4. PROCEDURES

1. GENERAL INFORMATION

1.1 This section provides information to test the DIMENSION Custom Telephone Service (DCTS) Manual Exclusion feature.

1.2 The Manual Exclusion feature gives a station user the capability to prevent other station users from bridging onto the same line. This feature is activated whenever a line is being used and the Manual Exclusion button for that line is operated.

2. RECORDS

2.1 Form SD-97-1313 is required for recording the results of this test.

3. TEST EQUIPMENT

Qty	ITE	Description
2		Electronic Telephone Sets.

4. PROCEDURES

4.1 Preliminary

4.11 Connect two electronic telephone sets to the termination field so that the following conditions are met.

Station A Provided with the Manual Exclusion feature.

Station B Provided with a line that is identical to the line associated with the Manual Exclusion button to be used for test on Station A.

4.2 Test Procedure

4.21 At Station A, make a call to the attendant.

NOTE: The line used shall be the same as the one associated with the Manual Exclusion, button. After dial completion verify:

(a) That Station A receives ringback.

4.22 At the console, answer the incoming call and verify transmission between Station A and the attendant.

4.23 At Station B, go off-hook on the same line that was used by Station A. Verify:

(a) That a bridged transmission path between Station A, Station B and the attendant.

4.24 At Station A, operate the Manual Exclusion button. Verify:

(a) That the status lamp associated with the operated Manual Exclusion button lights steadily.

(b) That Station A and the attendant still have a transmission path.

(c) That Station B receives busy tone.

4.25 Go on-hook with Station A and Station B and the attendant. Verify:

(a) That the Manual Exclusion button status lamp extinguishes.

4.26 This completes the testing of the Manual Exclusion feature per this section.
