

93-TYPE TEST SET DESCRIPTION

1. GENERAL

1.01 This section describes the 93B Test Set intended for tracing the path or determining the depth of buried cables or wires.

1.02 This section is reissued to include information on the 93B Test Set which replaces the 93A Test Set rated MD.

2. DESCRIPTION

2.01 The 93B Test Set (Fig. 1) consists of a single winding coil on a straight iron core. The unit is enclosed in an oxford gray molded plastic case provided with a carrying strap.

2.02 The case is designed so that the set can be rested or held in a vertical position for locating the conductor, and at an angle of 45 degrees for determining the depth of the conductor. Two spirit levels are provided for convenience in determining the position of the coil.

2.03 The set is equipped with a W2CG cord terminated in a 347B plug for making connection to a 147B amplifier.
