure service template epipe-sap-template** *string* **ingress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure service template epipe-sap-template** *string* **ingress qos**

Description Sap-ingress policy name applied to this SAP

String Length 1 to 64

Introduced 16.0.R1

queuing-type *keyword*

Context	**configure service template epipe-sap-template** *string* **ingress qos**
Description	Ingress queuing type
Options	shared, multipoint-shared
Introduced	16.0.R1

vpls-sap-template [name] *string*

Context	**configure service template**
Description	Enter the vpls-sap-template context
Introduced	16.0.R1

[name] *string*

Context	**configure service template vpls-sap-template** *string*
Description	SAP template name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

egress

Context	**configure service template vpls-sap-template** *string*
Description	Enter the egress context
Introduced	16.0.R1

agg-rate

Context	**configure service template vpls-sap-template** *string* **egress**
Description	Enter the agg-rate context
Introduced	16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service template vpls-sap-template** *string* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service template vpls-sap-template** *string* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service template vpls-sap-template** *string* **egress agg-rate**

Description Maximum total rate of all egress queues

Range 1 to 3200000000

Introduced 16.0.R1

filter

Context **configure service template vpls-sap-template** *string* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service template vpls-sap-template** *string* **egress filter**

Description IPv4 filter identifier

String Length 1 to 64

Introduced 16.0.R1

ipv6 *string*

Context **configure service template vpls-sap-template** *string* **egress filter**

Description IPv6 filter identifier

String Length 1 to 64

Introduced 16.0.R1

mac *string*

Context **configure service template vpls-sap-template** *string* **egress filter**

Description MAC filter ID

String Length 1 to 64

Introduced 16.0.R1

policer-control-policy

Context **configure service template vpls-sap-template** *string* **egress**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **egress policer-control-policy**

Description Egress policer control policy

String Length 1 to 32

Introduced 16.0.R1

qos

Context **configure service template vpls-sap-template** *string* **egress**

Description Enter the qos context

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **egress qos**

Description Sap-egress policy name applied to this SAP

String Length 1 to 64

Introduced 16.0.R1

qinq-mark-top-only *boolean*

Context **configure service template vpls-sap-template** *string* **egress qos**

Description Mark top Q-tags

Default false

Introduced 16.0.R1

scheduler-policy

Context **configure service template vpls-sap-template** *string* **egress**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **egress scheduler-policy**

Description Egress QoS scheduler

String Length 1 to 32

Introduced 16.0.R1

ingress

Context **configure service template vpls-sap-template** *string*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service template vpls-sap-template** *string* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service template vpls-sap-template** *string* **ingress filter**

Description IPv4 filter identifier

String Length 1 to 64

Introduced 16.0.R1

ipv6 *string*

Context **configure service template vpls-sap-template** *string* **ingress filter**

Description IPv6 filter identifier

String Length 1 to 64

Introduced 16.0.R1

mac *string*

Context **configure service template vpls-sap-template** *string* **ingress filter**

Description MAC filter ID

String Length 1 to 64

Introduced 16.0.R1

policer-control-policy

Context **configure service template vpls-sap-template** *string* **ingress**

Description Enter the policer-control-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **ingress policer-control-policy**

Description Ingress policer control policy

String Length 1 to 32

Introduced 16.0.R1

qos

Context **configure service template vpls-sap-template** *string* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service template vpls-sap-template** *string* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **ingress qos**

Description Sap-ingress policy name applied to this SAP

String Length 1 to 64

Introduced 16.0.R1

queuing-type *keyword*

Context **configure service template vpls-sap-template** *string* **ingress qos**

Description Ingress queuing type

Options shared, multipoint-shared

Introduced 16.0.R1

scheduler-policy

Context **configure service template vpls-sap-template** *string* **ingress**

Description Enter the scheduler-policy context

Introduced 16.0.R1

policy-name *string*

Context **configure service template vpls-sap-template** *string* **ingress scheduler-policy**
Description Ingress QoS scheduler
String Length 1 to 32
Introduced 16.0.R1

upnp

Context **configure service**
Description Enter the upnp context
Introduced 16.0.R1

policy [name] *external-named-item*

Context **configure service upnp**
Description Enter the policy context
Max. Elements 255
Introduced 16.0.R1

[name] *external-named-item*

Context **configure service upnp policy** *external-named-item*
Description Policy name
Introduced 16.0.R1
Notes This element is part of a list key

description *string*

Context **configure service upnp policy** *external-named-item*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

mapping-limit *number*

Context	**configure service upnp policy** *external-named-item*
Description	Maximum number of UPnP mappings per subscriber
Range	1 to 256
Default	256
Introduced	16.0.R1

port *number*

Context	**configure service upnp policy** *external-named-item*
Description	HTTP TCP port to which this UPnP IGD listens
Range	1 to 65535
Default	5000
Introduced	16.0.R1

strict-mode *boolean*

Context	**configure service upnp policy** *external-named-item*
Description	Allow changes to existing UPnP mapping only from same UPnP client
Default	false
Introduced	16.0.R1

vpls [service-name] *service-name*

Context	**configure service**
Description	Enter the vpls context
Introduced	16.0.R1

[service-name] *service-name*

Context	**configure service vpls** *service-name*
Description	Name of the service
String Length	1 to 64
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name*
Description	Administrative state of the mirror destination service
Default	disable
Options	enable, disable
Introduced	16.0.R1

bgp [bgp-instance] *number*

Context	**configure service vpls** *service-name*
Description	Enter the bgp context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service vpls** *service-name* **bgp** *number*
Description	BGP instance
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

pw-template-binding [pw-template-name] *string*

Context	**configure service vpls** *service-name* **bgp** *number*
Description	Enter the pw-template-binding context
Max. Elements	100
Introduced	16.0.R1

[pw-template-name] *string*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	PW template policy name
Reference	configure **service pw-template** *pw-template-name*
Introduced	16.0.R1
Notes	This element is part of a list key

bfd-liveness *boolean*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Enable BFD
Default	false
Introduced	16.0.R1

bfd-template *string*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	BFD template name for PW-Template binding
Reference	configure **bfd bfd-template** *string*
Introduced	16.0.R1

import-rt *route-target*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Import route-target communities
String Length	10 to 28
Max. Elements	5
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Oerational group to monitor
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

oper-group *string*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

split-horizon-group *string*

Context	**configure service vpls** *service-name* **bgp** *number* **pw-template-binding** *string*
Description	Split horizon group
String Length	1 to 32
Introduced	16.0.R1

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

Context	**configure service vpls** *service-name* **bgp** *number*
Description	High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI
Introduced	16.0.R1

route-target

Context	**configure service vpls** *service-name* **bgp** *number*
Description	Enter the route-target context
Introduced	16.0.R1

export *route-target*

Context	**configure service vpls** *service-name* **bgp** *number* **route-target**
Description	Extended community name for default import policy
String Length	10 to 28
Introduced	16.0.R1

import *route-target*

Context	**configure service vpls** *service-name* **bgp** *number* **route-target**
Description	Extended community name for default import policy
String Length	10 to 28
Introduced	16.0.R1

vsi-export *string*

Context	**configure service vpls** *service-name* **bgp** *number*
Description	VSI export policies
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

vsi-import *string*

Context	**configure service vpls** *service-name* **bgp** *number*
Description	VSI import policies
Reference	configure **policy-options policy-statement** *string*
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

bgp-ad

Context	**configure service vpls** *service-name*
Description	Enter the bgp-ad context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **bgp-ad**
Description	Administrative state of BGP AD
Default	disable
Options	enable, disable
Introduced	16.0.R1

vpls-id *vpls-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vpls** *service-name* **bgp-ad**
Description VPLS identifier as a 8-byte route distinguisher
Introduced 16.0.R1

vsi-id-prefix *ipv4-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vpls** *service-name* **bgp-ad**
Description VSI prefix value
Introduced 16.0.R1

bgp-evpn

Context **configure service vpls** *service-name*
Description Enter the bgp-evpn context
Introduced 16.0.R1

accept-ivpls-evpn-flush *boolean*

Context **configure service vpls** *service-name* **bgp-evpn**
Description Accept non-zero ethernet-tag MAC routes and process for CMAC flushing
Default false
Introduced 16.0.R1

evi *number*

Context **configure service vpls** *service-name* **bgp-evpn**
Description EVPN ID
Range 1 to 65535
Introduced 16.0.R1

incl-mcast-orig-ip *ipv4-unicast-address*

Context **configure service vpls** *service-name* **bgp-evpn**
Description Originating IP address
Introduced 16.0.R1

isid-route-target

Context	**configure service vpls** *service-name* **bgp-evpn**
Description	Enter the isid-route-target context
Introduced	16.0.R1

range [start] *number*

Context	**configure service vpls** *service-name* **bgp-evpn isid-route-target**
Description	Enter the range context
Max. Elements	8192
Introduced	16.0.R1

[start] *number*

Context	**configure service vpls** *service-name* **bgp-evpn isid-route-target range** *number*
Description	Starting value of the isid-range entry
Range	1 to 16777215
Default	1
Introduced	16.0.R1
Notes	This element is part of a list key

end *number*

Context	**configure service vpls** *service-name* **bgp-evpn isid-route-target range** *number*
Description	Ending value of the isid-range entry
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

route-target *route-target*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn isid-route-target range** *number*
Description	Route for the ISID range
String Length	10 to 28
Introduced	16.0.R1

type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn isid-route-target range** *number*
Description	Method used to support the PBB-EVPN ISID-based route target advertisement
Default	auto
Options	auto, configured
Introduced	16.0.R1

mac-duplication

Context	**configure service vpls** *service-name* **bgp-evpn**
Description	Enter the mac-duplication context
Introduced	16.0.R1

blackhole *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn mac-duplication**
Description	Enable black hole dup MAC configuration
Default	false
Introduced	16.0.R1

detect

Context	**configure service vpls** *service-name* **bgp-evpn mac-duplication**
Description	Enter the detect context
Introduced	16.0.R1

num-moves *number*

Context	**configure service vpls** *service-name* **bgp-evpn mac-duplication detect**
Description	BGP EVPN MAC duplication detection number of moves
Range	3 to 10
Default	5
Introduced	16.0.R1

window *number*

Context	**configure service vpls** *service-name* **bgp-evpn mac-duplication detect**
Description	BGP EVPN MAC duplication detection window
Range	1 to 15
Default	3
Units	minutes
Introduced	16.0.R1

retry (*number* | *keyword*)

Context	**configure service vpls** *service-name* **bgp-evpn mac-duplication**
Description	BGP EVPN MAC duplication retry
Range	2 to 60
Default	9
Units	minutes
Options	never
Introduced	16.0.R1

mpls [bgp-instance] *number*

Context	**configure service vpls** *service-name* **bgp-evpn**
Description	Enter the mpls context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	BGP instance
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	Administrative state of BGP EVPN MPLS
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-bind-tunnel

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	Enter the auto-bind-tunnel context
Introduced	16.0.R1

enforce-strict-tunnel-tagging *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**
Description	Enable/disable enforcement of strict tunnel tagging
Default	false
Introduced	16.0.R4

resolution *keyword*

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**
Description	Resolution method for tunnel selection
Default	none
Options	none, filter, any
Introduced	16.0.R1

resolution-filter

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel**

Description Enter the resolution-filter context

Introduced 16.0.R1

bgp *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Set BGP type for auto bind tunnel

Default false

Introduced 16.0.R1

ldp *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting LDP type for auto-bind-tunnel

Default false

Introduced 16.0.R1

rsvp *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting RSVP-TE type for auto-bind-tunnel

Default false

Introduced 16.0.R1

sr-isis *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting SR-ISIS type for auto-bind-tunnel

Default false

Introduced 16.0.R1

sr-ospf *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Segment Routing (SR) tunnel type programed by an OSPF instance in TTM

Default false

Introduced 16.0.R1

sr-te *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Enable/disable setting SR-TE type for auto-bind-tunnel

Default false

Introduced 16.0.R1

udp *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **auto-bind-tunnel resolution-filter**

Description Set UDP type for auto-bind-tunnel

Default false

Introduced 16.0.R1

control-word *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*

Description Enable/disable setting the CW bit in the label message.

Default false

Introduced 16.0.R1

default-route-tag *one-byte-value*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*

Description Default route tag to match against export policies: value as 0xXX.

Introduced 16.0.R4

ecmp *number*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description Maximum ECMP routes information
Range 1 to 32
Default 1
Introduced 16.0.R1

entropy-label *boolean*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description Enable/disable use of entropy-label.
Default false
Introduced 16.0.R1

fdb

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description Enter the fdb context
Introduced 16.0.R1

protected-src-mac-violation-action *keyword*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number* **fdb**
Description Action when a relearn request for a protected MAC is received
Options discard
Introduced 16.0.R1

force-vc-forwarding *keyword*

Context **configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description Forces vlan-vc-type forwarding in the data-path.
Options vlan
Introduced 16.0.R1

ingress-replication-bum-label *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	Use the same label as the one advertised for unicast traffic
Default	false
Introduced	16.0.R1

send-tunnel-encap

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	Enter the send-tunnel-encap context
Introduced	16.0.R1

mpls *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number* **send-tunnel-encap**
Description	Enable/disable MPLS encapsulation for this service.
Default	true
Introduced	16.0.R1

mpls-over-udp *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number* **send-tunnel-encap**
Description	Enable/disable MPLS over UDP encapsulation for this service.
Default	false
Introduced	16.0.R1

split-horizon-group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn mpls** *number*
Description	Split horizon group
Reference	configure **service vpls** *service-name* **split-horizon-group** *string*
Introduced	16.0.R1

routes

Context	**configure service vpls** *service-name* **bgp-evpn**
Description	Enter the routes context
Introduced	16.0.R1

incl-mcast

Context	**configure service vpls** *service-name* **bgp-evpn routes**
Description	Enter the incl-mcast context
Introduced	16.0.R1

advertise-ingress-replication *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes incl-mcast**
Description	BGP EVPN IMET-IR route advertisement
Default	true
Introduced	16.0.R1

ip-prefix

Context	**configure service vpls** *service-name* **bgp-evpn routes**
Description	Enter the ip-prefix context
Introduced	16.0.R1

advertise *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes ip-prefix**
Description	Status for the IP prefix routes advertisement
Default	false
Introduced	16.0.R1

include-direct-interface-host *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes ip-prefix**
Description	BGP EVPN IP route advertisement
Default	false
Introduced	16.0.R1

mac-ip

Context	**configure service vpls** *service-name* **bgp-evpn routes**
Description	Enter the mac-ip context
Introduced	16.0.R1

advertise *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes mac-ip**
Description	Status for the BGP-EVPN MAC/IP routes advertisement
Default	true
Introduced	16.0.R1

cfm-mac *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes mac-ip**
Description	Enable/disable the advertisement of MEP, MIP, and VMEP MAC addresses over the BGP EVPN.
Default	false
Introduced	16.0.R1

unknown-mac *boolean*

Context	**configure service vpls** *service-name* **bgp-evpn routes mac-ip**
Description	Enable/disable the advertisement of MEP, MIP, and VMEP MAC addresses over the BGP EVPN.
Default	false
Introduced	16.0.R1

vxlan [bgp-instance] *number*

Context	**configure service vpls** *service-name* **bgp-evpn**
Description	Enter the vxlan context
Introduced	16.0.R1

[bgp-instance] *number*

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	BGP instance
Range	1 to 2
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	Administrative state of BGP EVPN VXLAN
Default	disable
Options	enable, disable
Introduced	16.0.R1

default-route-tag *one-byte-value*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	Default route tag to match against export policies: value as 0xXX.
Introduced	16.0.R4

send-incl-mcast-ir-on-ndf *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	Allow IMET-IR on NDF
Default	true
Introduced	16.0.R1

send-tunnel-encap *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	Enable/Disable sending Vxlan Encap.
Default	true
Introduced	16.0.R1

vxlan-instance *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-evpn vxlan** *number*
Description	VXLAN instance
Reference	configure **service vpls** *service-name* **vxlan instance** *number*
Introduced	16.0.R1
Notes	This element is mandatory

bgp-mh-site [site-name] *string*

Context	**configure service vpls** *service-name*
Description	Enter the bgp-mh-site context
Introduced	16.0.R1

[site-name] *string*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Name for the specific site
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

activation-timer *number*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Time that the local sites are in standby status, waiting for BGP updates
Range	0 to 100
Units	seconds
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Administrative state of the site
Default	disable
Options	enable, disable
Introduced	16.0.R1

boot-timer *number*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Time that system waits after node reboot and before it runs DF election algorithm
Range	0 to 600
Units	seconds
Introduced	16.0.R1

failed-threshold (*number* | *keyword*)

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Threshold for the site to be declared down
Default	all
Introduced	16.0.R1

id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	ID for the site
Range	1 to 65535
Introduced	16.0.R1

mesh-sdp-binds

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Specify if a mesh-sdp-binding is associated with this site
Introduced	16.0.R1
Notes	This element is part of a choice

min-down-timer *number*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Minimum downtime for BGP multi-homing site after transition from up to down
Range	0 to 100
Units	seconds
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Operational group to monitor
Reference	configure **service oper-group** *string*
Introduced	16.0.R1

sap *sap*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	SAP to be associated with this site
Introduced	16.0.R1
Notes	This element is part of a choice

shg-name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	Split horizon group to be associated with this site
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

spoke-sdp *sdp-bind-id*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **bgp-mh-site** *string*
Description	SDP to be associated with this site
String Length	3 to 16
Introduced	16.0.R1
Notes	This element is part of a choice

bgp-vpls

Context	**configure service vpls** *service-name*
Description	Enter the bgp-vpls context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **bgp-vpls**
Description	Administrative state of the service
Default	disable
Options	enable, disable
Introduced	16.0.R1

maximum-ve-id *number*

Context	**configure service vpls** *service-name* **bgp-vpls**
Description	Maximum vpls-edge id for BGP-VPLS
Range	1 to 65535
Introduced	16.0.R1

ve

Context	**configure service vpls** *service-name* **bgp-vpls**
Description	Enter the ve context
Introduced	16.0.R1

id *number*

Context	**configure service vpls** *service-name* **bgp-vpls ve**
Description	VPLS edge identifier
Range	1 to 65535
Introduced	16.0.R1

name *string*

Context	**configure service vpls** *service-name* **bgp-vpls ve**
Description	Name of VPLS edge.
String Length	1 to 32
Introduced	16.0.R1

capture-sap [sap-id] *sap*

Context	**configure service vpls** *service-name*
Description	Enter the capture-sap context
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

allow-dot1q-msaps *boolean*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Create IEEE 802.1q Managed SAP's on an IEEE 802.1ad port
Default	false
Introduced	16.0.R1

bandwidth *number*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	SAP bandwidth
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

cpu-protection

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

mac-monitoring

Context	**configure service vpls** *service-name* **capture-sap** *sap* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R4

description *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

dhcp

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Enter the dhcp context
Introduced	16.0.R1

python-policy *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **dhcp**
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

user-db *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **dhcp**
Description	Local user database
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

dhcp6

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Enter the dhcp6 context
Introduced	16.0.R1

python-policy *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **dhcp6**
Description	Python policy
Reference	configure **python python-policy** *string*
Introduced	16.0.R1

user-db *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **dhcp6**
Description	Local user database
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

dist-cpu-protection *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Distributed CPU protection policy for SAP
Reference	configure **system security dist-cpu-protection policy** *string*
Introduced	16.0.R1

host-lockout-policy *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Host lockout policy
Reference	configure **subscriber-mgmt host-lockout-policy** *string*
Introduced	16.0.R1

ipoe-session

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Enter the ipoe-session context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **ipoe-session**
Description	Administrative state of IPoE session
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **ipoe-session**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

ipoe-session-policy *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **capture-sap** *sap* **ipoe-session**
Description	IPoE Session policy to be used for new sessions
Reference	configure **subscriber-mgmt ipoe-session-policy** *string*
Introduced	16.0.R1

user-db *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **capture-sap** *sap* **ipoe-session**
Description	Local user database that is used to (pre-)authenticate new sessions
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

msap-defaults

Context	**configure service vpls** *service-name* **capture-sap** *sap*
Description	Enter the msap-defaults context
Introduced	16.0.R1

group-interface *interface-name*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **msap-defaults**
Description	Group interface
String Length	1 to 32
Introduced	16.0.R1

policy *string*

Context **configure service vpls** *service-name* **capture-sap** *sap* **msap-defaults**

Description MSAP policy

Reference configure **subscriber-mgmt msap-policy** *string*

Introduced 16.0.R1

service-name *service-name*

Context **configure service vpls** *service-name* **capture-sap** *sap* **msap-defaults**

Description Service name

String Length 1 to 64

Introduced 16.0.R1

nasreq-auth-policy *string*

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description Diameter NASREQ application policy to use for authentication

Reference configure **subscriber-mgmt diameter-nasreq-policy** *string*

Introduced 16.0.R4

pppoe

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description Enter the pppoe context

Introduced 16.0.R1

policy *string*

Context **configure service vpls** *service-name* **capture-sap** *sap* **pppoe**

Description PPP policy

Reference configure **subscriber-mgmt ppp-policy** *string*

Introduced 16.0.R1

python-policy *string*

Context **configure service vpls** *service-name* **capture-sap** *sap* **pppoe**

Description Python policy

Reference configure **python python-policy** *string*

Introduced 16.0.R1

user-db *string*

Context **configure service vpls** *service-name* **capture-sap** *sap* **pppoe**

Description Local user database

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R1

radius-auth-policy *string*

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description RADIUS authentication policy

Reference configure **subscriber-mgmt radius-authentication-policy** *string*

Introduced 16.0.R4

router-solicit

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description Enter the router-solicit context

Introduced 16.0.R1

user-db *string*

Context **configure service vpls** *service-name* **capture-sap** *sap* **router-solicit**

Description Local user database

Reference configure **subscriber-mgmt local-user-db** *string*

Introduced 16.0.R1

track-srrp *number*

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description SRRP instance that this capture SAP tracks

Range 1 to 4294967295

Introduced 16.0.R1

trigger-packet

Context **configure service vpls** *service-name* **capture-sap** *sap*

Description Enter the trigger-packet context

Introduced 16.0.R1

arp *boolean*

Context **configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**

Description ARP packet

Default false

Introduced 16.0.R1

data *boolean*

Context **configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**

Description Data packet

Default false

Introduced 16.0.R1

dhcp *boolean*

Context **configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**

Description DHCP packet

Default false

Introduced 16.0.R1

dhcp6 *boolean*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**
Description	DHCP6 packet
Default	false
Introduced	16.0.R1

pppoe *boolean*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**
Description	PPPoE packet
Default	false
Introduced	16.0.R1

rtr-solicit *boolean*

Context	**configure service vpls** *service-name* **capture-sap** *sap* **trigger-packet**
Description	Router-solicit packet
Default	false
Introduced	16.0.R1

customer *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name*
Description	Service customer ID
Reference	configure **service customer** *customer-name*
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service vpls** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

endpoint [name] *string*

Context	**configure service vpls** *service-name*
Description	Enter the endpoint context
Max. Elements	10
Introduced	16.0.R1

[name] *string*

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Service endpoint name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

block-on-mesh-failure *boolean*

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Whether operational status of spoke-SDPs in the endpoint will be affected by the operational status of associated mesh SDPs in this service.
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fdb

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Enter the fdb context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service vpls** *service-name* **endpoint** *string* **fdb**
Description	Populate automatically MAC protect list with MAC addresses learned on SDP with this endpoint
Default	false
Introduced	16.0.R1

mac-pinning *boolean*

Context	**configure service vpls** *service-name* **endpoint** *string* **fdb**
Description	Activate MAC address pinning on this endpoint
Default	false
Introduced	16.0.R1

maximum-mac-addresses *number*

Context	**configure service vpls** *service-name* **endpoint** *string* **fdb**
Description	Maximum learned and static entries for this end point
Range	1 to 511999
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **endpoint** *string* **fdb**
Description	Action when a relearn request for a protected MAC is received on the SDP
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1

ignore-standby-signaling *boolean*

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Ignore standby-bit received from TLDP peers when performing internal tasks
Default	false
Introduced	16.0.R1

revert-time (*number* | *keyword*)

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint
Default	immediate
Introduced	16.0.R1

suppress-standby-signaling *boolean*

Context	**configure service vpls** *service-name* **endpoint** *string*
Description	Do not send pseudowire standby bit to TLDP peer when specified spoke SDP is selected as standby
Default	true
Introduced	16.0.R1

eth-cfm

Context	**configure service vpls** *service-name*
Description	Enter the eth-cfm context
Introduced	16.0.R4

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service vpls** *service-name* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R4

md-admin-name *string*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R4
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R4
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R4
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R4

alarm-notification

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R4

fng-alarm-time *number*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R4

fng-reset-time *number*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R4

ccm *boolean*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R4

ccm-ltm-priority *number*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R4

ccm-padding-size *number*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Additional octets inserted into CCM PDU for data TLV padding

Range 3 to 1500

Introduced 16.0.R4

description *string*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R4

eth-test

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R4

bit-error-threshold *number*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R4

test-pattern

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R4

crc-tlv *boolean*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R4

pattern *keyword*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R4

grace

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R4

eth-ed

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R4

max-rx-defect-window *number*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R4

priority *number*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R4

rx-eth-ed *boolean*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R4

tx-eth-ed *boolean*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R4

eth-vsm-grace

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R4

rx-eth-vsm-grace *boolean*

Context **configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R4

tx-eth-vsm-grace *boolean*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R4

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R4

mac-address *mac-unicast-address*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R4

one-way-delay-threshold *number*

Context	**configure service vpls** *service-name* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R4

etree *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name*
Description	Use VPLS as an E-Tree VPLS
Default	false
Introduced	16.0.R1

fdb

Context	**configure service vpls** *service-name*
Description	Enter the fdb context
Introduced	16.0.R1

discard-unknown *boolean*

Context	**configure service vpls** *service-name* **fdb**
Description	Discard packets with unknown destination MAC addresses
Default	false
Introduced	16.0.R1

mac-learning

Context	**configure service vpls** *service-name* **fdb**
Description	Enter the mac-learning context
Introduced	16.0.R1

aging *boolean*

Context	**configure service vpls** *service-name* **fdb mac-learning**
Description	Enable aging of MAC addresses
Default	true
Introduced	16.0.R1

learning *boolean*

Context	**configure service vpls** *service-name* **fdb mac-learning**
Description	Enable learning of new MAC addresses
Default	true
Introduced	16.0.R1

local-age-time *number*

Context	**configure service vpls** *service-name* **fdb mac-learning**
Description	Aging time for locally learned MAC addresses
Range	60 to 86400
Default	300
Introduced	16.0.R1

remote-age-time *number*

Context	**configure service vpls** *service-name* **fdb mac-learning**
Description	Aging time for locally learned MAC addresses
Range	60 to 86400
Default	900
Introduced	16.0.R1

mac-move

Context	**configure service vpls** *service-name* **fdb**
Description	Enter the mac-move context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **fdb mac-move**
Description	Administrative state of MAC move
Default	disable
Options	enable, disable
Introduced	16.0.R1

mac-subnet-length *number*

Context	**configure service vpls** *service-name* **fdb**
Description	MAC sub-net length.
Range	24 to 48
Default	48
Introduced	16.0.R1

selective-learning *boolean*

Context	**configure service vpls** *service-name* **fdb**
Description	Selective learning status.
Default	false
Introduced	16.0.R1

static-mac

Context	**configure service vpls** *service-name* **fdb**
Description	Enter the static-mac context
Introduced	16.0.R1

mac [mac-address] *mac-unicast-address-no-zero*

Context	**configure service vpls** *service-name* **fdb static-mac**
Description	Enter the mac context
Introduced	16.0.R1

[mac-address] *mac-unicast-address-no-zero*

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Static MAC address to SAP/SDP-binding or black-hole
Introduced	16.0.R1
Notes	This element is part of a list key

blackhole

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Create a static FDB entry for the MAC address to black-hole traffic
Introduced	16.0.R1
Notes	This element is part of a choice

endpoint *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Endpoint associated with this MAC
Reference	configure **service vpls** *service-name* **endpoint** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

mesh-sdp *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Mesh SDP bind associated with this MAC
Reference	configure **service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Introduced	16.0.R1
Notes	This element is part of a choice

monitor *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Entity to be monitored to decide whether this entry can be installed in the FDB
Default	none
Options	none, forward-status
Introduced	16.0.R1

sap *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	SAP associated with this MAC
Reference	configure **service vpls** *service-name* **sap** *sap*
Introduced	16.0.R1
Notes	This element is part of a choice

spoke-sdp *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **fdb static-mac mac** *mac-unicast-address-no-zero*
Description	Spoke SDP bind associated with this MAC
Reference	configure **service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Introduced	16.0.R1
Notes	This element is part of a choice

table

Context	**configure service vpls** *service-name* **fdb**
Description	Enter the table context
Introduced	16.0.R1

high-wmark *number*

Context	**configure service vpls** *service-name* **fdb table**
Description	High watermark for the FDB table
Range	0 to 100
Default	95
Introduced	16.0.R1

low-wmark *number*

Context **configure service vpls** *service-name* **fdb table**
Description Low watermark for the FDB table
Range 0 to 100
Default 90
Introduced 16.0.R1

size *number*

Context **configure service vpls** *service-name* **fdb table**
Description Maximum MAC entries in the FDB
Range 1 to 511999
Default 250
Introduced 16.0.R1

gsmp

Context **configure service vpls** *service-name*
Description Enter the gsmp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **gsmp**
Description Administrative state of GSMP
Default disable
Options enable, disable
Introduced 16.0.R1

group [name] *string*

Context **configure service vpls** *service-name* **gsmp**
Description Enter the group context
Max. Elements 1024
Introduced 16.0.R1

[name] *string*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	GSMP neighbor group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Administrative state of the GSMP group
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Enter the ancp context
Introduced	16.0.R1

dynamic-topology-discovery *boolean*

Context	**configure service vpls** *service-name* **gsmp group** *string* **ancp**
Description	Enable the ANCP dynamic topology discovery capability
Default	true
Introduced	16.0.R1

oam *boolean*

Context	**configure service vpls** *service-name* **gsmp group** *string* **ancp**
Description	Enable GSMP ANCP OAM capability at startup of GSMP connection
Default	false
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

hold-multiplier *number*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Hold-multiplier for the GSMP connections in this group
Range	1 to 100
Default	3
Introduced	16.0.R1

idle-filter *boolean*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Filter ANCP messages from IDLE DSL lines
Default	false
Introduced	16.0.R1

keepalive *number*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Keepalive value for the GSMP connections in this group
Range	1 to 25
Default	10
Units	seconds
Introduced	16.0.R1

neighbor [remote-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Enter the neighbor context
Introduced	16.0.R1

[remote-address] *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	GSMP neighbor remote IP address
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Administrative state of the GSMP neighbor
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Restrict connections to this local address only within the service running ANCP
Introduced	16.0.R1

priority-marking

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Enter the priority-marking context
Introduced	16.0.R1

dscp *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address* **priority-marking**
Description	DSCP that is used while remarking the in profile packets
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a choice

prec *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address* **priority-marking**
Description	Precedence priority marking
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a choice

persistency *boolean*

Context	**configure service vpls** *service-name* **gsmp group** *string*
Description	Store DSL line information when the GSMP connection terminates
Default	false
Introduced	16.0.R1

igmp-host-tracking

Context	**configure service vpls** *service-name*
Description	Enter the igmp-host-tracking context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **igmp-host-tracking**
Description	Administrative state of IGMP host tracking
Default	disable
Options	enable, disable
Introduced	16.0.R1

expiry-time *number*

Context	**configure service vpls** *service-name* **igmp-host-tracking**
Description	Time during which the system continues to track inactive hosts
Range	1 to 65535
Default	260
Units	seconds
Introduced	16.0.R1

igmp-snooping

Context	**configure service vpls** *service-name*
Description	Enter the igmp-snooping context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **igmp-snooping**
Description	Administrative state of IGMP snooping
Default	disable
Options	enable, disable
Introduced	16.0.R1

mvr

Context **configure service vpls** *service-name* **igmp-snooping**

Description Enter the mvr context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **igmp-snooping mvr**

Description Administrative state of MVR

Default disable

Options enable, disable

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **igmp-snooping mvr**

Description Text description

String Length 1 to 80

Introduced 16.0.R1

group-policy *string*

Context **configure service vpls** *service-name* **igmp-snooping mvr**

Description Policy that applies MVR

String Length 1 to 32

Introduced 16.0.R1

query-interval *number*

Context **configure service vpls** *service-name* **igmp-snooping**

Description Time between two consecutive host-query messages

Range 1 to 65535

Default 125

Units seconds

Introduced 16.0.R1

query-source-address (*keyword* | *string*)

Context **configure service vpls** *service-name* **igmp-snooping**
Description Source address for IGMP queries
Default system
Options system
Introduced 16.0.R1

report-source-address *ipv4-address*

Context **configure service vpls** *service-name* **igmp-snooping**
Description Source address used when generating IGMP reports.
Introduced 16.0.R1

robust-count *number*

Context **configure service vpls** *service-name* **igmp-snooping**
Description Robustness variable
Range 1 to 255
Default 2
Introduced 16.0.R1

interface [interface-name] *interface-name*

Context **configure service vpls** *service-name*
Description Enter the interface context
Introduced 16.0.R1

[interface-name] *interface-name*

Context **configure service vpls** *service-name* **interface** *interface-name*
Description Router interface name
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **interface** *interface-name*
Description	Text description
String Length	1 to 160
Introduced	16.0.R1

hold-time

Context	**configure service vpls** *service-name* **interface** *interface-name*
Description	Enter the hold-time context
Introduced	16.0.R1

ipv4

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time**
Description	Enter the ipv4 context
Introduced	16.0.R1

down

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time ipv4**
Description	Enter the down context
Introduced	16.0.R1

init-only *boolean*

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time ipv4 down**
Description	Apply down delay only when interface is configured or after reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time ipv4 down**
Description	Down hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time ipv4**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure service vpls** *service-name* **interface** *interface-name* **hold-time ipv4 up**
Description	Up hold time for the IP interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

ipv4

Context	**configure service vpls** *service-name* **interface** *interface-name*
Description	Enter the ipv4 context
Introduced	16.0.R1

neighbor-discovery

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the neighbor-discovery context
Introduced	16.0.R1

static-neighbor [ipv4-address] *ipv4-address*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	Enter the static-neighbor context
Introduced	16.0.R1

[ipv4-address] *ipv4-address*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	IPv4 address corresponding to the media-dependent physical address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-address *mac-address*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery static-neighbor** *ipv4-address*
Description	Media-dependent physical address
Introduced	16.0.R1
Notes	This element is mandatory

timeout *number*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 neighbor-discovery**
Description	ARP timeout value to determine how long an ARP entry remains in the ARP cache
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1

primary

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the primary context
Introduced	16.0.R1

address *ipv4-address*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address for a VPLS interface
Introduced	16.0.R1
Notes	This element is mandatory

prefix-length *number*

Context	**configure service vpls** *service-name* **interface** *interface-name* **ipv4 primary**
Description	IPv4 address prefix length
Range	0 to 32
Introduced	16.0.R1
Notes	This element is mandatory

mac *mac-unicast-address*

Context	**configure service vpls** *service-name* **interface** *interface-name*
Description	MAC address for the interface
Introduced	16.0.R1

load-balancing

Context	**configure service vpls** *service-name*
Description	Enter the load-balancing context
Introduced	16.0.R1

per-service-hashing *boolean*

Context	**configure service vpls** *service-name* **load-balancing**
Description	Enable/disable per service hashing.
Default	false
Introduced	16.0.R1

spi-load-balancing *boolean*

Context	**configure service vpls** *service-name* **load-balancing**
Description	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Default	false
Introduced	16.0.R1

teid-load-balancing *boolean*

Context	**configure service vpls** *service-name* **load-balancing**
Description	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Default	false
Introduced	16.0.R1

mac-flush

Context	**configure service vpls** *service-name*
Description	Enter the mac-flush context
Introduced	16.0.R1

tldp

Context	**configure service vpls** *service-name* **mac-flush**
Description	Enter the tldp context
Introduced	16.0.R1

propagate *boolean*

Context	**configure service vpls** *service-name* **mac-flush tldp**
Description	Propagate MAC flush frames from LDP peer to all mesh-SDP and Spoke-SDPs.
Default	false
Introduced	16.0.R1

send-on-failure *boolean*

Context	**configure service vpls** *service-name* **mac-flush tldp**
Description	Send MAC withdraw message on SAP/Spoke-SDP failure
Default	false
Introduced	16.0.R1

mcast-ipv6-snooping-scope *keyword*

Context	**configure service vpls** *service-name*
Description	IPv6 multicast snooping scope
Default	mac-based
Options	sg-based, mac-based
Introduced	16.0.R1

mcr-default-gtw

Context	**configure service vpls** *service-name*
Description	Enter the mcr-default-gtw context
Introduced	16.0.R1

ip *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **mcr-default-gtw**
Description	Multi-chassis ring default gateway IP address
Introduced	16.0.R1

mac *mac-address*

Context	**configure service vpls** *service-name* **mcr-default-gtw**
Description	Multi-chassis ring default gateway MAC address
Default	00:00:00:00:00:00
Introduced	16.0.R1

mesh-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service vpls** *service-name*
Description	Enter the mesh-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Policy to collect accounting statistics
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Enter the bfd-liveness context

Introduced 16.0.R1

encap *keyword*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **bfd-liveness**

Description BFD encapsulation used on this SDP binding

Default ipv4

Options ipv4

Introduced 16.0.R1

bfd-template *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description BFD template associated with SDP binding

Reference configure **bfd bfd-template** *string*

Introduced 16.0.R1

collect-stats *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Allow agent to collect accounting statistics

Default false

Introduced 16.0.R1

control-word *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Use the control word as preferred

Default false

Introduced 16.0.R1

cpu-protection

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **cpu-protection**

Description CPM protection policy

Reference configure **system security cpu-protection policy** *number*

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

dhcp

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Enter the dhcp context

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **dhcp**

Description Text description

String Length 1 to 80

Introduced 16.0.R4

snoop *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **dhcp**

Description Allow DHCP snooping of DHCP messages on the SAP or SDP

Default false

Introduced 16.0.R4

egress

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Enter the egress context

Introduced 16.0.R1

filter

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress filter**

Description MAC filter ID

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

mfib-allowed-mda-destinations

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress**

Description Enter the mfib-allowed-mda-destinations context

Introduced 16.0.R1

mda [mda-id] *slot-mda*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress mfib-allowed-mda-destinations**

Description Enter the mda context

Introduced 16.0.R1

[mda-id] *slot-mda*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress mfib-allowed-mda-destinations mda** *slot-mda*

Description MFIB allowed MDA destination

Introduced 16.0.R1

Notes This element is part of a list key

qos

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress qos**

Description Enter the network context

Introduced 16.0.R1

policy-name *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress qos network**

Description Egress network policy name applied to this SDP binding

Reference configure **qos network** *network-policy-name*

Introduced 16.0.R1

port-redirect-group

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress qos network**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress qos network port-redirect-group**
Description	Policy for port queue group for this SDP binding
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress qos network port-redirect-group**
Description	Instance of the port egress Queue Group for this SDP binding.
Range	1 to 65535
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **egress**
Description	Static MPLS VC label that is used to send packets to the far end device through this SDP
Range	16 to 1048575
Introduced	16.0.R1

entropy-label

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Whether the use of entropy-label is enabled or not.
Introduced	16.0.R1
Notes	This element is part of a choice

eth-cfm

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enter the eth-cfm context
Introduced	16.0.R1

collect-lmm-fc-stats

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**

Description Receive period multiplier to time out CSF

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

direction *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Direction the MEP faces

Options down, up

Introduced 16.0.R1

eth-test

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

lbm-svc-act-responder *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Process service activation streams encapsulated in ETH-CFM request Loopback Message
Default	false
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

primary-vlan *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MEP provisioned using MA primary VLAN ID
Default	false
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

vmep-filter *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **eth-cfm**
Description	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Default	false
Introduced	16.0.R1

etree-leaf *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enable etree leaf access-circuit status
Default	false
Introduced	16.0.R1

etree-root-leaf-tag *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Status for E-tree root leaf tag
Default	false
Introduced	16.0.R1

fdb

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enter the fdb context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **fdb**
Description	Enable/disable of automatic marking of MACs as protected
Default	false
Introduced	16.0.R4

mac-pinning *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **fdb**
Description	MAC address pinning in active status
Default	false
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **fdb**
Description	Action to take whenever a relearn request for a protected MAC is received
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R4

force-vc-forwarding *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	VC forwarding status
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1

hash-label

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **hash-label**
Description	To signal the hash label capability to the remote PE.
Introduced	16.0.R1
Notes	This element is part of a choice

igmp-snooping

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Enter the igmp-snooping context

Introduced 16.0.R1

fast-leave *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Allow IGMP fast leave processing

Default false

Introduced 16.0.R1

import-policy *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-group-sources *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum group source combinations

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum groups allowed

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

mcac

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

mrouter-port *boolean*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Port as a multicast router port

Default false

Introduced 16.0.R1

query-interval *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Time between two consecutive host-query messages

Range 2 to 1024

Default 125

Units seconds

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description Time between group-specific query messages

Range 1 to 50

Default 10

Units deciseconds

Introduced 16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**
Description	Enable IP router alert check option
Default	true
Introduced	16.0.R1

send-queries *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**
Description	Generate IGMP general queries
Default	false
Introduced	16.0.R1

static

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv4-multicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

version *keyword*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **igmp-snooping**

Description IGMP protocol version

Default 3

Options 1, 2, 3

Introduced 16.0.R1

ingress

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress filter**

Description MAC filter ID

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Forwarding-plane queue group policy for this SDP binding

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**
Description	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Range	1 to 65535
Introduced	16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress qos network**
Description	Ingress network policy name applied to this SDP binding
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

mld-snooping

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Enter the mld-snooping context
Introduced	16.0.R1

fast-leave *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Allow IGMP fast leave processing
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Maximum groups allowed
Range	1 to 16000
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

query-interval *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Time between group-specific query messages
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Enable IP router alert check option
Default	true
Introduced	16.0.R1

send-queries *boolean*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Generate IGMP general queries
Default	false
Introduced	16.0.R1

static

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv6-multicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

version *keyword*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id* **mld-snooping**
Description	MLD protocol version.
Default	2
Options	1, 2
Introduced	16.0.R1

vc-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Default	ether
Options	ether, vlan
Introduced	16.0.R1

vlan-vc-tag *number*

Context	**configure service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Description	SDP bind VC tag
Range	0 to 4094
Introduced	16.0.R1

mfib

Context	**configure service vpls** *service-name*
Description	Enter the mfib context
Introduced	16.0.R1

table

Context	**configure service vpls** *service-name* **mfib**
Description	Enter the table context
Introduced	16.0.R1

high-wmark *number*

Context	**configure service vpls** *service-name* **mfib table**
Description	High watermark for the MFIB table
Range	0 to 100
Default	95
Introduced	16.0.R1

low-wmark *number*

Context	**configure service vpls** *service-name* **mfib table**
Description	Low watermark for the MFIB table
Range	0 to 100
Default	90
Introduced	16.0.R1

size *number*

Context	**configure service vpls** *service-name* **mfib table**
Description	Maximum SG entries in the MFIB
Range	1 to 40959
Introduced	16.0.R1

mld-snooping

Context	**configure service vpls** *service-name*
Description	Enter the mld-snooping context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Administrative state of IGMP snooping
Default	disable
Options	enable, disable
Introduced	16.0.R1

mvr

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Enter the mvr context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **mld-snooping mvr**
Description	Administrative state of MVR
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **mld-snooping mvr**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

group-policy *string*

Context	**configure service vpls** *service-name* **mld-snooping mvr**
Description	Policy that applies MVR
String Length	1 to 32
Introduced	16.0.R1

query-interval *number*

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Time between two consecutive host-query messages
Range	1 to 65535
Default	125
Units	seconds
Introduced	16.0.R1

query-source-address (*keyword* | *string*)

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Source address used when generating MLD queries.
Default	system
Options	system
Introduced	16.0.R1

report-source-address *ipv6-address*

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Source address used when generating MLD reports.
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **mld-snooping**
Description	Robustness variable
Range	1 to 255
Default	2
Introduced	16.0.R1

multicast-info-policy *string*

Context	**configure service vpls** *service-name*
Description	Multicast information policy
Reference	configure **multicast-management multicast-info-policy** *string*
Introduced	16.0.R1

pbb

Context	**configure service vpls** *service-name*
Description	Enter the pbb context
Introduced	16.0.R1

backbone-vpls [backbone-vpls-service-name] *string*

Context	**configure service vpls** *service-name* **pbb**
Description	Enter the backbone-vpls context
Max. Elements	1
Introduced	16.0.R1

[backbone-vpls-service-name] *string*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string*
Description	Backbone VPLS service
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1
Notes	This element is part of a list key

igmp-snooping

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Enter the igmp-snooping context

Introduced 16.0.R1

mrouter-destination [mac-reference] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **igmp-snooping**

Description Enter the mrouter-destination context

Introduced 16.0.R1

[mac-reference] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **igmp-snooping mrouter-destination** *string*

Description Mac name reference

Reference configure **service pbb mac** *string*

Introduced 16.0.R1

Notes This element is part of a list key

isid *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Backbone VPLS ISID

Range 0 to 16777215

Introduced 16.0.R1

Notes This element is mandatory

mesh-sdp [sdp-bind-id] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Enter the mesh-sdp context

Introduced 16.0.R1

[sdp-bind-id] *string*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **mesh-sdp** *string*
Description	Backbone VPLS SAP
Reference	configure **service vpls** *service-name* **mesh-sdp** *sdp-bind-id*
Introduced	16.0.R1
Notes	This element is part of a list key

igmp-snooping

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **mesh-sdp** *string*
Description	Enter the igmp-snooping context
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **mesh-sdp** *string* **igmp-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

mld-snooping

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **mesh-sdp** *string*
Description	Enter the mld-snooping context
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **mesh-sdp** *string* **mld-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

mld-snooping

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Enter the mld-snooping context

Introduced 16.0.R1

mrouter-destination [mac-reference] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **mld-snooping**

Description Enter the mrouter-destination context

Introduced 16.0.R1

[mac-reference] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **mld-snooping mrouter-destination** *string*

Description Mac name reference

Reference configure **service pbb mac** *string*

Introduced 16.0.R1

Notes This element is part of a list key

sap [sap-id] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Enter the sap context

Introduced 16.0.R1

[sap-id] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **sap** *string*

Description Backbone VPLS SAP

Reference configure **service vpls** *service-name* **sap** *sap*

Introduced 16.0.R1

Notes This element is part of a list key

igmp-snooping

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **sap** *string*

Description Enter the igmp-snooping context

Introduced 16.0.R1

mrouter-port *boolean*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **sap** *string* **igmp-snooping**

Description Port as a multicast router port

Default false

Introduced 16.0.R1

mld-snooping

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **sap** *string*

Description Enter the mld-snooping context

Introduced 16.0.R1

mrouter-port *boolean*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string* **sap** *string* **mld-snooping**

Description Port as a multicast router port

Default false

Introduced 16.0.R1

spoke-sdp [sdp-bind-id] *string*

Context **configure service vpls** *service-name* **pbb backbone-vpls** *string*

Description Enter the spoke-sdp context

Introduced 16.0.R1

[sdp-bind-id] *string*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **spoke-sdp** *string*
Description	Backbone VPLS SAP
Reference	configure **service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Introduced	16.0.R1
Notes	This element is part of a list key

igmp-snooping

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **spoke-sdp** *string*
Description	Enter the igmp-snooping context
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **spoke-sdp** *string* **igmp-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

mld-snooping

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **spoke-sdp** *string*
Description	Enter the mld-snooping context
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **pbb backbone-vpls** *string* **spoke-sdp** *string* **mld-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

force-qtag-forwarding *boolean*

Context **configure service vpls** *service-name* **pbb**

Description Enable 802.1q tag forwarding

Default false

Introduced 16.0.R1

i-vpls-mac-flush

Context **configure service vpls** *service-name* **pbb**

Description Enter the i-vpls-mac-flush context

Introduced 16.0.R1

bgp-evpn

Context **configure service vpls** *service-name* **pbb i-vpls-mac-flush**

Description Enter the bgp-evpn context

Introduced 16.0.R1

send-to-bvpls *boolean*

Context **configure service vpls** *service-name* **pbb i-vpls-mac-flush bgp-evpn**

Description Send b-VPLS EVPN flush

Default false

Introduced 16.0.R1

tldp

Context **configure service vpls** *service-name* **pbb i-vpls-mac-flush**

Description Enter the tldp context

Introduced 16.0.R1

propagate-from-bvpls *boolean*

Context **configure service vpls** *service-name* **pbb i-vpls-mac-flush tldp**

Description Propagate mac-flush from b-vpls into local i-vpls

Default false

Introduced 16.0.R1

send-on-bvpls-failure *boolean*

Context	**configure service vpls** *service-name* **pbb i-vpls-mac-flush tldp**
Description	Send flush-all-from-me on b-vpls failure
Default	false
Introduced	16.0.R1

send-to-bvpls

Context	**configure service vpls** *service-name* **pbb i-vpls-mac-flush tldp**
Description	Enter the send-to-bvpls context
Introduced	16.0.R1

all-but-mine *boolean*

Context	**configure service vpls** *service-name* **pbb i-vpls-mac-flush tldp send-to-bvpls**
Description	Generate LDP MAC withdraw message to b-VPLS
Default	false
Introduced	16.0.R1

all-from-me *boolean*

Context	**configure service vpls** *service-name* **pbb i-vpls-mac-flush tldp send-to-bvpls**
Description	Generate LDP MAC withdraw all from me message to b-VPLS
Default	false
Introduced	16.0.R1

mac-notification

Context	**configure service vpls** *service-name* **pbb**
Description	Enter the mac-notification context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **pbb mac-notification**
Description	Administrative state of MAC notification
Default	disable
Options	enable, disable
Introduced	16.0.R1

count *number*

Context	**configure service vpls** *service-name* **pbb mac-notification**
Description	MAC notification messages count
Range	1 to 10
Introduced	16.0.R1

interval *number*

Context	**configure service vpls** *service-name* **pbb mac-notification**
Description	Interval for MAC notification messages
Range	1 to 100
Units	deciseconds
Introduced	16.0.R1

renotify (*number* | *keyword*)

Context	**configure service vpls** *service-name* **pbb mac-notification**
Description	Re-notify interval for MAC-notification messages
Range	240 to 840
Default	none
Units	seconds
Options	none
Introduced	16.0.R1

source-bmac

Context	**configure service vpls** *service-name* **pbb**
Description	Enter the source-bmac context
Introduced	16.0.R1

address *mac-unicast-address-no-zero*

Context **configure service vpls** *service-name* **pbb source-bmac**

Description Backbone source MAC address used for PBB

Introduced 16.0.R1

use-es-bmac-lsb *boolean*

Context **configure service vpls** *service-name* **pbb source-bmac**

Description Use ethernet segment backbone MAC LSB

Default false

Introduced 16.0.R1

use-mclag-bmac-lsb *boolean*

Context **configure service vpls** *service-name* **pbb source-bmac**

Description Use MC LAG backbone MAC LSB

Default false

Introduced 16.0.R1

pbb-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name*

Description PBB VPLS type

Options b-vpls, i-vpls

Introduced 16.0.R1

pim-snooping

Context **configure service vpls** *service-name*

Description Enter the pim-snooping context

Introduced 16.0.R1

group-policy *string*

Context	**configure service vpls** *service-name* **pim-snooping**
Description	Group policy name
String Length	1 to 255
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

hold-time *number*

Context	**configure service vpls** *service-name* **pim-snooping**
Description	Duration that allows the PIM-snooping switch to snoop all the PIM states in the VPLS
Range	0 to 300
Default	90
Units	seconds
Introduced	16.0.R1

ipv4

Context	**configure service vpls** *service-name* **pim-snooping**
Description	Enter the ipv4 context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **pim-snooping ipv4**
Description	Administrative state of snooping
Default	enable
Options	enable, disable
Introduced	16.0.R1

ipv6

Context	**configure service vpls** *service-name* **pim-snooping**
Description	Enter the ipv6 context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **pim-snooping ipv6**
Description Administrative state of snooping
Default disable
Options enable, disable
Introduced 16.0.R1

proxy-arp

Context **configure service vpls** *service-name*
Description Enter the proxy-arp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **proxy-arp**
Description Administrative state of the proxy
Default disable
Options enable, disable
Introduced 16.0.R1

age-time (*number* | *keyword*)

Context **configure service vpls** *service-name* **proxy-arp**
Description Aging timer for proxy entries, where entries are flushed upon timer expiry
Range 60 to 86400
Default never
Units seconds
Options never
Introduced 16.0.R1

duplicate-detect

Context **configure service vpls** *service-name* **proxy-arp**
Description Enter the duplicate-detect context
Introduced 16.0.R1

anti-spoof-mac *mac-unicast-address-no-zero*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-arp duplicate-detect**
Description	MAC address to replace the proxy-ARP/ND offending entry's MAC
Introduced	16.0.R1

hold-down-time (*number* | *keyword*)

Context	**configure service vpls** *service-name* **proxy-arp duplicate-detect**
Description	Hold down time for a duplicate entry
Range	1 to 60
Default	9
Units	minutes
Options	max
Introduced	16.0.R1

num-moves *number*

Context	**configure service vpls** *service-name* **proxy-arp duplicate-detect**
Description	Number of moves required to declare a duplicate entry
Range	3 to 10
Default	5
Introduced	16.0.R1

static-blackhole *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-arp duplicate-detect**
Description	Consider anti-spoof MAC as black-hole static MAC in FDB
Default	false
Introduced	16.0.R1

window *number*

Context	**configure service vpls** *service-name* **proxy-arp duplicate-detect**
Description	Time to monitor the MAC address in the anti-spoofing mechanism
Range	1 to 15
Default	3
Units	minutes
Introduced	16.0.R1

dynamic-arp

Context	**configure service vpls** *service-name* **proxy-arp**
Description	Enter the dynamic-arp context
Introduced	16.0.R1

ip-address [ipv4-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **proxy-arp dynamic-arp**
Description	Enter the ip-address context
Introduced	16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **proxy-arp dynamic-arp ip-address** *ipv4-unicast-address*
Description	Proxy ARP IP address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-list *string*

Context	**configure service vpls** *service-name* **proxy-arp dynamic-arp ip-address** *ipv4-unicast-address*
Description	MAC list for the dynamic entry
Reference	configure **service proxy-arp-nd mac-list list** *string*
Introduced	16.0.R1

resolve-retry-time *number*

Context	**configure service vpls** *service-name* **proxy-arp dynamic-arp ip-address** *ipv4-unicast-address*
Description	Frequency at which the resolve messages are sent
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1

dynamic-populate *boolean*

Context	**configure service vpls** *service-name* **proxy-arp**
Description	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/ SDP-bindings
Default	false
Introduced	16.0.R1

evpn

Context	**configure service vpls** *service-name* **proxy-arp**
Description	Enter the evpn context
Introduced	16.0.R1

flood

Context	**configure service vpls** *service-name* **proxy-arp evpn**
Description	Enter the flood context
Introduced	16.0.R1

gratuitous-arp *boolean*

Context	**configure service vpls** *service-name* **proxy-arp evpn flood**
Description	Flood GARP-requests/GARP-replies to the EVPN
Default	true
Introduced	16.0.R1

unknown-arp-req *boolean*

Context	**configure service vpls** *service-name* **proxy-arp evpn flood**
Description	Flood ARP-requests (with source squelching) if there is no active proxy-ARP entry for requested IP
Default	true
Introduced	16.0.R1

route-tag *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-arp evpn**
Description	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Range	0 | 1 to 255
Default	0
Introduced	16.0.R1

send-refresh (*number* | *keyword*)

Context	**configure service vpls** *service-name* **proxy-arp**
Description	Time at which to send a refresh message
Range	120 to 86400
Default	never
Options	never
Introduced	16.0.R1

static-arp

Context	**configure service vpls** *service-name* **proxy-arp**
Description	Enter the static-arp context
Introduced	16.0.R1

ip-address [ipv4-address] *ipv4-unicast-address*

Context **configure service vpls** *service-name* **proxy-arp static-arp**

Description Enter the ip-address context

Introduced 16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context **configure service vpls** *service-name* **proxy-arp static-arp ip-address** *ipv4-unicast-address*

Description Proxy ARP IP address

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address-no-zero*

Context **configure service vpls** *service-name* **proxy-arp static-arp ip-address** *ipv4-unicast-address*

Description Proxy ARP MAC address for static entry

Introduced 16.0.R1

Notes This element is mandatory

table-size *number*

Context **configure service vpls** *service-name* **proxy-arp**

Description Maximum number of learned and static entries allowed in the proxy table of this service

Range 1 to 16383

Default 250

Introduced 16.0.R1

proxy-nd

Context **configure service vpls** *service-name*

Description Enter the proxy-nd context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Administrative state of the proxy
Default	disable
Options	enable, disable
Introduced	16.0.R1

age-time (*number* | *keyword*)

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Aging timer for proxy entries, where entries are flushed upon timer expiry
Range	60 to 86400
Default	never
Units	seconds
Options	never
Introduced	16.0.R1

duplicate-detect

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Enter the duplicate-detect context
Introduced	16.0.R1

anti-spoof-mac *mac-unicast-address-no-zero*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-nd duplicate-detect**
Description	MAC address to replace the proxy-ARP/ND offending entry's MAC
Introduced	16.0.R1

hold-down-time (*number* | *keyword*)

Context	**configure service vpls** *service-name* **proxy-nd duplicate-detect**
Description	Hold down time for a duplicate entry
Range	1 to 60
Default	9
Units	minutes
Options	max
Introduced	16.0.R1

num-moves *number*

Context	**configure service vpls** *service-name* **proxy-nd duplicate-detect**
Description	Number of moves required to declare a duplicate entry
Range	3 to 10
Default	5
Introduced	16.0.R1

static-blackhole *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-nd duplicate-detect**
Description	Consider anti-spoof MAC as black-hole static MAC in FDB
Default	false
Introduced	16.0.R1

window *number*

Context	**configure service vpls** *service-name* **proxy-nd duplicate-detect**
Description	Time to monitor the MAC address in the anti-spoofing mechanism
Range	1 to 15
Default	3
Units	minutes
Introduced	16.0.R1

dynamic-neighbor

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Enter the dynamic-neighbor context
Introduced	16.0.R1

ip-address [ipv6-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **proxy-nd dynamic-neighbor**
Description	Enter the ip-address context
Introduced	16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **proxy-nd dynamic-neighbor ip-address** *ipv6-unicast-address*
Description	Proxy ND IP address
Introduced	16.0.R1
Notes	This element is part of a list key

mac-list *string*

Context	**configure service vpls** *service-name* **proxy-nd dynamic-neighbor ip-address** *ipv6-unicast-address*
Description	MAC list for the dynamic entry
Reference	configure **service proxy-arp-nd mac-list list** *string*
Introduced	16.0.R1

resolve-retry-time *number*

Context	**configure service vpls** *service-name* **proxy-nd dynamic-neighbor ip-address** *ipv6-unicast-address*
Description	Frequency at which the resolve messages are sent
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1

dynamic-populate *boolean*

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/ SDP-bindings
Default	false
Introduced	16.0.R1

evpn

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Enter the evpn context
Introduced	16.0.R1

advertise-neighbor-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-nd evpn**
Description	Advertisement type of static or dynamic entries in the EVPN
Default	router
Options	router, host
Introduced	16.0.R1

flood

Context	**configure service vpls** *service-name* **proxy-nd evpn**
Description	Enter the flood context
Introduced	16.0.R1

unknown-neighbor-advertise-host *boolean*

Context	**configure service vpls** *service-name* **proxy-nd evpn flood**
Description	Flood host unsolicited Neighbor Advertisement (NA) replies to EVPN
Default	true
Introduced	16.0.R1

unknown-neighbor-advertise-router *boolean*

Context	**configure service vpls** *service-name* **proxy-nd evpn flood**
Description	Flood router unsolicited Neighbor Advertisement (NA) replies to EVPN
Default	true
Introduced	16.0.R1

unknown-neighbor-solicitation *boolean*

Context	**configure service vpls** *service-name* **proxy-nd evpn flood**
Description	Flood unsolicited Neighbor Solicitation messages (with source squelching) into EVPN network
Default	true
Introduced	16.0.R1

route-tag *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **proxy-nd evpn**
Description	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Range	0 | 1 to 255
Default	0
Introduced	16.0.R1

send-refresh (*number* | *keyword*)

Context	**configure service vpls** *service-name* **proxy-nd**
Description	Time at which to send a refresh message
Range	120 to 86400
Default	never
Options	never
Introduced	16.0.R1

static-neighbor

Context **configure service vpls** *service-name* **proxy-nd**

Description Enter the static-neighbor context

Introduced 16.0.R1

ip-address [ipv6-address] *ipv6-unicast-address*

Context **configure service vpls** *service-name* **proxy-nd static-neighbor**

Description Enter the ip-address context

Introduced 16.0.R1

[ipv6-address] *ipv6-unicast-address*

Context **configure service vpls** *service-name* **proxy-nd static-neighbor ip-address** *ipv6-unicast-address*

Description Proxy ND IP address

Introduced 16.0.R1

Notes This element is part of a list key

mac *mac-unicast-address-no-zero*

Context **configure service vpls** *service-name* **proxy-nd static-neighbor ip-address** *ipv6-unicast-address*

Description Proxy ARP MAC address for static entry

Introduced 16.0.R1

Notes This element is mandatory

type *keyword*

Context **configure service vpls** *service-name* **proxy-nd static-neighbor ip-address** *ipv6-unicast-address*

Description Entry type

Default router

Options host, router

Introduced 16.0.R1

table-size *number*

Context **configure service vpls** *service-name* **proxy-nd**

Description Maximum number of learned and static entries allowed in the proxy table of this service

Range 1 to 16383

Default 250

Introduced 16.0.R1

routed-vpls

Context **configure service vpls** *service-name*

Description Enter the routed-vpls context

Introduced 16.0.R1

multicast

Context **configure service vpls** *service-name* **routed-vpls**

Description Enter the multicast context

Introduced 16.0.R1

ipv4

Context **configure service vpls** *service-name* **routed-vpls multicast**

Description Enter the ipv4 context

Introduced 16.0.R1

forward-to-ip-interface *boolean*

Context **configure service vpls** *service-name* **routed-vpls multicast ipv4**

Description Forward IPv4 multicast from RVPLS to L3 interface

Default false

Introduced 16.0.R1

igmp-snooping

Context **configure service vpls** *service-name* **routed-vpls multicast ipv4**

Description Enter the igmp-snooping context

Introduced 16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **routed-vpls multicast ipv4 igmp-snooping**
Description	VPLS L3 interface as a multicast router port
Default	false
Introduced	16.0.R1

ipv6

Context	**configure service vpls** *service-name* **routed-vpls multicast**
Description	Enter the ipv6 context
Introduced	16.0.R1

forward-to-ip-interface *boolean*

Context	**configure service vpls** *service-name* **routed-vpls multicast ipv6**
Description	Forward IPv6 multicast from RVPLS to L3 interface
Default	false
Introduced	16.0.R1

mld-snooping

Context	**configure service vpls** *service-name* **routed-vpls multicast ipv6**
Description	Enter the mld-snooping context
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **routed-vpls multicast ipv6 mld-snooping**
Description	VPLS L3 interface as a multicast router port
Default	false
Introduced	16.0.R1

vxlan-ipv4-tep-ecmp *boolean*

Context	**configure service vpls** *service-name* **routed-vpls**
Description	Use ECMP on VXLAN IPv4 destinations for R-VPLS services
Default	false
Introduced	16.0.R1

sap [sap-id] *sap*

Context	**configure service vpls** *service-name*
Description	Enter the sap context
Introduced	16.0.R1

[sap-id] *sap*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	SAP identifier
Introduced	16.0.R1
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Accounting policy
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Administrative state of the SAP
Default	enable
Options	enable, disable
Introduced	16.0.R1

anti-spoof *keyword*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Type of anti-spoof filtering
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1

arp-host

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the arp-host context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **arp-host**
Description	Administrative state of ARP hosts
Default	disable
Options	enable, disable
Introduced	16.0.R1

host-limit *number*

Context	**configure service vpls** *service-name* **sap** *sap* **arp-host**
Description	Maximum number of ARP triggered hosts
Range	1 to 131071
Default	1
Introduced	16.0.R1

min-auth-interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **arp-host**
Description	Minimal time that has to pass before incoming ARPs of an active ARP host are re-authenticated
Range	1 to 6000
Default	15
Units	minutes
Introduced	16.0.R1

arp-reply-agent *keyword*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enable arp-reply-agent function
Options	true, with-subscr-ident
Introduced	16.0.R1

bandwidth *number*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	SAP bandwidth
Range	1 to 3200000000
Units	kilobps
Introduced	16.0.R1

calling-station-id *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Calling station ID
String Length	1 to 64
Introduced	16.0.R1

cflowd *boolean*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enable Cflowd collection and analysis on this SAP
Default	false
Introduced	16.0.R1

collect-stats *boolean*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Collect accounting statistics
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service vpls** *service-name* **sap** *sap* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service vpls** *service-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service vpls** *service-name* **sap** *sap* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service vpls** *service-name* **sap** *sap* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context **configure service vpls** *service-name* **sap** *sap* **cpu-protection**
Description CPM protection policy
Reference configure **system security cpu-protection policy** *number*
Introduced 16.0.R4

description *string*

Context **configure service vpls** *service-name* **sap** *sap*
Description Text description
String Length 1 to 160
Introduced 16.0.R1

dhcp

Context **configure service vpls** *service-name* **sap** *sap*
Description Enter the dhcp context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**
Description Administrative state of DHCP
Default disable
Options enable, disable
Introduced 16.0.R4

description *string*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**
Description Add/remove a text description for DHCP.
String Length 1 to 80
Introduced 16.0.R4

lease-populate

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

max-leases *number*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp lease-populate**

Description Maximum number of DHCPv4 leases

Range 0 to 131071

Default 0

Introduced 16.0.R4

option-82

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

action *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82**

Description What to do with DHCP option 82.

Default keep

Options replace, drop, keep

Introduced 16.0.R4

circuit-id

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82**

Description Enter the circuit-id context

Introduced 16.0.R4

ascii-tuple

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 circuit-id**
Description	Use ascii-tuple in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 circuit-id**
Description	Use user-defined hexadecimal string in the option
String Length	1 to 66
Introduced	16.0.R4
Notes	This element is part of a choice

none

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 circuit-id**
Description	Do not include the circuit-id.
Introduced	16.0.R4
Notes	This element is part of a choice

vlan-ascii-tuple

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 circuit-id**
Description	Use vlan-ascii-tuple in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

remote-id

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82**
Description	Enter the remote-id context
Introduced	16.0.R4

ascii-string *string*

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 remote-id**
Description	Use user-defined ASCII string in the option.
String Length	1 to 32
Introduced	16.0.R4
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 remote-id**
Description	Use user-defined hexadecimal string in the option.
String Length	1 to 66
Introduced	16.0.R4
Notes	This element is part of a choice

mac

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 remote-id**
Description	Use MAC address in the option.
Introduced	16.0.R4
Notes	This element is part of a choice

none

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82 remote-id**
Description	Do not include the remote-id.
Introduced	16.0.R4
Notes	This element is part of a choice

vendor-specific-option

Context	**configure service vpls** *service-name* **sap** *sap* **dhcp option-82**
Description	Enter the vendor-specific-option context
Introduced	16.0.R4

client-mac-address *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82 vendor-specific-option**

Description Send a user-defined string in the Nokia vendor specific suboption.

String Length 1 to 32

Introduced 16.0.R4

system-id *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp option-82 vendor-specific-option**

Description Send the system ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

proxy-server

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**

Description Enter the proxy-server context

Introduced 16.0.R4

admin-state *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp proxy-server**

Description Administrative state of DHCP proxy

Default disable

Options enable, disable

Introduced 16.0.R1

emulated-server *ipv4-unicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp proxy-server**

Description IP address used as the DHCP server address in the context of this service

Introduced 16.0.R1

lease-time

Context **configure service vpls** *service-name* **sap** *sap* **dhcp proxy-server**

Description Enter the lease-time context

Introduced 16.0.R1

radius-override *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp proxy-server lease-time**

Description Use lease time information provided by RADIUS server

Default false

Introduced 16.0.R1

value *number*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp proxy-server lease-time**
Description DHCP lease time
Range 300 to 315446399
Units seconds
Introduced 16.0.R1

snoop *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **dhcp**
Description DHCP snooping.
Default false
Introduced 16.0.R4

dist-cpu-protection *string*

Context **configure service vpls** *service-name* **sap** *sap*
Description Distributed CPU protection policy for SAP
Reference configure **system security dist-cpu-protection policy** *string*
Introduced 16.0.R1

egress

Context **configure service vpls** *service-name* **sap** *sap*
Description Enter the egress context
Introduced 16.0.R1

agg-rate

Context **configure service vpls** *service-name* **sap** *sap* **egress**
Description Enter the agg-rate context
Introduced 16.0.R1

limit-unused-bandwidth *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **egress agg-rate**

Description Enable aggregate rate overrun protection

Default false

Introduced 16.0.R1

queue-frame-based-accounting *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **egress agg-rate**

Description Enable frame-based accounting on all policers and queues associated with context

Default false

Introduced 16.0.R1

rate *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress agg-rate**

Description Maximum total rate of all egress queues in kbps.

Range 1 to 3200000000

Introduced 16.0.R1

dest-mac-rewrite *mac-unicast-address-no-zero*

Context **configure service vpls** *service-name* **sap** *sap* **egress**

Description Destination MAC overwrite for unicast

Introduced 16.0.R5

filter

Context **configure service vpls** *service-name* **sap** *sap* **egress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress filter**

Description IP filter identifier

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress filter**

Description MAC filter identifier

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vpls** *service-name* **sap** *sap* **egress**

Description Enter the qos context

Introduced 16.0.R1

policer-control-policy

Context **configure service vpls** *service-name* **sap** *sap* **egress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Minimum amount of cumulative buffer space allowed
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos policer-control-policy**
Description	Policer control policy name
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

qinq-mark-top-only *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos**
Description	Mark top Q-tags
Default	false
Introduced	16.0.R1

sap-egress

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos**
Description	Enter the sap-egress context
Introduced	16.0.R1

overrides

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress**
Description	Enter the overrides context
Introduced	16.0.R1

hs-secondary-shaper *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	HS Secondary Shaper
String Length	1 to 32
Introduced	16.0.R1

hs-wrr-group [group-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hs-wrr-group context
Introduced	16.0.R4

[group-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	HS WRR group identifier
Reference	configure **qos sap-egress** *qos-policy-name* **hs-wrr-group** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

hs-class-weight *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Weight of scheduling class.
Range	1 | 2 | 4 | 8
Introduced	16.0.R1

percent-rate *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR percent.
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hs-wrr-group** *string*
Description	Administrative PIR.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

hsmda-queues

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the hsmda-queues context
Introduced	16.0.R1

packet-byte-offset *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Packet byte offset for HSMDA queue
Range	-64 to 31
Introduced	16.0.R1

queue [queue-id] *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**

Description Enter the queue context

Introduced 16.0.R4

[queue-id] *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Egress HSMDA queue ID

Reference configure **qos sap-egress** *qos-policy-name* **hsmda-queues queue** *number*

Introduced 16.0.R1

Notes This element is part of a list key

mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Buffer space allowed for the queue

Units bytes

Introduced 16.0.R1

rate (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Administrative PIR rate.

Introduced 16.0.R1

slope-policy *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*

Description Name of the slope-policy which is used to override the default slope-policy for the named buffer pool.

Reference configure **qos hsmda-slope-policy** *string*

Introduced 16.0.R1

wrr-weight *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues queue** *string*
Description	Weight value for the HSMDA queue
Range	1 to 32
Introduced	16.0.R1

secondary-shaper *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	Secondary shaper for the HSMDA queue
String Length	1 to 32
Introduced	16.0.R1

wrr-policy *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides hsmda-queues**
Description	WRR policy for the HSMDA queue
Reference	configure **qos hsmda-wrr-policy** *string*
Introduced	16.0.R1

policer [policer-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the policer context
Introduced	16.0.R4

[policer-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description CBS

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -64 to 31

Introduced 16.0.R1

percent-rate

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-egress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

avg-frame-overhead *decimal-number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Encapsulation overhead, in centipercent, used to translate packet-based rate to frame-based rate and vice versa.

Range 0.00 to 100.00

Introduced 16.0.R1

burst-limit (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Explicit shaping burst size of a queue.

Range 1 to 14000000

Options auto

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobytes

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

hs-class-weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Scheduling class weight.

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

hs-wred-queue

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Enter the hs-wred-queue context

Introduced 16.0.R1

policy *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **hs-wred-queue**

Description Name of slope-policy.

Reference configure **qos slope-policy** *string*

Introduced 16.0.R1

hs-wrr-weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description Weighted Round Robin (WRR) weight to parent with this queue into the scheduler

Range 1 to 127

Default 1

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Units kilobytes

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Monitor queue depth
Default	false
Introduced	16.0.R1

parent

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the parent context
Introduced	16.0.R1

cir-weight *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**
Description	CIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

weight *number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **parent**
Description	PIR parameter that overrides parent for queue group
Range	0 to 100
Introduced	16.0.R1

percent-rate

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **percent-rate** context
Introduced	16.0.R1

cir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress overrides queue** *string* **rate**

Description PIR rate

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Notes This element is part of a choice

policy-name *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress**

Description Policy identifier

Reference configure **qos sap-egress** *qos-policy-name*

Introduced 16.0.R1

port-redirect-group

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress**

Description Enter the port-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Policy for port redirect queue group

Reference configure **qos queue-group-templates egress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos sap-egress port-redirect-group**

Description Instance of port queue group

Range 1 to 65535

Introduced 16.0.R1

scheduler-policy

Context **configure service vpls** *service-name* **sap** *sap* **egress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

scheduler [scheduler-name] *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service vpls** *service-name* **sap** *sap* **egress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

eth-cfm

Context **configure service vpls** *service-name* **sap** *sap*

Description Enter the eth-cfm context

Introduced 16.0.R1

collect-lmm-fc-stats

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm**

Description Enter the collect-lmm-fc-stats context

Introduced 16.0.R1

fc *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**

Description Forwarding class name for which to create an individual profile-unaware counter

Options be, l2, af, l1, h2, ef, h1, nc

Max. Elements 8

Introduced 16.0.R1

fc-in-profile *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* **ma-admin-name** *string* **mep-id** *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the alarm-notification context

Introduced 16.0.R1

fng-alarm-time *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**

Description Time to expire before a Fault Notification Generation (FNG) alarm

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

fng-reset-time *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**

Description Time to expire before a Fault Notification Generation (FNG) alarm is reset

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

ccm *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Generate CCM messages

Default false

Introduced 16.0.R1

ccm-ltm-priority *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Priority of CCM and LTM messages transmitted by the MEP

Range 0 to 7

Default 7

Introduced 16.0.R1

ccm-padding-size *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Additional octets inserted into CCM PDU for data TLV padding

Range 3 to 1500

Introduced 16.0.R1

csf

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**

Description Receive period multiplier to time out CSF

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

direction *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Direction the MEP faces

Options down, up

Introduced 16.0.R1

eth-test

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP

Default true

Introduced 16.0.R1

lbm-svc-act-responder *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Process service activation streams encapsulated in ETH-CFM request Loopback Message

Default false

Introduced 16.0.R1

low-priority-defect *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Lowest priority defect that is allowed to generate a fault alarm

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

mac-address *mac-unicast-address*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

primary-vlan *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MEP provisioned using MA primary VLAN ID
Default	false
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

vmep-filter *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **eth-cfm**
Description	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Default	false
Introduced	16.0.R1

eth-ring *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Ethernet ring operation
Range	0 to 128
Introduced	16.0.R1

etree-leaf *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enable etree leaf access-circuit status
Default	false
Introduced	16.0.R1

etree-root-leaf-tag

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the etree-root-leaf-tag context
Introduced	16.0.R1

leaf *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **etree-root-leaf-tag**
Description	Leaf tag value
Range	1 to 4094
Introduced	16.0.R1
Notes	This element is mandatory

fdb

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the fdb context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Enable automatic update of MAC protect list
Default	false
Introduced	16.0.R1

discard-unknown-source *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Discard frames with unknown source
Default	false
Introduced	16.0.R1

discard-unprotected-dest-mac *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Enable/disable unprotected dest MAC restriction
Default	false
Introduced	16.0.R1

limit-mac-move *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	MAC move
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1

mac-learning

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Enter the mac-learning context
Introduced	16.0.R1

aging *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb mac-learning**
Description	Enable aging of MAC addresses
Default	true
Introduced	16.0.R1

learning *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb mac-learning**
Description	Enable learning of new MAC addresses
Default	true
Introduced	16.0.R1

mac-pinning *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Enable MAC address pinning on this SAP
Default	false
Introduced	16.0.R1

maximum-mac-addresses *number*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Maximum number of MAC entries in the FDB
Range	1 to 511999
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **fdb**
Description	Action to take whenever a relearn request for a protected MAC is received
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1

host-admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Administrative state of hosts
Default	enable
Options	enable, disable
Introduced	16.0.R1

host-lockout-policy *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Host lockout policy
Reference	configure **subscriber-mgmt host-lockout-policy** *string*
Introduced	16.0.R1

i-vpls-mac-flush

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the i-vpls-mac-flush context
Introduced	16.0.R1

bgp-evpn

Context **configure service vpls** *service-name* **sap** *sap* **i-vpls-mac-flush**

Description Enter the bgp-evpn context

Introduced 16.0.R1

send-to-bvpls *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **i-vpls-mac-flush bgp-evpn**

Description Send B-VPLS EVPN flush

Default true

Introduced 16.0.R1

igmp-host-tracking

Context **configure service vpls** *service-name* **sap** *sap*

Description Enter the igmp-host-tracking context

Introduced 16.0.R1

expiry-time *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Time during which the system continues to track inactive hosts

Range 1 to 65535

Units seconds

Introduced 16.0.R1

import-policy *string*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-group-sources *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast groups to be tracked per group

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast groups to be tracked

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Maximum number of multicast sources to be tracked

Range 1 to 1000

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-host-tracking**

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

igmp-snooping

Context **configure service vpls** *service-name* **sap** *sap*

Description Enter the igmp-snooping context

Introduced 16.0.R1

fast-leave *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Allow IGMP fast leave processing
Default	false
Introduced	16.0.R1

import-policy *string*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Maximum group source combinations
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Maximum groups allowed
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Maximum sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping**

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints**

Description Enter the level context

Introduced 16.0.R1

[level-id] *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints level** *number*

Description Bandwidth level ID for a multicast CAC constraint

Range 1 to 8

Introduced 16.0.R1

Notes This element is part of a list key

bandwidth *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints level** *number*

Description Bandwidth available for this level

Range 0 to 2147483647

Introduced 16.0.R1

Notes This element is mandatory

number-down [number-lag-port-down] *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints**

Description Enter the number-down context

Introduced 16.0.R1

[number-lag-port-down] *number*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints number-down** *number*

Description Number of LAG ports down

Range 1 to 64

Introduced 16.0.R1

Notes This element is part of a list key

level *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping mcac**
Description	Multicast CAC policy name
Reference	configure **mcac policy** *string*
Introduced	16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

mvr

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Enter the mvr context
Introduced	16.0.R1

from-vpls *string*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping mvr**
Description	MVR VPLS from which the multicast channels are taken
Reference	configure **service vpls** *service-name*
Introduced	16.0.R1

to-sap *sap*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping mvr**
Description	Multicast channels copied to SAP
Introduced	16.0.R1

query-interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Time between group-specific query messages
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Enable IP router alert check option
Default	true
Introduced	16.0.R1

send-queries *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Generate IGMP general queries
Default	false
Introduced	16.0.R1

static

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv4-multicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping static group** *ipv4-multicast-address*

Description Group address of multicast channel

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping static group** *ipv4-multicast-address*

Description Enter the **source** context

Introduced 16.0.R3

[source-address] *ipv4-unicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*

Description Source address of multicast channel.

Introduced 16.0.R3

Notes This element is part of a choice

This element is part of a list key

starg

Context **configure service vpls** *service-name* **sap** *sap* **igmp-snooping static group** *ipv4-multicast-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

version *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **igmp-snooping**
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

ingress

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the ingress context
Introduced	16.0.R1

filter

Context	**configure service vpls** *service-name* **sap** *sap* **ingress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress filter**
Description	IP filter identifier
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6 *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress filter**
Description	IPv6 filter identifier
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1

mac *string*

Context **configure service vpls** *service-name* **sap** *sap* **ingress filter**

Description MAC filter identifier

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vpls** *service-name* **sap** *sap* **ingress**

Description Enter the qos context

Introduced 16.0.R1

match-qinq-dot1p *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos**

Description Ingress match QinQ Dot1p

Options top, bottom

Introduced 16.0.R1

policer-control-policy

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos**

Description Enter the policer-control-policy context

Introduced 16.0.R1

overrides

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy**

Description Enter the overrides context

Introduced 16.0.R1

root

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides**

Description Enter the root context

Introduced 16.0.R4

max-rate (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Maximum frame-based bandwidth limit

Range 1 to 2000000000

Options max

Introduced 16.0.R1

priority-mbs-thresholds

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root**

Description Enter the priority-mbs-thresholds context

Introduced 16.0.R4

min-thresh-separation (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Minimum amount of separation buffer space

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

priority [priority-level] *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Description Enter the priority context

Introduced 16.0.R4

[priority-level] *number*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Priority level
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

mbs-contribution (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy overrides root priority-mbs-thresholds priority** *number*
Description	Minimum amount of cumulative buffer space allowed
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos policer-control-policy**
Description	Policer control policy name
Reference	configure **qos policer-control-policy** *string*
Introduced	16.0.R1

sap-ingress

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos**
Description	Enter the sap-ingress context
Introduced	16.0.R1

fp-redirect-group

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress**
Description	Enter the fp-redirect-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**
Description	Forwarding-plane queue group policy
Reference	configure **qos queue-group-templates ingress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress fp-redirect-group**
Description	Queue group instance
Range	1 to 65535
Introduced	16.0.R1

overrides

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress**
Description	Enter the overrides context
Introduced	16.0.R4

policer [policer-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides**
Description	Enter the policer context
Introduced	16.0.R4

[policer-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **policer** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

cbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description CBS

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

packet-byte-offset *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Size of each packet, handled by the policer, to be modified

Range -32 to 31

Introduced 16.0.R1

percent-rate

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**
Description	CIR percent rate
Range	0.00 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

pir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

stat-mode *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides policer** *string*
Description	Mode of statistics collected by the policer
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1

queue [queue-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides**
Description	Enter the queue context
Introduced	16.0.R4

[queue-id] *string*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Policer unique ID
Reference	configure **qos sap-ingress** *qos-policy-name* **queue** *number*
Introduced	16.0.R1
Notes	This element is part of a list key

adaptation-rule

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the adaptation-rule context

Introduced 16.0.R1

cir *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational CIR value

Options max, min, closest

Introduced 16.0.R1

pir *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **adaptation-rule**

Description Constraint used when deriving the operational PIR value

Options max, min, closest

Introduced 16.0.R1

cbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description CBS

Range 0 to 1048576

Units kilobps

Options auto

Introduced 16.0.R1

drop-tail

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the drop-tail context

Introduced 16.0.R1

low

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail**

Description Enter the low context

Introduced 16.0.R1

percent-reduction-from-mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **drop-tail low**

Description Percentage reduction from the MBS for a queue drop tail

Introduced 16.0.R1

mbs (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description MBS

Range 0 to 1073741824

Options auto

Introduced 16.0.R1

monitor-depth *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Monitor queue depth

Default false

Introduced 16.0.R1

parent

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description CIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **parent**

Description PIR parameter that overrides parent for queue group

Range 0 to 100

Introduced 16.0.R1

percent-rate

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*

Description Enter the **percent-rate** context

Introduced 16.0.R1

cir *decimal-number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**

Description CIR percent rate

Range 0.00 to 100.00

Introduced 16.0.R1

Notes This element is part of a choice

pir *decimal-number*

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **percent-rate**
Description	PIR percent rate
Range	0.01 to 100.00
Introduced	16.0.R1
Notes	This element is part of a choice

rate

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string*
Description	Enter the **rate** context
Introduced	16.0.R1

cir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	CIR rate
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

pir (*number* | *keyword*)

Context	**configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress overrides queue** *string* **rate**
Description	PIR rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Notes	This element is part of a choice

policy-name *string*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress**

Description Policy identifier

Reference configure **qos sap-ingress** *qos-policy-name*

Introduced 16.0.R1

queuing-type *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos sap-ingress**

Description Ingress queuing type

Options shared, multipoint-shared

Introduced 16.0.R1

scheduler-policy

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos**

Description Enter the scheduler-policy context

Introduced 16.0.R1

overrides

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy**

Description Enter the overrides context

Introduced 16.0.R4

scheduler [scheduler-name] *string*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides**

Description Enter the scheduler context

Introduced 16.0.R4

[scheduler-name] *string*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Scheduler override policy name

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

parent

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the parent context

Introduced 16.0.R1

cir-weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight that is used by the scheduler until the committed rate for feeding this queue

Range 0 to 100

Introduced 16.0.R1

weight *number*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **parent**

Description Weight to be used by the scheduler for feeding this queue

Range 0 to 100

Introduced 16.0.R1

rate

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string*

Description Enter the rate context

Introduced 16.0.R1

cir (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative CIR

Range 0 to 3200000000

Options sum, max

Introduced 16.0.R1

pir (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy overrides scheduler** *string* **rate**

Description Specifies the administrative PIR

Range 1 to 3200000000

Options max

Introduced 16.0.R1

policy-name *string*

Context **configure service vpls** *service-name* **sap** *sap* **ingress qos scheduler-policy**

Description Scheduler policy name

Reference configure **qos scheduler-policy** *string*

Introduced 16.0.R1

qtag-manipulation

Context **configure service vpls** *service-name* **sap** *sap* **ingress**

Description Enter the qtag-manipulation context

Introduced 16.0.R1

push-dot1q-vlan (*number* | *keyword*)

Context **configure service vpls** *service-name* **sap** *sap* **ingress qtag-manipulation**

Description VLAN translation information

Introduced 16.0.R1

Notes This element is part of a choice

l2pt

Context **configure service vpls** *service-name* **sap** *sap*
Description Enter the l2pt context
Introduced 16.0.R1

termination

Context **configure service vpls** *service-name* **sap** *sap* **l2pt**
Description Enter the termination context
Introduced 16.0.R1

protocols

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination**
Description Enter the protocols context
Introduced 16.0.R1

cdp *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable Cisco discovery protocol
Default false
Introduced 16.0.R1

dtp *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable dynamic trunking protocol
Default false
Introduced 16.0.R1

pagp *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable/disable port aggregation protocol.
Default false
Introduced 16.0.R1

stp *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable/disable spanning tree protocols stp/mstp/pvst/rstp.
Default true
Introduced 16.0.R1

udld *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable/disable unidirectional link detection.
Default false
Introduced 16.0.R1

vtp *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **l2pt termination protocols**
Description Enable/disable virtual trunk protocol.
Default false
Introduced 16.0.R1

l2tpv3-session

Context **configure service vpls** *service-name* **sap** *sap*
Description Enter the l2tpv3-session context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **l2tpv3-session**
Description Adminstrative state of the entry.
Default disable
Options enable, disable
Introduced 16.0.R1

pseudo-wire

Context **configure service vpls** *service-name* **sap** *sap* **l2tpv3-session**

Description Enter the pseudo-wire context

Introduced 16.0.R1

ethernet

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vpls** *service-name* **sap** *sap* **l2tpv3-session pseudo-wire**

Description Ethernet type.

Introduced 16.0.R1

Notes This element is part of a choice

ethernet-vlan-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context **configure service vpls** *service-name* **sap** *sap* **l2tpv3-session pseudo-wire**

Description Ethernet VLAN identifier.

Range 0 to 4095

Introduced 16.0.R1

Notes This element is part of a choice

router

Context **configure service vpls** *service-name* **sap** *sap* **l2tpv3-session**

Description Enter the router context

Introduced 16.0.R1

group *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **l2tpv3-session router**
Description	Tunnel group name.
String Length	1 to 32
Introduced	16.0.R1

router-instance *router-instance-base-vprn-loose*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **l2tpv3-session router**
Description	Router instance hosting the l2tpv3 session.
String Length	1 to 64
Introduced	16.0.R1

vc-id *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **l2tpv3-session**
Description	VC identifier.
Range	1 to 4294967295
Introduced	16.0.R1

lag

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the lag context
Introduced	16.0.R1

link-map-profile *number*

Context	**configure service vpls** *service-name* **sap** *sap* **lag**
Description	LAG link map profile applied to a SAP or network interface
Range	1 to 64
Introduced	16.0.R1

per-link-hash

Context	**configure service vpls** *service-name* **sap** *sap* **lag**
Description	Enter the per-link-hash context
Introduced	16.0.R1

class *number*

Context	**configure service vpls** *service-name* **sap** *sap* **lag per-link-hash**
Description	Class used on LAG egress when using weighted per-link-hash
Range	1 to 3
Default	1
Introduced	16.0.R1

weight *number*

Context	**configure service vpls** *service-name* **sap** *sap* **lag per-link-hash**
Description	Weight used on LAG egress when using weighted per-link-hash
Range	1 to 1024
Default	1
Introduced	16.0.R1

mc-ring

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the mc-ring context
Introduced	16.0.R1

ring-node *string*

Context	**configure service vpls** *service-name* **sap** *sap* **mc-ring**
Description	Name for the ring node associated with this SAP
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

mld-snooping

Context **configure service vpls** *service-name* **sap** *sap*

Description Enter the mld-snooping context

Introduced 16.0.R1

fast-leave *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Allow IGMP fast leave processing

Default false

Introduced 16.0.R1

import-policy *string*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Maximum groups allowed

Range 1 to 16000

Introduced 16.0.R1

mrouter-port *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Port as a multicast router port

Default false

Introduced 16.0.R1

mvr

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Enter the mvr context

Introduced 16.0.R1

from-vpls *string*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping mvr**

Description MVR VPLS from which the multicast channels are taken

Reference configure **service vpls** *service-name*

Introduced 16.0.R1

to-sap *sap*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping mvr**

Description The SAP to which the multicast channels are copied

Introduced 16.0.R1

query-interval *number*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Time between two consecutive host-query messages

Range 2 to 1024

Default 125

Units seconds

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping**

Description Time between group-specific query messages

Range 1 to 50

Default 10

Units deciseconds

Introduced 16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	Enable IP router alert check option
Default	true
Introduced	16.0.R1

send-queries *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	Generate IGMP general queries
Default	false
Introduced	16.0.R1

static

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv6-multicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping static group** *ipv6-multicast-address*

Description Group address of multicast channel

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping static group** *ipv6-multicast-address*

Description Enter the **source** context

Introduced 16.0.R3

[source-address] *ipv6-unicast-address*

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*

Description Source address of multicast channel.

Introduced 16.0.R3

Notes This element is part of a choice

This element is part of a list key

starg

Context **configure service vpls** *service-name* **sap** *sap* **mld-snooping static group** *ipv6-multicast-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

version *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **mld-snooping**
Description	MLD protocol version.
Default	2
Options	1, 2
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Monitor operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

multi-service-site *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Multi service site name
String Length	1 to 32
Introduced	16.0.R1

oper-group *string*

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Operational group
Reference	configure **service oper-group** *string*
Introduced	16.0.R4
Notes	This element is part of a choice

pim-snooping

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the pim-snooping context
Introduced	16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **sap** *sap* **pim-snooping**

Description Maximum groups for this interface

Range 1 to 16000

Introduced 16.0.R1

process-cpm-traffic-on-sap-down *boolean*

Context **configure service vpls** *service-name* **sap** *sap*

Description Process CPM traffic on SAP down event

Default false

Introduced 16.0.R4

radius-auth-policy *string*

Context **configure service vpls** *service-name* **sap** *sap*

Description RADIUS authentication policy

Reference configure **subscriber-mgmt radius-authentication-policy** *string*

Introduced 16.0.R4

shcv-policy-ipv4 *string*

Context **configure service vpls** *service-name* **sap** *sap*

Description Subscriber host connectivity verification policy for IPv4

Reference configure **subscriber-mgmt shcv-policy** *external-named-item*

Introduced 16.0.R1

split-horizon-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name* **sap** *sap*

Description Split horizon group

Reference configure **service vpls** *service-name* **split-horizon-group** *string*

Introduced 16.0.R1

static-host

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the static-host context
Introduced	16.0.R1

ipv4 [ip] *ipv4-address* mac *mac-unicast-address*

Context	**configure service vpls** *service-name* **sap** *sap* **static-host**
Description	Enter the ipv4 context
Introduced	16.0.R1

[ip] *ipv4-address*

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	IP address
Introduced	16.0.R1
Notes	This element is part of a list key

mac *mac-unicast-address*

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	MAC address
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Administrative state of the static host
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp-string *ancp-string*

Context **configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description ANCP string

String Length 1 to 63

Introduced 16.0.R1

int-dest-id *int-dest-id*

Context **configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description Intermediate destination ID

String Length 1 to 32

Introduced 16.0.R1

shcv

Context **configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description Enter the shcv context

Introduced 16.0.R4

sla-profile *string*

Context **configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description SLA profile name

Reference configure **subscriber-mgmt sla-profile** *external-named-item*

Introduced 16.0.R1

sub-profile *string*

Context **configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*

Description Sub-profile name

Reference configure **subscriber-mgmt sub-profile** *external-named-item*

Introduced 16.0.R1

subscriber-id

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address*
Description	Enter the subscriber-id context
Introduced	16.0.R1

string *subscriber-id*

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Subscriber identification
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

use-sap-id

Context	**configure service vpls** *service-name* **sap** *sap* **static-host ipv4** *ipv4-address* **mac** *mac-unicast-address* **subscriber-id**
Description	Use the SAP id as subscriber ID
Introduced	16.0.R1
Notes	This element is part of a choice

stp

Context	**configure service vpls** *service-name* **sap** *sap*
Description	Enter the stp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **sap** *sap* **stp**
Description	Enable/disable spanning-tree-protocol
Default	enable
Options	enable, disable
Introduced	16.0.R1

auto-edge *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **stp**

Description Enable/disable automatic detection of edge-port.

Default true

Introduced 16.0.R1

edge-port *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **stp**

Description Configure as edge-port.

Default false

Introduced 16.0.R1

link-type *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **stp**

Description Configure STP link-type

Default pt-pt

Options pt-pt, shared

Introduced 16.0.R1

path-cost *number*

Context **configure service vpls** *service-name* **sap** *sap* **stp**

Description Configure path-cost

Range 1 to 200000000

Default 10

Introduced 16.0.R1

port-num *number*

Context **configure service vpls** *service-name* **sap** *sap* **stp**

Description Configure virtual port number

Range 1 to 2047

Introduced 16.0.R1

priority *number*

Context **configure service vpls** *service-name* **sap** *sap* **stp**
Description Configure STP priority
Range 0 to 255
Default 128
Introduced 16.0.R1

root-guard *boolean*

Context **configure service vpls** *service-name* **sap** *sap* **stp**
Description Enable/disable STP root-guard
Default false
Introduced 16.0.R1

sub-sla-mgmt

Context **configure service vpls** *service-name* **sap** *sap*
Description Enter the sub-sla-mgmt context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description Administrative state of subscriber management on this SAP
Default disable
Options enable, disable
Introduced 16.0.R1

defaults

Context **configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description Enter the defaults context
Introduced 16.0.R1

int-dest-id

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Enter the int-dest-id context
Introduced	16.0.R1

string *int-dest-id*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the configured string
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

top-q-tag

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults int-dest-id**
Description	Use the top Q-tag of this SAP
Introduced	16.0.R1
Notes	This element is part of a choice

sla-profile *string*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default SLA profile for hosts on this SAP
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1

sub-profile *string*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Default subscriber profile used for subscribers on this SAP
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1

subscriber-id

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults**
Description	Enter the subscriber-id context
Introduced	16.0.R1

auto-id

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**
Description	Use auto-generated subscriber identification string
Introduced	16.0.R1
Notes	This element is part of a choice

sap-id

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**
Description	Use SAP ID as default subscriber identification string
Introduced	16.0.R1
Notes	This element is part of a choice

string *subscriber-id*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt defaults subscriber-id**
Description	Subscriber ID policy name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a choice

mac-da-hashing *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description	Use destination MAC address instead of subscriber ID to select egress LAG link
Default	false
Introduced	16.0.R1

single-sub-parameters

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description	Enter the single-sub-parameters context
Introduced	16.0.R1

non-sub-traffic

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**
Description	Enter the non-sub-traffic context
Introduced	16.0.R1

sla-profile *string*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	SLA profile applicable for all non-subscriber traffic
Reference	configure **subscriber-mgmt sla-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

sub-profile *string*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	Subscriber IDprofile applied for all non-subscriber traffic
Reference	configure **subscriber-mgmt sub-profile** *external-named-item*
Introduced	16.0.R1
Notes	This element is mandatory

subscriber-id *subscriber-id*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters non-sub-traffic**
Description	Subscriber ID applied for all non-subscriber traffic
String Length	1 to 32
Introduced	16.0.R1

profiled-traffic-only *boolean*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt single-sub-parameters**
Description	Include all traffic in subscriber profile
Default	false
Introduced	16.0.R1

sub-ident-policy *string*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description	Subscriber identification policy used on this SAP
Reference	configure **subscriber-mgmt sub-ident-policy** *external-named-item*
Introduced	16.0.R1

subscriber-limit *sap-subscriber-limit*

Context	**configure service vpls** *service-name* **sap** *sap* **sub-sla-mgmt**
Description	Maximum number of subscribers on this SAP
Default	1
Introduced	16.0.R1

service-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name*
Description	Unique service ID; cannot be used by any other service, regardless of service type
Range	1 to 2147483647
Introduced	16.0.R1

service-mtu *number*

Context	**configure service vpls** *service-name*
Description	MTU size
Range	1 to 9194
Default	1514
Introduced	16.0.R1

shcv-policy-ipv4 *string*

Context	**configure service vpls** *service-name*
Description	Subscriber host connectivity verification policy for IPv4
Reference	configure **subscriber-mgmt shcv-policy** *external-named-item*
Introduced	16.0.R1

split-horizon-group [shg-name] *string*

Context	**configure service vpls** *service-name*
Description	Enter the split-horizon-group context
Introduced	16.0.R1

[shg-name] *string*

Context	**configure service vpls** *service-name* **split-horizon-group** *string*
Description	Name for the service split-horizon-group
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure service vpls** *service-name* **split-horizon-group** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

fdb

Context	**configure service vpls** *service-name* **split-horizon-group** *string*
Description	Enter the fdb context
Introduced	16.0.R1

saps

Context	**configure service vpls** *service-name* **split-horizon-group** *string* **fdb**
Description	Enter the saps context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service vpls** *service-name* **split-horizon-group** *string* **fdb saps**
Description	Populate automatically MAC protect list with MAC addresses learned on SDP with split horizon group
Default	false
Introduced	16.0.R1

discard-unprotected-dest-mac *boolean*

Context	**configure service vpls** *service-name* **split-horizon-group** *string* **fdb saps**
Description	Enable/disable unprotected dest MAC restriction
Default	false
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **split-horizon-group** *string* **fdb saps**
Description	Action to take whenever a relearn request for a protected MAC is received
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1

residential *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **split-horizon-group** *string*
Description	Define as a residential split horizon group
Default	false
Introduced	16.0.R1

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Context	**configure service vpls** *service-name*
Description	Enter the spoke-sdp context
Introduced	16.0.R1

[sdp-bind-id] *sdp-bind-id*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP Binding identifier as <sdp-id>:<vc-id>. sdp-id - [1..32767] vc-id - [1..4294967295].
String Length	3 to 16
Introduced	16.0.R4
Notes	This element is part of a list key

accounting-policy *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Policy to collect accounting statistics
Reference	configure **log accounting-policy** *number*
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Administrative state of this Service SDP binding
Default	enable
Options	enable, disable
Introduced	16.0.R1

bfd-liveness

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the bfd-liveness context

Introduced 16.0.R1

encap *keyword*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **bfd-liveness**

Description BFD encapsulation used on this SDP binding

Default ipv4

Options ipv4

Introduced 16.0.R1

bfd-template *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description BFD template associated with SDP binding

Reference configure **bfd bfd-template** *string*

Introduced 16.0.R1

block-on-mesh-failure *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enable blocking after all configured SDPs or endpoints are in operationally down state

Default false

Introduced 16.0.R1

collect-stats *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Allow agent to collect accounting statistics

Default false

Introduced 16.0.R1

control-word *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Use the control word as preferred
Default	false
Introduced	16.0.R1

cpu-protection

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the cpu-protection context
Introduced	16.0.R1

eth-cfm-monitoring

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Enter the **eth-cfm-monitoring** context
Introduced	16.0.R1

aggregate

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Apply rate limit to the sum of the per peer packet rates
Introduced	16.0.R1
Notes	This element is part of a choice

car

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection eth-cfm-monitoring**
Description	Eth-CFM packets to be ignored when enforcing overall rate
Introduced	16.0.R1
Notes	This element is part of a choice

mac-monitoring

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	Monitor MAC for CPU protection
Introduced	16.0.R1
Notes	This element is part of a choice

policy-id *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **cpu-protection**
Description	CPM protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dhcp

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the dhcp context
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **dhcp**
Description	Text description
String Length	1 to 80
Introduced	16.0.R4

snoop *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **dhcp**
Description	Allow DHCP snooping of DHCP messages on the SAP or SDP
Default	false
Introduced	16.0.R4

egress

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the egress context
Introduced	16.0.R1

filter

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description	Enter the filter context
Introduced	16.0.R1

ip *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**
Description	IP filter ID
Reference	configure **filter ip-filter** *filter-name*
Introduced	16.0.R1

ipv6 *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**
Description	IPv6 filter identifier
Reference	configure **filter ipv6-filter** *filter-name*
Introduced	16.0.R1

mac *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress filter**

Description MAC filter ID

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

mfib-allowed-mda-destinations

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the mfib-allowed-mda-destinations context

Introduced 16.0.R1

mda [mda-id] *slot-mda*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress mfib-allowed-mda-destinations**

Description Enter the mda context

Introduced 16.0.R1

[mda-id] *slot-mda*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress mfib-allowed-mda-destinations mda** *slot-mda*

Description MFIB allowed MDA destination

Introduced 16.0.R1

Notes This element is part of a list key

qos

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos**

Description Enter the network context

Introduced 16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network**
Description	Egress network policy name applied to this SDP binding
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

port-redirect-group

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network**
Description	Enter the port-redirect-group context
Introduced	16.0.R1

group-name *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**
Description	Policy for port queue group for this SDP binding
Reference	configure **qos queue-group-templates egress queue-group** *string*
Introduced	16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress qos network port-redirect-group**
Description	Instance of the port egress Queue Group for this SDP binding.
Range	1 to 65535
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **egress**
Description	Static MPLS VC label that is used to send packets to the far end device through this SDP
Range	16 to 1048575
Introduced	16.0.R1

endpoint

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the endpoint context
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Name of endpoint to which this SDP bind is attached.
Reference	configure **service vpls** *service-name* **endpoint** *string*
Introduced	16.0.R1

precedence (*number* | *keyword*)

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **endpoint**
Description	Precedence of this SDP bind when there are multiple SDP binds attached to one service endpoint
Default	4
Introduced	16.0.R1

entropy-label

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Whether the use of entropy-label is enabled or not.
Introduced	16.0.R1
Notes	This element is part of a choice

eth-cfm

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the eth-cfm context
Introduced	16.0.R1

collect-lmm-fc-stats

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the collect-lmm-fc-stats context
Introduced	16.0.R1

fc *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Forwarding class name for which to create an individual profile-unaware counter
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

fc-in-profile *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm collect-lmm-fc-stats**
Description	Individual counters to create for the specified Forwarding Class
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Elements	8
Introduced	16.0.R1

collect-lmm-stats *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Collect statistics for OAM-PM Loss Measurement Message (LMM) tests
Default	false
Introduced	16.0.R1

mep md-admin-name *string* ma-admin-name *string* mep-id *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Enter the mep context
Introduced	16.0.R1

md-admin-name *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique domain name
Reference	configure **eth-cfm domain** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

ma-admin-name *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Unique association name
Reference	configure **eth-cfm domain** *admin-name* **association** *admin-name*
Introduced	16.0.R1
Notes	This element is part of a list key

mep-id *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Maintenance association end point identifier
Range	1 to 8191
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Administrative state of the MEP
Default	disable
Options	enable, disable
Introduced	16.0.R1

ais

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the ais context
Introduced	16.0.R1

client-meg-level *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Client MEG level for AIS message generation
Range	1 to 7
Max. Elements	7
Introduced	16.0.R1

interface-support *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Allow generation of AIS PDUs based on the associated endpoint state
Default	false
Introduced	16.0.R1

interval *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Transmission interval for AIS messages
Range	1 | 60
Default	1
Units	seconds
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Lowest priority defect for MEP AIS generation
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1

priority *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **ais**
Description	Priority of AIS messages originated by the node
Range	0 to 7
Default	7
Introduced	16.0.R1

alarm-notification

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Enter the alarm-notification context
Introduced	16.0.R1

fng-alarm-time *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

fng-reset-time *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **alarm-notification**
Description	Time to expire before a Fault Notification Generation (FNG) alarm is reset
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1

ccm *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Generate CCM messages
Default	false
Introduced	16.0.R1

ccm-ltm-priority *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Priority of CCM and LTM messages transmitted by the MEP
Range	0 to 7
Default	7
Introduced	16.0.R1

ccm-padding-size *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Additional octets inserted into CCM PDU for data TLV padding
Range	3 to 1500
Introduced	16.0.R1

csf

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the csf context

Introduced 16.0.R1

multiplier *decimal-number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **csf**

Description Receive period multiplier to time out CSF

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

description *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

direction *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Direction the MEP faces

Options down, up

Introduced 16.0.R1

eth-test

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the eth-test context

Introduced 16.0.R1

bit-error-threshold *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Lowest priority defect threshold for the bit error trap to generate a fault alarm

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

test-pattern

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test**

Description Enter the test-pattern context

Introduced 16.0.R1

crc-tlv *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Generate a CRC checksum

Default false

Introduced 16.0.R1

pattern *keyword*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **eth-test test-pattern**

Description Test pattern for eth-test frames

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

fault-propagation *keyword*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Fault propagation for the MEP

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

grace

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*

Description Enter the grace context

Introduced 16.0.R1

eth-ed

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-ed context

Introduced 16.0.R1

max-rx-defect-window *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Value to compare to received peer value, lower is used as maximum ETH-ED expected defect window

Range 1 to 86400

Units seconds

Introduced 16.0.R1

priority *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmission priority for ETH-ED PDUs

Range 0 to 7

Introduced 16.0.R1

rx-eth-ed *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Receive and process ETH-ED PDUs

Default true

Introduced 16.0.R1

tx-eth-ed *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-ed**

Description Transmit ETH-ED PDUs

Default false

Introduced 16.0.R1

eth-vsm-grace

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace**

Description Enter the eth-vsm-grace context

Introduced 16.0.R1

rx-eth-vsm-grace *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**

Description Allow the reception and processing of the Nokia ETH-CFM Grace PDU on the MEP

Default true

Introduced 16.0.R1

tx-eth-vsm-grace *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number* **grace eth-vsm-grace**
Description	Allow the transmission of the Nokia ETH-CFM Grace PDU from the MEP
Default	true
Introduced	16.0.R1

lbm-svc-act-responder *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Process service activation streams encapsulated in ETH-CFM request Loopback Message
Default	false
Introduced	16.0.R1

low-priority-defect *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Lowest priority defect that is allowed to generate a fault alarm
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1

mac-address *mac-unicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep** **md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MAC address for the MEP
Introduced	16.0.R1

one-way-delay-threshold *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	Threshold for one way delay test
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1

primary-vlan *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm mep md-admin-name** *string* **ma-admin-name** *string* **mep-id** *number*
Description	MEP provisioned using MA primary VLAN ID
Default	false
Introduced	16.0.R1

squelch-ingress-levels *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	ETH-CFM PDUs to be silently discarded
Range	0 to 7
Max. Elements	8
Introduced	16.0.R1

vmep-filter *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **eth-cfm**
Description	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Default	false
Introduced	16.0.R1

etree-leaf *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enable etree leaf access-circuit status
Default	false
Introduced	16.0.R1

etree-root-leaf-tag *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	E-tree root leaf tag status
Default	false
Introduced	16.0.R1

fdb

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the fdb context
Introduced	16.0.R1

auto-learn-mac-protect *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	Populate automatically MAC protect list with source MAC addresses learned on SDP
Default	false
Introduced	16.0.R1

discard-unknown-source *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	Discard packets with unknown destination MAC addresses
Default	false
Introduced	16.0.R1

limit-mac-move *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	MAC move
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1

mac-learning

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	Enter the mac-learning context
Introduced	16.0.R1

aging *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb mac-learning**
Description	Enable aging of MAC addresses
Default	true
Introduced	16.0.R1

learning *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb mac-learning**
Description	Enable learning of new MAC addresses
Default	true
Introduced	16.0.R1

mac-pinning *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	MAC address pinning in active status
Default	false
Introduced	16.0.R1

maximum-mac-addresses *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	Maximum MAC entries in the FDB from this SDP
Range	1 to 511999
Introduced	16.0.R1

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **fdb**
Description	Action when a relearn request for a protected MAC is received on the SDP
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1

force-vc-forwarding *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	VC forwarding status
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1

hash-label

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the **hash-label** context
Introduced	16.0.R1

signal-capability

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **hash-label**
Description	To signal the hash label capability to the remote PE.
Introduced	16.0.R1
Notes	This element is part of a choice

i-vpls-mac-flush

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the i-vpls-mac-flush context
Introduced	16.0.R1

bgp-evpn

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **i-vpls-mac-flush**
Description	Enter the bgp-evpn context
Introduced	16.0.R1

send-to-bvpls *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **i-vpls-mac-flush bgp-evpn**
Description	Send B-VPLS EVPN flush
Default	true
Introduced	16.0.R1

igmp-snooping

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the igmp-snooping context
Introduced	16.0.R1

fast-leave *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	Allow IGMP fast leave processing
Default	false
Introduced	16.0.R1

import-policy *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-group-sources *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum group source combinations

Range 1 to 32000

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum groups allowed

Range 1 to 16000

Introduced 16.0.R1

maximum-number-sources *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Maximum sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

mcac

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	Port as a multicast router port
Default	false
Introduced	16.0.R1

query-interval *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	Time between group-specific query messages
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Number of retries to cope with message loss.

Range 2 to 7

Default 2

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Enable IP router alert check option

Default true

Introduced 16.0.R1

send-queries *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Generate IGMP general queries

Default false

Introduced 16.0.R1

static

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**

Description Enter the static context

Introduced 16.0.R1

group [group-address] *ipv4-multicast-address*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv4-multicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping static group** *ipv4-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

version *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **igmp-snooping**
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

ignore-standby-signaling *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Ignore standby-bit received from TLDP peers when performing internal tasks

Default false

Introduced 16.0.R1

ingress

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the ingress context

Introduced 16.0.R1

filter

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the filter context

Introduced 16.0.R1

ip *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IP filter ID

Reference configure **filter ip-filter** *filter-name*

Introduced 16.0.R1

ipv6 *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description IPv6 filter identifier

Reference configure **filter ipv6-filter** *filter-name*

Introduced 16.0.R1

mac *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress filter**

Description MAC filter ID

Reference configure **filter mac-filter** *filter-name*

Introduced 16.0.R1

qos

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**

Description Forwarding-plane queue group policy for this SDP binding

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network fp-redirect-group**
Description	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Range	1 to 65535
Introduced	16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress qos network**
Description	Ingress network policy name applied to this SDP binding
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

vc-label *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **ingress**
Description	Static MPLS VC label used by the far end device to send packets through this SDP
Range	1 to 1048575
Introduced	16.0.R1

l2pt

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the l2pt context
Introduced	16.0.R1

termination

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt**
Description	Enter the termination context
Introduced	16.0.R1

protocols

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination**

Description Enter the protocols context

Introduced 16.0.R1

cdp *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable Cisco discovery protocol

Default false

Introduced 16.0.R1

dtp *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable dynamic trunking protocol

Default false

Introduced 16.0.R1

pagp *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable/disable port aggregation protocol.

Default false

Introduced 16.0.R1

stp *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable/disable spanning tree protocols stp/mstp/pvst/rstp.

Default true

Introduced 16.0.R1

udld *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable/disable unidirectional link detection.

Default false

Introduced 16.0.R1

vtp *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **l2pt termination protocols**

Description Enable/disable virtual trunk protocol.

Default false

Introduced 16.0.R1

mld-snooping

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*

Description Enter the mld-snooping context

Introduced 16.0.R1

fast-leave *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Allow IGMP fast leave processing

Default false

Introduced 16.0.R1

import-policy *string*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Import policy that filters IGMP packets

Reference configure **policy-options policy-statement** *string*

Introduced 16.0.R1

maximum-number-groups *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Maximum groups allowed

Range 1 to 16000

Introduced 16.0.R1

mrouter-port *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Port as a multicast router port

Default false

Introduced 16.0.R1

query-interval *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Time between two consecutive host-query messages

Range 2 to 1024

Default 125

Units seconds

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**

Description Time between group-specific query messages

Range 1 to 50

Default 10

Units deciseconds

Introduced 16.0.R1

query-response-interval *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	Number of retries to cope with message loss.
Range	2 to 7
Default	2
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	Enable IP router alert check option
Default	true
Introduced	16.0.R1

send-queries *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	Generate IGMP general queries
Default	false
Introduced	16.0.R1

static

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv6-multicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping static**
Description	Enter the group context
Introduced	16.0.R1

[group-address] *ipv6-multicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	Group address of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv6-unicast-address*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address* **source** *ipv6-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping static group** *ipv6-multicast-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

version *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **mld-snooping**
Description	MLD protocol version.
Default	2
Options	1, 2
Introduced	16.0.R1

monitor-oper-group *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Operational group identifier that affect the state of this SDP bind
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

oper-group *string*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Operational group identifier
Reference	configure **service oper-group** *string*
Introduced	16.0.R1
Notes	This element is part of a choice

pim-snooping

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the pim-snooping context
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **pim-snooping**
Description	Maximum groups for this interface
Range	1 to 16000
Introduced	16.0.R1

pw-status

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the pw-status context
Introduced	16.0.R1

signaling *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **pw-status**
Description	Whether this SDP binding supports pseudowire status signaling.
Default	true
Introduced	16.0.R1

split-horizon-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Name of the split horizon group where the spoke SDP bind belongs to
Reference	configure **service vpls** *service-name* **split-horizon-group** *string*
Introduced	16.0.R1

stp

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Enter the stp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**
Description	Enable/disable spanning-tree-protocol
Default	enable
Options	enable, disable
Introduced	16.0.R1

auto-edge *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**

Description Enable/disable automatic detection of edge-port.

Default true

Introduced 16.0.R1

edge-port *boolean*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**

Description Configure as edge-port.

Default false

Introduced 16.0.R1

link-type *keyword*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**

Description Configure STP link-type

Default pt-pt

Options pt-pt, shared

Introduced 16.0.R1

path-cost *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**

Description Configure path-cost

Range 1 to 200000000

Default 10

Introduced 16.0.R1

port-num *number*

Context **configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**

Description Configure virtual port number

Range 1 to 2047

Introduced 16.0.R1

priority *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**
Description	Configure STP priority
Range	0 to 255
Default	128
Introduced	16.0.R1

root-guard *boolean*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id* **stp**
Description	Enable/disable STP root-guard
Default	false
Introduced	16.0.R1

vc-type *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Default	ether
Options	ether, vlan
Introduced	16.0.R1

vlan-vc-tag *number*

Context	**configure service vpls** *service-name* **spoke-sdp** *sdp-bind-id*
Description	SDP bind VC tag
Range	0 to 4094
Introduced	16.0.R1

stp

Context	**configure service vpls** *service-name*
Description	Enter the stp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **stp**
Description	Enable/disable spanning tree protocol (STP)
Default	disable
Options	enable, disable
Introduced	16.0.R1

forward-delay *number*

Context	**configure service vpls** *service-name* **stp**
Description	Configure forward-delay
Range	4 to 30
Default	15
Introduced	16.0.R1

hello-time *number*

Context	**configure service vpls** *service-name* **stp**
Description	Configure hello-time
Range	1 to 10
Default	2
Introduced	16.0.R1

hold-count *number*

Context	**configure service vpls** *service-name* **stp**
Description	Configure BPDU transmit hold count
Range	1 to 20
Default	6
Introduced	16.0.R1

maximum-age *number*

Context	**configure service vpls** *service-name* **stp**
Description	Configure maximum STP information age
Range	6 to 40
Default	20
Introduced	16.0.R1

mode *keyword*

Context	**configure service vpls** *service-name* **stp**
Description	Configure protocol version
Default	rstp
Options	rstp, comp-dot1w, dot1w, mstp, pmstp
Introduced	16.0.R1

priority *number*

Context	**configure service vpls** *service-name* **stp**
Description	Configure STP bridge priority
Range	0 to 65535
Default	32768
Introduced	16.0.R1

temp-flooding *number*

Context	**configure service vpls** *service-name*
Description	Temporary flooding
Range	3 to 600
Units	seconds
Introduced	16.0.R1

vpn-id *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name*
Description	VPN identifier for the service
Range	1 to 2147483647
Introduced	16.0.R1

vxlan

Context	**configure service vpls** *service-name*
Description	Enter the vxlan context
Introduced	16.0.R1

instance [vxlan-instance] *number*

Context	**configure service vpls** *service-name* **vxlan**
Description	Enter the instance context
Introduced	16.0.R1

[vxlan-instance] *number*

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	VXLAN instance
Range	1 to 2
Default	1
Introduced	16.0.R1
Notes	This element is part of a list key

assisted-replication

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the assisted-replication context
Introduced	16.0.R1

leaf

Context	**configure service vpls** *service-name* **vxlan instance** *number* **assisted-replication**
Description	Enter the **leaf** context
Introduced	16.0.R1

acttime *number*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **assisted-replication leaf**
Description	Time for the leaf to wait before sending traffic to a new replicator
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

replicator

Context	**configure service vpls** *service-name* **vxlan instance** *number* **assisted-replication**
Description	AR role as replicator
Introduced	16.0.R1
Notes	This element is part of a choice

egress-vtep [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the egress-vtep context
Introduced	16.0.R4

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vpls** *service-name* **vxlan instance** *number* **egress-vtep** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Description	configure egress vtep address for entry
Introduced	16.0.R4
Notes	This element is part of a list key

fdb

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the fdb context
Introduced	16.0.R4

discard-unknown-source *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb**
Description	Enable/disable discarding of frames with unknown source
Default	false
Introduced	16.0.R4

mac-learning

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb**
Description	Enter the mac-learning context
Introduced	16.0.R4

aging *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb mac-learning**
Description	Enable/disable aging of MAC addresses
Default	false
Introduced	16.0.R4

learning *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb mac-learning**
Description	Enable/disable learning of new MAC addresses
Default	false
Introduced	16.0.R4

maximum-mac-addresses *number*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb**
Description	Maximum number of MAC entries in the FDB from this vxlan instance
Range	1 to 511999
Introduced	16.0.R4

protected-src-mac-violation-action *keyword*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **fdb**
Description	Action when a relearn request for a protected MAC is received
Options	discard
Introduced	16.0.R1

igmp-snooping

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the **igmp-snooping** context
Introduced	16.0.R5

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **igmp-snooping**
Description	Configure as a multicast router port.
Default	false
Introduced	16.0.R5

mld-snooping

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the **mld-snooping** context
Introduced	16.0.R5

mrouter-port *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **mld-snooping**
Description	Configure as a multicast router port.
Default	false
Introduced	16.0.R5

network

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enter the network context
Introduced	16.0.R1

ingress

Context **configure service vpls** *service-name* **vxlan instance** *number* **network**

Description Enter the ingress context

Introduced 16.0.R1

qos

Context **configure service vpls** *service-name* **vxlan instance** *number* **network ingress**

Description Enter the qos context

Introduced 16.0.R1

network

Context **configure service vpls** *service-name* **vxlan instance** *number* **network ingress qos**

Description Enter the network context

Introduced 16.0.R1

fp-redirect-group

Context **configure service vpls** *service-name* **vxlan instance** *number* **network ingress qos network**

Description Enter the fp-redirect-group context

Introduced 16.0.R1

group-name *string*

Context **configure service vpls** *service-name* **vxlan instance** *number* **network ingress qos network fp-redirect-group**

Description Forwarding-plane queue group policy for this SDP binding

Reference configure **qos queue-group-templates ingress queue-group** *string*

Introduced 16.0.R1

instance *number*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **network ingress qos network fp-redirect-group**
Description	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Range	1 to 65535
Introduced	16.0.R1

policy-name *string*

Context	**configure service vpls** *service-name* **vxlan instance** *number* **network ingress qos network**
Description	Ingress network policy name applied to this SDP binding
Reference	configure **qos network** *network-policy-name*
Introduced	16.0.R1

rx-discard-on-ndf *keyword*

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	specifies the type of multicast traffic discarded on the receive side of when the vxlan instance is NDF
Default	bm
Options	bm, bum, none
Introduced	16.0.R4

source-vtep-security *boolean*

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	Enable/disable source vtep security
Default	false
Introduced	16.0.R4

vni *number*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **vxlan instance** *number*
Description	VNI of the VXLAN
Range	1 to 16777215
Introduced	16.0.R1
Notes	This element is mandatory

source-vtep (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vpls** *service-name* **vxlan**
Description	Vxlan source virtual tunnel endpoint information
Introduced	16.0.R4

wlan-gw

Context	**configure service vpls** *service-name*
Description	Enter the wlan-gw context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vpls** *service-name* **wlan-gw**
Description	Administrative state of WLAN-GW
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vpls** *service-name* **wlan-gw**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

sap-template *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vpls** *service-name* **wlan-gw**
Description	Template used when creating internal SAPs towards ISAs
Reference	configure **service template vpls-sap-template** *string*
Introduced	16.0.R1

vprn [service-name] *service-name*

Context	**configure service**
Description	Enter the vprn context
Introduced	16.0.R1

[service-name] *service-name*

Context	**configure service vprn** *service-name*
Description	Name of the service
String Length	1 to 64
Introduced	16.0.R4
Notes	This element is part of a list key

aaa

Context	**configure service vprn** *service-name*
Description	Enter the aaa context
Introduced	16.0.R1

remote-servers

Context	**configure service vprn** *service-name* **aaa**
Description	Enter the remote-servers context
Introduced	16.0.R1

radius

Context	**configure service vprn** *service-name* **aaa remote-servers**
Description	Enter the radius context
Introduced	16.0.R1

access-algorithm *keyword*

Context **configure service vprn** *service-name* **aaa remote-servers radius**

Description Configure the algorithm used to access the set of RADIUS servers.

Default direct

Options direct, round-robin

Introduced 16.0.R1

accounting *boolean*

Context **configure service vprn** *service-name* **aaa remote-servers radius**

Description Enable/disable RADIUS command accounting.

Default false

Introduced 16.0.R1

accounting-port *number*

Context **configure service vprn** *service-name* **aaa remote-servers radius**

Description Port number on which to contact RADIUS server for accounting requests.

Range 1 to 65535

Default 1813

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **aaa remote-servers radius**

Description Enable/disable RADIUS protocol operation.

Default enable

Options enable, disable

Introduced 16.0.R1

authorization *boolean*

Context **configure service vprn** *service-name* **aaa remote-servers radius**

Description Enable/disable RADIUS command authorization.

Default false

Introduced 16.0.R1

interactive-authentication *boolean*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Enable/disable RADIUS interactive authentication.
Default	false
Introduced	16.0.R1

port *number*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Port number on which to contact RADIUS server.
Range	1 to 65535
Default	1812
Introduced	16.0.R1

server [index] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[index] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers radius server** *number*
Description	Unique number which identifies a specific RADIUS server.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **aaa remote-servers radius server** *number*
Description	IP address of Radius server.
Introduced	16.0.R1
Notes	This element is mandatory

secret *encrypted-leaf*

Context	**configure service vprn** *service-name* **aaa remote-servers radius server** *number*
Description	The secret key associated with RADIUS server. The value of secret cannot be set to an empty string.
String Length	1 to 114
Introduced	16.0.R1
Notes	This element is mandatory

server-retry *number*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Number of attempts to retry contacting RADIUS.
Range	1 to 10
Default	3
Introduced	16.0.R1

server-timeout *number*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Timeout for a response from RADIUS server.
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R1

use-default-template *boolean*

Context	**configure service vprn** *service-name* **aaa remote-servers radius**
Description	Enable/disable RADIUS default template.
Default	false
Introduced	16.0.R1

tacplus

Context	**configure service vprn** *service-name* **aaa remote-servers**
Description	Enter the tacplus context
Introduced	16.0.R1

accounting

Context **configure service vprn** *service-name* **aaa remote-servers tacplus**

Description Enter the accounting context

Introduced 16.0.R1

record-type *keyword*

Context **configure service vprn** *service-name* **aaa remote-servers tacplus accounting**

Description Configure the type of accounting record packet that is to be sent to the TACACS+ server.

Default stop-only

Options start-stop, stop-only

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **aaa remote-servers tacplus**

Description Enable/disable TACACS+ protocol operation.

Default enable

Options enable, disable

Introduced 16.0.R1

authorization

Context **configure service vprn** *service-name* **aaa remote-servers tacplus**

Description Enter the authorization context

Introduced 16.0.R1

use-priv-lvl *boolean*

Context **configure service vprn** *service-name* **aaa remote-servers tacplus authorization**

Description Enable/disable the privilege level mapping.

Default false

Introduced 16.0.R1

interactive-authentication *boolean*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus**
Description	Enable/disable TACACS+ interactive authentication.
Default	false
Introduced	16.0.R1

priv-lvl-map

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus**
Description	Enter the priv-lvl-map context
Introduced	16.0.R1

priv-lvl [level] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus priv-lvl-map**
Description	Enter the priv-lvl context
Introduced	16.0.R1

[level] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus priv-lvl-map priv-lvl** *number*
Description	Specifies the privilege level for this mapping.
Range	0 to 15
Introduced	16.0.R1
Notes	This element is part of a list key

user-profile-name *string*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus priv-lvl-map priv-lvl** *number*
Description	Specifies the user profile for this mapping.
Reference	configure **system security aaa local-profiles profile** *string*
Introduced	16.0.R1
Notes	This element is mandatory

server [index] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus**
Description	Enter the server context
Max. Elements	5
Introduced	16.0.R1

[index] *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus server** *number*
Description	Identifies a specific TACACS+ server.
Range	1 to 5
Introduced	16.0.R1
Notes	This element is part of a list key

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus server** *number*
Description	IP address of TACACS+ server.
Introduced	16.0.R1
Notes	This element is mandatory

port *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus server** *number*
Description	TCP port number on which to contact TACACS+ server.
Range	0 | 1 to 65535
Default	49
Introduced	16.0.R1

secret *encrypted-leaf*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus server** *number*
Description	The secret key associated with the TACACS+ server. The value of secret cannot be set to an empty string.
String Length	1 to 198
Introduced	16.0.R1
Notes	This element is mandatory

server-timeout *number*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus**
Description	Timeout for a response from an TACACS+ server.
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R1

use-default-template *boolean*

Context	**configure service vprn** *service-name* **aaa remote-servers tacplus**
Description	Enable/disable TACACS+ default template.
Default	true
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name*
Description	Administrative state of the mirror destination service
Default	disable
Options	enable, disable
Introduced	16.0.R1

aggregates

Context	**configure service vprn** *service-name*
Description	Enter the aggregates context
Introduced	16.0.R1

aggregate [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **aggregates**
Description	Enter the aggregate context
Introduced	16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description IP address prefix to match for aggregation

Introduced 16.0.R1

Notes This element is part of a list key

aggregator

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the aggregator context

Introduced 16.0.R1

address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **aggregator**

Description Aggregator IP address

Introduced 16.0.R1

as-number *number*

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **aggregator**

Description Aggregator Autonomous System Number (ASN)

Range 1 to max

Introduced 16.0.R1

as-set *boolean*

Context **configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)

Description Allow aggregate route as an AS-SET option

Default false

Introduced 16.0.R1

blackhole

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Enter the **blackhole** context
Introduced	16.0.R1

generate-icmp *boolean*

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **blackhole**
Description	Send ICMP unreachable messages when packets match an aggregate route with black-hole next-hop
Default	false
Introduced	16.0.R1
Notes	This element is part of a choice

community *community*

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Community name that is added to aggregate route
String Length	1 to 72
Max. Elements	12
Introduced	16.0.R1
Notes	This element is ordered by user

description *string*

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Address of indirect next hop
Introduced	16.0.R1
Notes	This element is part of a choice

local-preference *number*

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Default local preference if aggregate route is exported and advertised to BGP peers
Range	0 to 4294967295
Introduced	16.0.R1

summary-only *boolean*

Context	**configure service vprn** *service-name* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*)
Description	Advertise only the aggregate route and not the specific routes that make up the aggregate
Default	false
Introduced	16.0.R1

allow-export-bgp-vpn *boolean*

Context	**configure service vprn** *service-name*
Description	Include BGP-VPN routes for export
Default	false
Introduced	16.0.R1

auto-bind-tunnel

Context	**configure service vprn** *service-name*
Description	Enter the auto-bind-tunnel context
Introduced	16.0.R1

ecmp *number*

Context **configure service vprn** *service-name* **auto-bind-tunnel**

Description Maximum number of tunnels that can be used as ECMP next-hops for the VPRN

Range 1 to 32

Default 1

Introduced 16.0.R1

enforce-strict-tunnel-tagging *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel**

Description Consider only LSPs marked with an admin-tag for next-hop resolution

Default false

Introduced 16.0.R1

resolution *keyword*

Context **configure service vprn** *service-name* **auto-bind-tunnel**

Description Resolution method for tunnel selection

Default none

Options none, filter, any

Introduced 16.0.R4

resolution-filter

Context **configure service vprn** *service-name* **auto-bind-tunnel**

Description Enter the resolution-filter context

Introduced 16.0.R1

bgp *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**

Description Set BGP type for auto bind tunnel

Default true

Introduced 16.0.R1

gre *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting GRE type for auto-bind-tunnel
Default false
Introduced 16.0.R1

ldp *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting LDP type for auto-bind-tunnel
Default false
Introduced 16.0.R1

mpls-fwd-policy *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting MPLS Forwarding Policy type for auto-bind-tunnel
Default false
Introduced 16.0.R4

rib-api *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting RIB API type for auto-bind-tunnel
Default false
Introduced 16.0.R4

rsvp *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting RSVP-TE type for auto-bind-tunnel
Default false
Introduced 16.0.R1

sr-isis *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting SR-ISIS type for auto-bind-tunnel
Default false
Introduced 16.0.R1

sr-ospf *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting SR-OSPF type for auto-bind-tunnel
Default false
Introduced 16.0.R1

sr-policy *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting SR Policy type for auto-bind-tunnel
Default false
Introduced 16.0.R4

sr-te *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Enable/disable setting SR-TE type for auto-bind-tunnel
Default false
Introduced 16.0.R1

udp *boolean*

Context **configure service vprn** *service-name* **auto-bind-tunnel resolution-filter**
Description Set UDP type for auto-bind-tunnel
Default false
Introduced 16.0.R1

weighted-ecmp *boolean*

Context	**configure service vprn** *service-name* **auto-bind-tunnel**
Description	Allow weighted load-balancing
Default	false
Introduced	16.0.R1

autonomous-system *number*

Context	**configure service vprn** *service-name*
Description	Autonomous System number that is advertised to peer
Range	1 to max
Introduced	16.0.R1

bgp

Context	**configure service vprn** *service-name*
Description	Enter the bgp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **bgp**
Description	Administrative state of BGP instance
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-inactive *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Advertise inactive BGP routes to other BGP peers
Default	false
Introduced	16.0.R1

aggregator-id-zero *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Set router ID in aggregator path attribute to zero when BGP aggregates routes
Default	false
Introduced	16.0.R1

asn-4-byte *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Allow use of 4-byte ASNs
Default	true
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **bgp**
Description	Configure the BGP authentication key for all peers.
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure service vprn** *service-name* **bgp**
Description	The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

backup-path

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the backup-path context
Introduced	16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp backup-path**

Description Support unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp backup-path**

Description Support unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp backup-path**

Description Support labeled unicast IPv4 routes

Default false

Introduced 16.0.R1

best-path-selection

Context **configure service vprn** *service-name* **bgp**

Description Enter the best-path-selection context

Introduced 16.0.R1

always-compare-med

Context **configure service vprn** *service-name* **bgp best-path-selection**

Description Enter the always-compare-med context

Introduced 16.0.R1

med-value *keyword*

Context	**configure service vprn** *service-name* **bgp best-path-selection always-compare-med**
Description	MED path attribute
Default	off
Options	off, missing-med-zero, missing-med-infinity, on
Introduced	16.0.R1

strict-as *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection always-compare-med**
Description	Compare MED path attribute between routes from same neighbor AS only
Default	true
Introduced	16.0.R1

as-path-ignore

Context	**configure service vprn** *service-name* **bgp best-path-selection**
Description	Enter the as-path-ignore context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection as-path-ignore**
Description	Support IPv4 address family
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection as-path-ignore**
Description	Support IPv6 address family
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection as-path-ignore**
Description	Support labeled IPv4 address family
Default	false
Introduced	16.0.R1

deterministic-med *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection**
Description	Use deterministic MED for BGP instance
Default	false
Introduced	16.0.R1

ebgp-ibgp-equal

Context	**configure service vprn** *service-name* **bgp best-path-selection**
Description	Enter the ebgp-ibgp-equal context
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection ebgp-ibgp-equal**
Description	Load balance eBGP and iBGP paths for unlabeled unicast IPv4 routes
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection ebgp-ibgp-equal**
Description	Load balance eBGP and iBGP paths for unlabeled unicast IPv6 routes
Default	false
Introduced	16.0.R1

label-ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection ebgp-ibgp-equal**
Description	Load balance eBGP and iBGP paths for labeled unicast IPv4 routes
Default	false
Introduced	16.0.R1

ignore-nh-metric *boolean*

Context	**configure service vprn** *service-name* **bgp best-path-selection**
Description	Ignore next hop metric for best routes of base router BGP instance
Default	false
Introduced	16.0.R1

ignore-router-id

Context	**configure service vprn** *service-name* **bgp best-path-selection**
Description	Enter the ignore-router-id context
Introduced	16.0.R1

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Use Bidirectional Forwarding Detection
Default	false
Introduced	16.0.R1

client-reflect *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Enable client reflection of routes by the route reflector
Default	true
Introduced	16.0.R1

cluster

Context **configure service vprn** *service-name* **bgp**

Description Enter the cluster context

Introduced 16.0.R1

cluster-id *ipv4-address*

Context **configure service vprn** *service-name* **bgp cluster**

Description Cluster ID for route reflector server

Introduced 16.0.R1

connect-retry *number*

Context **configure service vprn** *service-name* **bgp**

Description BGP connect retry timer value

Range 1 to 65535

Default 120

Introduced 16.0.R1

damp-peer-oscillations

Context **configure service vprn** *service-name* **bgp**

Description Enter the damp-peer-oscillations context

Introduced 16.0.R1

error-interval *number*

Context **configure service vprn** *service-name* **bgp damp-peer-oscillations**

Description Error free interval after session reset, to return idle-hold-time to initial-wait

Range 0 to 2048

Default 30

Introduced 16.0.R1

idle-hold-time

Context **configure service vprn** *service-name* **bgp damp-peer-oscillations**

Description Enter the idle-hold-time context

Introduced 16.0.R1

initial-wait *number*

Context **configure service vprn** *service-name* **bgp damp-peer-oscillations idle-hold-time**

Description Time a session remains in idle state after session stabilized

Range 0 to 2048

Default 0

Introduced 16.0.R1

max-wait *number*

Context **configure service vprn** *service-name* **bgp damp-peer-oscillations idle-hold-time**

Description Maximum session idle time after repeated instability

Range 1 to 2048

Default 60

Introduced 16.0.R1

second-wait *number*

Context **configure service vprn** *service-name* **bgp damp-peer-oscillations idle-hold-time**

Description Time that doubles after each session failure within relatively short time

Range 1 to 2048

Default 5

Introduced 16.0.R1

damping *boolean*

Context **configure service vprn** *service-name* **bgp**

Description Use BGP route damping for learned routes defined within the route policy

Default false

Introduced 16.0.R1

description *string*

Context	**configure service vprn** *service-name* **bgp**
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dynamic-neighbor-limit *number*

Context	**configure service vprn** *service-name* **bgp**
Description	Dynamic peer limit for BGP instance
Range	1 to 8192
Introduced	16.0.R1

eibgp-loadbalance *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Use ECMP over BGP VPN and BGP routes
Default	false
Introduced	16.0.R1

enforce-first-as *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match
Default	false
Introduced	16.0.R1

error-handling

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the error-handling context
Introduced	16.0.R1

update-fault-tolerance *boolean*

Context	**configure service vprn** *service-name* **bgp error-handling**
Description	Consider non-critical errors as treat-as-withdraw and do not trigger session reset
Default	false
Introduced	16.0.R1

export

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the export context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp export**
Description	Export policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

family

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the family context
Introduced	16.0.R1

flow-ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp family**
Description	Support flowspec IPv4 address family
Default	false
Introduced	16.0.R1

flow-ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp family**
Description Support flowspec IPv6 address family
Default false
Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp family**
Description Support IPv4 address family
Default true
Introduced 16.0.R1

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp family**
Description Support IPv6 address family
Default false
Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp family**
Description Support labeled IPv4 address family
Default false
Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp family**
Description Support multicast IPv4 address family
Default false
Introduced 16.0.R1

mcast-ipv6 *boolean*

Context	**configure service vprn** *service-name* **bgp family**
Description	Support multicast IPv6 address family
Default	false
Introduced	16.0.R1

fast-external-failover *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.
Default	true
Introduced	16.0.R1

flowspec

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the flowspec context
Introduced	16.0.R1

validate-dest-prefix *boolean*

Context	**configure service vprn** *service-name* **bgp flowspec**
Description	Validate received IPv4 and IPv6 flowspec routes that contain destination prefix
Default	false
Introduced	16.0.R1

validate-redirect-ip *boolean*

Context	**configure service vprn** *service-name* **bgp flowspec**
Description	Validate the redirect-to-IPv4 action attached to flowspec IPv4 routes received by the BGP instance
Default	false
Introduced	16.0.R1

graceful-restart

Context **configure service vprn** *service-name* **bgp**

Description Enter the graceful-restart context

Introduced 16.0.R1

gr-notification *boolean*

Context **configure service vprn** *service-name* **bgp graceful-restart**

Description Enable graceful restart capability indicating support for NOTIFICATION messages

Default false

Introduced 16.0.R1

long-lived

Context **configure service vprn** *service-name* **bgp graceful-restart**

Description Enter the long-lived context

Introduced 16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Advertise BGP routes marked as LLGR stale to BGP peers

Default false

Introduced 16.0.R1

advertised-stale-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Long-lived stale time that is advertised by router in its LLGR capability

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

family [family-type] *keyword*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Enter the family context

Introduced 16.0.R1

[family-type] *keyword*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived family** *keyword*

Description Address family type for LLGR

Options ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4

Introduced 16.0.R1

Notes This element is part of a list key

advertised-stale-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived family** *keyword*

Description Long-lived stale time that is advertised by router in its LLGR capability

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

helper-override-stale-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived family** *keyword*

Description Locally-imposed LLGR stale time

Range 0 to 16777215

Introduced 16.0.R1

forwarding-bits-set *keyword*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description BGP LLGR forwarding bit behavior for F bit in AFI or SAFI

Default none

Options none, all, non-fwd

Introduced 16.0.R1

helper-override-restart-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability

Range 0 to 4095

Introduced 16.0.R1

helper-override-stale-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Locally-imposed LLGR stale time

Range 0 to 16777215

Introduced 16.0.R1

without-no-export *boolean*

Context **configure service vprn** *service-name* **bgp graceful-restart long-lived**

Description Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability

Default false

Introduced 16.0.R1

restart-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart**

Description BGP graceful restart time

Range 0 to 4095

Default 120

Introduced 16.0.R1

stale-routes-time *number*

Context **configure service vprn** *service-name* **bgp graceful-restart**

Description Maximum time that stale routes maintain after graceful restart is initiated

Range 1 to 3600

Default 360

Introduced 16.0.R1

group [group-name] *string*

Context **configure service vprn** *service-name* **bgp**

Description Enter the group context

Introduced 16.0.R1

[group-name] *string*

Context **configure service vprn** *service-name* **bgp group** *string*

Description BGP peer group

String Length 1 to 32

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Administrative state of BGP group

Default enable

Options enable, disable

Introduced 16.0.R1

advertise-inactive *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Advertise inactive BGP routes to other BGP peers

Introduced 16.0.R1

aggregator-id-zero *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Set router ID in aggregator path attribute to zero when BGP aggregates routes

Introduced 16.0.R1

as-override *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Replace all instances of the peer's AS number with the local AS number in a BGP route's AS_PATH
Default	false
Introduced	16.0.R1

asn-4-byte *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Allow use of 4-byte ASNs
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Configure the BGP authentication key for all peers.
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.
Reference	configure **system security keychains keychain** *string*
Introduced	16.0.R3

bfd-liveness *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Use Bidirectional Forwarding Detection
Introduced	16.0.R1

capability-negotiation *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enable capability negotiation

Default true

Introduced 16.0.R1

client-reflect *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enable client reflection of routes by the route reflector

Introduced 16.0.R1

cluster

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the cluster context

Introduced 16.0.R1

cluster-id *ipv4-address*

Context **configure service vprn** *service-name* **bgp group** *string* **cluster**

Description Cluster ID for route reflector server

Introduced 16.0.R1

connect-retry *number*

Context **configure service vprn** *service-name* **bgp group** *string*

Description BGP connect retry timer value

Range 1 to 65535

Introduced 16.0.R1

damp-peer-oscillations

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the damp-peer-oscillations context

Introduced 16.0.R1

error-interval *number*

Context **configure service vprn** *service-name* **bgp group** *string* **damp-peer-oscillations**

Description Error free interval after session reset, to return idle-hold-time to initial-wait

Range 0 to 2048

Default 30

Introduced 16.0.R1

idle-hold-time

Context **configure service vprn** *service-name* **bgp group** *string* **damp-peer-oscillations**

Description Enter the idle-hold-time context

Introduced 16.0.R1

initial-wait *number*

Context **configure service vprn** *service-name* **bgp group** *string* **damp-peer-oscillations idle-hold-time**

Description Time a session remains in idle state after session stabilized

Range 0 to 2048

Default 0

Introduced 16.0.R1

max-wait *number*

Context **configure service vprn** *service-name* **bgp group** *string* **damp-peer-oscillations idle-hold-time**

Description Maximum session idle time after repeated instability

Range 1 to 2048

Default 60

Introduced 16.0.R1

second-wait *number*

Context **configure service vprn** *service-name* **bgp group** *string* **damp-peer-oscillations idle-hold-time**

Description Time that doubles after each session failure within relatively short time

Range 1 to 2048

Default 5

Introduced 16.0.R1

damping *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Use BGP route damping for learned routes defined within the route policy

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

dynamic-neighbor

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the dynamic-neighbor context

Introduced 16.0.R1

prefix [ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure service vprn** *service-name* **bgp group** *string* **dynamic-neighbor**

Description Enter the prefix context

Introduced 16.0.R1

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure service vprn** *service-name* **bgp group** *string* **dynamic-neighbor prefix** (*ipv4-prefix* | *ipv6-prefix*)

Description Prefix for dynamic BGP sessions in peer group

Introduced 16.0.R1

Notes This element is part of a list key

dynamic-neighbor-limit *number*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Dynamic peer limit for BGP instance

Range 1 to 8192

Introduced 16.0.R1

enforce-first-as *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match

Introduced 16.0.R1

error-handling

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the error-handling context

Introduced 16.0.R1

update-fault-tolerance *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **error-handling**

Description Consider non-critical errors as treat-as-withdraw and do not trigger session reset

Introduced 16.0.R1

export

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the export context

Introduced 16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp group** *string* **export**
Description	Export policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

family

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Enter the family context
Introduced	16.0.R1

flow-ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **family**
Description	Support flowspec IPv4 address family
Default	false
Introduced	16.0.R1

flow-ipv6 *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **family**
Description	Support flowspec IPv6 address family
Default	false
Introduced	16.0.R1

ipv4 *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **family**
Description	Support IPv4 address family
Default	false
Introduced	16.0.R1

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **family**

Description Support IPv6 address family

Default false

Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **family**

Description Support labeled IPv4 address family

Default false

Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **family**

Description Support multicast IPv4 address family

Default false

Introduced 16.0.R1

mcast-ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **family**

Description Support multicast IPv6 address family

Default false

Introduced 16.0.R1

fast-external-failover *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.

Introduced 16.0.R1

graceful-restart

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the graceful-restart context

Introduced 16.0.R1

gr-notification *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **graceful-restart**

Description Enable graceful restart capability indicating support for NOTIFICATION messages

Default false

Introduced 16.0.R1

long-lived

Context **configure service vprn** *service-name* **bgp group** *string* **graceful-restart**

Description Enter the long-lived context

Introduced 16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**

Description Advertise BGP routes marked as LLGR stale to BGP peers

Default false

Introduced 16.0.R1

advertised-stale-time *number*

Context **configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**

Description Long-lived stale time that is advertised by router in its LLGR capability

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

family [family-type] *keyword*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**
Description	Enter the family context
Introduced	16.0.R1

[family-type] *keyword*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description	Address family type for LLGR
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Introduced	16.0.R1
Notes	This element is part of a list key

advertised-stale-time *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived family** *keyword*
Description	Locally-imposed LLGR stale time
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1

forwarding-bits-set *keyword*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**
Description	BGP LLGR forwarding bit behavior for F bit in AFI or SAFI
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1

helper-override-restart-time *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**
Description	Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability
Range	0 to 4095
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**
Description	Locally-imposed LLGR stale time
Range	0 to 16777215
Introduced	16.0.R1

without-no-export *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart long-lived**
Description	Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability
Default	false
Introduced	16.0.R1

restart-time *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **graceful-restart**
Description	BGP graceful restart time
Range	0 to 4095
Default	300
Introduced	16.0.R1

stale-routes-time *number*

Context **configure service vprn** *service-name* **bgp group** *string* **graceful-restart**
Description Maximum time that stale routes maintain after graceful restart is initiated
Range 1 to 3600
Default 360
Introduced 16.0.R1

hold-time

Context **configure service vprn** *service-name* **bgp group** *string*
Description Enter the hold-time context
Introduced 16.0.R1

minimum-hold-time *number*

Context **configure service vprn** *service-name* **bgp group** *string* **hold-time**
Description Minimum hold time that is strictly enforced
Range 0 | 3 to 65536
Default 0
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **bgp group** *string* **hold-time**
Description BGP hold time
Range 0 | 3 to 65535
Introduced 16.0.R1

import

Context **configure service vprn** *service-name* **bgp group** *string*
Description Enter the import context
Introduced 16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp group** *string* **import**
Description	Specifies the name of the import policy. The name of the policy is limited to 64 characters except for the first policy.
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Introduced	16.0.R1

keepalive *number*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Time after which the keepalive message is sent
Range	0 to 21845
Introduced	16.0.R1

label-preference *number*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Introduced	16.0.R1

link-bandwidth

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Enter the link-bandwidth context
Introduced	16.0.R3

accept-from-ebgp

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth**

Description Enter the accept-from-ebgp context

Introduced 16.0.R4

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

add-to-received-ebgp

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth**

Description Enter the add-to-received-ebgp context

Introduced 16.0.R3

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R3

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R3

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R3

aggregate-used-paths

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth**

Description Enter the aggregate-used-paths context

Introduced 16.0.R4

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

send-to-ebgp

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth**

Description Enter the send-to-ebgp context

Introduced 16.0.R4

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **link-bandwidth send-to-ebgp**
Description Support Link Bandwidth EC to labeled unicast IPv4 routes
Default false
Introduced 16.0.R4

local-address (*union* | *string*)

Context **configure service vprn** *service-name* **bgp group** *string*
Description Local IP address used by group when communicating with BGP peers
Introduced 16.0.R1

local-as

Context **configure service vprn** *service-name* **bgp group** *string*
Description Enter the local-as context
Introduced 16.0.R1

as-number *number*

Context **configure service vprn** *service-name* **bgp group** *string* **local-as**
Description BGP AS number
Range 1 to 4294967295
Introduced 16.0.R1

prepend-global-as *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **local-as**
Description Prepend global AS number when advertising routes to EBGP peer
Default true
Introduced 16.0.R1

private *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **local-as**
Description	Hide local AS number in paths learned from peering
Default	false
Introduced	16.0.R1

local-preference *number*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Default value for local preference attribute if not specified in incoming routes
Range	0 to 4294967295
Introduced	16.0.R1

loop-detect *keyword*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Loop detection strategy in AS path
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1

med-out (*number* | *keyword*)

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Multi-Exit Discriminator (MED) identifier
Options	igp-cost
Introduced	16.0.R1

min-route-advertisement *number*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Minimum interval between successive updates of prefix toward peer
Range	1 to 255
Introduced	16.0.R1

monitor

Context **configure service vprn** *service-name* **bgp group** *string*

Description Enter the monitor context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **bgp group** *string* **monitor**

Description Administrative state of BMP monitoring

Default disable

Options enable, disable

Introduced 16.0.R1

all-stations *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **monitor**

Description Use all BMP monitoring stations

Default false

Introduced 16.0.R1

route-monitoring

Context **configure service vprn** *service-name* **bgp group** *string* **monitor**

Description Enter the route-monitoring context

Introduced 16.0.R1

post-policy *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **monitor route-monitoring**

Description Send post-policy monitoring messages

Default false

Introduced 16.0.R1

pre-policy *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure service vprn** *service-name* **bgp group** *string* **monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure service vprn** *service-name* **bgp group** *string* **monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

multihop *number*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	TTL value in the IP header of packets sent to a peer
Range	1 to 255
Introduced	16.0.R1

next-hop-self *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Advertise routes to peer using next hop path attribute set to itself
Default	false
Introduced	16.0.R1

passive *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Enable passive mode for BGP group
Default false
Introduced 16.0.R1

path-mtu-discovery *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Allow path MTU discovery for associated TCP connections
Introduced 16.0.R1

peer-as *number*

Context **configure service vprn** *service-name* **bgp group** *string*
Description AS number for all remote peers in group
Range 1 to 4294967295
Introduced 16.0.R1

peer-ip-tracking *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Allow BGP peer tracking
Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Route preference for routes learned from all peers
Range 1 to 255
Introduced 16.0.R1

prefix-limit [family] *keyword*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Enter the prefix-limit context
Introduced 16.0.R1

[family] *keyword*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Address family to which the limit applies
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Introduced	16.0.R1
Notes	This element is part of a list key

idle-timeout *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Time that BGP peering remains idle before reconnecting to peers
Range	1 to 1024
Introduced	16.0.R1

log-only *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Send warning message if specified threshold or limit is reached, without disabling BGP peer session
Default	false
Introduced	16.0.R1

maximum *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Specifies the maximum number of routes that can be learned from this peer.
Range	1 to 4294967295
Introduced	16.0.R3
Notes	This element is mandatory

post-import *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Apply prefix limit only to number of routes accepted by import policies
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **bgp group** *string* **prefix-limit** *keyword*
Description	Threshold value that triggers a warning message
Range	1 to 100
Default	90
Introduced	16.0.R1

remove-private

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **remove-private**
Description	Remove private AS numbers up to first public ASN encountered
Default	false
Introduced	16.0.R1

skip-peer-as *boolean*

Context	**configure service vprn** *service-name* **bgp group** *string* **remove-private**
Description	Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN
Default	false
Introduced	16.0.R1

send-communities

Context	**configure service vprn** *service-name* **bgp group** *string*
Description	Enter the send-communities context
Introduced	16.0.R1

extended *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for external communities.

Introduced 16.0.R1

large *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for large communities.

Introduced 16.0.R1

standard *boolean*

Context **configure service vprn** *service-name* **bgp group** *string* **send-communities**

Description Enables the sending of community attribute to the peer for non-external communities.

Introduced 16.0.R1

split-horizon *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Prevent routes from being reflected back to peer that sends best route

Introduced 16.0.R1

static-group *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Use group for static peers

Default true

Introduced 16.0.R1

third-party-nexthop *boolean*

Context **configure service vprn** *service-name* **bgp group** *string*

Description Send third party next hop to EBGP peers in same subnet as source peer

Introduced 16.0.R1

ttl-security *number*

Context **configure service vprn** *service-name* **bgp group** *string*
Description Minimum TTL value for incoming BGP packet
Range 1 to 255
Introduced 16.0.R1

type *keyword*

Context **configure service vprn** *service-name* **bgp group** *string*
Description BGP peer type
Default no-type
Options no-type, internal, external
Introduced 16.0.R1

hold-time

Context **configure service vprn** *service-name* **bgp**
Description Enter the hold-time context
Introduced 16.0.R1

minimum-hold-time *number*

Context **configure service vprn** *service-name* **bgp hold-time**
Description Minimum hold time that is strictly enforced
Range 0 | 3 to 65535
Default 0
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **bgp hold-time**
Description BGP hold time
Range 0 | 3 to 65535
Default 90
Introduced 16.0.R1

ibgp-multipath *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Add IBGP routes with multiple next hops to route table
Default	false
Introduced	16.0.R1

import

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp import**
Description	Import policy name
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Default	false
Introduced	16.0.R1

keepalive *number*

Context	**configure service vprn** *service-name* **bgp**
Description	Time after which the keepalive message is sent
Range	0 to 21845
Default	30
Introduced	16.0.R1

label-preference *number*

Context	**configure service vprn** *service-name* **bgp**
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Default	170
Introduced	16.0.R1

local-as

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the local-as context
Introduced	16.0.R1

as-number *number*

Context	**configure service vprn** *service-name* **bgp local-as**
Description	BGP AS number
Range	1 to 4294967295
Introduced	16.0.R1

prepend-global-as *boolean*

Context	**configure service vprn** *service-name* **bgp local-as**
Description	Prepend global AS number when advertising routes to EBGP peer
Default	true
Introduced	16.0.R1

private *boolean*

Context	**configure service vprn** *service-name* **bgp local-as**
Description	Hide local AS number in paths learned from peering
Default	false
Introduced	16.0.R1

local-preference *number*

Context **configure service vprn** *service-name* **bgp**

Description Default value for local preference attribute if not specified in incoming routes

Default 100

Introduced 16.0.R1

loop-detect *keyword*

Context **configure service vprn** *service-name* **bgp**

Description Loop detection strategy in AS path

Default ignore-loop

Options drop-peer, ignore-loop, off, discard-route

Introduced 16.0.R1

med-out (*number* | *keyword*)

Context **configure service vprn** *service-name* **bgp**

Description Multi-Exit Discriminator (MED) identifier

Options igp-cost

Introduced 16.0.R1

min-route-advertisement *number*

Context **configure service vprn** *service-name* **bgp**

Description Minimum interval between successive updates of prefix toward peer

Range 1 to 255

Default 30

Introduced 16.0.R1

monitor

Context **configure service vprn** *service-name* **bgp**

Description Enter the monitor context

Introduced 16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **bgp monitor**
Description	Administrative state of BMP monitoring
Default	disable
Options	enable, disable
Introduced	16.0.R1

all-stations *boolean*

Context	**configure service vprn** *service-name* **bgp monitor**
Description	Use all BMP monitoring stations
Default	false
Introduced	16.0.R1

route-monitoring

Context	**configure service vprn** *service-name* **bgp monitor**
Description	Enter the route-monitoring context
Introduced	16.0.R1

post-policy *boolean*

Context	**configure service vprn** *service-name* **bgp monitor route-monitoring**
Description	Send post-policy monitoring messages
Default	false
Introduced	16.0.R1

pre-policy *boolean*

Context	**configure service vprn** *service-name* **bgp monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure service vprn** *service-name* **bgp monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure service vprn** *service-name* **bgp monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

multihop *number*

Context	**configure service vprn** *service-name* **bgp**
Description	TTL value entered in IP header of packets sent to peer
Range	1 to 255
Introduced	16.0.R1

multipath

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the multipath context
Introduced	16.0.R1

ebgp *number*

Context	**configure service vprn** *service-name* **bgp multipath**
Description	Maximum multipaths per prefix or NLRI when best path is an EBGP learned route
Range	1 to 64
Introduced	16.0.R1

ibgp *number*

Context **configure service vprn** *service-name* **bgp multipath**

Description Maximum multipaths per prefix or NLRI when best path is an IBGP learned route

Range 1 to 64

Introduced 16.0.R1

max-paths *number*

Context **configure service vprn** *service-name* **bgp multipath**

Description Maximum multipaths per prefix or NLRI if EBGP or IBGP maximum paths do not apply

Range 1 to 64

Default 1

Introduced 16.0.R1

restrict *keyword*

Context **configure service vprn** *service-name* **bgp multipath**

Description Multipath restrictions

Default same-as-path-length

Options same-as-path-length, same-neighbor-as, exact-as-path

Introduced 16.0.R1

neighbor [ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure service vprn** *service-name* **bgp**

Description Enter the neighbor context

Introduced 16.0.R1

[ip-address] (*ipv4-address* | *ipv6-address*)

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description IP address that the neighbor uses to communicate with BGP peers

Introduced 16.0.R1

Notes This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Administrative state of BGP peer
Default	enable
Options	enable, disable
Introduced	16.0.R1

advertise-inactive *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Advertise inactive BGP routes to other BGP peers
Introduced	16.0.R1

aggregator-id-zero *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Set router ID in aggregator path attribute to zero when BGP aggregates routes
Introduced	16.0.R1

as-override *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Replace all instances of the peer's AS number with the local AS number in a BGP route's AS_PATH
Introduced	16.0.R1

asn-4-byte *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Allow use of 4-byte ASNs
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Configure the BGP authentication key for all peers.
String Length	1 to 370
Introduced	16.0.R1

authentication-keychain *string*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description The value specifies the keychain which will be used to sign and/or authenticate the BGP protocol stream.

Reference configure **system security keychains keychain** *string*

Introduced 16.0.R3

bfd-liveness *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Use Bidirectional Forwarding Detection

Introduced 16.0.R1

capability-negotiation *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enable capability negotiation

Introduced 16.0.R1

client-reflect *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enable client reflection of routes by the route reflector

Introduced 16.0.R1

cluster

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the cluster context

Introduced 16.0.R1

cluster-id *ipv4-address*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **cluster**

Description Cluster ID for route reflector server

Introduced 16.0.R1

connect-retry *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description BGP connect retry timer value

Range 1 to 65535

Introduced 16.0.R1

damp-peer-oscillations

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the damp-peer-oscillations context

Introduced 16.0.R1

error-interval *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations**

Description Error free interval after session reset, to return idle-hold-time to initial-wait

Range 0 to 2048

Default 30

Introduced 16.0.R1

idle-hold-time

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations**

Description Enter the idle-hold-time context

Introduced 16.0.R1

initial-wait *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Time a session remains in idle state after session stabilized

Range 0 to 2048

Default 0

Introduced 16.0.R1

max-wait *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Maximum session idle time after repeated instability

Range 1 to 2048

Default 60

Introduced 16.0.R1

second-wait *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **damp-peer-oscillations idle-hold-time**

Description Time that doubles after each session failure within relatively short time

Range 1 to 2048

Default 5

Introduced 16.0.R1

damping *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Use BGP route damping for learned routes defined within the route policy

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Text description

String Length 1 to 80

Introduced 16.0.R1

enforce-first-as *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Compare most recent ASN in AS_PATH attribute of each route to configured peer AS of session for match

Introduced 16.0.R1

error-handling

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the error-handling context

Introduced 16.0.R1

update-fault-tolerance *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **error-handling**

Description Consider non-critical errors as treat-as-withdraw and do not trigger session reset

Introduced 16.0.R1

export

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the export context

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **export**

Description Export policy name

String Length 1 to 255

Max. Elements 15

Min. Elements 1

Introduced 16.0.R1

Notes This element is ordered by user

family

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the family context

Introduced 16.0.R1

flow-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description Support flowspec IPv4 address family
Default false
Introduced 16.0.R1

flow-ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description Support flowspec IPv6 address family
Default false
Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description Support IPv4 address family
Default false
Introduced 16.0.R1

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description Support IPv6 address family
Default false
Introduced 16.0.R1

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**
Description Support labeled IPv4 address family
Default false
Introduced 16.0.R1

mcast-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support multicast IPv4 address family

Default false

Introduced 16.0.R1

mcast-ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **family**

Description Support multicast IPv6 address family

Default false

Introduced 16.0.R1

fast-external-failover *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Specifies whether the router should drop an external BGP session immediately when the local interface goes down, or whether the BGP session should be kept up until the holdtime expires.

Introduced 16.0.R1

graceful-restart

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the graceful-restart context

Introduced 16.0.R1

gr-notification *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**

Description Enable graceful restart capability indicating support for NOTIFICATION messages

Default false

Introduced 16.0.R1

long-lived

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**

Description Enter the long-lived context

Introduced 16.0.R1

advertise-stale-to-all-neighbors *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**

Description Advertise BGP routes marked as LLGR stale to BGP peers

Default false

Introduced 16.0.R1

advertised-stale-time *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**

Description Long-lived stale time that is advertised by router in its LLGR capability

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

family [family-type] *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**

Description Enter the family context

Introduced 16.0.R1

[family-type] *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*

Description Address family type for LLGR

Options ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4

Introduced 16.0.R4

Notes This element is part of a list key

advertised-stale-time *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*
Description	Long-lived stale time that is advertised by router in its LLGR capability
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

helper-override-stale-time *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived family** *keyword*
Description	Locally-imposed LLGR stale time
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1

forwarding-bits-set *keyword*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	BGP LLGR forwarding bit behavior for F bit in AFI or SAFI
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1

helper-override-restart-time *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**
Description	Locally-imposed restart time for all AFI/SAFI included in the peer's GR capability
Range	0 to 4095
Introduced	16.0.R1

helper-override-stale-time *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**

Description Locally-imposed LLGR stale time

Range 0 to 16777215

Introduced 16.0.R1

without-no-export *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart long-lived**

Description Allow LLGR stale routes to be advertised to any peer that did not signal the LLGR capability

Default false

Introduced 16.0.R1

restart-time *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**

Description BGP graceful restart time

Range 0 to 4095

Default 300

Introduced 16.0.R1

stale-routes-time *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **graceful-restart**

Description Maximum time that stale routes maintain after graceful restart is initiated

Range 1 to 3600

Default 360

Introduced 16.0.R1

group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Neighbor to group
Reference	configure **service vprn** *service-name* **bgp group** *string*
Introduced	16.0.R4
Notes	This element is mandatory

hold-time

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the hold-time context
Introduced	16.0.R1

minimum-hold-time *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **hold-time**
Description	Minimum hold time that is strictly enforced
Range	0 | 3 to 65536
Default	0
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **hold-time**
Description	BGP hold time
Range	0 | 3 to 65535
Introduced	16.0.R1

import

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **import**
Description	Specifies the name of the import policy. The name of the policy is limited to 64 characters except for the first policy.
String Length	1 to 255
Max. Elements	15
Min. Elements	1
Introduced	16.0.R1
Notes	This element is ordered by user

initial-send-delay-zero *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Bypass minimum route advertisement interval and send BGP updates as soon as session comes up
Introduced	16.0.R1

keepalive *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Time after which the keepalive message is sent
Range	0 to 21845
Introduced	16.0.R1

label-preference *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Route preference for routes learned from labeled unicast peers
Range	1 to 255
Introduced	16.0.R1

link-bandwidth

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the link-bandwidth context
Introduced	16.0.R4

accept-from-ebgp

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the accept-from-ebgp context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth accept-from-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

add-to-received-ebgp

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the add-to-received-ebgp context

Introduced 16.0.R3

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R3

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R3

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth add-to-received-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R3

aggregate-used-paths

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the aggregate-used-paths context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth aggregate-used-paths**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

send-to-ebgp

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth**

Description Enter the send-to-ebgp context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv4 routes

Default false

Introduced 16.0.R4

ipv6 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to unlabeled unicast IPv6 routes

Default false

Introduced 16.0.R4

label-ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **link-bandwidth send-to-ebgp**

Description Support Link Bandwidth EC to labeled unicast IPv4 routes

Default false

Introduced 16.0.R4

local-address (*union* | *string*)

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Local IP address used by neighbor when communicating with BGP peers

Introduced 16.0.R1

local-as

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the local-as context

Introduced 16.0.R1

as-number *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**

Description BGP AS number

Range 1 to 4294967295

Introduced 16.0.R1

prepend-global-as *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**

Description Prepend global AS number when advertising routes to EBGP peer

Default true

Introduced 16.0.R1

private *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **local-as**
Description Hide local AS number in paths learned from peering
Default false
Introduced 16.0.R1

local-preference *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Default value for local preference attribute if not specified in incoming routes
Range 0 to 4294967295
Introduced 16.0.R1

loop-detect *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Loop detection strategy in AS path
Options drop-peer, ignore-loop, off, discard-route
Introduced 16.0.R1

med-out (*number* | *keyword*)

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Multi-Exit Discriminator (MED) identifier
Options igp-cost
Introduced 16.0.R1

min-route-advertisement *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Minimum interval between successive updates of prefix toward peer
Range 1 to 255
Introduced 16.0.R1

monitor

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the monitor context

Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**

Description Administrative state of BMP monitoring

Default disable

Options enable, disable

Introduced 16.0.R1

all-stations *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**

Description Use all BMP monitoring stations

Default false

Introduced 16.0.R1

route-monitoring

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**

Description Enter the route-monitoring context

Introduced 16.0.R1

post-policy *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor route-monitoring**

Description Send post-policy monitoring messages

Default false

Introduced 16.0.R1

pre-policy *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor route-monitoring**
Description	Send pre-policy route monitoring messages
Default	false
Introduced	16.0.R1

station [station-name] *string*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor**
Description	Enter the station context
Max. Elements	8
Introduced	16.0.R1

[station-name] *string*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **monitor station** *string*
Description	BMP monitoring station
Reference	configure **bmp station** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

multihop *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	TTL value in the P header of packets sent to a peer
Range	1 to 255
Introduced	16.0.R1

next-hop-self *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Advertise routes to peer using next hop path attribute set to itself
Introduced	16.0.R1

passive *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Enable passive mode for BGP group
Introduced 16.0.R1

path-mtu-discovery *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Allow path MTU discovery for associated TCP connections
Introduced 16.0.R1

peer-as *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description AS number for the remote peer
Range 1 to 4294967295
Introduced 16.0.R1

peer-creation-type *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Peer creation type
Default static
Options static, dynamic
Introduced 16.0.R1

peer-ip-tracking *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Allow BGP peer tracking
Introduced 16.0.R1

preference *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Route preference for routes learned from all peers

Range 1 to 255

Introduced 16.0.R1

prefix-limit [family] *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the prefix-limit context

Introduced 16.0.R1

[family] *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
prefix-limit *keyword*

Description Address family to which the limit applies

Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4

Introduced 16.0.R1

Notes This element is part of a list key

idle-timeout *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
prefix-limit *keyword*

Description Time that BGP peering remains idle before reconnecting to peers

Range 1 to 1024

Introduced 16.0.R1

log-only *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
prefix-limit *keyword*

Description Send warning message if specified threshold or limit is reached, without disabling BGP peer session

Default false

Introduced 16.0.R1

maximum *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Specifies the maximum number of routes that can be learned from this peer.
Range	1 to 4294967295
Introduced	16.0.R3

post-import *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Apply prefix limit only to number of routes accepted by import policies
Default	false
Introduced	16.0.R1

threshold *number*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **prefix-limit** *keyword*
Description	Threshold value that triggers a warning message
Range	1 to 100
Default	90
Introduced	16.0.R1

remove-private

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context	**configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **remove-private**
Description	Remove private AS numbers up to first public ASN encountered
Default	false
Introduced	16.0.R1

skip-peer-as *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **remove-private**

Description Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN

Default false

Introduced 16.0.R1

send-communities

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Enter the send-communities context

Introduced 16.0.R1

extended *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**

Description Enables the sending of community attribute to the peer for external communities.

Introduced 16.0.R1

large *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**

Description Enables the sending of community attribute to the peer for large communities.

Introduced 16.0.R1

standard *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*) **send-communities**

Description Enables the sending of community attribute to the peer for non-external communities.

Introduced 16.0.R1

split-horizon *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)

Description Prevent routes from being reflected back to peer that sends best route (true)

Introduced 16.0.R1

third-party-nexthop *boolean*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Send third party next hop to EBGP peers in same subnet as source peer
Introduced 16.0.R1

ttl-security *number*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Minimum TTL value for incoming BGP packet
Range 1 to 255
Introduced 16.0.R1

type *keyword*

Context **configure service vprn** *service-name* **bgp neighbor** (*ipv4-address* | *ipv6-address*)
Description Peer as internal (IBGP) or external (EBGP)
Options no-type, internal, external
Introduced 16.0.R1

next-hop-resolution

Context **configure service vprn** *service-name* **bgp**
Description Enter the next-hop-resolution context
Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **bgp next-hop-resolution**
Description Policy that controls which IP routes are eligible to resolve BGP next hop addresses
String Length 1 to 64
Introduced 16.0.R1

path-mtu-discovery *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Allow path MTU discovery for associated TCP connections
Default	false
Introduced	16.0.R1

peer-ip-tracking *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Allow BGP peer tracking
Default	false
Introduced	16.0.R1

peer-tracking-policy *string*

Context	**configure service vprn** *service-name* **bgp**
Description	Policy for BGP peer tracking on router instance
String Length	1 to 64
Introduced	16.0.R1

preference *number*

Context	**configure service vprn** *service-name* **bgp**
Description	Route preference for routes learned from all peers
Range	1 to 255
Default	170
Introduced	16.0.R1

rapid-withdrawal *boolean*

Context	**configure service vprn** *service-name* **bgp**
Description	Send BGP withdrawals immediately without MRAI timer expiring
Default	false
Introduced	16.0.R1

remove-private

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the remove-private context
Introduced	16.0.R1

limited *boolean*

Context	**configure service vprn** *service-name* **bgp remove-private**
Description	Remove private ASNs up to the first public ASN encountered
Default	false
Introduced	16.0.R1

skip-peer-as *boolean*

Context	**configure service vprn** *service-name* **bgp remove-private**
Description	Keep a private ASN in the AS path if that ASN is the same as the BGP peer ASN
Default	false
Introduced	16.0.R1

rib-management

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the rib-management context
Introduced	16.0.R1

ipv4

Context	**configure service vprn** *service-name* **bgp rib-management**
Description	Enter the ipv4 context
Introduced	16.0.R1

leak-import

Context	**configure service vprn** *service-name* **bgp rib-management ipv4**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp rib-management ipv4 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context	**configure service vprn** *service-name* **bgp rib-management ipv4**
Description	Enter the route-table-import context
Introduced	16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **bgp rib-management ipv4 route-table-import**
Description	Policy that controls the importation of active routes from IP route table into one of BGP RIBs
String Length	1 to 64
Introduced	16.0.R1

ipv6

Context	**configure service vprn** *service-name* **bgp rib-management**
Description	Enter the ipv6 context
Introduced	16.0.R1

leak-import

Context	**configure service vprn** *service-name* **bgp rib-management ipv6**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp rib-management ipv6 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context	**configure service vprn** *service-name* **bgp rib-management ipv6**
Description	Enter the route-table-import context
Introduced	16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **bgp rib-management ipv6 route-table-import**
Description	Policy that controls the importation of active routes from IP route table into one of BGP RIBs
String Length	1 to 64
Introduced	16.0.R1

label-ipv4

Context	**configure service vprn** *service-name* **bgp rib-management**
Description	Enter the label-ipv4 context
Introduced	16.0.R1

leak-import

Context	**configure service vprn** *service-name* **bgp rib-management label-ipv4**
Description	Enter the leak-import context
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **bgp rib-management label-ipv4 leak-import**
Description	Leak import policy name
String Length	1 to 255
Max. Elements	15
Introduced	16.0.R1
Notes	This element is ordered by user

route-table-import

Context	**configure service vprn** *service-name* **bgp rib-management label-ipv4**
Description	Enter the route-table-import context
Introduced	16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **bgp rib-management label-ipv4 route-table-import**
Description	Policy that controls the importation of active routes from IP route table into one of BGP RIBs
String Length	1 to 64
Introduced	16.0.R1

router-id *ipv4-address*

Context	**configure service vprn** *service-name* **bgp**
Description	Unique router ID for BGP instance in AS
Introduced	16.0.R1

send-communities

Context	**configure service vprn** *service-name* **bgp**
Description	Enter the send-communities context
Introduced	16.0.R1

extended *boolean*

Context **configure service vprn** *service-name* **bgp send-communities**

Description Enables the sending of community attribute to the peer for external communities.

Default true

Introduced 16.0.R1

large *boolean*

Context **configure service vprn** *service-name* **bgp send-communities**

Description Enables the sending of community attribute to the peer for large communities.

Default true

Introduced 16.0.R1

standard *boolean*

Context **configure service vprn** *service-name* **bgp send-communities**

Description Enables the sending of community attribute to the peer for non-external communities.

Default true

Introduced 16.0.R1

split-horizon *boolean*

Context **configure service vprn** *service-name* **bgp**

Description Prevent routes from being reflected back to peer that sends best route

Default false

Introduced 16.0.R1

third-party-nexthop *boolean*

Context **configure service vprn** *service-name* **bgp**

Description Send third-party next hop to EBGP peers in same subnet as source peer

Default false

Introduced 16.0.R1

bgp-shared-queue

Context **configure service vprn** *service-name*

Description Enter the bgp-shared-queue context

Introduced 16.0.R1

cir (*kilobytes* | *keyword*)

Context **configure service vprn** *service-name* **bgp-shared-queue**

Description Committed information rate for shared queue

Default 4000

Units kilobps

Introduced 16.0.R1

pir (*kilobytes* | *keyword*)

Context **configure service vprn** *service-name* **bgp-shared-queue**

Description Peak information rate for shared queue

Default 4000

Units kilobps

Introduced 16.0.R1

bgp-vpn-backup

Context **configure service vprn** *service-name*

Description Enter the bgp-vpn-backup context

Introduced 16.0.R1

ipv4 *boolean*

Context **configure service vprn** *service-name* **bgp-vpn-backup**

Description Allows BGP-VPN routes to be used as backup paths for IPv4 prefixes.

Default false

Introduced 16.0.R1

ipv6 *boolean*

Context	**configure service vprn** *service-name* **bgp-vpn-backup**
Description	Allows BGP-VPN routes to be used as backup paths for IPv6 prefixes.
Default	false
Introduced	16.0.R1

carrier-carrier-vpn *boolean*

Context	**configure service vprn** *service-name*
Description	Allow VPRN service to support a Carrier Supporting Carrier model
Default	false
Introduced	16.0.R1

confederation

Context	**configure service vprn** *service-name*
Description	Enter the confederation context
Introduced	16.0.R1

confed-as-num *number*

Context	**configure service vprn** *service-name* **confederation**
Description	Confederation number within an autonomous system
Range	1 to 4294967295
Introduced	16.0.R1

members [as-number] *number*

Context	**configure service vprn** *service-name* **confederation**
Description	Enter the members context
Max. Elements	256
Introduced	16.0.R1

[as-number] *number*

Context	**configure service vprn** *service-name* **confederation members** *number*
Description	Tertiary index for tBgpConfederation4ByteTable. Each confederation member entry is differentiated by an autonomous system number.
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a list key

customer *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name*
Description	Service customer ID
Reference	configure **service customer** *customer-name*
Introduced	16.0.R1
Notes	This element is mandatory

description *string*

Context	**configure service vprn** *service-name*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

dhcp-server

Context	**configure service vprn** *service-name*
Description	Enter the dhcp-server context
Introduced	16.0.R1

dhcpv4 [name] *string*

Context	**configure service vprn** *service-name* **dhcp-server**
Description	Enter the dhcpv4 context
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	DHCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Administrative state of the DHCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failover

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

force-renews *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Send DHCP FORCERENEW messages to force renewal of lease state
Default	false
Introduced	16.0.R1

lease-hold

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string*

Description Enter the lease-hold context

Introduced 16.0.R1

additional-scenarios

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **lease-hold**

Description Enter the additional-scenarios context

Introduced 16.0.R1

internal-lease-ipsec *boolean*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **lease-hold additional-scenarios**

Description Enable lease hold timer for internal IPsec clients

Default false

Introduced 16.0.R1

solicited-release *boolean*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **lease-hold additional-scenarios**

Description Enable lease hold timer for solicited releases

Default false

Introduced 16.0.R1

time *number*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **lease-hold**

Description Lease hold time

Range 1 to 631152000

Units seconds

Introduced 16.0.R1

pool [pool-name] *string*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description Enter the pool context
Introduced 16.0.R1

[pool-name] *string*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description DHCP server pool name
String Length 1 to 32
Introduced 16.0.R1
Notes This element is part of a list key

description *string*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description Text description
String Length 1 to 80
Introduced 16.0.R1

failover

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description Enter the failover context
Introduced 16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description Administrative state of the failover mechanism
Default disable
Options enable, disable
Introduced 16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

max-lease-time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Maximum lease time
Range	10 to 315446399
Default	864000
Units	seconds
Introduced	16.0.R1

min-lease-time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Minimum lease time
Range	10 to 315446399
Default	600
Units	seconds
Introduced	16.0.R1

minimum-free

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the minimum-free context
Introduced	16.0.R1

absolute *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Absolute minimum number for free addresses
Range	0 to 255
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **minimum-free**
Description	Minimum percentage of free addresses
Range	0 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

nak-non-matching-subnet *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Send a DHCP NAK if a DHCP request IP address does not match any range in this pool
Default	false
Introduced	16.0.R1

offer-time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Time interval when a DHCP offer remains valid
Range	10 to 600
Default	60
Units	seconds
Introduced	16.0.R1

options

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

subnet [ipv4-prefix] *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string*

Description Enter the subnet context

Introduced 16.0.R1

[ipv4-prefix] *ipv4-unicast-prefix*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*

Description IPv4 prefix

Introduced 16.0.R1

Notes This element is part of a list key

address-range [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*

Description Enter the address-range context

Introduced 16.0.R1

[start] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*

Description Start address of this range

Introduced 16.0.R1

Notes This element is part of a list key

end *ipv4-unicast-address*

Context **configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*

Description End address of this range

Introduced 16.0.R1

Notes This element is part of a list key

failover-control-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **address-range** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Failover control type for this range
Default	local
Options	local, remote, access-driven
Introduced	16.0.R1

drain *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Prevent new leases from setting up in this prefix
Default	false
Introduced	16.0.R1

exclude-addresses [start] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the exclude-addresses context
Introduced	16.0.R1

[start] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **exclude-addresses** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	Start address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **exclude-addresses** *ipv4-unicast-address* **end** *ipv4-unicast-address*
Description	End address of this range
Introduced	16.0.R1
Notes	This element is part of a list key

maximum-declined *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Maximum number of declined addresses
Default	64
Introduced	16.0.R1

minimum-free

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the minimum-free context
Introduced	16.0.R1

absolute *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Absolute minimum number for free addresses
Range	0 to 255
Default	1
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **minimum-free**
Description	Minimum percentage of free addresses
Range	0 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

options

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option for sending identification strings to DHCP client
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv4-address *ipv4-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv4 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

netbios-node-type *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool** *string* **subnet** *ipv4-unicast-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as NetBIOS node type
Options	b-node, p-node, m-node, h-node
Introduced	16.0.R4
Notes	This element is part of a choice

pool-selection

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Enter the pool-selection context
Introduced	16.0.R1

use-gi-address

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool-selection**
Description	Enter the use-gi-address context
Introduced	16.0.R1

scope *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool-selection use-gi-address**
Description	Match the GI address to a specific subnet or pool.
Default	subnet
Options	subnet, pool
Introduced	16.0.R4

use-pool-from-client

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool-selection**
Description	Enter the use-pool-from-client context
Introduced	16.0.R1

delimiter *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string* **pool-selection use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1

user-db *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	Local user database for authentication
Reference	configure **subscriber-mgmt local-user-db** *string*
Introduced	16.0.R1

user-identification *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv4** *string*
Description	User identification for DHCPv6
Default	mac-circuit-id
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1

dhcpv6 [name] *string*

Context	**configure service vprn** *service-name* **dhcp-server**
Description	Enter the dhcpv6 context
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	DHCP server name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Administrative state of the DHCP server
Default	disable
Options	enable, disable
Introduced	16.0.R1

auto-provisioned *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Auto-provision the pools of this server
Default	false
Introduced	16.0.R1

defaults

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string*

Description Enter the defaults context

Introduced 16.0.R4

options

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults**

Description Enter the options context

Introduced 16.0.R4

option [number] (*number* | *keyword*)

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options**

Description Enter the option context

Introduced 16.0.R4

[number] (*number* | *keyword*)

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)

Description DHCPv6 option for sending identification strings to DHCP client

Range 1 to 65535

Options dns-server, domain-name

Introduced 16.0.R4

Notes This element is part of a list key

ascii-string *string*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)

Description ASCII string for DHCP option

String Length 1 to 127

Introduced 16.0.R4

Notes This element is part of a choice

domain-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R4
Notes	This element is part of a choice

duration *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R4
Notes	This element is part of a choice

empty

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R4
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R4
Notes	This element is part of a choice

preferred-lifetime *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults**
Description	Time for the prefix to remain preferred.
Range	300 to 315446399
Default	3600
Units	seconds
Introduced	16.0.R4

rebind-time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults**
Description	Rebind time for the prefix.
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R4

renew-time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults**
Description	Renew time for the prefix.
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R4

valid-lifetime *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **defaults**
Description	Time for the prefix to remain valid.
Range	300 to 315446399
Default	86400
Units	seconds
Introduced	16.0.R4

description *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

failover

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

ignore-rapid-commit *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Rapid Commit Option to ignore
Default	false
Introduced	16.0.R1

interface-id-mapping *boolean*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Map different hosts using the same interface ID to the same prefix
Default	false
Introduced	16.0.R1

lease-hold

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Enter the lease-hold context
Introduced	16.0.R1

additional-scenarios

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **lease-hold**
Description	Enter the additional-scenarios context
Introduced	16.0.R1

internal-lease-ipsec *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for internal IPsec clients
Default	false
Introduced	16.0.R1

solicited-release *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **lease-hold additional-scenarios**
Description	Enable lease hold timer for solicited releases
Default	false
Introduced	16.0.R1

time *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **lease-hold**
Description	Lease hold time
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1

lease-query *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Allow lease query messages
Default	false
Introduced	16.0.R1

pool [pool-name] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Enter the pool context
Introduced	16.0.R1

[pool-name] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	DHCP server pool name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

delegated-prefix

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the delegated-prefix context
Introduced	16.0.R1

length *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description	Prefix length for this pool if unspecified by client
Range	48 to 127
Default	64
Introduced	16.0.R1

maximum *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description	Maximum delegated prefix length for this pool
Range	48 to 127
Default	64
Introduced	16.0.R1

minimum *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **delegated-prefix**
Description	Minimum delegated prefix length for this pool
Range	48 to 127
Default	48
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

exclude-prefix [ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the exclude-prefix context
Introduced	16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **exclude-prefix** *ipv6-prefix*
Description	IPv6 prefix
Introduced	16.0.R1
Notes	This element is part of a list key

failover

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the failover context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Administrative state of the failover mechanism
Default	disable
Options	enable, disable
Introduced	16.0.R1

ignore-mclt-on-takeover *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Ignore maximum client lead delay while taking over the pool address space from partner
Default	false
Introduced	16.0.R1

maximum-client-lead-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Maximum client lease time (MCLT) that a DHCP server can extend
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1

partner-down-delay *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Partner down delay that prevents the IP lease duplication
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1

peer [address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Enter the peer context
Max. Elements	1
Introduced	16.0.R1

[address] *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover peer** *string*
Description	Failover peer address
Reference	configure **redundancy multi-chassis peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Introduced	16.0.R1
Notes	This element is part of a list key

sync-tag *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover peer** *string*
Description	Failover peer Sync tag
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is mandatory

startup-wait-time *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **failover**
Description	Startup wait time
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1

options

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)

Description Empty DHCP option.

Introduced 16.0.R1

Notes This element is part of a choice

hex-string *string*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)

Description DHCP option as hexadecimal string

String Length 1 to 256

Introduced 16.0.R1

Notes This element is part of a choice

ipv6-address *ipv6-address*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **options option** (*number* | *keyword*)

Description DHCP option as a list of IPv6 addresses

Max. Elements 4

Introduced 16.0.R1

Notes This element is part of a choice

prefix [ipv6-prefix] *ipv6-prefix*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*

Description Enter the prefix context

Introduced 16.0.R1

[ipv6-prefix] *ipv6-prefix*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*

Description IPv6 prefix

Introduced 16.0.R1

Notes This element is part of a list key

drain *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Prevent new leases from setting up in this prefix
Default	false
Introduced	16.0.R1

failover-control-type *keyword*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Failover control type for this range
Default	local
Options	local, remote, access-driven
Introduced	16.0.R1

options

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the options context
Introduced	16.0.R1

option [number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options**
Description	Enter the option context
Introduced	16.0.R1

[number] (*number* | *keyword*)

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCPv6 option for sending identification strings to DHCP client
Range	1 to 65535
Options	dns-server, domain-name
Introduced	16.0.R1
Notes	This element is part of a list key

ascii-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	ASCII string for DHCP option
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

domain-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as domain name
String Length	1 to 127
Introduced	16.0.R1
Notes	This element is part of a choice

duration *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as time duration
Range	10 to 315446399
Units	seconds
Introduced	16.0.R1
Notes	This element is part of a choice

empty

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	Empty DHCP option.
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as hexadecimal string
String Length	1 to 256
Introduced	16.0.R1
Notes	This element is part of a choice

ipv6-address *ipv6-address*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **options option** (*number* | *keyword*)
Description	DHCP option as a list of IPv6 addresses
Max. Elements	4
Introduced	16.0.R1
Notes	This element is part of a choice

preferred-lifetime *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Time for the prefix to remain preferred.
Range	300 to 315446399
Default	3600
Units	seconds
Introduced	16.0.R4

prefix-length-threshold [prefix-length] *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the prefix-length-threshold context
Max. Elements	8
Introduced	16.0.R1

[prefix-length] *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Delegated prefix length
Range	1 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

absolute *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Absolute minimum number for free addresses
Range	1 to 4294967295
Introduced	16.0.R1
Notes	This element is part of a choice

event-when-depleted *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

percent *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-length-threshold** *number*
Description	Minimum percentage of free addresses
Range	1 to 100
Introduced	16.0.R1
Notes	This element is part of a choice

prefix-type

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*
Description	Enter the prefix-type context
Introduced	16.0.R1

pd *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-type**
Description	Aggregate prefix to be used by IPv6 ESM hosts for DHCPv6 prefix delegation
Default	true
Introduced	16.0.R1

wan-host *boolean*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix* **prefix-type**
Description	Aggregate prefix to be used by IPv6 ESM hosts, or by routing gateway WAN interface
Default	true
Introduced	16.0.R1

rebind-time *number*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*

Description Rebind time for the prefix.

Range 0 to 1209600

Default 2880

Units seconds

Introduced 16.0.R4

renew-time *number*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*

Description Renew time for the prefix.

Range 0 to 604800

Default 1800

Units seconds

Introduced 16.0.R4

valid-lifetime *number*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix** *ipv6-prefix*

Description Time for the prefix to remain valid.

Range 300 to 315446399

Default 86400

Units seconds

Introduced 16.0.R4

prefix-length-threshold [prefix-length] *number*

Context **configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string*

Description Enter the prefix-length-threshold context

Max. Elements 8

Introduced 16.0.R1

[prefix-length] *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Delegated prefix length
Range	1 to 128
Introduced	16.0.R1
Notes	This element is part of a list key

event-when-depleted *boolean*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Generate a notification when this pool is depleted
Default	false
Introduced	16.0.R1

minimum-free-percent *number*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool** *string* **prefix-length-threshold** *number*
Description	Percentage of free prefixes for this prefix length
Range	0 to 100
Default	0
Introduced	16.0.R1

pool-selection

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Enter the pool-selection context
Introduced	16.0.R1

use-link-address

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool-selection**
Description	Enter the use-link-address context
Introduced	16.0.R1

scope *keyword*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool-selection use-link-address**
Description	Match a specific pool or prefix using the DHCPv6 relay link address.
Default	subnet
Options	subnet, pool
Introduced	16.0.R4

use-pool-from-client

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool-selection**
Description	Enter the use-pool-from-client context
Introduced	16.0.R1

delimiter *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **pool-selection use-pool-from-client**
Description	Delimiter character to combine primary and secondary pool names
String Length	1
Introduced	16.0.R1

server-id

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	Enter the server-id context
Introduced	16.0.R1

duid-enterprise

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **server-id**
Description	Enter the **duid-enterprise** context
Introduced	16.0.R1

ascii-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **server-id duid-enterprise**
Description	DUID enterprise value as an ASCII string
String Length	1 to 58
Introduced	16.0.R1
Notes	This element is part of a choice

hex-string *string*

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **server-id duid-enterprise**
Description	DUID enterprise value as a hexadecimal string
String Length	1 to 118
Introduced	16.0.R1
Notes	This element is part of a choice

duid-link-local

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string* **server-id**
Description	DUID (DHCP Unique Identifier) type code link local
Introduced	16.0.R1
Notes	This element is part of a choice

user-identification *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **dhcp-server dhcpv6** *string*
Description	User identification for DHCPv6
Default	duid
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1

dns

Context	**configure service vprn** *service-name*
Description	Enter the dns context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **dns**
Description	Administrative state of DNS
Default	disable
Options	enable, disable
Introduced	16.0.R1

ipv4-source-address (*keyword* | *string*)

Context	**configure service vprn** *service-name* **dns**
Description	Source address to contact an IPv4 DNS server
Default	use-interface-ip
Options	use-interface-ip
Introduced	16.0.R1

ipv6-source-address (*keyword* | *string*)

Context	**configure service vprn** *service-name* **dns**
Description	Source address to contact an IPv6 DNS server
Default	use-interface-ip
Options	use-interface-ip
Introduced	16.0.R1

server (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Context	**configure service vprn** *service-name* **dns**
Description	List of DNS servers used for address resolution.
Max. Elements	3
Introduced	16.0.R1
Notes	This element is ordered by user

ecmp *number*

Context **configure service vprn** *service-name*

Description Maximum number of equal cost routes allowed on this routing table instance

Range 1 to 64

Default 1

Introduced 16.0.R1

entropy-label *boolean*

Context **configure service vprn** *service-name*

Description Use entropy label

Default false

Introduced 16.0.R1

export-inactive-bgp *boolean*

Context **configure service vprn** *service-name*

Description Export best BGP route as a VPN-IP route even if inactive due to a preferred route from another PE

Default false

Introduced 16.0.R1

fib-priority *keyword*

Context **configure service vprn** *service-name*

Description FIB (Forwarding Information Base) priority

Default standard

Options standard, high

Introduced 16.0.R1

firewall

Context **configure service vprn** *service-name*

Description Enter the firewall context

Introduced 16.0.R1

domain [name] *string*

Context	**configure service vprn** *service-name* **firewall**
Description	Enter the domain context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	Firewall domain name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	Administrative state of the firewall domain
Default	disable
Options	enable, disable
Introduced	16.0.R1

dhcpv6-server

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	Enter the dhcpv6-server context
Introduced	16.0.R1

name *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **firewall domain** *string* **dhcpv6-server**
Description	DHCPv6 server name
String Length	1 to 32
Introduced	16.0.R1

router-instance *string*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **firewall domain** *string* **dhcpv6-server**
Description	Router name
Introduced	16.0.R1

nat-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	NAT group
Reference	configure **isa nat-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

prefix [ip-prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	Enter the prefix context
Max. Elements	4096
Introduced	16.0.R1

[ip-prefix] *ipv6-unicast-prefix*

Context	**configure service vprn** *service-name* **firewall domain** *string* **prefix** *ipv6-unicast-prefix*
Description	Prefix attribute and prefix length
Introduced	16.0.R1
Notes	This element is part of a list key

description *string*

Context	**configure service vprn** *service-name* **firewall domain** *string* **prefix** *ipv6-unicast-prefix*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

wlan-gw-group *string*

Warning: Modifying this element will cause the parent element to be recreated automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **firewall domain** *string*
Description	WLAN GW group used for NAT
Reference	configure **isa wlan-gw-group** *number*
Introduced	16.0.R4
Notes	This element is part of a choice

flowspec

Context	**configure service vprn** *service-name*
Description	Enter the flowspec context
Introduced	16.0.R1

ip-filter-max-size *number*

Context	**configure service vprn** *service-name* **flowspec**
Description	Maximum number of entries in IP filter for flowspec rules
Range	0 to 262143
Default	512
Introduced	16.0.R1

ipv6-filter-max-size *number*

Context	**configure service vprn** *service-name* **flowspec**
Description	Maximum number of entries in IPv6 filter for flowspec rules
Range	0 to 262143
Default	512
Introduced	16.0.R1

grt-leaking

Context	**configure service vprn** *service-name*
Description	Enter the grt-leaking context
Introduced	16.0.R1

allow-local-management *boolean*

Context	**configure service vprn** *service-name* **grt-leaking**
Description	Enable/disable management traffic from GRT-leaking enabled VPRN instances to reach local interfaces in the base routing instance.
Default	false
Introduced	16.0.R1

export-grt

Context	**configure service vprn** *service-name* **grt-leaking**
Description	Enter the export-grt context
Introduced	16.0.R1

policy-name *string*

Context	**configure service vprn** *service-name* **grt-leaking export-grt**
Description	Attribute policy-name for export-grt.
String Length	1 to 255
Max. Elements	5
Introduced	16.0.R1
Notes	This element is ordered by user

export-limit *number*

Context **configure service vprn** *service-name* **grt-leaking**

Description Maximum number of routes that can be exported.

Range 0 to 1000

Default 5

Introduced 16.0.R1

export-v6-limit *number*

Context **configure service vprn** *service-name* **grt-leaking**

Description Maximum number of IPv6 routes that can be exported.

Range 0 to 1000

Default 5

Introduced 16.0.R1

grt-lookup *boolean*

Context **configure service vprn** *service-name* **grt-leaking**

Description Enable/disable global route table lookup.

Default false

Introduced 16.0.R1

import-grt

Context **configure service vprn** *service-name* **grt-leaking**

Description Enter the import-grt context

Introduced 16.0.R1

policy-name *string*

Context **configure service vprn** *service-name* **grt-leaking import-grt**

Description Attribute policy-name for import-grt.

String Length 1 to 255

Max. Elements 5

Introduced 16.0.R1

Notes This element is ordered by user

gsmp

Context	**configure service vprn** *service-name*
Description	Enter the gsmp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **gsmp**
Description	Administrative state of GSMP
Default	disable
Options	enable, disable
Introduced	16.0.R1

group [name] *string*

Context	**configure service vprn** *service-name* **gsmp**
Description	Enter the group context
Max. Elements	1024
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	GSMP neighbor group name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	Administrative state of the GSMP group
Default	disable
Options	enable, disable
Introduced	16.0.R1

ancp

Context **configure service vprn** *service-name* **gsmp group** *string*

Description Enter the ancp context

Introduced 16.0.R1

dynamic-topology-discovery *boolean*

Context **configure service vprn** *service-name* **gsmp group** *string* **ancp**

Description Enable the ANCP dynamic topology discovery capability

Default true

Introduced 16.0.R1

oam *boolean*

Context **configure service vprn** *service-name* **gsmp group** *string* **ancp**

Description Enable GSMP ANCP OAM capability at startup of GSMP connection

Default false

Introduced 16.0.R1

description *string*

Context **configure service vprn** *service-name* **gsmp group** *string*

Description Text description

String Length 1 to 80

Introduced 16.0.R1

hold-multiplier *number*

Context **configure service vprn** *service-name* **gsmp group** *string*

Description Hold-multiplier for the GSMP connections in this group

Range 1 to 100

Default 3

Introduced 16.0.R1

idle-filter *boolean*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	Filter ANCP messages from IDLE DSL lines
Default	false
Introduced	16.0.R1

keepalive *number*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	Keepalive value for the GSMP connections in this group
Range	1 to 25
Default	10
Units	seconds
Introduced	16.0.R1

neighbor [remote-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	Enter the neighbor context
Introduced	16.0.R1

[remote-address] *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	GSMP neighbor remote IP address
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Administrative state of the GSMP neighbor
Default	disable
Options	enable, disable
Introduced	16.0.R1

description *string*

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Text description
String Length	1 to 80
Introduced	16.0.R1

local-address *ipv4-unicast-address*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Restrict connections to this local address only within the service running ANCP
Introduced	16.0.R1

priority-marking

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address*
Description	Enter the priority-marking context
Introduced	16.0.R1

dscp *keyword*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address* **priority-marking**
Description	DSCP that is used while remarking the in profile packets
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Notes	This element is part of a choice

prec *number*

Warning: Modifying this element will cause the parent element's **admin-state** to be toggled automatically for the new value to take effect.

Context	**configure service vprn** *service-name* **gsmp group** *string* **neighbor** *ipv4-unicast-address* **priority-marking**
Description	Precedence priority marking
Range	0 to 7
Introduced	16.0.R1
Notes	This element is part of a choice

persistency *boolean*

Context	**configure service vprn** *service-name* **gsmp group** *string*
Description	Store DSL line information when the GSMP connection terminates
Default	false
Introduced	16.0.R1

gtp

Context	**configure service vprn** *service-name*
Description	Enter the gtp context
Introduced	16.0.R1

s11

Context **configure service vprn** *service-name* **gtp**

Description Enter the s11 context

Introduced 16.0.R1

interface [interface-name] *string*

Context **configure service vprn** *service-name* **gtp s11**

Description Enter the interface context

Introduced 16.0.R1

[interface-name] *string*

Context **configure service vprn** *service-name* **gtp s11 interface** *string*

Description Interface where s11 is enabled.

Reference configure **service vprn** *service-name* **interface** *interface-name*

Introduced 16.0.R1

Notes This element is part of a list key

apn-policy *string*

Context **configure service vprn** *service-name* **gtp s11 interface** *string*

Description The APN policy for this interface.

Reference configure **subscriber-mgmt gtp apn-policy** *string*

Introduced 16.0.R1

peer-profile-map

Context **configure service vprn** *service-name* **gtp s11**

Description Enter the peer-profile-map context

Introduced 16.0.R1

prefix [peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context **configure service vprn** *service-name* **gtp s11 peer-profile-map**

Description Enter the prefix context

Introduced 16.0.R1

[peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **gtp s11 peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Attribute ip-prefix/ip-prefix-length for address.
Introduced	16.0.R1
Notes	This element is part of a list key

peer-profile *string*

Context	**configure service vprn** *service-name* **gtp s11 peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Peer profile used for peers in this prefix
Reference	configure **subscriber-mgmt gtp peer-profile** *string*
Introduced	16.0.R1
Notes	This element is mandatory

uplink

Context	**configure service vprn** *service-name* **gtp**
Description	Enter the uplink context
Introduced	16.0.R1

apn *string*

Context	**configure service vprn** *service-name* **gtp uplink**
Description	Network Identifier part of APN
String Length	1 to 80
Introduced	16.0.R1

pdn-type *keyword*

Context	**configure service vprn** *service-name* **gtp uplink**
Description	Default 3GPP PDN in GTP
Default	ipv4
Options	ipv4, ipv6, ipv4v6
Introduced	16.0.R1

peer-profile-map

Context	**configure service vprn** *service-name* **gtp uplink**
Description	Enter the peer-profile-map context
Introduced	16.0.R1

prefix [peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **gtp uplink peer-profile-map**
Description	Enter the prefix context
Introduced	16.0.R1

[peer-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Context	**configure service vprn** *service-name* **gtp uplink peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Attribute ip-prefix/ip-prefix-length for address.
Introduced	16.0.R1
Notes	This element is part of a list key

peer-profile *string*

Context	**configure service vprn** *service-name* **gtp uplink peer-profile-map prefix** (*ipv4-prefix* | *ipv6-prefix*)
Description	Peer profile name
Reference	configure **subscriber-mgmt gtp peer-profile** *string*
Introduced	16.0.R1
Notes	This element is mandatory

hash-label *boolean*

Context	**configure service vprn** *service-name*
Description	Include hash label
Default	false
Introduced	16.0.R1

igmp

Context	**configure service vprn** *service-name*
Description	Enter the igmp context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **igmp**
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

forwarding-group-interface forwarding-service *service-name* group-interface-name *interface-name*

Context	**configure service vprn** *service-name* **igmp**
Description	Enter the forwarding-group-interface context
Introduced	16.0.R1

forwarding-service *service-name*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Forwarding service for a subscriber interface in a retailer context
String Length	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

group-interface-name *interface-name*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Maximum number of sources that are allowed per group

Range 1 to 1000

Introduced 16.0.R1

mcac

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enter the mcac context

Introduced 16.0.R1

bandwidth

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time between group-specific query messages

Range 1 to 1023

Introduced 16.0.R1

query-response-interval *number*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Time to wait for a response to the host-query messages

Range 1 to 1023

Introduced 16.0.R1

query-source-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Source address for IGMP queries

Introduced 16.0.R1

router-alert-check *boolean*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enable IGMP router alert check option

Default true

Introduced 16.0.R1

sub-hosts-only *boolean*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Allow IGMP traffic from known hosts only

Default true

Introduced 16.0.R1

subnet-check *boolean*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description Enable subnet checking

Default true

Introduced 16.0.R1

version *keyword*

Context **configure service vprn** *service-name* **igmp forwarding-group-interface forwarding-service** *service-name* **group-interface-name** *interface-name*

Description IGMP protocol version

Default 3

Options 1, 2, 3

Introduced 16.0.R1

group-if-query-source-address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp**
Description	Source address in queries for group interfaces when not configured at group interface level
Introduced	16.0.R1

group-interface [group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **igmp**
Description	Enter the group-interface context
Introduced	16.0.R1

[group-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Group interface name
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name* **mcac**
Description	Enter the bandwidth context
Introduced	16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp group-interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp group-interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **igmp group-interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

policy *string*

Context **configure service vprn** *service-name* **igmp group-interface** *interface-name* **mcac**

Description Multicast CAC policy name

Reference configure **mcac policy** *string*

Introduced 16.0.R1

query-interval *number*

Context **configure service vprn** *service-name* **igmp group-interface** *interface-name*

Description Time between two consecutive host-query messages

Range 2 to 1024

Introduced 16.0.R1

query-last-member-interval *number*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Time between group-specific query messages
Range	1 to 1023
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

query-source-address *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Source address for IGMP queries
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

sub-hosts-only *boolean*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Allow IGMP traffic from known hosts only
Default	true
Introduced	16.0.R1

subnet-check *boolean*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure service vprn** *service-name* **igmp group-interface** *interface-name*
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

interface [ip-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **igmp**
Description	Enter the interface context
Introduced	16.0.R1

[ip-interface-name] *interface-name*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Interface name.
String Length	1 to 32
Introduced	16.0.R3
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Administrative state of IGMP
Default	enable
Options	enable, disable
Introduced	16.0.R1

import-policy *string*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Import policy that filters IGMP packets
Reference	configure **policy-options policy-statement** *string*
Introduced	16.0.R1

maximum-number-group-sources *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Maximum number of group sources
Range	1 to 32000
Introduced	16.0.R1

maximum-number-groups *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Max groups number for which IGMP can have local receiver information based on received IGMP reports
Range	1 to 16000
Introduced	16.0.R1

maximum-number-sources *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Maximum number of sources that are allowed per group
Range	1 to 1000
Introduced	16.0.R1

mcac

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Enter the mcac context
Introduced	16.0.R1

bandwidth

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac**

Description Enter the bandwidth context

Introduced 16.0.R1

mandatory (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac bandwidth**

Description Pre-reserved bandwidth for all mandatory channels.

Introduced 16.0.R1

total (*number* | *keyword*)

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac bandwidth**

Description Maximum allowed bandwidth.

Introduced 16.0.R1

interface-policy *string*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac**

Description Name for multicast CAC interface policy

Reference configure **mcac interface-policy** *string*

Introduced 16.0.R1

mc-constraints

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac**

Description Enter the mc-constraints context

Introduced 16.0.R1

level [level-id] *number*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints**

Description Enter the level context

Introduced 16.0.R1

[level-id] *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth level ID for a multicast CAC constraint
Range	1 to 8
Introduced	16.0.R1
Notes	This element is part of a list key

bandwidth *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints level** *number*
Description	Bandwidth available for this level
Range	0 to 2147483647
Introduced	16.0.R1
Notes	This element is mandatory

number-down [number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints**
Description	Enter the number-down context
Introduced	16.0.R1

[number-lag-port-down] *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Number of LAG ports down
Range	1 to 64
Introduced	16.0.R1
Notes	This element is part of a list key

level *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints number-down** *number*
Description	Level associated with the number of LAG ports that are down
Range	1 to 8
Introduced	16.0.R1
Notes	This element is mandatory

use-lag-port-weight *boolean*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac mc-constraints**
Description	Use LAG port weight while calculating Multicast CAC constraints
Default	false
Introduced	16.0.R1

policy *string*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **mcac**
Description	Multicast CAC policy name
Reference	configure **mcac policy** *string*
Introduced	16.0.R1

query-interval *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Time between two consecutive host-query messages
Range	2 to 1024
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Time between group-specific query messages
Range	1 to 1023
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Introduced	16.0.R1

redundant-mcast *boolean*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Exchange the interface state information with MCS
Default	false
Introduced	16.0.R1

router-alert-check *boolean*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Enable IGMP router alert check option
Default	true
Introduced	16.0.R1

ssm-translate

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Enter the ssm-translate context
Introduced	16.0.R1

group-range start *ipv4-multicast-address* **end** *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **ssm-translate**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Start of group range
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	End of group range
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*
Description	Enter the source context
Min. Elements	1
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

static

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Enter the static context
Introduced	16.0.R1

group [group-address] *ipv4-multicast-address*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **static**

Description Enter the group context

Introduced 16.0.R1

[group-address] *ipv4-multicast-address*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*

Description Group address of multicast channel

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*

Description Enter the **source** context

Introduced 16.0.R3

[source-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **static group** *ipv4-multicast-address* **source** *ipv4-unicast-address*

Description Source address of multicast channel.

Introduced 16.0.R3

Notes This element is part of a choice

This element is part of a list key

starg

Context **configure service vprn** *service-name* **igmp interface** *interface-name* **static group** *ipv4-multicast-address*

Description any source address (*,G)

Introduced 16.0.R3

Notes This element is part of a choice

group-range start *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static**
Description	Enter the group-range context
Introduced	16.0.R1

start *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Start of group range of multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

end *ipv4-multicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	End of group range for multicast channel
Introduced	16.0.R1
Notes	This element is part of a list key

step *ipv4-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Step interval for the group-range addresses
Introduced	16.0.R1
Notes	This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	Enter the **source** context
Introduced	16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a choice This element is part of a list key

starg

Context	**configure service vprn** *service-name* **igmp interface** *interface-name* **static group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **step** *ipv4-address*
Description	any source address (*,G)
Introduced	16.0.R3
Notes	This element is part of a choice

subnet-check *boolean*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	Enable subnet checking
Default	true
Introduced	16.0.R1

version *keyword*

Context	**configure service vprn** *service-name* **igmp interface** *interface-name*
Description	IGMP protocol version
Default	3
Options	1, 2, 3
Introduced	16.0.R1

query-interval *number*

Context	**configure service vprn** *service-name* **igmp**
Description	Time between two consecutive host-query messages
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1

query-last-member-interval *number*

Context	**configure service vprn** *service-name* **igmp**
Description	Time between group-specific query messages
Range	1 to 1023
Default	1
Units	seconds
Introduced	16.0.R1

query-response-interval *number*

Context	**configure service vprn** *service-name* **igmp**
Description	Time to wait for a response to the host-query messages
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1

robust-count *number*

Context	**configure service vprn** *service-name* **igmp**
Description	Number of retries after message loss
Range	2 to 10
Default	2
Introduced	16.0.R1

ssm-translate

Context **configure service vprn** *service-name* **igmp**

Description Enter the ssm-translate context

Introduced 16.0.R1

group-range **start** *ipv4-multicast-address* **end** *ipv4-multicast-address*

Context **configure service vprn** *service-name* **igmp ssm-translate**

Description Enter the group-range context

Introduced 16.0.R1

start *ipv4-multicast-address*

Context **configure service vprn** *service-name* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*

Description Start of group range

Introduced 16.0.R1

Notes This element is part of a list key

end *ipv4-multicast-address*

Context **configure service vprn** *service-name* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*

Description End of group range

Introduced 16.0.R1

Notes This element is part of a list key

source [source-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address*

Description Enter the source context

Min. Elements 1

Introduced 16.0.R3

[source-address] *ipv4-unicast-address*

Context	**configure service vprn** *service-name* **igmp ssm-translate group-range start** *ipv4-multicast-address* **end** *ipv4-multicast-address* **source** *ipv4-unicast-address*
Description	Source address of multicast channel.
Introduced	16.0.R3
Notes	This element is part of a list key

igmp-host-tracking

Context	**configure service vprn** *service-name*
Description	Enter the igmp-host-tracking context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **igmp-host-tracking**
Description	Administrative state of IGMP host tracking
Default	disable
Options	enable, disable
Introduced	16.0.R1

expiry-time *number*

Context	**configure service vprn** *service-name* **igmp-host-tracking**
Description	Time during which the system continues to track inactive hosts
Range	1 to 65535
Default	260
Units	seconds
Introduced	16.0.R1

ignore-nh-metric *boolean*

Context	**configure service vprn** *service-name*
Description	Ignore next hop metric
Default	false
Introduced	16.0.R1

interface [interface-name] *interface-name*

Context	**configure service vprn** *service-name*
Description	Enter the interface context
Introduced	16.0.R1

[interface-name] *interface-name*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Name of the interface
String Length	1 to 32
Introduced	16.0.R1
Notes	This element is part of a list key

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Administrative state of the interface
Default	enable
Options	enable, disable
Introduced	16.0.R1

cflowd-parameters

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the cflowd-parameters context
Introduced	16.0.R1

sampling [sampling-type] *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **cflowd-parameters**
Description	Enter the sampling context
Introduced	16.0.R1

[sampling-type] *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	Cflowd sampling type for virtual router interface
Options	unicast, multicast
Introduced	16.0.R5
Notes	This element is part of a list key

direction *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The direction of the Cflowd analysis that is applied to the given interface.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4

type *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **cflowd-parameters sampling** *keyword*
Description	The type of Cflowd analysis that is applied to the given interface.
Options	acl, interface
Introduced	16.0.R4
Notes	This element is mandatory

cpu-protection *string*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	CPU protection policy
Reference	configure **system security cpu-protection policy** *number*
Introduced	16.0.R1

description *string*

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Text description

String Length 1 to 160

Introduced 16.0.R1

hold-time

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Enter the hold-time context

Introduced 16.0.R1

ipv4

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time**

Description Enter the ipv4 context

Introduced 16.0.R1

down

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv4**

Description Enter the down context

Introduced 16.0.R1

init-only *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv4 down**

Description Apply down delay only when interface is configured or after reboot

Default false

Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv4 down**
Description Down hold time for the IP interface
Range 1 to 1200
Units seconds
Introduced 16.0.R1

up

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv4**
Description Enter the up context
Introduced 16.0.R1

seconds *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv4 up**
Description Up hold time for the IP interface
Range 1 to 1200
Units seconds
Introduced 16.0.R1

ipv6

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time**
Description Enter the ipv6 context
Introduced 16.0.R1

down

Context **configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv6**
Description Enter the down context
Introduced 16.0.R1

init-only *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv6 down**
Description	Apply hold time only when IP interface is first configured or after system reboot
Default	false
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv6 down**
Description	Down hold time for the IPv6 interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

up

Context	**configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv6**
Description	Enter the up context
Introduced	16.0.R1

seconds *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **hold-time ipv6 up**
Description	Up hold time for the IPv6 interface
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

if-attribute

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Enter the if-attribute context
Introduced	16.0.R1

admin-group *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **if-attribute**
Description	Name of the Admin group membership of the interface
Reference	configure **routing-options if-attribute admin-group** *string*
Max. Elements	32
Introduced	16.0.R1

srlg-group [name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **if-attribute**
Description	Enter the srlg-group context
Introduced	16.0.R1

[name] *string*

Context	**configure service vprn** *service-name* **interface** *interface-name* **if-attribute srlg-group** *string*
Description	Shared Risk Link Group (SRLG) name.
Reference	configure **routing-options if-attribute srlg-group** *string*
Introduced	16.0.R1
Notes	This element is part of a list key

ingress-stats *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Collect ingress statistics
Default	false
Introduced	16.0.R1

ip-mtu *number*

Context	**configure service vprn** *service-name* **interface** *interface-name*
Description	Interface IP MTU
Range	512 to 9000
Units	bytes
Introduced	16.0.R1

ipv4

Context **configure service vprn** *service-name* **interface** *interface-name*

Description Enter the ipv4 context

Introduced 16.0.R1

addresses

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4**

Description Enter the addresses context

Introduced 16.0.R1

address [ipv4-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 addresses**

Description Enter the address context

Introduced 16.0.R1

[ipv4-address] *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 addresses address** *ipv4-unicast-address*

Description IPv4 address for a router interface

Introduced 16.0.R1

Notes This element is part of a list key

prefix-length *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 addresses address** *ipv4-unicast-address*

Description IPv4 address prefix length

Range 0 to 32

Introduced 16.0.R1

Notes This element is mandatory

allow-directed-broadcasts *boolean*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Forward directed broadcasts
Default	false
Introduced	16.0.R1

bfd

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the bfd context
Introduced	16.0.R1

admin-state *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	Administrative state of BFD sessions established on this interface
Default	disable
Options	enable, disable
Introduced	16.0.R1

echo-receive *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD echo interval over this interface
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

multiplier *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	Number of missed consecutive BFD messages from peer before the BFD session state changes to down
Range	3 to 20
Default	3
Introduced	16.0.R1

receive *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD receive interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

transmit-interval *number*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD transmit interval over this interface
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1

type *keyword*

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4 bfd**
Description	BFD session termination
Default	auto
Options	cpm-np, auto
Introduced	16.0.R1

dhcp

Context	**configure service vprn** *service-name* **interface** *interface-name* **ipv4**
Description	Enter the dhcp context
Introduced	16.0.R1

admin-state *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Administratively enable/disable DHCP.

Default disable

Options enable, disable

Introduced 16.0.R4

description *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Add/remove a text description for DHCP.

String Length 1 to 80

Introduced 16.0.R4

gi-address *ipv4-unicast-address*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Configure the gateway interface address for the DHCP relay.

Introduced 16.0.R4

lease-populate

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the lease-populate context

Introduced 16.0.R4

max-leases *number*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp lease-populate**

Description The maximum number of DHCPv4 leases.

Range 0 to 511999

Default 0

Introduced 16.0.R4

option-82

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp**

Description Enter the option-82 context

Introduced 16.0.R4

action *keyword*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description What to do with DHCP option 82.

Default keep

Options replace, drop, keep

Introduced 16.0.R4

circuit-id

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the circuit-id context

Introduced 16.0.R4

ascii-tuple

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

ifindex

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use ifindex in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Do not include the circuit-id.

Introduced 16.0.R4

Notes This element is part of a choice

sap-id

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use SAP ID in the option.

Introduced 16.0.R4

Notes This element is part of a choice

vlan-ascii-tuple

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 circuit-id**

Description Use vlan-ascii-tuple in the option.

Introduced 16.0.R4

Notes This element is part of a choice

remote-id

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the remote-id context

Introduced 16.0.R4

ascii-string *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use user-defined ASCII string in the option.

String Length 1 to 32

Introduced 16.0.R4

Notes This element is part of a choice

mac

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Use MAC address in the option.

Introduced 16.0.R4

Notes This element is part of a choice

none

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 remote-id**

Description Do not include the remote-id.

Introduced 16.0.R4

Notes This element is part of a choice

vendor-specific-option

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82**

Description Enter the vendor-specific-option context

Introduced 16.0.R4

client-mac-address *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the MAC address in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

pool-name *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the pool name in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

sap-id *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the SAP ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

service-id *boolean*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**

Description Send the service ID in the Nokia vendor specific suboption.

Default false

Introduced 16.0.R4

string *string*

Context **configure service vprn** *service-name* **interface** *interface-name* **ipv4 dhcp option-82 vendor-specific-option**
