

ATTACHMENTS AND FASTENERS
DESCRIPTION OF SURFACES ENCOUNTERED

1. GENERAL

1.001 This addendum supplements Section 080-720-105.

1.002 It is issued to delete reference to usage of plastic anchors when attaching to plaster on wood lath or rock lath, and plaster board.

2. SURFACES ENCOUNTERED

The following change applies to Part 2 of the section:

(a) 2.09 — revised

Plaster on Lath, Rock Lath, Plaster Board

2.09 B wall screw anchors or toggle bolts are used to make attachments. However, when a substantial fastener is required for heavier apparatus, it will be necessary to locate the studding as in 2.07 and use wood screws. The holding power of hollow wall fasteners is such that any movement or shifting of weight tends to loosen them. This must be considered at all times so that costly maintenance, as well as hazards, are not built into plant.
