### **Notice**

Every effort was made to ensure that the information in this document was complete and accurate at the time of printing. However, information is subject to change.

### **Security Statement**

In rare instances, unauthorized individuals make connections to the telecommunications network through the use of remote access features. In such event, applicable tariffs require that the customer pay all network charges for traffic. AT&T cannot be responsible for such charges, and will not make any allowance or give any credit for charges that result from unauthorized access.

### **Documentation Ordering Information**

The ordering number for this document is AT&T 365-353-052. To order this document, call the AT&T Customer Information Center in Indianapolis, Indiana, on 1-800-432-6600. For more ordering information, refer to "How to Order Documentation" in the section "About this Document."

### **Technical Support Telephone Number**

The AT&T Regional Technical Assistance Center (RTAC) provides a technical assistance telephone number which is staffed 24 hours a day. For technical assistance, simply call 1-800-225-RTAC.

### **Documentation Support Telephone Number**

AT&T provides a telephone number for you to report errors or to ask questions about the information in this document. The support telephone numbers are:

Outside North Carolina - 1-800-334-0404  
Inside North Carolina - 1-919-727-6681.

## About This Document

---

### Purpose

---

The *DACS II Release 7.0 Command and Message Manual* describes the input commands and output messages of Release 7.0 of the Digital Access and Cross-Connect System II (DACS II). In addition, it provides full support for previous product releases.

 **NOTE:**

Those customers using this manual with Releases 3 through 6.1 software should be aware that all features of a particular message shown for Release 7.0 may or may not apply to previous releases.

This manual consists of three volumes as follows:

- **Volume I** - This volume contains general information about the document, a detailed introduction that defines DACS II messages, relates how to communicate with DACS II, introduces the administrative links, and discusses in detail NPC addressing, on-line help feature, system configuration and features a listing of related documentation and a glossary. Message listings in this volume include alphabetical and numerical, summary list of input commands and a list of autonomous messages. A comprehensive presentation of input commands and output messages (ABT through DGN) concludes this volume.
- **Volume II and III** - These two volumes contain input commands and output messages in the following order:
  - **Volume II** - DGRTH through SW
  - **Volume III** - TABS through UTL

---

## **Release 7.0.3 Addendum**

---

The *DACS II Release 7.0.3 Command and Message Manual Addendum* consists of the following list of items to be inserted or replaced in your *DACS II Release 7.0 Command and Message Manual*:

- Updated manual Table of Contents for each volume
- Updated "About this Document" section for each volume
- Updated "Alphabetic Message List" (Chapter 2)
- Updated "Numeric Message List" (Chapter 3)
- Updated "Summary of Input Commands" (Chapter 4)
- New section, "Release 7.0.3 Addendum," consisting of updated and new commands applicable to Release 7.0.3.
- Updated manual index for each volume

The instructional page enclosed with the Addendum will explain how to incorporate these new items into the Release 7.0 documentation.

## **Intended Audiences**

---

This manual is a catalog of messages intended for reference by a technician or craftperson who needs additional details about a message. It provides the user with supplemental information for the Digital Access and Cross-Connect System II (DACS II) that is programmed in the Program Documentation Standards (PDS) language. An example of a user is someone performing a task from an operation and maintenance manual who needs the definition of a specific keyword to complete the task.

## **How to Order Documentation**

---

To order additional copies of this document, send or call in an order as follows:

- To order by Mail:

Lucent Technologies  
Customer Information Center  
Attention: Order Entry Section  
2855 N. Franklin Road  
P. O. Box 19901  
Indianapolis, IN 46219

- 
- To order by Telephone (Monday through Friday);

Within the United States of America:

**1-800-432-6600** (7:30 a.m. to 6:30 p.m. EST)

From Canada:

**1-800-255-1242**

Worldwide:

Toll: **1-317-352-8557**

FAX: **1-317-352-8484**

For RBOC/BOC customers, process orders through your Company Documentation Coordinator.

For commercial customers, a check, money order, purchase order number, or charge card number is required with all orders. Make checks payable to Lucent Technologies.

Lucent Technologies entities should use Form IND 1-80.80 FA, available through the Customer Information Center.

One-time orders include a binder (if applicable) and the document contents for the current issue in effect at the time of order. After placing a one-time order, you can request a standing order for any document revisions *of that software release*. Documents for new software releases do *not* go to standing-order customers. You will only get those documents if you order the new software release.

## **How to Comment on This Document**

A feedback form is located at the beginning of this publication, immediately after the title page. Please fill out the feedback form and return it (postage free) to the address on the back.

If the feedback form is missing, send comment on this publication to:

Lucent Technologies  
DACS II Documentation Coordinator  
2400 Reynolda Rd.  
Winston Salem, NC 27106

### Foreword

---

This manual contains commands and messages for Digital Access and Cross-Connect System II (DACS II) software Release 7.0

### Who Should Use This Manual

---

This manual is a catalog of messages intended for reference by a technician or craftsperson who needs additional details about a message. It provides the user with supplemental information for the DACS II that is programmed in the Program Documentation Standards (PDS) language. An example of a user is someone performing a task from an operation and maintenance manual who needs the definition of a specific keyword to complete the task.

### How To Use This Manual

---

The user refers to a particular message via the message number or the action verb. The messages are arranged in alphabetical order by action verb; for example, add, audit, broadcast, change, etc. A numerical list, an alphabetical list, and a summary of input commands list provide cross referencing of messages and should help in locating a particular message.

A *message* is a communication between a user\* and DACS II. Input messages, or *commands*, are sent by a user to a DACS II. Output messages are originated by a DACS II and sent to the user.

---

\* A *user* can be a person operating a terminal connected to a DACS II or an Operations System (OS), such as TIRKS† system, SARTS, etc.

† TIRKS is a registered trademark of Bell Communications Research, Inc.

## **How the Manual Is Organized**

---

This manual consists of three volumes as follows:

### *Volume I Contents*

- Introduction
  - About This Manual
  - DACS II Messages
  - Communicating With DACS II
  - DACS II Administrative Links
  - NPC Addressing
  - On-Line Help Feature
  - System Configuration
  - Documentation Support
  - Glossary
- Message Lists
  - Alphabetical List of Messages
  - Numerical List of Messages
  - Summary of Input Commands
  - List of Autonomous Messages

- Messages (ABT through DGN).

### *Volume II Contents*

- Messages (DGRTN through SW).

### *Volume III Contents*

- Messages (TABS through UTL).

## **DACS II Messages**

---

In this manual, DACS II messages are arranged in alphabetical order with the input command preceding the output message(s) associated with that command. Table 1, following the "Output Message Format" section, groups the messages according to functional category, message number, verb, and keyword. The inexperienced technician or craftsman should find this table helpful in locating a particular message, group of messages, verb, or keyword.

## How the Messages In This Manual Are Formatted

---

Each message is presented in actual input command format with accompanying explanations of parameters. Additionally, all responses to the input command, such as the completion, the denial, and any autonomous messages generated from the input or that are activated by the machine, are shown.

## Understanding Message Numbering

---

Messages are grouped according to verbs and keywords and are indexed for reference by a *message number*.

**IMPORTANT:** In the PDS language, the message number is used for organization and reference and does not appear in an actual message.

Message numbers have the following format:

|                |                                                                                              |
|----------------|----------------------------------------------------------------------------------------------|
| I . mmmmn      | Input command                                                                                |
| O . mmmmn      | Output message reporting a successful or conditional completion (COMPL) of the input command |
| O . mmmmn . pp | Output message reporting a denial (DNY) of the input command.                                |

Input commands are prefixed by an I; output messages are prefixed by an O. All messages related to each other have the same mmmm digits. An input command may have more than one completion output message. In this case, the last digit, n, indicates the particular completion message. Denial output messages are referenced by the additional digits pp.

For example, consider the monitor test access group of messages (mmm = 2100). Below is a replica of the input command followed by the possible output messages for this group:

```
I.21001    TTST:FRM xy,SEQ ww:MON[, TO ghijjj], TP kk!  
O.21001    ::TTST MON TP COMPL  
O.21001.01 ::TTST TP DNY  
O.21001.02 ::TTST MON TP DNY  
O.21001.03 ::TTST MON TP ASSGN DNY  
O.21001.04 ::TTST MON TP DNY
```

## **Usage of Uppercase and Lowercase Characters**

---

In the command and message formats, uppercase and lowercase letters distinguish between information that is constant (uppercase) and information that is variable (lowercase). Any character written in uppercase appears on the output device exactly as written. A variable represented by lowercase letters will be replaced on the printout or screen by a value listed under the EXPLANATION OF PARAMETERS for that particular variable.

## **Representation of Lines Longer Than the Page Width**

---

Many message lines in this document exceed the width of the margins of the page on which they are printed. Consequently, a way to present the message on more than one line while maintaining an accurate representation of the message's parameter fields and the character spacing between them has been devised. The backslash character is used in both input and output message representations to mark the point in the message text where a single line has been truncated and continued onto another line. This is consistent with the present use of the backslash character on input to enter a command whose length exceeds 80 characters. The user can easily construct the single-line representation because the backslash marks the extent of any blank characters in the message.

Rather than using the backslash convention discussed above, some utility (UTL) output messages are printed in a reduced type font because of their volume.

## **Delimiters**

---

Delimiters are used to enclose a field in a message:

- [ ] Brackets indicate an optional field, one which may or may not be used in the input command or appear in the output message.
- { } Braces indicate a field containing alternate choices. For input commands, the user must select one of the choices. In output messages, braces indicate that only one of the fields within the braces will appear.
- < > The less than and greater than symbols enclose an abbreviation representing variable length information. These delimiters are never used in actual DACS II input commands or output messages but are used only in describing the message format in this manual.
- ( ) Parentheses **are** part of the message text and must be entered where shown.

---

## **Message Layout and Heading Definitions**

---

The layout or skeleton for a message in this manual contains the following major headings:

**INPUT COMMAND FORMAT**

Nonhierarchical Format

Hierarchical Format

**EXPLANATION OF COMMAND**

**EXPLANATION OF PARAMETERS**

**COMPLETION MESSAGE**

Nonhierarchical Format

Hierarchical Format

**DENIAL MESSAGE (Not applicable to every message)**

Nonhierarchical Format

Hierarchical Format

**AUTONOMOUS MESSAGES (Not applicable to every message)**

Nonhierarchical Format

Hierarchical Format.

*INPUT COMMAND FORMAT* shows the command exactly as it appears when entered at the terminal. An exception is that some input commands are too long to be displayed on a single line; therefore, these messages are presented on multiple lines. Both the nonhierarchical and hierarchical NPC numbering formats are shown (refer to the "NPC Addressing" section).

*EXPLANATION OF COMMAND* explains the input command in general terms.

*EXPLANATION OF PARAMETERS* explains keywords and variables in detail, such as the specific entity, condition code, etc., for that command. The uppercase letters denote keywords and the lowercase letters denote variables.

*COMPLETION MESSAGE* is the normal response to the input command and indicates the successful completion of the command or the task requested by the command.

*DENIAL MESSAGE* indicates the input command has been denied and will not be executed. The denial message includes an error code describing the reason for the denial.

*AUTONOMOUS MESSAGES* report a change in the equipment/operations state of the DACS II. For example, a frame audit message (FRADTS) will be generated when a diagnostic and audit background test finds a problem with the equipment.

## Communicating With DACS II

---

### Input Command Modes

---

An input command requests an action to be performed; this command contains necessary information for DACS II to accomplish the requested action. The user has two basic modes for inputting commands: The command mode and the menu/prompt mode.

#### Command Mode

The command mode is for the experienced user or machine-machine operation. A command must be selected along with variables and entered within a single line. The user types a single-line command with the only carriage return occurring at the end. "Single-line" refers to the input *command*, not to the display of the command. *A long single-line command may extend for several lines on a display terminal.*

DACS II accepts up to 120 characters of input per command. If an input command exceeds 80 characters (the standard width of most terminal screens), the input will continue on the next line of the display beginning with the 81st character. However, the command line can be broken at a convenient place by typing a backslash (\) followed by a carriage return. The display of the input command will continue on the next line, but the command will be interpreted as a single-line command. If 120 characters is not sufficient or if the user finds entering long commands error-prone, the single-line command can be broken up into several smaller commands.

Entering a carriage return without the backslash terminates the input and causes the line to be interrupted. An exclamation point (!) also terminates the input command (that is, DACS interprets the carriage return and ! as the end of the command). If the carriage return is used, ! is echoed back to the terminal.

#### Menu/Prompt Mode

The **menu/prompt mode** consists of **on-line help** to assist a user in completing an input command. This mode aids the user by providing a list of context sensitive alternative variables or keywords.

The user starts the menu/prompt mode by entering a question mark (?) in the command line at the point in question. In response, DACS II presents a list of possible keywords. This list is presented to the user in menu or prompt form. At this point, the user may continue or return to the command line. If the user continues, he/she should refer to the detailed examples (menu form and prompt form) in the "On-Line Help Feature" section.

#### Aborting an Input Command or Output Message

The **ABT** command is entered to *interrupt an input command or an output message*. If **ABT** is entered for a particular link, the output from this link will be interrupted just after the **ABT** command is entered or after one or two output lines. The output message on the other links may or may not be interrupted, option dependent. When **ABT** is used, the command generating the output will be completed unless the autonomous message, **ERR CMD ABT**

TM STOPPED (Message O.01121), appears. See the ABT command (I.55711) in this document for a list of commands and messages that may be aborted.

For a nonabortable message, the output message will not be affected.

If a nonabortable message is being printed out but DACS II is executing an abortable command, the ABT command will stop that command and ERR CMD ABT TM STOPPED will be outputted on all links.

## **Input Command Format**

---

### **General**

The general format for an input command is:

VERB:FRM xy,SEQ ww:DATA [ ] !

VERB is the action verb telling the system to do something: add, change, cross-connect, restore, etc. The verbs are listed in Table 1 and in the Glossary.

The FRM xy field identifies the DACS II frame to which the command is being sent. A DACS II frame is identified by a 2-digit number whose range is from 00 through ZZ. This number is assigned to the frame when it is placed into operation.

The sequence field SEQ ww assigns an identifying 2-digit number to the command. The number is arbitrarily chosen by the operator. This field is commonly used when two or more remote operators using an OS are sharing the same administrative link. Sequence numbers enable the operators to keep track of their commands.

The frame and sequence fields are optional. If the sequence field is omitted, sequence number "00" is assigned to the command by default.

The DATA field consists of keywords and numbers as required by the command. A delimiter, brackets [ ] in this case, encloses variable optional information which gives specific information that is required by the verb to execute that command. All variables are positional by significance within the command line.

Colons are used to separate the variables (also called group, block, field); but if they are logically connected, these variables are separated by commas. The colon (:) is used as a variable field delimiter.

Additional variable information is contained in the EXPLANATION OF PARAMETERS as required for the message. Verbs, keywords, and variables are positionally significant within the command line.

### *Command Example*

RST:FRM 05,SEQ 12:NPC 097! PF

The above command asks DACS II to restore to service (RST) network processing circuit number 97 (NPC 097) in DACS II frame number 5 (FRM 05). The operator has arbitrarily assigned the sequence number 12 (SEQ 12) to the command.

### **Keywords**

An input command consists of *keywords* that combine the equipment and circuit identification variables. A *keyword* is an alphanumeric string of characters representing:

- Verb (also called action verb or command verb)
- Entity identification
- Address specification
- Results of a command.

*Verbs* are keywords or action verbs that tell the system to do something. Table 1 lists all Release 7.0 verbs and their associated keywords.

*Entity identification* is a keyword that identifies a specific system or circuit pack within the system. For example, the keyword NPC refers to a network processing circuit.

*Address specification* is a keyword that refers to a specific address. TP 03, for example, refers to a specific test port (Test Port 03).

Keywords sometimes report the results of a command. In response to a diagnostic command, DACS II might return the keyword ATP to indicate "All Tests Passed."

The "Glossary" section contains a listing of all keywords and their definitions.

### **Input Command Control Characters**

The following characters may be used while entering the input command:

**&** (or **CONTROL-x**, or **CTRL-x**). *Abandon message.* Entering any one of these characters will cause the message to be abandoned and will return the DACS II system prompt.

**^ h** (or **CONTROL-h** or **CTRL-h**), **\_** (underline), **S** (or **BACKSPACE**). *Erase last character.* Depressing the CONTROL and the H keys simultaneously or depressing the underline key or the BACKSPACE key causes DACS II to ignore the last character of a message and echo an underline (\_). Entering *n* number of erase character symbols causes DACS II to ignore the last *n* characters of a message.

**BREAK.** *Interrupt output message.* The BREAK key interrupts an output message. The message continues after an allotted amount of time has passed or after the operator completes entering the input command.

### **Input Command Acknowledgements**

After DACS II has received the execute character of the input command, an immediate reply will appear with one of the following acknowledgements:

#### **PF (Printout Follows)**

DACS II received the input command and processed it. An output message will soon be returned. The output message will report the results of the work initiated by the command. If the system cannot complete the command, the reason will be printed.

#### **RL (Retry Later)**

DACS II cannot execute the requested command now because it does not currently have system resources available.

- The system could be temporarily overloaded.
- The command queue could be excessively long.
- The requested program may be busy, etc.

Wait, and enter the command later.

#### **NG (No Good)**

The basic format of the command is correct, but the system is in trouble. For example, MP = MCOND means the main processor is in the maintenance condition state.

#### **NA (No Acknowledgement)**

The command has been accepted by the parser, but processing control has been lost, thus making correct acknowledgement impossible. An example is when the communications interface (CI) has detected a local area network (LAN) failure.

If either NA or RL is sent as an input acknowledgement, a normal or error output message may not be sent. Also, if the input command itself is in error, the input acknowledgement will indicate this fact and either the normal or error message will not be sent.

**Acknowledgement****Meaning**

|            |                                                                  |
|------------|------------------------------------------------------------------|
| ?V<cr><lf> | Command code error                                               |
| ?D<cr><lf> | Parameter block error                                            |
| ?E<cr><lf> | Error in command, cannot be identified as either ?V or ?D        |
| ?P<cr><lf> | Parity error occurred in the input                               |
| ?T<cr><lf> | The time between characters exceeded timeout threshold           |
| ?X<cr><lf> | Command aborted, in response to a <cancel> or <break> from user. |

**Output Message Format**

---

There are three types of DACS II output messages. The normal or **completion message** indicates that the input command from the user has been executed and completed. An error response or **denial message** means the input command has been denied and gives the reason or condition code for the denial. An autonomous output message reports a change in the operational state of the DACS II.

**General Format of a Single-Line Output Message**

The format for an output message is:

PA TIME FRM,SEQ LINK IDENT DATA TERM

The priority of action (PA) field is a 2-character field indicating the priority level as follows:

|    |                                             |
|----|---------------------------------------------|
| *C | Immediate action, critical alarm            |
| ** | Immediate action, major alarm               |
| *  | Action, minor alarm                         |
| M^ | Results of manual action                    |
| A^ | Autonomously generated action message       |
| I^ | Autonomously generated information message. |

**Note:** The ^ indicates a space.

TIME is the time of day using a 24-hour clock with an hours:minutes:seconds (hh:mm:ss) format.

The 2-digit FRM field identifies the DACS II frame that sent the message.

The LINK field contains a digit from 1 through 6, optionally followed by two more digits, that identifies the DACS II administrative link that originated the command. A blank LINK field indicates an autonomous message generated within DACS II. The optional two digits identify the virtual circuit number and range from 1 through 16.

The IDENT and DATA fields identify the action verb and associated keywords, variables, and data to which the output message is responding.

The termination field, TERM, indicates the results of a requested command. Some possible terminations are:

|       |                                |
|-------|--------------------------------|
| COMPL | Requested action is completed. |
|-------|--------------------------------|

---

|             |                                                                                                                                                                  |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STOPPED     | Requested action stopped before normal completion.                                                                                                               |
| IN PROGRESS | Requested action is in progress.                                                                                                                                 |
| [ ] DNY     | Requested action is denied. The reason for denial is indicated in the output message. The brackets signify various keywords and data used to explain the reason. |

### Completion Message

A possible response to the input command `RST:FRM 05,SEQ 12:NPC 097!` (restore to service network processing circuit number 097 in DACS II Frame 05) could be:

```
M 07:39:20 05,12 2 RST NPC 097 TYPE DE100 COND 00 COMPL
```

M, the priority of action, indicates the result of a manually entered command. The time (07:39:20), the DACS II frame number executing the command (05), the message sequence number (12), and the link number (2) follow. The remaining fields reflect the input command that originated the output message and the results of the command. In this case, network processing circuit number 097 (NPC 097), a standard DE100 digroup card (TYPE DE100), was restored to service (RST). Restoration of the NPC occurred without error (COND 00), and the command was successfully completed (COMPL).

### Denial Message

A possible response to the input command `RST:FRM 05,SEQ 12:NPC 097!` could be:

```
M 07:39:20 05,12 2 RST NPC 097 TYPE DE100 COND 02 DNY
```

The denial reason in this example (COND 02) means that the NPC is not equipped. The other fields in the message are the same as the completion message.

### Autonomous Messages

This example of an autonomous output message (65041) reports that a major or minor alarm for a parameter has been idled or cleared:

Nonhierarchical Format

```
I 07:39:20 05,12 ALM IDLD <parameter> NPC 097 COMPL
```

Hierarchical Format

```
I 07:39:20 05,12 ALM IDLD <parameter> NPC 01423 COMPL
```

**Table 1. Functional Categories of Messages**

| MESSAGE CATEGORY                                                  | NUMBER         | VERB         | KEYWORD                                              |
|-------------------------------------------------------------------|----------------|--------------|------------------------------------------------------|
| Input Denials                                                     | 01100          | *            | BAD, CMD, STOPPED, INACT                             |
| Startup Messages                                                  | 01200          | *            | STARTUP, BOOT, RESET                                 |
| Error Messages                                                    | 01300          | *            | ERR, OVERLOAD, RESET                                 |
| One-Way Cross-Connect<br>Two-Way Cross-Connect                    | 11000          | OCON<br>TCON | FROM, TO, MPM                                        |
| One-Way Terminated and<br>Two-Way Terminated<br>Cross-Connections | 12000          | OCNT<br>TCNT | FROM, TO, MPM                                        |
| Broadcast Cross-Connect                                           | 13000          | BCON         | FROM, TO, TOX, BCAST,<br>COND                        |
| Alternate Cross-Connect                                           | 14000          | ACON         | OLD, NEW, INCL, CUS, RDC                             |
| One-Way Disconnect<br>Two-Way Disconnect                          | 15000          | ODIS<br>TDIS | FROM, TO, BCAST                                      |
| Broadcast Disconnect                                              | 15200          | BDIS         | FROM, TOX, BCAST                                     |
| Change Circuit Parameters                                         | 17000          | CHG          | TCON, OCON, FROM, TO                                 |
| Change Circuit Parameters                                         | 18000          | CHG          | BCON, SWCH                                           |
| Edit Macro or<br>Alternate Map                                    | 19000          | ED           | MACRO, MAP, APPEND, OPEN<br>DELETE, LIST, SAVE, MOVE |
| Two-Way Monitor<br>Test Access                                    | 20000<br>21000 | CTST<br>TTST | FAD, FROM<br>MON, TP, ASSGN                          |
| Two-Way Split<br>Test Access                                      | 23000          | TTST         | SPL, TP                                              |
| Two-Way Hub<br>Test Access                                        | 24000          | TTST         | HUB, TP                                              |

\* Autonomous Output Message

**Table 1. Functional Categories of Messages (Contd)**

| MESSAGE CATEGORY                                                          | NUMBER | VERB  | KEYWORD                                                                                                     |
|---------------------------------------------------------------------------|--------|-------|-------------------------------------------------------------------------------------------------------------|
| Two-Way Terminate and Leave Activate/Release Test Access                  | 25000  | TTST  | TLA, TLR, TP, NUTST<br>UASGN, PTLA, NTLA                                                                    |
| Two-Way Test Port Release Test Access                                     | 27000  | TTST  | TPR, TP, ALL, COND                                                                                          |
| Two-Way Looped Test Access                                                | 29000  | TTST  | LPD, TP                                                                                                     |
| Growth                                                                    | 30000  | GRTH  | FRAME, SYNC, UNIT, TB<br>NPC, TP, TLI, RTMI, FC                                                             |
| Degrowth                                                                  | 32000  | DGRTH | SYNC, UNIT, TB, TLI<br>NPC, TP, FTMI, TYPE                                                                  |
| Remove                                                                    | 33000  | RMV   | MC, LINK, SYNC, CCNI<br>CCB, TSI, TSIS, UNIT<br>CRO, CCN, UC, FC, NPC<br>CCI, ETSI, ETSIS, ECCN             |

\* Autonomous Output Message

## **DACS II Administrative Links**

The DACS II can be administered (managed, operated) from a local terminal or remotely from an operations system (OS) connected via an administrative link. Six physical links can be connected to the DACS II frame. Links 1–4 are asynchronous and links 5 and 6 can be

asynchronous or synchronous depending on the communications interface. Sixteen virtual circuits may be established on a synchronous link.

Variables *n* and *vv* are used within the message formats to represent the physical and virtual link numbers, respectively.

A level of message screening can be assigned to each link. A user may choose to always receive output messages in response to his/her commands, to receive selected messages, or to receive all messages from the other links. Autonomous messages may be blocked for a particular link to prevent other output messages from being interspersed among the user's messages. Some uses of an administrative link are:

- DS0 channel and clear DS1 signal cross-connections and test access
- Subrate data feature cross-connections
- Common equipment and feature equipment provisioning and maintenance
- Equipment and channel status information
- DS1 and DS3 facility provisioning and maintenance
- DS1 and DS3 facility performance readings
- DS3 facility alarm surveillance and control (AS&C) and DS3 performance monitoring using telemetry asynchronous block serial (TABS) protocol.

Administrative links carry output messages in response to one of the following occurrences:

- An input command

The output message reports that the input command was either completed successfully or denied; additionally, it may contain information requested by the input command. A *normal response* is an output message reporting a successful completion; and *error response* is an output message reporting a denial.

- An autonomous change in DACS II operation state

The output message reports a change in the DACS II system operation state which includes alarms and other trouble indications. This type of output message is referred to as an *autonomous response*.

## **NPC Addressing**

---

Two addressing or numbering schemes for network processing circuits are available: the **nonhierarchical or extended format** and the **hierarchical**. These numbering methods are used to provide a means of locating network processing circuits.

### **Nonhierarchical Numbering**

---

The **nonhierarchical or extended method** uses consecutive numbering to count through the units in the frame. Each unit has a fixed starting number (for example, 161 for unit 2; 21 for unit 3; 481 for unit 4). The starting number is the same for FTU or DSPU type units.

### **Hierarchical Numbering**

---

The **hierarchical method** uses a three-part number: the unit number (uv), the module or group number within the unit (m), and the NPC number within the module (np) for a total of five digits (uvmnp).

## **On-Line Help Feature**

---

### **Description**

---

DACS II provides on-line assistance to the user when constructing commands at the terminal. This assistance is in the form of a menu-driven help routine. Different menus are displayed during the routine to provide the user with information on all of the command fields. The menu items include: command verbs, applicable keywords for a command, definitions of keywords, and the possible choices or number range for a variable field. Inappropriate selections bring error messages.

The help routine can be used to the degree needed to complete the command: either through the entire command in every field or only for a particular part of the command. Help will probably not be needed after some experience is gained at entering commands, since all the commands are documented and the direct entry of commands is so much faster.

The question mark and RETURN are entered to invoke the different levels of the help routine. A question mark is entered by simultaneously depressing **SHIFT** and **?**. The question mark is used to initiate the routine or to get more information, and RETURN is used to see the alternative choices at a given point. The dialogue can be terminated either by typing CTRL-x or by completing the current command line when it is displayed. These functions are demonstrated in the following portion.

### **Summary: The Help Feature**

---

By entering **SHIFT** **?**, the user may ask DACS II for help at any time before or during the construction of an input command.

In the help mode, DACS II will offer the user menus for the selection of the message keywords and/or prompt for values of variable fields. Entering **SHIFT** **?** provides a greater detail of information on the keywords or variables.

A user may select a keyword from a menu by selecting its index number or by entering the keyword itself.

The **RETURN** key displays the command line that has been constructed so far. The user may then enter the remaining keywords and values to complete the command or may enter **SHIFT** **?** to return to the menu/prompt mode.

### **Constructing An Entire Command Using Help**

---

The following sequence demonstrates the use of the menus in the help routine to construct a simple UTL (utility) command. Only portions of long menu lists are shown here, but these examples still serve to demonstrate how selections are made.

- (1) To invoke the help routine at the start level, enter **SHIFT** **?**. DACS II will respond with OK and the following menu:

Select from:

1. ABT
2. ADD
3. AUD
- .
- .
- .
20. UTL

Selection?

- (2) To obtain more explanation, enter **SHIFT** **?**. DACS II will respond with OK and the following list:

Select from:

1. ABT (abort the current command)
2. ADD (adjust link parameters)
3. AUD (query facility alarm data)
- .
- .
- .
20. UTL (perform a general utility)

Selection (1-20 or the actual literal)?

- (3) Here you can enter either 20 or UTL followed by **SHIFT** **?**. The DACS responds with this menu:

Select from:

1. ,
2. :
3. FRM
4. SEQ

Selection?

- (4) To bypass the frame and sequence number, which is normally done unless that information is needed for records or to direct the command to a different location, the user enters either 1 or : followed by **SHIFT** **?**. The question mark prompts DACS II to respond with a list of possible keywords that could appear next in the command. The list is long; DACS II prompts the user to enter **RETURN** to page through it.

Select from:

1. ACO
2. ALL
3. ALMS
- .
- .
- .
81. UNITS
82. WHO
83. XC

- (5) If the user enters a keyword and **?**, DACS II responds with OK and supplies the only appropriate keyword(s) to complete the command. For example, if the user enters WHO and **SHIFT ?**, DACS II responds:

```
UTL: :WHO, QRY!  
Command-line complete. Submit (YES/NO)?
```

- (6) To enter the command, the user simply enters Y followed by **RETURN** .

### **Obtaining Help at a Particular Point on a Command Line**

---

In addition to being used to construct a command from scratch, DACS II's on-line help can be used to obtain information on particular fields of a command. If the command format is not known or if the keywords or variables are not clear, the help dialogue can be initiated at any point by entering **SHIFT ?** .

- (1) Assume the user desires to cross-connect a multipoint circuit and enters the following command:

```
TCON: FROM 001001, TO 002003, MPM(SYM, LEG), TRSP!
```

DACS II responds:

```
M 08:19:06 01,00 2 TCON INERR BAD SYNTAX 2 LN MSG:  
TCON: : FROM 001001, TO 002003, =MPM=(SYM, LEG), TRSP! DNY
```

=MPM= indicates a problem.

- (2) The user can use the help feature to obtain information to reenter the correct command. He or she enters TCON: : FROM and **SHIFT ?** . DACS II responds:

```
ds3u unit number =
```

- (3) The user desires a circuit using a DSPU NPC (Digital Signal Processing Unit Network Processing Circuit), not an FTU (Facility Terminating Unit). He or she enters **RETURN** to see the next option which is:

ftu npc number =

Another **RETURN** brings the desired option which is:

dspu npc number =

- (4) To get more information at this point, the user enters **SHIFT** **?**, and DACS II responds:

dspu npc number (3-digit decimal integer, range 641-941) =

This is where the trouble occurred in the original command; one of the NPCs must be an MB-type in the range 641-941 (for specific values, see Message 11021). The user enters 641 and **SHIFT** **?**.

- (5) DACS II responds:

dmb conference number =

The user enters **SHIFT** **?** to get more information:

dmb conference number (decimal integer, range 1-85) =

- (6) The user enters the conference number, 2. To view the current command line, the user enters **RETURN** DACS II echos the command line completed so far:

TCON::FROM 6412

The user may complete the command by directly entering remaining keywords and parameter values. By entering **SHIFT** **?**, DACS II proceeds with the menu and prompts for the remainder of the command:

Select from:

- 1. CUS
- .
- .
- .
- 8. TO
- 9. TRB
- 10. TRSP

Selection?

- (7) The user enters 8 selecting the TO keyword (TCON::FROM 641002,TO . . .). The user then enters **SHIFT** **?** to ask for information in the next command field. DACS II responds:

ftu npc number =

- (8) The user enters **SHIFT** **?** to get information on FTU NPC values. DACS II responds:

ftu npc number (3-digit decimal integer, range 001-640) =

- (9) The user enters FTU NPC number 002 and **RETURN** DACS II responds with the command line developed to this point:

TCON::FROM 6412,TO 002

- (10) By entering **SHIFT** **?**, the user may continue to be prompted through the construction of the remainder of the command or may directly input the remainder of the command for execution:

TCON::FROM 641002,TO 002003, MPM(SYM,LEG), TRSP!

## **System Configuration**

---

### **Frame Configuration and Bay Growth**

---

This section discusses the frame configuration for a standard DACS II Capacity Expansion Frame (CEF) and for a retrofitted CEF. In addition, it details the bay growth schemes and requirements for the CEF. The same command is used to configure a non-CEF system. However, the responses will vary since a non-CEF can have a maximum of two interface bays.

#### **Frame Configuration**

A DACS II CEF supports one switch bay and up to six interface bays. The switch bay, always bay 2, controls the overall DACS II system operations and provides the switch matrix, power, timing and alarm, and administrative link connections. The interface bay terminates digital facilities and/or provides the digital signal processing function. Interface bays 1, 3, 4, and 5 support three unit positions, while interface bays 6 and 7 support two units. Therefore, a CEF can be equipped with a total of 16 units. Two interface bay types are supported:

- **Original Interface Bay**

The original interface bay supports two facility terminating units (FTUs) in its two upper unit positions and one digital signal processing unit (DSPU) or DS3 unit (DS3U) in its lower unit position. The original interface bay only appears in a retrofitted Release 5.0 CEF. An interface bay used for a CEF can be an original interface bay only if the frame is a retrofit CEF. In such a case, the original interface bay can only be in bays 1 and 3. Bay 3 can be an original interface bay only if the CEF is retrofitted from a 3-bay frame. If bay 3 of a CEF is an original interface bay, bay 1 must also be an original interface bay.

- **Flexible Interface Bay**

The flexible interface bay allows fully flexible unit provisioning. Each of the unit positions can be independently equipped as an IFTU, DSPU, or DS3U. The flexible interface bay can occupy any interface bay location; that is, it can occupy bay 1, 3, 4, 5, 6, or 7. The flexible interface bay is the standard interface bay type for the Release 5.0 CEF.

#### **Bay Growth**

The minimum bay equipage for a CEF is two bays: Bay 1 (an interface bay) and bay 2 (the switch bay). DACS II allows additional peripheral units and/or bays to be added to an in-service CEF without causing a hit to the existing service.

The bay choices and growth are provisioned by entries to the configuration file using the configuration file command:

```
[I.35021]
CFR:FRM xy,SEQ ww:FRAME!
```

After all data is entered into the configuration file and it is accepted, DACS II outputs the following response:

```
[O.35021]
M hh:mm:ss xy,ww n[vv] CFR FRAME[ COND cc] COMPL
```

### **Procedure For Configuring the Frame**

When the configuration file command is entered, DACS II leads the user to complete the entry of the file by displaying the Main Menu below:

- 1: Initialize/Reset Configuration File
- 2: Add new bay(s) and unit(s)
- 3: Add unit(s) to existing bay(s)
- 4: Change unit(s) type
- 5: Remove unit(s) OR bay(s) and unit(s)
- 6: Recall configuration data
- 7: Exit

#### **Option 1, Initialize/Reset Configuration File**

If Option 1 (initializing or resetting the configuration file) is selected, DACS II leads the user through the steps detailed below.

**Note:** A default option has been assigned to each step and each time a step is entered, DACS II presents its default option unless a user has previously selected an option. In such case, the user-selected option is displayed.

Step 1. Choose the Software Serial Number.

Default = 1234567890.

Step 2. Choose the height of the bay.

The options are:

- 1: 7'0''
- 2: 11'6''

Default = 7'0''.

Step 3. Choose the Cross-Connect Network designation.

Choose ECCN for a CEF  
Choose CCN1 for a non-CEF multibay frame  
Choose CCN2 for a single-bay frame (SBF)

Step 4. Choose the allowable nonhierarchical NPC addressing scheme.

The options are:

- 1: Both 3-digit and 4-digit are allowed
- 2: Only 3-digit is allowed
- 3: Only 4-digit is allowed

Default = Option 1 (both 3-digit and 4-digit).

Selection of option 1 or 3 will be denied if the frame is non-CEF. Selection of option 3 on a CEF will be denied if there is one or more administrative link or if the user has chosen the 3-digit scheme. Similarly, the selection of option 2 on a CEF will be denied if there is one or more administrative links or users using the 4-digit scheme. The denial causes an error message to be displayed; after that, DACS II returns to the Main Menu. In this case, all the choices entered in the previous steps are discarded. Once the Main Menu is shown, the user can either exit to change the provisioning of the link (or user) or select another option from the menu.

Note that for domestic DACS II frames, the 3-digit NPC addressing scheme is the default for DACS II administrative links/users. Also, since the hierarchical NPC addressing scheme does not restrict the frame configuration, there is no selection needed here.

Step 5. Choose total number of bays.

The options are:

- 1: 1 bay
- 2: 2 bays
- 3: 3 bays
- 4: 4 bays
- 5: 5 bays
- 6: 6 bays
- 7: 7 bays

Default = 2 bays (Option 2).

Option 1 above (1 bay) is not allowed for a CEF. Options 4 through 7 must not be selected for a non-CEF. Options 4 through 7 are allowed only if the 4-digit scheme (i.e., Option 3 of Step 4) is selected. Otherwise, an error message will be generated and Step 4 will be displayed again.

Step 6. Choose bays.

Step 6.1 If the total number of bays selected is 2, choose bays 1 and 2.

Choose bay 1 type. In the figure below, the boxes shown represent the physical relationship between the switch bay (bay 2) and the bay selected; that is, the one surrounded by asterisks (\*).

```

*****-----
*           |           |
* Bay 1    | ECCN    |
*           |           |
*****-----

```

SELECT BAY 1 TYPE

- 1: Flexible Interface Bay (Units 1, 2, 5)
- 2: Original Interface Bay (Units 1, 2, 5)

Default = Option 1 (Flexible Interface Bay).

Step 6.2 If the total number of bays selected is 3, choose the third bay as below.

```

*****_-----*****
*
* Bay 4 | Bay 1 | ECCN | Bay 3 *
*      |      |      |      *
*****_-----*****

```

SELECT THE NEXT BAY POSITION

- 1: (Bay 3, Flexible Interface Bay (Units 3, 4, 6)
- 2: (Bay 3, Original Interface Bay (Units 3, 4, 6)
- 3: (Bay 4 (Units 7, 8, 11)

Default = Option 1 Bay 3, Flexible Interface Bay)

Step 6.3 If the total number of bays selected is 4, select the fourth bay.

Depending on which bay is selected as the third bay, the options chosen for the fourth bay will be one of the following:

Step 6.3.1 If bay 3 is the third bay configured, the fourth bay can only be one of the following:

```

*****_-----*****
*
* Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 *
*      |      |      |      |      *
*****_-----*****

```

SELECT THE NEXT BAY POSITION

- 1: Bay 4 (Units 7, 8, 11)
- 2: Bay 5 (Units 9, 10, 12)

Default = Option 1.

Step 6.3.2 If Bay 4 is the third bay configured, the fourth bay can only be one of the followings:

```
***** _ _ _ _ _ *****
*      |      |      |      |      *
* Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 *
*      |      |      |      |      *
***** _ _ _ _ _ *****
```

SELECT THE NEXT BAY POSITION

- 1: Bay 3, Flexible Interface Bay (Units 3, 4, 5)
- 2: Bay 3, Original Interface Bay (Units 3, 4, 5)
- 3: Bay 6 (Units 13, 14)

Default = Option 1.

Bay 1 must also be an original interface bay. If this rule is violated, the type for both bays (bays 1 and 3) must be reentered.

Step 6.4 If the total number of bays is 5, choose the fifth bay.

Depending on the third and fourth bays selected, the selection for the fifth bay will be one of the following:

Step 6.4.1 If bays 3 and 4 are the third and fourth bays (in any order), the options are:

```
***** _ _ _ _ _ *****
*      |      |      |      |      *
* Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 *
*      |      |      |      |      *
***** _ _ _ _ _ *****
```

SELECT THE NEXT BAY POSITION

- 1: Bay 5 (Units 9, 10, 12)
- 2: Bay 6 (Units 13, 14)

Default = Option 1.

Step 6.4.2 If bays 3 and 5 are the third and fourth bays (in any order), the options are:

```

*****_-----*****
*      |      |      |      |      |      *
* Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 | Bay 7 *
*      |      |      |      |      |      *
*****_-----*****

```

SELECT THE NEXT BAY POSITION

- 1: Bay 4 (Units 7, 8, 11)
- 2: Bay 7 (Units 15, 16)

Default = Option 1.

Step 6.4.3 If bays 4 and 6 are the third and fourth bays, the options are:

```

-----*****
|      |      |      |      |      *
| Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 *
|      |      |      |      |      *
-----*****

```

SELECT THE NEXT BAY POSITION

- 1: Bay 3, Flexible Interface Bay (Units 3, 4, 6)
- 2: Bay 3, Original Interface Bay (Units 3, 4, 6)

Default = Option 1.

**Note:** Option 2 is allowed only if bay 1 is an original interface bay. If this rule is violated, the bay type for both bays (bays 1 and 3) must be reentered.

Step 6.5 If the total number of bays is 6, choose the sixth bay.

Depending on which bays are already configured, the option displayed will be one of the following:

Step 6.5.1 If bays 3, 4, and 5 were chosen

```

*****
*                               *
* Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 | Bay 7 *
*                               *
*****

```

SELECT THE NEXT BAY POSITION

- 1: Bay 6 (Units 13, 14)
- 2: Bay 7 (Units 15, 16)

Default = Option 1.

Step 6.5.2 If bay 4 has not been chosen, choose bay 4 as the sixth bay configured.

```

*****
*                               *
* Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 | Bay 7 |
*                               *
*****

```

THE NEXT BAY IS BAY 4

Step 6.5.3 If bay 5 was not selected, choose bay 5 as the sixth bay configured.

```

*****
| Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 *
|                               |
|                               |
*****

```

THE NEXT BAY IS BAY 5

Step 6.6 If the 7-bay option is selected, determine if the bay type for bays 1 and 3 has already been stored in the data base. If so, go to Step 7. Otherwise, choose these two bays.

Step 6.6.1 Choose the type for bay 1:

```

-----*****-----
| Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 | Bay 7 |
|       |       |       |     |     |     |       |
|       |       |       |     |     |     |       |
-----*****-----

```

SELECT BAY 1 TYPE

- 1: Flexible Interface Bay (Units 1, 2, 5)
- 2: Original Interface Bay (Units 1, 2, 5)

Default = Option 1.

Step 6.6.2 Choose the type for bay 3:

```

-----*****-----
| Bay 6 | Bay 4 | Bay 1 | ECCN | Bay 3 | Bay 5 | Bay 7 |
|       |       |       |     |     |     |       |
|       |       |       |     |     |     |       |
-----*****-----

```

SELECT BAY 3 TYPE

- 1: Flexible Interface Bay (Units 3, 4, 6)
- 2: Original Interface Bay (Units 3, 4, 6)

Default = Option 1.

Step 7. Choose unit types.

Step 7.1 For original interface bay 1, the unit types are:

Units 1, 2: FTU or NONE

Unit 5: DS3U, DSPU, or NONE

Default for units 1 and 2 = FTU.

Default for unit 5 = DSPU.

Step 7.2 For the flexible interface bay 1, unit types are:

Units 1, 2, 5: IFTU, DSPU, DS3U or NONE

Default = IFTU. Only one type of IFTU is available in Release 5.0. Thus, no version selection is necessary.

Step 7.3 For original interface bay 3, the unit types are:

Units 3, 4: FTU or NONE

Unit 6: DSPU, DS3U or NONE

Default for units 3 and 4 = FTU.

Default for unit 6 = DSPU.

Step 7.4 For flexible interface bay 3, the unit type can be:

Units 3, 4, 6: IFTU, DSPU, DS3U or NONE

Default = IFTU.

Step 7.5 Bay 4 is restricted to the flexible interface bay type, and the unit type can be:

Units 7, 8, 11: IFTU, DSPU, DS3U or NONE

Default = IFTU.

Step 7.6 Bay 5 is restricted to a flexible interface bay type, and the unit type can be:

Units 9, 10, 12: IFTU, DSPU, DS3U or NONE

Default = IFTU.

Step 7.7 Bay 6 is restricted to the flexible interface bay type, and the unit type can be:

Units 13, 14: IFTU, DSPU, DS3U or NONE

Default = IFTU.

Step 7.8 Bay 7 is restricted to a flexible interface bay type, and the unit type can be:

Units 15, 16: IFTU, DSPU, DS3U or NONE

Default = IFTU.

**Note:** It is acceptable for all units to be configured with the option NONE. Also, if the software used on the frame does not support the DS3 termination feature, the DS3U option will not be displayed.

Step 8. After all unit types are chosen and accepted by DACS II, the following will be displayed:

Are the Frame # and UID to be unprotected?

1: YES

2: NO

Default = unprotected.

When all required data for initializing/resetting the configuration file is entered, the user must press the RETURN key to view the Main Menu. Recalling data, changing data or exiting must be implemented through the Main Menu. Note that DACS II does not back up the configuration data to DISK until the user exits.

To interrupt the data entry and exit, press the DELETE key followed by the RETURN key. Once this interrupt signal is received, DACS II denies the input command, and all newly entered data is discarded. In this case, the input command I.35021 must be reentered to allow initialization or editing of the configuration file.

### **Option 2, Add New Bay(s) and Unit(s)**

To add new bay(s) and/or unit(s) from the Main Menu, DACS II first verifies that the action is allowed. The action of adding new bay(s) and/or unit(s) (option 2 from Main Menu) will be denied if any of the following conditions exist:

- a. The configuration file is not initialized.
- b. All bays are configured.
- c. DACS II is a single bay frame (SBF) or a 3-bay non-CEF.
- d. DACS II is a 3-bay CEF equipped with bays 1, 2 and 3, and at least one of its links/users is using the 3-digit scheme.

Once the selection is accepted, DACS II displays the allowable nonhierarchical NPC addressing scheme. If DACS II is currently a 2-bay frame, DACS II displays the same choices as displayed in Step 4 above, except that, instead of the default option, the currently recorded option is displayed. In this case, all requirements for Step 4 above apply.

If the frame is already equipped with three or more bays, DACS II displays the following:

THE NONHIERARCHICAL NPC ADDRESS SCHEME IS THE 4-DIGIT SCHEME

### **Option 3, Add Unit(s) to Existing Bay(s)**

To add unit(s) to an existing bay from the Main Menu, enter option 3. Units listed are those configured as type NONE. DACS II lists the units in ascending order, with the first unit listed being the default.

Once the unit is selected, DACS II displays the unit type as shown in Step 7 above. However, DACS II only shows up to three options (IFTU/FTU, DSPU, and DS3U) for each unit, depending on the feature package used. The NONE option will not be shown.

After the unit type is selected, if there are other units configured as NONE, DACS II asks the user if another unit is to be added. If the answer is yes, the unit list will be shown again and the same procedure must be repeated. Otherwise, DACS II will allow the user to return to the Main Menu.

The selection of option 3 from the Main Menu will be denied if either of the following two conditions exists:

- a. The configuration file is not initialized.
- b. No units are configured as NONE.

#### **Option 4, Change Unit(s) Type**

To change the unit(s) type, enter option 4 from the Main Menu. Units listed are types IFTU, DSPU and DS3U. Note that an FTU cannot be changed to another unit type and vice versa. DACS II lists the units in ascending order. The first unit listed is the default.

Once the unit is selected, DACS II shows the two allowable choices of the new unit type.

If the original unit type is IFTU, the choice is:

- 1: DSPU
- 2: DS3U

If the original unit type is DSPU, the choice is:

- 1: IFTU
- 2: DS3U

If the original unit type is DS3U, the choice is:

- 1: IFTU
- 2: DSPU

**Note:** The DS3U option will not be displayed if the DS3 termination feature is not supported by the frame.

After the new type unit is selected, DACS II asks the user if another unit is to be changed to a new type. If the answer is yes, the same procedure must be repeated.

The choice of option 4 from the Main Menu will be denied if one of the following conditions exists:

- a. The configuration file is not initialized.
- b. The selected unit is grown by the GRTH command.
- c. All units are configured with type NONE or FTU.

### **Option 5, Delete Unit(s) or Bay(s) and Unit(s)**

To delete unit(s) or bay(s) and units(s) from the Main Menu, choose the unit number. The units listed are those of a type other than NONE. DACS II lists the units in ascending order, and the first unit listed is the default.

Once the unit is selected, DACS II shows that the unit type is NONE and asks if another unit is to be deleted. If the answer is yes, the same procedure must be repeated. If the answer is no, DACS II then checks to verify if there is a bay with all units as type NONE. If such a bay exists and the bay is not bay 1, DACS II queries the user if the bay is to be deleted. If the response is yes, DACS II deletes the bay and its units from the configuration file. DACS II repeats the routine for each qualified bay. Note that although all three units of bay 1 can be designated as NONE, bay 1 cannot be deleted from the frame.

**Note:** If all units are configured as type NONE when the option is selected, DACS II immediately starts the bay deletion check.

The deletion of the unit is denied if either of the following conditions exists:

- a. The configuration file is not initialized.
- b. The selected unit is grown by the GRTH command.

### **Option 6, Recall Configuration Data**

If option 6 is entered from the Main Menu, DACS II presents the configuration file from the most recently completed session. If no session was previously completed, the file stored before the current command is entered will be displayed.

A 7-bay configuration is shown below as an example:

|                |                |               |      |               |                |                |
|----------------|----------------|---------------|------|---------------|----------------|----------------|
| Bay6           | Bay4           | Bay1          | Bay2 | Bay3          | Bay5           | Bay7           |
| Unit14<br>TYPE | Unit8<br>TYPE  | Unit2<br>TYPE |      | Unit4<br>TYPE | Unit10<br>TYPE | Unit16<br>TYPE |
| Unit13<br>TYPE | Unit7<br>TYPE  | Unit1<br>TYPE | ECCN | Unit3<br>TYPE | Unit9<br>TYPE  | Unit15<br>TYPE |
| -----<br>TYPE  | Unit11<br>TYPE | Unit5         |      | Unit6<br>TYPE | Unit12<br>TYPE | -----          |

Bay 1 Type: Original Interface Bay  
 Bay 3 Type: Flexible Interface Bay  
 Height of Bay: 7'0''  
 Software Serial Number: 1234567890  
 Frame Number: UNINITIALIZED (UNPROTECTED)  
 Unique Id: UNINITIALIZED  
 Nonhierarchical NPC Address Scheme: 4 digits

Note that the TYPE can be IFTU, DSPU, DS3U, or NONE, depending on the type provisioned. The bay type for bays 1 and 3 can be either the original interface bay or flexible interface bay. The word "UNINITIALIZED" is shown for the frame number and for the unique ID number if these numbers are not entered. Otherwise, the number and/or ID stored will be output instead of the word "UNINITIALIZED." DACS II shows whether or not the frame number is protected (in parentheses).

If a specific bay has not been selected, its space will be filled with blanks. An example of a 3-bay frame configuration follows:

|               |      |               |
|---------------|------|---------------|
| Bay1          | Bay2 | Bay3          |
| Unit2<br>TYPE |      | Unit4<br>TYPE |
| Unit1<br>TYPE | ECCN | Unit3<br>TYPE |
| Unit5<br>TYPE |      | Unit6<br>TYPE |

After the configuration file is recalled, DACS II instructs the user to return to the Main Menu.

If the configuration file is not initialized, the recall option will be denied.

### **Option 7, Exit**

If Option 7 is selected from the Main Menu, DACS II shows all data in the configuration file as if the "recall" option were chosen. In addition, DACS II displays the following:

```
Is the above data correct ? (if not, reenter the data)
  1: YES
  2: NO
IS DATA CORRECT ?
```

If the answer is yes, DACS II displays the following menu:

```
Preparing to write Configuration File to DISK
Please wait while writing to disk
Are you sure? (YES/NO)
```

If the answer is yes, DACS II begins writing the configuration file to DISK. When the configuration file backup is completed, output message O.35021 appears. DACS II backs up the configuration file to DISK before generating message O.35021.

**Note:** DACS II generates the completion message even if the content of the configuration file is unchanged.

### **Configuration File Completion**

---

The configuration file command can only be executed if the conditions listed are met:

1. The MC is in maintenance condition.
2. The command is entered from link 1.
3. The command is entered by the superuser.

The configuration file command allows the configuration information to be entered all at once or at the time that a new bay or unit is added to the frame. The entry of unit types into the unit positions in the configuration file does not equip these units; rather it limits unit equipage to be consistent with the configuration file and makes the equipment locate function available to assist the craft installation operations before the equipment has been placed in service.

## Documentation Support

The following sections provide descriptions of the following types of DACS II documents:

- Customer Reference Manual
- Operation and Maintenance Manual
- Command and Message Manual
- Quick Reference Guide
- Customer Information Releases

### Customer Reference Manual

This manual provides the overall description of the DACS II equipment and features including physical, functional, application, and capability considerations and administrative link connections.

The following table lists the Customer Reference Manual by select code, issue, and applicable software release.

| Document #    | Subject                           | Iss. | Release |   |   |   |   |   |
|---------------|-----------------------------------|------|---------|---|---|---|---|---|
|               |                                   |      | 1       | 2 | 3 | 4 | 5 | 6 |
| 365-301-002   | DACS II Customer Reference Manual | 1    | X       |   |   |   |   |   |
|               |                                   | 2    |         |   | X |   |   |   |
|               |                                   | 3    |         |   | X | X |   |   |
|               |                                   | 4    |         |   |   | X | X |   |
| 365-352-000   | DACS II Customer Reference Manual | 1    | X       | X | X | X | X |   |
| 365-353-000 * | DACS II Customer Reference Manual | 1    | X       | X | X | X | X | X |

\* Last version.

## **Operation and Maintenance Manuals**

---

The operation and maintenance manuals contain instructions on how to operate the DACS II and how to clear trouble messages. These manuals are intended to be the guide for daily use and for troubleshooting before requesting technical help. The operation and maintenance manuals for the basic core software and all features are available in both MML and PDS versions.

The following table lists the Operation and Maintenance Manual by select code, issue, and applicable software release.

| Operation and Maintenance Manual |                                                           |       |         |   |   |   |   |   |
|----------------------------------|-----------------------------------------------------------|-------|---------|---|---|---|---|---|
| Document #                       | Subject                                                   | Iss.  | Release |   |   |   |   |   |
|                                  |                                                           |       | 1       | 2 | 3 | 4 | 5 | 6 |
| 365-301-601                      | DACS II Operation and Maintenance Manual                  | 1     | X       |   |   |   |   |   |
| 365-301-605                      | DACS II (PDS)                                             | 1     |         | X |   |   |   |   |
| 365-301-606                      | DACS II (MML)                                             | 1     |         | X |   |   |   |   |
| 365-301-615                      | DACS II (PDS)                                             | 1     |         |   | X | X |   |   |
| 365-301-616                      | DACS II (MML)                                             | 1     |         |   | X | X |   |   |
| 365-301-617                      | DACS II (PDS) Subrate Feature                             | 1     |         |   | X | X |   |   |
|                                  |                                                           | 2     |         |   | X | X | X |   |
| 365-301-618                      | DACS II (MML) Subrate Feature                             | 1     |         |   | X | X |   |   |
|                                  |                                                           | 2     |         |   | X | X | X |   |
| 365-301-619                      | DACS II (PDS) SLC® 96 Carrier Feature                     | B     |         |   | X | X |   |   |
|                                  |                                                           | 2     |         |   | X | X | X |   |
| 365-301-620                      | DACS II (MML) SLC® 96 Carrier Feature                     | A     |         |   | X | X |   |   |
|                                  |                                                           | 2     |         |   | X | X | X |   |

## Command and Message Manuals

The command and message manuals are the reference documents for all the input and output messages and explanations of all message fields. These manuals are available in both MML and PDS versions.

The following table lists the Command and Message Manuals by select code, title, issue, and applicable software release.

| Command and Message Manuals |                                                  |      |         |   |   |   |   |   |

## **Quick Reference Guides**

---

These guides contain frequently used commands organized into categories of functions, tables and illustrations of cross-connections, a summary of corrective action for frame audit messages, and for PDS, the meanings of the command denial condition codes. The guides are intended to support the experienced user and to serve as a handy reference for commands. Different guides cover two feature set: 2.048 Mb/s alone or subrate SLC<sup>®</sup> carrier, DS1, DS3, and clear-DS1. Both MML and PDS versions are available for each feature set.

The following table lists each Quick Reference Guide by select code, title, issue, and applicable software release.

| Quick Reference Guide |                               |      |         |   |   |   |   |   |   |

## Customer Information Releases

Customer Information Releases (CIRs) are designed both to assist sales personnel and as a vehicle to get new feature information to customers.

The following table lists CIRs by number, issue and title.

| Customer Information Releases |      |                                                                                                |
|-------------------------------|------|------------------------------------------------------------------------------------------------|
| CIR No.                       | Iss. | Title                                                                                          |

## Glossary

Note: Some keywords are used in a generic manner by DACS II. For example, CCN also represents ECCN. Some other keywords used in this manner are: MIU and EMIU, MXR and EMXR, and FTU and IFTU.

| TERM    | MEANING                         |
|---------|---------------------------------|
| ABT     | Abort                           |
| ACO     | Alarm Cutoff                    |
| ACTVERB | Action Verb                     |
| AIS     | Alarm Indication Signal         |
| ALM     | Alarm                           |
| ALMDET  | Alarm Detected                  |
| ALW     | Allowed                         |
| ARG     | Argument                        |
| ARGEND  | Argument End                    |
| ASGN    | Assigned                        |
| ATP     | All Tests Passed                |
| ATTR    | Attribute                       |
| AUD     | Audit                           |
| BADVERB | Bad Verb                        |
| BBL     | Backbone Leg                    |
| BDCST   | Broadcast                       |
| BER     | Bit Error Rate                  |
| BKUP    | Backup                          |
| BM      | Backup Memory                   |
| BMTR    | Backup Memory Transfer          |
| BRDIS   | Broadcast Disconnect            |
| BRDLEG  | Broadcast Disconnect Leg        |
| BX      | Bus Extender                    |
| BDIS    | Broadcast Disconnect            |
| CAS     | Channel Associated Signaling    |
| CATP    | Conditional All Tests Passed    |
| CCB     | Cross-Connect Buffer            |
| CCN     | Cross-Connect Network           |
| CCNI    | Cross-Connect Network Interface |

| TERM     | MEANING                                               |

---

### **Summary of Input Commands**

This section provides a summary of the DACS II Release 7.0 input commands. The commands are presented in an alphabetical and numerical order.

## Alphabetic Command Summary

---

[I.55711]

**ABT!**

[I.14001]

**ACON:FRM xy,SEQ ww:OLD [s]abcddd,NEW [t]ghijjj[,INCL]!**

[I.14001]

**ACON:FRM xy,SEQ ww:OLD uvmnpddd,NEW wxkqrjjj[,INCL]!**

[I.39201]

**ACT:FRM xy,SEQ ww:MAP <map name>[,CLR][,INCL]!**

[I.36007]

**ADD:FRM xy,SEQ ww:LINK j,APPL {ASCS|ASCD|PM}[,L2AD aa]\  
[,POLL ttt]!**

[I.36003]

**ADD:FRM xy,SEQ ww:LINK j[,K b][,T1 ee][,T3 ggg][,N2 aa]\  
[,FRMAD {A|B}]!**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL {S|X|T|M}[,BAUD bb][,ALM k]\  
[,BS e][,ENQ q][,XON x][,INIT]!**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL S[,BAUD bb][,ALM k]\  
[,BS e][,ENQ q][,XON x][,INIT]!**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL X[,ALM k][,INIT]!**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL T[,BAUD bb][,ALM k][,INIT]!**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL M[,ALM k][,INIT]!**

## List of Autonomous Messages

---

### **Autonomous Messages**

This section provides a summary of the autonomous messages that can appear on the DACS II Release 7.0 output printer. The following are the categories of autonomous messages:

- Alarms Messages
- Audits Messages
- Error Recovery Messages
- Event Reporting Messages
- Input Denial Messages
- Scheduled PM Reporting Messages
- Startup Messages

## **ABT — AUD**

---

This section documents the commands **ABT** through **AUD**.

## **ABT**

---

### **ABORT**

#### **Explanation Of Command**

---

The abort command enables a user to stop a currently executing abortable task previously initiated by the same user from continuing execution. This command is helpful to use when a task is producing large amounts of output that the user does not wish to view, or to stop a task that is operating over a range of entities.

If no users are logged in, a command entered on one link CANNOT be aborted from another link. If the same user is logged in on two different links, commands entered from one link CAN be aborted from another link. Only USER DAX can abort commands entered on any link issued by any user.

When an abortable task is operating over a range of entities, DACS II will complete the task on the current entity, and then stop the task for the remaining entities in the specified range. Since the abort command will also delete all messages queued for output for the link or virtual circuit on which the ABT command was entered, the user should use appropriate query commands to determine which entities in the range have been operated upon before the task was stopped.

In the case where a task has already executed, or no task is executing when the abort command is entered, the abort command will not take effect. Any remaining output will not be generated, and DACS II will not generate a completion message or an ABT completion message.

The following commands may be aborted:

- 31341 GRTH::NPC
- 31352 GRTH::NPC
- 31362 GRTH::NPC
- 31363 GRTH::NPC
- 31371 GRTH::NPC
- 32341 DGR::NPC

## **ACO,ACTIVE**

### **ALARM CUTOFF ACTIVE**

#### **Explanation Of Command**

This output message automatically reports the activation (depressing) of the alarm cutoff (ACO) switch. Activation of this switch silences the audible alarms. The ACO switch will be inactivated when all alarms are retired or when a new alarm appears on the frame. For example, if there is a minor alarm on the frame before the CGA major alarm is induced, when the CGA major alarm is retired by an ACO action, the minor alarm will remain. In this case, there will be a second ACO ACTIVE message.

## **ACON,OLD,NEW,INCL**

### **ALTERNATE CROSS-CONNECTIONS**

#### **Explanation Of Command**

The alternate cross-connection command can only be used with a capacity expansion frame (CEF). This command requests an alternate cross-connection for a channel or a range of channels from one NPC to another NPC through DACS II. It moves circuits from one (OLD) service-carrying digroup to another (NEW) service-carrying digroup. All circuit parameters associated with the circuit on the OLD digroup before the ACON command is executed will be retained with the circuit on the NEW digroup after the ACON command is executed.

The ACON command will create a new connection consistent with existing DACS II cross-connect topologies. The user should make sure that this connection is suitable for the type of traffic intended for the circuit. Test signals may exist on the new digroup. If allowed to remain they will overwrite the signal transferred from the old digroup.

#### **WARNING:**

*Prior to executing this command the user should check to see if any test signals exist on the NEW digroup.*

### Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical OLD NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical NEW NPC number

**Note:** Valid types for old and new NPC's are DExyz (except DE9yz) and TExyz (except TE9yz).

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**uvmnp** - Hierarchical OLD NPC number

**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd, jjj**  
- Channel numbers for beginning of channel range

**eee, kkk**  
- Channel numbers for end of channel range  
To connect a range of channels, use the optional fields eee and kkk.

**INCL** - Inclusive  
A circuit designated as a customer controlled circuit or a red circuit cannot be modified without using the inclusive keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

**mmm** - The OLD channel number involved in denial (ddd through eee).

**nnn** - The NEW channel number involved in denial (jjj through kkk).

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                  |

## **ACT,MAP,CLR,INCL**

### **ACTIVATE ALTERNATE MAPS**

#### **Explanation Of Command**

This command requests the activation of an alternate map.

DACS II will not generate individual completion messages for each successful cross-connection; however, it will generate individual denial messages. Moreover, the individual denial messages will only be output to the link/user where the alternate map command was entered, independent of the output screening level.

When only one end of a TCON is remapped via this command, the trunk conditioning specified for a particular cross-connection when that cross-connection was first established will be applied to a disconnected channel.

M hh:mm:ss xy,ww n[vv] ACT MAP <map name>[ CLR][ INCL] \  
COND cc DNY

[O.55703]

M hh:mm:ss xy,ww n[vv] ACT MAP IN PROGRESS

**Note:** As the alternate map is being executed, DACS II will generate the above IN PROGRESS message every 20 seconds.

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**MAP** - Map

**map name**

- Map name (1 to 7 uppercase alphanumeric characters)  
Name of an already existing alternate map.

**CLR** - Clear

Clear all cross-connections on all NPCs included in the map before activating the alternate map.

**INCL** - Inclusive

When an alternate map is activated, existing circuits that are marked CUS or RDC will be overwritten only if the INCL keyword has been specified. Otherwise, a denial will be issued as is currently done for channels under test, etc.

**NPC** - Network processing circuit

**[s]abc** - The first 3- or 4-digit nonhierarchical NPC number of NPC containing a non-two-way, two-point cross-connect.

**[s]jkl, [t]ghi**

- The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

**uvmnp** - First hierarchical NPC number of NPC containing a non-two-way, two-point cross-connection.

**edhfg** - Hierarchical NPC number

**wxkqr** - Hierarchical NPC number

**uv,wx,ed**

- Unit number

**m,k,h** - Module number

**np,qr,fg**

- NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd,jjj**

- Channel number, the first channel of a range

**eee,kkk**

- Channel number, the last channel of a range

001 through 024

**tc** - Trunk conditioning

**AIS** - Alarm Indication Signal (All 1's)

**cc** - Hexadecimal condition code

**cc** *Explanation*

| <b>ED</b> | Invalid channel 031 cross-connection specified                         |

**cc**    *Explanation*

**85**    Using the 24th channel of a T1DM NPC  
**FF**    Termination is in process of being rolled  
**B0**    Unit 1 denied request  
**B1**    Unit 2 denied request  
**B2**    Unit 3 denied request  
**B3**    Unit 4 denied request  
**B4**    Unit 5 denied request  
**B5**    Unit 6 denied request  
**4A**    channel part of a TP or TG

## **ADD, LINK, APPL, ASCS, ASCD, PM, L2AD, POLL**

### **ADD TABS LINK PARAMETERS**

#### **Explanation Of Command**

This message is used to provision a TABS administrative link.

#### **Command**

[I.36007]

ADD:FRM xy,SEQ ww:LINK j,APPL {ASCS|ASCD|PM}[ ,L2AD aa]\  
[,POLL ttt]!

#### **Completion Message**

[O.36007]

M hh:mm:ss xy,ww n[vv] ADD LINK j APPL {ASCS|ASCD|PM}\  
[ L2AD aa][ POLL ttt] COMPL

#### **Denial Message**

[O.36007.01]

M hh:mm:ss xy,ww n[vv] ADD LINK j APPL {ASCS|ASCD|PM}\  
[ L2AD aa][ POLL ttt] COND cc DNY

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**LINK** - Link

**j** - Administrative link number (either 3 or 4)

**POLL** - Polling

**ttt** - Time in seconds

001 through 255 for ASCS or ASCD applications  
000 through 044 for PM applications

**APPL** - Application of the TABS link

**ASCS** - Alarm surveillance and control, summary

**ASCD** - Alarm surveillance and control, detailed

**PM** - Performance monitoring

**L2AD aa**  
- Layer 2 address (00 through 31)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**DF** Command and protocol are inconsistent

**3A** Invalid poll time

**3B** Unspecified L2 address

**3C** Duplicate L2 address

## **ADD, LINK, K, T1, T3, N2, A, B**

**ADD LINK, X.25, PROTOCOL, DATA LINK, LAYER  
PARAMETERS**

### **Explanation Of Command**

This command allows the user to provision the protocol-specific parameters in the data link layer of an X.25 administrative link.

### **Command**

[I.36003]

**ADD:FRM xy,SEQ ww:LINK j[,K b][,T1 ee][,T3 ggg][,N2 aa]\  
[,FRMAD {A|B}]!**

### **Completion Message**

[O.36003]

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ K b][ T1 ee][ T3 ggg]\  
[ N2 aa][ FRMAD {A|B}] COMPL**

### **Denial Message**

[O.36003.01]

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ K b][ T1 ee][ T3 ggg]\  
[ N2 aa][ FRMAD {A|B}] COND cc DNY**

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**LINK** - Link

**j** - Administrative link number (5 or 6)

**FRMAD** - Frame address used by each frame in the Data Link Layer of X.25 protocol.

**A** - Data link layer frame address A. Default is A

**B** - Data link layer frame address B

**K** - Maximum number of outstanding I frames

**b** - Number of frames (1 through 7). Default is 7.

**T1** - Acknowledgment timer

**ee** - Timer setting in seconds (2 through 20). Default is 3 seconds

**T3** - Disconnect (or Idle channel) timer

**ggg** - Timer setting in seconds (4 through 120). Default is 26 seconds

**N2** - Maximum number of frame transmissions

**aa** - Number of frame transmissions (2 through 16) (including original transmission). Default is 7.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**03** Subject entity is in service

**D0** Command is Frame administrator (DAX) only.

## **ADD, LINK, PTCOL, S, X, T, M, BAUD, ALM, BS, ENQ**

### **ADD LINK, PROTOCOL, BAUD**

#### **Explanation Of Command**

This command is used to provision (add) a Snider, Modified Snider, X.25, or TABS administrative link. Only one modified Snider link may be provisioned.

This command can also be used to initialize or change the performance parameters of the link, including the protocol (PTCOL), link speed (BAUD), alarm class (ALM), backspace (BS), Xon/Xoff flow control (XON), and Enq/Ack flow control (ENQ) provisioning.

At least one parameter must be given.

On input, if a virtual circuit range is specified as zero (0), the corresponding group number specified is ignored by DACS II.

#### **Command**

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL {S|X|T|M}[,BAUD bb][,ALM k]\  
[,BS e][,ENQ q][,XON x][,INIT]!**

If the protocol is Snider:

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL S[,BAUD bb][,ALM k]\  
[,BS e][,ENQ q][,XON x][,INIT]!**

If the protocol is X.25:

[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL X[,ALM k][,INIT]!**

If the protocol is TABS:  
[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL T[,BAUD bb][,ALM k][,INIT]!**

If the protocol is Modified Snider:  
[I.36001]

**ADD:FRM xy,SEQ ww:LINK j,PTCOL M[,ALM k][,INIT]!**

### **Completion Message**

---

The output message received depends upon whether "ENQ" and "XON" are specified in the input command. If "ENQ" and "XON" are not specified in the input command, the output message is the following:  
[O.36001]

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ PTCOL {S|X|T|M}]\**  
**[ BAUD bb][ ALM k][ BS e][ INIT] COMPL**

If "ENQ" and "XON" are specified in the input command, the output message is the following:

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ PTCOL {S|X|T|M}]\**  
**[ BAUD bb][ ALM k][ BS e][ INIT] 2 LN MSG:**  
**[ ENQ q][ XON x] COMPL**

### **Denial Message**

---

The output message received depends upon whether "ENQ" and "XON" are specified in the input command. If "ENQ" and "XON" are not specified in the input command, the output message is the following:  
[O.36001.01]

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ PTCOL {S|X|T|M}]\**  
**[ BAUD bb][ ALM k][ BS e][ INIT] COND cc DNY**

If "ENQ" and "XON" are specified in the input command, the output message is the following:

**M hh:mm:ss xy,ww n[vv] ADD LINK j[ PTCOL {S|X|T|M}]\**  
**[ BAUD bb][ ALM k][ BS e][ INIT] 2 LN MSG:**  
**[ ENQ q][ XON x] COND cc DNY**

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**LINK** - Link

**j** - Administrative link number (1 through 6)

**PTCOL** - Protocol

**S** - SCCSAI (Snider protocol)

**X** - X.25 Synchronous protocol

**T** - TABS (Telemetry Asynchronous Block Serial protocol)

**M** - Modified Snider Protocol (requires baud rate of 1200)

**BAUD** - Baud

**bb** - Baud rate

Not provisioned for synchronous X.25 links

| <i>bb</i> | <i>Rate</i> |
|-----------|-------------|
|-----------|-------------|

|    |     |
|----|-----|
| 03 | 300 |
|----|-----|

|    |     |
|----|-----|
| 06 | 600 |
|----|-----|

|    |      |
|----|------|
| 12 | 1200 |
|----|------|

|    |      |
|----|------|
| 24 | 2400 |
|----|------|

|    |      |
|----|------|
| 48 | 4800 |
|----|------|

|    |      |
|----|------|
| 96 | 9600 |
|----|------|

**ALM** - Alarm

**k** - Alarm class for link hardware failures

| <i>k</i> | <i>Alarm Class</i> |
|----------|--------------------|
|----------|--------------------|

|   |                 |
|---|-----------------|
| 1 | Minor (default) |
|---|-----------------|

|   |       |
|---|-------|
| 2 | Major |
|---|-------|

**BS** - Backspace

**e** - Character echoed for backspace or control-h

| <i>e</i> | <i>Character</i> |
|----------|------------------|
|----------|------------------|

|   |                               |
|---|-------------------------------|
| 0 | Backspace is echoed (default) |
|---|-------------------------------|

|   |                      |
|---|----------------------|
| 1 | Underscore is echoed |
|---|----------------------|

**ENQ** - Enquire

**q** - ENQ/ACK Protocol Enable/Disable Control

*q* ENQ/ACK Protocol Provisioning

0 Disabled

1 Enabled (default)

If the DACS II frame has been set to expect the ENQ/ACK Protocol Enable/Disable Control and the sending terminal is not set up properly to send the ACK in response to ENQ, then after several attempts to receive ACK the DACS II frame will autonomously declare a protocol OOS for ENQ/ACK, remove the link, perform diagnostics and then restore the link. At this point the ENQ/ACK protocol is set to disabled.

**XON** - XON

**x** - XON/XOFF Protocol Enable/Disable Control

*x* XON/XOFF Protocol Provisioning

0 Disabled (default)

1 Enabled

The XON/XOFF Protocol Enable/Disable Control will only take effect when the DACS II frame is in output mode. The effect of XOFF lasts for 60 seconds or until an XON is received. If the frame has data to be output on the given link (that is, from a command executed on that link, or output data from another monitored link), and XOFF's are received in a manner such that at the end of an 60 second OFF interval a new 60 second OFF interval begins, thus preventing the frame from delivering output data, then the frame will declare a software error based on the assumption that a software communications error exists. The link will be autonomously removed, diagnosed, and restored. Following restoral, queued output data will be flushed. The XON protocol will still be in effect after the link is restored.

**INIT** - Initialize

Initialize the administrative link; all parameters are set to default except those specified in the command.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**01** Subject entity is equipped

**03** Subject entity is in service

**D0** Command is Frame administrator (DAX) only.

**DF** Command and protocol are inconsistent

**2A** Incorrect pack type in slot

**EA** XON/XOFF flow control is supported only on Snider link

**cc**    *Explanation*

**EB**    ENQ/ACK flow control is supported only on Snider link

## **ADD, LINK, W, P, T20, T22, T23, T25, T26, R20**

### **ADD X.25 LINK PARAMETERS**

#### **Explanation Of Command**

This command allows a user to provision an X.25 administrative link with packet layer parameters.

If a virtual circuit (VC) range is specified as zero (0), the corresponding group number specified in **gghh** is ignored by DACS II.

Parameters T20, R20, DBIT, and VC() are per-link parameters and the remaining parameters are per-VC parameters.

If a 3-digit link+VC number (501, 502, ..) is used and only per-VC parameters are specified, then the command is accepted and the values apply only to the specified VC.

If a 3-digit link+VC number is used and at least one per-link parameter is specified, then the command is denied.

If a 1-digit link number (5 or 6) is used and any per-link and/or per-VC parameter is specified, then the command is accepted and the values apply to all VCs in the link. To ensure proper interface between DACS II and the packet network, packet layer parameters at DACS II and network ends of the X.25 link must be identical.

#### **Command**

[I.36005]

```
ADD:FRM xy,SEQ ww:LINK j[mm][,W c][,P ddd][,T20 iiii]\  
[,T22 jjj][,T23 kkk][,T25 lll][,T26 mmm][,R20 nn]\  
[,R22 p][,R23 qq][,R25 r][,DBIT v][,VC(ppss,gghh)]!
```

### **Completion Message**

---

[O.36005]

```
M hh:mm:ss xy,ww n[vv] ADD LINK j[mm][ W c][ P ddd]\
[ T20 iii][ T22 jjj][ T23 kkk][ T25 lll][ T26 mmm]\
[ R20 nn][ R22 p][ R23 qq][ R25 r][ DBIT v][ VC(ppss,gghh)] COMPL
```

**Note:** If output message is longer than 80 characters, the following will be output.

[O.36005]

```
M hh:mm:ss xy,ww n[vv] ADD LINK j[mm][ W c][ P ddd]\
[ T20 iii][ T22 jjj] 2 LN MSG:
[ T23 kkk][ T25 lll][ T26 mmm][ R20 nn][ R22 p][ R23 qq]\
[ R25 r][ DBIT v][ VC(ppss,gghh)] COMPL
```

### **Denial Message**

---

[O.36005.01]

```
M hh:mm:ss xy,ww n[vv] ADD LINK j[mm][ W c][ P ddd]\
[ T20 iii][ T22 jjj][ T23 kkk] [ T25 lll][ T26 mmm]\
[ R20 nn][ R22 p][ R23 qq][ R25 r][ DBIT v][ VC(ppss,gghh)]\
COND cc DNY
```

**Note:** If output message is longer than 80 characters, the following will be output:

[O.36005.01]

```
M hh:mm:ss xy,ww n[vv] ADD LINK j[mm][ W c][ P ddd]\
[ T20 iii][ T22 jjj] 2 LN MSG:
[ T23 kkk][ T25 lll][ T26 mmm][ R20 nn][ R22 p][ R23 qq]\
[ R25 r][ DBIT v][ VC(ppss,gghh)] COND cc DNY
```

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**LINK** - Link

**j [mm]** - Administrative link number

**j** - Physical link number (l is either 5 or 6)

**mm** - Virtual circuit number (01 through 16)

**W** - Window

**c** - Window size (1 through 7). Default window size is 2.

**P** - Packet

**ddd** - Packet size. Can be 128, 256, 512 octets. Default is 128 octets.

**T20** - Restart request response timer

**iii** - Timer setting (10 through 180 seconds). Default is 180 seconds.

T20 is valid only on a per link basis and will be denied on an individual virtual circuit.

**T22** - Reset request response timer

**jjj** - Timer setting (10 through 180 seconds). Default is 180 seconds.

**T23** - Disconnect (or idle channel) timer

**kkk** - Timer setting (10 through 180 seconds). Default is 180 seconds.

**T25** - Data packet acknowledgement timer

**lll** - Timer setting (10 through 200 seconds). Default is 200 seconds.

**T26** - Interrupt response timer.

**mmm** - Timer setting (10 through 180 seconds). Default is 180 seconds.

**R20** - Restart request retransmission counter

**nn** - Counter setting (1 through 10). Default is 1.

R20 is valid only on a per link basis and will be denied on an individual virtual circuit.

**R22** - Reset request retransmission counter.

**p** - Counter setting (1 through 3). Default is 1.

**R23** - Clear request retransmission counter.

**qq** - Counter setting (1 through 10). Default is 1.

**R25** - Data packet retransmission counter.

**r** - Counter setting (0 through 3). Default is 0.

**VC** - Virtual circuit

**ppss** - Virtual circuit number

**pp** - Range of PVCs

**ss** - Range of SVCs

The sum of the number of PVCs and SVCs must be equal to 16.

Table 1 shows the default values for these fields.

Table 1 and Table 2 show the acceptable values for these fields, allowing for an LCN numbering scheme of 00-255.

TABLE 1

| "pp" | "ss" | Number<br>of PVCs | Number<br>of SVCs | Starting LCN for first<br>PVC Channel | Starting LCN for first<br>SVC Channel |
|------|------|-------------------|-------------------|---------------------------------------|---------------------------------------|
| 00   | 16   | 00                | 16                | --                                    | 01                                    |
| 01   | 15   | 01                | 15                | 01                                    | 02                                    |
| 02   | 14   | 02                | 14                | 01                                    | 03                                    |
| 03   | 13   | 03                | 13                | 01                                    | 04                                    |
| 04   | 12   | 04                | 12                | 01                                    | 05                                    |

## **ADD,NPC**

---

### **ADD NETWORK PROCESSING CIRCUIT**

#### **Explanation Of Command**

---

This message adds one or more network processing circuits (NPCs) of the facility terminating unit (FTU) into an alternate map while in a map session.

#### **Command**

---

##### **Nonhierarchical**

---

[I.36021]

**ADD:FRM xy,SEQ ww:NPC {[s]abc-[t]def|[s]abc[, [s]ghi]...\  
[, [t]def]]}!**

##### **Hierarchical**

---

[I.36021]

**ADD:FRM xy,SEQ ww:NPC {uvmnp-wxkqr|uvmnp[,edfgh]...\  
[,wxkqr]]}!**

#### **Completion Message**

---

If the command is accepted by DACS II, the following acknowledgement will be output.

**OK**

#### **Denial Message**

---

Not applicable.

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**NPC** - Network processing circuit

**[s]abc, [t]def, [s]ghi**  
- The 3- or 4-digit nonhierarchical NPC numbers

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |

**uvmnp** - Hierarchical NPC number at beginning of range  
**wxkqr** - Hierarchical NPC number at end of range  
**edfgh** - Hierarchical NPC number

**uv,wx,ed**  
- Unit number  
**m,k,f**  
- Module number  
**np,qr,gh**  
- NPC number

The valid values are:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

## **ADD,RT,DL,MD,DGA,DGB,DGC,DGD,DGP,NDL**

### **ADD RT | DL**

#### **Explanation Of Command**

This command is used to request assignment of from one to five network processing circuits of type DS<sub>xyz</sub> to a specific SLC<sup>®</sup> carrier bank or a digital carrier line unit system. This command also allows for designation of remote terminal digital line parameters to a grown DS-type network processing circuit.

Use this command to enter the bank's identification number, its mode of operation and to designate the digroups associated with the network processing circuit.

For SLC 96 carrier, the existence of a data link on digroup A and the meaning of the PWR/ MISC alarm carried on the data link are identified. For a SLC Series 5 Carrier Feature Package C (FPC) interface, this message allows the user to specify if the remote terminal is to be retrofitted from a Central Office Terminal (COT) to DACS II.

The retrofit (**RTF**) keyword is applicable only to SLC Series 5 Carrier FPC remote terminals. If the remote terminal exists and is to be cutover from an RT-COT interface to DACS II, the **RTF** keyword must be entered in this command, and the remote terminal retrofit procedure must be followed. Note that, at least one digroup with its associated NPC number must be present on input. Also note that options **sss** and no data line (**NDL**) can only be specified if DGA **aaa** is present on input. This command is used to request assignment of from one to five network processing circuits of type DS<sub>xyz</sub> to a specific SLC<sup>®</sup> carrier bank or a DCLU system.

In this message, the bank's identification number, its mode of operation and its designated digroups. For SLC 96 the existence of a data link on the digroup A and the meaning of the PWR/ MISC alarm carried on the data link, if it exists, are identified. For SLC Series 5 Feature Package C (FPC) interface, this message allows the user to specify if the remote terminal is to be retrofitted from a COT to DACS II.

This message also allows for designation of RT (DL) parameters to a grown DS-type NPC.

Note that, at least one digroup with its associated network processing number must be present on the input message. Also note that the options of **sss** and **NDL** can only be specified.

The RTF keyword is applicable only to SLC Series 5 FPC remote terminals. If the remote terminal exists and is to be cutover from a RT-COT interface to DACS II, the RTF must be entered in this command, and the remote terminal retrofit procedure must be followed. Note that at least one digroup with its associated NPC number must be present on the input message. Also, note that, the options of sss and NDL can only be specified if the DGA [s]aaa is present on the input message. The RTF key word is applicable only to SLC Series 5 FPC RTs. If the FPC RT is in service and is to be cutover from an RT-COT interface to DACS II, the RTF keyword must be entered in this command, and the RT retrofit procedure must be followed.

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**DGA** - Digroup A of SLC carrier bank  
**DGB** - Digroup B of SLC carrier bank  
**DGC** - Digroup C of SLC carrier bank  
**DGD** - Digroup D of SLC carrier bank  
**DGP** - Digroup P of SLC carrier bank

**[s]aaa** - The 3- or 4-digit nonhierarchical DGA NPC number  
**[s]bbb** - The 3- or 4-digit nonhierarchical DGB NPC number  
**[s]ccc** - The 3- or 4-digit nonhierarchical DGC NPC number  
**[s]ddd** - The 3- or 4-digit nonhierarchical DGD NPC number  
**[s]ppp** - The 3- or 4-digit nonhierarchical DGP NPC number

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**uvjab** - Hierarchical DGA NPC number  
**uvkcd** - Hierarchical DGA NPC number  
**uvlef** - Hierarchical DGA NPC number  
**uvmgh** - Hierarchical DGA NPC number  
**uvjpr** - Hierarchical DGA NPC number

**uv** - Unit number  
**j, k, l, m**  
 - Module number within the unit  
 (For FPC RT j=k=l=m)  
**ab** - DGA NPC number within the module  
**cd** - DGB NPC number within the module  
**ef** - DGC NPC number within the module  
**gh** - DGD NPC number within the module  
**pr** - DGP NPC number within the module

The allowable values are presented below:

DS type NPC numbers listed by unit, module, and NPC Number  
 Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**RT** - SLC remote terminal  
**DL** - Digital carrier line unit  
**ffff** - Bank identification number (0000 through 9999)  
**NDL** - No data link  
**RTF** - Retrofit (only applies to SLC Series 5 FPC RT)

**MD g[g]**  
 - Mode of operation of SLC carrier bank

| <i>g[g]</i> | <i>Explanation</i>      |
|-------------|-------------------------|
| 1           | SLC 96 Carrier Mode I   |
| 3           | SLC 96 Carrier Mode III |
| C           | SLC Series 5 Carrier    |

**sss** - Power or miscellaneous alarm option

| <i>sss</i> | <i>Explanation</i>                                                   |
|------------|----------------------------------------------------------------------|
| PMJ        | The PWR/MISC alarm from the data link is a power major alarm         |
| PMN        | The PWR/MISC alarm from the data link is a power minor alarm         |
| MMJ        | The PWR/MISC alarm from the data link is a miscellaneous major alarm |
| MMN        | The PWR/MISC alarm from the data link is a miscellaneous minor alarm |

**A, B, C, D, P**

- Digroup name indicating the digroup that caused the denial.

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 10**    Unit is not equipped
- 11**    UC is out of service
- 12**    UC is in service but failed
- 13**    FTMI is not equipped
- 15**    NPC is unequipped
- 2D**    RTF keyword is used without DGA
- 2E**    RTF keyword and the operation mode does not match
- 64**    NPC is already grown and added as SLC digroup
- 65**    Another NPC is grown and added as this digroup
- 66**    DGP designated to bank without data link
- 67**    DGA is not added
- 68**    NDL option is used without DGA
- 6A**    NPC type is not DS type
- 6B**    Operation mode and digroup name don't match
- 6C**    Framing format, digroup name & operational mode don't match
- 6D**    Counting sequence and operational mode don't match
- 6E**    DGA with NDL option is not provisioned with D4 or ESF framing format
- 6F**    Adding two digroups from one bank on same DDC
- 70**    Digroups from same bank have different modes
- 71**    Digroups from same bank have different counting sequence
- 72**    Digroups from same bank are added to two different FTUs
- 73**    Invalid PWR/MISC alarm level
- 74**    PWR/MISC alarm is specified to a digroup other than DGA
- 76**    Alarm option and bank mode don't match
- 77**    Unassigned operational mode
- 78**    Protection switch process failed
- 79**    DGA/DGP of RT/DL Mode I must be assigned to one DDC
- 7A**    Mode I RT/DL IDs don't match for DGA/DGP on same DDC
- 7B**    Other NPC on this DDC not the same digroup for Mode I DGA/DGP
- 7C**    Different DSxyz types are used for DGA/DGP on same DDC for Mode I
- 7D**    The NDL options are different for DGA's on the same DDC for Mode I
- 82**    DL ffff is used w/ operational mode other than Mode I
- 94**    Mate RT/DL mode is different
- AF**    Number of SLC RT's on each unit is limited to 80
- BC**    DGA and DGB must be specified together in the command
- BD**    DGC and DGD must be specified together in the command
- BE**    NPC type option Y is invalid for SLC-96 NPC
- 1B**    Two digroups from same bank added to different FTMI's
- D4**    Active CCN side is out of service
- E5**    Adding DL DGP forbidden for SLC 96 MD 1

**cc**    *Explanation*

- E6**    No DL digroups can be added until the associated RT bank is created
- 58**    SLC 96 MD 1 RT DGP requires mate NPC to be unequipped
- 59**    Number of DGPs on each unit is limited to 32
- 69**    Use of this NPC is RESERVED for SLC 96 MD 1

## **ADD,USER,LINK,INCL,ALL,LANG,M,P,F**

### **ADD USER/LINK LANGUAGE, NPC ADDRESSING AND PRIORITY**

#### **Explanation Of Command**

This command *is used by the DACS II frame administrator* to assign to a user or link or all users and links any of the following attributes:

- The language with which users converse with the DACS II machine
- The type of addressing used to specify a network processing circuit
- The execution priority level assigned to a given message category
- The ability to remove a link

The command can also be used to initialize these attributes, except for the language and NPC addressing type attributes, to their default values.

To change the type of addressing the frame administrator must issue this command and then logout and login again.

#### **Command**

[I.36103]

```
ADD:FRM xy,SEQ ww:{USER <user id>|LINK j[mm][,INCL]|ALL}\  
[,LANG {M|P|F}][,NPCAD {E|X|H}][,LEV(a,b,c,d,e,f)]\  
[, {RMON|RMOFF}][,RLK {A|I}][,INIT]!
```

## **Completion Message**

---

[O.36103]

```
M hh:mm:ss xy,ww n[vv] ADD {USER <user id>|LINK j[mm][,INCL]|ALL} \

[ {RMON|RMOFF}][ RLK {A|I}][ INIT] COND cc DNY
```

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**USER** - User

**user id**

- User identifier

The users login identifier (two to eight alphabetic characters). The command is denied if the user identifier does not exist.

**LINK** - Link

**j[mm]** - Administrative link number

j Physical link number (1 through 6)

mm Virtual circuit number (01 through 16) for l = 5 or 6

**INCL** - Inclusive

Include virtual circuits of links 5 and 6. The INCL keyword can only be entered with X.25 links 5 and 6, and no virtual circuit number is allowed when this keyword is used. That is, "mm" and "INCL" are mutually exclusive. In addition, the INCL keyword is also mutually exclusive with the "user id" and the keyword "ALL". When INCL is entered, it means that all provisioning data specified in this command, for example, LANG, NPCAD, LEV(a,b,c,d,e,f), RMON/RMOFF and RLK, will be applied to all virtual circuits of the link (5 or 6).

**ALL** - All

All users and links (including virtual circuits). The ALL keyword can only be used together with the NPCAD option. When used, it will change the NPC addressing scheme for ALL users and links including virtual circuits. There is a single exception: the ALL keyword does not affect the NPC addressing scheme for a virtual circuit that is provisioned with the facility data link communication protocol, "F".

**LANG** - Language

The LANG keyword specifies the language used by a link communicating with the DACS II system. All languages cannot be used on all links. The protocol determines what languages are permissible. Three languages are available and they are listed below. See the table below for permissible combinations of protocol and language.

| <i>protocol</i> | <i>language</i>  |
|-----------------|------------------|
| Snider          | PDS or MML       |
| X.25            | PDS, MML, or FDL |
| TABS            | Not applicable   |
| Modified Snider | Not applicable   |

The language defaults to *PDS* if LANG is not specified.

**P** - Program Documentation Standards (PDS)

**M** - Man-Machine Language (MML)

**F** - Facility Data Link (FDL) Communication Protocol

This language may only be provisioned for a single virtual circuit on an X.25 link. A virtual circuit provisioned with this language provides a communication path between an Operations Support System and the ESF data link of a DA or TA type (ANSI) Network Processing Circuit. Such a virtual circuit is completely dedicated to this function and does not interact with other DACS II input/output (I/O) messages. Once the X.25 link is set up, provisioning this function only requires the user to specify the language "F" for the virtual circuit; no other I/O parameters affect this channel, except the NPC addressing option.

**NPCAD** - Network processing circuit addressing

**E** - Extended 3-digit nonhierarchical NPC addressing

If the 3-digit nonhierarchical NPC addressing scheme is allowed in the configuration file, it will be used as the default NPC addressing scheme.

**X** - Extended 4-digit nonhierarchical NPC addressing

If the 3-digit nonhierarchical NPC addressing scheme is not allowed in the configuration file, the 4-digit scheme is used as the default NPC addressing scheme.

**H** - Hierarchical NPC addressing

**⇒ NOTE:**

To place a new addressing scheme into effect the frame administrator must first request the new addressing scheme with this command and then logout and login again.

- LEV** - Level
- a** - Execution priority level for circuit provisioning commands
  - b** - Execution priority level for equipment provisioning commands
  - c** - Execution priority level for maintenance commands
  - d** - Execution priority level for test access commands
  - e** - Execution priority level for monitoring commands
  - f** - Execution priority level for common commands

A table giving the command verbs associated with each of the above command sets is given below.

LEV is used in combination with the command set identifiers a through f to set the execution priority level for each command set. A priority level applies to a user or link as appropriate. Priority levels range from 0 through 3. A list of these levels and their meaning is given below for a. The list for b through f is similar to the a list.

| <i>a</i> | <i>Explanation</i>                                                                                                                                                                                                        |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0        | Commands in the command set assigned this execution priority level cannot be executed.                                                                                                                                    |
| 1        | Highest execution priority level. Commands in the command set assigned this execution priority level will be executed before commands with priority level 2 or 3.                                                         |
| 2        | Middle execution priority level. Commands in the command set assigned this execution priority level will be executed before commands with priority level 3                                                                |
| 3        | Lowest execution priority level. Commands in the command set assigned this execution priority level will be executed after all priority level 1 and 2 commands have been executed. Level 3 is the default priority level. |
| -        | The execution priority level of the command set assigned this execution priority level is not to be changed.                                                                                                              |

**Note:** The commands used to login, logoff, cross-connect, stop, and abort always have the highest priority.

A single queue is used for DACS II commands. When multiple commands arrive at the same time, they will be queued for execution according to the priority assigned to their command set. Commands with the same priority will be executed in the order of arrival, that is, first come first served. A timeout feature insures that no command will wait in the queue forever. When the timeout period has expired for a given command that command will be executed regardless of its priority level.

| a<br>Circuit<br>Prov.                                                                                    | b<br>Equipment<br>Prov. | c<br>Maint. | d<br>Test<br>Access | e<br>Monitoring | f<br>Common                    |

| OCNT<br>OCON<br>ODIS<br>OPR<br>RLS<br>SCNT<br>SCON<br>SDCH<br>SDIS<br>SECH<br>SW<br>TCNT<br>TCON<br>TDIS | DLT<br>GRTH             | RMV<br>RST  | TTST                |                 | ALW<br>CHG<br>ED<br>EXC<br>INH |

**RMON** - Restricted maintenance privilege ON

The RMON keyword is used to assign to a user the privilege of issuing the commands normally restricted to the Frame Administrator.

The following commands are restricted to the Frame Administrator.

|                                      |           |
|--------------------------------------|-----------|
| RST::MC,TAPE!                        | (I.34001) |
| RST::MC,FRC!                         | (I.34001) |
| UTL::BMTR,FROM TAPE,TO DISK[,INSTL]! | (I.55701) |
| RST::DISK,CLR!                       | (I.34211) |
| UTL::CLR,BMTR!                       | (I.51051) |
| UTL::BMTR,FROM TAPE,TO DISK[,EXCT]!  | (I.55701) |
| UTL::BOOT,FRAME[,TAPE]!              | (I.58001) |

**RMOFF** - Restricted maintenance privilege OFF

The RMOFF keyword is used to eliminate a user's privilege to issue the commands restricted to the Frame Administrator. RMOFF is the default value.

**RLK** - Remove Link

**A** - Allowed

A is the default value.

**I** - Inhibited

RLK is used to assign to a user or link the privilege of removing a link. There is a relationship between the link privilege and the execution priority level. If c (see previous Command Sets table) in the LEV field is set to zero then the command to remove a link cannot be executed hence the remove link privilege is inhibited even if the RLK option is set to A or I.

**INIT** - Initialize

INIT is used to assign the default values to the link/user parameters LEV, RMON/RMOFF and RLK. Parameters specified in the command will take on the specified values.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**D1** Cannot create any more users

**D2** User has been created

**D3** User does not exist

**D6** Incorrect or missing password

**D8** Cannot remove Frame administrator

**DC** No zeros allowed for DAX privilege

**DF** Command and protocol are inconsistent

**25** Invalid FPI value

**C0** NPC addressing scheme selected is not allowed in the configuration file

**E1** Virtual circuit is not specified for X.25 link

**E2** Invalid link number specified

**E3** Invalid keyword(s) combination specified

**E4** Invalid NPC addressing scheme specified

**E5** No user/link needs to be changed

**3B** Not valid for frame administrator

**40** Only one channel allowed to have this language

**41** Language "F" provisioned for this channel

**83** Language is not allowed

## **ADD,USER,NEW,PASSWD**

### **ADD USER**

#### **Explanation Of Command**

This message is used by the frame administrator to create a new user login identification and password or to reassign a login identification and password to a previous user of DACS II.

The **NEW** keyword indicates that a new user is being created. The frame administrator uses this command without the **NEW** keyword to reassign a password to a user who is currently on DACS II.

A user is identified to DACS II by his or her **user id** associated with the login. The administrator divulges a password to a new user for the initial log on to DACS II. Afterwards, the user can change this initial password through the **CHG PASSWD** command to a password known only to him or her.

Output from this command is sent only to the link on which the command was input.

#### **Command**

[I.36101]

**ADD:FRM xy,SEQ ww:USER <user id>[,NEW][,PASSWD <user password>]!**

If the message is entered on a Snider link:

[I.36101]

**ADD:FRM xy,SEQ ww:USER <user id>[,NEW]!**

DACS II then generates the message below and a dialog is started.

**PASSWD:** (The frame administrator enters user password.)

**REENTER PASSWD:** (The frame administrator again enters the user password.).

Note that the user password is not echoed by DACS II.

### **Completion Message**

---

[O.36101]

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**USER** - User

**user id**

- User identifier

User login identification (two to eight alphabetic characters).

**NEW** - New

Create a user identifier for a new user.

**Note:** The "NEW" keyword cannot be used to create a user identifier on a link that is using the X.25 protocol.

**PASSWD** - Password

**user password**

- User password

The password assigned to the user, where password is at least six alphanumeric characters.

**Note:** The "PASSWD" keyword cannot be used to create a user identifier on a link that is using the X.25 protocol.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- D0** Command is Frame administrator (DAX) only.
- D1** Cannot create any more users
- D2** User has been created
- D3** User does not exist
- D6** Incorrect or missing password

## **ALM,IDLD,NPC**

**ALARM IDLED, DE, DS, OR TE NPCs**

### **Explanation Of Command**

This autonomous output message reports that a major or minor alarm has been cleared for a given parameter on a facility that terminates on a particular network processing circuit (NPC).

### **Command**

## Hierarchical

[O.65041]

**I hh:mm:ss xy,ww ALM IDLD <parameter> NPC uvmnp COMPL**

## Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|

| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**IDLD** - Idled

**parameter**

- Facility performance parameter

| Parameter                  | Programmable<br>Threshold<br>Range | Default<br>Threshold |
|----------------------------|------------------------------------|----------------------|
| Bit Error Rate (BER) Major | 1E-6* to 1E-3†                     | 1E-3†                |
| Bit Error Rate (BER) Minor | 1E-6* to 1E-3†                     | 1E-6                 |

\* For T1DM and Fe framing, the lower limit of the programmable threshold range is 1E-7.

† For DE-type Clear DS1 NPC and DS-type NPC, the range and default value is 1E-4.

| <b>10</b> | Shelf Alarm Far End(SAFE)§      | 00001 to 65535 | 00000 |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

† 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

‡ Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

## **ALM,MN,IDLD,DS3UNPROTALM,DS3U**

### **ALARM DS3 PROTECTION STATUS**

#### **Explanation Of Command**

This message reports an alarm on a DS3U. A minor alarm message will be generated if DS3 service on a DS3U is unprotected as a result of manual commands.

This alarm will only be generated if the user uses another input command (CHG::DS3UNPROTALM) to activate the alarm generation. If the user deactivates it (using the same command), the alarm will not be generated, even if DS3 service is unprotected.

### **ALLOW DS1 PERFORMANCE MONITORING REPORT**

#### **Explanation Of Command**

This message reenables DACS II scheduled performance monitoring report output for DA and TA type NPCs that had been inhibited by the use of the "Inhibit Performance Monitoring Report" message (I.51161). The user may reenables performance monitoring report output for a single, range or all NPCs on the frame.

This command will handle NPC addressing in the input command as follows: If only a single NPC is addressed in the input command, then either a completion or denial response will be generated for the addressed NPC. DACS II will always deny invalid commands to specifically addressed NPCs.

If a range of NPCs is addressed and the feature applies to one or more NPCs within the range, DACS II will reenables outputting the scheduled reports for the NPCs in the range that support this feature, but skip the NPCs which do not support this feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports this feature, DACS II will generate a completion response for the entire range of NPCs; individual denial responses will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range support the requested feature, DACS II will generate a range denial response.

## Explanation Of Parameters

NPC - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical starting NPC number

[t]def - The 3- or 4-digit nonhierarchical ending NPC number

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

## **ALWSW,UNIT,MMFG,TOPRTN,TOSRVC**

### **ALLOW SWITCH OF MMFG**

#### **Explanation Of Command**

This command requests removal of the inhibition of automatic protection switching from a range of service multiplexer-multiple interface unit functional group (MMFG) in a DS3 unit to the protection MMFG in that unit or the automatic switch back from the protection MMFG of a DS3 unit to the service MMFG c[-d] of that unit. Only automatic protection switches due to failure will be affected by this message.

The command will always specify the number of the service MMFGs involved, even in the case of the command to allow switch back from the protection MMFG.

When the **TOSRVC** keyword is specified, a range of MMFGs is not acceptable. The command will be denied by the parser.

This command may cause an immediate protection switching/switch back if the original MMFG is out-of-service or is pested. In this case, an autonomous message that indicates the occurrence of the switch will be printed out.

#### **Command**

### Autonomous Message

---

Not applicable.

### Explanation Of Parameters

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MMFG** - Multiplexer-multiple interface unit functional group

**c, d** - The number of the MMFG within the unit (1 through 6)

When the TOSRVC keyword is specified, a range of MMFGs is not acceptable. The command will be denied by the parser.

**TOPRTN** - To protection pack

**TOSRVC** - To service pack

**a** - The number of the service MMFG within the range c and d

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**44** Service MXR is not equipped

**4B** The Service MMFG is already under protection

**4C** The Service MMFG is not under protection

**4D** The switch is allowed (not inhibited)

## **APPEND,END**

---

### **APPEND COMPONENT COMMAND**

#### **Explanation Of Command**

---

This message is used, during a macro session, to add one or more commands to an existing macro. Commands are added following the location specified by **line number** or **END**. If neither **line number** or **END** is specified then the command(s) being added will be added on the line following the current position of the line pointer. This position may be determined by use of the LINE command.

**DNY**

#### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

---

### **line number**

- Line number at which to begin appending (0, 1, 2, 3, ...)

If a line number is specified, a command being added will be appended to this line. That is, the new command will be placed on the line following the line pointed to by the line number. The line pointer will then move down to point to the position of the new command. If more than one command has been entered the line pointer will move to the position of the last line entered.

### **END** - End

End is a special line number that marks the position of the last line in the macro. If END is specified, the new command will be placed on the line following the line pointed to by END. The line pointer will then move down to point to the position of the new command. END will then be the line number of the new command. If more than one command has been entered, END will be the line number of the last line entered.

### **COND** - Condition

### **cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|           |                              |
|-----------|------------------------------|
| <b>60</b> | User macro/map space is full |
| <b>6B</b> | Invalid line number          |
| <b>6E</b> | No edit session active       |

## **AR01,MISC,ALM,CGA,LOS**

**AR01 MISCELLANEOUS ALARM, CGA, PBA OR  
LOS**

### **Explanation Of Command**

This autonomous message reports a DACS II Carrier Group Alarm (CGA) or Loss of Signal (LOS) on a facility terminated on a particular Network Processing Circuit. Once a CGA Red/LOS has been detected, DACS II inserts downstream trunk conditioning and transmits a yellow signal in the upstream direction.

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are listed below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**state** - Alarm status

*state*    *Explanation*

MJ    Major  
MN    Minor  
INFO    Information

**k** - Type of CGA alarm

*k*    *Explanation*

- A** AIS - Alarm Indication Signal; also known as All Ones Signal or Blue Signal
- B** Both - Yellow and Red (Note: B is valid only for SLC® Series 5 NPCs)
- L** LMA - Local Multiframe Alarm
- M** RMA - Remote Multiframe Alarm
- R** Red
- Y** Yellow

## **AR01,MISC,ALM,IDLD,CGA,LOS**

### **ALARM IDLD**

#### **Explanation Of Command**

This autonomous message indicates that the carrier group alarm (CGA) on a facility terminated on a particular network processing circuit has been cleared.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

#### **Nonhierarchical**

[O.65021]

I hh:mm:ss xy,ww AR01 MISC ALM IDLD {CGA|LOS} [s]abc[ k] COMPL

## Hierarchical

[O.65021]

**I** hh:mm:ss xy,ww **AR01 MISC ALM IDLD {CGA|LOS} uvmnp[ k] COMPL**

## Explanation Of Parameters

**MISC** - Miscellaneous

**ALM** - Alarm

**IDLD** - Idled

**CGA** - Carrier group alarm

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

**LOS** - Loss of signal

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |

```

### Explanation Of Parameters

**BER** - Bit error rate

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number  
The first NPC in a module.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number  
The last NPC in a module.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number

The first NPC in a range.

**uvmqr** - Hierarchical NPC number

The last NPC in a range.

**uv** - Unit number

**m** - Module number

**np, qr** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**nnn** - Number of NPCs with BER values greater than BER minor threshold or  
number of NPCs with the parameter threshold exceeded.

**xx** - Alarm State

*xx Explanation*

CL Clear

ER Error

MJ Major

MN Minor

-- NPC is unequipped or out of service

**Note:** For the NPCs in Multiplexers (MXRs), one output module corresponds to all the NPCs in an MXR.

## **AUD, QRY, BER, ALL, NPCS, TOT**

### **AUDIT QUERY**

#### **Explanation Of Command**

This message indicates all equipped facility terminating and DS3 unit network processing circuits have zero values for the BER parameter since local midnight.

The scope of this message includes both FTU and DS3U type NPCs.

## **AUD,QRY,CFA,CGA,LOS**

### **QUERY FACILITY ALARMS**

#### **Explanation Of Command**

This message requests a listing of all Network Processing Circuits (NPCs) reporting a Carrier Failure Alarm (CFA), a Carrier Group Alarm (CGA), or a Loss of Signal (LOS) alarm,

For carrier group alarms the CGA and CFA keywords are alternatives and may be used interchangeably on input. However, the CFA keyword has the capability to cause a report of the alarms enabled via command I.51011.

*The alarm report is followed by reports of the form [O.81002], [O.81003] and [O.81004] — if their respective parameters have been enabled as specified in Message I.51101.*

The end of the report is indicated by AUD PARAMS COMPL.

For an autonomous message, the link field "n" is blank.

#### **Command**

## **Explanation Of Parameters**

---

**CFA**    - Carrier failure alarm

Use this keyword to list carrier group alarms and alarms enabled by command UTL::TOD (I.51011).

**CGA**    - Carrier group alarm

Use this keyword to list only carrier group alarms.

**LOS**    - Loss of signal

**PARAMS**    - Parameters

**AR01**    - Alarm report 1

**AR02**    - Alarm report 2

**ALARM** - Alarm

**SUM**    - Summary

**REPORTS**

- Reports

**FOLLOW**

- Follow

**NPC**

- Network processing circuits

**MISC**

- Miscellaneous

**END**

- End

**[s]abc**

- The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are listed below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**nnnn** - Total number of CGA/CFA reports

**SC** - Subscriber (loop) carrier

**ALM** - Alarm

**state** - Alarm status

| <i>state</i> | <i>Explanation</i> |
|--------------|--------------------|
| MJ           | Major              |
| MN           | Minor              |
| INFO         | Information        |

**k** - Type of alarm

| <i>k</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |                                                                             |
|----------|-----------------------------------------------------------------------------|
| <b>A</b> | AIS - Alarm Indication Signal; also known as All Ones Signal or Blue Signal |
| <b>B</b> | Both - Yellow and Red (Note: B is valid only for SLC® Series 5 NPCs)        |
| <b>L</b> | LMA - Local Multiframe Alarm                                                |
| <b>M</b> | RMA - Remote Multiframe Alarm                                               |
| <b>R</b> | Red                                                                         |
| <b>Y</b> | Yellow                                                                      |

## **AUD, QRY, CFA, CGA, LOS**

### **AUDIT QUERY NPC PARAMETER**

#### **Explanation Of Command**

This command is used to request the value of selected facility performance parameters of all FTU or DS3U NPCs that are associated with active Carrier Group Alarms (CGAs) or Carrier Failure Alarms (CFAs). Only those parameters that were enabled by the UTL::TOD, FAC (51011) command are reported.

The output messages may be the result of executing the AUD::QRY, {CFA|CGA|LFVR|FFER} command or they may be autonomously produced.

The output messages are part of the "midnight report" parameter count section. The parameter count section appears:

- Manually: Immediately when requested by the AUD::QRY, CFA command.
- Autonomously: Daily at the time scheduled with the UTL::TOD command (default is midnight).

#### **Command**

[I.81001]

**AUD: [FRM xy, SEQ ww]: QRY, {CFA|CGA|LOS}!**

## Explanation Of Parameters

### parameter

- Facility performance parameter

For DS1 signal (Not applicable to DA or TA type NPCs):

| <i>parameter</i> | <i>Explanation</i>        |
|------------------|---------------------------|
| OOF              | Out Of Frame              |
| SLIP             | Slip counts               |
| ERS              | Errored Seconds           |
| SERS             | Severely Errored Seconds  |
| COFA             | Change Of Frame Alignment |
| BPV              | Bipolar Violation         |
| SANE             | Shelf Alarm Near End      |
| SAFE             | Shelf Alarm Far End       |

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, the first NPC in a module.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, the last NPC in a module.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number, the first NPC in a module.

**uvmqr** - Hierarchical NPC number, the last NPC in a module.

**uv** - Unit number  
**m** - Module number  
**np, qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**TOT** - Total

**nnn** - Cumulative total number of NPCs in the module

A module is either an FTM or a Multiplexer on a DS3U with the specified facility performance parameter value greater than 0.

One DS3U output module contains the information about NPCs on one Multiplexer.

**xxxxx** - Facility performance parameter value (00000 through 65536)

## **AUD, QRY, CFA, CGA, LOS**

### **AUDIT QUERY FACILITY PERFORMANCE PARAMETERS**

#### **Explanation Of Command**

This message indicates all equipped facility terminating and DS3 unit network processing circuits have zero values for a specified facility performance parameter since local midnight.

#### **Command**

[I.81001]

**AUD: [FRM xy, SEQ ww]: QRY, {CFA|CGA|LOS}!**

#### **Completion Message**

[O.81004]

**M hh:mm:ss xy, ww n[vv] AUD QRY <parameter> ALL NPCS TOT 000 \**  
**COMPL**

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.81004]

**I hh:mm:ss xy, ww AUD QRY <parameter> ALL NPCS TOT 000 \**  
**COMPL**

### **Explanation Of Parameters**

---

**CFA** - Carrier failure alarm

**CGA** - Carrier group alarm

**ALL** - All

**NPCS** - Network processing circuits

**TOT** - Total

Total of all NPCs

#### **parameter**

- Facility performance parameter

For DS1 signal:

| <i>parameter</i> | <i>Explanation</i>        |
|------------------|---------------------------|
| OOF              | Out Of Frame              |
| SLIP             | Slip counts               |
| ERS              | Errored Seconds           |
| SERS             | Severely Errored Second   |
| COFA             | Change Of Frame Alignment |
| BPV              | Bipolar Violation         |
| SANE             | Shelf Alarm Near End      |
| SAFE             | Shelf Alarm Far End       |

## **BADVERB — BX2**

---

This section documents the commands **BADVERB** through **BX2**.

## **BADVERB,BAD,SYNTAX,STOPPED**

### **INPUT DENIAL**

#### **Explanation Of Command**

Processing of the input message is **STOPPED** because the action verb is unrecognized (**BADVERB**) or the frame or sequence number is incorrect (**FRMERR** or **SEQERR**).

Output from this command is sent only to the link on which the command was input.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01101]

M hh:mm:ss xy,ww n[vv] {BADVERB|FRMERR|SEQERR} BAD SYNTAX \  
e LN MSG:  
First 70 characters of input message.  
Remaining text of input message STOPPED

### **Explanation Of Parameters**

---

**BADVERB**

- Bad verb

The action verb was not recognized.

**FRMERR**

- Frame error

Incorrect frame number

**SEQERR**

- Sequence error

Incorrect sequence number

**BAD**

- Bad

**STOPPED**

- Stopped

**SYNTAX**

- Syntax

**e**

- Number of lines in the message

## **BADVERB,CMD,INERR,STOPPED**

### **INPUT DENIAL**

#### **Explanation Of Command**

If the message reports STOPPED it means that the input command has been stopped or has been denied processing.

If the message reports DNY it means that an attempt has been made to execute an unlicensed or inactive command.

Note that the error field, action verb, and category are optional; a reason will always be given.

Attempts to address entities (units and NPCs) dependent upon nonconfigured units will result in the following message:

**BAD ARG CONFIG ERR.**

Output from this command is sent only to the link on which the command was input.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

### **Autonomous Message**

[<INERR>] <reason> e LN MSG:  
<First 70 characters of input message.>  
[<Text continued from input message>]  
<Remaining text of input message> {STOPPED|DNY}

### **Explanation Of Parameters**

---

#### **BADVERB**

- Bad verb
- The action verb was not recognized

#### **FRMERR** - Frame error

Incorrect frame number

#### **SEQERR** - Sequence error

Incorrect sequence number

#### **actverb**

- Action verb
- A valid action verb of the stopped or denied command

#### **CMD** - Command

Other command error

#### **INERR** - Input error

#### **STOPPED**

- Stopped

#### **e** - Number of lines in the message

**reason**            - Reason for stop or denial

*reason*

*Explanation*

BAD ARG

Bad argument

BAD ARG CONFIG ERR

Bad argument and configuration  
error; attempted to address  
entities such as units and  
Network Processing Circuits  
(NPCs) dependent on  
non-configured units

BAD SYNTAX

Bad syntax

CMD NOT ALLOWED

Command is not allowed in a  
macro or alternative map

RESTRICTED

Command is restricted to frame  
administrator only

ERR CMD ABT

Command error and aborted

INACT

Command is for a feature package  
which currently is inactive

MC OOS,MCOND,INSERVICE

Main Controller is out-of-service,  
maintenance condition, or in-service

RANGE ERROR

Range error

## **BCON, FROM, TO, NTR, LPD, CONV, CUS, INCL, RDC**

### **BROADCAST CROSS-CONNECTION**

#### **Explanation Of Command**

This command adds a single tributary leg to a broadcast cross-connection. It cross-connects the tributary to the indicated source.

It can be used to create a new one-way cross-connection from an existing broadcast source to the specified tributary channel. It can also be used to convert an existing two-way, two-point cross-connection to a broadcast cross-connection while adding a new tributary leg.

Data received on the broadcast tributary leg is discarded because a one-way cross-connection is created. Only data from the full tributary leg is returned to the broadcast source.

The FROM end field designates the conference backbone. The optional range fields indicate the conference width.

The allowable range is from 01 to 24 channels.

If the FROM end is not looped or is in the no transmit state and the TO end is the initial connection, then the FROM end will receive return data from the TO end.

The field in the TO end designates the tributary. The width of the tributary is indicated by a range designation and must match the backbone width. If necessary, more tributaries can be added by subsequent broadcast cross-connect commands. Received data from broadcast-only TO terminations will be dead-ended as it enters DACS II.

**Note:** Broadcast cross-connections are not allowed to the 24th channel of a DS1 using the T1DM framing format.

## **Command**

## Explanation Of Parameters

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |
| <b>016A-016H</b> | <b>032A-032H</b> | <b>048A-048H</b> | <b>064A-064H</b> |
| Unit<br>5        | Unit<br>6        | Unit<br>7        | Unit<br>8        |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0641-0800</b> | <b>0801-0960</b> | <b>0961-1120</b> | <b>1121-1280</b> |
| <b>080A-080H</b> | <b>096A-096H</b> | <b>112A-112H</b> | <b>128A-128H</b> |
| Unit<br>9        | Unit<br>10       | Unit<br>11       | Unit<br>12       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1281-1440</b> | <b>1441-1600</b> | <b>1601-1760</b> | <b>1761-1920</b> |
| <b>144A-144H</b> | <b>160A-160H</b> | <b>176A-176H</b> | <b>192A-192H</b> |
| Unit<br>13       | Unit<br>14       | Unit<br>15       | Unit<br>16       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd,**  
**jjj** - Channel numbers for beginning of channel range  
**eee,**  
**kkk** - Channel numbers for end of channel range

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |

| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**tc** - Trunk conditioning

The desired cross-connected signaling and insertion word applied when a failure occurs. The signaling and the insertion word specification are entered separately, with a comma as the delimiter.

The following signaling options are allowed:

| <i>signaling</i>      | <i>Explanation</i>                                                                                                                                                           |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TC(ijkl,mnop)         | 2-way, 4-state signaling in binary. For ESF type framing format, software will expand 4-state to 16-state by duplicating the format on the remaining frames on a superframe. |
| TC(efghijkl,mnopqrst) | 2-way, 16-state in binary. Only valid for ESF framing formats.                                                                                                               |
| TC(X'ab,X'cd)         | 2-way, 16-state in hexadecimal. Only valid for ESF framing formats.                                                                                                          |
| TRSP                  | Transparent, no signaling.                                                                                                                                                   |

The following insertion word options are allowed:

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                       |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4.                                                                                                 |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                  |

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**NTR** - No Transmit

All tributaries are broadcast only. There is no return path to the source.

**LPD** - Looped.

The source loops its broadcast back to itself. All the tributaries are broadcast only.

**CONV** - Convert

CONV is given to convert a two-way, two-point circuit to a broadcast circuit.

The first termination (NPC and channel) listed in the input message is the FROM (or source) termination in the current two-point connection. The termination next following in the command is the full tributary leg to be added in the conversion to a broadcast connection.

If the range fields eee and kkk are used, the entire width of the conference tributaries must be indicated.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

E1 to E1      Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

E1 to DS1 or      Same explanation as E1 to E1.  
DS1 to E1

DS1 to DS1      Not applicable.

**CUS** - Customer

Indicates a customer controlled circuit

**RDC** - Red circuit

This keyword will cause the associated circuit to be flagged as a red circuit.

**INCL** - Inclusive

To connect a circuit or range of circuits including one or more circuits previously marked as Customer Controlled, use the INCL (inclusive) option. If this option is not used, the message will be denied if any circuits in the range are customer controlled. INCL is not needed to connect a circuit or circuits previously marked as Red Circuits.

**[t]wxy** - The 3- or 4-digit nonhierarchical NPC number involved in the denial, otherwise the same as [s]abc

**opjst** - Hierarchical NPC number involved in the denial, otherwise the same as uvmnp.

**zzz** - Channel number involved in the denial; otherwise, the same as ddd.

**BCAST** - Denial specific to broadcast conferences.

**COND** - Condition

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b> | <i>Explanation</i>                                                    |

## **BCON, FROM, TO, RDC, CUS, INCL, NTR, LPD, CONV**

### **BROADCAST CONNECT**

#### **Explanation Of Command**

This message connects a new broadcast circuit from a non-channelized source network processing circuit (NPC) to a single non-channelized tributary. It also adds a single non-channelized tributary to an existing conference.

This message also adds the indicated tributary and converts (CONV) a two-way, two-point circuit to a broadcast conference.

When a failure occurs or during an alarm state, the alarm-indication signal (AIS or all ones signal) is transmitted to the failed tributaries or to all tributaries if the source NPCs fail. If the failure occurs during the execution of this command, it is canceled and no broadcast circuit is set up.

## Explanation Of Parameters

**FROM** - From termination

**TO** - To termination

**[s]abc** - The 3- or 4-digit non-hierarchical non-channelized source (backbone)  
NPC number

**[t]def** - The 3- or 4-digit non-hierarchical non-channelized tributary NPC  
number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

| Unit<br>13       | Unit<br>14       | Unit<br>15       | Unit<br>16       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical number of non-channelized source NPC  
**wxkqr** - Hierarchical number of non-channelized tributary NPC

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**Note:** An NPC cannot be broadcast-connected to itself. The desired effect can be achieved by specifying the LPD option.

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**INCL** - Inclusive  
The INCL keyword will remove CUS marking

**NTR** - No transmit  
No transmit or return path, the tributary is broadcast only

**LPD** - Looped  
One signal is looped back to source  
If neither the NTR nor LPD keyword is specified and the broadcast conference is being established for the first time, the tributary is a full tributary, capable of transmitting back to the source; if the source has been previously established then the tributary is broadcast only.

**CONV** - Convert

CONV is given to convert a two-way, two-point circuit to a broadcast circuit.

The first termination (NPC and channel) listed in the input message is the FROM (or source) termination in the current two-point connection. The termination next following in the command is the full tributary leg to be added in the conversion to a broadcast connection.

**[t]ghi** - The 3- or 4-digit backbone leg (bbl) or tributary NPC number causing denial

**edfhg** - Hierarchical number of the backbone leg or tributary NPC causing denial

**st** - Status  
Status of denial

**cc** - Hexadecimal condition code

## **BCON, FROM, TOX, NTR, LPD, CONV, CUS, INCL**

### **BROADCAST CROSS-CONNECTIONS**

#### **Explanation Of Command**

This message sets up a broadcast from a source (FROM) NPC to up to eight tributary (TO) receiving NPCs in the same broadcast. This message is also used to add multiple TOs to an existing broadcast connection based on the specified FROM. Each of the TOs will be connected to the specified FROM. There will be at most eight TOs allowed in the argument list to the TO keyword. Note that no channel range can be specified on the TO arguments.

The channel range from 001 to 024 channels is determined by the range given for the FROM.

The **FROM** field designates the source termination. The optional range field **[-eee]** indicates the width of the conference backbone

The allowable width ranges from 001 to 024 channels and must be the same as the width of the existing conference backbone (if any).

The fields following the SOURCE designation assign the tributaries to be connected to the backbone. Although a conference may have any number of tributaries (limited only by frame configuration), at most eight at a time may be added using this command.

More tributaries can be added by subsequent **BCON** commands. Each specified tributary will have the same range width as the backbone.

If a command attempts to cross-connect a channel to the 24th channel of a DS1 provisioned with the T1DM format, the command will be denied.

## **Command**

---

### **Nonhierarchical**

---

[I.13001]

```
BCON:FRM xy,SEQ ww:FROM [s]abcddd[-eee],\  
TOX ([t]ghijjj[, [t]klmnnn, ...]),<tc>[, {NTR|LPD|CONV}]\  
[, {CUS|INCL}][, RDC]!
```

### **Hierarchical**

---

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**FROM** - From

The FROM field is the source termination.

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number  
**[u]klm** - The 3- or 4-digit nonhierarchical TO NPC number

The values are as follows:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|

| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**edhfg** - Hierarchical TO NPC number within a range of NPC numbers

**uv, wx, ed**

- Unit number

**m, k, h** - Module number

**np, qr, fg**

- NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM channel number

**eee** - FROM channel number denoting the end of the range

**jjj** - TO channel number

**nnn** - TO channel number denoting the end of the range

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |

| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The optional range field **eee** indicates the width of the conference backbone. The range field must not be repeated on the tributary legs' specification. A termination cannot be broadcast connected to itself. The desired effect can be reached by specifying the LPD option. If this message is used to add tributary legs, the width must be the same as the width of the existing conference backbone. However, a conference can have an unlimited number of tributaries, limited only by the frame configuration. More tributaries can be added by subsequent commands.

**tc** - The desired cross-connected signaling and insertion word applied when a failure occurs. The signaling and the insertion word specifications are entered separately, with a comma as the delimiter. The following signaling options are allowed:

| <i>tc</i>             | <i>Explanation</i>                                                                                                                                                           |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TC(ijkl,mnop)         | 2-way, 4-state signaling in binary. For ESF type framing format, software will expand 4-state to 16-state by duplicating the format on the remaining frames on a superframe. |
| TC(efghijkl,mnopqrst) | 2-way, 16-state in binary. Only valid for ESF framing formats.                                                                                                               |
| TC(X'ab,X'cd)         | 2-way, 16-state in hexadecimal. Only valid for ESF framing formats.                                                                                                          |
| TRSP                  | Transparent, no signaling.                                                                                                                                                   |

**Note:** TRSP is used only for domestic trunk conditioning.

The following insertion word options are allowed:

| <i>IW</i> | <i>Explanation</i>                                                                                                                       |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq   | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB       | Standard trouble code, equal to IW X'E4                                                                                                  |
| MUX       | MUX out of sync code, equal to IW X'1A                                                                                                   |

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**NTR** - No transmit

All tributaries are broadcast only. There is no return path to the source.

**LPD** - Looped

The source loops its broadcast back to itself. All the tributaries are broadcast only.

If neither NTR nor LPD is used, and the source (FROM abcd[...]) is being established for the first time, ghijkl is a full tributary, capable of transmitting back to the source. If the source has been previously established, all tributaries are broadcast only.

**CONV** - Convert

CONV is given to convert a two-way, two-point circuit to a broadcast circuit.

The first termination (NPC and channel) listed in the input message is the FROM (or source) termination in the current two-point connection. The termination next following in the command is the full tributary leg to be added in the conversion to a broadcast connection. Additional legs may be added simultaneously by specifying additional terminations.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

E1 to E1      Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

E1 to DS1 or      Same explanation as E1 to E1.  
DS1 to E1

DS1 to DS1      Not applicable.

**CUS** - Customer

Indicates a Customer-controlled Circuit

**RDC** - Red circuit

This keyword will cause the associated circuits to be flagged as red circuits.

**INCL** - Inclusive

To connect a circuit or range of circuits including one or more circuits previously marked as customer controlled, use the INCL (inclusive) option. If this option is not used, the message will be denied if any circuits in the range are customer controlled. INCL is not needed to connect a circuit or circuits previously marked as red circuits.

**[t]wxy**      - NPC number involved in the denial; otherwise, the same as [s]abc.

**zzz**      - Channel number involved in the denial; otherwise, the same as ddd.

**opjst** - Hierarchical NPC number involved in the denial, otherwise the same as uvmnp

**BCAST** - Denial specific to broadcast conferences

**cc** - Hexadecimal condition code

## **BCON, FROM, TOX, RDC, CUS, INCL, NTR, LPD**

### **BROADCAST CONNECT**

#### **Explanation Of Command**

This message cross connects a new broadcast circuit from a non-channelized source network processing circuit (NPC) to up to eight non-channelized tributaries. The NPCs can belong to different units. This message can be used to add up to eight non-channelized tributaries to an existing conference.

This message is also used to add the indicated tributaries and convert (CONV) a two-way, two-point circuit to a broadcast circuit. When a failure occurs, or during an alarm state, the alarm-indication signal (AIS-all ones) is transmitted to the failed tributaries or all tributaries if the source NPCs fail. If the failure occurs during the execution of this command, the message is canceled and no broadcast circuit is set up.

#### **Command**

##### **Nonhierarchical**

[I.13011]

```
BCON:FRM xy,SEQ ww:FROM [s]abc,TOX ([t]def[, [u]ghi]\  
[, [v]jkl][...])[,RDC][,{CUS|INCL}][,{NTR|LPD|CONV}]!
```

##### **Hierarchical**

[I.13011]

```
BCON:FRM xy,SEQ ww:FROM uvmnp,TOX (wxkqr[,edfhg]\  
[,stmno][...])[,RDC][,{CUS|INCL}][,{NTR|LPD|CONV}]!
```

## **Completion Message**

---

### **Nonhierarchical**

## **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**Note:** An NPC cannot be broadcast-connected to itself. The desired effect can be achieved by specifying the LPD option.

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number  
[t]def - The 3- or 4-digit nonhierarchical TO NPC number  
[u]ghi - Same definition as [t]def  
[v]jkl - Same definition as [t]def  
[t]mno - Same definition as [t]def

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                              |                              |                              |                              |                              |                              |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical number of non-channelized source NPC

**wxkqr** - Hierarchical tributary NPC number.

**edfhg** - Same definition as wxkqr

**stmno** - Same definition as wxkqr

**uv, wx, ed, st**

- Unit number

**m, k, f**

- Module number

**np, qr, hg, no**

- NPC number within the module

The values are:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**INCL** - Inclusive  
Option will remove CUS marking

**NTR** - No transmit  
No transmit or return path, all tributaries are broadcast only

**LPD** - Looped  
One signal is looped back to source

If neither the NTR nor the LPD keyword is specified and the broadcast conference is being established for the first time, the first tributary is a full tributary, capable of transmitting back to the source; if the source has been previously established then all tributaries are broadcast only.

**CONV** - Convert

Convert a two-way, two-point circuit to a broadcast circuit by adding the indicated tributaries

The first termination (NPC and channel) listed in the input message is the FROM (or source) termination in the current two-point connection. The termination next following in the command is the full tributary leg to be added in the conversion to a broadcast connection. Additional legs may be added simultaneously by specifying additional terminations.

**[t]qrs** - The 3- or 4-digit backbone leg (bbl) or tributary NPC involved in denial

**opqrs** - Hierarchical number of the backbone leg or tributary NPC involved in denial.

**st** - Status  
Status of denial

**cc** - Hexadecimal condition code

## **BDIS, FROM, TO, CONV, OOS, DCC, INCL**

### **BROADCAST DISCONNECTIONS**

#### **Explanation Of Command**

This command requests the disconnection of a broadcast circuit cross-connection. It can be used to disconnect any one-way tributary from a broadcast circuit, or the full tributary once all of the one-way tributaries have been disconnected.

#### **Command**

##### **Nonhierarchical**

[I.15201]

```
BDIS:FRM xy,SEQ ww:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk]\  
[,CONV][,OOS][,DCC][,INCL]!
```

##### **Hierarchical**

[I.15201]

```
BDIS:FRM xy,SEQ ww:FROM uvmnpddd[-eee],TO wxkqrjjj[-kkk]\  
[,CONV][,OOS][,DCC][,INCL]!
```

#### **Completion Message**

##### **Nonhierarchical**

[O.15201]

### **Autonomous Message**

---

Not applicable.

### Explanation Of Parameters

- [s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd, jjj**

- Channel number for beginning of channel range

**eee, kkk**

- Channel number for end of channel range.

Without the optional CONV keyword, ddd and jjj must be the lowest numbered channels in the range of channels that make up the broadcast circuit. If the range fields [-eee] and [-kkk] are used, the entire width of the conference tributaries must be indicated.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**CONV** - Convert

The CONV keyword is given to disconnect the specified one-way tributary from the broadcast circuit and convert the circuit to a two-way, two-point circuit. For a command with this option to succeed, only the broadcast source and the full tributary leg must remain on the circuit following the disconnection of the specified one-way tributary. That is, this option will be denied if the user attempts to disconnect the full tributary rather than a one-way tributary, or if any other one-way tributaries remain on the broadcast circuit following the disconnection of the one-way tributary specified in the command.

**OOS** - Out-of-service

An OOS disconnection may be done by giving the optional OOS keyword. At least one end of the circuit must be out-of-service or the OOS disconnection will be denied.

**INCL** - Inclusive

Use the optional INCL keyword to disconnect a circuit or range of circuits including one or more circuits marked as a red circuit or under customer control. If this option is not used, the message will be denied if any circuits in the range are red circuits or customer controlled.

**DCC** - Disconnect code

If the DCC keyword is specified, DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the trunk conditioning field used to connect the circuit. If the DCC option is not used, the disconnect code specified in the GRTH::NPC command is used.

**[t]wxy** - The 3- or 4-digit nonhierarchical NPC number that caused the denial, with the same valid values as [s]abc.

**edhfg** - Hierarchical NPC number that caused the denial

**zzz** - Channel number that caused the denial, with the same valid value as ddd.

**BRDIS** - Broadcast disconnect

The BRDIS keyword indicates that the conference is entirely disconnected (no tributaries remain).

**CUS** - Customer

Customer-controlled circuit

CUS indicates a customer controlled circuit.

**RDC** - Red circuit

Indicates that the disconnection was performed on a red circuit.

This implies that the INCL keyword was given in the input message.

If the disconnection was given on more than one circuit, at least one of them was a red circuit or under customer control.

**BCAST** - Broadcast

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 01**    Invalid range for specified NPC type
- 03**    No RDC or CUS circuits and INCL keyword used
- 04**    No NPC's out of service and OOS keyword used
- 05**    Invalid use of CONV keyword
- 10**    NPC out of service or failed
- 11**    NPC not equipped
- 12**    Active CCN side not IS or failed or pested or hardware OOS
- 13**    UNIT not equipped, not in service, or failed
- 14**    CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15**    FTMI not equipped, not in service, or failed
- 16**    FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17**    TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 32**    Termination is under test
- 34**    Termination is under customer control (CUS)
- 35**    Termination is protected (RDC)
- 53**    TO side of two-way to be converted is not an FTU NPC
- 55**    Width of existing two way does not match conference width
- 57**    FROM is not a backbone leg
- 58**    Specified width does not match existing conference width
- 59**    NTR invalid since existing conference is not already NTR
- 5A**    LPD invalid since existing conference is not already LPD
- 5B**    TO is not a leg of this/any conference
- 5C**    Can't disconnect return leg unless entire conference disconnected
- 1A**    Required FLI not equipped, not in service, or failed
- 1B**    Required MXR not equipped, not in service, or failed
- 1C**    Reqd FMT not eqd, not IS, or failed, or inact side FMT not eqd, or not IS
- 1D**    Required MIU not equipped, not in service, or failed
- 95**    Range overlapping between FROM and TO or between two TOs
- D0**    FROM NPC is not provisioned as DGA
- D1**    TO NPC is not provisioned as DGA

**cc**    *Explanation*

**D3**    Corresponding NPC for FROM virtual channel is not provisioned  
**D4**    Corresponding NPC for TO virtual channel is not provisioned  
**D9**    Invalid FROM channel number range  
**DA**    Invalid TO channel number range  
**DC**    A loopback is active on the FROM termination  
**FF**    Termination is in process of being rolled  
**E0**    ETSI not equipped, not in service, or failed

**st**        **d**                    *Explanation*

**ROLL**    **{F|T|B}**    Circuit is involved in a roll

## **BDIS, FROM, TO, OOS, INCL, CONV**

### **BROADCAST DISCONNECTION**

#### **Explanation Of Command**

This message disconnects a single non-channelized tributary network processing circuit from a non-channelized digital signal broadcast circuit. It also disconnects a single tributary and converts a broadcast conference to a two-way, two-point circuit.

When the circuit is disconnected, the idle code (AIS) is transmitted.

#### **Command**

##### **Nonhierarchical**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

[s]abc - The 3- or 4-digit non-hierarchical non-channelized source(backbone)  
NPC number  
[t]ghi - The 3- or 4-digit non-hierarchical non-channelized tributary NPC  
number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1 | Unit<br>2 | Unit<br>3 | Unit<br>4 | Unit<br>5 | Unit<br>6 |
|-----------|-----------|-----------|-----------|-----------|-----------|
| NPC       | NPC       | NPC       | NPC       | NPC       | NPC       |
| 001-160   | 161-320   | 321-480   | 481-640   | 641-800   | 801-960   |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |

**uvmnp** - Hierarchical non-channelized source (backbone) NPC number

**wxkqr** - Hierarchical non-channelized tributary NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

- OOS** - Out-of-service keyword may be specified if one or more of the backbone or tributary NPCs is out of service
- INCL** - Inclusive keyword required for Customer-controlled (CUS) or Red circuits
- CONV** - Convert circuit to a two-way, two-point circuit by disconnecting the indicated tributary; as long as more than two tributaries remain, or no return path exists, the option is denied.

If the indicated tributary is a full tributary, it can be disconnected only when there are no other tributaries.

**[t]qrs** - The 3- or 4-digit nonhierarchical NPC number causing denial

**uvqrs** - Hierarchical NPC number causing denial

**RDC** - Red circuit

**CUS** - Customer

Customer-controlled circuit

**BRDIS** - Broadcast conference completely disconnected

**st** - Status of denial

**cc** - Hexadecimal condition code

## **BDIS, FROM, TOX, CONV, OOS, DCC, INCL**

### **BROADCAST DISCONNECTION**

#### **Explanation Of Command**

This command requests the disconnection of up to eight tributary legs from the source of a broadcast cross-connection circuit.

The **FROM** field designates the source termination. The optional range field **[-eee]** indicates the width of the conference backbone. The allowable width ranges from 001 to 024 channels and must be the same as the width of the existing conference backbone (if any).

The fields in the TO end designate the tributaries to be connected to the backbone. Although a conference may have any number of tributaries (limited only by the frame configuration), at most eight at a time may be disconnected using this command. More tributaries can be disconnected by subsequent broadcast disconnect commands.

## **Autonomous Message**

Not applicable.

## **Explanation Of Parameters**

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number designating the source termination

[t]ghi, [u]klm  
- The 3- or 4-digit nonhierarchical tributary NPC numbers

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                |                                                |                                                |                                                |                                                |                                                |

**ddd** - FROM channel number

**eee** - FROM channel number denoting end of width

The optional range field [-eee] or [&&-eee] indicates the width of the conference backbone. Note that a range may be specified for the source only.

**jjj** - Channel number of tributary legs

**nnn** - Channel number of the last tributary leg of the range

Without the optional CONV keyword, ddd and jjj must be the lowest numbered channels in the range of channels that make up the broadcast circuit. If the range field [-eee] is used, the entire width of the conference tributaries must be indicated.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

#### **FROM** - From

The FROM field designates the source termination.

The fields following the TOX keyword (or the subsequent channel numbers in MML) designate the tributaries that are connected to the backbone.

Although a conference may have any number of tributaries (limited only by frame configuration), at most eight at a time may be disconnected using this command. More tributaries can be disconnected by subsequent commands.

#### **CONV** - Convert

The CONV keyword is given to disconnect the specified one-way tributaries from the broadcast circuit and convert the circuit to a two-way, two-point circuit. For a command with this option to succeed, only the broadcast source and the full tributary leg must remain on the circuit following the disconnection of the specified one-way tributaries. That is, this option will be denied if the user attempts to disconnect the full tributary rather than a one-way tributary, or if any other one-way tributaries remain on the broadcast circuit following the disconnection of the one-way tributaries specified in the command.

**OOS** - Out-of-service

An OOS disconnection may be done by giving the optional OOS keyword. At least one end of the circuit must be out-of-service or the OOS disconnection will be denied.

**DCC** - Disconnect code

If the DCC keyword is specified, DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the trunk conditioning field used to connect the circuit. If the DCC option is not used, the disconnect code specified in the GRTH::NPC command is used.

**INCL** - Inclusive

To disconnect a circuit or range of circuits including one or more circuits marked as a red circuit or under customer control, use the INCL option. If this option is not used, the message will be denied if any circuits in the range are red circuits or customer controlled.

**[t]wxy** - The 3- or 4-digit nonhierarchical NPC number involved in the denial.  
(with the same valid value as [s]abc.)

**opjst** - Hierarchical NPC number involved in the denial

**zzz** - Channel number involved in the denial. Otherwise the same as ddd.

**BCAST** - Broadcast

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 01**    Invalid range for specified NPC type
- 03**    No RDC or CUS circuits and INCL keyword used
- 04**    No NPC's out of service and OOS keyword used
- 05**    Invalid use of CONV keyword
- 10**    NPC out of service or failed
- 11**    NPC not equipped
- 12**    Active CCN side not IS or failed or pested or hardware OOS
- 13**    UNIT not equipped, not in service, or failed
- 14**    CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15**    FTMI not equipped, not in service, or failed
- 16**    FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17**    TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 32**    Termination is under test
- 34**    Termination is under customer control (CUS)

**cc**    *Explanation*

- 35**    Termination is protected (RDC)
- 53**    TO side of two-way to be converted is not an FTU NPC
- 55**    Width of existing two way does not match conference width
- 57**    FROM is not a backbone leg
- 58**    Specified width does not match existing conference width
- 59**    NTR invalid since existing conference is not already NTR
- 5A**    LPD invalid since existing conference is not already LPD
- 5B**    TO is not a leg of this/any conference
- 5C**    Can't disconnect return leg unless entire conference disconnected
- 1A**    Required FLI not equipped, not in service, or failed
- 1B**    Required MXR not equipped, not in service, or failed
- 1C**    Req'd FMT not eq'd, not IS, or failed, or inact side FMT not eq'd, or not IS
- 1D**    Required MIU not equipped, not in service, or failed
- 95**    Range overlapping between FROM and TO or between two TOs
- D0**    FROM NPC is not provisioned as DGA
- D1**    TO NPC is not provisioned as DGA
- D3**    Corresponding NPC for FROM virtual channel is not provisioned
- D4**    Corresponding NPC for TO virtual channel is not provisioned
- D6**    Invalid FROM channel number
- D7**    Invalid TO channel number
- D9**    Invalid FROM channel number range
- DA**    Invalid TO channel number range
- DC**    A loopback is active on the FROM termination
- EC**    Invalid channel 000 cross-connection specified
- ED**    Invalid channel 031 cross-connection specified
- FF**    Termination is in process of being rolled
- E0**    ETSI not equipped, not in service, or failed

## **BDIS, FROM, TOX, OOS, INCL, CONV**

### **BROADCAST DISCONNECT**

#### **Explanation Of Command**

This message disconnects upto eight non-channelized tributaries from a non-channelized source network processing circuit (NPC). The NPCs can be in different units. This message also disconnects tributaries and can convert a broadcast conference to a two-way, two-point circuit. When the circuit is disconnected, the idle code (AIS) is transmitted.

#### **Command**

##### **Nonhierarchical**

[|.15221]

```
BDIS:FRM xy,SEQ ww:FROM [s]abc,\  
TOX ([t]ghi[, [u]jkl][, [v]mno][...])[, OOS][, INCL][, CONV]!
```

##### **Hierarchical**

[|.15221]

```
BDIS:FRM xy,SEQ ww:FROM uvmnp,\  
TOX (wxqqr[, edhfg][, opqrs][...])[, OOS][, INCL][, CONV]!
```

### Explanation Of Parameters

- [s]abc** - The 3- or 4-digit non-hierarchical non-channelized Source(backbone) NPC number
- [t]ghi** - The 3- or 4-digit non-hierarchical non-channelized tributary NPC number
- [u]jkl** - Explained for [t]ghi
- [v]mno** - Explained for [t]ghi

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical number of non-channelized source NPC

**wxkqr** - Hierarchical NPC number of non-channelized tributary

**edhfg** - Hierarchical number of NPC

**opqrs** - Hierarchical number of tributary

**uv, wx, ed, op**

- Unit number

**m, x, h, q**

- Module number

**np, qr, fg, rs**

- NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**OOS** - Out-of-service keyword may be specified if one or more of the backbone or tributary NPCs is out of service

**INCL** - Inclusive keyword required for customer-controlled or Red circuits

**CONV** - Convert circuit to a two-way, two-point circuit by disconnecting the indicated tributaries; as long as more than two tributaries remain, or if no return path exists, the option is denied.

If the broadcast circuit has one full tributary, it can be disconnected only when there are no other tributaries.

**[t]qrs** - The 3- or 4-digit nonhierarchical NPC number causing denial

**uvjkl** - Hierarchical NPC number causing denial

**BRDIS** - Broadcast conference completely disconnected

**st** - Status of denial

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                        |
|-----------|--------------|---------------------------------------------------------------------------|
| <b>01</b> | <b>RNGIE</b> | Invalid range for specified NPC type                                      |

## **BOOT,FAILED,BAD,DEVICE**

### **BOOT FAILED**

#### **Explanation Of Command**

This autonomous output message reports that a system boot has failed while entering the RST::MC command (Message 34001).

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.65053]

**\*\*hh:mm:ss xy,ww    BOOT FAILED - BAD BOOT DEVICE**

#### **Explanation Of Parameters**

## **BOOT, FROM, PMEM, FAILED, ATTEMPTING, TO**

### **STARTUP**

#### **Explanation Of Command**

If the Primary memory Card (PMEM) had a corrupted generic load or the generic is absent from the PMEM, the bootstrap loader will display this message.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01242]

**BOOT FROM PMEM FAILED  
ATTEMPTING TO BOOT FROM SMEM**

### **Explanation Of Parameters**

---

**BOOT** - Boot.

**PMEM** - Primary memory card.

**SMEM** - Secondary memory card.

## **BOOT, FROM, PMEM, SMEM**

### **STARTUP**

#### **Explanation Of Command**

The main processor has successfully loaded the boot program from either the Primary Memory (PMEM) or the Secondary Memory (SMEM).

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01241]

**BOOT FROM {PMEM|SMEM}**

### **Explanation Of Parameters**

---

**BOOT** - Boot

**PMEM** - Primary memory.

**FROM** - From

**SMEM** - Secondary memory.

## **BX2,STF,ATP**

### **BUS EXTENDER STARTUP**

#### **Explanation Of Command**

This message indicates that the communications interface bus extender has initialized itself and has performed self-diagnostics. The results of these diagnostics are reported as some tests failed or all tests passed.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01271]

**BX2 {STF|ATP}**

### **Explanation Of Parameters**

---

**BX2** - Bus extender

**STF** - Some tests failed

**ATP** - All tests passed

For ATP no action is required.

---

## **CFR — CTST**

---

This section documents the commands **CFR** through **CTST**.

## **CFR,FRAME**

---

### **CONFIGURE FRAME**

#### **Explanation Of Command**

---

This command is used to initialize or change the frame configuration. After this command is successfully completed, DACS II will autonomously update the location information for the packs in the frame. **WARNING:** A manual backup from Working to Primary memory must be invoked prior to entering Maintenance Condition, else the command may not complete. **WARNING:** A manual backup from RAM to Disk must be invoked prior to entering Maintenance Condition, else the command may not complete.

Entering this message will cause DACS II to present the user with self-explanatory menus. These menus allow the user to select the total number of bays and units to be equipped and to specify the bay and unit type for each of them. With the user specified information, DACS II will then determine the physical location of each circuit pack in the frame. The completion message will be output when the user exits from the menu mode.

This command can only be entered under the following conditions:

- It is entered from link 1
- The frame is in the maintenance condition
- The user is a superuser

#### **Command**

---

[I.35021]

**CFR:FRM xy,SEQ ww:FRAME!**

#### **Completion Message**

---

[O.35021]

**M hh:mm:ss xy,ww n[vv] CFR FRAME[ COND cc] COMPL**

### **Denial Message**

---

[O.35021.01]

**M hh:mm:ss xy,ww n[vv] CFR FRAME COND cc DNY**

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**FRAME** - Frame

**COND** - Condition

**cc** - Completion condition code (hexadecimal)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**8D** DB PMEM error OP-CL-RD-WR-SK

**8F** Can't lock or unlock ram database

**96** Unit(s) OOS, and additional backup required

**98** Unable to verify Configuration file since MP DB not loaded

**92** Can't mount or unmount PMEM

**97** User quit the menu

**01** Backup required before executing this command

## **CFR,SYNC,FPLL**

### **CONFIGURE SYNCHRONIZER**

#### **Explanation Of Command**

This command requests the fast start of the phase-locked loop in a synchronizer.

#### **Command**

[I.35011]

**CFR:FRM xy,SEQ ww:SYNC a,FPLL!**

#### **Completion Message**

[O.35011]

**M hh:mm:ss xy,ww n[vv] CFR SYNC a FPLL COMPL**

#### **Denial Message**

[O.35011.01]

**M hh:mm:ss xy,ww n[vv] CFR SYNC a FPLL COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**FPLL** - Fast start phase-locked loop

**cc** - Hexadecimal condition code

**cc** *Explanation*

**16** SYNC TB is not equipped

**17** SYNC is out of service

**BF** Sync mode is same

**C8** Sync pack denied command

## **CFR,SYNC,MASTER,SLAVED**

### **CONFIGURE SYNCHRONIZER**

#### **Explanation Of Command**

This command requests configuration of the synchronizer to extract timing from itself (stand-alone or **MASTER** mode) or from external sources (**SLAVED** mode).

The **CFR::SYNC** command modifies the Main Controller (MC) data base for the synchronizers, thus allowing appropriate combinations of time bases, timing extractors, and timing distributors to be equipped. This command is also used by the MC to instruct the Digital Phase Locked Loops (DPLLs) to implement the specified architecture. Condition codes for completion indicate architecture states, dependent on the current equipage. Condition codes for denial indicate that the requested architecture is not consistent with the current equipage.

#### **Command**

[I.35013]

**CFR:FRM xy,SEQ ww:SYNC,{MASTER|SLAVED}!**

#### **Completion Message**

[O.35013]

**M hh:mm:ss xy,ww n[vv] CFR SYNC {MASTER|SLAVED} COND 00 \**  
**COMPL**

#### **Denial Message**

[O.35013.01]

**M hh:mm:ss xy,ww n[vv] CFR SYNC {MASTER|SLAVED} COND cc DNY**

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**MASTER** - Master

The frame will use its own sources for timing.

**SLAVED** - Slaved

Timing will be extracted from external sources.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                        |
|-----------|----------------------------------------|
| <b>16</b> | SYNC TB is not equipped                |
| <b>B6</b> | Sync architecture is same              |
| <b>B7</b> | Some TLIs are still equipped           |
| <b>B8</b> | CRO is still equipped                  |
| <b>B9</b> | Timing Extractor type TLIs are present |
| <b>BA</b> | TLI 3 or 4 still equipped              |
| <b>BC</b> | SSP with 0 priority present            |
| <b>BD</b> | SSP with non 0 priority present        |
| <b>C8</b> | Sync pack denied command               |

## **CFR,SYNC,STRATUM,STR2,STR3**

### **CONFIGURE SYNCHRONIZER STRATUM**

#### **Explanation Of Command**

This command requests the configuration of the synchronizer at a particular stratum level.

The command can be entered to configure the synchronizer at a lower stratum than the capability of the equipped time bases. The message can also be used to change the operating stratum level of the synchronizer to a higher level if the synchronizer is so equipped.

#### **Command**

[I.35012]

**CFR:FRM xy,SEQ ww:SYNC,STRATUM {STR2|STR3}!**

#### **Completion Message**

[O.35012]

**M hh:mm:ss xy,ww n[vv] CFR SYNC STRATUM {STR2|STR3} COMPL**

#### **Denial Message**

[O.35012.01]

**M hh:mm:ss xy,ww n[vv] CFR SYNC STRATUM {STR2|STR3} COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**STRATUM**

- Stratum

**STR2** - Stratum 2 Time Base

**STR3** - Stratum 3 Time Base

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**    *Explanation*

**16**    SYNC TB is not equipped

**C0**    Sync stratum is same

**C1**    Stratum not allowed

**C8**    Sync pack denied command

## **CFR,XC,INCL**

### **CONFIGURE DIGROUP CIRCUITS**

#### **Explanation Of Command**

This command requests that all digroup circuits select data and clocks from the specified cross-connect network side.

If the frame is in the maintenance condition state then the user must be logged in as the system administrator (DAX) on link 1. In addition the INCL keyword must be specified in order for the command to be accepted. If these conditions are not met the command will be denied.

#### **Command**

[I.35001]

**CFR:FRM xy,SEQ ww:XC s[,INCL]!**

#### **Completion Message**

[O.35001]

**M hh:mm:ss xy,ww n[vv] CFR XC s[ INCL] COMPL**

#### **Denial Message**

[O.35001.01]

**M hh:mm:ss xy,ww n[vv] CFR XC s[ INCL] COND cc DNY**

## **Autonomous Message**

---

[O.35001]

**I** hh:mm:ss xy,ww n[vv] **CFR XC s[ TN abcd]** **COMPL**

## **Explanation Of Parameters**

---

**XC** - Cross-connect

**s** - Cross-connect side (0 or 1)

**INCL** - Inclusive

**a, b** - The CCN side representations used for the autonomous report, with the same definition as s.

a and b each represents a CCN side. If a is 1, b must be 0, and vice versa.

**TN** - Transaction

**abcd** - transaction number (hexadecimal)

The transaction number is shown only in the autonomous output message.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**1C** CCN side s is out of service

**98** Unable to verify Configuration file since MP DB not loaded

**F5** INCL keyword needed to perform this command

**64** Frame is not in MCOND

**65** Link being used is not Link 1

**66** User login-id is not DAX

## **CHG,DS3UNPROTALM,ON,OFF**

### **CHANGE UNPROTECTED ALARM SETTING**

#### **Explanation Of Command**

This message activates or deactivates the generation of minor alarms when DS3 service is unprotected as a result of manual commands. DS3 service can be unprotected due to manual commands when the user manually switches service from a MMFG-S to the protection MMFG, when the user manually removes one of the FLIs, when s/he manually removes the protection MMFG, or when s/he manually removes the Unit Controller of a DS3 unit.

Even though a minor alarm is generated per unprotected DS3U, this message activates/deactivates the alarm generation for **all** DS3Us in the frame. If the frame is not equipped with any DS3U, the command will indicate that fact.

Deactivating the alarm generation will idle all active DS3 unprotected alarms previously generated.

#### **Command**

[I.38611]

**CHG:[FRM xy,SEQ ww]:DS3UNPROTALM {ON|OFF}!**

#### **Completion Message**

**Note:** When the frame is not equipped with DS3, the following output appears:

[O.38611]

**M hh:mm:ss xy,ww n[vv] CHG DS3UNPROTALM UNEQPD COMPL**

**Note:** When the frame is equipped with DS3, the following output appears:

[O.38612]

**M hh:mm:ss xy,ww n[vv] CHG DS3UNPROTALM STATUS <a> COMPL**

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

#### **DS3UNPROTALM**

- DS3 Unprotected Alarm

**UNEQPD** - Unequipped with DS3

**STATUS** - Status

<a> - status of activation/deactivation

ON - Activated. Alarm will be generated when DS3 is unprotected.

OFF - Deactivated. Alarm will not be generated.

**COND** - Condition

## **CHG,ECLOC,TYPE,MJU,SRM**

### **CHANGE SUBRATE ERROR CORRECTION LOCATION**

#### **Explanation Of Command**

**For Subrate**, this command changes the error correction location to either the multipoint junction unit (MJU) or Subrate multiplexer unit (SRM) type of a Subrate pack. As a result of this command, all new error correction functions that require Subrate circuit pack resources will be allocated to the pack type specified for subsequent Subrate circuit provisioning commands (**SECH**, **SCON**, **SCNT**).

#### **Command**

[I.38261]

**CHG:FRM xy,SEQ ww:ECLOC,TYPE {MJU|SRM}!**

#### **Completion Message**

[O.38261]

**M hh:mm:ss xy,ww n[vv] CHG ECLOC TYPE {MJU|SRM} COMPL**

#### **Denial Message**

[O.38261.01]

**M hh:mm:ss xy,ww n[vv] CHG ECLOC TYPE {MJU|SRM} COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**ECLOC** - Subrate error correction location

**MJU** - Multipoint junction unit

**SRM** - Subrate multiplexer unit

As a result of this command, all new error correction functions that require Subrate circuit pack resources will be allocated to the pack type specified for subsequent Subrate circuit provisioning commands (SECH, SCON, SCNT). Such error correction resources are allocated for channels requiring parity channel error correction and for circuits with subrate error correction that do not connect to a subrate multiplexer or an MJU. This command does not result in reallocation of any existing error correction resources to the new circuit pack type.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**9F** current error corrector pack type specified in command

## **CHG, FROM, TO, NOT, TLA, TLR, F, T, B, A, INCL**

### **CHANGE CIRCUIT PARAMETERS**

#### **Explanation Of Command**

This message changes the termination state of a cross-connected non-channelized network processing circuit. This command can affect either a two-way, a one-way or a broadcast non-channelized digital signal cross-connection. This command has the ability to change the termination states of all of the legs of a broadcast circuit. However, an option is provided to exclude one of the legs from being changed. The idle code for non-channelized digital signal cross-connections is the alarm indication signal which is transmitted over a terminated connection.

#### **Command**

##### **Nonhierarchical**

[I.17011]

```
CHG:FRM xy,SEQ ww:FROM [s]abc,TO [t]ghi[,NOT [u]rst],\  
{TLA|TLR} {F|T|B|A}{[,INCL]}
```

##### **Hierarchical**

[I.17011]

```
CHG:FRM xy,SEQ ww:FROM uvmnp,TO wxkqr[,NOT edhfg],\  
{TLA|TLR} {F|T|B|A}{[,INCL]}
```

### **Completion Message**

---

#### **Nonhierarchical**

---

[O.17011]

M hh:mm:ss xy,ww n[vv] CHG [s]abc,[t]ghi[ RDC]\  
[ CUS][ NOT [u]rst] {TLA|TLR} {F|T|B|A} COMPL

#### **Hierarchical**

---

[O.17011]

M hh:mm:ss xy,ww n[vv] CHG uvmnp,wxkqr[ RDC]\  
[ CUS][ NOT edhfg] {TLA|TLR} {F|T|B|A} COMPL

### **Denial Message**

---

#### **Nonhierarchical**

---

[O.17011.01]

M hh:mm:ss xy,ww n[vv] CHG [s]abc,[t]ghi cc <st> DNY

[O.17011.02]

M hh:mm:ss xy,ww n[vv] CHG [s]abc,[t]ghi <d> <st> DNY

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**FROM** - From termination  
**TO** - To termination

**[s]abc** - The 3- or 4-digit nonhierarchical non-channelized  
FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical non-channelized  
TO NPC number  
**[u]rst** - The 3- or 4-digit nonhierarchical non-channelized  
NPC number that is not affected by this command.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

- uvmnp** - Hierarchical number of non-channelized FROM NPC
- wxkqr** - Hierarchical number of non-channelized TO NPC
- edhfg** - Hierarchical number of a leg of a non-channelized digital signal broadcast circuit that is not affected by this command.

**uv, wk, ed**

- Unit number

**m, x, h**

- Module number

**np, qr, fg**

- NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**INCL** - Inclusive

Inclusive keyword, required if one or more circuits are marked  
Customer-controlled (CUS) or Red (RDC)

**TLA** - Terminate and leave activate

**TLR** - Terminate and leave release

The direction in which TLA or TLR is to be applied is specified by  
the use of F, T, B, A, and NOT as defined below:

**F** - Towards the FROM NPC

**T** - Towards the TO NPC

**B** - In both directions

**A** - All directions of a broadcast circuit

**NOT** - In conjunction with the A options, all directions of a broadcast  
circuit except the one specified

**RDC** - Red circuit

NPC is a red circuit

**CUS** - Customer

NPC is a Customer-controlled Circuit

**d** - direction

|   |             |
|---|-------------|
| d | Explanation |
| F | From        |
| T | To          |
| B | Both        |
| A | All         |

## **CHG, FROM, TO, NOT, TLA, TLR, F, T, B, L, G, A**

### **CHANGE CROSS-CONNECT TERMINATION STATUS**

#### **Explanation Of Command**

This command is used to request a change in the termination status of the specified cross-connected circuit or range of circuits which were established by a two-point or multipoint cross-connect command.

If successful, the requested change is echoed ([NOT [u]rst-vvv]{TLA|TLR}{F|T|B|L|G|A}), followed by the new termination state (**NEW STATE**) of the circuit. If the range option was given, the new states of the circuits in the range may differ, noted by the **RNG** keyword.

#### **Command**

##### **Nonhierarchical**

[I.17001]

```
CHG:[FRM xy,SEQ ww]:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk]\  
[,NOT [u]rstvvv},{TLA|TLR}{F|T|B|L|G|A}[,INCL]!
```

##### **Hierarchical**

[I.17001]

```
CHG:[FRM xy,SEQ ww]:FROM uvmnpddd[-eee],TO wxkqrjjj[-kkk]\  
[,NOT edhfgvvv},{TLA|TLR}{F|T|B|L|G|A}[,INCL]!
```

### Autonomous Message

Not applicable.

### Explanation Of Parameters

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

**[u]rst** - The 3- or 4-digit nonhierarchical NPC number not affected by this message

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**edfhg** - Hierarchical NPC number not affected by this message

**uv, wx, ed**

- Unit number

**m, k, f**

- Module number

**np, qr, hg**

- NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC                                   |
|-----------|----------|---------------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02 (DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06 (DACS II CEF frames)</b>     |

**ddd** - FROM channel number  
**jjj** - TO channel number  
**eee** - FROM channel number denoting the end of the range  
**kkk** - TO channel number denoting the end of range  
**vvv** - Channel number not affected by this command.

The valid channel numbers are:

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

|         |               |
|---------|---------------|
| 001-085 | (MB NPC)      |
| 001-500 | (Virtual NPC) |

**TLA** - Terminate and leave activate

**s** - Direction of transmission to be terminated

If the cross-connection is between a facility terminating unit (FTU) and a virtual NPC (VI type NPC), once terminated, the FTU NPC will send out its provisioning insertion word (PIW) as the idle code.

**TLR** - Terminate and leave release

**s** *Explanation*

**A** Towards the facilities and the bridge (multipoint only)

**B** Towards both terminations

**F** Towards the FROM termination

**G** Towards the bridge (multipoint connection only)

**L** Towards the facilities (multipoint connection only)

**T** Towards the TO termination

**INCL** - Inclusive

Use this keyword, to change the termination status on a channel or range of channels including one or more channels marked as a red. The command will otherwise be denied if one or more of the cross-connected circuits in the range are marked as red.

**NOT** - Not

The LEG is not affected by this command

**mmm, nnn**

- Channel number involved in the denial.

Otherwise, the same as **ddd**.

**RNG** - Range

**RDC** - Red circuit

The change in termination status was performed on a red circuit. If the command specified a range of circuits, then at least one of the circuits involved was a red circuit. This keyword will appear only if the **INCL** keyword was specified in the command.

**CUS** - Customer

The change in termination status was performed on a customer controlled circuit. If the command specified a range of circuits, then at least one of the circuits involved was a customer controlled circuit.

**d** - Direction

**d** *Direction*

**F** From

**T** To

**B** Both

**st** - Status

**cc** - Hexadecimal condition code

## **CHG, FROM, TO, TLP, NG, ES, INCL**

### **CHANGE CIRCUIT PARAMETERS**

#### **Explanation Of Command**

This message requests DACS II to change the parameters of a multipoint circuit leg. Termination [s]abcddd must be either a termination on an FTU (facility terminating unit), DS3U or DSPU (digital signal processing unit) NPC. Termination [t]ghijjj must be a termination on a DSPU NPC.

#### **Command**

#### **Nonhierarchical**

[I.17002]

Not applicable.

## Explanation Of Parameters

**FROM** - From  
**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

**jjj** - TO channel number

001-085 (MB NPC)

**TLP** - Transmission level point

Specify the incoming and outgoing gain adjustments relative to the TO multipoint circuit by using the TLP (snn,smm) field. Gain adjustment snn is applied as the signal enters the bridge, while smm is applied as the signal leaves.

- snn** - Incoming gain adjust parameter  
**smm** - Outgoing gain adjust parameter  
**s** - Sign (+ or -)  
**nn** - Incoming gain adjust value (-90 through +88)  
**mm** - Outgoing gain adjust value (-90 through +88)

These are the parameters requested for the TO termination. Values are given in steps of two and the units are tenths of a db.

Certain situations require replacement of the gain adjust parameter values with "---". In general "---" is used for either snn or smm (but not both) when no change is to be made to that parameter. This feature allows changing only one of the two parameters if desired. Also, if the cross-connection was provisioned with the NTR (no transmit) option, the gain adjustment in the direction for which transmission is shut off MUST be ---. See the table below to see what situations require "---".

| <i>FROM</i> | <i>TO</i> | <i>snn</i>          | <i>smm</i> |
|-------------|-----------|---------------------|------------|
| BRD         | BBL       | ---                 | smm        |
| BBL         | BRD       | snn                 | ---        |
| LEG         | BBL       | ---                 | smm        |
| LEG         | BRD       | snn                 | ---        |
| LEG         | SYM       | snn                 | smm        |
| BBL         | LEG       | Invalid combination |            |
| BBL         | SYM       | Invalid combination |            |
| BRD         | LEG       | Invalid combination |            |
| BRD         | SYM       | Invalid combination |            |

- NG** - Noise guard  
**nn** - Requested NG level setting (00, 06, 12, or 18) db

To specify the noise guard level setting, use NG nn. The following default values apply:

For Symmetrical bridges Default: NG = -18 db  
For Polling circuits Default: NG = 0 db

- ES** - Echo suppression  
**ee** - Requested ES level setting (00, 06, 12, or 18) db

To specify the echo suppression level setting, use ES ee. The following default values apply:

For Symmetrical bridges Default: ES = -18 db  
For Polling circuits Default: ES = 0 db

At least one of the three parameters (TLP, NG, ES) must be specified.

Since a BBL (backbone leg) has no input to the bridge and the bridge has no output to a BRD (broadcast) leg, transmission values in these directions cannot be changed.

**INCL** - Inclusive

INCL is used to change the parameters on a circuit marked either as a red or a customer controlled circuit. If this option is not used, the command will be denied such a circuit.

**spp, sqq**

- New gain setting. Otherwise, the same as snn and smm.

**ff** - New noise guard setting. Otherwise, the same as nn.

**hh** - New echo suppression setting. Otherwise, the same as ee.

**RDC** - Red circuit

These keywords indicate the connection is marked as a red circuit.

**CUS** - Customer

The connection is a Customer-controlled Circuit.

**cc** - Hexadecimal condition code

**cc**    *Explanation*

### **Explanation Of Parameters**

---

**SPACE** - Space

**sss** - User macro or map space allocation (000 through 100 percent)

Variable sss represents the space allocated to user macros or maps for entire DACS II system as a percentage of the system macro space.

**ttt** - Old user macro space allocation (000 through 100 percent)

Variable ttt represents the space previously allocated to user macros for the entire DACS II system as a percentage of the system macro space.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**CHG,NPC,ALMOPT,PLOPT,AIS,INFO,MJ,MN,PL**

CHANGE NPC AIS ALARM OPTION

## **Explanation Of Command**

---

This command may be used to program either the Network Processing Circuit (NPC) Alarm Indication Signal (AIS) alarm option or the ANSI NPC payload loopback capability, but not both simultaneously.

To program the payload loopback capability the NPC(s) must be out of service.

To program the AIS alarm option, the input command must contain the ALMOPT and AIS {INFO|MJ|MN} keywords in the command line; it must not contain the PLOPT and PL {ENA|DSA} keywords. In this case, the command changes the NPC AIS alarm option to Information (INFO), Major (MJ), or Minor (MN) alarm for all domestic non-SLC® NPC types. This command is not valid for DS-type NPCs.

To program the payload loopback capability, the input command must contain the PLOPT and PL {ENA|DSA} keywords in the command line; it must not contain the ALMOPT and AIS {INFO|MJ|MN} keywords. In this case, the command changes the far-end initiated (via the ESF data link) payload loopback capability for ANSI NPCs to Enabled (ENA) or Disabled (DSA) for domestic ANSI NPCs (DA and TA types).

If both keyword sets appear simultaneously in the input command, or if the AIS and payload loopback keywords are mixed, the command will be denied.

If the feature applies to one or more NPCs within the addressed range, DACS II will perform the command on the NPCs in the range that support the requested feature, but skip the NPCs which do not support the requested feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports the requested feature, DACS II will generate a completion message for the entire unit of NPCs; individual denial messages will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range support the requested feature, DACS II will generate a range denial message.

**uvmnp** - Hierarchical NPC number at beginning of range  
**wxkqr** - Hierarchical NPC number at beginning of range  
**defgh** - Hierarchical NPC number between uvmnp and ijklm  
**ijklm** - Hierarchical NPC number between defgh and wxkqr

**uv,wx** - Unit number  
**m,k** - Module number in unit uv  
**np,qr** - NPC number in module m

The allowable values are presented below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ALMOPT** - Alarm option

**AIS** - Alarm indication signal

Type of alarm. AIS is not detected by unframed clear (unchannelized) 2Mbit/s PAXDz type NPCs. Therefore, specifying AIS with one of the alarm level types MI, DMA, or PMA, is unnecessary. However, the command will not be denied if AIS is specified with an alarm level for unframed clear PAXDz NPCs. AIS with its alarm level will simply never be reported for unframed clear PAXDz NPCs.

**INFO** - Information

Information message (not an alarm). This is the default option for domestic NPCs.

**MJ** - Major

Major alarm.

**MN** - Minor

Minor alarm.

**TOT nnn**

- Total number of NPCs in the output segment.

**PLOPT** - Payload loopback option

The NPC(s) must be out of service to use this option.

**PL** - Payload loopback

**ENA** - Enabled

The ANSI NPC will respond to payload loopback requests received from the far-end terminal over the ESF data link. This is the default option.

**DSA** - Disabled

The ANSI NPC will not respond to payload loopback requests received from the far-end terminal over the ESF data link.

**s** - Status of the AIS alarm or payload loopback capability.

*s Explanation*

\* The AIS alarm option/payload loopback capability of the NPC has been changed.

blank The AIS alarm option/payload loopback capability of the NPC has not been changed.

**tttt** - The old AIS alarm option/payload loopback setting for the NPC.

*tttt Explanation*

INFO AIS programmed for Information message

MJ AIS programmed for Major alarm

MN AIS programmed for Minor alarm

ENA ANSI payload loopback capability enabled

DSA ANSI payload loopback capability disabled

---- Not applicable (for unequipped NPCs or not valid NPC type within the specified NPC range)

**cc** - Hexadecimal condition code

*cc Explanation*

**02** Subject entity is not equipped

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**13** FTMI is not equipped

**14** FTMI is out of service

**15** NPC is unequipped

**C9** In-service NPC change not allowed

**FD** NPC range crosses unit boundary

**70** NPC invalid type

**60** Selectable AIS not valid for specified NPC(s) type

**61** All NPC(s) are either not valid or not grown

**62** IU type NPC(s) cannot be provisioned for Minor Alarm

**67** NPC(s) actual type incompatible with TYPE keyword and/or alarm type

**A5** AIS keyword incompatible with NPC type

## **CHG,NPC,OPTS**

---

### **CHANGE NPC OPTIONS**

#### **Explanation Of Command**

---

This message changes the facility performance parameter threshold values on a specified Network Processing Circuit (NPC) without disconnecting and reconnecting provisioned circuits.

One or more alarm or information threshold values for the designated NPC may be changed to a value previously stored in the DACS II threshold data base. These previously stored values are selected through use of the indices **rr/m**.

Each facility parameter of an NPC has a default threshold and up to three user-programmable threshold values stored in the DACS II threshold data base. The **CHG SETOP NPCOP** command sets these values.

**Note:** This command will not reboot the NPC hardware. Therefore, if any NPCs are in service, use the **UTL : :BOOT,FRAME** command (Message I.58001) to avoid any possible inconsistency.

#### **Command**

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected.

**m** - Facility performance parameter threshold index (0 through 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist; that is, must have been programmed prior to being selected. The non-default thresholds can be set by using the CHG::SETOP (I.38201) command.

Clear-DS1 ANSI NPCs (DAxy9/TAxy9) provide the same set of path and line performance monitoring parameters that are provided by terminated ANSI NPC types. ANSI NPCs in DS3 Units (TAxyz) do not provide near-end DS1 line performance monitoring parameters.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For DS type NPCs, parameters with values rr = 1 through 10 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| rr | Parameter                             | Threshold<br>Value<br>Range | Default<br>Threshold<br>Value |
|----|---------------------------------------|-----------------------------|-------------------------------|
| 01 | Slip major                            | 000 to 255                  | 255                           |
| 02 | Slip minor                            | 000 to 255                  | 4                             |
| 03 | Bit Error Rate major                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-3*                         |
| 04 | Bit Error Rate minor                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-6                          |
| 05 | Errored Seconds <sup>‡</sup>          | 00001 to 65535              | 864                           |
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255                  | 225                           |
| 07 | Change of Frame Alignment major       | 001 to 511                  | 511                           |
| 08 | Change of Frame Alignment minor       | 001 to 255                  | 17                            |
| 09 | Shelf Alarm Near End(SANE)§           | 00001 to 65535              | 00000                         |
| 10 | Shelf Alarm Far End(SAFE)§            | 00001 to 65535              | 00000                         |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

**Note 4:** Only parameters 01 through 04 are allowed for DE type clear DS1.

**Note 5:** Only 01 through 02 are allowed for TE type clear DS1

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the following Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the following Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. All of the following Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. The only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

| rr | Parameter                                           | Threshold Value Range  | Default Threshold Value |
|----|-----------------------------------------------------|------------------------|-------------------------|
| 41 | Daily Near-end Path Coding Violations               | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 42 | Daily Near-end Path Errored Seconds                 | 00000 to 86400         | 648                     |
| 43 | Daily Near-end Path Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 44 | Daily Near-end Severely Errored Framing Seconds     | 00000 to 86400         | 17                      |
| 45 | Daily Near-end Controlled Slip Seconds              | 00000 to 86400         | 4                       |
| 46 | Daily Near-end Unavailable Seconds                  | 00000 to 86400         | 10                      |
| 47 | Daily Near-end Line Coding Violations               | 000000000 to 134217727 | 133400                  |
| 48 | Daily Near-end Line Errored Seconds                 | 00000 to 86400         | 648                     |
| 49 | Daily Near-end Line Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 50 | Daily Far-end Path Coding Violations                | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 51 | Daily Far-end Path Errored Seconds                  | 00000 to 86400         | 648                     |
| 52 | Daily Far-end Path Severely Errored Seconds         | 00000 to 86400         | 100                     |
| 53 | Daily Far-end Severely Errored Framing Seconds      | 00000 to 86400         | 17                      |
| 54 | Daily Far-end Controlled Slip Seconds               | 00000 to 86400         | 4                       |
| 55 | Daily Far-end Unavailable Seconds                   | 00000 to 86400         | 10                      |
| 56 | Daily Far-end Line Errored Seconds                  | 00000 to 86400         | 648                     |
| 57 | 15-Minute Near-end Path Coding Violations           | 0000000 to 2097151     | 13296 <sup>†</sup>      |
| 58 | 15-Minute Near-end Path Errored Seconds             | 000 to 900             | 65                      |
| 59 | 15-Minute Near-end Path Severely Errored Seconds    | 000 to 900             | 10                      |
| 60 | 15-Minute Near-end Severely Errored Framing Seconds | 000 to 900             | 2                       |
| 61 | 15-Minute Near-end Controlled Slip Seconds          | 000 to 900             | 1                       |
| 62 | 15-Minute Near-end Unavailable Seconds              | 000 to 900             | 10                      |
| 63 | 15-Minute Near-end Line Coding Violations           | 0000000 to 2097151     | 13340                   |
| 64 | 15-Minute Near-end Line Errored Seconds             | 000 to 900             | 65                      |
| 65 | 15-Minute Near-end Line Severely Errored Seconds    | 000 to 900             | 10                      |
| 66 | 15-Minute Far-end Path Coding Violations            | 0000000 to 2097151     | 13296 <sup>†</sup>      |
| 67 | 15-Minute Far-end Path Errored Seconds              | 000 to 900             | 65                      |
| 68 | 15-Minute Far-end Path Severely Errored Seconds     | 000 to 900             | 10                      |

|           |                                                    |            |    |
|-----------|----------------------------------------------------|------------|----|
| <b>69</b> | 15-Minute Far-end Severely Errored Framing Seconds | 000 to 900 | 2  |
| <b>70</b> | 15-Minute Far-end Controlled Slip Seconds          | 000 to 900 | 1  |
| <b>71</b> | 15-Minute Far-end Unavailable Seconds              | 000 to 900 | 10 |
| <b>72</b> | 15-Minute Far-end Line Errored Seconds             | 000 to 900 | 65 |

† The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default Daily value is 691.

‡ The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default 15-Minute value is 72.

**uvmnp** - Hierarchical NPC number

**TYPE** - Type

**mnxyz** - NPC type

DExyz - FTU DS1 NPC type

TExyz - DS3U DS1 NPC type

DSxyz - SLC Carrier digroup terminating NPC type

DAxyz - FTU DS1 ANSI NPC type

TAxyz - DS3U DS1 ANSI NPC type

DE-type xyz fields

**x** - Multiframe format for the digroup

**x** *Explanation*

**0** Not assigned

**1** D4

**2** ESF - Voice

**3** ESF - Data

**4** DDST (T1DM - R bit connection via channel 24)

**5-7** Not assigned

**8** Ericsson Cellular format

**9** No framing format, transparent (TRSP), clear-DS1

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

DS-type xyz fields

**x** - Multiframe format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

#### TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

**IW** - Insertion word

**pq** - Insertion word value (hexadecimal)

The value entered for pq is used as the disconnect code (DCC) or idle code. This value is inserted in the transmit direction on unassigned channels. An insertion word is not allowed for clear-DS1 NPCs; the all ones signal is transmitted for an idle clear-DS1 NPC. Thus, information about the disconnect code will not appear for any message involving a clear-DS1 type NPC. Although any hexadecimal value may be assigned, the following are some commonly used values:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                  |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | UAC (unassigned channel code), the default value                                                                                                                                    |
| 18        | UMC (unassigned multiplex code), should only be used with type DE4yz, TE4yz, DA4yz, and TA4yz, for a T1DM formatted facility. The growth command does not enforce this restriction. |
| FF        | Per channel all ones code, needed for not connected channels in SLC carrier and CPI applications.                                                                                   |

**SLIP** - Timing Slip

**BER** - Bit Error Rate

**ERS** - Errored Seconds

**SERS** - Severely Errored Seconds

**COFA** - Change of Frame Alignment

**SANE** - Shelf Alarm Near End

**SAFE** - Shelf Alarm Far End

#### SLIP

**mmm** - Slip major alarm threshold (0 through 255)

**nnn** - Slip minor alarm threshold (0 through 255)

**e** - Slip major alarm option selection (0 through 3)

**s** - Slip major alarm option old selection (0 through 3)

**f** - Slip minor alarm option selection (0 through 3)

**t** - Slip minor alarm option old selection (0 through 3)

### BER (Bit Error Rate)

- p** - BER major alarm threshold,  $(1E-p, 3^{\dagger} \leq p \leq 6^*)$
- q** - BER minor alarm threshold,  $(1E-q, 3^{\dagger} \leq q \leq 6^*)$ 
  - \* 7 on T1DM and Fe framing
  - <sup>†</sup> 4 for DE type clear-DS1 or DS type NPCs
- g** - BER major alarm option selection (0 through 3)
- u** - BER major alarm option old selection (0 through 3)
- h** - BER minor alarm option selection (0 through 3)
- v** - BER minor alarm option old selection (0 through 3)

### ERS (Errored Seconds)

- rrrrr** - ERS threshold (1 through 65535)
- i** - ERS option selection (0 through 3)
- w** - ERS option old selection (0 through 3)

### SERS (Severely Errored Seconds)

- sss** - SERS threshold (1 through 255)
- j** - SERS option selection (0 through 3)
- x** - SERS option old selection (0 through 3)

### COFA (Change of Frame Alignment)

- ttt** - COFA major alarm threshold (1 through 511)
- uuu** - COFA minor alarm threshold (1 through 255)
- k** - COFA major alarm option selection (0 through 3)
- y** - COFA major alarm option old selection (0 through 3)
- l** - COFA minor alarm option selection (0 through 3)
- z** - COFA minor alarm option old selection (0 through 3)

### SANE (Shelf Alarm Near End)

- xxxxx** - SANE threshold (0 through 65535)
- m** - SANE option selection (0 through 3)
- b** - SANE option old selection (0 through 3)

### SAFE (Shelf Alarm Far End)

- zzzzz** - SAFE threshold (0 through 65535)
- n** - SAFE option selection (0 through 3)
- c** - SAFE option old selection (0 through 3)

**Note:** Major thresholds must be greater than minor thresholds, except for the BER threshold of SLC® 96 carrier NPCs. For DE type clear-DS1 NPCs only SLIP and BER parameters are listed. For TE type clear-DS1 DS3U NPCs only SLIP parameters are listed. Both SANE and SAFE are only applicable to SLC 96 carrier NPCs.

For ANSI NPC types:

|             |                                    |

**ss/n** - First improper values of "rr/m" for which message is denied.

**cc** - Hexadecimal condition code

## **cc** *Explanation*

- 02** Subject entity is not equipped
- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 13** FTMI is not equipped
- 20** Option rr/m has not been set up on 2nd database
- 21** Minor >= major for SLIP opt
- 22** Minor <= major for BER opt
- 23** Minor >= major for COFA opt
- 26** NPC type error
- 29** IW is UMUX (18) but NPC not type DE4yz
- 2A** DMI combined with T1DM
- 2B** Maj|Min BER threshold is 7, but not in T1DM or Fe mode
- 4F** BER must not be less than 4 for Clear DS1
- 83** Option not programmable for this NPC type
- B5** NPC is a test port
- 44** Service MXR is not equipped
- 0A** Minor Slip threshold disabled before Major Slip threshold
- 32** Threshold value is out of range

## **CHG,NPC,RT,DL,TYPE,OPTS**

### **CHANGE OPTIONS**

#### **Explanation Of Command**

This command changes facility threshold values for one or more Network Processing Circuits (NPCs) of a particular type or SLC® bank without disconnecting and reconnecting provisioned circuits.

#### **Command**

##### **Nonhierarchical**

[I.38241]

```
CHG:FRM xy,SEQ ww:{NPC [s]abc|RT ffff|DL ffff|TYPE mnxyz},\  
OPTS(rr/m[,rr/m,...])!
```

##### **Hierarchical**

[I.38241]

```
CHG:FRM xy,SEQ ww:{NPC uvmnp|RT ffff|DL ffff|TYPE mnxyz},\  
OPTS(rr/m[,rr/m,...])!
```

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

Each facility performance parameter of an NPC may have up to three user-selectable threshold values stored in the DACS II data base. The CHG::SETOP (ED-OPT-T1 for MML format) command programs these values in the DACS II data base. Threshold values are provisioned on particular NPCs through the use of the indices rr and m following the options keyword of this command. Variable rr identifies the parameter, and m selects one of the four stored threshold values for that parameter from the DACS II data base. More than one parameter can be changed with a single command by following the first rr/m pair with a list of similarly formed parameter/index pairs for each additional parameter. Unspecified options in this command retain their previous values.

Note that if the option of RT(DL) ffff is specified in the input command, all of the digroups belonging to that RT(DL) will be affected by the command.

For the MML format, the NPC-[s]abc keyword and argument may be omitted in the output response if any of the following are specified on input: TYPE-mnxyz, RT-ffff, or DL-ffff. The CHG function is then performed on all NPCs with the given TYPE, or from the same bank which had the same set of OLD options. The first (lowest numbered) NPC with the given TYPE will determine the class of NPCs affected by the CHG command.

**NPC** - Network processing circuit  
**[s]abc** - The 3- or 4-digit nonhierarchical NPC number  
 The valid numbers are:

If NPC numbers are expressed in three digits, the valid values are:

**5-7** Not assigned

**8** Ericsson Cellular format

**9** No framing format, transparent (TRSP), clear-DS1

**y** - Line and signaling format

**y** *Explanation*

**0** ZCS - Zero code suppression

**1\*** NZCS - No zero code suppression

**2\*** B8ZS - Bipolar with 8 zero substitution

**3†** ZBTST - Zero-bit time-slot interchanger

**4** ZCS/DMI - Zero code suppression/DMI signaling

**5** NZCS/DMI - No zero code suppression/DMI signaling

**6** B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling

**7-9** Not assigned

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z** *Explanation*

**0** D4 channel bank channel numbering

**1** D2 channel bank channel numbering

**2** D1D channel bank channel numbering

**3-8** Not assigned

**9** No channel numbering format, clear-DS1

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |

| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

## TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

**0**      ZCS - Zero code suppression

**1\***     NZCS - No zero code suppression

**2**      Not assigned

**3**      Not assigned

**4**      ZCS/DMI - Zero code suppression/DMI signaling

**5**      NZCS/DMI - No zero code suppression/DMI signaling

**6-9**   Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

**0**      D4 channel bank channel numbering

**1**      D2 channel bank channel numbering

**2**      D1D channel bank channel numbering

**3-8**   Not assigned

**9**      No channel numbering format, clear-DS1

**OPTS** - Options

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected.

**m** - Facility performance parameter threshold index (0 through 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist; that is, must have been programmed prior to being selected. The non-default thresholds can be set by using the CHG::SETOP (I.38201) command. Thresholds of all unspecified parameters will be set to the default value associated with m=0. The options field must not be given without the NPC type field.

Clear-DS1 ANSI NPCs (DAxy9/TAxy9) provide the same set of path and line performance monitoring parameters that are provided by terminated ANSI NPC types. ANSI NPCs in DS3 Units (TAxyz) do not provide near-end DS1 line performance monitoring parameters.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For DS type NPCs, parameters with values rr = 1 through 10 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| rr | Parameter                             | Threshold<br>Value<br>Range | Default<br>Threshold<br>Value |
|----|---------------------------------------|-----------------------------|-------------------------------|
| 01 | Slip major                            | 000 to 255                  | 255                           |
| 02 | Slip minor                            | 000 to 255                  | 4                             |
| 03 | Bit Error Rate major                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-3*                         |
| 04 | Bit Error Rate minor                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-6                          |
| 05 | Errored Seconds <sup>‡</sup>          | 00001 to 65535              | 864                           |
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255                  | 225                           |
| 07 | Change of Frame Alignment major       | 001 to 511                  | 511                           |
| 08 | Change of Frame Alignment minor       | 001 to 255                  | 17                            |
| 09 | Shelf Alarm Near End(SANE)§           | 00001 to 65535              | 00000                         |
| 10 | Shelf Alarm Far End(SAFE)§            | 00001 to 65535              | 00000                         |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the following Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the following Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. All of the following Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. The only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

| rr | Parameter                                           | Threshold Value Range  | Default Threshold Value |
|----|-----------------------------------------------------|------------------------|-------------------------|
| 41 | Daily Near-end Path Coding Violations               | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 42 | Daily Near-end Path Errored Seconds                 | 00000 to 86400         | 648                     |
| 43 | Daily Near-end Path Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 44 | Daily Near-end Severely Errored Framing Seconds     | 00000 to 86400         | 17                      |
| 45 | Daily Near-end Controlled Slip Seconds              | 00000 to 86400         | 4                       |
| 46 | Daily Near-end Unavailable Seconds                  | 00000 to 86400         | 10                      |
| 47 | Daily Near-end Line Coding Violations               | 000000000 to 134217727 | 133400                  |
| 48 | Daily Near-end Line Errored Seconds                 | 00000 to 86400         | 648                     |
| 49 | Daily Near-end Line Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 50 | Daily Far-end Path Coding Violations                | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 51 | Daily Far-end Path Errored Seconds                  | 00000 to 86400         | 648                     |
| 52 | Daily Far-end Path Severely Errored Seconds         | 00000 to 86400         | 100                     |

| 66 | 15-Minute Far-end Path Coding Violations            | 0000000 to 2097151     | 13296 <sup>†</sup>      |
| 67 | 15-Minute Far-end Path Errored Seconds              | 000 to 900             | 65                      |
| 68 | 15-Minute Far-end Path Severely Errored Seconds     | 000 to 900             | 10                      |

|           |                                                    |            |    |
|-----------|----------------------------------------------------|------------|----|
| <b>69</b> | 15-Minute Far-end Severely Errored Framing Seconds | 000 to 900 | 2  |
| <b>70</b> | 15-Minute Far-end Controlled Slip Seconds          | 000 to 900 | 1  |
| <b>71</b> | 15-Minute Far-end Unavailable Seconds              | 000 to 900 | 10 |
| <b>72</b> | 15-Minute Far-end Line Errored Seconds             | 000 to 900 | 65 |

<sup>†</sup> The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default Daily value is 691.

<sup>‡</sup> The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default 15-Minute value is 72.

Note that IW pq as well as the last line of the output message only appears if NPC ... is used in the input message. Also note that the actual data will be printed only for those rrs that are entered on the input message. The rest of the columns will be filled with dashes (---).

**pq** - Hexadecimal value of the disconnect code (DCC) or idle code.

This value is inserted in the transmit direction on unassigned channels. Insertion word is not allowed for Clear-DS1 NPCs; the all ones signal is transmitted for an idle Clear-DS1 NPC. Thus, information about the disconnect code will not appear for any message involving a Clear-DS1 type NPC. Although any hexadecimal value may be assigned, the following are some commonly used values:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                  |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | UAC (unassigned channel code), the default value                                                                                                                                    |
| 18        | UMC (unassigned multiplex code), should only be used with type DE4yz, TE4yz, DA4yz, and TA4yz, for a T1DM formatted facility. The growth command does not enforce this restriction. |
| FF        | Per channel all ones code, needed for not connected channels in SLC carrier and CPI applications.                                                                                   |

|             |                             |
|-------------|-----------------------------|
| <b>SLIP</b> | - Timing slip               |
| <b>BER</b>  | - Bit error rate            |
| <b>ERS</b>  | - Errored seconds           |
| <b>SERS</b> | - Severely errored seconds  |
| <b>COFA</b> | - Change of frame alignment |
| <b>SANE</b> | - Shelf alarm near end      |
| <b>SAFE</b> | - Shelf alarm far end       |

## SLIP

- mmm** - Slip major alarm threshold (0 through 255)
- nnn** - Slip minor alarm threshold (0 through 255)
- e** - Slip major alarm option selection (0 through 3)
- s** - Slip major alarm option old selection (0 through 3)
- f** - Slip minor alarm option selection (0 through 3)
- t** - Slip minor alarm option old selection (0 through 3)

## BER (Bit Error Rate)

- p** - BER major alarm threshold,  $(1E-p, 3^{\dagger} \leq p \leq 6^*)$
- q** - BER minor alarm threshold,  $(1E-q, 3^{\dagger} \leq q \leq 6^*)$   
  - \* 7 on T1DM and Fe framing
  - <sup>†</sup> 4 for DE type clear-DS1 or DS type NPCs
- g** - BER major alarm option selection (0 through 3)
- u** - BER major alarm option old selection (0 through 3)
- h** - BER minor alarm option selection (0 through 3)
- v** - BER minor alarm option old selection (0 through 3)

## ERS (Errored Seconds)

- rrrrr** - ERS threshold (1 through 65535)
- i** - ERS option selection (0 through 3)
- w** - ERS option old selection (0 through 3)

## SERS (Severely Errored Seconds)

- sss** - SERS threshold (1 through 255)
- j** - SERS option selection (0 through 3)
- x** - SERS option old selection (0 through 3)

## COFA (Change of Frame Alignment)

- ttt** - COFA major alarm threshold (1 through 511)
- uuu** - COFA minor alarm threshold (1 through 255)
- k** - COFA major alarm option selection (0 through 3)
- y** - COFA major alarm option old selection (0 through 3)
- l** - COFA minor alarm option selection (0 through 3)
- z** - COFA minor alarm option old selection (0 through 3)

## SANE (Shelf Alarm Near End)

- xxxxx** - SANE threshold (0 through 65535)
- m** - SANE option selection (0 through 3)
- b** - SANE option old selection (0 through 3)

# SAFE (Shelf Alarm Far End)

**zzzzz** - SAFE threshold (0 through 65535)  
**n** - SAFE option selection (0 through 3)  
**c** - SAFE option old selection (0 through 3)

**Note:** Major thresholds may not be equal to minor thresholds, except for the BER threshold of SLC® 96 carrier NPCs. For DE type clear-DS1 NPCs only SLIP and BER parameters are listed. For TE type clear-DS1 DS3U NPCs only SLIP parameters are listed. Both SANE and SAFE are only applicable to SLC 96 carrier NPCs.

For ANSI NPC types:

**CVP** - Path coding violations  
**ESP** - Path errored seconds  
**SESP** - Path severely errored seconds  
**SEFS** - Severely errored framing seconds  
**CSS** - Controlled slip seconds  
**UAS** - Unavailable seconds  
**CVL** - Line coding violations  
**ESL** - Line errored seconds  
**SESL** - Line severely errored seconds

# CVP (Path Coding Violations)

**aaaaaaaa** - Path Coding Violation Daily NE threshold (0 to 134217727)  
**jjjjjjjj** - Path Coding Violation Daily FE threshold (0 to 134217727)  
**aaaaaaa** - Path Coding Violation 15Min NE threshold (0 to 2097151)  
**jjjjjjj** - Path Coding Violation 15Min FE threshold (0 to 2097151)  
**a** - Path Coding Violation Daily NE option selection (0 to 3)  
**j** - Path Coding Violation Daily FE option selection (0 to 3)  
**a** - Path Coding Violation 15Min NE option selection (0 to 3)  
**j** - Path Coding Violation 15Min FE option selection (0 to 3)  
**a** - Path Coding Violation Daily NE option old selection (0 to 3)  
**j** - Path Coding Violation Daily FE option old selection (0 to 3)  
**a** - Path Coding Violation 15Min NE option old selection (0 to 3)  
**j** - Path Coding Violation 15Min FE option old selection (0 to 3)

### ESP (Path Errored Seconds)

**bbbb** - Path Errored Seconds Daily NE threshold (0 to 86400)  
**kkkk** - Path Errored Seconds Daily FE threshold (0 to 86400)  
**bbb** - Path Errored Seconds 15Min NE threshold (0 to 900)  
**kkk** - Path Errored Seconds 15Min FE threshold (0 to 900)  
**b** - Path Errored Seconds Daily NE option selection (0 to 3)  
**k** - Path Errored Seconds Daily FE option selection (0 to 3)  
**b** - Path Errored Seconds 15Min NE option selection (0 to 3)  
**k** - Path Errored Seconds 15Min FE option selection (0 to 3)  
**b** - Path Errored Seconds Daily NE option old selection (0 to 3)  
**k** - Path Errored Seconds Daily FE option old selection (0 to 3)  
**b** - Path Errored Seconds 15Min NE option old selection (0 to 3)  
**k** - Path Errored Seconds 15Min FE option old selection (0 to 3)

### SESP (Path Severely Errored Seconds)

**cccc** - Path Severely Errored Seconds Daily NE threshold (0 to 86400)  
**llll** - Path Severely Errored Seconds Daily FE threshold (0 to 86400)  
**ccc** - Path Severely Errored Seconds 15Min NE threshold (0 to 900)  
**lll** - Path Severely Errored Seconds 15Min FE threshold (0 to 900)  
**c** - Path Severely Errored Seconds Daily NE option selection (0 to 3)  
**l** - Path Severely Errored Seconds Daily FE option selection (0 to 3)  
**c** - Path Severely Errored Seconds 15Min NE option selection (0 to 3)  
**l** - Path Severely Errored Seconds 15Min FE option selection (0 to 3)  
**c** - Path Severely Errored Seconds Daily NE option old selection (0 to 3)  
**l** - Path Severely Errored Seconds Daily FE option old selection (0 to 3)  
**c** - Path Severely Errored Seconds 15Min NE option old selection (0 to 3)  
**l** - Path Severely Errored Seconds 15Min FE option old selection (0 to 3)

### SEFS (Severely Errored Framing Seconds)

**dddd** - Severely Errored Framing Seconds Daily NE threshold (0 to 86400)  
**mmmm** - Severely Errored Framing Seconds Daily FE threshold (0 to 86400)  
**ddd** - Severely Errored Framing Seconds 15Min NE threshold (0 to 900)  
**mmm** - Severely Errored Framing Seconds 15Min FE threshold (0 to 900)  
**d** - Severely Errored Framing Seconds Daily NE option selection (0 to 3)  
**m** - Severely Errored Framing Seconds Daily FE option selection (0 to 3)  
**d** - Severely Errored Framing Seconds 15Min NE option selection (0 to 3)  
**m** - Severely Errored Framing Seconds 15Min FE option selection (0 to 3)  
**d** - Severely Errored Framing Seconds Daily NE option old selection (0 to 3)  
**m** - Severely Errored Framing Seconds Daily FE option old selection (0 to 3)  
**d** - Severely Errored Framing Seconds 15Min NE option old selection (0 to 3)  
**m** - Severely Errored Framing Seconds 15Min FE option old selection (0 to 3)

CSS (Controlled Slip Seconds)

|               |                                                                  |
|---------------|------------------------------------------------------------------|
| <b>eeeeee</b> | - Controlled Slip Seconds Daily NE threshold (0 to 86400)        |
| <b>nnnnn</b>  | - Controlled Slip Seconds Daily FE threshold (0 to 86400)        |
| <b>eee</b>    | - Controlled Slip Seconds 15Min NE threshold (0 to 900)          |
| <b>nnn</b>    | - Controlled Slip Seconds 15Min FE threshold (0 to 900)          |

CVL (Line Coding Violations)

|                  |                                                                |
|------------------|----------------------------------------------------------------|
| <b>ggggggggg</b> | - Line Coding Violation Daily NE threshold (0 to 134217727)    |
| <b>ggggggg</b>   | - Line Coding Violation 15Min NE threshold (0 to 2097151)      |
| <b>g</b>         | - Line Coding Violation Daily NE option selection (0 to 3)     |
| <b>g</b>         | - Line Coding Violation 15Min NE option selection (0 to 3)     |
| <b>g</b>         | - Line Coding Violation Daily NE option old selection (0 to 3) |
| <b>g</b>         | - Line Coding Violation 15Min NE option old selection (0 to 3) |

### ESL (Line Errored Seconds)

**hhhhh** - Line Errored Seconds Daily NE threshold (0 to 86400)  
**ppppp** - Line Errored Seconds Daily FE threshold (0 to 86400)  
**hhh** - Line Errored Seconds 15Min NE threshold (0 to 900)  
**ppp** - Line Errored Seconds 15Min FE threshold (0 to 900)  
**h** - Line Errored Seconds Daily NE option selection (0 to 3)  
**p** - Line Errored Seconds Daily FE option selection (0 to 3)  
**h** - Line Errored Seconds 15Min NE option selection (0 to 3)  
**p** - Line Errored Seconds 15Min FE option selection (0 to 3)  
**h** - Line Errored Seconds Daily NE option old selection (0 to 3)  
**p** - Line Errored Seconds Daily FE option old selection (0 to 3)  
**h** - Line Errored Seconds 15Min NE option old selection (0 to 3)  
**p** - Line Errored Seconds 15Min FE option old selection (0 to 3)

### SESL (Line Severely Errored Seconds)

**iiiiii** - Line Severely Errored Seconds Daily NE threshold (0 to 86400)  
**iii** - Line Severely Errored Seconds 15Min NE threshold (0 to 900)  
**i** - Line Severely Errored Seconds Daily NE option selection (0 to 3)  
**i** - Line Severely Errored Seconds 15Min NE option selection (0 to 3)  
**i** - Line Severely Errored Seconds Daily NE option old selection (0 to 3)  
**i** - Line Severely Errored Seconds 15Min NE option old selection (0 to 3)

ss/n - First improper values of "rr/m" for which message is denied.

**cc** - Hexadecimal condition code

#### **cc** *Explanation*

**02** Subject entity is not equipped  
**10** Unit is not equipped  
**11** UC is out of service  
**12** UC is in service but failed  
**13** FTMI is not equipped  
**20** Option rr/m has not been set up on 2nd database  
**21** Minor >= major for SLIP opt  
**22** Minor <= major for BER opt  
**23** Minor >= major for COFA opt  
**26** NPC type error  
**29** IW is UMUX (18) but NPC not type DE4yz  
**2A** DMI combined with T1DM  
**2B** Maj|Min BER threshold is 7, but not in T1DM or Fe mode  
**7E** Bank id number not found  
**83** Option not programmable for this NPC type  
**1A** The facility parameter not programmable for specified x or z parameter

**cc**    *Explanation*

- 0A**    Minor Slip threshold disabled before Major Slip threshold
- 32**    Threshold value is out of range

## **CHG,NPC,TYPE,IW,X,INCL**

### **CHANGE NPC TYPE**

#### **Explanation Of Command**

This command is used to change the type and, optionally, the insertion word of a specified network processing Circuit (NPC) equipped in a facility terminating unit (FTU). The insertion word field is used to change the NPC's disconnect code (DCC). These changes may be made without disconnecting and reconnecting the provisioned circuits, but the NPC must be out of service when this command is executed.

Permissible type changes depend upon the digroup card in use. For NPCs provisioned on the DACS II Enhanced Dual Digroup Card (TG191-EDDC), the **mn**, **x**, and **y** values of the NPC TYPE may be changed if the NPC is out of service. This feature makes use of the flexibility of the TG191 circuit pack. The **z** value must not be changed from the value entered when the NPC was provisioned.

For NPCs provisioned on other DACS II Dual Digroup Cards, only the **x** and **y** values of the NPC TYPE may be changed with this command. The **mn** and **z** values must not be changed from the values entered in the NPC provisioning command.

The **z** value specifies the NPC's channel numbering format. The channel numbering format cannot be changed if cross-connections exist on the NPC.

The NPC must be out of service to change the facility provisioning. It can be taken out of service using the **RMV** command. Changes to the parameters will take effect when the NPC is restored (**RST**) to service. When the NPC facility provisioning is changed, all programmable alarm thresholds revert to their default values. These default thresholds are defined in the **GRTH : NPC, TYPE** message. If values other than the defaults are desired, a separate **CHG : NPC, OPTS** command must be given for each value.

The NPC must be out of service to change the facility provisioning. It can be taken out of service using the **RMV-EQPT** command. Changes to the parameters will take effect when the NPC is restored (**RST-EQPT**) to service. When the NPC facility provisioning is changed, all programmable alarm thresholds revert to the default values. These default thresholds are defined in the **CRTE-EQPT : NPC** message. If values other than the defaults are desired, a separate **ED-PRMTR-EQPT** command must be given for each value. Some in-service facility parameter changes are allowed. For in-service changes, the programmable alarm threshold values do not revert to their default values.

For DS3U NPCs, use CHG::NPC,TYPE to request a change of the NPC Type and insertion word.

For DS3U NPCs, use ED-PRMTR::NPC to request a change of the NPC type and insertion word.

## Explanation Of Parameters

---

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |

|                                |                                |                                |                                |

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

**Note:** For DS-type NPCs only, all cross-connects must be disconnected before the NPC's type can be changed because the NPC must be deleted from the RT in order to change the

NPC's type.

**ttuvw** - Previous value of mnxyz

**IW** - Insertion word

**pq** - Insertion word value (hexadecimal)

Hexadecimal value of the growth insertion word (GIW). Specifies the insertion word sent in the transmit direction on unassigned channels. If this value is not specified, it remains unchanged from its previous value.

An eight-bit code, called the growth insertion word, is transmitted by this NPC on unassigned 64kb/s channels. This code is specified by the optional keyword IW and its argument pq. This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the cross-connect insertion word, which is transmitted when the disconnect message with DDC specified is used.

For Clear-DS1 NPCs, the insertion word option is **NOT** available and the message will be denied if this option is entered. The alarm indication signal (AIS) is transmitted in the disconnect or idle state.

Although any 2-digit hexadecimal code may be used (see INCL below), some common GIWs are:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                                                           |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | Unassigned Channel Code (UAC). Default value for all NPC types with non-T1DM framing.                                                                                                                                        |
| 18        | Unassigned Multiplex Code (UMC). Default value for DE/DA type NPCs provisioned with T1DM framing. This value should only be provisioned with T1DM framing (DE4yz or DA4yz), so the change command enforces this restriction. |
| FF        | Per channel all ones code, needed for unconnected channels in SLC <sup>®</sup> carrier (DS type NPCs) and computer-to-PBX interface (CPI) applications.                                                                      |

**rs** - Previous value of pq

**INCL** - Inclusive

As a protection to users, this keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs grown in the D4 format (DE1yz/DA1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word "pq" is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h define the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 02** Subject entity is not equipped
- 03** Subject entity is in service
- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 13** FTMI is not equipped
- 14** FTMI is out of service
- 1F** FTMI is in service but failed
- 20** Option rr/m has not been set up on 2nd database
- 21** Minor >= major for SLIP opt
- 26** NPC type error
- 29** IW is UMUX (18) but NPC not type DE4yz
- 2A** DMI combined with T1DM
- 2B** Maj|Min BER threshold is 7, but not in T1DM or Fe mode
- 34** NPC type option xyz is unassigned
- 35** NPC has active circuit
- 4E** RTBC conference exists
- 86** NPC is NPCTG and chan 24 is used in a TG;Can't change to T1DM or DMI
- 3D** Alarm bits cannot be passed through or inverted
- 42** Change not valid
- 4E** IW option is not allowed for new type of Clear-DS1 NPC
- 4F** BER must not be less than 4 for Clear DS1
- 7C** Different DSxyz types are used for DGA/DGP on same DDC for Mode I
- 83** Option not programmable for this NPC type
- 8A** x & z parameters on DSxyz are inconsistent
- 8F** NPC not deleted
- BB** Timeslot channel numbering not allowed with CAS
- C9** In-service NPC change not allowed
- CD** NPC not designated as sync timing source
- F2** Invalid NPC number specified

**cc**    *Explanation*

- F6**    T1DM or DMI mode and channel 24 is connected
- FC**    ZBTSl option is only valid with the ESF mode
- FE**    Change to non-ESF digroup with 16-state cross-connect
- FF**    Change to T1DM digroup with cross-connect that is not TRSP
- 05**    This NPC type does not allow unframed Clear-DS1
- 87**    NPC as 12th test port can not change to DMI nor T1DM
- 36**    INCL keyword needed when restricted Insertion Word specified
- 7E**    Framed/Unframed clear 2Mbit/s NPC invalid for Automatic CRC-4
- 7F**    Unframed clear 2Mbit/s NPC invalid for TS0 processing
- 80**    Framed/Unframed clear 2Mbit/s NPC invalid for Transmic 1G, 2G
- 81**    Framed/Unframed clear 2Mbit/s NPC invalid for Firmware Timing
- 82**    Unframed clear 2Mbit/s NPC invalid for Bit 4 used as RA IS/RBER
- 85**    IW not allowed to be specified in Clear 2Mbit/s
- A1**    NPC has been designated as NPCTG
- A7**    NPC has been designated as NPCTP
- E5**    Invalid combination of "x" and "z" values
- E7**    Invalid combination of "x" and "y" values

## **CHG,NPC,TYPE,IW,X,INCL**

### **CHANGE DS3U NPC TYPE**

#### **Explanation Of Command**

For **DACS II DS3 Units**, this command changes a single or range of TE or TA type Network Processing Circuits (NPCs) to the newly specified type without disconnecting and reconnecting provisioned circuits. The NPCs must be out of service.

The "mn" field, as well as the "xyz" field, of the NPC type parameter ("mnxyz") can be changed by this command. This feature is used to change between the different types (TE and TA) of NPCs supported by the DS3 Unit line termination circuit packs.

A range is allowed for the NPCs within one DS3 Unit. The optional insertion word field is used to change the disconnect code (DCC).

The new parameters will take effect when the NPC is restored to service. When the NPC **TYPE** parameters are changed, all programmable alarm thresholds revert to the default values. If values other than defaults are desired, a separate **CHG** command must be given for each value. There will be one output completion message for each NPC in the range.

## Explanation Of Parameters

Use the optional insertion word (IW X'pq) field to change the unassigned channel code.

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC Number

**[t]def** - The 3- or 4-digit nonhierarchical NPC number denoting the end of a range specification.

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

#### TE-type xyz fields

##### **x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

##### **y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

##### **z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

**IW** - Insertion Word

**pq** - Hexadecimal value of the growth insertion word (GIW). Specifies the insertion word in the transmit direction on unassigned channels.

An eight-bit code, called the growth insertion word, is transmitted by this NPC on unassigned DS0 channels. This code is specified by the optional keyword IW and its argument pq. This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the cross-connect insertion word, which is transmitted when the disconnect message with the DDC specified is used.

Although any 2-digit hexadecimal code may be used (see INCL below), the default GIWs are:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                                                                    |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | Unassigned Channel Code (UAC), the default value for TE/TA type NPCs provisioned with D4 or ESF framing.                                                                                                                              |
| 18        | Unassigned Multiplex Code (UMC), the default value for TE/TA type NPCs provisioned with T1DM framing. This value should only be provisioned with T1DM framing (DA4yz or TA4yz). The change command does not enforce this restriction. |

**INCL** - Inclusive

As a protection to users, this keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs grown in the D4 format (TE1yz/TA1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word "pq" is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h define the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

For Clear-DS1 NPCs, the insertion word option is **NOT** available and the message will be denied if this option is entered. The alarm indication signal (AIS) is transmitted in the disconnect or idle state.

**[s]ghi,**

- The 3- or 4-digit nonhierarchical NPC number within the range of [s]abc and [t]def

**[s]jkl**

- The 3- or 4-digit nonhierarchical NPC number of the first NPC of a range that is being denied ( $abc \leq jkl \leq mno$ )

**[t]mno** - The 3- or 4-digit nonhierarchical NPC number of the last NPC of a range that is being denied ( $jkl \leq mno \leq def$ )

**ttuvw** - Previous value of mnxyz

**rs** - Previous value of pq

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 02** Subject entity is not equipped
- 03** Subject entity is in service
- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 24** Unit type error
- 26** NPC type error
- 29** IW is UMUX (18) but NPC not type DE4yz
- 2A** DMI combined with T1DM
- 34** NPC type option xyz is unassigned
- 35** NPC has active circuit
- 01** Invalid range for specified NPC type

- E7** Invalid combination of "x" and "y" values

## **CHG,PASSWD,OLD,NEW**

### **CHANGE USER PASSWORD**

#### **Explanation Of Command**

This message requests a change of a previously created password by any user of DACS II.

For an X.25 link, <old pswd>:<new pswd> option must be used. DACS II will not prompt the user for old and new password.

For a SCCSAI (Snider) link, <old pswd>:<new pswd> option cannot be used.

For a Snider link, DACS II will prompt the user for the old and new password. Neither new nor old password characters will be echoed by DACS II.

Output from this command is sent only to the link on which the command was input.

### **Command**

---

[I.38301]

**CHG:FRM xy,SEQ ww:PASSWD[,OLD <old password>, \**  
**NEW <new password>]!**

If the user is on a Snider protocol administrative link, the message is entered as follows:

[I.38301]

**CHG:FRM xy,SEQ ww:PASSWD!**

Then DACS II will prompt the user for the old and new password:

**OLD PASSWD: (user enters the old password)**  
**NEW PASSWD: (user enters the new password)**  
**PASSWD: (user re-enters the new password for verification)**

DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**ttt** - The old PWR/MISC alarm option

**cc** - Hexadecimal condition code

**cc**    *Explanation*

**11**    UC is out of service

**2E**    RTF keyword and the operation mode does not match

**2F**    The RT id entered is not a retrofit one

**67**    DGA is not added

**76**    Alarm option and bank mode don't match

**7E**    Bank id number not found

**90**    NDL option is specified for DGA

**10**    RT's alarm exists

**97**    option LOCAL already exists

**98**    option REMOTE already exists

**99**    can't change option, protection switch is active

**9A**    can't change option, inhibition is active

## **CHG,SCON,OLD,NEW**

### **CHANGE SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command changes the external facility termination associated with a multipoint circuit branch from an existing digroup, channel, and (optional) customer number to a **NEW** digroup, channel, and (optional) customer number.

Execution of this command causes the disconnection of the existing facility and reconnection to a **NEW** external facility termination. The external facility termination associated with the original connection is left established to the Subrate feature with an unassigned multiplexer channel (UMC) code inserted towards the **OLD** facility.

Once moved to the **NEW** facility termination, the circuit or the multipoint circuit master leg and all of its associated branches is(are) left in the same terminate and leave state that existed with the **OLD** channel. For example, if the **OLD** channel was terminated in the TO direction before the change command, it remains terminated in the same direction after the command.

If desired, changes to the terminate and leave state can be done either before or after moving the channel by using the Subrate Test Access command or the Subrate Change Termination command.

In effect, this command combines the operations of **SDIS** and **SCON** commands that would be necessary to do the same change but with a minimum of service interruption.

Before using this command, the **NEW** channel must be established to the Subrate feature (**SECH**), and the **NEW** facility termination must not already be cross-connected (for example, with a previous **SCON**). The specified **OLD** facility termination must be cross-connected in an existing Subrate multipoint circuit and the specified **NEW** facility termination cannot be the same as the **OLD**. Also, neither the **NEW** termination nor any portion of the existing circuit can be under test access at the time this command is issued.

Circuits connected to an out-of-service facility NPC may also be moved with this command. Such changes require no special keyword in the input command, but the output message will indicate that the facility is out-of-service. The user should note that the UMC code may not be inserted in the disconnected facility channel until the facility is restored to service under these conditions.

If the facility NPC associated with the **NEW** channel is out-of-service, the command will be denied.

**uvmnp** - OLD hierarchical NPC number  
**wxkqr** - NEW hierarchical NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number  
**jjj** - Channel number

The valid values are listed below:

001 through 024

001-047      Odd only (SLC 96® Carrier, Mode 3, DGA)  
049-095      Odd only (SLC 96 Carrier, Mode 3, DGC)  
001-024      Odd and Even (SLC 96 Carrier, Mode 1, DGA)  
025-048      Odd and Even (SLC 96 Carrier, Mode 1, DGB)  
049-072      Odd and Even (SLC 96 Carrier, Mode 1, DGC)  
073-096      Odd and Even (SLC 96 Carrier, Mode 1, DGD)  
001-024      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA)  
025-048      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB)  
049-072      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC)  
073-096      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD)

**ff**      - Customer number

**ll**      - Customer number

The valid values are listed below:

01      (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20   (DS0B at 2.4 kb/s)  
01-10   (DS0B at 4.8 kb/s)  
01-05   (DS0B at 9.6 kb/s)

The customer numbers, **ff** and/or **ll**, are optional when the facility termination is a DS0A channel because there is only one customer in a DS0A channel. If specified for this type of channel, the customer number must appear as 01. A customer number is required when specifying a facility termination in a DS0B (subrate multiplexed) channel.

The allowed customer numbers for the NEW termination field depend on the rate of the existing circuit and the type of DS0B channel associated with the NEW termination. If the circuit rate is equal to or lower than the maximum DS0B rate, the command will be allowed, as shown below:

| [Multipoint]<br>Circuit<br>Rate | NEW DS0B Type                                  |                                                |                                               |
|---------------------------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                                 | 20-channel<br>(max. customer<br>rate 2.4 kb/s) | 10-channel<br>(max. customer<br>rate 4.8 kb/s) | 5-channel<br>(max. customer<br>rate 9.6 kb/s) |
| 24                              | Customer No.<br>1-20 Allowed                   | Customer No.<br>1-10 Allowed                   | Customer No.<br>1-5 Allowed                   |
| 48                              | Denied                                         | Customer No.<br>1-10 Allowed                   | Customer No.<br>1-5 Allowed                   |
| 96                              | Denied                                         | Denied                                         | Customer No.<br>1-5 Allowed                   |
| 56                              | Denied                                         | Denied                                         | Denied                                        |

The user must ensure that a circuit using the secondary channel capability is only assigned to a NEW facility termination that is compatible with this capability. If the NEW termination is a DS0A or if zero suppression was NOT specified when its associated facility NPC was equipped then any assignment of the NEW termination is compatible with the secondary channel capability. If the NEW termination is in a DS0B **and** if zero suppression was specified when its associated facility NPC was equipped the user can only assign secondary channel services to a NEW termination with the following customer numbers within the given DS0B type:

| DS0B Type  | Allowed Customer Numbers       |
|------------|--------------------------------|
| 20-channel | 2, 3, 6, 8, 11, 12, 13, and 18 |
| 10-channel | 2, 3, 6, and 8                 |
| 5-channel  | 2 and 3                        |

If the OLD facility is connected to a branch of a multipoint circuit, it is disconnected from the MJU and the NEW facility is connected to the same MJU and branch.

**oos** - Out-of-service

The **oos** keyword appears in the output whenever the disconnection of the f(CBOLDf1 facility has taken place with its facility terminating NPC out-of-service or failed. In this case, the user should note that the Unassigned Multiplexer Channel (UMC) code may not be inserted towards the disconnected f(CBOLDf1 facility until its NPC is restored to service. external facility termination data (e.g., [s]abcddd/ff) is always set to 01 for DS0A channels.

**[s]abcddd/ff**

- OLD external facility termination

**[t]ghijjj/ll**

- NEW external facility termination

**reason** - Reason for denial

The reasons listed below contain variables represented in lower case letters. As shown the variables representing NPC numbers are in nonhierarchical format. These variables can also appear in hierarchical format. They take the form used in the input command where applicable.

## Input Errors

### *reason*

## **CHG,SCON,OLD,NEW,MPTM**

### **CHANGE SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command changes the external facility termination associated with the MPTM (multipoint master) leg of a Subrate multipoint circuit from an existing digroup, channel, and (optional) customer number to a **NEW** digroup, channel, and (optional) customer number. Execution of this command causes the disconnection of the existing multipoint circuit's master leg (that is, the control leg of MJU 1) and its reconnection to a **NEW** external facility termination. All branches associated with the circuit are left with their existing external and internal connections. Also, the external facility termination associated with the original connection is left established to the Subrate feature with an Unassigned Multiplexer Channel (UMC) code inserted towards the **OLD** facility. In effect, this command combines the operations of multipoint **SDIS** and **SCON** commands that would be necessary to do the same change but with a minimum of service interruption.

Before using this command, the **NEW** channel must be established to the Subrate feature (**SECH**) and the **NEW** facility termination must not already be cross-connected (for example, with a previous **SCON**). The specified **OLD** facility termination must be the multipoint master termination of an existing Subrate multipoint circuit, and the specified **NEW** facility termination cannot be the same as the **OLD**. Also, neither the **NEW** termination nor any portion of the existing multipoint circuit can be under test access at the time this command is issued.

The user must ensure that a multipoint circuit using the secondary channel capability is assigned only to a **NEW** facility termination that is compatible with this capability. If the **NEW** termination is a DS0A or if its associated facility NPC was provisioned without zero suppression, any assignment of the **NEW** termination is compatible with the secondary channel capability. If the **NEW** termination is in a DS0B and its associated facility NPC was grown with zero suppression, the user can only assign secondary channel services to a **NEW** termination with the following customer numbers within the given DS0B type:

| DS0B Type  | Allowed Customer Numbers       |
|------------|--------------------------------|
| 20-channel | 2, 3, 6, 8, 11, 12, 13, and 18 |
| 10-channel | 2, 3, 6, and 8                 |
| 5-channel  | 2 and 3                        |

Once moved to the **NEW** facility termination, the multipoint circuit master leg and all of its associated branches are left in the same terminate and leave state that existed with the **OLD** channel. For example, if the master leg was terminated in the **TO** direction before the change command, it remains terminated in the same direction after the command. If desired, changes to the terminate and leave state can be done either before or after moving the channel by using the Subrate Test Access command (STST) or the Subrate Change Termination command (CHG).

Multipoint masters connected to an out-of-service facility NPC may also be moved with this command. Such changes require no special keyword in the input command, but the output message will indicate that the facility is out-of-service. The user should note that the UMC code may not be inserted in the disconnected facility channel until the facility is restored to service under these conditions. If the facility NPC associated with the **NEW** channel is out-of-service, the command will be denied.

### Explanation Of Parameters

|               |                                                                                                |
|---------------|------------------------------------------------------------------------------------------------|
| <b>OLD</b>    | - Old                                                                                          |
| <b>NEW</b>    | - New                                                                                          |
| <b>MPTM</b>   | - Multipoint master                                                                            |
| <b>[s]abc</b> | - The 3- or 4-digit nonhierarchical <b>OLD</b> NPC number of the multipoint circuit master leg |
| <b>[t]ghi</b> | - The 3- or 4-digit nonhierarchical <b>NEW</b> NPC number of the multipoint circuit master leg |

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical **OLD** NPC number of the multipoint circuit master leg

**wxkqr** - Hierarchical **NEW** NPC number of the multipoint circuit master leg

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - **OLD** channel number of the multipoint circuit master leg

**jjj** - **NEW** channel number of the multipoint circuit master leg

**ff** - **OLD** customer number of the multipoint circuit master leg  
(1 through 20)

**ll** - **NEW** customer number of the multipoint circuit master leg  
(1 through 20)

The customer numbers, **ff** and/or **ll**, are optional when the multipoint master termination is a DS0A channel. This is because there is only one customer in a DS0A channel. If specified for this type of channel, it must appear as 01. A customer number is required when specifying a multipoint master termination in a DS0B (subrate multiplexed) channel. The allowed customer numbers for the **NEW** termination field depend on the rate of the existing multipoint circuit and the type of DS0B channel associated with the **NEW** termination. If the circuit rate is equal to or lower than the maximum DS0B rate, the command will be allowed, as shown in the following table.

| MULTIPOINT<br>CIRCUIT<br>RATE | NEW DS0B TYPE                                  |                                                |                                               |
|-------------------------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                               | 20-CHANNEL<br>(MAX. CUSTOMER<br>RATE 2.4 kb/s) | 10-CHANNEL<br>(MAX. CUSTOMER<br>RATE 4.8 kb/s) | 5-CHANNEL<br>(MAX. CUSTOMER<br>RATE 9.6 kb/s) |
| 24                            | Customer No.<br>1-20 Allowed                   | Customer No.<br>1-10 Allowed                   | Customer No.<br>1-5 Allowed                   |
| 48                            | Denied                                         | Customer No.<br>1-10 Allowed                   | Customer No.<br>1-5 Allowed                   |
| 96                            | Denied                                         | Denied                                         | Customer No.<br>1-5 Allowed                   |
| 56                            | Denied                                         | Denied                                         | Denied                                        |

**00S** - Out-of-service

The **00S** keyword appears in the output whenever the disconnection of the **OLD** facility has taken place with its facility terminating NPC out-of-service or failed. In this case, the user should note that the unassigned multiplexer channel (UMC) code may not be inserted towards the disconnected **OLD** facility until its NPC is restored to service.

**[s]abcddd/ff**

- **OLD** master leg external facility termination

**[t]ghijjj/ll**

- **NEW** master leg external facility termination

Nonhierarchical addresses are used for termination numbers in the reason for denial tables given below. Hierarchical addresses may be substituted where ever the Nonhierarchical form is shown. The address form received by the user is determined by the users' machine.

## **CHG,SECH,OLD,NEW,PCH,DCC**

### **CHANGE SUBRATE ESTABLISHED CHANNEL**

#### **Explanation Of Command**

This command moves a subrate established channel (**DS0A** or **DS0B**) and all associated subrate cross-connections from an existing digroup and channel to a **NEW** digroup and channel. Once the command executes, the **OLD** channel is left disestablished and the **NEW** channel is established with exactly the same format (that is, rate, **DS0A/DS0B** format, number of subrate multiplexer channels, error correction, etc.) as the **OLD**. When present, any subrate circuits (that is, **SCONS**) that use the **OLD** channel for one or more ends are also moved to the **NEW** channel. In effect, this command combines the operations of the **SDIS**, **SDCH**, **SECH**, and **SCON** commands that would be necessary to do the same change.

Prior to this command, the **NEW** channel must not be established or used in any DACS cross-connection unless it is already established with exactly the same format as the **OLD** channel. However, in the latter case, no prior subrate cross-connections (e.g., **SCONS**) can be present on the **NEW** channel. Also, none of the **OLD** or **NEW** established channels nor any portion of the subrate circuits associated with them can be under test access at the time this command is issued. If no subrate cross-connections are present on the **OLD** channel and the **NEW** channel is already established in the same manner, the command will be denied. In this case, the **OLD** channel can simply be disestablished (**SDCH**) to achieve the same effect as the **CHG** command would otherwise do.

Once moved to the **NEW** channel, the established channel and all associated subrate cross-connections are left in the same terminate and leave state that existed with the **OLD** channel. For example, if one of the subrate circuits in a moved **DS0B** was terminated in the **TO** direction before the change command, it remains terminated in the same direction after the command. If desired, changes to the terminate and leave state can be done either before or after moving the channel by using the **SRDC** Test Access command (**STST**,**TLA**,**TLR**,**TP**) or the subrate change termination command (**CHG**,**TLA**,**TLR**,**TO**)

A range of channels may be specified, provided that parity channel error correction is not used with any channels within the **OLD** or **NEW** channel ranges. If the **OLD** channel has an error correction parity channel associated with it, the **NEW** channel must be specified with the location of the new parity channel by use of the **PCH ppp** field. [Note that the location of the **OLD** channel's parity channel need not be specified since the system will locate and move it along with the data channel automatically.] When specified, the **NEW** parity channel must not be already established or cross-connected unless it is already established as the **NEW** channel's parity channel. If the **OLD** channel is not established with parity channel error correction, the **NEW** channel cannot be specified with the **PCH** field.

Use of the optional **DCC** keyword causes the DDS unassigned multiplexer channel (UMC) code to be inserted in the **OLD** channel(s) towards the digroup facility listed after **OLD** in the message text. If this keyword is not specified, the disconnection code specified in the **GRTH NPC** when the **OLD** digroup was provisioned is used.

**OLD** channels connected to an out-of-service facility NPC may also be moved with this command. Such changes require no special keyword in the input command, but the output message will contain the **OOS** keyword to indicate that the facility is out-of-service. The user should note that the appropriate disconnection channel code may not be inserted in the **OLD** facility channels until the facility is restored to service under these conditions. If the facility NPC associated with the **NEW** channels is out-of-service, the command will be denied.

---

Not applicable.

## Explanation Of Parameters

**OLD** - Old

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of OLD established channel.

**NEW** - New

**[t]ghi** - The 3- or 4-digit nonhierarchical NPC number of NEW established channel.

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                |                                                |                                                |                                                |                                                |                                                |
|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|
| Unit<br>1                                      | Unit<br>2                                      | Unit<br>3                                      | Unit<br>4                                      | Unit<br>5                                      | Unit<br>6                                      |

**PCH** - Parity channel  
**ppp** - Channel number of NEW parity error correction channel

**DCC** - Disconnect code

Appearance of the **DCC** keyword indicates that the DDS unassigned multiplexer channel (UMC) code is inserted towards the OLD channel's facilities when the command completes. If this keyword is not present, the disconnect code specified in the command used to provision digroup abc is used.

The **DCC** keyword appears only if present in the input command.

**e** - Number of lines in the message.

**OOS** - Out-of-service

The OOS keyword appears in the output whenever the established channel change has taken place with the OLD channel's facility terminating NPC out-of-service or failed. In this case, the user should note that the appropriate disconnect channel code may not be inserted in the disestablished channel until the facility is restored to service.

**nnn** - Channel number of OLD error correction parity channel

**yyy** - OLD channel number involved in the denial

**zzz** - NEW channel number involved in the denial

**reason** - Reason for denial

reason

## **CHG,SETOP,TYPE,ALL,NPCOP**

### **CHANGE/SET OPTIONS**

#### **Explanation Of Command**

This message initializes or changes the DACS II threshold data base, which contains the programmable set of selectable alarm thresholds for facility performance parameters accumulated by DACS II NPCs.

This command will be denied if an attempt is made to set the minor threshold greater than or equal to the major threshold of any parameter specified on *any* NPC currently in the frame.

This command will be also denied if an attempt is made to *disable* the minor slip threshold (by setting its value to zero) before disabling the major slip threshold on *any* in-service NPC on the frame.

Threshold values are entered in free format (1 to 9 digits) separated by commas. Enter a hyphen (-) for values that are *not* to be changed.

Following DACS II installation, the user-programmable (non-default) values are empty until this **CHG::SETOP** command initializes them. A user-programmable threshold value must first be initialized by this message before it can be used as an argument to the **OPTS** keyword of the **GRTH::NPC** (Message I.31352), **CHG::NPC,OPTS** (Message I.38221), and **CHG::NPC** message.

**SETOP rr** designates the parameter to be changed.  
**NPCOP(set1,set2,set3)** are the user-programmable threshold values for the designated parameter.

If **ALL** is specified, the given thresholds will be written to the threshold data base for all types of NPCs for which the associated parameter is valid.

**Note:** This command will not reboot the NPC hardware. Therefore, if any NPCs are in service, use the **UTL::BOOT,FRAME** command (Message I.58001) to avoid any possible

inconsistency.

**Note:** This command will not reboot the NPC hardware. Therefore, if any NPCs are in service, use the **STA-LOCL-RST** command (Message I.58001) to avoid any possible inconsistency.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**SETOP** - Set option

**OPT** - Option

**rr** - Facility performance parameter number

Variable *rr* specifies the parameter whose alarm threshold is being set or changed. The parameters and their corresponding *rr* values are given in the table below.

The Major and Minor *Slip* threshold crossing alarms can be disabled by programming a value of zero for the Slip Major and Slip Minor thresholds, respectively.

To use this feature, the Slip Major threshold must be disabled before the Slip Minor threshold. This command will be denied if an attempt is made to disable the Minor Slip threshold (by setting its value to zero) before disabling the Major Slip threshold on *any* in-service NPC on the frame.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For DS type NPCs, parameters with values rr = 1 through 10 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| rr | Parameter                             | Threshold<br>Value<br>Range | Default<br>Threshold<br>Value |
|----|---------------------------------------|-----------------------------|-------------------------------|
| 01 | Slip major                            | 000 to 255                  | 255                           |
| 02 | Slip minor                            | 000 to 255                  | 4                             |
| 03 | Bit Error Rate major                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-3*                         |
| 04 | Bit Error Rate minor                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-6                          |
| 05 | Errored Seconds <sup>‡</sup>          | 00001 to 65535              | 864                           |
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255                  | 225                           |
| 07 | Change of Frame Alignment major       | 001 to 511                  | 511                           |
| 08 | Change of Frame Alignment minor       | 001 to 255                  | 17                            |
| 09 | Shelf Alarm Near End(SANE)§           | 00001 to 65535              | 00000                         |
| 10 | Shelf Alarm Far End(SAFE)§            | 00001 to 65535              | 00000                         |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the following Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the following Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. All of the following Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the following Near-end Path parameters are valid, but the Near-End Line parameters

(rr = 47-49, 63-65) are invalid. The only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

| rr | Parameter                                           | Threshold Value Range  | Default Threshold Value |
|----|-----------------------------------------------------|------------------------|-------------------------|
| 41 | Daily Near-end Path Coding Violations               | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 42 | Daily Near-end Path Errored Seconds                 | 00000 to 86400         | 648                     |
| 43 | Daily Near-end Path Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 44 | Daily Near-end Severely Errored Framing Seconds     | 00000 to 86400         | 17                      |
| 45 | Daily Near-end Controlled Slip Seconds              | 00000 to 86400         | 4                       |
| 46 | Daily Near-end Unavailable Seconds                  | 00000 to 86400         | 10                      |
| 47 | Daily Near-end Line Coding Violations               | 000000000 to 134217727 | 133400                  |

| 71 | 15-Minute Far-end Unavailable Seconds               | 000 to 900             | 10                      |
| 72 | 15-Minute Far-end Line Errored Seconds              | 000 to 900             | 65                      |

<sup>†</sup> The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default Daily value is 691.

<sup>‡</sup> The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default 15-Minute value is 72.

**TYPE** - Type

Type of NPC for which the options are being set. Note that not all parameter threshold options apply to all NPC types.

**mn** - NPC Type prefix

| <i>mn</i> | <i>Explanation</i>          |
|-----------|-----------------------------|
| DA        | FTU ANSI NPC type           |
| DE        | FTU NPC type                |
| DS        | SLC carrier digroup circuit |
| TA        | DS3U ANSI NPC type          |
| TE        | DS3U NPC type               |

**ALL** - All

All NPC types. If specified, the given thresholds will be written into the secondary data base for all types of NPCs for which the associated parameter is valid.

**NPCOP** - Network processing circuit option

**set1** - Threshold setting 1 (m=1) for given parameter rr

**set2** - Threshold setting 2 (m=2) for given parameter rr

**set3** - Threshold setting 3 (m=3) for given parameter rr

Thresholds are entered in free format (1 to 9 digits) separated by commas. Enter a "-" (hyphen) for values that are not to be changed.

For ANSI NPC types (DA and TA type NPCs), a threshold value of zero can be programmed for any parameter to disable threshold crossing alert messages for that parameter.

DACS II provides a set of default threshold values (m=0) for each NPC type. Only the default threshold value for each parameter exists in the DACS II database prior to user programming using the CHG::SETOP command. Before any non-default threshold value (m=1,2,3) can be provisioned to be used by an NPC for performance monitoring, it must be entered in the DACS II database using this command. Otherwise, an error message will occur. When this command is executed, all threshold values in the DACS II frame are changed, including the ones previously set or in use. Performance monitoring thresholds are provisioned for NPCs using the "rr/m" argument of the GRTH::NPC or CHG::NPC command.

The default values are accessed using threshold setting 0. Threshold settings 1, 2, and 3 are user-programmable. That is, set1, set2, and set3 do not have default values; they must be programmed by the user before they can be used.

**ttttt[tttt]**

- Default threshold value for option rr

**aaaaa[aaaa]**

- Old set1 threshold value

**bbbbbb[bbbb]**

- Old set2 threshold value

**cccccc[cccc]**

- Old set3 threshold value

**talm** - Type of alarm

*talm*    *Explanation*

MJ      Major

MN      Minor

**pname** - Parameter name

*pname*                      *Explanation*

BER                      Bit error rate

COFA                    Change of frame alignment

ERS                      Errored seconds

SAFE                    Shelf alarm far end

SANE                    Shelf alarm near end

SERS                    Severely errored seconds

SLIP                     Slip

CSSP,{D|Q}{N|F}

Path Controlled Slip Seconds

CVL,{D|Q}{N|F}

Line Coding Violations

CVP,{D|Q}{N|F}

Path Coding Violations

ESL,{D|Q}{N|F}

Line Errored Seconds

ESP,{D|Q}{N|F}

Path Errored Seconds

SEFS,{D|Q}{N|F}

Severely Errored Framing Seconds

SESL,{D|Q}{N|F}

Line Severely Errored Seconds

SESP,{D|Q}{N|F}

Path Severely Errored Seconds

UASP,{D|Q}{N|F}

Path Unavailable Seconds

D, F, N, and Q are defined below

D- Daily

F- Far-end

N- Near-end

Q- 15 minute

xxxxx[xxxx]

- New set1 threshold value

yyyyy[yyyy]

- New set2 threshold value

zzzzz[zzzz]

- New set3 threshold value

**Note:** If the "TYPE mn" option is used in the input command to change the thresholds for a single NPC type and a hyphen is entered for at least one of the thresholds to preserve its value, the output response will show that the respective new threshold values are unchanged by outputting the same value for the new threshold that is output for the old threshold.

If the "ALL" types option is used in the input command to change the thresholds for all NPC types and a hyphen is entered for at least one set of thresholds to preserve their values, the output response will show that the respective threshold values are unchanged by outputting "-----[----]" (a dash) for the new threshold value and the respective unchanged values in the old threshold fields for each NPC type.

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of problematic NPC

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

| <b>17</b> | 15 min >= 24 hr for US opt                              |
| <b>18</b> | 15 min >= 24 hr for SLIP opt                            |
| <b>37</b> | Major/Minor BER threshold value is invalid for SLC NPCs |
| <b>4F</b> | BER must not be less than 4 for Clear DS1               |
| <b>83</b> | Option not programmable for this NPC type               |
| <b>FE</b> | Change to non-ESF digroup with 16-state cross-connect   |

**cc**    *Explanation*

- FF**    Change to T1DM digroup with cross-connect that is not TRSP
- 0A**    Minor Slip threshold disabled before Major Slip threshold
- 32**    Threshold value is out of range

## **CHG,SWCH,TOX,INCL**

---

### **CHANGE CIRCUIT PARAMETERS**

#### **Explanation Of Command**

---

This message switches return paths to the digroups and ranges beginning with the initial channels given in the TO end argument list.

This message requests a change in a broadcast multipoint circuit, switching the full tributary circuit leg (one that can both receive and transmit to the multipoint source) to another leg. Up to eight multipoint circuits can be changed with this command. Arguments [s]abc-ddd, [t]ghi-yyy, and [u]klm-yyy etc., represent TO terminations Arguments [s]abcddd, [t]ghijjj, and [u]klmnnn etc., represent TO terminations from different broadcast circuits (allowing multiple switches to be performed with a single message). That is, these arguments specify the new full tributaries in up to eight different broadcast circuits.

#### **Command**

---

##### **Nonhierarchical**

| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**INCL** - Inclusive

To change a circuit or range of circuits including one or more circuits previously marked as a Red Circuit or under Customer Control, use the INCL (inclusive) option. If this option is not used, the message will be denied if any circuits in the range are red circuits or customer controlled.

**SWCH** - Switch

**TOX** - TO Tributaries

**[t]wxyz**

- Nonhierarchical number of circuit leg on which problem occurred.

**opjstzz**

- Hierarchical number of circuit leg on which problem occurred.

**BCAST** - Broadcast

Denial specific to a broadcast conference.

**CUS** - Customer

NPC is a customer-controlled circuit

**RDC** - Red circuit

NPC is a Red circuit

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 01**    Invalid range for specified NPC type
- 03**    No RDC or CUS circuits and INCL keyword used
- 04**    No NPC's out of service and OOS keyword used
- 10**    NPC out of service or failed
- 11**    NPC not equipped
- 12**    Active CCN side not IS or failed or pested or hardware OOS
- 13**    UNIT not equipped, not in service, or failed
- 14**    CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15**    FTMI not equipped, not in service, or failed
- 16**    FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17**    TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 32**    Termination is under test
- 33**    Termination is a test port
- 34**    Termination is under customer control (CUS)
- 35**    Termination is protected (RDC)

**cc**    *Explanation*

- 53**    TO side of two-way to be converted is not an FTU NPC
- 5B**    TO is not a leg of this/any conference
- 5D**    TO is the backbone leg of a conference
- 5F**    Conference is NTR: has no switchable return leg
- 60**    Conference is LPD: has no switchable return leg
- 61**    TO is already the return leg
- 1A**    Required FLI not equipped, not in service, or failed
- 1B**    Required MXR not equipped, not in service, or failed
- 1C**    Req'd FMT not eq'd, not IS, or failed, or inact side FMT not eq'd, or not IS
- 1D**    Required MIU not equipped, not in service, or failed
- D0**    FROM NPC is not provisioned as DGA
- D1**    TO NPC is not provisioned as DGA
- D3**    Corresponding NPC for FROM virtual channel is not provisioned
- D4**    Corresponding NPC for TO virtual channel is not provisioned
- D6**    Invalid FROM channel number
- D7**    Invalid TO channel number
- D9**    Invalid FROM channel number range
- DA**    Invalid TO channel number range
- EC**    Invalid channel 000 cross-connection specified
- ED**    Invalid channel 031 cross-connection specified

## **CHG,SWCH,TOX,INCL**

### **CHANGE SWITCH, TOX**

#### **Explanation Of Command**

This message changes a non-channelized digital signal broadcast circuit by switching a specified tributary network processing circuit (NPC) to be the full tributary NPC. Up to eight broadcast circuits can be changed by specifying the respective full tributary NPCs, all of which are non-channelized NPCs currently part of different broadcast circuits and may belong to different Units.

## **CHG,SYNC,TLI,SSP,TYPE,SRC**

**CHANGE PRIORITIES AND/OR TYPE,  
SYNCHRONIZER OR NPC**

### **Explanation Of Command**

This command changes priorities and type parameters of timing extractor type TLIs/SSPs that have been equipped. One of the following two fields must be given: type/synchronizer sync port or the source for priority (SRC). Only one type may be changed at a time; the output message will show both types after the change command is completed, if both are equipped, or it will show a "-" for unequipped SSPs.

Only the type and priority data bases are affected by this command. The SSP must be out of service for the command to complete. The RST::SYNC,TLI,[SSP]! command must be given to implement the changes for both side 0 and 1.

### **Command**

### Autonomous Message

---

Not applicable.

### Explanation Of Parameters

---

**SYNC** - Synchronizer

**TLI** - Timing link interface

**m** - Timing link interface number (1 through 4)

**SSP** - Synchronizer sync port

**b** - SSP side (0 or 1)

**TYPE** - Type

**texyz** - Timing Extractor or Timing Distributor type

The output message shows the type of SSP for both SSPs on the TLI card  
If one SSP is not equipped, a "-" will appear for the unequipped SSP.

**testu** - The TLI type of the other SSP on the same TLI. If not equipped, this  
parameter will be output as "-----".

**f** - TLI k SSP 1 priority (1 through 8)

**l** - TLI slot number (1 through 4)

**g** - TLI l SSP 0 priority (1 through 8)

**h** - TLI l SSP 1 priority (1 through 8)

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**02** Subject entity is not equipped

**16** SYNC TB is not equipped

**B3** X option is illegal

**B4** Y option is illegal

**C2** SSP type(options) same

**C3** Wrong SSP type(Timing Extractor type)

**C4** Sync architecture different

**C5** Some priority values required

**C6** Some priority values not required

**C7** Priority values are same

**C8** Sync pack denied command

**CA** New NPC same as existing one

**CB** NPC parameter only valid with TU type TLI

**CC** NPC is still provisioned to provide sync timing

**CD** NPC not designated as sync timing source

**CE** NPC already allocated as sync timing source

**F1** Parameter only valid with PA, PB, or PC type NPCs

**cc**    *Explanation*

- 01**    Assignment of single priority to multiple SSPs
- E4**    NPC already has Equipment Loopback

## **CHG,TLA,TLR,TO**

### **CHANGE SUBRATE TERMINATE AND LEAVE**

#### **Explanation Of Command**

This command changes the terminate and leave state of the cross-connection associated with a subrate two-point or multipoint circuit. The termination point is defined in terms of an external facility termination (that is, a digroup, channel, and customer number). If the termination point specified is under test or is not cross-connected, the command will be denied.

The external facility termination given by the NPC, channel, and customer number can be one end of a two-point circuit, or the master leg or branch of a multipoint circuit.

The CHG command cannot be used to change the terminate and leave status of the entire DS0B channel (that is, all customers within the DS0B at once). Also, the CHG command cannot be used to change the terminate and leave status of an external facility termination that is looped on itself.

The termination state resulting from the command depends on the state prior to the command as indicated by the following table:

| PRIOR STATE | REQUESTED CHANGE | NEW STATE | PRIOR STATE | REQUESTED CHANGE | NEW STATE |
|-------------|------------------|-----------|-------------|------------------|-----------|
| R           | TLA F            | F         | R           | TLR F            | DNY       |

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**NEW** - New

**STATE** - State

NEW STATE indicates the new termination state of the circuit as a result of the command. The circuit can be left terminated in either or both directions, or left in the released state.

**TLA** - Terminate and leave activate

**TLR** - Terminate and leave release

The requested termination state change is indicated by the TLA or TLR where TLA activates and TLR releases the terminate and leave state. The unassigned multiplex channel (UMC) code is inserted towards the direction that is terminated.

**m** - Requested termination state

**m** *Explanation*

F FROM. Terminate or release the FROM side  
T TO. Terminate or release the TO side  
B BOTH. Terminate or release BOTH sides

The TO direction is defined as facing towards the external facility termination indicated by the NPC, channel, and customer number. (The TO and FROM directions are the same sides that are connected to the even and odd test port channels, respectively, in the corresponding STST test access command.)

**s** - Resulting termination state of the circuit

**s** *Explanation*

R Neither side is terminated  
F FROM side is terminated  
T TO side is terminated  
B BOTH sides are terminated

**TO** - To

termination

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                |                |                |                |                |                |

| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number

**ff** *Explanation*

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

The customer number (ff) is optional when the customer is in a DS0A channel. This is because there is only one customer in a DS0A channel. If ff is specified for this type of channel, it must appear as 01. If the specified facility is a DS0B, a customer number must appear.

#### **reason 1**

- Coded reason for denial

#### **reason 2**

- Explanation of reason 1

Reason 1 summarizes the denial reason with a single keyword while reason 2 gives a more detailed explanation.

## **CHG,TLA,TLR,TO,MJU**

### **CHANGE TERMINATE AND LEAVE**

#### **Explanation Of Command**

This command changes the terminate and leave state of the master leg or branch associated with a subrate multipoint circuit. This command defines the termination point in terms of a master leg external facility termination, MJU number, and optional branch number. If the termination point specified is under test or is not cross-connected, the command will be denied.

The specified facility termination must be the external facility termination for the master leg of a multipoint circuit. Note that this is *not* the facility defined as the TO side of the circuit. The TO side is always facing towards an MJU defined by ssss.

If MJU 0001 is specified, the TO side faces towards the control leg of MJU 1 and the FROM side faces towards the master leg external facility termination. If an MJU number other than 0001 is specified and the optional BR field is absent, the TO side faces towards the control leg of the specified MJU, and the FROM side faces upstream towards the branch of a cascaded MJU. If the BR field is specified, the TO side faces upstream towards the branch of MJU ssss and the FROM side faces downstream either towards another MJU or towards an external facility termination. The unassigned multiplexer channel (UMC) code is inserted towards the direction that is terminated.

If the termination point specified is under test or is not cross-connected, the command will be denied. The termination state resulting from the command depends on the state prior to the command as indicated by the following table:

| PRIOR<br>STATE | REQUESTED<br>CHANGE | NEW<br>STATE | PRIOR<br>STATE | REQUESTED<br>CHANGE | NEW<br>STATE |
|----------------|---------------------|--------------|----------------|---------------------|--------------|
| R              | TLA F               | F            | R              | TLR F               | DNY          |
| R              | TLA T               | T            | R              | TLR T               | DNY          |
| R              | TLA B               | B            | R              | TLR B               | DNY          |
| F              | TLA F               | DNY          | F              | TLR F               | R            |
| F              | TLA T               | B            | F              | TLR T               | DNY          |

|   |       |     |   |       |     |
|---|-------|-----|---|-------|-----|
| F | TLA B | B   | F | TLR B | R   |
| B | TLA F | DNY | B | TLR F | T   |
| B | TLA T | DNY | B | TLR T | F   |
| B | TLA B | DNY | B | TLR B | R   |
| T | TLA T | DNY | T | T     | R   |
| T | F     | B   | T | F     | DNY |
| T | B     | B   | T | B     | R   |

The customer number (ff) is optional when the master leg customer is in a DS0A channel. This is because there is only one customer in a DS0A channel. If specified for this type of channel, it must appear as 01. If the specified facility is a DS0B, a customer number must appear.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**NEW** - New

**STATE** - State

NEW STATE indicates the new termination state of the circuit as a result of the command. The circuit can be left terminated in either or both directions, or left in the released state.

**TLA** - Terminate and leave activate

**TLR** - Terminate and leave release

The requested termination state change is indicated by TLA or TLR, where TLA activates and TLR releases the terminate and leave state.

**s** - Resulting termination state of the circuit:

*s Explanation*

R Neither side is terminated

F FROM side is terminated

T TO side is terminated

B BOTH sides are terminated

**m** - Circuit direction

m specifies the circuit direction affected by the change.

*m Explanation*

F Terminate or release the FROM side

T Terminate or release the TO side

B Terminate or release BOTH sides

**TO** - To

**MPTM** - Multipoint mode

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of the master leg.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |

## **CHG,TYPE,OPTS**

---

### **CHANGE TYPE, OPTIONS**

#### **Explanation Of Command**

---

This command changes the threshold values for facility performance parameters on all NPCs of a particular type. The threshold values may be changed without disconnecting and reconnecting provisioned circuits.

One or more alarm or information threshold values may be set for all NPCs to a value previously stored in the DACS II threshold data base.

The values stored in the DACS II threshold data base are selected with the indices (**rr/n**).

## Explanation Of Parameters

**TYPE** - Type

**mnxyz** - NPC type

**mnxyz** *Explanation*

DExyz FTU DS1 NPC

TExyz DS3U DS1 NPC

DSxyz SLC carrier digroup terminating NPC

DAxyz FTU DS1 ANSI NPC type

TAxyz DS3U DS1 ANSI NPC type

DE-type xyz fields

**x** - Multiframe format for the digroup

**x** *Explanation*

**0** Not assigned

**1** D4

**2** ESF - Voice

**3** ESF - Data

**4** DDST (T1DM - R bit connection via channel 24)

**5-7** Not assigned

**8** Ericsson Cellular format

**9** No framing format, transparent (TRSP), clear-DS1

**y** - Line and signaling format

**y** *Explanation*

**0** ZCS - Zero code suppression

**1\*** NZCS - No zero code suppression

**2\*** B8ZS - Bipolar with 8 zero substitution

**3†** ZBTSI - Zero-bit time-slot interchanger

**4** ZCS/DMI - Zero code suppression/DMI signaling

**5** NZCS/DMI - No zero code suppression/DMI signaling

**6** B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling

**7-9** Not assigned

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |
| <b>1</b>   | D4                               |
| <b>2</b>   | ESF - Voice                      |
| <b>3</b>   | Not assigned                     |
| <b>4</b>   | Not assigned                     |
| <b>5</b>   | Not assigned                     |
| <b>6</b>   | SLC® 96 carrier Fs               |
| <b>7</b>   | SLC 5 carrier ESF with data link |
| <b>8-9</b> | Not assigned                     |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

## DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the **y** field if the **x** field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y** *Explanation*

**0** ZCS - Zero code suppression

**1\*** NZCS - No zero code suppression

**2** Not assigned

**3** Not assigned

**4** ZCS/DMI - Zero code suppression/DMI signaling

**5** NZCS/DMI - No zero code suppression/DMI signaling

**6-9** Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z** *Explanation*

**0** D4 channel bank channel numbering

**1** D2 channel bank channel numbering

**2** D1D channel bank channel numbering

**3-8** Not assigned

**9** No channel numbering format, clear-DS1

**OPTS** - Options

Clear DS1 DE type FTU NPCs have a limited number of parameters for performance monitoring, 01 through 04 only. Clear DS1 TE type DS3U NPCs have only parameters 01 and 02.

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected

**m** - Facility performance parameter threshold index (0 to 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist; that is, must have been programmed prior to being selected. The non-default thresholds can be set by using the CHG::SETOP (I.38201) command.

Clear-DS1 ANSI NPCs (DAxy9/TAXy9) provide the same set of path and line performance monitoring parameters that are provided by terminated ANSI NPC types. ANSI NPCs in DS3 Units (TAXyz) do not provide near-end DS1 line performance monitoring parameters.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For DS type NPCs, parameters with values rr = 1 through 10 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| rr | Parameter                             | Threshold<br>Value<br>Range | Default<br>Threshold<br>Value |
|----|---------------------------------------|-----------------------------|-------------------------------|
| 01 | Slip major                            | 000 to 255                  | 255                           |
| 02 | Slip minor                            | 000 to 255                  | 4                             |
| 03 | Bit Error Rate major                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-3*                         |
| 04 | Bit Error Rate minor                  | 1E-3* to 1E-6 <sup>†</sup>  | 1E-6                          |
| 05 | Errored Seconds <sup>‡</sup>          | 00001 to 65535              | 864                           |
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255                  | 225                           |
| 07 | Change of Frame Alignment major       | 001 to 511                  | 511                           |
| 08 | Change of Frame Alignment minor       | 001 to 255                  | 17                            |
| 09 | Shelf Alarm Near End(SANE)§           | 00001 to 65535              | 00000                         |
| 10 | Shelf Alarm Far End(SAFE)§            | 00001 to 65535              | 00000                         |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the following Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the following Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. All of the following Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. The only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

| rr | Parameter                                           | Threshold Value Range  | Default Threshold Value |
|----|-----------------------------------------------------|------------------------|-------------------------|
| 41 | Daily Near-end Path Coding Violations               | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 42 | Daily Near-end Path Errored Seconds                 | 00000 to 86400         | 648                     |
| 43 | Daily Near-end Path Severely Errored Seconds        | 00000 to 86400         | 100                     |

† The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default Daily value is 691.

‡ The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default 15-Minute value is 72.

- SLIP** - Timing slip
- BER** - Bit error rate
- ERS** - Errored seconds
- SERS** - Severely errored seconds
- COFA** - Change of frame alignment
- SANE** - Shelf Alarm Near End
- SAFE** - Shelf Alarm Far End

#### SLIP

- mmm** - Slip major alarm threshold (0 through 255)
- nnn** - Slip minor alarm threshold (0 through 255)
- e** - Slip major alarm option selection (0 through 3)
- f** - Slip minor alarm option selection (0 through 3)

#### BER (Bit Error Rate)

- p** - BER major alarm threshold, (1E-p, 3\* through 6†)
- q** - BER minor alarm threshold, (1E-q, 3\* through 6†)
  - \* 4 for clear-DS1 FTU NPC or DS type NPC
  - † 7 on T1DM and Fe framing
- g** - BER major alarm option selection (0 through 3)
- h** - BER minor alarm option selection (0 through 3)

#### ERS (Errored Seconds)

- rrrrr** - ERS threshold (1 through 65535)
- i** - ERS option selection (0 through 3)

#### SERS (Severely Errored Seconds)

- sss** - SERS threshold (1 through 255)
- j** - SERS option selection (0 through 3)

COFA (Change of Frame Alignment)

- ttt** - COFA major alarm threshold (1 through 511)
- uuu** - COFA minor alarm threshold (1 through 255)
- k** - COFA major alarm option selection (0 through 3)
- l** - COFA minor alarm option selection (0 through 3)

SANE (Shelf Alarm Near End)

- xxxxx** - SANE alarm threshold (00000 through 65535)
- m** - SANE alarm option selection (0 through 3)

SAFE (Shelf Alarm Far End)

- zzzzz** - SAFE alarm threshold (00000 through 65535)
- n** - SAFE alarm option selection (0 through 3)

**Note:** Major thresholds may not be equal to minor thresholds, except for the BER threshold of SLC® 96 carrier NPCs. For DE type clear-DS1 NPCs only SLIP and BER parameters are listed. For TE type clear-DS1 DS3U NPCs only SLIP parameters are listed. Both SANE and SAFE are applicable only to SLC 96 carrier NPCs.

For ANSI NPC types:

- CVP** - Path Coding Violations
- ESP** - Path Errored Seconds
- SESP** - Path Severely Errored Seconds
- SEFS** - Severely Errored Framing Seconds
- CSSP** - Path Controlled Slip Seconds
- UASP** - Path Unavailable Seconds
- CVL** - Line Coding Violations
- ESL** - Line Errored Seconds
- SESL** - Line Severely Errored Seconds

CVP (Path Coding Violations)

**aaaaaaaa**

- Path Coding Violation Daily NE threshold (0 to 134217727)

**g** - Line Coding Violation Daily NE option selection (0 to 3)  
**g** - Line Coding Violation 15Min NE option selection (0 to 3)

ESL (Line Errored Seconds)

**hhhhh** - Line Errored Seconds Daily NE threshold (0 to 86400)  
**ppppp** - Line Errored Seconds Daily FE threshold (0 to 86400)  
**hhh** - Line Errored Seconds 15Min NE threshold (0 to 900)  
**ppp** - Line Errored Seconds 15Min FE threshold (0 to 900)  
**h** - Line Errored Seconds Daily NE option selection (0 to 3)  
**p** - Line Errored Seconds Daily FE option selection (0 to 3)  
**h** - Line Errored Seconds 15Min NE option selection (0 to 3)  
**p** - Line Errored Seconds 15Min FE option selection (0 to 3)

### SESL (Line Severely Errored Seconds)

- iiii** - Line Severely Errored Seconds Daily NE threshold (0 to 86400)
- iii** - Line Severely Errored Seconds 15Min NE threshold (0 to 900)
- i** - Line Severely Errored Seconds Daily NE option selection (0 to 3)
- i** - Line Severely Errored Seconds 15Min NE option selection (0 to 3)

For SHORT INTERVAL, DM is calculated hourly and SERS, ERS, US and SLIP are calculated at 15-minute intervals.

**THMODE** - Thresholding mode (for PA NPCs only)

**hhh** - Thresholding mode option

| <i>hhh</i> | <i>Explanation</i>   |
|------------|----------------------|
| INH        | Inhibit thresholding |
| ALW        | Allow thresholding   |

The INH option is used to temporarily inhibit thresholding for all parameters of all NPCs provisioned with TYPE mxyz whether the thresholding for a specific NPC is already inhibited or not. When it is entered, all thresholds for those NPCs are suspended; therefore, no new threshold crossing messages will be output after the inhibition.

The ALW option is the default option and can be used to turn-off the thresholding inhibition. Note that, this command with the "ALW" option can be used for TYPE mxyz NPCs whose thresholding capability is inhibited due to the entry of command I.38221

When the "ALW" is entered, the thresholds applied before the inhibition will be re-applied unless the thresholds were changed during the inhibition. Option change requests are permitted while the NPC thresholding is inhibited.

**vv/k** - Parameter/option involved in denial

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                              |
|-----------|-------------------------------------------------|
| <b>02</b> | Subject entity is not equipped                  |
| <b>10</b> | Unit is not equipped                            |
| <b>11</b> | UC is out of service                            |
| <b>12</b> | UC is in service but failed                     |
| <b>13</b> | FTMI is not equipped                            |
| <b>20</b> | Option rr/m has not been set up on 2nd database |
| <b>21</b> | Minor >= major for SLIP opt                     |
| <b>22</b> | Minor <= major for BER opt                      |
| <b>23</b> | Minor >= major for COFA opt                     |
| <b>2A</b> | DMI combined with T1DM                          |

**cc**    *Explanation*

- 2B**    Maj|Min BER threshold is 7, but not in T1DM or Fe mode
- 4F**    BER must not be less than 4 for Clear DS1
- 83**    Option not programmable for this NPC type
- 44**    Service MXR is not equipped
- 0A**    Minor Slip threshold disabled before Major Slip threshold
- 32**    Threshold value is out of range

## **CHG,UNIT,CONN**

### **CHANGE CONNECTIVITY**

#### **Explanation Of Command**

This command requests a change of a unit's connectivity. Timeslot interchange (TSI) circuit packs will be automatically grown and/ or degrown (deprovisioned) as needed.

New or degrown TSIs are listed at the end of the output message. They are listed pairwise with up to six pairs listed per message line. At most there will be 10 of these pairs when the connectivity of a unit is changed.

#### **Command**

[I.38101]

**CHG:FRM xy,SEQ ww:UNIT q,CONN(a[,b[,c[,d[,e[,f]]]]])!**

## **CHG,UNIT,DS3,BERM,BERT,LBO,TYPE**

### **CHANGE DS3 PARAMETERS**

#### **Explanation Of Command**

For one or more DS3 facilities, this command requests and reports a change in any of the following parameters:

BERM Bit error rate calculation method      BERT Bit error rate threshold  
for declaring high BER condition.      LBO The line build-out setting  
TYPE The DS3 facility type and framing format

At least one of the optional parameters must be supplied.

One output message will be generated for each DS3 termination.

### Explanation Of Parameters

---

**UNIT** - Unit

[q]q - Unit number (1 through 16)

**DS3** - Digital signal 3 (44.736 Mb/s rate)

**c** - DS3 facility number within the unit (1 through 6)

**d** - DS3 facility number within the unit (1 through 6)

Variable d is used to specify a range of facilities

**a** - DS3 number within the range of c and d

**BERM** - Bit error rate calculation method

**s** - BERM specification

s *Explanation*

B Bipolar violations

P DS3 parity errors

**BERT** - Bit error rate threshold

For declaring high BER condition

**t** - BERT specification

t *Explanation*

3 Corresponds to threshold of  $10^{-3}$

6 Corresponds to threshold of  $10^{-6}$

**LBO** - Line buildout

**b** - LBO specification

*b*      *Explanation*

ON      Line build-out is turned on

OFF      Line build-out is turned off

LBO is required as shown in the following table.

734A Cabling to DSX-3      KS-19224,L2 Cabling to DSX-3LBO

0 to 225 feet      0 to 75 feet      ON

225 to 450 feet      75 to 150 feet      OFF

**Note:** LBO <b> may be used to change the LBO setting of an in-service, traffic-carrying Multiplexer-Multiplexer Interface Unit (MMFG).

**TYPE** - Type

**mnxyz** - The requested DS3 format that will be processed by the MXR

**mn** - DS3 facility type

*mn*      *Explanation*

MX      The original Release 4.0 DS3 facility type supported by the Multiplexer (MXR) circuit pack

EX      The enhanced Release 6.0 DS3 facility type supported by the Enhanced Multiplexer (EMXR) circuit pack

Default is the MX type for backward compatibility

**x** - DS3 framing format

*x*      *Format*

1      M13 format.(default)

2      C-bit parity format

**y** - Not assigned (the only valid value is 0)

**z** - Not assigned (the only valid value is 0)

**mnxyz** - old DS3 facility type and DS3 format

**s** - old BER calculation method

**t** - old BER threshold

<b> - old Line Build Out

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                       |

## Explanation Of Parameters

- UNIT** - Unit
- [q]q** - Unit number (1 through 16)
- FTMI** - Facility terminating module interface
- d** - FTMI number in the DACS II unit (1 through 4)
- EQL** - Equalization
- l** - Left half shelf equalization value (first 10 Dual Digroup Circuits)
- r** - Right half shelf equalization value (second 10 Dual Digroup Circuits)

Enter a dash for an equalization value if that value is not to be changed.

Equalization option values for 255AS/24 gauge cable

| <i>l</i> | <i>Explanation</i>         |
|----------|----------------------------|
| 1        | 000 to 100 feet            |
| 2        | 100 to 200 feet            |
| 3        | 200 to 300 feet            |
| 4        | 300 to 400 feet            |
| 5        | 400 to 500 feet            |
| -        | Do not change equalization |

Equalization option values for 600 series/22 gauge cable

| <i>l</i> | <i>Explanation</i>         |
|----------|----------------------------|
| 1        | 000 to 050 feet            |
| 2        | 051 to 267 feet            |
| 3        | 268 to 400 feet            |
| 4        | 401 to 533 feet            |
| 5        | 534 to 655 feet            |
| -        | Do not change equalization |

Equalization option values for 1249/26 gauge cable

| <i>l</i> | <i>Explanation</i>         |
|----------|----------------------------|
| <i>r</i> |                            |
| 1        | 000 to 090 feet            |
| 2        | 090 to 180 feet            |
| 3        | 180 to 270 feet            |
| 4        | 270 to 360 feet            |
| 5        | 360 to 450 feet            |
| -        | Do not change equalization |

If a number is entered for *l* and/or *r*, the equalization option of each half will be changed to the value associated with that number whether the option was previously specified or not. If a dash (-) is entered for *l* or *r* the existing equalization option used for the corresponding half will continue to be applied; that is, the option will be unchanged. However, the command will be denied if dashes (-) are entered for both *l* and *r*.

**k, p** - Equalization options before change

**m, s** - Equalization options after change

*k* and *m* apply to the left half of shelf, that is, the first 10 DDCs in the shelf

*p* and *s* apply to the right half of shelf, that is, the second 10 DDCs in the shelf

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                  |
|-----------|----------------------------------|
| <b>02</b> | Subject entity is not equipped   |
| <b>04</b> | Subject entity is out of service |
| <b>10</b> | Unit is not equipped             |
| <b>11</b> | UC is out of service             |
| <b>12</b> | UC is in service but failed      |
| <b>0E</b> | No equalization for CEPT FTMI    |

## **CHG,USER,LINK,INCL,SCR,GR,MCON,MCOFF**

### **CHANGE USER/LINK SCREENING**

#### **Explanation Of Command**

This command assigns the output message screening for a user or administrative link, including all virtual circuits in a X.25 link, on the DACS II system.

The command can also assign default values to the link options.

The function is denied if the user identification does not exist.

Output from this command is sent only to the link on which the command was input.

#### **Command**

[I.38401]

```
CHG:FRM xy,SEQ ww:{USER <user id>|LINK j[mm][,INCL]}\  
[,SCR n[,GR(a,b,c,d,e,f)]][, {MCON|MCOFF}][,INIT]!
```

#### **Completion Message**

[O.38401]

```

## Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

**USER** - User

### user id

- User identifier (two to eight alphabetic characters)  
User login identification

**LINK** - Link

**j [mm]** - Administrative link number

**j** - Physical link number (1 through 6)

**mm** - Virtual circuit number (01 through 16, for l = 5 or 6)

If mm is specified, pp must be specified as 01.

**INCL** - Include

Include virtual circuits of links 5 and 6. The INCL keyword can only be entered with X.25 links 5 and 6, and no virtual circuit number is allowed when this keyword is used. That is, "mm" and "INCL" are mutually exclusive. In addition, the INCL keyword is also mutually exclusive with the "<user id>". When the INCL keyword is entered, it means that all provisioning data specified in this command, for example, SCR n, GR(a,b,c,d,e,f), and MCON/MCOFF, will be applied to all virtual circuits of the link (5 or 6).

**SCR** - Screening

**n** - Screening option number (1 through 5)

The screening option is used to limit responses on a given administrative link to one of the sets given in the table below. The set to be received is selected by the use of variable "n".

| <i>n</i> | <i>Explanation</i>                                                                                                  |
|----------|---------------------------------------------------------------------------------------------------------------------|
| 1        | Responses to input at the same link.                                                                                |
| 2        | Responses to input at the same link and autonomous messages.<br>This is the default value.                          |
| 3        | Responses to messages input at the same link and some specified sets of action verbs.                               |
| 4        | Responses to messages input at the same link and some specified sets of action verbs including autonomous messages. |
| 5        | Responses to input messages on all links and autonomous messages                                                    |

**GR** - Group

**a, b, c, d, e, f**

- Screening groups a through f (0 or 1)

The entry of the screening group option is allowed only if n = 3 or 4 was entered for the screening option number. The screening group option will not apply for n = 2; the default screening option. The restricted commands are not categorized by group and are always assigned the screening group value "1".

| <i>a*</i> | <i>Explanation</i>                                                                                                       |
|-----------|--------------------------------------------------------------------------------------------------------------------------|
| 0         | Messages in the message group represented by variable a will not be sent to the link or user specified in this command.  |
| 1         | Messages in the message group represented by variable a will also be sent to the link or user specified in this command. |
| -         | Do not change the screening group option for variable a.                                                                 |

\* This table applies also to variables b through f.

DACS II has six groups of action verbs represented in this message by variables a, b, c, d, e, and f. The following table defines the variables assigned to each action verb.

| a<br>Circuit<br>Prov. | b<br>Equipment<br>Prov. | c<br>Maintenance | d<br>Test<br>Access | e<br>Monitoring | f<br>Common |

**MCON** - Macro on

Macro completion message screening ON. MCON is the default value.

**MCOFF** - Macro off

Macro completion message screening OFF

The MCON/MCOFF options are used to turn on or off the completion messages of the component commands inside a macro during its execution.

**INIT** - Initialize

Initialize the link or user options; all parameters are set to their default values except those specified in the command.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- D3** User does not exist
- D7** Cannot execute privileged command
- DF** Command and protocol are inconsistent
- E1** Virtual circuit is not specified for X.25 link
- E2** Invalid link number specified
- E3** Invalid keyword(s) combination specified
- 41** Language "F" provisioned for this channel
- 83** Language is not allowed

## **CI,ECI,RESET**

### **STARTUP**

#### **Explanation Of Command**

DACS II outputs this message immediately after a hardware reset. The message notifies remote systems by the major alarm state (indicated by \*\*) that the frame has reset.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01201]

**\*\*{CI|ECI} RESET**

### **Explanation Of Parameters**

---

**CI** - Communications interface

**ECI** - Enhanced communications interface

**RESET** - Reset

Indicates a hardware reset of the frame

## **CI,ECI,STARTUP,STF,ATP**

### **STARTUP**

#### **Explanation Of Command**

The communications interface or enhanced communications interface has initialized itself and has performed self-diagnostics. The results of these diagnostics are reported as some tests failed or all tests passed.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01211]

{CI|ECI} STARTUP {STF|ATP}

### **Explanation Of Parameters**

---

**CI** - Communications interface

**ECI** - Enhanced communications interface

**STARTUP**

- Startup

Indicates initialization

**STF** - Some tests failed

**ATP** - All tests passed

## **CMD,MC,OOS,MCOND,INSERVICE,MPDBASE**

### **INPUT DENIAL**

#### **Explanation Of Command**

This autonomous message indicates that processing of the input message is **STOPPED** because the main controller is either out of service, in maintenance condition, in service, or the main processor data base is not loaded.

Output from this command is sent only to the link on which the command was input.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01111]

M hh:mm:ss xy,ww n[vv] CMD MC {OOS|MCOND|INSERVICE|MPDBASE} \

e LN MSG:

<First 70 characters of input message.>

<Remaining text of input message> STOPPED

### **Explanation Of Parameters**

---

**e** - Number of lines in message

**OOS** - Out-of-service

**MCOND** - Maintenance condition

**INSERVICE**  
- In-service

**MPDBASE**  
- MP data base  
The main processor data base is not loaded

**STOPPED**  
- Stopped

## **COPY,NPC,TO**

### **COPY NPC**

#### **Explanation Of Command**

This command is used to copy provisioning information from a previously provisioned network processing circuit (NPC) to an NPC to be provisioned (the destination NPC). It is used for domestic NPC types DE, TE, DA, TA, and DS. Copying is limited to the combinations given below:

- DE to DE or TE
- TE to TE or DE
- DA to DA or TA
- TA to TA or DA
- DS to DS

When the parameters of the source (previously provisioned) NPC type do not apply to the destination NPC type, such parameters and their values will be not be copied to the destination NPC type; the destination NPC will ignore them. When there are no parameters of the source NPC type that apply to the destination NPC type, the destination NPC type will assume its default values for those parameters.

One output message is printed for each NPC successfully copied and provisioned.

When a range address crosses a Unit boundary, the command will be denied.

When an NPC range specified within a Unit crosses a Facility Terminating Module (FTM) boundary and the FTM type differs from that specified in this command then that FTM will be skipped and a summary denial message will be output. This message will give the range of NPCs for which the denial is effective and the reason for the denial. The NPC range covers successive NPCs in the range that are denied for the same reason.

Execution of the command then resumes at the NPC following the last one in the summary denial message and continues to the end of the specified range.

No insertion word will appear in the output message if the NPC is a clear DS1 type (types DE9y9, DA9y9, TE9y9 and TA9y9).

## Command

### Nonhierarchical

[I.31521]

**COPY:FRM xy,SEQ ww:NPC [s]abc,TO [t]def[-[u]ghi]!**

### Hierarchical

[I.31521]

**COPY:FRM xy,SEQ ww:NPC uvmnp,TO wxkqr[-ghikl]!**

## Completion Message

### Nonhierarchical

If the destination NPC is DE or TE type, the output format is:

[O.31521]

**M hh:mm:ss xy,ww n[vv] COPY [s]jkl TYPE mnxyz [IW pq] AIS {INFO|MJ|MN}\**

## Explanation Of Parameters

---

**NPC** - Network processing circuit

**TO** - to

**TYPE** - type

**mnxyz** - NPC type identifier

| <i>mn</i> | <i>Explanation</i>         |
|-----------|----------------------------|
| DA        | Dual digroup ANSI NPC      |
| DE        | Dual digroup NPC           |
| DS        | SLC® carrier NPC           |
| TA        | DS3U ANSI NPC              |
| TE        | DS3U Noninterface unit NPC |

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, denoting the source of the provisioning information.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, denoting the start of a range.

**[u]ghi** - The 3- or 4-digit nonhierarchical NPC number, denoting the end of a range.

**[s]jkl** - The 3- or 4-digit nonhierarchical NPC number of the NPC that was successfully equipped.

**[t]mno** - The 3- or 4-digit nonhierarchical NPC number of the first NPC in a range to be denied.

**[u]vwx** - The 3- or 4-digit nonhierarchical NPC number of the last NPC in a range to be denied.

**bcdfe** - Hierarchical NPC number of the first NPC in a range to be denied.

**efhed** - Hierarchical NPC number of the last NPC in a range to be denied.

**ghikl** - Hierarchical NPC number of the last NPC in a range to be equipped.

**uvjkl** - Hierarchical NPC number of the NPC that was successfully equipped.

**uvmnp** - Hierarchical NPC number denoting the source of the provisioning information to be copied.

**wxkqr** - Hierarchical NPC number of the NPC to be equipped or the first NPC in a range to be equipped.

**bc, ef, gh, uv, wx**

- Unit number

**d, h, i, j, k, m**

- Module number

**fe, ed, kl, np, qr**

- NPC number within the module

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

If NPC numbers are expressed in hierarchical form, the valid values are:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**IW** - Insertion word

**pq** - Hexadecimal value of the insertion word.

An eight-bit code, called the growth insertion word, is transmitted by this NPC on unassigned DS0 channels. This code is specified by the optional keyword IW and its argument pq. This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the cross-connect insertion word, which is transmitted when the disconnect message with the DDC specified is used.

Although any 2-digit hexadecimal code may be used, the default values are:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                                                                         |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | Unassigned Channel Code (UAC), the default value for DE/TE type, DA/TA type, and DS type NPCs provisioned with D4 or ESF framing.                                                                                                          |
| 18        | Unassigned Multiplex Code (UMC), the default value for DA/TA type NPCs provisioned with T1DM framing. This value should only be provisioned with T1DM framing (DE4yz/TE4yz, DA4yz/TA4yz), so the growth command enforces this restriction. |
| FF        | This is recommended for unconnected channels in the SLC® interface and CPI applications.                                                                                                                                                   |

For Clear-DS1 NPCs, the insertion word option is **NOT** available and the message will be denied if this option is entered. The alarm indication signal (AIS) is transmitted in the disconnect or idle state.

**AIS** - Alarm indication signal

**INFO** - Information  
Information message (not an alarm).

**MJ** - Major (alarm)

**MN** - Minor (alarm)

**BER** - Bit Error Rate

**ERS** - Errored seconds

**SERS** - Severe errored seconds

**COFA** - Change of frame alignment

---

**mmm** - SLIP major alarm threshold (0 through 255)  
**nnn** - SLIP minor alarm threshold (0 through 255)  
**e** - SLIP major option selection (0 through 3)  
**f** - SLIP minor option selection (0 through 3)

**p** - BER major alarm threshold (4 through 6)  
**q** - BER minor alarm threshold (4 through 6)  
**g** - BER major option selection (0 through 3)  
**h** - BER minor option selection (0 through 3)

**rrrrr** - ERS threshold (1 through 65535)  
**i** - ERS option selection (0 through 3)

**sss** - SERS threshold (1 through 255)  
**j** - SERS option selection (0 through 3)

**ttt** - COFA major alarm threshold (1 through 511)  
**uuu** - COFA minor alarm threshold (1 through 255)  
**k** - COFA major option selection (0 through 3)  
**l** - COFA minor option selection (0 through 3)

**xxxxx** - SANE threshold (0 through 65535)  
**v** - SANE option selection (0 through 3)

**zzzzz** - SAFE threshold (0 through 65535)  
**w** - SAFE option selection (0 through 3)

**Note:** For clear-DS1 FTU NPC only SLIP and BER parameters are listed.  
For clear-DS1 DS3U NPC only SLIP parameters are listed.

The SANE and SAFE parameters are not applicable to DS1yz and DS7yz type NPCs.

Except for BER, major thresholds may not be equal to or less than the minor thresholds. The BER major threshold can be equal to the BER minor threshold.

**PL** - Payload loopback

**ENA** - Enabled

Payload loopback commands received from far-end equipment on the ESF data link are recognized and performed by the ANSI NPC. This is the default option.

**DSA** - Disabled

Payload loopback commands received from far-end equipment on the ESF data link are ignored by the ANSI NPC. This prevents customer equipment from controlling network configurations.

**CVP** - Path Coding Violations

**ESP** - Path Errored Seconds

**SESP** - Path Severely Errored Seconds

**SEFS** - Severely Errored Framing Seconds

**CSSP** - Path Controlled Slip Seconds

**UASP** - Path Unavailable Seconds

**CVL** - Line Coding Violations

**ESL** - Line Errored Seconds

**SESL** - Line Severely Errored Seconds

(000 through 900, or --- if not applicable)
- p** - 15-Minute far-end line errored second threshold selection,  
(0 through 3)

**Note:** A threshold of zero for any parameter inhibits threshold crossing monitoring for that parameter.

**For PB/PC type:**

Note that:

- If the NPC is not located in a sync NPC location, bit "b" set to "1" will be denied.
- For telephone channel numbering, channels 16 to 30 occupy time slots 17 to 31.
- For time slot channel numbering, channels 16 to 30 occupy time slots 16 to 30.
- For NSA NPCs (bit d = 0), bits "f" and "g" are don't cares: any values are accepted.
- If bit "d" is set to "1" (that is, a CAS NPC) and "jkl" is "110" (that is, Transmic 1G), the command will be denied.
- If bit "d" is set to "1" (that is, a CAS NPC) and bit "e" is "1" for time slot channel numbering, the command will be denied.

- m** - Facility performance parameter threshold index (0 through C)

**Note:** If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options will still be correctly output.

In addition, certain parameters do not apply. In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes.

A special code, called the Growth Insertion Word (GIW), is transmitted by this NPC on unassigned channels. This code is specified by the optional keyword **IW** and its argument **pq**.

*This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the TCON Insertion Word, which is transmitted when the "TDIS: :FROM, TO, . . . , DCC" command is used.*

**IW** - Insertion word

**pqr** - Hexadecimal value of the insertion word.

For PB and PC type NPCs, the IW argument is X'pq[r], and the default GIW code is X'D5D (Binary: 11010101 1101). Hexadecimal digits "pq" represent the CEPT insertion word for cross-connected time slots and hexadecimal digit "r" represents the CEPT signaling option. The "r" digit is needed to accommodate the cross-connected CEPT time slot and its associated portion of TS16 used for signaling when provisioned for channel associated signaling (CAS).

Although the "r" digit is accepted on input, for NSA NPCs, it has no significance.

**AIS** - Alarm indication signal

**MI** - Maintenance information  
This is the default option.

**PMA** - Prompt maintenance alarm

**DMA** - Deferred maintenance alarm

The **TS0 abcdefgh** variables represent international and national bits in time slot'0, as defined by:

These variables are set to their default values "11011111" by this command, except for the Transmic'1G option, where the default is "11000000."

The variables may later be changed by setting the abcdefgh parameters in the TS0 field of the CHG::NPC command.

Each of the variables may then be set to "0", "1", or "P."  
"P" indicates that the incoming bit will be cross-connected unchanged.

When TS0 is cross-connected, the TS0 bits will be either passed, or set to "0" or "1" as indicated by the "abcdefgh" variable values.  
Note that bits which are used for alarms (bit 3 always; bits 4 and 5 if provisioned by the **mnxyz** values) may not be set to "P."

This is also true for NPCs assigned as test port NPCs.

The **TS0M abcdefgh** field allows monitoring of state changes in the received spare international bits, where the "abcdefgh" variables refer to the same TS0 bits as defined above for the TS0 "abcdefgh" variables.

The TS0M variables are specified for monitoring in the command as:

The default values for TS0M variables are **abcdefgh=00000000**, unless the **xyz** parameters set them differently, that is, for Transmic'1G the **abcdefgh=00111111**.

The TS0M variables may later be provisioned by the **CHG::TS0M'abcdefgh** or the **ED-PRMTR-EQPT TS0M-abcdefgh (38323)** command.

**For PA type:**

Note that:

- If the NPC is not located in a sync NPC location, the value of "x" must be in the range 0 - 3 or 8 - B. Otherwise the command will be denied.
- For telephone channel numbering, channels 16 to 30 occupy time slots 17 to 31.
- For time slot channel numbering, channels 16 to 30 occupy time slots 16 to 30.
- If the value of "y" is 0, 2, 4 or 6 (i.e., a CAS NPC) and the value of "z" is C (i.e. Transmic 1G), the command will be denied.

**m** - Facility performance parameter threshold index (0 through c)

Variable m is used to select the threshold value and alarm type previously programmed for parameter rr. There are four possible alarm thresholds and 3 different alarm levels. A given value of m selects one combination of threshold value and alarm level. The combinations of these two result in 12 possible values of m. There is a thirteenth m value which is used to disable the alarm threshold and the alarm. The values of m that produce the default values of the thresholds and alarms are shown in the table below under the column heading "Threshold Value". Threshold and alarm combinations selected by m = 3 through b must exist, that is, must have been programmed, prior to being selected. The thresholds are programmed by using the ED-OPT-T1 command. Thresholds of all unspecified parameters will be set to the default value associated with m=0. Setting m = c disables thresholding for a given parameter.

A special code, called the Growth Insertion Word (GIW), is transmitted by this NPC on unassigned channels. This code is specified by the optional keyword **IW** and its argument **pq**.

*This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the TCON Insertion Word, which is transmitted when the "TDIS: :FROM, TO, . . . , DCC" command is used.*

**IW** - Insertion word

**pqr** - Hexadecimal value of the insertion word.

For PA type NPCs, the IW argument is X'pq[r]', and the default GIW code is X'D5D (Binary: 11010101 1101). The "pq" hex digits represent the CEPT insertion word for cross-connected time slots and the "r" hex digit represents the CEPT signaling options. The "r" digit is needed to accommodate the cross-connected CEPT time slot and its associated portion of TS16 used for signaling when provisioned for CAS.

Although the "r" digit is accepted on input, for NSA NPCs, it has no significance.

**AIS** - Alarm indication signal

AIS is not detected by unframed clear (unchannelized) 2Mbit/s PAXDz type NPCs. Therefore, specifying AIS with one of the alarm level types MI, DMA, or PMA, is unnecessary. However, the command will not be denied if AIS is specified with an alarm level for unframed clear PAXDz NPCs. AIS with its alarm level will simply never be reported for unframed clear PAXDz NPCs.

**MI** - Maintenance information

This is the default option.

**PMA** - Prompt maintenance alarm

**DMA** - Deferred maintenance alarm

For each NPC listed, this message prints out values of the states, counts, thresholds and options of the following facility performance parameters and the spare international and national bits in time slot 0 for CEPT DPCs.

| parameter | explanation                      |
|-----------|----------------------------------|
| CRC       | CRC Block Errors                 |
| FRER      | Framing Errors                   |
| OFS       | Out of Frame Seconds             |
| ES        | Errored Seconds                  |
| SES       | Severely Errored Seconds         |
| CSS       | Controlled Slip Seconds          |
| CV        | Coding Violations                |
| UAS       | Unavailable Seconds              |
| UATC      | Unavailable Time Count           |
| MER       | Multiframe Errors                |
| FEBE      | Far End Block Errors             |
| FES       | Far End Errored Seconds          |
| FSES      | Far End Severely Errored Seconds |
| FUAS      | Far End Unavailable Seconds      |

Two sets of thresholds are kept for each parameter: One for DAILY intervals and one for 15 MINUTE intervals.

aaaaaaaa

- Daily CRC block error threshold value.

**a** - Daily CRC block error threshold selection, (0 through 3)

bbbbbbbb

- Daily framing error threshold value.

**b** - Daily framing error threshold selection, (0 through 3)

cccccc

- Daily out of frame seconds threshold value.

**c** - Daily out of frame seconds threshold selection, (0 through 3)

dddddd

- Daily errored second threshold value.

**d** - Daily errored second threshold selection, (0 through 3)

**eeeeee** - Daily severely errored second threshold value.  
**e** - Daily severely errored second threshold selection, (0 through 3)  
**fffff** - Daily controlled slip second threshold value.  
**f** - Daily controlled slip second threshold selection, (0 through 3)  
**ggggggggg** - Daily coding violation threshold value.  
**g** - Daily coding violation threshold selection, (0 through 3)  
**hhhhh** - Daily unavailable second threshold value.  
**h** - Daily unavailable second threshold selection, (0 through 3)  
**iiii** - Daily unavailable time count threshold value.  
**i** - Daily unavailable time count threshold selection, (0 through 3)  
**jjjjj** - Daily multiframe alignment error threshold value.  
**j** - Daily multiframe alignment error threshold selection, (0 through 3)  
**kkkkkkkk** - Daily far-end block error threshold value.  
**k** - Daily far-end path block error selection, (0 through 3)  
**lllll** - Daily far-end errored second threshold value.  
**l** - Daily far-end path second threshold selection, (0 through 3)  
**mmmm** - Daily far-end severely errored second threshold value.  
**m** - Daily far-end severely errored second threshold selection, (0 through 3)  
**nnnnn** - Daily far-end unavailable second threshold value.  
**n** - Daily far-end unavailable second threshold selection, (0 through 3)  
**a a a a a** - 15-Minute CRC block error threshold value.  
**a** - 15-Minute CRC block error threshold selection, (0 through 3)  
**bbbbbbb** - 15-Minute framing error threshold value.  
**b** - 15-Minute framing error threshold selection, (0 through 3)

- ccc** - 15-Minute out of frame seconds threshold value.
- c** - 15-Minute out of frame seconds threshold selection, (0 through 3)
- ddd** - 15-Minute errored second threshold value.
- d** - 15-Minute errored second threshold selection, (0 through 3)
- eee** - 15-Minute severely errored second threshold value.
- e** - 15-Minute severely errored second threshold selection, (0 through 3)
- fff** - 15-Minute controlled slip second threshold value.
- f** - 15-Minute controlled slip second threshold selection, (0 through 3)
- g g g g g g g** - 15-Minute coding violation threshold value.
- g** - 15-Minute coding violation threshold selection, (0 through 3)
- hhh** - 15-Minute unavailable second threshold value.
- h** - 15-Minute unavailable second threshold selection, (0 through 3)
- ii** - 15-Minute unavailable time count threshold value.
- i** - 15-Minute unavailable time count threshold selection, (0 through 3)
- j j j** - 15-Minute multiframe alignment error threshold value.
- j** - 15-Minute multiframe alignment error threshold selection, (0 through 3)
- k k k k k k k** - 15-Minute far-end block error threshold value.
- k** - 15-Minute far-end path block error selection, (0 through 3)
- lll** - 15-Minute far-end errored second threshold value.
- l** - 15-Minute far-end path second threshold selection, (0 through 3)
- mmm** - 15-Minute far-end severely errored second threshold value.
- m** - 15-Minute far-end severely errored second threshold selection, (0 through 3)
- nnn** - 15-Minute far-end unavailable second threshold value.
- n** - 15-Minute far-end unavailable second threshold selection, (0 through 3)

The options {a,b,c,d,e,f,g,h,i,j,k,l,m,n} and {a,b,c,d,e,f,g,h,i,j,k,l,m,n} are **m values** as

previously shown and specify the threshold sets of the performance parameters listed.

The **TS0 abcdefgh** variables represent international and national bits in time slot'0, as defined by:

These variables are set to their default values "11011111" by this command, except for the Transmic'1G option, where the default is "11000000."

The variables may later be changed by setting the abcdefgh parameters in the TS0 field of the ED-PRMTR-EQPT::NPC or CHG::NPC (38321) command. Each of the variables may then be set to "0", "1", "P" or "V." "P" indicates that the incoming bit will be cross-connected unchanged; "V" indicates that the bit received will be inverted.

When TS0 is cross-connected, the TS0 bits will be either passed, inverted or set to "0" or "1" as indicated by the "abcdefgh" variable values. Note that bits which are used for alarms (bit 3 always; bits 4 and 5 if provisioned by the **mnxyz** values) may not be set to "P."

This is also true for NPCs assigned as test port NPCs.

The **TS0M abcdefgh** field allows monitoring of state changes in the received spare international bits, where the "abcdefgh" variables refer to the same TS0 bits as defined above for the TS0 "abcdefgh" variables.

The TS0M variables are specified for monitoring in the command as:

The default values for TS0M variables are **abcdefgh=00000000**, unless the **xyz** parameters set them differently, i.e., for Transmic'1G the abcdefgh=00111111. The TS0M variables may later be provisioned by the CHG::TS0M'abcdefgh or the ED-PRMTR-EQPT TS0M-abcdefgh (38323) command.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 01** Subject entity is equipped
- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 13** FTMI is not equipped
- 24** Unit type error
- 26** NPC type error
- 83** NPC type is inconsistent with FTMI type
- BF** MIU is not equipped
- FD** NPC range crosses unit boundary
- 9B** The MXR is not grown
- 07** Mismatch between MXR and NPC types
- 87** Copy source NPC is not equipped

## **CTST,FAD,AIS,INCL**

### **NON-CANNELIZED TEST, MONITOR,SPLIT,LOOP**

#### **Explanation Of Command**

For a one-way circuit under test, the test mode can only be MONE or SPLTA. The FROM and TO NPCs must be entered as the E- and F-end NPCs, respectively.

The AIS keyword is required for test modes SPLTE, SPLTF, SPLTEF, LOOPE and LOOPF, to indicate the idle signal for any idle output port that resulted from the interruption.

The INCL keyword is required if one or more of the NPC(s) under test is marked Red or Customer-controlled, except when changing to a monitor mode.

Once a test connection is set up, this command can be entered with either one or both FADs, in any order. The original order of FAD assignment will be used until test access is released.

The E- and F-end NPCs for non-channelized test access correspond to the FROM and TO NPCs of a cross-connection, respectively. The test session is the circuit connection under test.

During a test session, if a hard-reset or link failure occurs, the test session is released automatically. However, if the failure is such that it prevents release at the time of logoff or if the FAD fails, the test session is NOT automatically released and can be released by manual disconnection.

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**FAD** - Facility access digroup  
The test NPC

**tmode** - Test mode  
*tmode Explanation*

**MONE** Monitor signal from equipment end (E-end) NPC to facility end (F-end) NPC of unmapped or one-/two-way mapped test session

**MONF** Monitor signal from F-end NPC to E-end NPC of a two-way mapped test session

**MONEF** Monitor a two-way mapped connection in both directions; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs

**SPLTA** Split the A signal from the equipment E-end NPC to the facility F-end NPC of one-/two-way mapped test session

**SPLTB** Split the B signal from the F-end NPC to the E-end NPC of a mapped two-way test session

**SPLTAB** Split both A and B signals of a two-way test session; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs

**SPLTE** Split the input and output ports of E-end NPC of an unmapped or two-way mapped test session

**SPLTF** Split the input and output ports of F-end NPC of a two-way mapped test session

**SPLTEF** Split a two-way mapped test session in both directions; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs

**LOOPE** Loop the E-end input port to the output port, and connect the looped signal to the FAD; the test session may include an unmapped or two-way mapped connection

**LOOPF** Loop the F-end input port to the output port, and connect the looped signal to the FAD; only for a two-way mapped test session; not allowed for one-way broadcast tributaries

**[s]abc** - The 3- or 4-digit nonhierarchical number of test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this is one of two test NPCs; the message is denied if this NPC is currently not a FAD

**[t]def** - Nonhierarchical number of second test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this number can be entered or omitted; either and/or both of [s]abc and [t]def can be entered, in any order, the original order of FAD assignment will be used; the message is denied if this NPC is currently not a FAD

**[u]ghi** - Nonhierarchical number of E-end NPC, this is the reference NPC for the test session; it is a mapped or unmapped NPC, or the backbone of a broadcast circuit, depending on the test session specified

**[v]jkl** - Nonhierarchical number of current F-end NPC of the test session. It is defined only if it is mapped to the E-end NPC; if it is omitted, the NPC mapped to the E-end NPC becomes the F-end NPC, or if the test session involves a broadcast circuit, the full tributary becomes the F-end NPC, if one does not exist, the parameter must be given to specify the tributary being tested; it must be omitted if the E-end NPC is unmapped.

**[t]klm** - Nonhierarchical number of problematic NPC.

The valid values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical NPC number for FAD  
**wxkqr** - Hierarchical NPC number of second FAD  
**eghij** - Hierarchical E-end NPC number of test session  
**jklmn** - Hierarchical F-end NPC number of a mapped test session  
**ghklm** - Hierarchical number of problematic NPC

**uv,wx,eg,jk,gh**  
- Unit number  
**m,k,h,l** - Module number  
**np,qr,ij,mn,lm**  
- NPC number

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**AIS** - Alarm indication signal.

May be specified to be idle signal. Quasi-random signal source (QRSS) is the default idle signal. If QRSS is not provisioned or in service, AIS must be entered for all test modes resulting in idle output port(s): SPLTE, SPLTF, SPLTEF, LOOPE, and LOOPF. AIS input shall be denied for test access of an unmapped NPC, and all other test modes.

**INCL** - Inclusive

Required for test session with red or customer-controlled NPC(s), except for MONE, MONF and MONEF modes.

**RDC** - Red circuit

Test session has red NPC(s)

**CUS** - Customer

Customer-controlled circuit  
Test session has Customer-controlled NPC(s)

**ONEWAY** - One way cross-connection

Test session has one-way cross-connection

**UMPD** - Unmapped

Test session has unmapped NPC

**EMODE** - E-end termination status

**FMODE** - F-end termination status

*emode*

*fmode* *Explanation*

**NORM** - The circuit under test is not terminated in this direction

**TERM** - The circuit under test terminated in this direction

The emode output is omitted for one-way circuits

Both emode and fmode are omitted for unmapped circuits

**COND** - Condition

**cc** - Condition code

**st** - Status of denial

**cc** - Hexadecimal condition code

**cc** *Explanation*

| <b>8C</b> | The two FADS entered are not associated with one another.              |

## **CTST,FAD,EMODE,FMODE,INCL**

### **NON-CANNELIZED TEST FAD, EMODE, FMODE**

#### **Explanation Of Command**

This message changes the output mode (also known as termination status) of a non-channelized circuit under test. The status can be normal data transmission (NORM), or terminate (TERM) and send idle signal(s) to output port(s). The change can be selectively specified for the circuit's E-end and/or F-end NPCs. At least one of the two <e/fmode> fields must be entered, or the message is denied.

If the cross-connected circuit is terminated before a test session is set up, this command can be used to change the state from TERM to NORM. When the test session is released, the most recent state remains until a change (CHG) termination command is entered.

During a test session, if a hard-reset or link failure occurs, the test session is released automatically. However, if the failure is such that it prevents release at the time of logout or if the FAD fails, the test session is NOT automatically released and can be released by manual disconnection.

The E- and F-end NPCs for non-channelized test access correspond to the FROM and TO NPCs of a cross connection, respectively. A test session is the circuit connection under test.

#### **Command**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**FAD** - Facility access digroup

**[s]abc** - The 3- or 4-digit nonhierarchical number of test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this is one of two test NPCs;  
the message is denied if this NPC is currently not a FAD

**[t]def** - Nonhierarchical number of second test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this number can be entered or  
omitted; either and/or both of [s]abc and [t]def can be entered,  
in any order, the original order of FAD assignment will be used;  
the message is denied if this NPC is currently not a FAD

**[u]ghi** - Nonhierarchical number of E-end NPC of circuit under test

**[v]jkl** - Nonhierarchical number of current F-end NPC

**[t]klm** - Nonhierarchical number of problematic NPC

The valid values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

**uvmp** - Hierarchical NPC number for FAD  
**wxkqr** - Hierarchical NPC number of second FAD  
**eghij** - Hierarchical E-end NPC number of test session  
**jklmn** - Hierarchical F-end NPC number of a mapped test session  
**ghklm** - Hierarchical number of problematic NPC

**uv,wx,eg,jk,gh**

- Unit number

**m,k,h,l** - Module number

**np,qr,ij,mn,lm**

- NPC number

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**EMODE** - Equipment-end mode

**emode** - Equipment-end termination status

**FMODE** - Facility-end mode

**fmode** - Facility-end termination status

*emode*  
*fmode Explanation*

NORM The circuit under test is not terminated in this direction  
TERM The circuit under test terminated in this direction

The emode cannot be changed and is omitted for one-way circuits  
The fmode cannot be changed for modes SPLTE, SPLTEF and LOOPE  
For an unmapped circuit neither the EMODE or FMODE can be changed.

If emode or fmode is omitted, the parameter retains its current value.  
If either the E- or F-end NPC is out of service or failed, then is  
subsequently restored to service, the output modes remain as they were  
before the failure.

**RDC** - Red circuit  
Test session has NPC(s) designated as red circuits

**CUS** - Customer  
Test session has Customer-controlled NPC(s)

**INCL** - Inclusive  
Required for circuits with customer-controlled or red NPC(s)

**ONEWAY** - One-way  
Test session has a one-way cross-connection

**COND** - Condition

**st** - Status of denial

**cc** - Hexadecimal condition code

## **CTST,FAD,FROM,TO,AIS,INCL**

### **NON-CANNELIZED TEST ACCESS (MONITOR, SPLIT, OR LOOP)**

#### **Explanation Of Command**

This message sets up non-channelized test access in the monitor modes MONE, MONF, MONEF; the split modes SPLTA, SPLTB, SPLTAB, SPLTE, SPLTF, SPLTEF; and the loop modes LOOPE or LOOPF. The circuit under test can be one unmapped Network Processing Circuit (NPC), or a pair of mapped NPCs. The mapped circuit may be a one-way, two-way or broadcast circuit. A one-way circuit can only be tested in modes MONE and SPLTA. Only one test connection can exist at a time for any circuit.

For test modes MONEF, SPLTAB and SPLTEF two Facility Access Digroups (FADs), or test NPCs, are connected. The first FAD number is required; the second FAD can be user specified, or assigned by default to be NPC numbered n+1, where n is the NPC number of the first FAD. If n is the highest NPC number on the DACS II frame, the first NPC on the frame will be used as default for the second FAD. Whether a FAD is user specified or assigned by DACS II, the command will be denied if the FAD is assigned or has invalid type. One FAD is connected for all other modes.

During a test session, if a hard-reset or link failure occurs, the test session is released automatically. However, if the failure is such that it prevents release at the time of logoff, or if the FAD fails, the test session is NOT automatically released and can be released by manual disconnection.

The E- and F-end NPCs for non-channelized test access correspond to the FROM and TO NPCs of a cross-connection, respectively. For a broadcast circuit the full tributary is considered to be a two-way connection, and all other tributaries are one-way connections. Only one test session can exist for a circuit at a time. The FAD or test NPC corresponds to test ports for DS0 test access.

For modes SPLTE and LOOPE, the idle output port of the F-end NPC, and any other output ports the E-end is transmitting to, must be set to AIS.

For modes SPLTF and LOOPF, the idle output port of the E-end NPC, and any other output ports the F-end is transmitting to, must be set to AIS.

The output signal on all idle output ports related to a test session are restored to their previous values when the test modes are changed or test access is released. The OUTPUT modes can be overwritten when the NPC is test accessed.

## Command

---

Not applicable.

### **Explanation Of Parameters**

---

**FAD** - Facility access digroup

**FROM** - FROM termination

**TO** - TO termination

**tmode** - Test mode

| <i>tmode</i> | <i>Explanation</i>                                                                                                                                                            |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MONE         | Monitor signal from equipment E-end NPC to facility F-end NPC of unmapped or one-/two-way mapped test session                                                                 |
| MONF         | Monitor signal from F-end NPC to E-end NPC of a two-way mapped test session                                                                                                   |
| MONEF        | Monitor a two-way mapped connection in both directions; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs         |
| SPLTA        | Split the A signal from the equipment E-end NPC to the facility F-end NPC of one-/two-way mapped test session                                                                 |
| SPLTB        | Split the B signal from the F-end NPC to the E-end NPC of a mapped two-way test session                                                                                       |
| SPLTAB       | Split both A and B signals of a two-way test session; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs           |
| SPLTE        | Split the input and output ports of E-end NPC of an unmapped or two-way mapped test session                                                                                   |
| SPLTF        | Split the input and output ports of F-end NPC of a two-way mapped test session                                                                                                |
| SPLTEF       | Split a two-way mapped test session in both directions; two FADs are connected for the test session, and test mode can only be changed to another mode using two FADs         |
| LOOPE        | Loop the E-end input port to the output port, and connect the looped signal to the FAD; the test session may include an unmapped or two-way mapped connection                 |
| LOOPF        | Loop the F-end input port to the output port, and connect the looped signal to the FAD; only for a two-way mapped test session; not allowed for one-way broadcast tributaries |

- [s]abc** - The 3- or 4-digit nonhierarchical number of test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this is the first of two test NPCs; the message is denied if this NPC is assigned
- [t]def** - The 3- or 4-digit nonhierarchical number of second test NPC or FAD  
For MONEF, SPLTAB and SPLTEF modes this number can be user specified, if none is entered the next higher NPC number to [s]abc is used; the message is denied if it is assigned
- [u]ghi** - Nonhierarchical number of E-end NPC.  
This is the reference NPC for the test session; it is a mapped or unmapped NPC, or the backbone of a clear-DS1 broadcast circuit, depending on the test session specified
- [v]jkl** - Nonhierarchical number of current F-end NPC of the test session.  
This NPC is defined only if it is mapped to the E-end NPC. If this NPC is omitted from the input command, the NPC mapped to the E-end NPC becomes the F-end NPC or if the test session involves a broadcast circuit, the full tributary becomes the F-end NPC. If a full tributary does not exist, the NPC must be given to specify the tributary being tested. Omit this NPC if the E-end NPC is unmapped.
- [t]klm** - The 3- or 4-digit nonhierarchical number of problematic NPC

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

**uvmnp** - Hierarchical number of test NPC or FAD  
**wxkqr** - Hierarchical number of second FAD  
**eghij** - Hierarchical number of E-end NPC  
**jklnm** - Hierarchical number of F-end NPC of the test session  
**ghklm** - Hierarchical number of problematic NPC

**uv,wx,eg,jk,gh**  
 - Unit number  
**m,k,h,l** - Module number  
**np,qr,ij,mn,lm**  
 - NPC number

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
 Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
 Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**AIS** - Alarm indication signal.

May be specified to be idle signal. AIS must be entered for all test modes resulting in idle output port(s): SPLTE, SPLTF, SPLTEF, LOOPE, and LOOPF. AIS input will be denied for test access of an unmapped NPC, and all other test modes.

**INCL** - Inclusive

Required for test session with red or customer-controlled NPC(s), except for MONE, MONF and MONEF modes. INCL will be ignored if the circuit is NOT RDC or CUS.

**RDC** - Red circuit

Test session has red NPC(s)

**CUS** - Customer

Customer-controlled circuit. Test session has Customer-controlled NPC(s)

**ONEWAY** - One way cross-connection

Test session has one-way cross-connection

**UMPD** - Unmapped

Test session has unmapped NPC

**EMODE** - E-end termination status

**FMODE** - F-end termination status

*emode*

*fmode Explanation*

**NORM** - The circuit under test is not terminated in this direction

**TERM** - The circuit under test is terminated in this direction

The emode output is omitted for one-way circuits

Both emode and fmode are omitted for unmapped circuits

**COND** - Condition

**cc** - Condition code

**st** - Status of denial

**cc** - Hexadecimal condition code

**cc st Explanation**

**02 MCOND** Subject entity is not equipped

**04** Subject entity is out of service

**1E** Customer control or red circuit exists

**10** NPC out of service or failed

**12 MCOND** Active CCN side not IS or failed or pested or hardware OOS

**13 MCOND** UNIT not equipped, not in service, or failed

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                     |

## **CTST,HUB,FAD,TO,INCL**

### **NON-CANNELIZED TEST HUB**

#### **Explanation Of Command**

This message sets up a non-channelized hub connection between a facility access digroup (FAD), or test network processing circuit (NPC) and a remote FAD. The FAD is connected to an NPC which is connected to a remote test NPC. The NPCs cannot be part of an existing mapped circuit or test connection.

During a hub test session if a hard-reset or link failure occurs the hub test session is released automatically. However, if the failure is such that it prevents release at the time of logout, or if the FAD fails, the hub test session is NOT automatically released and can be released by manual disconnection.

Not applicable.

## Explanation Of Parameters

**HUB** - HUB connection

**FAD** - Facility access digroup

**[s]abc** - The 3- or 4-digit nonhierarchical number of test NPC or Facility Access Digroup (FAD).

**[t]jkl** - The 3- or 4-digit nonhierarchical number of TO NPC connected to the remote FAD

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**cc**    *Explanation*

- 73**    Invalid test mode for a one-way test session
- 75**    Test session already exists
- FF**    Termination is in process of being rolled
- 8D**    Clear gateway test access disallowed.

## **CTST,LPBKT,FAD,INCL**

### **NON-CANNELIZED LOOP TEST ACCESS FACILITY**

#### **Explanation Of Command**

This message terminally loops back a non-channelized Facility Access Digroup (FAD) or test network processing circuit (NPC).

Terminal looping is defined as looping of a terminated signal; it is done in the cross-connect network.

### **Explanation Of Parameters**

**FAD** - Facility access digroup

**[s]abc** - The 3- or 4-digit nonhierarchical FAD NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

## **CTST,TNR,ALL,OOS**

### **NON-CHANNELIZED TEST NPC RELEASE**

#### **Explanation Of Command**

This message releases ALL non-channelized facility access digroups (FADs), or test network processing circuits (NPCs) activated by the user, and restores the test session to its original mapped or unmapped state.  
It is preceded by individual CTST,TNR,FAD,OOS messages printed for each test session which is in progress.

If the circuit under test was a mapped circuit before the test session started, upon release of the FAD, the original cross-connection is restored. If the circuit was unmapped, it is restored to the unmapped or idle state that existed prior to testing.

#### **Command**

[I.20202]

CTST:FRM xy,SEQ ww:TNR,ALL[,OOS]!

#### **Completion Message**

[O.20202]

M hh:mm:ss xy,ww n[vv] CTST TNR ALL COND cc COMPL

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**TNR** - Test NPC release

**ALL** - All  
Release all test NPCs

**OOS** - Out-of-service  
The OOS keyword must be entered to release one or more NPC(s) that are OOS. Mapped NPC(s) that are OOS will not be restored to original cross-connection until NPC(s) are returned to service.

**COND** - Condition code

**cc** - Hexadecimal condition code

**cc**    *Explanation*

**00**    No conditions

**01**    No FADs were activated by link n

**02**    One or more FADs could not be released

## **CTST,TNR,FAD,OOS**

### **NON-CHANNELIZED TEST NPC RELEASE**

#### **Explanation Of Command**

This message releases a non-channelized facility access digroup (FAD) or test Network Processing Circuit (NPC) and restores the test session to its original mapped or unmapped state and releases ALL test NPCs activated by the user from the current link.

For test modes using two FADs, if one of the two FADs is entered, both FADs will be released from testing. If both FADs are entered, they must be associated with one another in the same test connection. Both FADs can be entered in any order and will still be released.

If the circuit under test was a mapped circuit before the test session start, upon release of FAD(s), the circuit is restored to cross-connection. If the circuit was unmapped, it is restored to the unmapped or idle state that existed prior to testing.

If the OOS keyword is input, NPC(s) that are out-of-service (OOS) should not be a reason for denial; 'NPC unequipped, failed, or not a test NPC' is a denial condition only for the case of one NPC.

#### **Command**

#### **Nonhierarchical**

[I.20201]

There are two alternate formats depending upon the number of FADs specified.

## Explanation Of Parameters

**TNR** - Test NPC release

**FAD** - Facility access digroup

**[s]abc** - The 3- or 4-digit nonhierarchical test NPC or Facility Access Digroup (FAD) number

**[t]def** - The second 3- or 4-digit nonhierarchical FAD number, if applicable

**[u]ghi** - The 3- or 4-digit nonhierarchical E-end NPC number of test session. Not applicable to loopback FAD

**[v]jkl** - The 3- or 4-digit nonhierarchical F-end NPC number of a mapped test session. Not applicable to loopback FAD

The values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

**uvmp** - Hierarchical NPC number for FAD  
**wxkqr** - Hierarchical NPC number of second FAD, if applicable  
**eghij** - Hierarchical E-end NPC number of test session. Not applicable to loopback FAD  
**jklmn** - Hierarchical F-end NPC number of a mapped test session. Not applicable to loopback FAD

**uv,wx, eg, jk**  
 - Unit number  
**m,k,h,l** - Module number  
**np, qr, ij, mn**  
 - NPC number

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
 Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
 Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**UMPD** - Unmapped  
 Test session has unmapped NPC

**EMODE** - E-end termination status  
**FMODE** - F-end termination status

*emode*  
*fmode Explanation*

**NORM** - The circuit under test is not terminated in this direction  
**TERM** - The circuit under test terminated in this direction

The emode output is omitted for one-way circuits  
 Both emode and fmode are omitted for unmapped circuits

**OOS** - Out-of-service

The OOS keyword must be entered to release one or more NPC(s) that are OOS. Mapped NPC(s) that are OOS will not be restored to original cross-connection until NPC(s) are returned to service.

If the OOS keyword is entered in the input command it will appear in the first line of the output message. A second OOS keyword will appear in the last line of the output message if at least one NPC is out-of-service at the time the command is issued.

**RDC** - Red circuit

Test session has red circuit

**CUS** - Customer

Test session has customer-controlled Circuit

**COND** - Condition

**cc** - Condition code

**st** - Status of denial

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                     |
|-----------|--------------|------------------------------------------------------------------------|
| <b>00</b> |              | No conditions                                                          |
| <b>02</b> |              | Subject entity is not equipped                                         |
| <b>04</b> |              | Subject entity is out of service                                       |
| <b>10</b> |              | NPC out of service or failed                                           |
| <b>12</b> | <b>MCOND</b> | Active CCN side not IS or failed or pested or hardware OOS             |
| <b>13</b> | <b>MCOND</b> | UNIT not equipped, not in service, or failed                           |

## **DELETE — DGN**

---

This section documents the commands **DELETE** through **DGN**.

## **DELETE,END**

### **DELETE LINES FROM MACRO**

#### **Explanation Of Command**

This command is used to delete one or more commands from an existing macro while in a macro session. If neither a range of line numbers nor END is specified then the line pointed to by the line pointer (the current line) is deleted.

#### **Command**

[I.19051]

```
DELETE[:FRM xy,SEQ ww:{<starting line>|END}[-{<ending line>\
|END}]]!
```

#### **Completion Message**

[O.19051]

```
M hh:mm:ss xy,ww n[vv] DELETE[ {<starting line>\
|END}[-{<ending line>|END}]] COMPL
```

#### **Denial Message**

[O.19051.01]

```
M hh:mm:ss xy,ww n[vv] DELETE[ {<starting line>|\
END}[-{<ending line>|END}]] COND cc DNY
```

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

{<starting line>|END}{-<ending line>\ {<starting line>|END}{-<ending line>|END}:\

#### **starting line**

- Beginning line number of a line range (1, 2, ..., n)

Starting line indicates the line number of the first line of a range of lines to be deleted from a macro.

#### **ending line**

- Ending line number of a line range (2, 3, ..., n+1)

Ending line indicates the line number of the last line of a range of lines to be deleted from a macro.

**END** - End

Line number of the line at the end of the macro.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**6B** Invalid line number

**6E** No edit session active

## **DGN,CCB,CFT,X**

### **DIAGNOSE CROSS-CONNECT BUFFER**

#### **Explanation Of Command**

This message requests diagnostics to be run on the cross-connect buffer.

#### **Command**

[I.41211]

**DGN:FRM xy,SEQ ww:CCB sf[,CFT X'vwxy]!**

#### **Completion Message**

[O.41211]

**M hh:mm:ss xy,ww n[vv] DGN CCB sf ATP COMPL**

[O.41212]

**M hh:mm:ss xy,ww n[vv] DGN CCB sf CATP cc COMPL**

[O.41213]

**M hh:mm:ss xy,ww n[vv] DGN CCB sf STF ppqq 2 LN MSG:  
<d5> <d4> <d3> <d2> <d1> <d0> COMPL**

#### **Denial Message**

[O.41211.01]

**M hh:mm:ss xy,ww n[vv] DGN CCB sf COND cc DNY**

## Autonomous Message

[O.41211]

**I** hh:mm:ss xy,ww DGN CCB sf ATP COMPL

[O.41212]

**I** hh:mm:ss xy,ww DGN CCB sf CATP cc COMPL

[O.41213]

[O.41211.01]

**I** hh:mm:ss xy,ww DGN CCB sf COND cc DNY

## Explanation Of Parameters

**CCB** - Cross-connect buffer

**s** - Cross-Connect Buffer side number (0 or 1)

**f** - Cross-Connect Buffer number (1 through 6)

**CFT** - Craft

The optional craft diagnostic test code field indicates which test(s) of the diagnostic is to be run under craft control. If this field is omitted, all tests of this diagnostic will be run.

All tests can be run while out of service. Test 0004 will not run if any TSI on this Cross-connect Buffer (that is, TSI1 through TSI6) is in service.

**vwxy** - Diagnostic test number

| Test                        | vwxy |
|-----------------------------|------|
| Sync energy detector test   | 0001 |
| Port alarm test             | 0002 |
| Port alarm test             | 0004 |
| Clock energy detector test. | 0008 |

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**cc** - Condition code for CATP

| <i>cc</i> | <i>Explanation</i>                                             |
|-----------|----------------------------------------------------------------|
| 03        | CCB in service                                                 |
| 39        | Not all buses have mapped time slot, or some TSI is in service |
| 3A        | No unmapped time slots on one of the buses                     |
| 44        | DMB type NPCs on unit f on side s is in service.               |

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

pp - Failing diagnostic number in hexadecimal form  
qq - Test number in hexadecimal form.

| <i>ppqq</i> | <i>Explanation</i>                                             |
|-------------|----------------------------------------------------------------|
| 0480        | Clock energy detector test. Circuit pack identification wrong. |
| 0410        | Clock energy detector test. Error bit not set.                 |
| 0440        | Clock energy detector test. Overall error summary not set.     |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                          |
|------|----------------------------------------------------------|
| 04a0 | Clock energy detector test. Error bit not cleared.       |
| 0420 | Clock energy detector test. Error returns after clear.   |
| 04b0 | Clock energy detector test. Summary returns after clear. |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                              |
|------|--------------------------------------------------------------|
| 04f0 | Clock energy detector test. Software error.                  |
| 0180 | Port alarm register test. Circuit pack identification wrong. |
| 0110 | Port alarm register test. Error bit not set.                 |
| 0140 | Port alarm register test. Overall error summary not set.     |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                        |
|------|--------------------------------------------------------|
| 01a0 | Port alarm register test. Error bit not cleared.       |
| 0120 | Port alarm register test. Error returns after clear.   |
| 01b0 | Port alarm register test. Summary returns after clear. |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                               |
|------|---------------------------------------------------------------|
| 01f0 | Port alarm register test. Software error.                     |
| 0280 | SYNC energy detector test. Circuit pack identification wrong. |
| 0210 | SYNC energy detector test. Error bit not set.                 |
| 0240 | SYNC energy detector test. Overall error summary not set.     |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                                               |
|------|-------------------------------------------------------------------------------|
| 02a0 | SYNC energy detector test. Error bit not cleared.                             |
| 0220 | SYNC energy detector test. Error returns after clear.                         |
| 02b0 | SYNC energy detector test. Summary returns after clear.                       |
| 02f0 | SYNC energy detector test. Software error.                                    |
| 031N | Port alarm in-service test. Port alarm set in ESR N. N=0-2.                   |
| 038N | Port Alarm in-service test. Circuit pack identification wrong in ESR N.       |
| 034N | Port alarm in-service test. Overall error bit not set when test bus B. B=0-3. |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                                                 |
|------|-----------------------------------------------------------------|
| 03aN | Port alarm in-service test. Error bit not cleared in ESR N.     |
| 032N | Port alarm in-service test. Error returns after clear in ESR N. |
| 03b0 | Port alarm in-service test. Summary returns after clear.        |

**Note:** Involves CCNI register; could be a CCNI problem.

|      |                                             |
|------|---------------------------------------------|
| 03f0 | Port alarm in-service test. Software error. |
| 0b00 | Could not initialize pack.                  |

**d5 - d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

**d5** - CCNI Error Source Register 5

Each data field contains sixteen bits. The significance of each data field and its individual bits is as follows:

| <i>Bit</i> | <i>Explanation</i>                        |
|------------|-------------------------------------------|
| 15-8       | Don't care                                |
| 7          | Error on autonomous switch enable circuit |
| 6          | Error on BSR parity                       |
| 5          | Parity error on high byte of data         |
| 4          | Parity error on low byte of data          |
| 3          | Address bus parity error                  |
| 2          | Synchronizer error                        |
| 1          | Error on CCB 6                            |
| 0          | Error on CCB 5                            |

**d4** - CCNI Error Source Register 4.

Each bit indicates an error on a pack connected to this CCNI.

| <i>Bit</i> | <i>Explanation</i>     |
|------------|------------------------|
| 15         | Error on CCB 4         |
| 14         | Error on CCB 3         |
| 13         | Error on CCB 2         |
| 12         | Error on CCB 1         |
| 11         | Error on FTM 4, Unit 6 |
| 10         | Error on FTM 3, Unit 6 |
| 09         | Error on FTM 2, Unit 6 |
| 08         | Error on FTM 1, Unit 6 |
| 07         | Error on FTM 4, Unit 5 |
| 06         | Error on FTM 3, Unit 5 |
| 05         | Error on FTM 2, Unit 5 |
| 04         | Error on FTM 1, Unit 5 |
| 03         | Error on FTM 4, Unit 4 |
| 02         | Error on FTM 3, Unit 4 |
| 01         | Error on FTM 2, Unit 4 |
| 00         | Error on FTM 1, Unit 4 |

**d3** - CCNI Error Source Register 3.

Each bit indicates an error on a pack connected to this CCNI.

| <i>Bit</i> | <i>Explanation</i>     |
|------------|------------------------|
| 15         | Error on FTM 4, Unit 3 |
| 14         | Error on FTM 3, Unit 3 |
| 13         | Error on FTM 2, Unit 3 |
| 12         | Error on FTM 1, Unit 3 |
| 11         | Error on FTM 4, Unit 2 |
| 10         | Error on FTM 3, Unit 2 |
| 09         | Error on FTM 2, Unit 2 |
| 08         | Error on FTM 1, Unit 2 |
| 07         | Error on FTM 4, Unit 1 |
| 06         | Error on FTM 3, Unit 1 |
| 05         | Error on FTM 2, Unit 1 |
| 04         | Error on FTM 1, Unit 1 |

## Explanation Of Parameters

**CCNI** - Cross-connect network interface

**s** - Cross-connect side number (0 or 1)

**CFT** - Craft

The optional craft diagnostic code field indicates which test(s) of the diagnostic is to be run under craft control. If this field is omitted, all tests of this diagnostic will be run. All diagnostic tests can be run in or out of service.

**vwxy** - Diagnostic test number

| Test                         | vwxy |
|------------------------------|------|
| Unmask test                  | 0001 |
| Lowbyte/highbyte parity test | 0002 |
| ESR/EMR test                 | 0004 |
| Bus status register test     | 0008 |
| Autonomous switch test       | 0010 |
| Address bus parity test      | 0020 |

**ATP** - All tests passed

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

pp - Failing diagnostic number in hexadecimal form

qq - Test number in hexadecimal form

| <i>ppqq</i> | <i>Explanation</i>                                                                                                                                          |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0110        | Autonomous switch enable test: error bit not set                                                                                                            |
| 0120        | Error bit returns after clear                                                                                                                               |
| 01f0        | Software error                                                                                                                                              |
| 0210        | Bus status register test: error bit not set                                                                                                                 |
| 0220        | Error bit returns after clear                                                                                                                               |
| 02f0        | Software error                                                                                                                                              |
| 0311        | Low/high byte parity test: low byte parity error not set                                                                                                    |

**CATP** - Conditional all tests passed

**cc** - Hexadecimal condition code

**d5-d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

**d5** - CCNI Error Source Register 5

Each data field contains sixteen bits. The significance of each data field and its individual bits is as follows:

| <i>Bit</i> | <i>Explanation</i>                        |
|------------|-------------------------------------------|
| 15-8       | Don't care                                |
| 7          | Error on autonomous switch enable circuit |
| 6          | Error on BSR parity                       |
| 5          | Parity error on high byte of data         |
| 4          | Parity error on low byte of data          |
| 3          | Address bus parity error                  |
| 2          | Synchronizer error                        |
| 1          | Error on CCB 6                            |
| 0          | Error on CCB 5                            |

**d4** - CCNI Error Source Register 4. Each bit indicates an error on a pack connected to this CCNI.

| <i>Bit</i> | <i>Explanation</i>     |
|------------|------------------------|
| 15         | Error on CCB 4         |
| 14         | Error on CCB 3         |
| 13         | Error on CCB 2         |
| 12         | Error on CCB 1         |
| 11         | Error on FTM 4, Unit 6 |
| 10         | Error on FTM 3, Unit 6 |
| 09         | Error on FTM 2, Unit 6 |
| 08         | Error on FTM 1, Unit 6 |
| 07         | Error on FTM 4, Unit 5 |
| 06         | Error on FTM 3, Unit 5 |
| 05         | Error on FTM 2, Unit 5 |
| 04         | Error on FTM 1, Unit 5 |
| 03         | Error on FTM 4, Unit 4 |
| 02         | Error on FTM 3, Unit 4 |
| 01         | Error on FTM 2, Unit 4 |
| 00         | Error on FTM 1, Unit 4 |

**d3** - CCNI Error Source Register 3. Each bit indicates an error on a pack connected to this CCNI.

| <i>Bit</i> | <i>Explanation</i>     |
|------------|------------------------|
| 15         | Error on FTM 4, Unit 3 |
| 14         | Error on FTM 3, Unit 3 |
| 13         | Error on FTM 2, Unit 3 |
| 12         | Error on FTM 1, Unit 3 |
| 11         | Error on FTM 4, Unit 2 |
| 10         | Error on FTM 3, Unit 2 |

**cc Explanation**

**55 Invalid CFT code**

**56 Unrunnable CFT code**

## **DGN,CI,CFT,X**

### **DIAGNOSE COMMUNICATIONS INTERFACE**

#### **Explanation Of Command**

This message requests diagnostics to be run on the communications interface (CI). The optional craft (CFT) field specifies which test(s) vwxy is to be run on the CI. The remainder of the CI diagnostics will then not be run.

An in progress message (O.41004) is output every 20 seconds while CI is being diagnosed until the command response or the autonomous report is output.

**wd15, ..., wd00**

- Raw data

Sixteen raw data words relating to the failed diagnostic detected. Each data word contains two bytes, and each byte is presented as a two-digit hexadecimal number. The interpretation of raw data values cannot be done by a craftsman.

Not applicable.

## **Explanation Of Parameters**

---

**ET SIS** - Expanded time slot interchangers

**ECCN** - Expanded cross-connect network

**s** - Side number (0 or 1)

**pa** - Priority of action

*pa*            *Explanation*

M^            Manual response

I^            Information from an autonomous activity

**r** - Diagnostic status for an individual ETSI

*r*            *Explanation*

A            All tests passed (ATP)

C            Conditional all tests passed (CATP)

S            Some tests failed (STF)

-            unequipped ETSI

**nn** - Condition code (hexadecimal) for an individual ETSI

**nn**            *Explanation*

--            Unequipped ETSI

To interpret other values of nn see cc below.

**tt** - Total number of ETSIs equipped in the ECCN side (01 through 16)

**kk** - Completion condition code (hexadecimal) for the whole message

To interpret values of kk see cc below.

**cc** - Condition code (hexadecimal)

**cc** - Hexadecimal condition code

**cc Explanation**

|    |                                |
|----|--------------------------------|
| 02 | Subject entity is not equipped |
| 03 | Subject entity is in service   |
| 16 | SYNC TB is not equipped        |
| 17 | SYNC is out of service         |
| 55 | Invalid CFT code               |
| 56 | Unrunnable CFT code            |
| A9 | No unmapped time slot          |
| CE | CCI is out of service          |
| CF | SYNC is inservice but failed   |
| D1 | CCI is not present             |
| D4 | CCI is inservice but failed    |

## **DGN,IN,PROGRESS**

### **DIAGNOSTIC IN PROGRESS**

#### **Explanation Of Command**

This message indicates that the diagnosis of the specified entity is in progress. This message will be output every 20 seconds while waiting for the response to the diagnostic command or the autonomous diagnostic report to be output.

### Explanation Of Parameters

**CFT**            - Craft

**vwxy**           - Diagnostic test number

|                         |             |
|-------------------------|-------------|
| <i>test</i>             | <b>vwxy</b> |
| Link Loopback Test      | 0001        |
| Input Port & Timer Test | 0002        |

**LINK**           - Link

**a**               - Administrative link number (1 through 6)

**ATP**           - All tests passed

**STF**           - Some tests failed

**ppqq**           - Diagnostic trouble number

|             |                             |
|-------------|-----------------------------|
| <i>ppqq</i> | <i>Explanation</i>          |
| 0100        | Link fail                   |
| 0300        | DUART test fail             |
| 0400        | Timer test fail             |
| 0500        | Input/output port test fail |

**pp**              - Failing diagnostic number (hexadecimal)

**qq**              - Test number (hexadecimal)

**d5,**

**d4,**

**...,**

**d0**

- Hexadecimal raw data bytes relating to the failed diagnostic detected

These data bytes can only be interpreted by an AT&T designer.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**03** Subject entity is in service

**BE** Hardware mismatch or not present

**F0** Clock absent for XPC to loop back

**55** Invalid CFT code

**56** Unrunnable CFT code

## **DGN,MC,CFT,X**

### **DIAGNOSE MAIN CONTROLLER**

#### **Explanation Of Command**

This message requests diagnostics to be run on the main controller (MC). The optional CFT field specifies which test(s) is to be run on the MC.

The DGN <entity> IN PROGRESS message (O.41004) is output every 20 seconds while the MC is being diagnosed until the command response or the autonomous report is output.

## Explanation Of Parameters

MC - Main controller

CFT - Craft

vwxy - Diagnostic test number (hexadecimal)

| <i>TEST</i>                    | <i>vwxy</i> |
|--------------------------------|-------------|
| MP Test                        | 0001        |
| PMEM Test                      | 0004†       |
| SMEM Test                      | 0008†       |
| CI Test                        | 0010        |
| EMTC/MTC Acknowledge Test      | 0020        |
| EMTC/MTC Interrupt Test        | 0040*       |
| EMTC/MTC Sanity Reg. Test      | 0080*       |
| EMTC/MTC LAN Disable Test      | 0100*       |
| EMTC/MTC Autonomous Alarm Test | 0200*       |

|                                 |       |
|---------------------------------|-------|
| EBX/BX Interrupt Test           | 0400* |
| EBX/BX Acknowledge Test         | 0800  |
| EBX/BX Data/Address Parity Test | 1000* |

\*Out-of-service test (not performed if MC is in-service)

†In-service test (not performed if MC is out-of-service or in maintenance condition (MCOND))

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**cc** - Hexadecimal completion condition code

*To interpret values of cc see the table of cc values below.*

**STF** - Some tests failed

**ppqq** - Trouble number for the craft (hexadecimal)

**pp** - Failing diagnostic number

**qq** - Test number

**xx** indicates a low level test failure point which can only be interpreted by an AT&T designer.

| <b>ppqq</b> | <i>Explanation</i>               |
|-------------|----------------------------------|
| 0100        | MP Fail                          |
| 0200        | CI Fail                          |
| 0400        | PMEM Fail                        |
| 0500        | SMEM Fail                        |
| 0600        | EMTC/MTC Interrupt Fail          |
| 0700        | EMTC/MTC Acknowledge Fail        |
| 0800        | EMTC/MTC Sanity Reg. Fail        |
| 0900        | EMTC/MTC LAN Disable Fail        |
| 0E00        | EMTC/MTC Autonomous Alarm Failed |

|      |                                 |
|------|---------------------------------|
| 0A01 | EBX/BX RAM Data Fail            |
| 0A02 | EBX/BX RAM Address Fail         |
| 0A03 | EBX/BX RAM Access Fail          |
| 0A04 | EBX/BX RAM Refresh Fail         |
| 0A05 | EBX/BX RAM Parity Fail          |
| 0Bxx | EBX/BX Interrupt Fail           |
| 0C00 | EBX/BX Acknowledge Fail         |
| 0D00 | EBX/BX Data/Address Parity Fail |
| 0D01 | EBX/BX Data Parity Write Failed |

## **DGN,MP,CFT,X**

### **DIAGNOSE MAIN PROCESSOR**

#### **Explanation Of Command**

This message requests diagnostics to be run on the main processor (MP). If the craft (CFT) option is used, the value supplied for *vwxy* will determine the diagnostic run. The remainder of the diagnostics will then not be run. If the CFT option is not used, all the diagnostics listed under *vwxy* will be run.

An in-progress message (O.41004) is output every 20 seconds while the MP is being diagnosed until the command response or the autonomous report is output.

### Explanation Of Parameters

**MP** - Main Processor

**CFT** - Craft

**vwxy** - Diagnostic test number

| Test                   | vwxy  |
|------------------------|-------|
| MP RAM Test            | 0001* |
| MP ROM Test            | 0002  |
| MP DMA Controller Test | 0010* |
| MP LAN Controller Test | 0020* |
| MP Acknowledge Test    | 0080  |

\*Out-of-service test.

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**cc** - Completion condition code (hexadecimal)

To interpret these codes see cc.

**STF** - Some tests failed

**ppqq** - Trouble number

pp - Failing diagnostic number (hexadecimal)

qq - Test number (hexadecimal)

**ppqq** *Explanation*

**01xx** RAM Tests Fail

**0101** RAM Data Fail

**0102** RAM Address Fail

**0103** RAM Access Fail

**0104** RAM Refresh Fail

**02xx** ROM Fail

**0500** Input Port Fail

**06xx** DMA Controller Fail

**07xx** LAN Controller Fail

**0900** Acknowledge Fail

**d5-d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

These data bytes can only be interpreted by an AT&T designer.

An in-progress message (O.41004) is output every 20 seconds while the MP is being diagnosed until the command response or the autonomous report is output.

**cc** - Hexadecimal condition code

**cc** **Explanation**

**03** **Subject entity is in service**

**55** **Invalid CFT code**

**56** **Unrunnable CFT code**

## **DGN,NPC**

---

### **DIAGNOSE NETWORK PROCESSING CIRCUITS**

#### **Explanation Of Command**

---

This command requests the diagnosis of a range of network processing circuits (NPCs) in a Facility Terminating Unit (FTU). It cannot be used to request the diagnosis of NPCs in a digital signal processing unit.

This command will be denied if the requested NPC range crosses a unit boundary. This command cannot be used to request the diagnosis of NPCs in a DS3 unit. If this command is specified for a range of NPCs and the first or last NPC in the range request is a CEPT GAP the entire command will be denied. If the CEPT GAP is contained within the range requested the gap NPCs are ignored and all equipped NPCs are diagnosed.

## Explanation Of Parameters

---

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, denoting the beginning of a range.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, denoting the end of a range.

[s]abc and [t]def must be in the same unit.

**[s]ghi** - Lowest NPC number in the FTM being reported ([s]abc through [s]def)

**[t]jkl** - Highest NPC number in the FTM being reported ([s]abc through [s]def)

The command may specify an NPC range that spans more than one facility terminating module (FTM) in the facility terminating unit or it may specify all or a subset of the NPCs in a given FTM. Hence the NPC numbers reported in a message segment for a given FTM will, in general, be numbers within the range given in the input command and may include the end points of the specified range.

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**uvmnp** - Hierarchical NPC number, denoting the beginning of a range.

**uvkqr** - Hierarchical NPC number, denoting the end of a range.

**abcde** - Lowest NPC number in the FTM being reported (**uvmnp** through **uvkqr**)

**abcfg** - Highest NPC number in the FTM being reported (**uvmnp** through **uvkqr**)

**uv, ab**

- Unit number

**m, k, c**

- Module number

**np, qr, de, fg**

- NPC number within the module

The command may specify an NPC range that spans more than one facility terminating module (FTM) in the facility terminating unit or it may specify all or a subset of the NPCs in a given FTM. Hence the NPC numbers reported in a message segment for a given FTM will, in general, be numbers within the range given in the input command and may include the end points of the specified range.

Valid values are listed below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**TOT** - Total**ttt** - Total number of equipped NPCs in a domestic FTM (**001** through **040**).**pa** - Priority of action**pa** *Explanation***\*\*** Major**M** Manual**r** - Result of diagnostics**r** *Explanation***A** All tests passed**C** Conditional all tests passed**S** Some tests failed**D** Diagnostics denied**N** NPC is not in the range**-** NPC is not equipped

If the diagnostic result is Some Test Failed, one output message will be generated for each NPC.

**kk** - Completion condition code for each NPC diagnostic (hexadecimal)

To interpret values of kk see cc in the condition code table. One special value is given below.

**kk**      *Explanation*

--      Not applicable

**cc** - Hexadecimal condition code

**cc**      **Explanation**

|    |                                  |
|----|----------------------------------|
| 00 | No conditions                    |
| 02 | Subject entity is not equipped   |
| 03 | Subject entity is in service     |
| 04 | Subject entity is out of service |
| 10 | Unit is not equipped             |
| 11 | UC is out of service             |
| 13 | FTMI is not equipped             |
| 14 | FTMI is out of service           |
| 15 | NPC is unequipped                |
| 36 | DSPI not equipped                |
| 37 | DSPI out-of-service              |
| 40 | FC out of service                |
| 43 | (NPC) Hardware mismatch          |
| 0B | Invalid CEPT NPC                 |
| FD | NPC range crosses unit boundary  |

## **DGN,NPC,SIDE,CFT,X**

### **DIAGNOSE NPC**

#### **Explanation Of Command**

This command requests diagnostics to be run on a single network processing circuit (NPC) in a facility terminating unit (FTU) or a digital signal processing unit (DSPU). For a Capacity Expansion Frame (CEF), if the NPC is in a DSPU (that is, NPC types MB, SR, or MJ), this message also initiates the continuity test for the cable between the NPC and its corresponding expanded time slot interchanger (ETSI). However, the continuity test will not be run if the optional craft code is entered. For a Capacity Expansion Frame (CEF), if the NPC is in a DSPU (that is, NPC types MB or CB), this message also initiates the continuity test for the cable between the NPC and its corresponding expanded time slot interchanger (ETSI). However, the continuity test will not be run if the optional craft code is entered. This command is not valid for NPCs in a DS3 unit (DS3U). If this command is specified for a single NPC and that NPC is within a CEPT gap the request will be denied.

### Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |

| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB, SR, and MJ type numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**SIDE** - Side

**s** - Side number (s = 0 or 1)

Side of the duplicated NPC circuit pack in a DSPU that is to be diagnosed.

**CFT** - Craft

**vwxy** - Diagnostic test number

The optional craft code field indicates the diagnostic test(s) to be run. If this field is omitted, all tests of this diagnostic will be run. If the NPC is in-service, only in-service diagnostics are run.

Craft codes for the DA type NPC are listed below:

| <i>Test</i>                               | <i>vwxy</i> |
|-------------------------------------------|-------------|
| CI stuck bit test                         | 0001*       |
| CI sanity timer test                      | 0002        |
| CI serial link test                       | 0004*       |
| CC configuration register test            | 0008        |
| CC IRAM stuck bit test                    | 0010        |
| Miscellaneous CC tests                    | 0020*       |
| CC data parity test                       | 0040        |
| Transceiver alarm text                    | 0080        |
| EDCC memory test                          | 0100*       |
| BPV and ZCS tests                         | 0200        |
| CC receive stuff and CC->TX timeslot test | 0400        |
| Slip detector test                        | 0800        |
| Mode dependent system tests               | 1000        |
| Continuity tests                          | 2000        |
| Miscellaneous register tests              | 4000        |
| Transceiver BIST                          | 8000        |

\* In-service tests

Craft codes for the DE or DS type NPC are listed below:

| <i>Test</i>                                   | <i>vwxy</i> |
|-----------------------------------------------|-------------|
| Communication Interface (CI)                  |             |
| stuck bit test                                | 0001        |
| CI sanity timer test                          | 0002        |
| CI serial link test                           | 0004        |
| Channel Controller (CC) config                |             |
| stuck bit test                                | 0008        |
| CC data RAM stuck bit test                    | 0010*       |
| CC data parity test                           | 0020*       |
| Memory test                                   | 0040        |
| Bipolar violation test                        | 0080*       |
| Stuff channel test                            | 0100*       |
| Slip detector test                            | 0200*       |
| Zero code suppression test                    | 0400*       |
| Mode dependent system test                    | 0800*       |
| CC tests                                      | 1000*       |
| Transceiver tests                             | 2000*       |
| HSCC tests Data Link Controller (DLC) circuit |             |
| pack level tests (DS NPC only)                | 4000*       |
| DLC digroup level tests (DS NPC only)         | 8000*       |

Notes:

1. Only tests 1000 and 4000 can be run when the NPC is in service.
2. If both the requested NPC and its mate are out-of-service, any test may be run.

\*If the requested NPC is out-of-service and its mate is in service, only the tests marked with "\*" can be run.

Craft codes for the SP type NPC are listed below:

| <i>Test</i>                            | <i>vwxy</i> |
|----------------------------------------|-------------|
| CI stuck bit test                      | 0001        |
| CI sanity timer test                   | 0002        |
| CI serial link test                    | 0004        |
| CC configuration register test         | 0008        |
| CC IRAM stuck bit test                 | 0010        |
| Miscellaneous CC tests                 | 0020*       |
| DSPP Memory test                       | 0040        |
| Miscellaneous Register test            | 0080        |
| CC to Format Converter Continuity test | 0100        |

\* In-service tests

Craft codes for the MB type NPC are listed below:

| <i>Test</i>                      | <i>vwx</i> y |
|----------------------------------|--------------|
| RAM test                         | 0001*        |
| Interrupt and mask register test | 0002         |
| Data processing error test       | 0004         |
| Clock error test                 | 0008         |
| Serial interface error test      | 0010         |
| Control memory 0 test            | 0020         |
| Control memory 1 test            | 0040         |
| Conference 0 test                | 0080         |
| Conference 1 test                | 0100         |

\* Out-of-service only test

Craft codes for the MJ type NPC are listed below:

| <i>Test</i>                                                                           | <i>vwx</i> y |
|---------------------------------------------------------------------------------------|--------------|
| Exercise the clock circuitry                                                          | 0001         |
| Exercise the Processor Interface Device                                               | 0002         |
| Exercise the input data parity checker<br>and ECD data input                          | 0040         |
| Exercise the ECD, the MJU control<br>memory parity checker and data path<br>to output | 0080         |
| Exercise the MJU control prom                                                         | 0100         |
| Exercise the MJU output block                                                         | 0200         |
| Exercise the control code and<br>overwrite state machine                              | 0400         |
| Exercise the FTU PROM and secondary<br>channel state machine                          | 0800         |
| Verify propagation of alarms to the<br>DSPI circuit pack                              | 2000         |
| Run all out-of-service tests                                                          | 8000         |

**Note:** Test 8000 may only be run on out-of-service circuit packs.

Craft codes for the SR type NPC are listed below:

|                                    |            |
|------------------------------------|------------|
| <i>Test</i>                        | <i>vwx</i> |
| Exercise the clock circuitry       | 0001       |
| Exercise the Processor Interface   |            |
| Device                             | 0002       |
| Exercise the input data interface  | 0040       |
| Exercise the data path internal to |            |
| the SRM pack                       | 0080       |
| Exercise the output block of       |            |
| the SRM pack                       | 0200       |
| Exercise the bus feeding the       |            |
| output block                       | 0800       |
| Run all out-of-service tests       | 8000       |

**Note:** Test 8000 may only be run on out-of-service circuit packs.

**[t]def** - The 3- or 4-digit nonhierarchical MB type NPC number  
([t]def= [s]abc + 1)

**uvmnp** - Hierarchical MB type NPC number

**uvmqr** - Hierarchical MB type NPC number

**qr** - MB type NPC number within module "m" (qr = np +1).

**TYPE** - Type

**mnxyz** - NPC type identifier

**mnxyz** NPC type

**DAxyz** FTU ANSI DS1 NPC type

**DExyz** Facility Terminating Unit NPC

**DSxyz** SLC Carrier Type NPC

**MB100** Digital Multipoint Bridge

**MJ100** Multipoint Junction Unit

**SR100** Subrate Multiplexer Unit

**e** - Number of lines in the message (2 or 3)

**qq** - Unit number (01 through 16)

**UPN** - Unit plug number

**upn** - The value of the UPN.

**XPN** - ECCN plug number

**xpn** - The value of the XPN

- BIT** - Bit number of the data bus
- TD** - Transmit data
- RD** - Receive data
- bb** - Bit number (00 through 15)

The optional line which contains the unit, port, and pin information will only be output if the NPC is in a DSPU and if the continuity check between the NPC and the ECCN is fails. In addition, the completion condition must always be the STF. The valid values and the associated information of the UPN and XPN are shown below. Note that, the numbers shown in the output are exactly the same as the numbers on the backplane.

| Unit Plug No. | ECCN Plug No. | Side | Direction | Associated DSP Packs  |
|---------------|---------------|------|-----------|-----------------------|
| P1            | PqqA*         | 0    | Receive   | 1st and 2nd DSP Packs |
| P2            | PqqE          | 0    | Transmit  | 1st and 2nd DSP Packs |
| P3            | PqqB          | 0    | Receive   | 3rd and 4th DSP Packs |
| P4            | PqqF          | 0    | Transmit  | 3rd and 4th DSP Packs |
| P5            | PqqC          | 0    | Receive   | 5th and 6th DSP Packs |
| P6            | PqqG          | 0    | Transmit  | 5th and 6th DSP Packs |
| P7            | PqqD          | 0    | Receive   | 7th and 8th DSP Packs |
| P8            | PqqH          | 0    | Transmit  | 7th and 8th DSP Packs |
| P10           | PqqA          | 1    | Receive   | 1st and 2nd DSP Packs |
| P11           | PqqE          | 1    | Transmit  | 1st and 2nd DSP Packs |
| P12           | PqqB          | 1    | Receive   | 3rd and 4th DSP Packs |
| P13           | PqqF          | 1    | Transmit  | 3rd and 4th DSP Packs |
| P14           | PqqC          | 1    | Receive   | 5th and 6th DSP Packs |
| P15           | PqqG          | 1    | Transmit  | 5th and 6th DSP Packs |
| P16           | PqqD          | 1    | Receive   | 7th and 2nd DSP Packs |
| P17           | PqqH          | 1    | Transmit  | 7th and 8th DSP Packs |

\* qq is the unit number

The bit number (that is, BIT = TD RD bb) will be shown if the software identifies the bit of the data bus as the failed one.

- ATP** - All tests passed  
All tests passed on the diagnostic of NPC

- CATP** - Conditional all tests passed  
The reason for the conditional completion is indicated by cc.

**STF** - Some tests failed

Some tests failed on the diagnostic of NPC.

**ppqq** - Trouble number for the craft

pp Failing diagnostic number (hexadecimal)

qq Test number (hexadecimal)

Trouble numbers for the DA type NPC are listed below

The TG191 circuit pack can be grown as either a DA or DE type. As a consequence the trouble numbers for the DE type apply in addition to those shown below.

**ppqq** *Cause of failure*

- 0001** TG191 Initialization - Phase 1
- 0002** TG191 Initialization - Phase 2
- 0003** Digroup physical type verification
- 0004** Devices/registers on the FC could not be accessed
- 0005** Devices/registers on the FTMI could not be accessed
- 01--** TG191 initialization test
- 02--** CI stuck bit test
- 03--** CI sanity test
- 04--** CI serial link test
- 05--** CC configuration register stuck bit test
- 06--** CC IRAM stuck bit test
- 07--** CC loss of clock test
- 08--** CC sync error detector test
- 09--** CC sync and loss of clock error detector test
- 0A--** CC configuration register parity checker test
- 0B--** CC IRAM parity checker test
- 0C--** CC transmit data parity error detector test
- 0D--** CC receive data parity error detector test
- 0E--** CC receiver data checker test
- 0F--** TG191 memory test
- 10--** Bipolar violations test
- 11--** Zero code suppression test
- 12--** CC receive stuff register test
- 13--** CC to transceiver stuff test
- 14--** Receive slip detection test
- 15--** Mode dependent system tests
- 16--** Transceiver provisioning test
- 17--** AIS test
- 18--** RFA test
- 19--** CFA test
- 1A--** LMA test
- 1B--** RMA test
- 1C--** CRC test
- 1D--** PRISM stuck bit test
- 1E--** PRISM internal loopback test
- 1F--** PRISM external loopback test
- 20--** Signaling insertion and extraction test
- 21--** Transparent mode test
- 22--** D4 framing mode initialization test
- 23--** CC to format converter continuity test
- 24--** ESF framing mode initialization test
- 25--** PRISM loopback initialization test

- 26-- CC to transceiver continuity test
- 27-- Miscellaneous register test
- 28-- Receive framer alarm test
- 29-- Transceiver receive synchronizer alarm test
- 2A-- Transceiver transmit alarm test
- 2B-- PRISM initialization test
- 2C-- Transceiver BST
- 2D-- Downloadable diagnostic interface test

**Note:** "--" indicates a two-digit hexadecimal value indicating a decision point within the source program. This value can only be interpreted by a programmer with access to the source program.

Trouble numbers for DE and DS type NPCs are listed below.

The TG191 circuit pack can be grown as a DA or DE type. As a consequence the trouble numbers for the DA type apply in addition to those shown below.

**ppqq**    *Cause of failure*

|             |                                                                  |
|-------------|------------------------------------------------------------------|
| <b>0001</b> | DDC initialization failure                                       |
| <b>0002</b> | DDC initialization failure - second attempt                      |
| <b>0003</b> | Unable to read DDC circuit pack type or unknown DDC type         |
| <b>0004</b> | Unable to read/pest DDC via the FC                               |
| <b>0005</b> | Unable to read/pest DDC via the FTMI                             |
| <b>0009</b> | Facility Processor on In-service NPC is insane                   |
| <b>0100</b> | Communication Interface Stuck Bit failure                        |
| <b>0200</b> | Communication Interface Sanity Timer failure                     |

**C1--** DL CC Stuck Bit Test on Configuration Register Failed  
**C2--** DL CC IRAM Long Test Failed  
**C3--** DL CC Exercise Instruction RAM Parity Checker Failed  
**C4--** DL CC IRAM Short Test Failed  
**C5--** DL CC Exercise Loss of Clock Error Detector Failed  
**C6--** DL CC Exercise Receive Data Parity Error Detector Failed  
**C7--** DL CC Exercise Sync Error Detector Failed  
**C8--** DL CC Exercise Sync and Loss of Clock Error Detectors Failed  
**C9--** DL CC Exercise Transmit Data Parity Error Detector Failed  
**CA--** DL Pack Initialization Failed  
**CB--** DL RAM/ROM Test Failed  
**CD--** DL Miscellaneous Register Test Failed  
**CE--** DL ROM Test Failed  
**CF--** DL Real Time Clock Timer Test Failed  
**D0--** DL DSP Chip Test 0 Failed  
**D1--** DL DSP Chip Test 1 Failed  
**D2--** DL DSP Chip Test 2 Failed  
**D3--** DL DSP Chip Test 3 Failed  
**D4--** DL DSP Chip Test 4 Failed  
**D5--** DL DSP Chip Test 5 Failed  
**D6--** DL DSP Chip Test 6 Failed

**D7--** DL DSP Chip Test 7 Failed

**Note 1:** "--" indicates a two-digit hexadecimal value indicating a decision point within the source program. This value can only be interpreted by a programmer with access to the source program.

**Note 2:** "DL" means DownLoadable diagnostics running on the TG193.

Trouble numbers for MB, SR, and MJ type NPCs are listed below:

**ppqq** *Cause of failure*

- 0F00** Error Summary Failure
- 0F01** Hardware Fail on ECCI pack
- 0F02** Hardware Fail on ETSI pack
- 0F03** RCV Network Data Bus Failure  
badbit, baddirection & badport
- 0F04** RCV Network Data Bus Failure  
baddirection & badport
- 0F05** XMIT Network Data Bus Failure  
badbit, baddirection & badport
- 0F06** XMIT Network Data Bus Failure  
baddirection & badport
- 0F07** Pack hardware failure
- 0F0A** Parent pack failed, for DSP packs \*
- 0F0C** Network Parity or Frame Sync. or  
Network Data Bus error

Trouble numbers for only the MB type NPCs are listed below:

**ppqq** *Cause of failure*

- 0F08** Pack Failed to Initialize for CT
- 0F0B** DMB clock problem during initialization

Trouble numbers for the MJ type NPCs are listed below  
(xx indicates ignore the value):

**ppqq**    *Cause of failure*

- 01xx**    Failure occurred while exercising the clock circuitry
- 02xx**    Failure occurred while exercising the Processor Interface Device
- 03xx**    Failure occurred while exercising the RAM test
- 05xx**    Multipoint Junction Unit (MJU) circuit pack initialization failed
- 06xx**    Failure occurred while exercising the control RAM parity checker test
- 07xx**    Failure occurred while exercising the input data parity checker and ECD data input
- 08xx**    Failure occurred while exercising the ECD, the MJU control memory parity checker and data path to output
- 09xx**    Failure occurred while exercising the MJU control PROM
- 0Axx**    Failure occurred while exercising the MJU output block
- 0Bxx**    Failure occurred while exercising the control code and over-write state machine
- 0Cxx**    Failure occurred while exercising the Facility Terminating Unit(FTU) PROM and secondary channel state machine
- 0Dxx**    Failure occurred while exercising the CCM control memory parity checker and data path to output
- 0Exx**    Unable to verify propagation of alarms to Digital Signal Processing Interface (DSPI) interrupt register

Trouble numbers for SR type NPCs are listed below  
(xx indicates ignore the value):

**ppqq** *Cause of failure*

- 01xx** Failure occurred while exercising the clock circuitry
- 02xx** Failure occurred while exercising the Processor Interface Device (PID)
- 03xx** Failure occurred while exercising the RAM test
- 05xx** Failure occurred while running circuit pack initialization
- 06xx** Failure occurred while exercising the control RAM parity checker test
- 07xx** Failure occurred while exercising the input data interface
- 08xx** Failure occurred while exercising the data path internal to the subrate multiplexer
- 09xx** Failure occurred while exercising the multiplexer state machine
- 0Axx** Failure occurred while exercising the output block of the SRM pack
- 0Bxx** Failure occurred while exercising the internal data RAMS
- 0Cxx** Failure occurred while exercising the bus feeding the output block
- 0Dxx** Unable to verify propagation of alarms to DSPI interrupt register

**d5-d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

For DMB, MJU, and SRM circuit packs, the values of d5-d0 are the same.

## **DGN,PMEM,SMEM,CFT,X,EXCT,DBASE,VERIFY**

### **Explanation Of Command**

This command requests diagnostics to be run on the specified non-volatile memory card; either the primary memory card (PMEM) or the secondary memory card (SMEM). The diagnostics test the operation of the underlying hardware of the specified memory card. By default, the entire set of in-service or out-of-service diagnostics are run except for the database and executable tests. If the craft option is used, the value supplied for *vwxy* will determine the diagnostics run and can include database and executable tests.

Using the optional keywords EXCT or DBASE, allows the user to test the system's ability to correctly read either the executable program or the database stored on a memory card. When a single or multiple diagnostic test is specified via the CFT parameter, only those tests specified by the CFT parameter are run, all other possible tests are not run. The **DGN IN PROGRESS** message is output every 20 seconds while the diagnostics are being executed until the command response or the autonomous report is output. The **DGN EQPT IN\_PROGRESS** message is output every 20 seconds while the diagnostics are being executed until the command response or the autonomous report is output.

### **Explanation Of Parameters**

---

**PMEM** - Primary memory card.

**SMEM** - Secondary memory card.

**CFT** - Craft

**X** - Hexidecimal

**vwxy** - Diagnostic test number

The optional craft code field specifies which test is to be run on the PMEM/SMEM. The card status test is always performed. The remainder of the PMEM/SMEM diagnostics will not be run.

**vwyx** *Test*

**0001** Card Status Test

**0002** Wear Level Test

**0004\*** Card Diagnostic Test

0010\*+ Validate Data Base Test

0020\*% Validate Boot Block Test

0040\*% Validate Executable Header Test

0080\*% Validate Executable Test

**0100\*** Read/Write DGN Volume Test

**0020\*** Mount/Unmount All Volumes Test

\* out-of-service tests (not performed if PMEM/SMEM card is in MEMDBREADY state).

+ Database tests (performed when DBASE keyword is specified).

% Executable tests (performed when EXCT keyword is specified).

**DBASE** - Database

This keyword is used to test the ability to correctly read the data base files stored on the PMEM/SMEM. This diagnostic will be run only if the DBASE keyword is entered or if the specific test CFT field is specified.

**EXCT** - Executables

This keyword is used to test the ability to correctly read the executables stored on the PMEM/SMEM. This diagnostic will be run only if the EXCT keyword is entered or if the specific test CFT field is specified.

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

**pp** - Failing Diagnostic Number (hexadecimal)

**qq** - Test number (hexadecimal)

| <b>ppqq</b>       | <i>Explanation</i>                                                                               |

| <b>0124, 0126</b> | Keyword=VERIFY Test Failed                                                                       |

**d5-d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

These data bytes can only be supplied by an AT&T designer.

An in-progress message (O.41004) is output every 20 seconds while the device is being diagnosed until the command response or autonomous report is output.

VERIFY - Verify

This option causes block checking to be performed.

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 03**    Subject entity is in service
- 04**    Subject entity is out of service
- 55**    Invalid CFT code
- 56**    Unrunnable CFT code
- 84**    Problem occurred while accessing SMEM or unformatted SMEM
- 85**    Problem occurred while accessing PMEM

## **DGN,SYNC,TLI,SSP**

### **DIAGNOSE SYNCHRONIZER TIMING LINK INTERFACE**

#### **Explanation Of Command**

This command requests the diagnosis of a timing link interface on the synchronizer side. If the optional synchronizer sync port parameter is specified, only that single SSP is diagnosed. For autonomous diagnostics of a TD-type TLI circuit pack, the SSP field does not appear in the output message. Both arguments appear for autonomous removal of a timing extractor type TLI.

[O.41121.01]

I hh:mm:ss xy,ww DGN SYNC a TLI m[ SSP b[ 1]] COND cc DNY

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**a** - Synchronizer side number (0 or 1)

**TLI** - Timing link interface

**m** - Timing link interface number (1 through 4)

**SSP** - Synchronizer synchronization port

**b** - Synchronizer Synchronization Port number (0 or 1)

**Note 1:** SSP must be specified if the TLI is a timing extractor type NPC.

**Note 2:** If the SSP parameter is supplied, only that SSP is diagnosed. Otherwise both SSPs are diagnosed.

**ATP** - All tests passed

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

Valid values are listed below:

## **DGN,TSI,CFT,X**

### **DIAGNOSE TIME SLOT INTERCHANGE**

#### **Explanation Of Command**

This command requests diagnostics to be run on a specific time slot interchange.

The optional **CFT** field indicates which test(s) of the diagnostic is to be run under craft control. If this field is omitted, all tests of this diagnostic will be run.

If there are no mapped TSI slots, DACS II will respond with some tests failed (STF).

#### **Command**

### **Explanation Of Parameters**

---

- TSI** - Time slot interchange
- s** - Cross-connect network side number (0 or 1)
- f** - FROM unit number (1 through 6)
- t** - TO unit number (1 through 6)

**CFT** - Craft

**vwxy** - Diagnostic test number

| <i>Test</i>                     | <b>vwxy</b> |
|---------------------------------|-------------|
| Output data checker exercise    | 0001        |
| Memory test                     | 0002        |
| Memory diagnostic               | 0004        |
| Address bus parity test         | 0008        |
| Loss of clock exercise 2        | 0010        |
| Loss of clock exercise 1        | 0020        |
| Memory diagnostic exercise      | 0040        |
| Control RAM checker exercise    | 0080        |
| Communication test              | 0100        |
| Memory and Alarms diagnostic(s) | 0200        |

**Note:**

1. If the CFT field is omitted, all tests of this diagnostic will be run.
2. Tests 0200, 0040, 0020, 0010, 0004, and 0002 can only be run when the TSI is out-of-service. All other tests can be run when the TSI is in service.

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

pp - Failing diagnostic number in hexadecimal form

qq - Test number in hexadecimal form.

| <b>ppqq</b> | <i>Explanation</i>                                                                                               |

**d5 - d0** - Raw data relating to the failed diagnostic detected.

Four hex digits each. Each data field contains sixteen bits. The significance of each data field and its individual bits is as follows:

**d5** - CCNI Error Source Register 5

| Bit  | Explanation                               |
|------|-------------------------------------------|
| 15-8 | Don't care                                |
| 7    | Error on autonomous switch enable circuit |
| 6    | Error on BSR parity                       |
| 5    | Parity error on high byte of data         |
| 4    | Parity error on low byte of data          |
| 3    | Address bus parity error                  |
| 2    | Synchronizer error                        |
| 1    | Error on CCB 6                            |
| 0    | Error on CCB 5                            |

**d4** - CCNI Error Source Register 4.

Each bit indicates an error on a pack connected to this CCNI

| Bit | Explanation            |
|-----|------------------------|
| 15  | Error on CCB 4         |
| 14  | Error on CCB 3         |
| 13  | Error on CCB 2         |
| 12  | Error on CCB 1         |
| 11  | Error on FTM 4, Unit 6 |
| 10  | Error on FTM 3, Unit 6 |
| 09  | Error on FTM 2, Unit 6 |
| 08  | Error on FTM 1, Unit 6 |
| 07  | Error on FTM 4, Unit 5 |
| 06  | Error on FTM 3, Unit 5 |
| 05  | Error on FTM 2, Unit 5 |
| 04  | Error on FTM 1, Unit 5 |
| 03  | Error on FTM 4, Unit 4 |
| 02  | Error on FTM 3, Unit 4 |
| 01  | Error on FTM 2, Unit 4 |
| 00  | Error on FTM 1, Unit 4 |

**d3** - CCNI Error Source Register 3.

Each bit indicates an error on a pack connected to this CCNI.

| Bit | Explanation            |
|-----|------------------------|
| 15  | Error on FTM 4, Unit 3 |
| 14  | Error on FTM 3, Unit 3 |
| 13  | Error on FTM 2, Unit 3 |
| 12  | Error on FTM 1, Unit 3 |
| 11  | Error on FTM 4, Unit 2 |
| 10  | Error on FTM 3, Unit 2 |
| 09  | Error on FTM 2, Unit 2 |
| 08  | Error on FTM 1, Unit 2 |
| 07  | Error on FTM 4, Unit 1 |
| 06  | Error on FTM 3, Unit 1 |
| 05  | Error on FTM 2, Unit 1 |
| 04  | Error on FTM 1, Unit 1 |
| 03  | Error on TSI 66        |
| 02  | Error on TSI 56        |
| 01  | Error on TSI 46        |
| 00  | Error on TSI 36        |

**d2** - CCNI Error Source Register 2.

Each bit indicates an error on a pack connected to this CCNI:

| Bit | Explanation     |
|-----|-----------------|
| 15  | Error on TSI 26 |
| 14  | Error on TSI 16 |
| 13  | Error on TSI 65 |
| 12  | Error on TSI 55 |
| 11  | Error on TSI 45 |
| 10  | Error on TSI 35 |
| 09  | Error on TSI 25 |
| 08  | Error on TSI 15 |
| 07  | Error on TSI 64 |
| 06  | Error on TSI 54 |
| 05  | Error on TSI 44 |
| 04  | Error on TSI 34 |
| 03  | Error on TSI 24 |
| 02  | Error on TSI 14 |
| 01  | Error on TSI 63 |
| 00  | Error on TSI 53 |

**d1** - CCNI Error Source Register 1.

Each bit indicates an error on a pack connected to this CCNI:

| Bit | Explanation     |
|-----|-----------------|
| 15  | Error on TSI 43 |
| 14  | Error on TSI 33 |
| 13  | Error on TSI 23 |
| 12  | Error on TSI 13 |
| 11  | Error on TSI 62 |
| 10  | Error on TSI 52 |
| 09  | Error on TSI 42 |
| 08  | Error on TSI 32 |
| 07  | Error on TSI 22 |
| 06  | Error on TSI 12 |
| 05  | Error on TSI 61 |
| 04  | Error on TSI 51 |
| 03  | Error on TSI 41 |
| 02  | Error on TSI 31 |
| 01  | Error on TSI 21 |
| 00  | Error on TSI 11 |

**d0** - Contents of Bus Status Register on CCNI

| Bit   | Explanation                                                                                                                                                 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15-04 | Not used.                                                                                                                                                   |
| 03    | Indicates what side of the network is active.<br>This bit is read by the unit controllers.                                                                  |
| 02    | Indicates what side of the network is active.<br>This bit is written by the MP.                                                                             |
| 01    | ASE (Autonomous Switch Enable) bit<br>1 = ASE circuit controls the value of Bit 02<br>0 = MP controls the value of Bit 02<br>This bit is read by the units. |
| 00    | Odd parity over bits 02-00 of this register.                                                                                                                |

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>Explanation</b>             |
|-----------|--------------------------------|
| 02        | Subject entity is not equipped |
| 03        | Subject entity is in service   |
| 1B        | CCN side s is in service       |
| 3D        | No mapped slots on a tsi       |
| 45        | A DMB on the UNIT is OOS       |
| 50        | Can't run test on active side  |
| 55        | Invalid CFT code               |
| 56        | Unrunnable CFT code            |

## DGN,TSIS,CCN,ALL

---

### DIAGNOSE TIME SLOT INTERCHANGES

#### Explanation Of Command

---

This command requests diagnostics to be run on all time slot interchangers (TSIs) on cross-connect side **s**.

#### Command

---

[I.41241]

DGN:FRM xy,SEQ ww:TSIS,CCN s,ALL!

#### Completion Message

---

[O.41241]

---

### **DIAGNOSE TIME SLOT INTERCHANGES**

#### **Explanation Of Command**

---

This command requests diagnostics to be run on all time slot interchangers (TSIs) between **UNIT-q** and the specified units. If the optional connectivity field is omitted, then all TSIs connected to **UNIT-q** will be diagnosed.

#### **Command**

---

[I.41232]

```
DGN:FRM xy,SEQ ww:TSIS,CCN s,UNIT q,\
[,CONN(a[,b[,c[,d[,e[,f]]]]]])]!
```

#### **Completion Message**

---

[O.41232]

```
M hh:mm:ss xy,ww n[vv] DGN TSIS CCN s UNIT q[ CONN \

M hh:mm:ss xy,ww n[vv] DGN TSIS CCN s UNIT q[ CONN \  
[ a[ b[ c[ d[ e[ f]]]]]]] COND cc DNY

### Explanation Of Parameters

**TSIS** - Time slot interchangers

**CCN** - Cross-connect network

**s** - Cross-Connect Network side number (0 or 1)

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**CONN** - Unit connection

**a, b, c, d, e, f**

- Connected unit number

If the connected unit field is omitted, then all TSIs connected to the specified unit will be diagnosed.

**sft** - TSI identifier

**s** - See s under CCN above

**f** - FROM Unit

**t** - TO Unit

**e** - Number of lines in the message

**r** - Diagnostic status for an individual TSI

*r Explanation*

A ATP COMPL (All Tests Passed)

C CATP COMPL (Conditional All Tests Passed)

S STF COMPL (Some Tests Failed)

D DNY (Deny)

- unequipped TSIs

**nn** - Condition code for each TSI addressed (-- for unequipped TSIs)

See cc below to interpret values of nn.

**cc** - Hexadecimal condition code

**cc Explanation**

**02 Subject entity is not equipped**

**45 A DMB on the UNIT is 00S**

## **DGN,UNIT,DSPI,CFT,X**

### **DIAGNOSE DSPU**

#### **Explanation Of Command**

This message requests diagnostics to be run on the specified unit's digital signal processing interface.

### Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**DSPI** - Digital signal processing interface

**CFT** - Craft

**vwxy** - Diagnostic test number

| <i>Test</i>                                            | <i>vwxy</i> |
|--------------------------------------------------------|-------------|
| Processor bus parity checker test<br>(in-service test) | 0001        |
| Interrupt and mask register test<br>(in-service test)  | 0002        |
| Serial interface (in-service test)                     | 0004        |
| Serial interface (out-of-service test)                 | 0008        |

The optional CFT field is used to indicate which diagnostic test(s) is to be run. If this field is omitted, all DSPI diagnostic tests will be run.

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**cc** - Hexadecimal completion condition code for CATP

| <i>cc</i> | <i>Explanation</i>                                                                 |
|-----------|------------------------------------------------------------------------------------|
| 03        | Subject entity is in-service                                                       |
| 37        | DSPI out-of-service                                                                |
| 44        | DSPI is out-of-service; Digital Signaling Processing Circuit (DSPC) is in-service. |

**STF** - Some tests failed

**ppqq** - Trouble number for the craft

pp Failing diagnostic number in hexadecimal form  
qq Test number in hexadecimal form.

| <i>ppqq</i> | <i>Explanation</i>      |
|-------------|-------------------------|
| 0100        | MP Fail                 |
| 0600        | EMTC/MTC Interrupt Fail |
| 0A01        | EBX/BX RAM Data Fail    |
| 0B00        | EBX/BX Interrupt Fail   |
| 0C00        | EBX/BX Acknowledge Fail |

**d5 - d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

| <i>Data Byte</i> | <i>Description</i>                       |
|------------------|------------------------------------------|
| d5               | Upper byte of interrupt register 0       |
| d4               | Lower byte of interrupt register 0       |
| d3               | Interrupt register 1                     |
| d2               | Upper byte of side 0 service register 0  |
| d1               | Lower byte of side 0- service register 0 |
| d0               | Unused                                   |

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>Explanation</b>   |
|-----------|----------------------|
| 10        | Unit is not equipped |
| 11        | UC is out of service |
| 36        | DSPI not equipped    |
| 4D        | DSPI is in service   |
| 55        | Invalid CFT code     |
| 56        | Unrunnable CFT code  |

[O.41331.01]

I hh:mm:ss xy,ww DGN UNIT [q]q FC sb COND cc DNY

### Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FC** - Format converter

**s** - Side number (0 or 1)

**b** - FC number (1 through 4)

**CFT** - Craft

**vwxy** - Diagnostic test number

|                  |             |
|------------------|-------------|
| <i>Test</i>      | <i>vwxy</i> |
| CI device test   | 0001        |
| Receiver test    | 0002        |
| Transmitter test | 0004        |

The optional craft diagnostic test number indicates which test(s) of the diagnostic is to be run under craft control. If this number is omitted, all tests including the continuity check will be run.

**ATP** - All tests passed

**STF** - Some tests failed

**e** - Number of lines in the segment (2 or 3)

- UPN** - Unit plug number
- upn** - The value of UPN.
- XPN** - ECCN plug number
- xpn** - The value of XPN
- BIT** - Bit number of the data bus
- TD** - Transmit data
- RD** - Receive data
- bb** - Bit number (00 through 15)

The optional line which contains the unit, plug, and bit information will only be output if continuity checks between the NPC and the ECCN failed. The bit number (i.e., BIT={TD|RD}bb) will be shown if software identifies the bit of the data bus as the failed one. The optional line will always be output with the STF keyword. Valid values of the UPN and XPN are shown below. Note that the numbers shown in the output are exactly the same as the numbers on the backplane.

| Unit Plug<br>Number(FIB†) | Unit Plug<br>Number(OIB‡) | ECCN Plug<br>Number | Direction | Corresponding<br>FC |
|---------------------------|---------------------------|---------------------|-----------|---------------------|
| P01                       | P02                       | PqqA*               | Receive   | FC 01               |
| P02                       | P01                       | PqqE                | Transmit  | FC 01               |
| P03                       | P07                       | PqqB                | Receive   | FC 02               |

### **Explanation Of Parameters**

---

**UNIT**            - Unit

**[q]q**            - Unit number (1 through 16)

**FLI**            - Facility line interface

**k**               - FLI identifier

|          |                    |
|----------|--------------------|
| <i>k</i> | <i>Explanation</i> |
| S        | Service FLI        |
| P        | Protection FLI     |

**CFT** - Craft

**vwxxy** - Diagnostic test number

| <i>Test</i>                            | <i>vwxxy</i> |
|----------------------------------------|--------------|
| CI device tests                        | 0001         |
| FLI ESR test                           | 0002         |
| Lock and Key Error Detector Test       | 0004         |
| Loss of Signal and Loss of Clock tests | 0008         |
| LBO control test                       | 0010         |
| FSM test                               | 0020*        |
| FLI/MXR Bent Pin/Continuity Test       | 0040†        |

Unless otherwise designated, the above tests can only be executed when the entity is out of service. If no craft code is specified, all tests will be executed.

**Note:** \*This test can be executed at any time.

†This test is an inservice-only test that requires the other FLI and at least one MXR to be inservice.

**ATP** - All tests passed

**CATP** - Conditional all tests passed

**STF** - Some tests failed

**ppqq** - Failed test number in hexadecimal form

| <i>ppqq</i> | <i>Description</i>                          |
|-------------|---------------------------------------------|
| 0001        | FLI not physically present                  |

| 0F0D        | FMT RCV Port alarms before RCV Continuity Test       |
| 0F0E        | FMT RCV Port alarms after sourcing from MXR/DDC pack |

**d5-d0** - Raw data

Hexadecimal raw data fields relating to the failed diagnostic detected. The assignment of these data bytes is not fixed but varies with the failure detected. Interpretation of the information requires access to the software and to the programmer that wrote it.

**e** - Number of lines in the segment (2 or 3)

**UPN** - Unit plug number  
**upn** - Value of the UPN  
**XPN** - ECCN Plug Number  
**xpn** - Value of the XPN  
**BIT** - Bit  
**TD** - Transmit data  
**RD** - Receive data  
**bb** - Bit number (00 through 15)

For the STF output, the optional line which contains the unit, port, and pin information will only be output if the continuity check between the format converter and its corresponding ETSI is failed. Valid values of the UPN and XPN are shown below. Note that the numbers shown in the output are exactly the same as the numbers on the backplane.

| Unit Plug Number | ECCN Plug Number | FMT Number | Direction |
|------------------|------------------|------------|-----------|
| P01              | PqqA*            | FMT 0      | Receive   |
| P02              | PqqE             | FMT 0      | Transmit  |
| P03              | PqqB             | FMT 0      | Receive   |
| P04              | PqqF             | FMT 0      | Transmit  |
| P05              | PqqC             | FMT 0      | Receive   |
| P06              | PqqG             | FMT 0      | Transmit  |
| P07              | PqqD             | FMT 0      | Receive   |
| P08              | PqqH             | FMT 0      | Transmit  |
| P10              | PqqA             | FMT 1      | Receive   |
| P11              | PqqE             | FMT 1      | Transmit  |
| P12              | PqqB             | FMT 1      | Receive   |
| P13              | PqqF             | FMT 1      | Transmit  |
| P14              | PqqC             | FMT 1      | Receive   |
| P15              | PqqG             | FMT 1      | Transmit  |
| P16              | PqqD             | FMT 1      | Receive   |
| P17              | PqqH             | FMT 1      | Transmit  |

\* qq is the unit number

The bit number (i.e., BIT={TD|RD}bb) will be shown if software identifies the bit of the data bus as the failed one.

For the CATP output, the optional output line related to continuity test will be shown only if there is at least one port that cannot be diagnosed. The UPN and XPN numbers of the port(s) that is(are) not diagnosed will be output, while those that passed the diagnostic will be represented by dashes (--). The port number will be output in ascending order by UPN number. That is, for side 0, the output will be from P1 to P8, and for side 1 it will be from P10 to P17.

Note that the STF output will supersede the CATP output. That is, as long as there is one port that failed the diagnostic, DACS II must output the STF message without concern about a port that cannot be diagnosed.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 03** Subject entity is in service
- 04** Subject entity is out of service
- 05** Subject entity is pested
- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 55** Invalid CFT code
- 56** Unrunnable CFT code
- C3** XMIT continuity test won't be run: CFT code specified
- C4** XMIT continuity test won't be run: no XMIT timeslots available
- C5** RCV continuity test won't be run: no available inservice NPCPS for FC/FMT
- C9** CATP due to skipping continuity test for FMT
- CC** RCV continuity test won't be run: SYNC OOS or pested

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MIU** - Multiplexer interface unit

**c** - the number of the MIU within the unit ( $P, 1 \leq c \leq 6$ )

**CFT** - Craft

**vwxy** - Diagnostic test number (hexadecimal)

| <i>Test</i>               | <i>vwxy</i> |
|---------------------------|-------------|
| MIU Sanity test           | 0001*       |
| Facility (NPC level) test | 0002*       |
| MXR Interface test        | 0004        |
| MIU timer test            | 0008        |

\*This test can only be executed if the entity is out of service.  
If no craft code is specified, all tests will be executed.

**ATP** - All tests passed

**pa** - Priority of action

*pa* Explanation

M^ Manual

I^ Information

^ represents a blank character

**CATP** - Conditional all tests passed

**STF** - Some tests failed

**ppqq** - Failed test number in hexadecimal form

| <i>ppqq</i> | <i>Description</i>                          |
|-------------|---------------------------------------------|
| 0001        | MIU not physically present                  |
| 0002        | MIU pack type not readable                  |
| 0003        | MIU software download failed                |

Unless otherwise designated, the above tests can only be executed when the entity is out of service.

\*These tests can be executed at any time.

†This test is an inservice-only test that requires this entity and both FLIs to be inservice.

If no device (devc) is specified, all tests on the MXR will be executed.

If a test number (vwxy) is not specified, all tests related to devc will be executed.

**ATP** - All tests passed

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**UC** - Unit controller

**CFT** - Craft diagnostic test code

**vwxy** - Diagnostic test number (hexadecimal)

*Test*

*vwxy*

UC RAM test (out-of-service test)

0001

UC ROM test (in-service test)

0002

UC timer test (in-service test)

0004

UC DMA test (out-of-service test)

0008

UC LAN test (out-of-service test)

0010

UC bus error test (in-service test)

0020

UBX register test (out-of-service test)

0040

UBX sanity test (out-of-service test)

0080

## Notes:

1. The optional **CFT** field indicates which test(s) of the diagnostic is to be run under craft control. If this field is omitted, all tests of this diagnostic will be run.
2. Out-of-service diagnostics on the UC will run successfully only if the UC circuit pack is present in the frame and the diagnostic program can communicate with the unit. Otherwise, this message will be denied.

**ATP** - All tests passed

**CATP** - Conditional all tests passed  
The reason for the conditional completion is indicated by cc.

**STF** - Some tests failed

**ppqq** - Trouble number for the craft (hexadecimal)

pp Failing diagnostic number  
qq Test number

*ppqq Explanation*

|      |                                      |
|------|--------------------------------------|
| 0101 | RAM Test Failed - Data Error         |
| 0102 | RAM Test Failed - Address Error      |
| 0103 | RAM Test Failed - Access Error       |
| 0104 | RAM Test Failed - Refresh Error      |
| 0105 | RAM Test Failed - Parity Error       |
| 0200 | ROM Test Failed                      |
| 0400 | Timer Test Failed - Timer Error      |
| 0500 | Timer Test Failed - Input Port Error |
| 0600 | DMA Test Failed                      |
| 0700 | LAN Test Failed                      |
| 0900 | Bus Error Test Failed                |
| 0A00 | UBX Register Test Failed             |
| 0B00 | UBX Sanity Test Failed               |

**d5 - d0** - Hexadecimal raw data bytes relating to the failed diagnostic detected.

*Data Byte Value*

|    |        |
|----|--------|
| d5 | Unused |
| d4 | Unused |
| d3 | Unused |
| d2 | Unused |
| d1 | Unused |
| d0 | Unused |

For in-service UC:

- In-service tests will return ATP (All Tests Passed)
- Out-of-service tests will return CATP (Conditional All Tests Passed)

For out-of-service UC:

- In-service tests will return ATP
- Out-of-service tests will return ATP

**cc** - Hexadecimal condition code

**cc Explanation**

|    |                                  |
|----|----------------------------------|
| 03 | Subject entity is in service     |
| 03 | Subject entity is in service     |
| 04 | Subject entity is out of service |
| 10 | Unit is not equipped             |
| 42 | RST failed to boot program       |
| 55 | Invalid CFT code                 |
| 56 | Unrunnable CFT code              |

### **Notice**

Every effort was made to ensure that the information in this document was complete and accurate at the time of printing. However, information is subject to change.

### **Security Statement**

In rare instances, unauthorized individuals make connections to the telecommunications network through the use of remote access features. In such event, applicable tariffs require that the customer pay all network charges for traffic. AT&T cannot be responsible for such charges, and will not make any allowance or give any credit for charges that result from unauthorized access.

### **Documentation Ordering Information**

The ordering number for this document is AT&T 365-353-052. To order this document, call the AT&T Customer Information Center in Indianapolis, Indiana, on 1-800-432-6600. For more ordering information, refer to "How to Order Documentation" in the section "About this Document."

### **Technical Support Telephone Number**

The AT&T Regional Technical Assistance Center (RTAC) provides a technical assistance telephone number which is staffed 24 hours a day. For technical assistance, simply call 1-800-225-RTAC.

### **Documentation Support Telephone Number**

AT&T provides a telephone number for you to report errors or to ask questions about the information in this document. The support telephone numbers are:

Outside North Carolina - 1-800-334-0404  
Inside North Carolina - 1-919-727-6681.

# About This Document

---

## Purpose

---

The *DACS II Release 7.0 Command and Message Manual* describes the input commands and output messages of Release 7.0 of the Digital Access and Cross-Connect System II (DACS II). In addition, it provides full support for previous product releases.

 **NOTE:**

Those customers using this manual with Releases 3 through 6.1 software should be aware that all features of a particular message shown for Release 7.0 may or may not apply to previous releases.

This manual consists of three volumes as follows:

- **Volume I** - This volume contains general information about the document, a detailed introduction that defines DACS II messages, relates how to communicate with DACS II, introduces the administrative links, and discusses in detail NPC addressing, on-line help feature, system configuration and features a listing of related documentation and a glossary. Message listings in this volume include alphabetical and numerical, summary list of input commands and a list of autonomous messages. A comprehensive presentation of input commands and output messages (ABT through DGN) concludes this volume.
- **Volume II and III** - These two volumes contain input commands and output messages in the following order:
  - **Volume II** - DGRTH through SW
  - **Volume III** - TABS through UTL

---

## **Release 7.0.3 Addendum**

---

The *DACS II Release 7.0.3 Command and Message Manual Addendum* consists of the following list of items to be inserted or replaced in your *DACS II Release 7.0 Command and Message Manual*:

- Updated manual Table of Contents for each volume
- Updated "About this Document" section for each volume
- Updated "Alphabetic Message List" (Chapter 2)
- Updated "Numeric Message List" (Chapter 3)
- Updated "Summary of Input Commands" (Chapter 4)
- New section, "Release 7.0.3 Addendum," consisting of updated and new commands applicable to Release 7.0.3.
- Updated manual index for each volume

The instructional page enclosed with the Addendum will explain how to incorporate these new items into the Release 7.0 documentation.

## **Intended Audiences**

---

This manual is a catalog of messages intended for reference by a technician or craftperson who needs additional details about a message. It provides the user with supplemental information for the Digital Access and Cross-Connect System II (DACS II) that is programmed in the Program Documentation Standards (PDS) language. An example of a user is someone performing a task from an operation and maintenance manual who needs the definition of a specific keyword to complete the task.

## **How to Order Documentation**

---

To order additional copies of this document, send or call in an order as follows:

- To order by Mail:

Lucent Technologies  
Customer Information Center  
Attention: Order Entry Section  
2855 N. Franklin Road  
P. O. Box 19901  
Indianapolis, IN 46219

- 
- To order by Telephone (Monday through Friday);

Within the United States of America:

**1-800-432-6600** (7:30 a.m. to 6:30 p.m. EST)

From Canada:

**1-800-255-1242**

Worldwide:

Toll: **1-317-352-8557**

FAX: **1-317-352-8484**

For RBOC/BOC customers, process orders through your Company Documentation Coordinator.

For commercial customers, a check, money order, purchase order number, or charge card number is required with all orders. Make checks payable to Lucent Technologies.

Lucent Technologies entities should use Form IND 1-80.80 FA, available through the Customer Information Center.

One-time orders include a binder (if applicable) and the document contents for the current issue in effect at the time of order. After placing a one-time order, you can request a standing order for any document revisions *of that software release*. Documents for new software releases do *not* go to standing-order customers. You will only get those documents if you order the new software release.

## **How to Comment on This Document**

A feedback form is located at the beginning of this publication, immediately after the title page. Please fill out the feedback form and return it (postage free) to the address on the back.

If the feedback form is missing, send comment on this publication to:

Lucent Technologies  
DACS II Documentation Coordinator  
2400 Reynolda Rd.  
Winston Salem, NC 27106

## **DGRTH — DLT**

---

This section documents the commands **DGRTH** through **DLT**.

## **DGRTH,NPC**

---

### **DEGROWTH NPC**

#### **Explanation Of Command**

---

This command unequips network processing circuits (NPCs) in DACS II Facility Terminating Units (FTU), DS3 Units (DS3U) and Digital Signal Processing Units (DSPU). This command unequips network processing circuits (NPCs) in DACS II Facility Terminating Units (FTU) and Digital Signal Processing Units (DSPU).

It may be used to unequip a single NPC or a range of NPCs in an FTU or DS3U. However, Digital Signal Processing Circuits must be individually unequipped. When ranges of NPCs are addressed, the **DISC-EQPT** command will show a completion indication after the last NPC in the range is unequipped or the highest numbered NPC is successfully unequipped. **Before** the completion indication is output, individual denial messages will be output for each **NPC that is denied unequipage**. When ranges of NPCs are addressed, the **DGRTH** command will show a completion indication after the last NPC in the range is unequipped or the highest numbered NPC is successfully unequipped. **Before** the completion indication is output, individual denial messages will be output for each **NPC that is denied unequipage**.

For C-bit processing DSPU circuit packs (**CB**-type NPCs), unequipping an NPC range is not allowed. One output message is printed for each NPC that is successfully unequipped.

When an NPC range degrowth command within a unit crosses a Facility Terminating Module (FTM) boundary, if the FTM is unequipped, or the NPC is unequipped, in-service, designated as NPC test port for test ports, has active terminations or circuits under test, or for other conditions, gaps for such FTMs or two or more such NPCs will be skipped, with a summary message, as noted below.

Specifically:

- (a) Degrowth commands where the range address crosses a unit boundary will be denied.
- (b) For the degrowth NPC range command: output messages for such gaps of two or more NPCs will be denied in a summary command. The denial summary will use a floating window denial:

#### **Floating Window Denial Message**

Where a range NPC command is denied for successive NPCs in the range **for the same reason**, a summary denial message will be output, giving the range of NPCs denied, and the

reason. The execution of the normal completions, or of denials for a reason other than diagnostic failures, then resumes at the next NPC, up to the end of the range.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, denoting the beginning of the range.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, denoting the end of the range.

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

**uvmnp, uvkqr**

- Hierarchical NPC numbers

**uv** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The values are:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB, SR, and MJ type numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

|              |            |           |
|--------------|------------|-----------|
| Unit         | Module     | NPC       |
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**Note:** Range is not allowed for DSPU NPC degrowth.  
With exceptions, an NPC must first be removed from service  
with the RMV,NPC,SIDE,INCL message before it can be degrown.

The exceptions are DSPU NPCs. If a cross-connected channel or a channel under test is  
present on the NPC, the message will be denied.

Degrowth of DMB NPCs results in degrowth of both duplicated NPCs in a DSPU NPC  
circuit pack. For other DSPU NPCs, there is only one NPC per circuit pack.  
One of the duplicated NPCs may first be removed from service with the  
RMV,NPC,SIDE,INCL message.

If both NPCs are in service, both will be automatically removed during the degrowth of NPC  
operation. If a cross-connected channel is present on the NPC, the message will be  
denied.

Additionally, the SLC carrier terminated digroups must be deleted from the SLC  
carrier bank by executing the DLT,RT,DL,DGA,DGB,DGC,DGD,DGP command.

**[s]ghi** - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [t]def)  
**[s]jkl** - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [t]mno)  
**[t]mno** - The 3- or 4-digit nonhierarchical NPC number ([s]ghi through [t]def)

**uvghi** - Hierarchical NPC number within the range of uvmnp and uvkqr  
**uvjkl** - Hierarchical NPC number within the range of uvmnp and uvmno  
**uvmno** - Hierarchical NPC number within the range of uvjkl and uvkqr

**TYPE** - Type

**mnxyz** - NPC-type identifier

|    |                               |
|----|-------------------------------|
| mn | Explanation                   |
| DA | Dual digroup ANSI NPC         |
| DE | Dual digroup NPC              |
| DS | SLC® carrier NPC              |
| TA | DS3U ANSI NPC                 |
| TE | DS3U Noninterface unit NPC    |
| MB | Digital multipoint bridge NPC |

MJ     Multipoint junction unit NPC  
SR     Subrate multiplexer unit NPC

**UEQD** - Unequipped

The specified NPC is already unequipped

**IS** - In-service

The specified NPC is in service

**NPCTP** - NPC (for) test port

The specified NPC is designated for DS0 test ports

**NPCTG** - NPC (for) test group

The specified NPC is designated for Nx64Kbit/s test groups

**TERM** - Termination

**ASGN** - Assigned

The specified NPC has active or under-test assigned termination

**COND** - Condition

The specified NPC is denied due to condition given by cc

**cc** - Hexadecimal condition code

**cc**     *Explanation*

|           |                                             |

| <b>69</b> | Use of this NPC is RESERVED for SLC 96 MD 1 |

## **DGRTH,NPC,NPCTG,TGR**

### **DEGROWTH TEST-ACCESS GROUP NPC**

#### **Explanation Of Command**

This command is used to request the removal of the test-access group (TG) designation from a network processing circuit for test-access groups. All TGs associated with this NPCTG must be released before the NPCTG can be deprovisioned. If "TGR" is specified in the command all active TGs will be released and deprovisioned before the NPCTG is deprovisioned. Any out-of-serve (OOS) condition will be bypassed.

A TG may be supported by one or two NPCTGs. Deprovisioning of an NPCTG that supports half (one bundle) of an active TG, will result in the release and deprovisioning of the entire TG; provided "TGR" was specified.

#### **Command**

Not applicable.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**NPCTG** - NPC (for) test group

**rrr** - NPCTG number (1 through 400)

**TGR** - TG release

This keyword causes any active TGs supported by this NPCTG to be released from testing and degrown before the NPCTG is degrown. It is required if the NPCTG has active TGs.

**TGS** - TGs supported by the NPCTG

**mmm** - TG number (1 through 400)

Lowest TG number supported by the NPCTG. This number will be '000' if all TGs have been degrown.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**NPCTP** - NPC test port  
**n** - NPCTP number (1 through 8)

**TPR** - Test port release

This keyword causes any active test ports to be released from service before the test port NPC is degrown. Without the TPR keyword, the test ports must all be idle or the command is denied.

**TPS** - Test ports

**kk** - Beginning test port number

**nn** - Ending test port number

kk and nn indicate the range of test port numbers which the named NPC included

| <i>n</i> | <i>kk</i> | <i>nn</i> |
|----------|-----------|-----------|
| 1        | 01        | 12        |
| 2        | 13        | 24        |
| 3        | 25        | 36        |
| 4        | 37        | 48        |
| 5        | 49        | 60        |
| 6        | 61        | 72        |
| 7        | 73        | 84        |
| 8        | 85        | 96        |

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                                 |
|-----------|-------------------------------------------------|
| <b>15</b> | NPC is unequipped                               |
| <b>88</b> | NPC is not a NPCTP                              |
| <b>89</b> | NPC is not designated for this NPCTP/NPCTG      |
| <b>8A</b> | NPCTP is not grown                              |
| <b>8B</b> | Test port is not idle or frame is not inservice |
| <b>98</b> | Test Port release failed                        |

## **DGRTH,SYNC,TB**

DEGROWTH SYNCHRONIZER TIME BASE

### **Explanation Of Command**

This command requests the deprovisioning of the synchronizer time base.

### **Command**

[I.32101]

**DGRTH:FRM xy,SEQ ww:SYNC,TB!**

### **Completion Message**

[O.32101]

**M hh:mm:ss xy,ww n[vv] DGRTH SYNC TB TYPE TBpqr COMPL**

### **Denial Message**

[O.32101.01]

**M hh:mm:ss xy,ww n[vv] DGRTH SYNC TB TYPE TBpqr COND cc DNY**

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**TYPE** - Type

**TB** - Time base

**p** - Time base identifier

**qr** - Unassigned

q and r can take any value from 0 through 9

**p**      *Time base*

**0**      Stratum 3

**1**      CEPT Local

**2**      CEPT Toll

**3**      Stratum 2

**Note:** pqr will be shown as "---" if the synchronizer is not equipped.

**cc** - Hexadecimal condition code

**cc**      *Explanation*

**16**      SYNC TB is not equipped

**A4**      Both syncs are in-service

## **DGRTH,SYNC,TLI,SSP**

### **DEPROVISION SYNCHRONIZER TIMING LINK INTERFACE**

#### **Explanation Of Command**

This message requests the deprovisioning of the synchronizer's timing link interface.

If the timing link interface was configured as a timing extractor (**TYPE - txyz**), the synchronizer sync port must be specified as well.

On output, note that the NPC option can be a source of synchronization for a timing link interface. When a TU type TLI receiving its input from an NPC is degrown, the NPC must be marked as no longer being a synchronizer source.

Not applicable.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**TLI** - Timing link interface

**m** - TLI number (1 through 4)

**SSP** - Synchronizer synchronization port

**a** - SSP number (0 or 1)

**SRC** - Source

**p** - Synchronization port priority (1 through 8)

*p*      *Explanation*

1      HIGHEST priority

8      LOWEST priority

**TYPE** - Type

**texyz** - Timing extractor type

*texyz*      *Explanation*

TCxyz      Composite Clock Timing Extractor

TExyz      DS1 Timing extractor

TPxyz      Primary Block Timing Extractor (xyz values are listed below)

TRxyz      Basic System Reference Frequency

TUxyz      Unipolar Clock Timing Extractor

-----      Not Equipped

**nnn** - End of TG range number (1 through 400)

**rrr** - East-bundle NPCTG number (1 through 400)

**sss** - West-bundle NPCTG number (1 through 400)

**UEQD** - Unequipped

**ppp,qqq**  
- Unequipped TGs in specified range

**ttt,uuu**  
- Active TGs in specified range

**cc** - Hexadecimal condition code

**cc** *Explanation*

**63** None of the designated TG(s) are equipped

**A5** Test group is not idle or frame is not In Service

## **DGRTH,TP**

### **DEGROWTH**

#### **Explanation Of Command**

This message requests the unequipage of a specified test port. Any subsequent test access requests for this test port will be denied. Also, if the specified test port is in use, the command will be denied.

When degrowth of the specified test port is completed, the channel units associated with this test port are no longer assumed in place, and no test ports with numbers greater than the one specified remain equipped.

#### **Command**

[I.32411]

**DGRTH:FRM xy,SEQ ww:TP kk!**

#### **Completion Message**

[O.32411.03]

M hh:mm:ss xy,ww n[vv] DGRTH TP kk TPMAX nn TP NSO DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**TP** - Test port

**kk** - Test port number (01 through 96)

**NPCTP** - NPC for test ports

**UEQD** - Unequipped

**TPMAX** - Test port maximum

**nn** - Test port number (01 through 96)

**NSO** - Not in sequence order

Degrowth of test port kk can be denied under the following conditions:

- The NPCTP (network processing circuit for test ports) has not been designated or UEQD.
- The requested test port is not idle. The test port is currently assigned to a cross-connected channel for test access (NOT-IDLE).
- The requested test port is NSO (not in sequence order) (TPMAX=nn, TP, NSO). That is, kk is not equal to the highest existing test port number nn in the NPCTP.

## **DGRTH,UNIT**

### **DEGROW UNIT**

#### **Explanation Of Command**

When this request is completed, the two ETSI circuit packs required by the subject unit to cross-connect to other grown units are unequipped.

This message requests the degrowth of a DACS II unit.

When this request is completed, all cross-connect buffer and time slot interchange circuit packs required by the subject unit to cross-connect to other grown units are degrown.

When this request is completed, the two ETSI circuit packs required by the subject unit to cross-connect to other grown units are degrown.

#### **Command**

[I.32211]

**DGRTH:FRM xy,SEQ ww:UNIT [q]q!**

## Completion Message

For DACS II Non-CEF frames:  
[O.32211]

[O.32211.03]

M hh:mm:ss xy,ww n[vv] DGRTH UNIT [q]q COND cc DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**TOTAL** - Total

**TSIS** - Time slot interchangers

**tt** - Total number of provisioned TSIs in frame after unit is degrown  
(00 through 70)

**dd** - Number of TSIs deprovisioned by command (00 through 22)

**sft** - TSI equipped status

**s** - Service side number (0 or 1)

**f**

- FROM unit number

*f* *Explanation*

n Unit number n (equals 1 through 6) is equipped

- Not equipped

**t**

- TO unit number

*t* *Explanation*

n Unit number n (equals 1 through 6) is equipped

- Not equipped

**e** - Number of lines in the output message segment (2 through 4)

#### **DEGROWN**

- Degrown

Degrowth of UNIT q (1 through 6) can be denied because:

**kk** - Total number of equipped ETSIs in the frame after the unit is degrown  
(00 through 30)

**ETSIS** - Expanded time slot interchangers

**ETSI** - Expanded time slot interchanger

**0qq** - ETSI number side 0

**1qq** - ETSI number side 1

0qq and 1qq identify the ETSI packs dep provisioned by this command.  
qq is the unit number (see UNIT above).

Three dashes "---" are shown if an ETSI pack is not provisioned.

**0rr** - ETSI number side 0

**1rr** - ETSI number side 1

0rr and 1rr give the ETSIs equipage status. rr is the unit number  
(see UNIT above)

Three dashes "---" are shown if an ETSI pack is not provisioned.

- The unit is already degrown (UEQD), or

- The FTU is still equipped with m FTMI's (facility terminating module interfaces), or
- The DSPU is supporting l NPC's, or
- The unit controller (UC) is in service (IS)
  
- The DS3U is still equipped with k multiplexers (MXRs) and/or the protection multiple interface unit (MIU P), or
- The DS3U is supporting at least one in-service facility line interface (FLI),

**FLI** - Facility line interface

**S** - Service

**P** - Protection

**FMT** - Formatter

**0** - Side number 0

**1** - Side number 1

**MIU** - Multiple interface unit

**MXR** - Multiplexer

**P** - Protection

**FTMI** - Facility terminating module interface

**m** - Number of FTMI's (1 through 4). Will appear if the unit is equipped as an FTU.

**NPC** - Network processing circuit

**l** - Number of NPC's in DSP unit (1 through 8). Will appear if the unit is equipped as a DSPU.

**k** - Number of MXRs (1 through 6). Will appear if the unit is equipped as a DS3U.

**c** - Number of FLI's that are in service (1 or 2). Will appear if the unit is equipped as a DS3U.

**EQD** - Equipped

**cc** - Hexadecimal condition code

**cc** *Explanation*

**00** No conditions

**03** Subject entity is in service

**4D** DSPI is in service

## Explanation Of Parameters

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MXR** - Multiplexer

**c, d** - The number of the MXR within the unit ( $1 \leq c, d \leq 6$ )

**Note:** The Protection MXR is degrown along with the UNIT.

**a** - MXR number within the range of c and d

**TYPE** - The requested DS3 format that will be processed by the MXR.

**mnxyz** - The DS3 format processed by the MXR:

**mn** - the type of DS3 facility  
MX : the original R4.0 DS3 facility type supported by the  
Multiplexer (MXR) circuit pack  
EX : the enhanced R6.0 DS3 facility type supported by the  
Enhanced Multiplexer (EMXR) circuit pack  
Default is the MX type for backward compatibility.

**x** - the DS3 framing format  
1 - M13 format.(default)  
2 - C-bit parity format

**y** - not assigned (the only valid value is 0)

**z** - not assigned (the only valid value is 0)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**9B** The MXR is not grown

**52** The MMFG is protected

**53** The associated MMFG is under protection (for Service MIUs)

**54** The MIU is already equipped

**55** Some associated NPCs are equipped

**56** The MXR is in service

## **DLT,FPKG**

### **DELETE FEATURE PACKAGE IDENTIFICATION**

#### **Explanation Of Command**

The frame administrator enters this command to change the feature package identification code. This command is used to reduce the feature package set by a single feature at a time.

**Note:** The execution of this command requires DACS II superuser privileges. The frame must be in the **MCOND** (maintenance condition) state at execution.

**WARNING:** A manual backup from RAM to Disk must be invoked prior to entering Maintenance Condition, else the command may not complete.

Because of the impact of this command on the available features, the following dialogue will be displayed by DACS II.

ARE YOU SURE?

The user must respond with an affirmative Y for the command to be executed.

#### **Command**

In general a feature package identification code is a combination of several individual feature package numbers. To determine the individual features that make up a feature package it is necessary to decode the feature package identification code. This code is an eight digit hexadecimal number. Each hexadecimal number represents a four-bit binary number. Within this binary number each feature is associated with one particular bit. Consequently to determine the feature list from a feature package identification code it is necessary to convert each hexadecimal digit to its binary equivalent and look up the features in the list above. For example the feature package identification code 0000000F can be converted to the following binary number working from left to right one hex digit at a time.

0000 0000 0000 0000 0000 0000 0000 1111

This number contains eight binary numbers each representing one of the hexadecimal numbers in the feature package identification code 0000000F. The rightmost number of the code contains four features since there are four bits set to one. This would be decoded as follows using the table of features above.

|       | binary | hex | Feature                      |
|-------|--------|-----|------------------------------|
|       | 0001   | 1   | DS1                          |
|       | 0010   | 2   | CEPT                         |
|       | 0100   | 4   | Subrate                      |
|       | 1000   | 8   | Direct SLC                   |
| Total | 1111   | F   | (DS1 + CEPT + Subrate + SLC) |

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 96** Unit(s) OOS, and additional backup required
- 25** Invalid FPI value
- 26** Feature deactivation would leave system with core software
- 27** Disable not allowed - supports another feature
- 28** Feature is active
- 29** Feature not enabled
- 2A** Database not loaded
- 2B** Reading Feature Package Id from PMEM failed
- 2C** Writing Feature Package Id to PMEM failed
- 01** Backup required before executing this command

## **DLT,MACRO,MAP,USER**

### **DELETE MACRO**

#### **Explanation Of Command**

This command requests the deletion of a macro or alternate map from the DACS II system.

**Note:** Only the DACS II frame administrator can remove a public macro or another user's macros and maps. The names of public macros begin with the letter P.

#### **Command**

[I.37201]

```
DLT:FRM xy,SEQ ww:{MACRO <macro name>|MAP <map name>}\  
[,USER <user id>]!
```

#### **Completion Message**

[O.37201]

```
M hh:mm:ss xy,ww n[vv] DLT {MACRO <macro name>|MAP <map name>}\  
[ USER <user id>] COMPL
```

#### **Denial Message**

[O.37201.01]

```
M hh:mm:ss xy,ww n[vv] DLT {MACRO <macro name>|MAP <map name>}\  
[ USER <user id>] COND cc DNY
```

#### **Autonomous Message**

Not applicable.

## **Explanation Of Parameters**

---

### **macro name**

- Macro name (seven characters maximum length)

The name of a collection of DACS II commands executed as a group.

A macro name is a string of capitalized alphanumeric characters. There are two type of macros; public and private. A private macros is created by a user in space allocated to the user by the system administrator. Only the user that created it can execute or read (LIST) a private macro. A public macro is created by the system administrator and is executable and readable by all users. A public macro name must start with the letter "P". A private macro name must not start with the letter "P".

### **map name**

- Map name (seven characters maximum length)

The name of a collection of DACS II cross-connect commands that can be activated as a group to produce a new set of cross-connections (a new cross-connect map).

A map name is a string of capitalized alphanumeric characters.

### **user id**

- User identifier (two to eight alphabetic characters)

The user field is the user's login identifier. It is used only by the frame administrator to delete a private macro or map owned by the user specified. A user does not need to specify this information in order to delete a personally owned (private) macro or map.

### **cc** - Hexadecimal condition code

#### **cc**    *Explanation*

- 62**    File is being accessed
- 64**    File doesn't exist/can't be accessed
- D0**    Command is Frame administrator (DAX) only.
- D3**    User does not exist
- D5**    No user is logged in on the link/vc

## **DLT,NPC**

---

### **EDIT DELETE MAP**

#### **Explanation Of Command**

---

This command is only used in the open and create session of the alternate map feature. It is not intended to be used as a regular command under any circumstances.

This message is used to *delete* a single NPC, a range of NPCs, or a list of NPCs, from an alternate map.

To delete circuits from an alternate map, enter the **TCON : :FRM,TO** command (I.11001) with the DLT keyword at the end.

The only system response to this command is:

OK

Denials in response to this command are sent only to the link on which the command was input.

#### **Command**

---

#### **Nonhierarchical**

---

[I.37001]

**DLT:FRM xy,SEQ ww:NPC {[s]abc-[t]def|[s]abc[, [s]ghi]...\  
[, [t]def]]}!**

## **Hierarchical**

[I.37001]

**DLT:FRM xy,SEQ ww:NPC {uvmnp-wxkqr|uvmnp[,abcde]...[,wxkqr]}!**

## **Completion Message**

If the command is accepted by DACS II, the following input acknowledgement is output.

**OK**

## **Denial Message**

Not applicable.

## **Autonomous Message**

Not applicable.

## **Explanation Of Parameters**

**[s]abc, [t]def, [s]ghi**

- The 3- or 4-digit non-hierarchical NPC numbers

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                |                                                |                                                |                                                |                                                |                                                |
|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|

**cc** *Explanation*

**7A** The NPC to delete has not been previously added to map

## **DLT,RT,DL,DGA,DGB,DGC,DGD,DGP**

**DELETE {RT|DL}**

### **Explanation Of Command**

This command is used to delete the association of a network processing circuit (NPC) number with a SLC<sup>®</sup> carrier remote terminal (RT) or digital carrier line unit (DCLU) bank's digroup name. Once all of digroups of a specific bank are deleted, the bank's identification number and its mode of operation will also be deleted.

Note that at least one digroup name and NPC number must be specified on input.

For the denial message, the optional A, B, C, D, or P character will be shown to indicate the digroup that causes the denial.

### **Command**

#### **Nonhierarchical**

## **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**RT** - SLC® Carrier Remote Terminal

**DL** - Digital Carrier Line Unit

**ffff** - Bank identification number (0000 to 9999 inclusive)

**DGA** - SLC Carrier digroup A

**DGB** - SLC Carrier digroup B

**DGC** - SLC Carrier digroup C

**DGD** - SLC Carrier digroup D

**DGP** - SLC Carrier digroup P

**[s]aaa** - The 3- or 4-digit nonhierarchical DGA NPC number

**[s]bbb** - The 3- or 4-digit nonhierarchical DGB NPC number

**[s]ccc** - The 3- or 4-digit nonhierarchical DGC NPC number

**[s]ddd** - The 3- or 4-digit nonhierarchical DGD NPC number

**[s]ppp** - The 3- or 4-digit nonhierarchical DGP NPC number

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**uv** - Unit number

**j, k, l, m**

- Module number within the unit

**ab** - Digroup A (DGA) NPC number within the module

**cd** - Digroup B (DGB) NPC number within the module

**ef** - Digroup C (DGC) NPC number within the module

**gh** - Digroup D (DGD) NPC number within the module

**pr** - Digroup P (DGP) NPC number within the module

The allowable values are presented below:

DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**A, B, C, D, P**

- Digroup A, B, C, D, or P.

This is used to indicate the digroup that caused the denial.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**03** Subject entity is in service

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**15** NPC is unequipped

**35** NPC has active circuit

**6A** NPC type is not DS type

**78** Protection switch process failed

**7E** Bank id number not found

**7F** NPC is not added

**80** NPC number and bank id don't match

**81** NPC number and digroup name don't match

**87** DGP is protecting a primary digroup

**cc**    *Explanation*

- 89**    Can't delete because not all associated NPCs of the RT are entered
- 8B**    Digroup name and bank id don't match
- 8C**    Digroup is protected
- 93**    All digroups not out of service
- BC**    DGA and DGB must be specified together in the command
- BD**    DGC and DGD must be specified together in the command
- F9**    Mate NPC (DGA/DGP) is in service
- 59**    Number of DGPs on each unit is limited to 32
- 69**    Use of this NPC is RESERVED for SLC 96 MD 1
- 02**    Manual Pending is Active

## **DLT,USER**

---

### **DELETE USER**

#### **Explanation Of Command**

---

This command requests the deletion of **<user id>** from the DACS II system.

Output from this command is sent only to the link on which the command was input.

#### **⇒ NOTE:**

**Note:** This command may be used only by the DACS II frame administrator. It may be executed on any administrative link.

#### **Command**

---

[I.37101]

**DLT:FRM xy,SEQ ww:USER <user id>!**

#### **Completion Message**

---

[O.37101]

**M hh:mm:ss xy,ww n[vv] DLT USER <user id> COMPL**

#### **Denial Message**

---

[O.37101.01]

**M hh:mm:ss xy,ww n[vv] DLT USER <user id> COND cc DNY**

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**USER** - User

**user id**

- User identifier

User login identification (two to eight alphabetic characters)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**D3** User does not exist

**D8** Cannot remove Frame administrator

**D9** User has logged in somewhere

**DB** User still owns files

## **EBX — EXC**

---

This section documents the commands **EBX** through **EXC**.

## **EBX,STARTUP,STF,ATP**

### **EXPANDED BUS EXTENDER STARTUP**

#### **Explanation Of Command**

This message reports that the expanded bus extender has initialized itself and has performed self-diagnostics. The results of these diagnostics are reported. For all tests passed, no action is required.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01272]

**EBX STARTUP {STF|ATP}**

### **Explanation Of Parameters**

---

**EBX** - Expanded bus extender

**STARTUP**

- Startup

Indicates initialization

**STF** - Some tests failed

**ATP** - All tests passed

## **ED,CRET,MAP,PIC**

### **CREATE PICTURE ALTERNATE MAP**

#### **Explanation Of Command**

This command takes a **PIC** (picture) of currently-implemented cross-connections and stores them in the **new map name**. **reference map name** is the name of the map that contains the desired list of cross-connections.

**one to seven characters long.**

Output from this command is sent only to the link on which the command was input.

#### **Command**

[I.19031]

**ED:FRM xy,SEQ ww:CRET,MAP <new map name>\  
,PIC <reference map name>!**

#### **Completion Message**

#### **Nonhierarchical**

[O.19031]

**M hh:mm:ss xy,ww n[vv] ED CRET MAP <new map name> \  
PIC <reference map name>  
[ NPC [s]abc] COND kk COMPL**

## **Hierarchical**

---

[O.19031]

**M** hh:mm:ss xy,ww n[vv] **ED CRET MAP** <new map name> \  
**PIC** <reference map name> [ **NPC** uvmnp] **COND** kk **COMPL**

## **Denial Message**

---

[O.19031.01]

**M** hh:mm:ss xy,ww n[vv] **ED CRET MAP** <new map name> \  
**PIC** <reference map name> **COND** cc **DNY**

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**CRET** - Create

**MAP** - Map

new map name

- The new alternate map to be created by this message

"new map name" is a string of capitalized alphanumeric characters.  
The first character must be an alphabetic character. The maximum  
length of a map name is seven characters.

**PIC** - Picture

reference map name

- The existing alternate map

"reference map name" is a string of capitalized alphanumeric characters.  
The first character must be an alphabetic character. The maximum  
length of a map name is seven characters.

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

This number identifies the first NPC that contains either a  
non-two-way, two-point cross-connection, or a cross-connection with a  
termination on an NPC not found in the reference alternate map.

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

## **ED,MACRO,MAP**

### **CREATE OR EDIT A MACRO OR MAP**

#### **Explanation Of Command**

This command is dual purpose. It can be used to create a new macro or alternate map or to edit an existing macro or map. A macro is a collection of DACS II commands that can be executed as a group by a single command. A map is a collection of DACS II cross-connect commands that can be activated as a group by a single command to create a new cross-connect map.

Once a macro has been created, and is free of errors, it can be executed repeatedly. For commonly used command sequences this saves a lot of typing, speeds execution, and assures the user of repeatability. Similarly a map, once created, can be repeatedly activated. However, prior to each activation of a map the information specified in the map must be edited to create a new map. On the other hand the information in a macro can be changed, without editing, when the command is executed. The new information is inserted into the command line and replaces information within the macro at execution time.

The commands used in the macro, the macro commands, will always be executed in the order they are listed in the macro. However, because the commands can use variables as well as constants, the information within the macro can vary with each execution. A command within the macro that addresses a given NPC can be made to address a different NPC the next time the macro is executed. This is done by replacing the constant, representing the NPC number, listed in the macro command with a variable. Many other command parameters can be changed from execution to execution by the use of variables in the macro commands.

Consider the private macro named "DEMO" below. Some elements of these macro commands have been omitted in order to focus on the use of variables.

```
TDIS::FROM 00101,TO 00301,STOP!OK
TCON::FROM 00101,TO 00501!OK
TCON::FROM 00102,TO 00502!OK
TCON::FROM 00103,TO 00503!OK
UTL::QRY,CMAP 001!OK
```

This macro will always disconnect, connect, and query the same NPCs. If DEMO were written as follows, using variables, the NPCs affected could be specified each time the macro was executed without having to reenter the macro. A macro written in this manner is referred to as a universal macro. This particular macro would be even more universal if the channel numbers were represented by variables.

```
TDIS::FROM #0101,TO 00301,STOP!OK
TCON::FROM #0101,TO #0201!OK
TCON::FROM #0102,TO #0202!OK
TCON::FROM #0103,TO #0203!OK
UTL::QRY,CMAP #01!OK
```

Variables have replaced some of the constants in macro DEMO. NPC number 001 has been replaced with variable #01 and NPC number 005 has been replaced with variable #02. The numbers in these variable names refer to the position of the replacement in the command used to execute the macro. To execute this macro replacing #01 with 020 and #02 with 040 we would enter the following command.

```
EXC::MACRO DEMO,(020,040)!
```

The variables used in the macro commands of macro DEMO are replaced, upon execution of this command, by parameters included in the command. The first parameter replaces variable #01 and the second parameter replaces #02. After variable replacement macro DEMO would look as follows.

```
TDIS::FROM 02001,TO 00301,STOP!OK
TCON::FROM 02001,TO 04001!OK
TCON::FROM 02002,TO 04002!OK
TCON::FROM 02003,TO 04003!OK
UTL::QRY,CMAP 020!OK
```

Variables may be used for any macro command parameter except action verbs and punctuation. The number of variables used in a macro is limited to 10. A variable may be used wherever its value is needed, that is, it is not restricted to an NPC number just because it was used for that purpose at some other point in the macro. If the user wished to address NPC number 003 and channel 003 the variable #01 with value 003 could be used for both the NPC number and the channel number. The macro command would look as follows.

TCON::FROM #01#01,...!

At execution time this would translate to the following.

TCON::FROM 003003,...!

**⇒ NOTE:**

To represent hierarchical NPC numbers a variable must be used for each part (unit, module, NPC) of the NPC number. A macro expecting a hierarchical format parameter should not be executed with a nonhierarchical format parameter.

NPC 01101 would be represented in a macro command with variables #01, #02, and #03 as follows.

UTL::QRY,CMAP #01#02#03!

**⚠ WARNING:**

*Any command prompting "Are You Sure?" which is accepted as a macro command will always have the "No" answer to the question.*

The system responds with "OK" when the ED::MAP command is entered.

The system responds with LINE and SAVE messages, as shown below, when the ED-MACRO command is entered.

[O.19071]  
... LINE <line pointer> TOTAL <line total> COMPL

[O.19081]

... **SAVE** <macro name> **SPACE** sss **USED** uuu **COMPL**

A macro session is the period between entering the command to create a macro and entering the command to exit the macro. A line pointer is maintained by the system during the session to mark the position of the current line within the macro. As a line is added to the macro the line pointer moves down a line; tracking the position of the current line. The **LINE** command is used to determine the current line pointer value and the total number of lines currently in the macro.

The **SAVE** command is used during a macro session to save the current set of macro commands in the macro represented in the message by "macro name." The macro name is chosen by the user.

The completion messages correspond to the frame response when **END** or **QTEND** is entered after completion of editing or creating a macro. The **END** command saves all the changes before ending (exiting) a macro session. The **QTEND** command ends the macro session without saving the changes.

Output from this command is sent only to the link on which the command was input.

## **Explanation Of Parameters**

---

**MACRO** - Macro

### **macro name**

- Macro name (seven characters maximum length)

The name of a collection of DACS II commands executed as a group.

A macro name is a string of capitalized alphanumeric characters. There are two type of macros; public and private. A private macros is created by a user in space allocated to the user by the system administrator. Only the user that created it can execute or read (LIST) a private macro. A public macro is created by the system administrator and is executable and readable by all users. A public macro name must start with the letter "P". A private macro name must not start with the letter "P".

**MAP** - Map

### **map name**

- Map name (seven characters maximum length)

The name of a collection of DACS II cross-connect commands that can be activated as a group to produce a new set of cross-connections (a new cross-connect map).

A map name is a string of capitalized alphanumeric characters.

**QTEND** - Quit end

Quit to end a macro or map session without saving any changes to the macro or map.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc Explanation**

|    |                                                            |
|----|------------------------------------------------------------|
| 00 | No conditions                                              |
| 00 | No conditions                                              |
| 60 | User macro/map space is full                               |
| 60 | User macro/map space is full                               |
| 61 | System macro/map space is full                             |
| 62 | File is being accessed                                     |
| 65 | Command invalid while backup in progress                   |
| 65 | Command invalid while backup in progress                   |
| 66 | Map/macro file write deferred until backup is completed    |
| 67 | User logged off during session                             |
| 68 | Incorrect language/addressing mode                         |
| 6F | The session is terminated due to maintenance operation     |
| 6F | The session is terminated due to maintenance operation     |
| 7C | Logical conflicts found in the map                         |
| 7D | Can't start new session - previous session still verifying |
| D0 | Command is Frame administrator (DAX) only.                 |
| D5 | No user is logged in on the link/vc                        |
| 6E | No edit session active                                     |
| 6C | File is empty                                              |
| 6C | File is empty                                              |

## **EMTC,STARTUP,STF,ATP**

### **EXPANDED MAINTENANCE STARTUP**

#### **Explanation Of Command**

This message reports that the expanded maintenance circuit has initialized itself and has performed self-diagnostics. The results of these diagnostics are reported. For all tests passed, no action is required.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

[O.01282]

**EMTC STARTUP {STF|ATP}**

### **Explanation Of Parameters**

---

**EMTC** - Expanded maintenance circuit

**STF** - Some tests failed

**ATP** - All tests passed

## **ERR,CMD,ABT,TN,STOPPED**

### **INPUT DENIAL**

#### **Explanation Of Command**

This message is output by DACS II when a task indicated by the transaction number has been autonomously aborted.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01121]

A hh:mm:ss xy,ww    ERR CMD ABT [TN abcd]    e LN MSG:  
First 70 characters of input message.  
Remaining text of input message STOPPED

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**CMD** - Command

**ABT** - Abort

**TN** - Transaction

**abcd** - Transaction number

**e** - Number of lines in the message

## **ERR,ESR,ANALYSIS,REPORT,EVENT**

### **ERROR RECOVERY ESR ANALYSIS REPORT**

#### **Explanation Of Command**

This message outputs a list of circuit packs associated with a series of alarm messages identified by the EVENT number. One of the circuit packs listed may be at fault. The most likely faulty pack is at the top of the list. Only the first circuit pack on the list will be removed. This message will not be output if a single circuit pack is implicated.

<action> <circuit identifier> COMPL
```

## **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

**ANALYSIS**  
- Analysis

**REPORT** - Report

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

**action** - Identifies autonomous action attempted on the circuit pack. Available actions are

*action Explanation*

RMV Request was made to remove circuit pack from service and run a diagnostic

--- Pack is listed for information only

**circuit identifier**

- Circuit pack type and identification.

The available circuit identifiers are listed below:

circuit identifier

<error analysis data bytes> COND cc COMPL

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error Source Register

The ESR keyword is not output if the register contents cannot be read.

**CCB** - Cross-connect Buffer

**s** - Cross-connect side (0 or 1)

**f** - Unit (1 through 6)

**TN** - Transaction

**dddd** - Transaction number

**EVENT** - Event

**eeee** - Event number

#### **error analysis data bytes**

- Data used to analyze the cause of an error.

Eight bytes are output. These bytes are labeled "byte 0", "byte 1", etc, below.

**byte 0** - ESR0 (Error Source Register 0) in the CCB

**byte 1** - ESR1 (Error Source Register 1) in the CCB

**byte 2** - ESR2 (Error Source Register 2) in the CCB

**byte 3** - CCNI ESR0

**byte 4** - CCNI ESR1

**byte 5** - CCNI ESR2

**byte 6** - CCNI ESR3

**byte 7** - CCNI ESR4

**cc** - Hexadecimal condition code

#### **cc**    *Explanation*

**A0**    CCB packid error, wrong pack, can't read pack

**A1**    CCB sync pulse error

**A2**    CCB clock error

**A3**    CCB input port alarm error

**A4**    CCB zero bit is stuck at 1

**A5**    Corresponding CCNI bit is stuck

## Explanation Of Parameters

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**CCI** - Clock control interface

**s** - Cross-connect side number (0 or 1)

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the content of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the content of the DACS II error recovery log file which contains the data of this error recovery event.

**wd01,**  
**wd02,**

...,

**wd12** - Word 1 through 12

0 to 12 words of hexadecimal raw error data for internal use. Each word is four hexadecimal digits.

*wdxx Explanation*

|      |                                                         |

| wd09 | CCI System Mask Register                                |
| wd10 | CCI Mask Register                                       |
| wd11 | CCI ETSI Mask Register                                  |
| wd12 | Not used (= 0000)                                       |

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 01**    CCI pack is not present
- 02**    Can't communicate to CCI pack(incorrect version number)
- 03**    CCI pack's summary is set but has no errors
- 04**    CCIERR bit is stuck in system status reg
- 05**    TSIERR bit is stuck in system status reg
- 06**    PUERR bit is stuck in system status reg
- 07**    Bus Terminator pack is not present
- 08**    The 32 MHz clock is out of lock
- 09**    CCI 240 sync is misaligned with frame sync
- 0A**    CCI loss of 240 Frame Sync
- 0B**    CCI loss of 8 KHz Frame Sync
- 0C**    CCI detected Address Parity error
- 0D**    CCI detected low byte data parity error
- 0E**    CCI detected high byte data parity error
- 0F**    CCI -5.2 power supply has failed
- 10**    CCI detected Bus Status Parity error
- 11**    CCI Peripheral Unit Alarm
- 12**    SYNC summary is set on CCI circuit pack

## Explanation Of Parameters

---

- ERR** - Error recovery
- ESR** - Error Status Register.  
The ESR keyword is not output if the register contents cannot be read.
- CCNI** - Cross-connect network interface
- s** - Cross-connect side (0 or 1)
- TN** - Transaction
- dddd** - Transaction number
- EVENT** - Event
- eeee** - Event number
- regn** - Device register n (n = 0 through 4)  
A bit set to "1" in these registers indicates the alarming circuit pack or a parity error.

### CCNI s Error Source Register Bit Definitions

- reg0** - Error Source Register 0
- | Bit | Condition                                  |
|-----|--------------------------------------------|

| 10  | FTM 3 of Unit 2 is alarming                               |
| 09  | FTM 2 of Unit 2 is alarming                               |
| 08  | FTM 1 of Unit 2 is alarming                               |
| 07  | FTM 4 of Unit 1 is alarming                               |
| 06  | FTM 3 of Unit 1 is alarming                               |
| 05  | FTM 2 of Unit 1 is alarming                               |
| 04  | FTM 1 of Unit 1 is alarming                               |
| 03  | TSI 66 is alarming                                        |
| 02  | TSI 56 is alarming                                        |
| 01  | TSI 46 is alarming                                        |
| 00  | TSI 36 is alarming                                        |

**reg3** - Error Source Register 3

| Bit | Condition                                |
|-----|------------------------------------------|
| 15  | Cross-Connect Buffer (CCB) 4 is alarming |
| 14  | CCB 3 is alarming                        |
| 13  | CCB 2 is alarming                        |
| 12  | CCB 1 is alarming                        |
| 11  | FTM 4 of Unit 6 is alarming              |
| 10  | FTM 3 of Unit 6 is alarming              |
| 09  | FTM 2 of Unit 6 is alarming              |
| 08  | FTM 1 of Unit 6 is alarming              |
| 07  | FTM 4 of Unit 5 is alarming              |
| 06  | FTM 3 of Unit 5 is alarming              |
| 05  | FTM 2 of Unit 5 is alarming              |
| 04  | FTM 1 of Unit 5 is alarming              |
| 03  | FTM 4 of Unit 4 is alarming              |
| 02  | FTM 3 of Unit 4 is alarming              |
| 01  | FTM 2 of Unit 4 is alarming              |
| 00  | FTM 1 of Unit 4 is alarming              |

**reg4** - Error Source Register 4

| Bit   | Condition                                                             |
|-------|-----------------------------------------------------------------------|
| 15-08 | Not used                                                              |
| 07    | Cross-Connect Network Interface (CCNI) autonomous switch enable error |
| 06    | CCNI high byte data parity error                                      |
| 05    | CCNI low byte data parity error                                       |
| 04    | CCNI address bus parity error                                         |
| 03    | Synchronizer (SYNC) is alarming                                       |
| 02    | Cross-Connect Buffer (CCB) 6 is alarming                              |
| 01    | CCB 5 is alarming                                                     |

**emrn** - Error Mask Register n

A bit set to "1" in these registers indicates the alarming circuit pack or a parity error.

CCNI s Error Mask Register Bit Definitions

**emr0** - Error Mask Register 0

| Bit | Condition                                             |
|-----|-------------------------------------------------------|
| 15  | Errors from Time Slot Interchange (TSI) 43 are masked |
| 14  | Errors from TSI 33 are masked                         |
| 13  | Errors from TSI 23 are masked                         |
| 12  | Errors from TSI 13 are masked                         |
| 11  | Errors from TSI 62 are masked                         |
| 10  | Errors from TSI 52 are masked                         |
| 09  | Errors from TSI 42 are masked                         |
| 08  | Errors from TSI 32 are masked                         |
| 07  | Errors from TSI 22 are masked                         |
| 06  | Errors from TSI 12 are masked                         |

## **ERR,ESR,ETSI,TN,EVENT,COND**

### **ERROR RECOVERY ETSI**

#### **Explanation Of Command**

This message reports an alarm on a extended time slot interchanger.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01355]

```
I hh:mm:ss xy,ww  ERR[ ESR] ETSI sqq TN dddd EVENT eeee  \  
2 LN MSG:  
wd01 wd02 wd03 wd04 wd05 wd06 wd07 wd08 wd09 wd10 wd11 \  
wd12 COND cc COMPL
```

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**ETSI** - Expanded time slot interchanger (ETSI)

**sqq** - ETSI identification

**s** - Cross-connect side (0 or 1)

**qq** - Unit number (01 through 16)

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

**wd01,**

**wd02,**

...,

**wd12** - Word 1 through 12

0 to 12 words of four-digit hexadecimal raw error data for internal use.

**wd01** - Circuit Pack Summary Register

**wd02** - Receive MDX Status Register

**wd03** - Transmit MDX Status Register

**wd04** - Control RAM Status Register

**wd05** - Control RAM Port Alarm Register

**wd06** - Control RAM Data RAM Alarm Register

**wd07** - Receive MDX Mask Register

**wd08** - Transmit MDX Mask Register

**wd09** - CCI ETSI Error Source Register 0

**wd10** - CCI ETSI Error Source Register 1

**wd11** - CCI ETSI Error Source Register 2

**wd12** - CCI ETSI Error Source Register 3

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 20** ETSI pack is not present
- 21** Can't communicate to ETSI pack (incorrect version number)
- 22** ETSI pack's summary is set on CCI but has no errors
- 23** ETSI loss of 32.768 MHz clock
- 24** ETSI loss of 240 frame sync
- 25** ETSI Rcv MDX summary stuck bit
- 26** ETSI control RAM summary stuck bit
- 27** ETSI TX MDX summary stuck bit
- 28** ETSI loss of Vdd (3.3v) power
- 29** Peripheral unit port alarm (RCV MDX)
- 2A** Receive MDX data source time slot parity error
- 2B** Receive MDX sync error
- 2C** Receive MDX address parity error
- 2D** Receive MDX write data parity error
- 2F** Receive MDX can't be accessed (incorrect chip Id)
- 30** Transmit MDX data parity error
- 31** Transmit MDX data source time slot parity error
- 32** Transmit MDX sync error
- 33** Transmit MDX address parity error
- 34** Transmit MDX write data parity error
- 35** Transmit MDX can't be accessed (incorrect chip Id)
- 37** Control RAM parity error
- 38** Control RAM sync alarm
- 39** Control RAM port alarm
- 3A** Control RAM BIST flag is set
- 3B** Data RAM BIST flag is set
- 3C** Control RAM address parity error
- 3D** Control RAM write data parity error
- 3E** Control RAM device can't be accessed (incorrect chip Id)
- 3F** Control RAM circuit pack parity
- 40** Control RAM device is in reset state
- 41** Control RAM port alarm summary is stuck
- 42** ETSI TRD3ST exercise bit is set
- 43** ETSI ready high error on CCI
- 44** ETSI ready time-out error on CCI(ETSI can't be accessed)
- 45** Control RAM stuck bit error

## **ERR,ESR,MC,MP,CI,TN**

### **ERROR RECOVERY ERROR SOURCE REGISTER MAIN CONTROLLER**

#### **Explanation Of Command**

This message is a main controller error recovery output message. In addition to providing information for main controller error recovery, this message may also provide information for the following:

Main Processor  
Communications Interface

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01312]

I hh:mm:ss xy,ww ERR [ESR] MC [, {MP|CI}] TN dddd COMPL

### **Explanation Of Parameters**

---

**MC** - Main controller

**MP** - Main processor

**CI** - Communications interface

**ESR** - Error source register

The ESR is not output if the register content cannot be read.

**ERR** - Error recovery

**TN** - Transaction

**dddd** - Transaction number

## **ERR,ESR,MC,MP,TN,EVENT,COND,CI,BX,EBX**

### **ERROR RECOVERY MC**

#### **Explanation Of Command**

This message is a main controller error recovery output message reporting circuit pack alarms. It also provides information for the:

- Main Processor
- Communications Interface
- Extended Communications Interface
- Secondary Storage Controller
- Bus Extender or Expanded Bus Extender Pack for MP
- Maintenance Pack or Expanded Maintenance Pack

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01311]

```
I hh:mm:ss xy,ww  ERR[ ESR] MC[ MP] TN dddd EVENT eeee  \

### Explanation Of Parameters

**MC**        - Main controller

**MP**        - Main processor

**CI**        - Communications interface

**BX**        - Bus extender pack for MP

**MTC**       - Maintenance pack

**EBX**       - Expanded bus extender pack for MP

**EMTC**      - Expanded maintenance pack

**ESR**       - Error source register

This keyword is not output if the register content cannot be read.

**ERR**       - Error recovery

**TN**        - Transaction

**dddd**      - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

**abab, bbbb, ..., jjjj**

- Raw data

0 to 10 words of hexadecimal raw error data for internal use. The number of words output is dependent upon the error event. Each word consists of four hexadecimal digits.

**ERR ESR MC MP data words:**

abab bbbb cccc dddd eeee ffff

|             |                                           |
|-------------|-------------------------------------------|
| <b>abab</b> | - CPU Interrupt Holding Register contents |
| <b>bbbb</b> | - CPU Interrupt Mask Register contents    |
| <b>cccc</b> | - Version                                 |
| <b>dddd</b> | - Type                                    |
| <b>eeee</b> | - CPU RAM checksum word 1                 |
| <b>ffff</b> | - CPU RAM checksum word 2                 |

**ERR ESR MC {BX|EBX} data words:**

abab bbbb cccc dddd eeee ffff

|             |                                              |
|-------------|----------------------------------------------|
| <b>abab</b> | - CPU Interrupt Holding Register contents    |
| <b>bbbb</b> | - CPU Interrupt Mask Register contents       |
| <b>cccc</b> | - BX/EBX Interrupt Holding Register contents |
| <b>dddd</b> | - BX/EBX Interrupt Mask Register contents    |
| <b>eeee</b> | - BX/EBX type                                |
| <b>ffff</b> | - BX/EBX version                             |

**ERR ESR MC {MTC|EMTC} data words:**

abab bbbb cccc dddd eeee ffff gggg hhhh iiii jjjj

|             |                                                       |
|-------------|-------------------------------------------------------|
| <b>abab</b> | - CPU Interrupt Holding Register contents             |
| <b>bbbb</b> | - MTC/EMTC Error Source Register 0 contents           |
| <b>cccc</b> | - MTC/EMTC Error Source Register 1 contents           |
| <b>dddd</b> | - MTC/EMTC Error Source Register 2 contents           |
| <b>eeee</b> | - MTC/EMTC Error Source Register 3 contents           |
| <b>ffff</b> | - MTC/EMTC Error Mask Register 0 contents             |
| <b>gggg</b> | - MTC/EMTC Error Mask Register 1 contents             |
| <b>hhhh</b> | - MTC/EMTC Error Mask Register 2 contents             |
| <b>iiii</b> | - MTC/EMTC Error Mask Register 3 contents             |
| <b>jjjj</b> | - MTC/EMTC Interrupt Control/Sanity Register contents |

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                 |
|-----------|---------------------------------|
| <b>20</b> | BX Access Error                 |
| <b>21</b> | BX Ram Parity Over Low Byte     |
| <b>22</b> | BX Ram Parity Over High Byte    |

## **ERR,ESR,NPC,SIDE,TN,EVENT,COND**

### **ERROR RECOVERY DSPU NPC**

#### **Explanation Of Command**

This message indicates an alarm was detected in a digital signal processing circuit; for example, the digital multipoint bridge.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

#### **Nonhierarchical**

[O.01371]

TN dddd EVENT eeee 2 LN MSG:  
<error analysis data bytes>[ COND cc] COMPL

## Hierarchical

[O.01371]

I hh:mm:ss xy,ww ERR[ ESR] NPC uvmnp[-uvmqr] SIDE s \  
TN dddd EVENT eeee 2 LN MSG:  
<error analysis data bytes>[ COND cc] COMPL

## Explanation Of Parameters

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register content can not be read.

**NPC** - Network Processing Circuit

[s]abc - The 3- or 4-digit nonhierarchical odd DSPU NPC number

[t]def - The 3- or 4-digit nonhierarchical even DMB NPC number ([t]def =  
[s]abc + 1)

If NPC numbers are expressed in three digits, the valid values are:

SR and MJ type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1  | Unit<br>2  | Unit<br>3  | Unit<br>4  | Unit<br>5  | Unit<br>6  |
|------------|------------|------------|------------|------------|------------|
| <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> |
| <b>001</b> | <b>161</b> | <b>321</b> | <b>481</b> | <b>641</b> | <b>801</b> |
| <b>021</b> | <b>181</b> | <b>341</b> | <b>501</b> | <b>661</b> | <b>821</b> |
| <b>041</b> | <b>201</b> | <b>361</b> | <b>521</b> | <b>681</b> | <b>841</b> |
| <b>061</b> | <b>221</b> | <b>381</b> | <b>541</b> | <b>701</b> | <b>861</b> |
| <b>081</b> | <b>241</b> | <b>401</b> | <b>561</b> | <b>721</b> | <b>881</b> |

**uvmnp** - Hierarchical odd DSPU NPC numbers

**uvmqr** - Hierarchical even DMB NPC numbers

**uv** - Unit number

**m** - Module number

**np, qr** - NPC number within the module  
(qr = np + 1)

The values are listed below:

SR and MJ NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

**SIDE** - Side

**s** - Side number (0 or 1)

**TN** - Transaction

**dddd** - Transaction number

The transaction number can be specified in the UTL::QRY,ERR message (I.55011) to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

## error analysis data bytes

- Troubleshooting data (four-digit hexadecimal)

There can be from 0 through 10 data bytes output depending upon the circuit pack and error condition. The fields are labeled aaaa, bbbb, cccc, dddd, eeee, ffff, gggg, hhhh, iiii, and jjjj below for explanation purposes.

For the Digital Multipoint Bridge (DMB),  
C-Bit Processor (CPR),  
Multipoint Junction Unit (MJU), and  
Subrate Multiplexer (SRM)

aaaa DMB Interrupt Register content  
bbbb DMB Interrupt Mask Register content

For the DMB only

cccc cme 0 reply - word 2  
dddd cme 0 reply - word 1  
eeee cme 1 reply - word 2  
ffff cme 1 reply - word 1  
gggg conf 0 reply - word 2  
hhhh conf 0 reply - word 1  
iiii conf 1 reply - word 2  
jjjj conf 1 reply - word 1

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**70** DMB access error (e.g. pack not there )  
**71** DMB serial access error (pack not there)  
**72** DMB parallel access error  
**73** DMB bits stuck in exercise register  
**74** DMB data processing error  
**75** Multiple data parity error, CCB problem  
**76** DMB clock error  
**77** Multiple clock errors, CCB/SYNC problem  
**78** DMB FIFO error  
**79** Possible power failure on side  
**7A** DMB control memory error 0 (used for trans)  
**7B** DMB control memory error 1 (used for trans)  
**7C** Control Memory 0 control ram parity error  
**7D** Control Memory 1 control ram parity error  
**7E** Control Memory 0 control interface error  
**7F** Control Memory 1 control interface error  
**80** Control Memory 0 loss of sync error

**cc**    *Explanation*

|           |                                              |
|-----------|----------------------------------------------|
| <b>81</b> | Control Memory 1 loss of sync error          |
| <b>82</b> | Control Memory 0 DMB input data parity error |
| <b>83</b> | Control Memory 1 DMB input data parity error |
| <b>84</b> | DMB conference error 0 ( used for trans)     |
| <b>85</b> | DMB conference error 1 ( used for trans)     |
| <b>86</b> | Conference 0 control interface error         |
| <b>87</b> | Conference 1 control interface error         |
| <b>88</b> | Conference 0 control ram parity error        |
| <b>89</b> | Conference 1 control ram parity error        |
| <b>8A</b> | Conference 0 DMB input data parity error     |
| <b>8B</b> | Conference 1 DMB input data parity error     |
| <b>8C</b> | Conference 0 DMB device (chip) error         |
| <b>8D</b> | Conference 1 DMB device (chip) error         |
| <b>8E</b> | Bad Ram Data in DMB device (bits alarms)     |
| <b>8F</b> | Bad Ram Data in DMB device (bits alarms)     |
| <b>98</b> | CPR serial access error                      |
| <b>99</b> | CPR clock error                              |
| <b>9A</b> | CPR processor interface failure              |
| <b>9B</b> | CPR input data interface error               |
| <b>9C</b> | CPR D-Bit interface parity error             |
| <b>9E</b> | CPR control memory or state machine failure  |
| <b>9F</b> | CPR FIFO FRDY/FFULL stuck bit                |
| <b>BF</b> | MJU serial access error                      |
| <b>C0</b> | MJU clock error                              |
| <b>C1</b> | MJU processor interface failure              |
| <b>C2</b> | MJU input data interface failure             |
| <b>C3</b> | MJU error correction circuitry failure       |
| <b>C4</b> | MJU control memory failure                   |
| <b>C5</b> | MJU output block failure                     |
| <b>C6</b> | MJU sampling circuitry failure               |
| <b>C7</b> | MJU control memory or state machine failure  |
| <b>C8</b> | SRM serial access error                      |
| <b>C9</b> | SRM clock error                              |
| <b>CA</b> | SRM processor interface failure              |
| <b>CB</b> | SRM input data interface failure             |
| <b>CC</b> | SRM error correction block failure           |
| <b>CD</b> | SRM control memory failure                   |
| <b>CE</b> | SRM multiplexor block failure                |
| <b>CF</b> | SRM output block failure                     |
| <b>D5</b> | Illegal/unknown condition code               |
| <b>6D</b> | Invalid FPA state                            |

## **ERR,ESR,NPC,TN,EVENT,COND**

### **ERROR RECOVERY FTU NPC**

#### **Explanation Of Command**

This message indicates that an alarm was detected in a facility terminating unit Network Processing Circuit. The specific alarm type is identified by the error condition code.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

**I** hh:mm:ss xy,ww    **ERR**[ **ESR**] **NPC** uvmnp-wxkqr **TN** dddd \\  
**2 LN MSG:**  
**EVENT** eeee <error analysis data bytes>[ **COND** cc] **COMPL**

## Explanation Of Parameters

**ERR**    - Error recovery

**ESR**    - Error source register

The ESR keyword is not output if the register content cannot be read.

**NPC**    - Network processing circuit

**[s]abc**        - The 3- or 4-digit nonhierarchical NPC number denoting beginning of range specification

**[t]def**        - The 3- or 4-digit nonhierarchical NPC number denoting end of range specification

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number for beginning of range

**wxkqr** - Hierarchical NPC number for end of range

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in message I.55011 (in PDS, UTL::QRY,ERR or in MML, RTRV-LOG::ERR) to retrieve the content of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The EVENT number can be specified in message I.55011 (in PDS, UTL::QRY,ERR or in MML, RTRV-LOG::ERR) to retrieve the content of the DACS II error recovery log file which contains the data of this error recovery event.

## **error analysis data bytes**

- Troubleshooting data

Six bytes of 4-digit hexadecimal troubleshooting data, labeled for explanatory purposes below, as aaaa, bbbb, cccc, dddd, eeee, and ffff.

**aaaa** - Dual digroup card (DDC) ESR0 and ESR1

The first two digits (left to right) report ESR0 and the second two digits report ESR1

**bbbb** - Unused

**cccc** - DDC hardware and channel controller

**dddd** - DDC transceiver A Tferr & Rserr register

**eeee** - DDC transceiver B Tferr & Rserr register

**ffff** - DDC Transceiver transmit slip

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                     |
|-----------|-------------------------------------|
| <b>3D</b> | DPC ROM error                       |
| <b>3E</b> | DPC loss of timing                  |
| <b>3F</b> | OOS RAM test ran while IS           |
| <b>53</b> | NPC bus error                       |
| <b>54</b> | NPC can not be accessed             |
| <b>55</b> | NPC is alarming on FC               |
| <b>56</b> | Facility Processor Sanity Error     |
| <b>57</b> | SYNC Error                          |
| <b>58</b> | Channel controller loss of clock    |
| <b>59</b> | Channel controller frame sync error |
| <b>5A</b> | CC configuration register error     |
| <b>5B</b> | CC instruction ram error            |
| <b>5C</b> | CC parity error                     |
| <b>5D</b> | CC transmit data error              |
| <b>5E</b> | CC receiver data error              |
| <b>5F</b> | CC exercise error                   |
| <b>60</b> | CC summary bit error                |
| <b>61</b> | Hard RAM error                      |
| <b>62</b> | Hard ROM check error                |
| <b>63</b> | Hard Error stuck bit                |
| <b>64</b> | Transceiver A stuck bit             |
| <b>65</b> | Transceiver A transmit slip         |
| <b>66</b> | Transceiver A Error                 |
| <b>67</b> | Transceiver B stuck bit             |
| <b>68</b> | Transceiver B transmit slip         |
| <b>69</b> | Transceiver B Error                 |
| <b>6A</b> | Circuit ID Error                    |
| <b>6B</b> | Facility errors                     |

| <b>cc</b> | <i>Explanation</i>             |
|-----------|--------------------------------|
| <b>6C</b> | NPC address parity error       |
| <b>D5</b> | Illegal/unknown condition code |
| <b>6E</b> | Invalid DDC pack id            |

## **ERR,ESR,SYNC,TLI,SSP,TN,EVENT,COND**

### **ERROR RECOVERY SYNC TLI SSP**

#### **Explanation Of Command**

This message indicates that error recovery was called to handle an error that occurred in the synchronizer timing link interface sync port. The message also indicates the nature of the error.

If the port on which the error has occurred receives clock information from a dual primary card, then a network processing circuit has been added.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

#### **Nonhierarchical**

[O.01341]

```
I hh:mm:ss xy,ww  ERR[ ESR] SYNC a TLI m SSP b TN dddd \  
EVENT eeee  2 LN MSG:

```

## **Hierarchical**

---

[O.01341]

**I** hh:mm:ss xy,ww    **ERR**[ **ESR**] **SYNC** **a** **TLI** **m** **SSP** **b** **TN** dddd \  
**EVENT** eeee    **2 LN MSG:**  
<synchronizer status data bytes>[ **COND** cccc] **COMPL**

## **Explanation Of Parameters**

---

**ERR**    - Error recovery

**ESR**    - Error source register

The ESR keyword is not output if the register contents cannot be read.

**SYNC**   - Synchronizer

**a**       - SYNC number (0 or 1)

**TLI**    - Timing link interface

**m**       - TLI number (1 through 4)

**SSP**    - Synchronizer sync port

**b**       - SSP number (0 or 1)

**uvmnp** - Hierarchical NPC number

**TN**     - Transaction

**dddd**   - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee**   - Event number

The EVENT number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data of this error recovery event.

## **synchronizer status data bytes**

- Synchronizer status data in binary form

From 0 to 5 bytes may be output, depending upon the synchronizer error condition. In the explanations below the bytes are named "byte 1", "byte 2, and so on. The eight bits of each byte are labeled abcdefgh and are explained below. These bytes appear in the message in numeric order from left to right with "byte 1" first.

Note that if communications between the MP and the SYNC have failed, Error Recovery may not get the correct status data from the SYNC. All bits in "synchronizer status data bytes" will then be set to 1 by default.

### **byte 1 - Timing link status**

| <i>bit</i> | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| a          | Timing link equipped by MC              |
| b          | Timing link declared out-of-service     |
| c          | Timing link out-of-service due to error |
| d          | Associated Timing Extractor TLI error   |
| efgh       | Not used                                |

### **byte 2 - Priority weighting of link, a number from 1 to 8**

### **byte 3 - Framing format, line format, and frequency**

| <i>bits</i> | <i>Explanation</i>                                |
|-------------|---------------------------------------------------|
| abc         | Framing format (valid only for TXB1 or TXB2 TLIs) |
| TXB1        |                                                   |
| 000         | D4                                                |
| 001         | ESF                                               |
| 010         | DDS                                               |
| TXB2        |                                                   |
| 000         | CCS                                               |
| 001         | ERSM                                              |
| 010         | CAS0                                              |
| 011         | CAS1                                              |

de Line format (valid only for TXB1 or TXB2 TLIs)

TXB1

00 Bipolar  
01 B8ZS

TXB2

10 AMI  
11 HDB3

fgh Frequency (TXUC TLI)

000 512 kHz  
001 1.000 MHz  
010 1.544 MHz  
011 2.048 MHz  
100 5.000 MHz

**byte 4 - Mixed status**

*bit Explanation*

a Carrier failure alarm/loss of signal (TXB1, TXB2, and TXCC)  
b Timing signal loss of energy  
c Autobaud failure  
d Frequency offset flag  
e Excessive jitter  
f Phase step  
gh Not used

**byte 5 - Framing status**

*bit Explanation*

a Out of frame  
b Major framing error rate  
c Minor framing error rate  
defgh Not used

**COND** - Condition

**cccc** - Error recovery condition code

**cccc** - Hexadecimal condition code

**cccc**    *Explanation*

**E600**    TL error reported, unknown

**E602**    Timing Extractor type TLI has hardware problem

**E603**    Timing Extractor type TLI has autobaud failure

**E806**    TLI error cleared

## **ERR,ESR,SYNC,TLI,TN,EVENT,COND**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This message indicates that error recovery was called to handle an error that occurred in a synchronizer timing link interface, and also the nature of the error.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01342]

```
I hh:mm:ss xy,ww  ERR [ESR] SYNC a TLI m TN dddd EVENT eeee  \  
2 LN MSG:  
<synchronizer status data bytes> COND cccc COMPL
```

## **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**TLI** - Timing link interface

**m** - TLI number (1 through 4)

**TN** - Transaction

**dddd** - Transaction number

**EVENT** - Event

**eeee** - Event number

synchronizer status data bytes

- Synchronizer status data in binary form

Three bytes of synchronizer status data are output. These bytes are named "byte1", "byte2", and "byte3" in the explanations below. They would appear on output as "byte1 byte2 byte3" in place of "synchronizer status data bytes". The eight bits in each byte are labeled abcdefgh in left to right order. These bits are set to "1" for the listed conditions:

**byte1** - Overall status and configuration

| bit         | Condition                                                 |
|-------------|-----------------------------------------------------------|
| abcd        | TLI type                                                  |
| 0000        | TXB1, 1.544 Mb/s DS1 <b>Extractor</b>                     |
| 0001        | TXB2, 2.048 Mb/s Primary Block <b>(120 OHM) Extractor</b> |
| 0010        | TXCC, Composite Clock <b>Extractor</b>                    |
| 0011        | TXUC, High Level Unipolar Clock <b>Extractor</b>          |
| 0100        | TXRF, Basic System Reference Frequency                    |
| 0101        | TDCC, 64 kb/s Composite Clock Distributor                 |
| 0110        | TDS2, 2.048 MHz Sine Distributor                          |
| <b>0111</b> | <b>TXCP, CEPT 2.048 MHz Sine (120 Ohm) Extractor</b>      |
| e           | TLI is grown                                              |
| f           | TLI out-of-service                                        |
| g           | TLI hardware error                                        |
| h           | Unused bit                                                |

**byte2** - Hardware status and diagnostic results

| bit                                                                                                           | Condition                                                          |
|---------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| a                                                                                                             | Hardware energy detector on the time base strobe signal has failed |
| b                                                                                                             | Loss of time base strobe signal coming from the DPLL               |
| c                                                                                                             | Hardware energy detector on the CRO signal has failed              |
| d                                                                                                             | Loss of reference clock signal coming from the CRO                 |
| <b>Note:</b> These bits have meaning only for TDCC and TDS2 TLIs and when the SYNC is a master timing source. |                                                                    |
| e                                                                                                             | Side 0                                                             |
| f                                                                                                             | Side 1                                                             |
| <b>Note:</b> These bits have meaning only for TE TLIs.                                                        |                                                                    |
| For TXB1 or TXB2 TLIs:                                                                                        |                                                                    |
| Framer chip on side 0 (e) and/or side 1 (f) has failed.                                                       |                                                                    |
| For TXCC TLIs:                                                                                                |                                                                    |

## **ERR,ESR,SYNC,TN,EVENT,COND**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This message indicates that error recovery was called to handle an error that occurred in the specified synchronizer. The message also indicates the nature of the error.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01331]

I hh:mm:ss xy,ww ERR [ESR] SYNC a TN dddd EVENT eeee \  
2 LN MSG:  
<byte1> <byte2> <byte3> <byte4> <byte5> COND cccc COMPL

## **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**TN** - Transaction

**dddd** - Transaction number

**EVENT** - Event

**eeee** - Event number

**byte1,**

**byte2,**

...,

**byte5** - Synchronizer status data bytes

Synchronizer status data in binary form. The number of data bytes ranges from 1 to 5, depending upon the synchronizer error type. Each byte has eight bits labeled abcdefgh in left to right order.

If main processor to synchronizer communication has failed, Error Recovery may not get the correct status data from the Synchronizer. All bits in "synchronizer status data bytes" will then be set to 1 by default.

**byte1** - Synchronizer status data

| bit  | Explanation                  |
|------|------------------------------|
| a    | MC is down flag              |
| b    | SYNC is down flag            |
| c    | Mate SYNC is OOS             |
| d    | Time Base is down            |
| efgh | Timing link inservice status |

**byte2** - Timing link (SSP) inservice status

**byte3** - Synchronizer status data

| bit | Explanation                                                      |
|-----|------------------------------------------------------------------|
| a   | SYNC restart flag                                                |
| b   | Hardware summary, error on DPLL                                  |
| c   | PLL summary, any major cross-couple error                        |
| d   | Cross-couple summary, any major cross-couple error               |
| e   | Clock Reference Oscillator summary error,<br>any major CRO error |
| fgh | unused                                                           |

## **ERR,ESR,TSI,TN,EVENT,COND**

### **ERROR RECOVERY TIME SLOT INTERCHANGE**

#### **Explanation Of Command**

This error recovery message indicates that an error is occurring in the time slot interchange. This message reports an alarm on a time slot interchange circuit pack. The error type is contained in the error condition code.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01353]

```
I hh:mm:ss xy,ww  ERR [ESR] TSI sft TN dddd EVENT eeee  \  
2 LN MSG:  
<error analysis data> COND cc COMPL
```

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents can not be read.

**TSI** - Time slot interchanger

**sft** - TSI identifier

**s** - Cross-connect side (0 or 1)

**f** - FROM unit (1 through 6)

**t** - TO unit (1 through 6)

**TN** - Transaction

**dddd** - Transaction number

**EVENT** - Event

**eeee** - Event number

#### error analysis data

- The error analysis data consists of from 2 to 10 four-digit hexadecimal fields labeled regn below. The number of fields reported depends upon the error condition. The data is used for internal troubleshooting purposes only.

For pack id errors and TSI stuck bit errors the data include the pack id and the TSI number.

**regn** - Device register n (n ranges from 2 through 10)

For the TSI identified by sft:

There are 16 TSI devices in a TSI circuit pack.

Each bit set in the summary status register indicates an alarming device on TSI sft.

For each alarming TSI device, the device status register is dumped in device fields <reg1> through <reg2>, one device per register. Up to four devices can dump their status register, per message. If less than four devices are alarming, the fields will have a 0000 value.

## Register Bit Definitions

**reg1** - TSI summary status register

| bit | Definition                 |
|-----|----------------------------|
| 15  | Error on TSI sft device 15 |
| 14  | Error on TSI sft device 14 |
| 13  | Error on TSI sft device 13 |
| 12  | Error on TSI sft device 12 |
| 11  | Error on TSI sft device 11 |
| 10  | Error on TSI sft device 10 |
| 09  | Error on TSI sft device 09 |
| 08  | Error on TSI sft device 08 |
| 07  | Error on TSI sft device 07 |
| 06  | Error on TSI sft device 06 |
| 05  | Error on TSI sft device 05 |
| 04  | Error on TSI sft device 04 |
| 03  | Error on TSI sft device 03 |
| 02  | Error on TSI sft device 02 |
| 01  | Error on TSI sft device 01 |
| 00  | Error on TSI sft device 00 |

reg2,

reg3,

reg4,

**reg5** - TSI device summary status registers 2 through 5

For up to four TSI devices indicated by reg2 through reg5, each device will be represented by a summary status register indicating the following information:

| bit(s) | Definition                              |
|--------|-----------------------------------------|
| 15     | Not used                                |
| 14     | Not used                                |
| 13     | Odd parity over data bits 12 through 00 |
| 12     | TSI memory diagnostic in progress       |
| 11-08  | 4-bit TSI ID                            |
| 07     | Exercise in progress                    |
| 06     | Not used                                |
| 05     | Memory error overflow                   |
| 04     | Failure of memory diagnostic            |
| 03     | Loss of 8 MHz clock                     |
| 02     | Output data error                       |
| 01     | Control RAM parity error                |
| 00     | Microprocessor bus error                |

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- B0** Pack id error, can't read pack
- B1** TSI stuck bit, summary bit set, no devices alarming
- B2** TSI device error
- B3** TSI device id error, cannot read device
- B4** Illegal exercise bits set
- B5** Bus address error
- B6** Device clock error
- B7** Device control ram parity error
- B8** Output data parity error (from an FTM)
- B9** Corresponding CCNI bit is stuck

## **ERR,ESR,UNIT,DSPI,TN,EVENT,COND**

### **ERROR RECOVERY UNIT DSPI**

#### **Explanation Of Command**

This autonomous message reports that DACS II detected an alarm on the specified unit's digital signal processing interface.

#### **Command**

Not applicable.

#### **Completion Message**

[O.01365]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q DSPI TN dddd \  
EVENT eeee 2 LN MSG:  
<error analysis data> COND cc COMPL

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register content cannot be read.

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**DSPI** - Digital signal processing interface

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

#### **error analysis data**

- Troubleshooting data (four-digit hexadecimal)

Six words of troubleshooting data. For purposes of explanation they are here labeled and appear in the the following manner:

aaaa bbbb cccc dddd eeee ffff

| Name | Explanation |
|------|-------------|

| eeee | DSPI Interrupt Capturing Register 1 contents |
|------|----------------------------------------------|

|      |                                              |
|------|----------------------------------------------|
| ffff | DSPI Interrupt Capturing Register 1 contents |
|------|----------------------------------------------|

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 6D** DSPI access error (e.g. pack not there)
- 6E** DSPI bus data parity error
- 6F** DSPI bus address parity error
- D1** Source of error is unknown
- D2** Source of error was not found
- D3** Stuck bit in register
- D5** Illegal/unknown condition code

## **ERR,ESR,UNIT,FC,TN,EVENT,COND**

### **ERROR RECOVERY UNIT FC**

#### **Explanation Of Command**

This autonomous message reports that DACS II has detected an alarm on a given facility terminating unit's format converter.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01364]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q FC sb TN dddd \  
EVENT eeee 2 LN MSG:  
<error analysis data> COND cc COMPL

## **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FC** - Format converter

**sb** - FC identifier

**s** - FC side (0 or 1)

**b** - FC No. (1 through 4)

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

### **error analysis data**

- troubleshooting data (four-digit hexadecimal)

Six words of troubleshooting data. For purposes of explanation they are here labeled and appear in the the following manner:

aaaa bbbb cccc dddd eeee ffff

*Name Explanation*

aaaa Board Level ESR0 & ESR1 content

bbbb Board Level EMR0 & EMR1 content

cccc RF Device ESR0 & EMR0 content

dddd RF Device ESR1 & EMR1 content

eeee RF Device ESR2 & EMR2 content

ffff RF Device & TF Device Status Register content

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                |
|-----------|--------------------------------|
| <b>4C</b> | FC can't be accessed           |
| <b>4D</b> | Timer Error                    |
| <b>4E</b> | Circuit ID Error               |
| <b>4F</b> | Transmit Formatter Error       |
| <b>50</b> | Receiver Formatter Error       |
| <b>51</b> | Sanity Timer Interrupt         |
| <b>52</b> | RF bus error                   |
| <b>D5</b> | Illegal/unknown condition code |

## **ERR,ESR,UNIT,FLI,TN,EVENT,COND**

### **ERROR RECOVERY FLI**

#### **Explanation Of Command**

This message reports that a failure was detected in a facility line interface of a DS3 unit.

#### **Command**

Not applicable.

#### **Completion Message**

[O.01401]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q FLI k TN dddd \  
EVENT eeee 2 LN MSG:  
<error analysis data> COND cc COMPL

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

## Explanation Of Parameters

**ERR** - Error recovery

**ESR** - Error source register

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FLI** - Facility Line Interface

**k** - Side identifier of the FLI

*k*      *Explanation*

S      Service side

P      Protection side

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

error analysis data

- Troubleshooting data.

The error analysis data consists of three two-byte hexadecimal numbers. For explanatory purposes only these numbers are labeled below as a1b1, c1c2, and f1f2. Each byte of a number consists of two hexadecimal characters.

byte      Explanation

a1      Circuit pack identifier

b1      Hardware Firmware version

c1      Communications Interface (CI) esr 1

c2      CI esr 2

f1      FLI esr 1

f2      FLI esr 2

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                         |
|-----------|-----------------------------------------|
| <b>02</b> | Firmware error                          |
| <b>03</b> | Transmit underrun threshold exceeded    |
| <b>04</b> | Bad EMXR Acknowledgement                |
| <b>05</b> | Timeout while waiting for msg from EMXR |
| <b>06</b> | RAM data error                          |
| <b>07</b> | Invalid code checksum                   |
| <b>08</b> | Error in PRISM register                 |
| <b>09</b> | Error in HSCC register                  |
| <b>0A</b> | EPROM checksum error                    |
| <b>0B</b> | Timer 1 error                           |
| <b>0C</b> | Timer 2 error                           |
| <b>0D</b> | DUART error                             |
| <b>0E</b> | MIU access error                        |
| <b>12</b> | FLI register bit stuck                  |
| <b>13</b> | FLI lock and key alarm                  |
| <b>3B</b> | FLI access error                        |
| <b>3C</b> | FLI communication link error            |
| <b>BA</b> | FLI loss of clock                       |
| <b>BB</b> | FLI loss of signal                      |
| <b>BC</b> | FLI circuit id error                    |
| <b>BD</b> | FLI frame sync or internal error        |
| <b>BE</b> | FLI address bus parity error            |
| <b>D2</b> | Source of error was not found           |
| <b>D6</b> | MIU communication link error            |

## **ERR,ESR,UNIT,FMT,TN,EVENT,COND**

### **ERROR RECOVERY FMT**

#### **Explanation Of Command**

This message indicates that a failure was detected in a formatter of a DS3 unit.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01402]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q FMT s TN dddd \  
EVENT eeee 2 LN MSG:

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FMT** - Formatter

**s** - Side identifier of the FMT (0 or 1)

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

error analysis data

- Twelve words of troubleshooting data each consisting of four hexadecimal characters (two hexadecimal bytes). The form and ordering of these words, as they would appear in the output message, is shown below labeled for explanatory purposes.

abm1 e0e1 r0r1 r2r3 r4s0 s1s2 s3s4 t0t1 t2t3 t4u0 u1u2 u3u4

|    |                  |

| t1 | FMT 1RF esr 2    |
| t2 | FMT 2RF esr 2    |
| t3 | FMT 3RF esr 2    |
| t4 | FMT 4RF esr 2    |
| u0 | FMT 0TF status   |
| u1 | FMT 1TF status   |
| u2 | FMT 2TF status   |
| u3 | FMT 3TF status   |
| u4 | FMT 4TF status   |

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                       |
|-----------|---------------------------------------|
| <b>33</b> | FMT TF control bus error              |
| <b>35</b> | FMT multiple TF network data error    |
| <b>36</b> | FMT single TF network data error      |
| <b>37</b> | FMT TF device or clock receiver error |
| <b>38</b> | FMT multiple TF clock error           |
| <b>39</b> | FMT single TF sync error              |
| <b>3A</b> | FMT multiple TF sync error            |
| <b>D1</b> | Source of error is unknown            |
| <b>D7</b> | FMT communication link error          |
| <b>F0</b> | FMT access error                      |

**cc**    *Explanation*

- F1**    FMT timing error
- F2**    FMT link id error
- F3**    FMT bus timeout
- F4**    FMT serial address parity error
- F5**    FMT 0-4TF timing error
- F6**    FMT 0-4TF timing error
- F7**    FMT error summary 1 stuck bit
- F8**    FMT timing error, RF data parity
- F9**    FMT error summary 2 stuck bit
- FA**    FMT lock override, active select or kill parity
- FB**    FMT FIFO or control PROM error
- FC**    FMT RF control bus error
- FD**    FMT RF port and monitor alarms
- FE**    FMT RF port alarm; no monitor alarms

## **ERR,ESR,UNIT,FTMI,TN,EVENT,COND**

### **ERROR RECOVERY UNIT FTMI**

#### **Explanation Of Command**

This autonomous message indicates that DACS II has detected an alarm on the unit's facility terminating module interface. The error type is indicated by the error condition code.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01363]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q FTMI b TN dddd \  
EVENT eeee 2 LN MSG:  
<error analysis data> COND cc COMPL

## **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FTMI** - Facility Terminating Module Interface

**b** - FTMI No. (1 through 4)

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**ERR** - Error recovery

### **error analysis data**

- Seven words of 4-digit hexadecimal data.

The words are labeled as follows:

aaaa bbbb cccc dddd eeee ffff gggg

**aaaa** - Board level register contents

**bbbb** - CIA device ESR contents

**cccc** - CIB device ESR contents

**dddd** - CIC device ESR contents

**eeee** - CIA device EMR contents

## error analysis data

**- For the KCR1-MXR circuit pack introduced in Release 4.0,**

this data may be output with 0 to 10 fields depending upon the error condition. Each field contains a four-digit hexadecimal number representing troubleshooting data. For identification purposes these fields are labeled as shown below and would appear in the order shown within the message.

m1s1 m2s2 m3s3 h1h2 x1x2 x3x4 y1y2 z1z2 [d1d2 d3d4]

|    |                                                      |
|----|------------------------------------------------------|
| m1 | MXR mask register 1                                  |
| s1 | MXR error source register 1                          |
| m2 | MXR mask register 2                                  |
| s2 | MXR error source register 2                          |
| m3 | MXR mask register 3                                  |
| s3 | MXR error source register 3                          |
| h1 | Hardware error summary 1                             |
| h2 | Hardware error summary 2                             |
| x1 | Transceiver device register 1                        |
| x2 | Transceiver device register 2                        |
| x3 | Transceiver device register 3                        |
| x4 | Transceiver device register 4                        |
| y1 | M13 device ID register                               |
| y2 | Channel controller ESR register                      |
| z1 | Circuit ID & version                                 |
| z2 | Not used                                             |
| d1 | Byte 1 of devc data                                  |
| d2 | Byte 2 of devc data (not used for device CC)         |
| d3 | Byte 3 of devc data (not used for device CC)         |
| d4 | Byte 4 of devc data (not used for devices CC and TX) |

**- For the KCR5-EMXR circuit pack introduced in Release 6.0,**

this data may be output with 0 to ?? fields depending upon the error condition. Each field contains a four-digit hexadecimal number representing troubleshooting data. For identification purposes these fields are labeled as shown below and would appear in the order shown within the message.

## Data Fields

| dn | Description |

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                                     |
|-----------|-----------------------------------------------------|
| <b>14</b> | MXR DS3 loss of signal                              |
| <b>15</b> | MXR unknown error                                   |
| <b>34</b> | MXR M23 summary stuck error                         |
| <b>97</b> | MXR communication link error                        |
| <b>A6</b> | MXR channel controller transmit data error          |
| <b>A7</b> | MXR channel controller receiver data error          |
| <b>A8</b> | MXR channel controller exercise error               |
| <b>A9</b> | MXR channel controller stuck bit error              |
| <b>AA</b> | MXR transceiver framer error                        |
| <b>AB</b> | MXR transceiver receive sync error                  |
| <b>AC</b> | MXR transceiver transmitter error                   |
| <b>AD</b> | MXR M23 device error                                |
| <b>AE</b> | MXR M12 device error                                |
| <b>AF</b> | MXR M12 summary stuck error                         |
| <b>D5</b> | Illegal/unknown condition code                      |
| <b>D8</b> | MXR ROM error                                       |
| <b>D9</b> | MXR LCA error                                       |
| <b>DA</b> | MXR queue overflow                                  |
| <b>DB</b> | MXR channel controller loss of clock                |
| <b>DC</b> | MXR channel controller frame sync error             |
| <b>DD</b> | MXR channel controller configuration register error |
| <b>DE</b> | MXR channel controller instruction ram error        |
| <b>DF</b> | MXR channel controller parity error                 |
| <b>E1</b> | MXR access error (can't access pack)                |
| <b>E2</b> | MXR hard error stuck bit                            |
| <b>E3</b> | MXR facility error stuck bit                        |
| <b>E4</b> | MXR pack is in reset state                          |
| <b>E5</b> | MXR PIF Bus Parity Error                            |
| <b>E6</b> | MXR loss of clock from unselected FLI               |
| <b>E7</b> | MXR 45MHz is not phase locked to system clock       |
| <b>E8</b> | MXR firmware error                                  |
| <b>E9</b> | MXR HSCC device error                               |
| <b>EA</b> | MXR PIF I/O device error                            |
| <b>EB</b> | MXR M13 summary stuck bit error                     |
| <b>EC</b> | MXR transceiver summary stuck bit error             |
| <b>ED</b> | MXR program error                                   |
| <b>EF</b> | MXR RAM error                                       |
| <b>F0</b> | EMXR Timer error                                    |
| <b>F1</b> | EMXR DUART error                                    |

## **ERR,ESR,UNIT,UC,UBX,TN,EVENT,COND**

### **ERROR RECOVERY UNIT**

#### **Explanation Of Command**

This message reports that DACS II detected an alarm on a given units' unit controller or unit bus extender.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01361]

I hh:mm:ss xy,ww ERR[ ESR] UNIT [q]q {UC|UBX} TN dddd \  
EVENT eeee 2 LN MSG:  
<error analysis data> COND cc COMPL

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**ESR** - Error source register

The ESR keyword is not output if the register contents cannot be read.

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**UC** - Unit controller

**UBX** - Unit bus extender

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**EVENT** - Event

**eeee** - Event number

The event number can be specified in UTL::QRY, ERR to retrieve the contents of the DACS II error recovery log file which contains the data for this error recovery event.

#### **error analysis data**

- 2 to 8 words, depending on the unit type, of four hexadecimal digits each containing troubleshooting data.

For a DS3U the words are labeled as follows:

ire0, ire1, ire2, cies, irm0, irm1, irm2, cima

**ire0** - Error source register 0

**ire1** - Error source register 1

**ire2** - Error source register 2

**cies** - Communications interface error source register

**irm0** - MASK register 0

**irm1** - MASK register 1

**irm2** - MASK register 2

**cima** - Communications interface MASK register

For an FTU the words are labeled as follows:

aabb eeff

- aa** - CPU interrupt mask register contents
- bb** - CPU interrupt holding register contents
- ee** - UBX interrupt mask register contents
- ff** - UBX interrupt holding register contents

For a DSPU the words are labeled as follows:

aaaa bbbb cccc dddd eeee ffff

- aaaa** - CPU interrupt holding register contents
- bbbb** - CPU interrupt mask register contents
- cccc** - DSPI interrupt capturing register 0 contents
- dddd** - DSPI interrupt mask register 0 contents
- eeee** - DSPI interrupt capturing register 1 contents
- ffff** - DSPI interrupt mask register 1 contents

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 00** No conditions
- 0F** CPU internal bus error
- 10** CPU parallel bus parity error
- 11** CPU serial bus parity error
- 31** Sanity Time-out
- D0** CPU RAM Parity error
- D1** Source of error is unknown
- D2** Source of error was not found
- D3** Stuck bit in register
- D4** Bad UBX pack
- D5** Illegal/unknown condition code

## **ERR,HARDWARE,TN,COND,EVENT,ACTION**

### **ERROR RECOVERY HARDWARE**

#### **Explanation Of Command**

This message is printed out when applications software attempted some operation on a circuit, but that operation failed. The type of failure is indicated in the condition code. The applications software may have requested some autonomous action on the circuit and that action will be reflected with an autonomous request for removal and/or diagnostics. Additional information can be gathered by querying the error recovery log file, but this will require technical assistance for interpretation.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01392]

```
I hh:mm:ss xy,ww  ERR HARDWARE <entity> 4 LN MSG:
  TN=dddd COND=cc EVENT=xxxx ACTION=<action>
  SOURCE=<source> DP=<dp> PROC=<proc> <load>
  TSARGS=cn [<tsargs>]  COMPL
```

## **Explanation Of Parameters**

---

**ERR** - Error recovery

**HARDWARE**

- Hardware

**TN** - Transaction

**dddd** - Transaction number (hexadecimal)

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**COND** - Condition

**EVENT** - Event

**xxxx** - Event number

**SOURCE** - Source

**source** - Source filename

DACS II internal software filename (up to 12 characters)

**DP** - Decision point

**dp** - Decision point value

Number associated with a particular location in the software file specified in the "source" field. Value is 0- to 8-digit positive decimal number.

**ACTION** - Action

**action** - Action to be taken

| <i>(CBaction</i> | <i>Explanation</i>            |
|------------------|-------------------------------|
| REPORT           | Report only, no action        |
| REMOVE           | Remove processor from service |

**PROC** - Process

**proc** - Process value

**TSARGS** - Trouble shooting arguments

**cn** - The number of trouble shooting arguments that follow (00 through 10)

**tsargs** - List of "count" trouble shooting arguments

**load** - Load number

The load number is a ten digit number of the following form:

abcdefghij

|    |                             |
|----|-----------------------------|
| ab | software generic number     |
| cd | software point issue number |
| ef | software release number     |
| gh | year                        |
| ij | load number                 |

**entity** - DACS II entity involved

**entity**

BTS s  
CCB sf  
CCI s  
CCNI s s  
ETSI sqq  
LINK n  
NPC [s]abc[-[t]def][SIDE s]  
NPC uvmp[-wxkqr][SIDE s]  
SYNC s  
SYNC s TLI m  
TSI sft  
UC [q]q  
UNIT [q]q DSPI  
UNIT [q]q FC sb  
UNIT [q]q FTMI b  
UNIT [q]q MXR n DEV devc  
UNIT [q]q UBX  
UNIT [q]q MIU I  
UNIT [q]q FLI d  
UNIT [q]q FMT k  
UNIT [q]q MMFG y

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                           |
|-----------|-------------------------------------------|
| <b>E0</b> | Hardware database mismatch                |
| <b>E1</b> | Hardware Failure                          |
| <b>E2</b> | Hardware Boot Failed                      |
| <b>E3</b> | Can't access link                         |
| <b>E4</b> | Transmit Time-out                         |
| <b>E5</b> | Receiver Time-out                         |
| <b>E6</b> | softerr failure which forces link removal |
| <b>E7</b> | Unit could not be reset                   |

**cc**    *Explanation*

- E8**    Unit failed sanity check
- E9**    failure to insert TCC
- EA**    failure to remove TCC
- EB**    failed to switch CCN sides
- EC**    NPC's facility queue overflow condition
- ED**    Duplex entity failed diagnostics
- EE**    Lost Clear-To-Send signal on X.25 links
- EF**    Frame Audit reboot DDC failure
- F5**    Packet layer parameters are mismatched between DACS II and the network
- F6**    Failed to write XPC register
- F7**    Transmit time-out because Clear To Send lost
- F8**    R20 counter reaches limit
- F9**    T3 timer expires
- FA**    Too many interrupts or illegal interrupt from XPC

## **ERR,LINK,TN,STATUS**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This message reports that error recovery was called to handle an error occurring in an administrative link.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01321]

I hh:mm:ss xy,ww    ERR LINK a TN dddd STATUS a0 a1 a2 COMPL

## Explanation Of Parameters

**ERR** - Error recovery

**LINK** - Link

**a** - Link number (1 through 6)

**TN** - Transaction

**dddd** - Transaction number

**STATUS** - Status

**a0,**

**a1,**

**a2** - Status data

The following status data is for asynchronous links.

**a0** - Message code

| <i>a0</i> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|    |                                   |
|----|-----------------------------------|
| 00 | Link has gone protocol in-service |
|----|-----------------------------------|

|    |                                       |
|----|---------------------------------------|
| 01 | Link has gone protocol out-of-service |
|----|---------------------------------------|

**a1** - Link mode status

| <i>a1</i> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|    |      |
|----|------|
| 00 | Idle |
|----|------|

|    |                           |
|----|---------------------------|
| 01 | Input message in progress |
|----|---------------------------|

|    |                            |
|----|----------------------------|
| 02 | Output message in progress |
|----|----------------------------|

**a2** - Link interrupt register (hexadecimal)

Bit numbering 76543210

| <i>Bit</i> | <i>Explanation</i> |
|------------|--------------------|
|------------|--------------------|

|   |                |
|---|----------------|
| 7 | Received break |
|---|----------------|

|   |              |
|---|--------------|
| 6 | Parity error |
|---|--------------|

|   |               |
|---|---------------|
| 5 | Framing error |
|---|---------------|

|   |               |
|---|---------------|
| 4 | Overrun error |
|---|---------------|

|   |                   |
|---|-------------------|
| 3 | Transmitter empty |
|---|-------------------|

|   |                   |
|---|-------------------|
| 2 | Transmitter ready |
|---|-------------------|

|   |               |
|---|---------------|
| 1 | Receiver full |
|---|---------------|

|   |                |
|---|----------------|
| 0 | Receiver Ready |
|---|----------------|

If bits 4, 5, and 6 are all set (equal to 1) simultaneously it indicates a transmission error.

The following status data is for synchronous links.

| <i>a0</i> | <i>Explanation</i>                     |
|-----------|----------------------------------------|
| 00        | Session established on virtual circuit |
| 01        | Session closed on virtual circuit      |

| <i>a1</i> | <i>Explanation</i> |
|-----------|--------------------|
| 00        | always set to 00   |

**a2** - Virtual circuit number (hexadecimal)

| <i>a2</i> | <i>Virtual circuit number</i> |
|-----------|-------------------------------|
| 01        | 1                             |
| 02        | 2                             |
| 03        | 3                             |
| 04        | 4                             |
| 05        | 5                             |
| 06        | 6                             |
| 07        | 7                             |
| 08        | 8                             |
| 09        | 9                             |
| 0A        | 10                            |
| 0B        | 11                            |
| 0C        | 12                            |
| 0D        | 13                            |
| 0E        | 14                            |
| 0F        | 15                            |
| 10        | 16                            |

## **ERR,MSG,TO,LOG,DISCARDED**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This autonomous message reports that due to large numbers of error reports being passed through the system, not all transient error events were transferred to the disk. Logging will resume automatically when activity decreases to a manageable level.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01337]

I hh:mm:ss xy,ww ERR MSGS TO LOG DISCARDED COMPL

### **Explanation Of Parameters**

---

**ERR** - Error recovery

**MSGs** - Messages

**TO** - To

**LOG** - Log

**DISCARDED**  
- Discarded

## **ERR,PMEM,SMEM,TN,EVENT,COND**

### **REPORT MEMORY CARD ERROR**

#### **Explanation Of Command**

This autonomous message reports that a hardware error has been detected on the Primary Memory Card (PMEM) or the Secondary Memory Card (SMEM). The message identifies the source of the error by displaying error and status registers. Each bit in a register corresponds to a particular type of error. A specific error exists when its corresponding bit is set to one.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01315]

I hh:mm:ss xy,ww ERR {PMEM|SMEM} TN dddd EVENT eeee COND cc COMPL

### **Explanation Of Parameters**

---

**ERR** - Error

**PMEM** - Primary memory card.

**SMEM** - Secondary memory card.

**TN** - Transaction Number

**dddd** - Four digit (hexadecimal) transaction number

The transaction number is a unique tag used to identify a specific event that is recorded in the error recovery log. Specific events may be retrieved from the error log using message I.55011 if the user knows their transaction numbers.

**EVENT** - Event

**eeee** - Four digit (hexadecimal) event number

The event number is a unique tag used to identify a specific event that is recorded in the error recovery log. Specific events may be retrieved from the error log using message I.55011 if the user knows their event numbers.

## **ERR,PWR,TN**

### **ERROR RECOVERY POWER**

#### **Explanation Of Command**

This message indicates that error recovery was called by DACS II because of a power failure on the frame.

This message also indicates which power supply failed. The 4-digit hexadecimal "fields" of the error status register indicate the failed power source(s). These hexadecimal values must be decoded into their individual bits. A bit set to 1 indicates an errored power source.

#### **Command**

[O.01301]

I hh:mm:ss xy,ww ERR PWR aaaa bbbb cccc dddd TN dddd COMPL

## Explanation Of Parameters

**PWR** - Power

**ERR** - Error recovery

**aaaa** - EMTC ESR0

aaaa is a four-digit hexadecimal number representing the sixteen bits of ESR0. Each bit of this register contains the status of an individual power source. A power source has failed if the bit corresponding to it is set to 1.

| bit # | Explanation                                  |
|-------|----------------------------------------------|
| 15-12 | Unused                                       |
| 11    | CCN/ECCN 1 PWR failure                       |
| 10    | CCN/ECCN 0 PWR failure                       |
| 9     | SYNC 1 PWR failure                           |
| 8     | SYNC 0 PWR failure                           |
| 7     | Unit 7 PWR failure                           |
|       | Unused if non-Capacity Expansion Frame (CEF) |
| 6     | Unused                                       |
| 5     | Unit 6 PWR failure                           |
| 4     | Unit 5 PWR failure                           |
| 3     | Unit 4 PWR failure                           |
| 2     | Unit 3 PWR failure                           |
| 1     | Unit 2 PWR failure                           |
| 0     | Unit 1 PWR failure                           |

**bbbb** - EMTC ESR1

bbbb is similar to aaaa above but represents the sixteen bits of ESR1.

| bit # | Explanation                                                                                               |
|-------|-----------------------------------------------------------------------------------------------------------|
| 15-14 | Unused                                                                                                    |
| 13    | The +12 V disk and tape power unit has failed<br>(484GA, 484GB, or 484GC)                                 |
| 12    | The +5 V main controller power unit has failed<br>(411AA, 411AB, or 411AC)                                |
|       | OR                                                                                                        |
|       | the +/-12 V main controller power unit for communication<br>links has failed<br>(SM565, SM624, or SM565B) |
| 11-00 | Unused                                                                                                    |

**cccc** - EMTC ESR2 (Reserved for future use)

**dddd** - EMT3 ESR3 (Unused if non-CEF)

dddd is similar to aaaa above but represents the sixteen bits of ESR3.

| bit # | Explanation         |
|-------|---------------------|
| 15-9  | Unused              |
| 8     | Unit 16 PWR failure |
| 7     | Unit 15 PWR failure |
| 6     | Unit 14 PWR failure |
| 5     | Unit 13 PWR failure |
| 4     | Unit 12 PWR failure |
| 3     | Unit 11 PWR failure |
| 2     | Unit 10 PWR failure |
| 1     | Unit 9 PWR failure  |
| 0     | Unit 8 PWR failure  |

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified by the UTL::QRY,ERR message to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

## **ERR,SOFTWARE,MC,ERROR,MID,TN,RC,ACTION**

### **ERROR RECOVERY SOFTWARE**

#### **Explanation Of Command**

This output message reports that an error was detected by the software in the indicated processor. The report also gives the error type, the source of the error, and the action taken.

The action taken should be sufficient to recover from the problem, in which case no craft action is necessary. Or the action taken was to isolate the problem and prevent system inconsistencies. In this case, manual action will be required to restore the appropriate entities.

#### **⇒ NOTE:**

All new or unknown occurrences of this error should be reported to the development organizations immediately.

The word "SOFTWARE", in the message text, is replaced by "MC" when the error type is "DISK" or "TAPE".

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

[O.01362]

```
I hh:mm:ss xy,ww   ERR {SOFTWARE|MC} <error type> ERROR 4 LN MSG:
MID=<mid>   TN=dddd RC=<rc> ACTION=<action>   ENTITY=<entity>
SOURCE=<source>   DP=<dp>   PROC=<proc>
TSARGS=<tsargs>   COMPL
```

### Explanation Of Parameters

[illegible]

## SOFTWARE

- Software

**MC** - Main controller

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the content of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

**error type**

- Type of error

| <i>error type</i> | <i>Explanation</i>                                                   |
|-------------------|----------------------------------------------------------------------|
| CHECKSUM          | Text or data checksum error                                          |
| COMMUNICATION     | Difficulty talking to remove<br>processes of processors              |
| CPUDGN            | CPU diagnostic failed                                                |
| DATA BASE         | Error in data base access                                            |
| DBCHECKSUM        | Data base checksum error                                             |
| DISK              | Trouble accessing disk                                               |
| EXCESSIVE INT     | Too many error recovery calls                                        |
| HARDWARE          | External hardware failure                                            |
| JOURNAL           | Trouble sending journal to disk                                      |
| PROGRAM           | Program error, bad internal data passed                              |
| RAMTEST           | Internal RAM test failed                                             |
| RECOVERY          | Internal recovery error                                              |
| REMOTE PROGRAM    | Program error encountered on other<br>processor local process report |
| TAPE              | Trouble accessing tape                                               |
| VMACHINE          | Operating system or interface problem                                |

**ERROR** - Error

**SOURCE** - Source

**source** - Internal DACS II software filename (12 characters)

**DP** - Decision point

**dp** - Decision point value (0- to 8-digit positive decimal number)

Number associated with a specific point in the file specified in  
the source field.

**RC** - Return code

**rc** - Return code value (0- to 8-digit positive or negative number)

Number returned by an internal function.

**ACTION** - Action

**action** - Action to be taken

| <i>action</i> | <i>Explanation</i>                                        |
|---------------|-----------------------------------------------------------|
| RSCOLDBT      | Super Cold Boot                                           |
| REPORT        | Report only, no action                                    |
| HWBOOT        | Hardware boot (boot of processor with existing data base) |
| WMBOOT        | Warm boot (boot of processor with disk data base)         |
| CDBOOT        | Cold boot (boot of processor programs and data base)      |
| REMOVE        | Remove processor from service                             |
| MCOND         | Put frame into MCOND                                      |
| PARK          | Stop processor immediately                                |

**ENTITY** - Entity

**entity** - Entity identifier

| <i>entity</i> | <i>Explanation</i>                     |
|---------------|----------------------------------------|
| MP            | Action on Main Processor               |
| CI            | Action on Communication Interface      |
| MC            | Action on MC                           |
| UNIT [q]q     | Action on specific unit (1 through 16) |
| FRAME         | Frame wide action                      |

**MID** - Mailbox identifier

**mid** - Identifier

**PROC** - Process

**proc** - Process value

**TSARGS** - Trouble shooting arguments

**tsargs** - Trouble shooting arguments value

## **ERR,SYNC,MODE,FAST,HOLDOVER,NORMAL**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This message reports that the active sync has switched to a new operating mode. Additional autonomous actions may be reported (that is, side switch) based on the state of the mate synchronizer.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01366]

```
I hh:mm:ss xy,ww  ERR SYNC a MODE {FAST|HOLDOVER|NORMAL}\
{MATE|CRO|TLI m SSP c} TN dddd  2 LN MSG:
<synchronizer status data bytes> COND cccc COMPL
```

### **Explanation Of Parameters**

| <b>TN</b>       | - Transaction                                                                                                               |
| <b>dddd</b>     | - Transaction number                                                                                                        |
| <b>cccc</b>     | - Error recovery condition code                                                                                             |

## synchronizer status data bytes

- Synchronizer status information (hexadecimal)

Up to five bytes of synchronizer status data. The actual number of bytes output depends upon cccc. The bits of each byte are labeled abcdefgh in that order. The output will appear in the following order:

byte 1, byte 2, byte 3, byte 4, and byte 5.

### byte 1

| <i>bit</i> | <i>Explanation</i>          |
|------------|-----------------------------|
| a          | MC is down flag             |
| b          | SYNC is down flag           |
| c          | Mate SYNC is out-of-service |
| d          | Time Base is down           |

Timing link service status. A bit set to 1 indicates in-service.

| <i>bit</i> | <i>Explanation</i> |
|------------|--------------------|
| e          | TLI1               |
| f          | TLI2               |
| g          | TLI3               |
| h          | TLI4               |

byte 2 - Timing link (SSP) in-service status

A bit set to 1 indicates the indicated entity is in-service

| <i>bit</i> | <i>Explanation</i> |
|------------|--------------------|
| a          | SSP 0 on TLI 1     |
| b          | SSP 1 on TLI 1     |
| c          | SSP 0 on TLI 2     |
| d          | SSP 1 on TLI 2     |
| e          | SSP 0 on TLI 3     |
| f          | SSP 1 on TLI 3     |
| g          | SSP 0 on TLI 4     |
| h          | SSP 1 on TLI 4     |

**byte 3**

| <i>bit</i> | <i>Explanation</i>                                 |
|------------|----------------------------------------------------|
| a          | SYNC restart flag                                  |
| b          | Hardware summary, error on DPLL                    |
| c          | PLL summary, any major cross-couple error          |
| d          | Cross-couple summary, any major cross-couple error |
| e          | CRO summary error, any major CRO error             |
| fgh        | Not used                                           |

**byte 4**

| <i>bit</i> | <i>Explanation</i>                   |
|------------|--------------------------------------|
| ab         | Synchronizer architecture            |
| 00         | Slave in master slave configuration  |
| 01         | Master in master slave configuration |
| 10         | Mutual synchronization system        |
| cde        | Operational stratum field            |
| 000        | Domestic stratum 3                   |
| 011        | Domestic stratum 2                   |
| fg         | PLL locking mode field               |
| 00         | Normal                               |
| 01         | Fast                                 |
| 10         | Holdover                             |
| h          | Hit timing holdover field            |

**byte 5**

| <i>bit</i> | <i>Explanation</i>              |
|------------|---------------------------------|
| ab         | Active timing link source field |
| 00         | Holdover                        |
| 01         | Timing Link                     |
| 10         | Cross couple                    |
| 11         | CRO                             |
| cde        | Active link field               |
| 000        | TLI 1, SSP 0                    |
| 001        | TLI 1, SSP 1                    |
| 010        | TLI 2, SSP 0                    |
| 011        | TLI 2, SSP 1                    |
| 100        | TLI 3, SSP 0                    |
| 101        | TLI 3, SSP 1                    |
| 110        | TLI 4, SSP 0                    |
| 111        | TLI 4, SSP 1                    |
| fgh        | Not used                        |

**COND** - Condition

**cccc** - Hexadecimal condition code

**cccc** *Explanation*

|             |                               |
|-------------|-------------------------------|
| <b>EF00</b> | Unknown what sync switched to |
| <b>EF01</b> | SYNC switched to NORMAL mode  |
| <b>EF02</b> | SYNC switched to HOLDOVER     |
| <b>EF03</b> | SYNC switched to FAST mode    |
| <b>EF04</b> | SYNC switched TLIs/SSPs       |
| <b>EF05</b> | SYNC switched to cross couple |

## Explanation Of Parameters

|             |                                          |
|-------------|------------------------------------------|
| <b>ERR</b>  | - Error recovery                         |
| <b>SYNC</b> | - Synchronizer                           |
| <b>a</b>    | - SYNC number (0 or 1)                   |
| <b>TLI</b>  | - Timing link interface                  |
| <b>m</b>    | - TLI number (1 through 4)               |
| <b>SSP</b>  | - Synchronizer sync port                 |
| <b>b</b>    | - SSP number (0 or 1)                    |
| <b>NPC</b>  | - Network processing circuit             |
| <b>abc</b>  | - Nonhierarchical NPC number             |
| <b>uvmp</b> | - Hierarchical NPC number                |
|             | <b>uv</b> - Unit number                  |
|             | <b>m</b> - Module number                 |
|             | <b>np</b> - NPC number within the module |
| <b>TN</b>   | - Transaction                            |
| <b>dddd</b> | - Transaction number                     |
| <b>ALM</b>  | - Alarm                                  |
| <b>LOS</b>  | - Loss of signal                         |
| <b>LEN</b>  | - Loss of energy                         |
| <b>EXJ</b>  | - Excessive jitter                       |
| <b>PHS</b>  | - Phase step                             |

**00F** - Out of frame

**MAJ** - Major framing error rate

**MIN** - Minor framing error rate

**CLR** - Clear

**byte 1,**  
**byte 2,**

...,

**byte 5** - Synchronizer status bytes

Synchronizer status data in binary form. The number of data bytes ranges from 1 to 5, depending upon the synchronizer error type. These bytes are a coded form of the information shown in "explanation of error condition code". Each byte has eight bits labeled abcdefgh.

If Main Processor to Synchronizer communication has failed, Error Recovery may not get the correct status data from the Synchronizer. All bits in "synchronizer status data bytes" will then be set to 1 by default.

byte 1

| bit  | Explanation                             |
|------|-----------------------------------------|
| a    | Timing link equipped by MC              |
| b    | Timing link declared out-of-service     |
| c    | Timing link out-of-service due to error |
| d    | Associated Timing Extractor TLI error   |

**cccc** - Error recovery condition code

**cccc** - Hexadecimal condition code

**cccc** *Explanation*

**E805** TL error cleared

## **ERR,SYNC,TLI,SSP,TN,ALM,LOS,LEN,EXJ**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This message reports the results of the error recovery process on the synchronizer with the alarms set.

The errors can be of the following types:

- Loss of signal
- Loss of energy
- Excessive jitter
- Phase step
- Out of frame
- Major framing error rate
- Minor framing error rate

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

## Explanation Of Parameters

---

|              |                                |
|--------------|--------------------------------|
| <b>ERR</b>   | - Error recovery               |
| <b>SYNC</b>  | - Synchronizer                 |
| <b>a</b>     | - SYNC number (0 or 1)         |
| <b>TLI</b>   | - Timing link interface        |
| <b>m</b>     | - TLI number (1 through 4)     |
| <b>SSP</b>   | - Synchronizer sync port       |
| <b>b</b>     | - SSP number (0 or 1)          |
| <b>uvmnp</b> | - Hierarchical NPC number      |
| <b>uv</b>    | - Unit number                  |
| <b>m</b>     | - Module number                |
| <b>np</b>    | - NPC number within the module |
| <b>TN</b>    | - Transaction                  |
| <b>dddd</b>  | - Transaction number           |
| <b>ALM</b>   | - Alarm                        |
| <b>LOS</b>   | - Loss of signal               |

**LEN** - Loss of energy

**EXJ** - Excessive jitter

**PHS** - Phase step

**00F** - Out of frame

**MAJ** - Major  
Major framing error rate

**MIN** - Minor  
Minor framing error rate

**SET** - Set

**COND** - Condition

**cccc** - Error recovery condition code

**byte 1,**  
**byte 2,**

...,

**byte 5** - Synchronizer status data bytes

The letters a through h used below are the names given to the individual bits in a synchronizer status data byte. The eight bits in each byte are labeled abcdefgh in left to right order.

**byte 1**

bit Explanation

a Timing link equipped by MC

b Timing link declared out-of-service

c Timing link out-of-service due to error

d Associated Timing Extractor TLI error

efgh Not used

**byte 2** - Priority weighting of link, a number from 1 through 8

**byte 3** - Framing format, line format, and frequency

bit Explanation

abc Framing format (valid only for TXB1 or TXB2 TLIs)

000 D4 (TXB1)

**cccc** - Hexadecimal condition code

**cccc** *Explanation*

**E601** TL out of service or loss of signal

**E602** Timing Extractor type TLI has hardware problem

## **EXC,MACRO**

---

### **EXECUTE MACRO**

#### **Explanation Of Command**

---

This message requests the execution of macro **<name>**. The optional fields **p1**, **p2**, etc., specify parameters used in the macro.

To list the contents of a macro, use the **UTL QRY,LIST,MACRO** command, Message I.54131.

The **NULL** keyword may be used as a parameter.

#### **Command**

---

[I.39301]

```
EXC:FRM xy,SEQ ww:MACRO <macro name>[,(<p1>[,<p2>[,<p3>\  
[,...[,<p10>]]]])]!
```

#### **Completion Message**

---

[O.39301]

```
M hh:mm:ss xy,ww n[vv] EXC MACRO <macro name>\  
[ (<p1>[,<p2>[,<p3>[,...[,<p10>]]]])] COMPL
```

[O.39302]

```
M hh:mm:ss xy,ww n[vv] EXC MACRO <macro name> STOP \  
COMPL
```

[O.39303]

```
M hh:mm:ss xy,ww n[vv] EXC MACRO IN PROGRESS
```

### **Denial Message**

---

[O.39301.01]

M hh:mm:ss xy,ww n[vv] EXC MACRO <macro name> COND cc \  
DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

p1,  
p2,  
p3,

...,  
p10

- Macro parameter values (1 to 7 uppercase alphanumeric characters)

Within a macro a parameter is referred to by #nn. The # sign indicates a parameter reference follows and the nn indicates the position in the command line from which the parameter value will be taken. That is, if the parameter reference #03 is contained in a line within a macro then the third parameter on the EXC::MACRO command line will be substituted for each appearance of the parameter reference #03.

A maximum of 10 parameters can be specified.

**MACRO** - Macro

**macro name**

- Macro name (seven characters maximum length)

The name of a collection of DACS II commands executed as a group.

A macro name is a string of capitalized alphanumeric characters. There are two type of macros; public and private. A private macros is created by a user in space allocated to the user by the system administrator. Only the user that created it can execute or read (LIST) a private macro. A public macro is created by the system administrator and is executable and readable by all users. A public macro name must start with the letter "P". A private macro name must not start with the letter "P".

**STOP** - Indicates that macro execution is stopped

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 62** File is being accessed
- 64** File doesn't exist/can't be accessed
- 68** Incorrect language/addressing mode
- 69** Incorrect number of parameters
- D5** No user is logged in on the link/vc

# FRADTS

---

This section documents the **FRADTS** command.

## **FRADTS,BMCMP**

---

### **FRAME AUDITS**

#### **Explanation Of Command**

---

This completed, autonomously-generated action message from frame audits indicates that the data in MC RAM did not match the data in the DISK. A similar message may be used for MC/UC mismatches.

#### **Command**

---

Not applicable.

#### **Completion Message**

---

Not applicable.

#### **Denial Message**

---

Not applicable.

#### **Autonomous Message**

---

[O.82003]

I hh:mm:ss xy,ww FRADTS BMCMP <ttt> d8 d7 d6 d5 d4 d3 d2 d1 COMPL

### **Explanation Of Parameters**

---

**ttt** - Entity name

*ttt*      *Explanation*

MP      Main processor

CI      Communications interface

U1-U16 Unit controller (1 through 16)

**d8** - Data base file number on disk

**d7** - Invalid page number divided by 100 ( $d7 / 100$ )

**d6** - Invalid page number modulo by 100 ( $d6 \% 100$ )

If RAM page checksum is invalid,  $d5 = d4 = d3 = d2 = d1 = FF$ .

If DACS II cannot get the disk data base file,  $d7 = d5 = FF$ .

## **FRADTS,DGN,DEV**

| d0 | Second byte of the equalization value from MP data base |
| d1 | First byte of the equalization value from MP data base  |
| d2 | Second byte of the equalization value from UC data base |
| d3 | First byte of the equalization value from UC data base  |
| d4 | FTMI number                                             |
| d5 | UNIT number                                             |

005 FTU FTMI right side equalization values are inconsistent

The FTMI right side equalization values in the MP data base do not match those in the UC data base.

- d0 Second byte of the equalization value from MP data base
- d1 First byte of the equalization value from MP data base
- d2 Second byte of the equalization value from UC data base
- d3 First byte of the equalization value from UC data base
- d4 FTMI number
- d5 UNIT number

006 FTU FTMI mode flags are inconsistent

The mode of the FTMI in the MP data base does not match the mode of the FTMI in the UC data base.

- d0 FTMI mode from MP data base
- d1 FTMI mode from UC data base
- d2 Not used
- d3 Not used
- d4 FTMI number
- d5 UNIT number

007 Unit flags are inconsistent

The UNIT equipage flag in the MP data base does not match the UNIT equipage flag in the unit data base.

- d0 UNIT flag from MP data base
- d1 UNIT flag from UC data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 UNIT number

008 Unit Cross-Connect side status flag is inconsistent

The Cross-Connect side status flag in the MP data base does not match the CCN/ECCN side status flag in the unit data base.

- d0 Cross-Connect side flag from MP data base
- d1 Cross-Connect side flag from UNIT data base
- d2 Not used
- d3 Not used
- d4 Cross-Connect side
- d5 UNIT number

009 DS3 FMT equipage inconsistent

FMT equipage in the MP data base is not consistent with that of the unit data base

d0 MP equipage flag  
d1 UA equipage flag  
d2 Not used  
d3 Not used  
d4 FMT Number  
d5 Unit Number

00A DS3 MXR equipage inconsistent

MXR equipage in the MP data base is not consistent with that of the unit data base

d0 MP data base equipage flag  
d1 UA data base equipage flag  
d2 Not used  
d3 Not used  
d4 MXR Number  
d5 Unit Number

00B DS3 MIU equipage inconsistent

MIU equipage in the MP data base is not consistent with that of the Unit data base

d0 MP data base equipage flag  
d1 UA data base equipage flag  
d2 Not used  
d3 Not used  
d4 MIU Number  
d5 Unit Number

00C DS3 FLI equipage inconsistent

FLI equipage in the MP data base is not consistent with that of the Unit data base

d0 MP equipage flag  
d1 UA equipage flag  
d2 Not used  
d3 Not used  
d4 FLI Number  
d5 Unit Number

00D    NPC Transmit Pseudo Framing Word is out of range

The Transmit Pseudo Framing Word is out of range in the MP data base

|    |                                                           |
|----|-----------------------------------------------------------|
| d0 | The Transmit Pseudo Framing Word of NPC from MP data base |
| d1 | Not used                                                  |
| d2 | Not used                                                  |
| d3 | Not used                                                  |
| d4 | NPC number                                                |
| d5 | UNIT number                                               |

00E    NPC Receive Pseudo Framing Word is out of range

The Receive Pseudo Framing Word is out of range in the MP data base

|    |                                                          |
|----|----------------------------------------------------------|
| d0 | The Receive Pseudo Framing Word of NPC from MP data base |
| d1 | Not used                                                 |
| d2 | Not used                                                 |
| d3 | Not used                                                 |
| d4 | NPC number                                               |
| d5 | UNIT number                                              |

00F    NPC AIS Alarm data are inconsistent

The AIS Alarm data of the NPC in the MP data base does not match that in the unit data base

|    |                                               |
|----|-----------------------------------------------|
| d0 | The AIS Alarm data of NPC from MP data base   |
| d1 | The AIS Alarm data of NPC from unit data base |
| d2 | Not used                                      |
| d3 | Not used                                      |
| d4 | NPC number                                    |
| d5 | UNIT number                                   |

011    FTU NPC flags are inconsistent

The FTU (or DSPU) NPC equipage flag in the MP data base does not match the FTU (or DSPU) NPC equipage flag in the Unit data base.

|    |                            |
|----|----------------------------|
| d0 | NPC flag from MP data base |
| d1 | NPC flag from UC data base |
| d2 | Not used                   |
| d3 | Not used                   |
| d4 | NPC number                 |
| d5 | UNIT number                |

012 FTU NPC insertion words are inconsistent

The FTU NPC insertion word in the MP data base does not match the FTU NPC insertion word in the UC data base.

- d0 NPC insertion word from MP data base
- d1 NPC insertion word from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

013 FTU NPC types are inconsistent

The type of the FTU NPC in the MP data base does not match the type of the FTU NPC in the UC data base.

- d0 NPC type from MP data base
- d1 NPC type from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

014 FTU NPC X option values are inconsistent

The X option of the FTU NPC in the MP data base does not match that in the UC data base.

- d0 Second byte of the X option of NPC from MP data base
- d1 First byte of the X option of NPC from MP data base
- d2 Second byte of the X option of NPC from UC data base
- d3 First byte of the X option of NPC from UC data base
- d4 NPC number
- d5 UNIT number

015 FTU NPC Y option values are inconsistent

The Y option of the FTU NPC in the MP data base does not match that in the UC data base.

- d0 Second byte of the Y option of NPC from MP data base
- d1 First byte of the Y option of NPC from MP data base
- d2 Second byte of the Y option of NPC from UC data base
- d3 First byte of the Y option of NPC from UC data base
- d4 NPC number
- d5 UNIT number

016 FTU NPC Z option values are inconsistent

The Z option of the FTU NPC in the MP data base does not match that in the UC data base.

- d0 Second byte of the Z option of NPC from MP data base
- d1 First byte of the Z option of NPC from MP data base
- d2 Second byte of the Z option of NPC from UC data base
- d3 First byte of the Z option of NPC from UC data base
- d4 NPC number
- d5 UNIT number

017 FTU NPC threshold values are inconsistent

The threshold value of the FTU NPC in the MP data base does not match that in the UC data base.

- d0 Second byte of the threshold value of NPC from MP data base
- d1 First byte of the threshold value of NPC from MP data base
- d2 Second byte of the threshold value of NPC from UC data base
- d3 First byte of the threshold value of NPC from UC data base
- d4 NPC number
- d5 UNIT number

018 FTU NPC Signaling field is inconsistent

The FTU NPC SIG field in the MP data base does not match the FTU NPC SIG field in the UC data base.

- d0 NPC SIG field from MP data base
- d1 NPC SIG field from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

019 FTU NPC TS0 bit value is inconsistent

The FTU NPC TS0 bits in the MP data base do not match the FTU NPC TS0 bits in the UC data base.

- d0 NPC TS0 bits from MP data base
- d1 NPC TS0 bits from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

01A FTU NPC loopback field is inconsistent

The FTU NPC LPBK field in the MP data base does not match the FTU NPC LPBK field in the UC data base.

- d0 NPC LPBK field from MP data base
- d1 NPC LPBK field from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

01B FTU NPC TS0M bit value is inconsistent

The FTU NPC TS0M bits in the MP data base do not match the FTU NPC TS0M bits in the UC data base.

- d0 NPC TS0M bits from MP data base
- d1 NPC TS0M bits from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

01C FTU syncmode value is inconsistent

The FTU syncmode in the MP data base does not match the FTU syncmode in the UC data base.

- d0 syncmode from MP data base
- d1 syncmode from UC data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 UNIT number

01D CPR channel modify activated information is inconsistent

The CPR channel modify activated information stored in UC data base does not match that stored in the MP data base.

- d0 Not used
- d1 Not used
- d2 Not used
- d3 Not used
- d4 FTU NPC number
- d5 UNIT number

01E NPC Insertion AIS values are inconsistent

The Insertion AIS of the NPC in the MP data base does not match that in the unit data base

- d0 The AIS Insertion of NPC from MP data base
- d1 The AIS Insertion of NPC from MP data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

01F NPC alarm disable flag values are inconsistent

The alarm disable flag of the NPC in the MP data base does not match that in the unit data base

- d0 Second byte of the alarm disable flag of NPC from MP data base
- d1 First byte of the alarm disable flag of NPC from MP data base
- d2 Second byte of the alarm disable flag of NPC from unit data base
- d3 First byte of the alarm disable flag of NPC from unit data base
- d4 NPC number
- d5 UNIT number

021 CCN side entity flags are inconsistent

The equipage flag of the CCN side entity in the MP data base does not match that in the CCN data base.

- d0 CCN side flag from MP data base
- d1 CCN side flag from CCN data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 CCN side

022 CCN CCNI entity flags are inconsistent

The equipage flag of the CCN CCNI entity in the MP data base does not match that in the CCN data base.

- d0 CCNI flag from MP data base
- d1 CCNI flag from CCN data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 CCN side

023     CCN CCB entity flags are inconsistent

The equipage flag of the CCN CCB entity in the MP data base does not match that in the CCN data base.

- d0     CCB flag from MP data base
- d1     CCB flag from CCN data base
- d2     Not used
- d3     Not used
- d4     CCB number
- d5     CCN side

024     CCN TSI entity flags are inconsistent

The equipage flag of the CCN TSI entity in the MP data base does not match that in the CCN data base.

- d0     CCN TSI flag from MP data base
- d1     CCN TSI flag from CCN data base
- d2     Not used
- d3     CCB number - TO side
- d4     CCB number - FROM side
- d5     CCN side

025     CCN active side flags are inconsistent

The CCN active side reported by the MP data base does not match the CCN active side reported by the CCN data base.

- d0     CCN active side flag MP data base
- d1     CCN active side from CCN data base
- d2     Not used
- d3     Not used
- d4     Not used
- d5     Not used

026     ECCN side entity flags are inconsistent

The equipage flag of the ECCN side entity in the MP data base does not match that in the ECCN data base.

- d0     ECCN side flag from MP data base
- d1     ECCN side flag from ECCN data base
- d2     Not used
- d3     Not used
- d4     Not used
- d5     ECCN side

027 ECCN CCI entity flags are inconsistent

The equipage flag of the ECCN CCI entity in the MP data base does not match that in the ECCN data base.

- d0 CCI flag from MP data base
- d1 CCI flag from ECCN data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 ECCN side

028 ECCN ETSI entity flags are inconsistent

The equipage flag of the ECCN ETSI entity in the MP data base does not match that in the ECCN data base.

- d0 ECCN ETSI flag from MP data base
- d1 ECCN ETSI flag from ECCN data base
- d2 Not used
- d3 Not used
- d4 ETSI number
- d5 ECCN side

029 ECCN active side flags are inconsistent

The ECCN active side reported by the MP data base does not match the ECCN active side reported by the ECCN data base.

- d0 ECCN active side flag MP data base
- d1 ECCN active side from ECCN data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Not used

02A NPC Transmit Pseudo Framing Words are inconsistent

The Transmit Pseudo Framing Word of the NPC in the MP data base does not match that in the unit data base

- d0 The Transmit Pseudo Framing word of NPC from MP data base
- d1 The Transmit Pseudo Framing word of NPC from unit data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

02B NPC Receive Pseudo Framing Word values are inconsistent

The Receive Pseudo Framing Word of the NPC in the MP data base does not match that in the unit data base

- d0 The Receive Pseudo Framing Word of NPC from MP data base
- d1 The Receive Pseudo Framing Word of NPC from unit data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

02C NPC Non Frame Word Setting values are inconsistent

The Non Frame Word Setting of the NPC in the MP data base does not match that in the unit data base

- d0 Fourth byte of the Non Frame Word Setting of NPC from MP data base
- d1 Third byte of the Non Frame Word Setting of NPC from MP data base
- d2 Fourth byte of the Non Frame Word Setting of NPC from unit data base
- d3 Third byte of the Non Frame Word Setting of NPC from unit data base
- d4 NPC number
- d5 UNIT number

02D NPC Transmit and Receive Pseudo Framing word values are inconsistent

The Transmit Pseudo Framing Word of a NPC does not match the Receive Pseudo Framing Word in the MP data base when one of them is set to the Non-Framing Word

- d0 The Transmit Pseudo Framing Word of NPC from MP data base
- d1 The Receive Pseudo Framing Word of NPC from MP data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

032 DSPI entity flags are inconsistent

The equipage flag of the DSPI entity in the MP data base does not match that in the DSPU data base.

- d0 DSPI flag from MP data base
- d1 DSPI flag from UD data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit number

033 HUB-ID value in data bases is inconsistent

The HUB-ID is inconsistent between the MP data base and the UD data base.

- d0 HUB-ID value from MP data base
- d1 HUB-ID value from UD data base
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit number

034 NPC connected to a time slot is inconsistent

The NPC connected to a time slot in the MP data base does not match with the UD data base.

- d0 The connected NPC number from MP data base
- d1 The connected NPC number from UD data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

035 Function block for a time slot is inconsistent

The function block connected to a time slot in the MP data base does not match with the UD data base.

- d0 The connected function block number from MP data base
- d1 The connected function block number from UD data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

036 SRM customer number or MJU branch number is inconsistent

The SRM customer number or MJU branch number in the MP data base does not match with the UD data base.

- d0 The SRM customer number or MJU branch number from MP data base
- d1 The SRM customer number or MJU branch number from UD data base
- d2 Not used
- d3 The SRM number or the MJU number
- d4 The NPC number
- d5 Unit number

037 Time slot rate is inconsistent

The time slot rate in the MP data base does not match with that of the UD data base.

- d0 The time slot rate from MP data base
- d1 The time slot rate from UD data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

038 Time slot functional usage is inconsistent

The functional usage in the MP data base does not match with that of the UD data base.

- d0 the functional usage from MP data base
- d1 the functional usage from UD data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

039 SRDC unexpected errors

An unexpected error was encountered during Subrate Circuit audits.

- d0 The Unit where the error is found
- d1 Not used
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Not used

03B DS3 FLI LBO data base inconsistent

FLI/Line Build Out in the MP data base is not consistent with that of the Unit data base

- d0 MP lbo
- d1 UA lbo
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

03C DS3 MXR data base flag inconsistent

MXR data base flag in the MP data base is not consistent with that of the Unit data base

- d0 MP data base flag
- d1 UA data base flag
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

03D DS3 MXR data base type inconsistent

MXR type in the MP data base is not consistent with that of the Unit data base

- d0 MP data base type
- d1 UA data base type
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

03E DS3 MXR data base xoption inconsistent

MXR 'x' option in the MP data base is not consistent with that of the Unit data base

- d0 MP data base xoption
- d1 UA data base xoption
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

03F DS3 MXR data base yoption inconsistent

MXR 'y' option in the MP data base is not consistent with that of the Unit data base

- d0 MP data base yoption
- d1 UA data base yoption
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

040 DS3 MXR data base zoption inconsistent

MXR 'z' option in the MP data base is not consistent with that of the Unit data base

- d0 MP data base zoption
- d1 UA data base zoption
- d2 Not used
- d3 Not used
- d4 MXR Number
- d5 Unit Number

041 DS3 MXR data base BER threshold inconsistent

MXR 'BER' threshold in the MP data base is not consistent with that of the Unit data base

- d0 MP data base ber threshold
- d1 UA data base ber threshold
- d2 Not used
- d3 Not used
- d4 Unit Number
- d5 MXR Number

042 DS3 MXR data base BER type inconsistent

MXR 'BER' type in the MP data base is not consistent with that of the Unit data base

- d0 MP data base ber type
- d1 UA data base ber type
- d2 Not used
- d3 Not used
- d4 Unit Number
- d5 MXR Number

043 DS3 MIU data base flag inconsistent

MIU data base flag in the MP data base is not consistent with that of the Unit data base

- d0 MP data base flag
- d1 UA data base flag
- d2 Not used
- d3 Not used
- d4 MIU Number
- d5 Unit Number

044 DS3 MIU data base type inconsistent

MIU data base type in the MP data base is not consistent with that of the Unit data base

|    |                   |
|----|-------------------|
| d0 | MP data base type |
| d1 | UA data base type |
| d2 | Not used          |
| d3 | Not used          |
| d4 | MIU Number        |
| d5 | Unit Number       |

045 DS3 MIU data base xoption inconsistent

MIU 'x' option in the MP data base is not consistent with that of the Unit data base

|    |                      |
|----|----------------------|
| d0 | MP data base xoption |
| d1 | UA data base xoption |
| d2 | Not used             |
| d3 | Not used             |
| d4 | MIU Number           |
| d5 | Unit Number          |

046 DS3 MIU data base yoption inconsistent

MIU 'y' option in the MP data base is not consistent with that of the Unit data base

|    |                      |
|----|----------------------|
| d0 | MP data base yoption |
| d1 | UA data base yoption |
| d2 | Not used             |
| d3 | Not used             |
| d4 | MIU Number           |
| d5 | Unit Number          |

047 DS3 MIU data base zoption inconsistent

MIU 'z' option in the MP data base is not consistent with that of the Unit data base

|    |                      |
|----|----------------------|
| d0 | MP data base zoption |
| d1 | UA data base zoption |
| d2 | Not used             |
| d3 | Not used             |
| d4 | MIU Number           |
| d5 | Unit Number          |

048 MMFG data base inhibit flag inconsistent

MMFG inhibit status in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base flag
- d1 UA data base flag
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

049 MMFG data base protected status inconsistent

MMFG protected status in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base status
- d1 UA data base status
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

04A MMFG data base protected index inconsistent

MMFG protected index in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base index
- d1 UA data base index
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

04B MMFG data base protected mode inconsistent

MMFG protected mode in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base mode
- d1 UA data base mode
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

04C MMFG data base service status of MXR P inconsistent

MXR-P service status in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base status
- d1 UA data base status
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

04D MMFG data base service status of MIU P inconsistent

MIU-P service status in the MP data base is not consistent with that of the Unit data base

- d0 Protection switch data base status
- d1 UA data base status
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Unit Number

050 Time slot partner is inconsistent

The time slot's partner time slot in the MP data base does not match with that of the UC data base.

- d0 The partner time slot from MP data base
- d1 The partner time slot from UC data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

052 Time slot TLA state is inconsistent

The time slot's TLA state in the MP data base does not match with that of the UC data base.

- d0 The TLA state from MP data base
- d1 The TLA state from UC data base
- d2 Not used
- d3 The time slot number
- d4 The NPC number
- d5 Unit number

055 RTs external number is inconsistent

An RTs external number in the MP data base does not match with that of the UC data base.

- d0 Left byte of the RT external number in MP data base
- d1 Right byte of the RT external number in MP data base
- d2 Left byte of the RT external number in UC data base
- d3 Right byte of the RT external number in UC data base
- d4 Not used
- d5 The Unit of the RT

056 RTs digroup NPC number is inconsistent

An RTs digroup NPC number in the MP data base does not match with that of the UC data base (d3=2); An RTs digroup NPC number does not match with the associated DCLUs both in the MP data base (d3=1)

- d0 The RT digroup NPC number in MP data base
- d1 The RT digroup NPC number in UC data base
- d2 Index of the digroup (1,2,3,4,5 for DGA,DGB,DGC,DGD,DGP respectively)
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

057 RTs index of protected digroup is inconsistent

An RTs index of protected digroup in the MP data base does not match with that of the UC data base

- d0 The RT index of protected digroup in MP data base
- d1 The RT index of protected digroup in UC data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

058 RTs Zoption is inconsistent

An RTs Zoption in the MP data base does not match with that of the UC data base

- d0 The RT Zoption in MP data base
- d1 The RT Zoption in UC data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

059 RTs inhibit state is inconsistent

An RTs inhibit state in the MP data base does not match with that of the UC data base

- d0 The RT inhibit state in MP data base
- d1 The RT inhibit state in UC data base
- d2 Index of the digroup
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

05A SLC<sup>®</sup> carrier unexpected errors

An unexpected error is encountered during SLC carrier RT audits.

- d0 The Unit where the error is found
- d1 Not used
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Not used

05B This entity is expected to be inservice and equipped

This entity (indicated in d0) is expected to be inservice and equipped.

- d0 1-frame; 2-Unit; 3-channel; 4-time slot;
- d1 The time slot number if applicable
- d2 the channel number if applicable
- d3 The NPC number if applicable
- d4 Unit number if applicable
- d5 Not used

05C Data base is inconsistent with the configuration file

Data in the MP data base do not agree with those in the configuration file.

- d0 Not used
- d1 Not used
- d2 Not used
- d3 Not used
- d4 Not used
- d5 Not used

060 RTs loopback state is inconsistent

An RTs loopback state in the MP data base does not match with that of the UC data base

- d0 The RT loopback state in MP data base
- d1 The RT loopback state in UC data base
- d2 Index of the digroup
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

061 RTs protection status is inconsistent

An RTs protection status in the MP data base does not match with that of the UC data base

- d0 The RT protection status in MP data base
- d1 The RT protection status in UC data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

062 RTs data link status is inconsistent

An RTs data link status in the MP data base does not match with that of the UC data base

- d0 The RT data link in MP data base
- d1 The RT data link in UC data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

063 RTs alarm class is inconsistent

An RTs alarm class in the MP data base does not match with that of the UC data base

- d0 The RT alarm class in MP data base
- d1 The RT alarm class in UC data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

064     RTs SLC carrier mode is inconsistent

An RTs SLC carrier mode in the MP data base does not match with that of the UC data base

- d0     The RT SLC carrier mode in MP data base
- d1     The RT SLC carrier mode in UC data base
- d2     Not used
- d3     Not used
- d4     The RT internal number
- d5     The Unit of the RT

065     Can not find an RT internal number for the associate DCLU of an RT.

Given an RT with SLC 96 carrier mode I or SLC series 5 carrier feature package B, it may have a DCLU with the external number being 10000 greater. But that external number cannot be retrieved from the MP data base.

- d0     Right byte of the DCLUs external number in MP data base
- d1     Left byte of the DCLUs external number in MP data base
- d2     Right byte of the RTs external number in MP data base
- d3     Left byte of the RTs external number in MP data base
- d4     The RT internal number
- d5     The Unit of the RT

066     Cannot find the associate DCLU of an RT.

Given an RT with SLC 96 carrier mode I or SLC series 5 carrier feature package B, it may have a DCLU with the external number being 10000 greater. But such DCLU is not found from the RT list in the MP data base.

- d0     Right byte of the DCLUs external number
- d1     Left byte of the DCLUs external number
- d2     Not used
- d3     Not used
- d4     The DCLU internal number
- d5     The Unit of the RT

069 Invalid internal MJU number or internal NPC number

An NPC indicates there is an MJU allocated to it, after the MJU query returns a different internal MJU number or that MJU is marked to allocate to another NPC.

- d0 the MJU number
- d1 The NPC number
- d2 the UNIT number
- d3 the MJU internal number from the query
- d4 the internal NPC number from the query
- d5 Not used

070 Inconsistent mapping between a facility channel and a time slot.

A channel is connected to a time slot but the time slot does not connect the channel in the MP data base.

- d0 the channel number
- d1 The NPC number
- d2 the UNIT number
- d3 The time slot
- d4 The time slot NPC
- d5 The time slot Unit

071 Inconsistent time slot mapping between a facility channel and a MVEC.

An MVEC is expected to connect to a facility channel but the MP data base shows the channel does not connect to the MVEC.

- d0 the channel number
- d1 The NPC number
- d2 the UNIT number
- d3 the MVEC time slot
- d4 the MVEC NPC
- d5 MVEC Unit

072 Inconsistent time slot mapping a channel to a PCHEC.

A PCHEC is expected to connect to a facility channel but the MP data base shows the channel does not connect to the PCHEC.

- d0 the channel number
- d1 The NPC number
- d2 the UNIT number
- d3 the PCHEC time slot
- d4 the PCHEC NPC
- d5 the PCHEC Unit

073 Inconsistent time slot mapping a channel to a PCHECs parity leg.

A PCHEC parity leg is expected to connect to a facility channel but the MP data base shows the channel does not connect to the leg.

d0 the channel number  
d1 The NPC number  
d2 the UNIT number  
d3 the PCHEC time slot  
d4 the PCHEC NPC  
d5 the PCHEC Unit

074 Inconsistent time slot mapping a channel to a PCHECs data leg

A PCHEC data leg is expected to connect to a facility channel but the MP data base shows the channel does not connect to the leg.

d0 the channel number  
d1 The NPC number  
d2 the UNIT number  
d3 the PCHEC time slot  
d4 the PCHEC NPC  
d5 the PCHEC Unit

076 Invalid time slot assignment to an MJU's master leg.

An MJU's master leg is expected to connect a time slot but the MP data base shows that the time slot does not connect to the master leg.

d0 the MJU number  
d1 The NPC number  
d2 the UNIT number  
d3 the MJU master leg index  
d4 Not used  
d5 Not used

077 Invalid time slot assignment to an MJU's branch leg.

An MJU's branch leg is expected to connect a time slot but the MP data base shows that the time slot does not connect to the branch leg.

d0 the MJU number  
d1 The NPC number  
d2 the UNIT number  
d3 the MJU branch leg  
d4 Not used  
d5 Not used

078 Inconsistent time slot mapping a channel to a PCHECs customer leg.

A PCHEC customer leg is expected to connect to a facility channel but the MP data base shows the channel does not connect to the leg.

d0 the channel number  
d1 The NPC number  
d2 the UNIT number  
d3 the PCHEC time slot  
d4 the PCHEC NPC  
d5 the PCHEC Unit

079 Cascaded MJUs do not have same rate.

An MJU is cascaded with MJU b, their rate must be the same.

d0 the MJU b number  
d1 The NPC number of MJU b  
d2 the UNIT number of MJU b  
d3 the MJU a number  
d4 The NPC number of MJU a  
d5 the UNIT number of MJU a

080 SRM rate is invalid

An SRM rate is invalid.

d0 The SRM number  
d1 The NPC number of SRM  
d2 the UNIT number of SRM  
d3 Not used  
d4 Not used  
d5 Not used

081 Invalid time slot assignment to an SRMs leg.

An SRMs branch leg is expected to connect a time slot but the MP data base shows that the time slot does not connect to the branch leg.

d0 The SRM number  
d1 The NPC number  
d2 the UNIT number  
d3 Index of SRM leg  
d4 Not used  
d5 Not used

084 A DS0A channel does not connect to an EC.

A DS0A channel is expected to connect to an error corrector through a time slot but the MP data base shows that the time slot does not connect to an error corrector.

- d0 the DS0A channel number
- d1 The NPC number of the channel
- d2 the UNIT number of the channel
- d3 The ECs time slot
- d4 The ECs NPC number
- d5 The ECs Unit number

086 RTs external number is inconsistent with DCLU

An RTs external number in the MP data base does not match with that of the DCLU in the MP data base.

- d0 Left byte of the RT external number in MP data base
- d1 Right byte of the RT external number in MP data base
- d2 Left byte of the DCLU external number in MP data base
- d3 Right byte of the DCLU external number in MP data base
- d4 Not used
- d5 The Unit of the RT

089 RTs Zoption is inconsistent with DCLU Zoption

An RTs Zoption in the MP data base does not match with that of the DCLU in the MP data base

- d0 The RT Zoption in MP data base
- d1 The DCLU Zoption in MP data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

090 RTs inhibit state is inconsistent with DCLU

An RTs inhibit state in the MP data base does not match with that of the DCLU in the MP data base

- d0 The RT inhibit state in MP data base
- d1 The DCLU inhibit state in MP data base
- d2 Index of the digroup
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

091 RTs loopback state is inconsistent with DCLU

An RTs loopback state in the MP data base does not match with that of the DCLU in the MP data base

- d0 The RT loopback state in MP data base
- d1 The DCLU loopback state in MP data base
- d2 Index of the digroup
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

093 RTs data link status is inconsistent with DCLU

An RTs data link status in the MP data base does not match with that of the DCLU in the MP data base

- d0 The RT data link in MP data base
- d1 The DCLU data link in MP data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

095 RTs SLC carrier mode is inconsistent with DCLU

An RTs SLC carrier mode in the MP data base does not match with that of the DCLU in the MP data base

- d0 The RT SLC carrier mode in MP data base
- d1 The DCLU SLC carrier mode in MP data base
- d2 Not used
- d3 Not used
- d4 The RT internal number
- d5 The Unit of the RT

102 MP two-way two-point connection types are inconsistent

The two-way two-point connection types in the MP data base do not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

103 MP two-way two-point connection data are inconsistent

The two-way two-point connection data in the MP data base do not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

104 UC two-way two-point connection data are inconsistent

The two-way two-point connection channel data in the UC data base do not match that from MP data base.

- d0 TCC audit result - equal 1 if inconsistency detected
- d1 Flag audit result - equal 1 if inconsistency detected
- d2 Connected NPC audit result - equal 1 if inconsistency detected
- d3 Channel number
- d4 NPC number
- d5 UNIT number

105 CCN two-way two-point connection map error detected

The two-way two-point connection TSI map in the CCN does not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

106 ECCN two-way two-point connection map error detected

The two-way two-point connection ETSI map in the ECCN does not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

112 MP one-way two-point connection types are inconsistent

The one-way two-point connection types in the MP data base do not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

113 MP one-way two-point connection data are inconsistent

The one-way two-point connection data in the MP data base does not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

114 UC one-way two-point connection data are inconsistent

The one-way two-point connection channel data in the UC data base do not match that MP data base.

- d0 TCC audit result - equal 1 if inconsistency detected
- d1 Flag audit result - equal 1 if inconsistency detected
- d2 Connected NPC audit result - equal 1 if inconsistency detected
- d3 Channel number
- d4 NPC number
- d5 UNIT number

115 CCN one-way two-point connection map error detected

The one-way two-point connection TSI map in the CCN does not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

116 CCN unmapped connection error detected

The TSI map shows that there is a connection map to an NPC and channel in CCN data base while the NPC and channel are marked as unmapped in MP data base.

d0 Channel number of the TO side  
d1 NPC number of the TO side  
d2 Unit number of the TO side  
d3 Not used  
d4 Not used  
d5 Not used

121 UC virtual conference leg channel alternate message store (AMS) value is inconsistent

The virtual conference leg channel AMS data in the UC data base does not match the TCC value in the MP data base.

d0 Not used  
d1 Not used  
d2 Not used  
d3 Channel number  
d4 NPC number  
d5 UNIT number

122 UC virtual conference leg channel connected NPC is inconsistent

The connected NPC of the virtual conference leg channel in the UC data base does not match the BBL NPC number from the MP data base.

d0 Not used  
d1 Not used  
d2 Not used  
d3 Channel number  
d4 NPC number  
d5 UNIT number

123 UC virtual conference leg channel flag is inconsistent

The virtual conference leg channel flag in the UC data base does not match the flag from the MP data base.

d0 Not used  
d1 Not used  
d2 Not used  
d3 Channel number  
d4 NPC number  
d5 UNIT number

125 CCN virtual conference leg channel connection map error detected

The two-point connection TSI map in the CCN does not match between the BBL channel and the leg channel.

- d0 Channel number of the BRD leg
- d1 NPC number of the BRD leg
- d2 UNIT number of the BRD leg
- d3 Channel number of the BBL leg
- d4 NPC number of the BBL leg
- d5 UNIT number of the BBL leg

126 ECCN virtual conference leg channel connection map error detected

The two-point connection ETSI map in the ECCN does not match between the BBL channel and the leg channel.

- d0 Channel number of the BRD leg
- d1 NPC number of the BRD leg
- d2 UNIT number of the BRD leg
- d3 Channel number of the BBL leg
- d4 NPC number of the BBL leg
- d5 UNIT number of the BBL leg

127 ECCN one-way two-point connection map error detected

The one-way two-point connection ETSI map in the ECCN does not match between two sides.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

128 ECCN unmapped connection error detected

The ETSI map shows that there is a connection map to an NPC and channel in ECCN data base while they are marked as unmapped in MP data base.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 Unit number of the TO side
- d3 Not used
- d4 Not used
- d5 Not used

- 131 UC BCON leg channel alternate message store (AMS) value is inconsistent

The BCON leg channel AMS data in the UC data base does not match the TCC value from the MP data base.

d0 Not used  
d1 Not used  
d2 Not used  
d3 Channel number  
d4 NPC number  
d5 UNIT number

- 132 UC BCON leg channel connected NPC is inconsistent

The connected NPC of the BCON leg channel in the UC data base does not match the BBL NPC number from the MP data base.

d0 Not used  
d1 Not used  
d2 Not used

- 135 CCN BCON leg channel connection map error detected

The two-point connection TSI map in the CCN does not match between the BBL channel and the leg channel.

d0 Channel number of the BRD leg  
d1 NPC number of the BRD leg  
d2 UNIT number of the BRD leg  
d3 Channel number of the BBL leg  
d4 NPC number of the BBL leg  
d5 UNIT number of the BBL leg

136 ECCN BCON leg channel connection map error detected

The two-point connection ETSI map in the ECCN does not match between the BBL channel and the leg channel.

- d0 Channel number of the BRD leg
- d1 NPC number of the BRD leg
- d2 UNIT number of the BRD leg
- d3 Channel number of the BBL leg
- d4 NPC number of the BBL leg
- d5 UNIT number of the BBL leg

150 UC DMB conference leg channel connected NPC is inconsistent

The connected NPC of the DMB conference leg channel in the UC data base does not match that from MP data base.

- d0 Channel flag in the UC data base
- d1 Connected NPC number
- d2 Connected Unit number
- d3 Channel number
- d4 NPC number
- d5 UNIT number

151 UC DMB conference leg channel alternate message store (AMS) value is inconsistent

The DMB conference leg channel AMS data in the UC data base does not match the TCC value from the MP data base.

- d0 Channel flag in the UC data base
- d1 Connected NPC number
- d2 Connected Unit number
- d3 Channel number
- d4 NPC number
- d5 UNIT number

152 UC DMB conference leg channel flag is inconsistent

The DMB conference leg channel flag in the UC data base does not match the flag from the MP data base.

- d0 Channel flag in the UC data base
- d1 Connected NPC number
- d2 Connected Unit number
- d3 Channel number
- d4 NPC number
- d5 UNIT number

154 CCN one-way DMB conference connection map error detected

The one-way DMB conference connection TSI map in the CCN does not match between two legs.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

155 CCN two-way DMB conference connection map error detected

The two-way DMB conference connection TSI map in the CCN does not match between two legs.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

156 ECCN one-way DMB conference connection map error detected

The one-way DMB conference connection ETSI map in the ECCN does not match between two legs.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

157 ECCN two-way DMB conference connection map error detected

The two-way DMB conference connection ETSI map in the ECCN does not match between two legs.

- d0 Channel number of the TO side
- d1 NPC number of the TO side
- d2 UNIT number of the TO side
- d3 Channel number of the FROM side
- d4 NPC number of the FROM side
- d5 UNIT number of the FROM side

160 UD DMB conference leg is inconsistent

The DMB conference number of the leg channel in the UD data base does not match the number from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg stored in the UD data base
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

161 UD DMB conference leg channel connected NPC is inconsistent

The connected NPC of the DMB conference leg channel in the UD data base does not match the NPC number from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

162 UD DMB conference leg connected conference is inconsistent

The connected conference number of the DMB conference leg channel in the UD data base does not match the number from the MP data base.

- d0 Connected NPC number of the leg from UD data base
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

163 UD DMB conference leg type is inconsistent

The type of the DMB conference leg channel in the UD data base does not match the type from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

164 UD DMB channel tlpin value is inconsistent

The value of transmit level into bridge of the DMB conference leg channel from UD data base does not match that from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

165 UD DMB channel tlpout value is inconsistent

The value of transmit level out of bridge of the DMB conference leg channel from UD data base does not match that from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

166 UD DMB channel noise guard value is inconsistent

The value of noise guard of the DMB conference leg channel from UD data base does not match that from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

167 UD DMB channel echo suppression value is inconsistent

The value of echo suppression of the DMB conference leg channel from UD data base does not match that from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

168 UD DMB channel NTR state is inconsistent

The current NTR state of the DMB conference leg from UD data base does not match that from the MP data base.

- d0 Connected NPC number of the leg
- d1 Connected UC Unit number of the leg
- d2 Conference number of the leg
- d3 Channel number of the leg
- d4 DMB NPC number of the leg
- d5 UNIT number

171 DSPU CPR channel modify activated/monitor enabled information is inconsistent

The CPR channel modify activated/monitor enabled information stored in UD data base does not match that stored in the MP data base.

- d0 Not used
- d1 Not used
- d2 Not used
- d3 Channel number
- d4 CPR NPC number
- d5 UNIT number

172 DSPU CPR channel modify activated/monitor enabled information is inconsistent

The CPR channel modify activated/monitor enabled information stored in UD data base does not match that stored in the CPR hardware.

- d0 Not used
- d1 Not used
- d2 Not used
- d3 Channel number
- d4 CPR NPC number
- d5 UNIT number

173 DSPU CPR liaison C-Bit modify pattern information is inconsistent

The CPR liaison C-Bit modify pattern information stored in UD data base does not match that stored in the CPR hardware.

- d0 Not used
- d1 Not used
- d2 Not used
- d3 Channel number
- d4 CPR NPC number
- d5 UNIT number

174 DSPU CPR pack type is inconsistent

The CPR pack type stored in UD data base does not match with the CPR pack.

| d5 | UNIT number |

208 NPC hardware not in service

The Unit NPC hardware status is not in service but the equipage flag in the UC data base is in service.

|    |             |
|----|-------------|
| d0 | Not used    |
| d1 | Not used    |
| d2 | Not used    |
| d3 | Not used    |
| d4 | NPC number  |
| d5 | UNIT number |

209 UC NPC type not match with hardware

The Unit NPC type in the UC data base does not match with that indicated in the hardware.

- d0 NPC type in hardware
- d1 NPC type in data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

210 FTU FC hardware mode is inconsistent

The FTU FC hardware mode status does not match the FC mode stored in the UC data base.

- d0 Not used
- d1 FC hardware mode
- d2 FC mode in the UC data base
- d3 FC side
- d4 FTMI number
- d5 UNIT number

211 FTU or DS3U NPC channel alternate message store (AMS) value is inconsistent

The FTU or DS3U NPC channel AMS value stored in the unit data base does not match the AMS value from the DDC hardware.

- d0 Not used
- d1 Not used
- d2 Side
- d3 Channel number
- d4 NPC number
- d5 UNIT number

215 DPC NPC TS0M value is inconsistent

The TS0M value stored in UC data base does not match that stored in the DPC hardware.

- d0 NPC TS0M bits from DPC hardware
- d1 NPC TS0M bits from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

216 DPC NPC loopback value is inconsistent

The LPBK value stored in UC data base does not match that stored in the DPC hardware.

- d0 NPC LPBK bits from DPC hardware
- d1 NPC LPBK bits from UC data base
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 UNIT number

217 FTU and DS3U NPC pgfbits in the channel are inconsistent

The pgfbits in the data base do not match the pgfbits stored in the transceiver loopback parity channel hardware. The F and G bits determine the signaling type (16-state, 4-state or transparent). This comparison is only done on domestic NPCs on the RECEIVE side.

- d0 Data base F and G bits
- d1 Transceiver Hardware F and G bits
- d2 CHANNEL side : (Receive side)
- d3 CHANNEL number
- d4 NPC number
- d5 UNIT number

218 FTU NPC Channel AIS flag is inconsistent.

The AIS flag set in the DDC Digital Signal Interface (DSI) hardware register does not match with the associated flag saved in the UC data base.

- d0 AIS flag in the DSI register
- d1 AIS flag in the UC data base
- d2 Not used
- d3 Channel side
- d4 NPC number
- d5 Unit number

220 FTU and DS3U NPC COFAMAJ threshold value is inconsistent

The Change Of Frame Alignment Major value of the FTU NPC threshold value stored in the FTU Unit data base does not match that stored in the DDC hardware.

- d0 Second byte of the cofamaj value from DDC hardware
- d1 First byte of the cofamaj value from DDC hardware
- d2 Second byte of the cofamaj value from UC data base
- d3 First byte of the cofamaj value from UC data base
- d4 NPC number
- d5 UNIT number

221 FTU and DS3U NPC COFAMIN threshold value is inconsistent

The Change Of Frame Alignment Minor value of the FTU NPC NPC threshold value stored in the FTU data base does not match that stored in the DDC hardware.

- d0 Second byte of the cofamin value from DDC hardware
- d1 First byte of the cofamin value from DDC hardware
- d2 Second byte of the cofamin value from UC data base
- d3 First byte of the cofamin value from UC data base
- d4 NPC number
- d5 UNIT number

222 FTU NPC SLIPMAJ threshold value is inconsistent

The Slip Major value stored in the UC data base does not match that stored in the DDC hardware

- d0 Second byte of the slipmaj value from DDC hardware
- d1 First byte of the slipmaj value from DDC hardware
- d2 Second byte of the slipmaj value from UC data base
- d3 First byte of the slipmaj value from UC data base
- d4 NPC number
- d5 UNIT number

223 FTU and DS3U NPC SLIPMIN threshold value is inconsistent

The Slip Minor threshold value stored in the UC data base does not match that stored in the DDC hardware

- d0 Second byte of the slipmin value from DDC hardware
- d1 First byte of the slipmin value from DDC hardware
- d2 Second byte of the slipmin value from UC data base
- d3 First byte of the slipmin value from UC data base
- d4 NPC number
- d5 UNIT number

224 FTU and DS3U NPC SES threshold value is inconsistent

The Severe Errored Seconds value stored in the UC data base does not match that stored in the DDC hardware.

- d0 Second byte of the ses value from DDC hardware
- d1 First byte of the ses value from DDC hardware
- d2 Second byte of the ses value from UC data base
- d3 First byte of the ses value from UC data base
- d4 NPC number
- d5 UNIT number

225 FTU and DS3U NPC ES threshold value is inconsistent

The Errored Seconds value stored in the UC data base does not match that stored in the DDC hardware.

- d0 Second byte of the es value from DDC hardware
- d1 First byte of the es value from DDC hardware
- d2 Second byte of the es value from UC data base
- d3 First byte of the es value from UC data base
- d4 NPC number
- d5 UNIT number

226 FTU and DS3U NPC BERMAJ threshold value is inconsistent

The Bit Error Rate Major value stored in the UC data base does not match that stored in the DDC hardware.

- d0 Second byte of the bermaj value from DDC hardware
- d1 First byte of the bermaj value from DDC hardware
- d2 Second byte of the bermaj value from UC data base
- d3 First byte of the bermaj value from UC data base
- d4 NPC number
- d5 UNIT number

227 FTU and DS3U NPC BERMIN threshold value is inconsistent

The Bit Error Rate Minor value stored in the UC data base does not match that stored in the DDC hardware.

- d0 Second byte of the bermin value from DDC hardware
- d1 First byte of the bermin value from DDC hardware
- d2 Second byte of the bermin value from UC data base
- d3 First byte of the bermin value from UC data base
- d4 NPC number
- d5 UNIT number

228 NPC (DIU/DPC) Error Seconds 15 min. threshold value is inconsistent

The Error Seconds 15 min. (ERS15) threshold value stored in UC data base does not match that stored in the NPC hardware.

- d0 Second byte of the ERS15 value of the NPC from hardware
- d1 First byte of the ERS15 value of the NPC from hardware
- d2 Second byte of the ERS15 value of the NPC from UC data base
- d3 First byte of the ERS15 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

229 DIU NPC Bursty Error Seconds 15 Min threshold value is inconsistent

The Bursty Error Seconds 15 min. threshold value of a DIU NPC stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the BERS15 value of the NPC from hardware
- d1 First byte of the BERS15 value of the NPC from hardware
- d2 Second byte of the BERS15 value of the NPC from UC data base
- d3 First byte of the BERS15 value of the NPC from UC data base
- d4 DIU NPC number
- d5 Unit number

230 NPC (DIU/DPC) Severely Error Seconds 15 min. threshold value is inconsistent

The Severely Error Seconds 15 min. (SERS15) threshold value stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the SERS15 value of the NPC from hardware
- d1 First byte of the SERS15 value of the NPC from hardware
- d2 Second byte of the SERS15 value of the NPC from UC data base
- d3 First byte of the SERS15 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

231 NPC (DIU/DPC) Unavailable Seconds 15 min. threshold value is inconsistent

The Unavailable Seconds 15 min. (US15) threshold value of an NPC stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the US15 value of the NPC from hardware
- d1 First byte of the US15 value of the NPC from hardware
- d2 Second byte of the US15 value of the NPC from UC data base
- d3 First byte of the US15 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

232 NPC (DIU/DPC) Slips 15 min. threshold value is inconsistent

The Slips Error Seconds 15 min. (SLP15) threshold value stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the SLP15 value of the NPC from hardware
- d1 First byte of the SLP15 value of the NPC from hardware
- d2 Second byte of the SLP15 value of the NPC from UC data base
- d3 First byte of the SLP15 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

233 NPC (DIU/DPC) Error Seconds 24 hr. threshold value is inconsistent

The Error Seconds 24 hr. (ESR24) threshold value stored in UC data base does not match that stored in the hardware.

- d0 Second byte of the ERS24 value of the NPC from hardware
- d1 First byte of the ERS24 value of the NPC from hardware
- d2 Second byte of the ERS24 value of the NPC from UC data base
- d3 First byte of the ERS24 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

234 DIU NPC Bursty Error Seconds 24 Min threshold value is inconsistent

The Bursty Error Seconds 24 min. threshold value of a DIU NPC stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the BERS24 value of the NPC from hardware
- d1 First byte of the BERS24 value of the NPC from hardware
- d2 Second byte of the BERS24 value of the NPC from UC data base
- d3 First byte of the BERS24 value of the NPC from UC data base
- d4 DIU NPC number
- d5 Unit number

235 NPC (DIU/DPC) Severely Error Seconds 24 hr. threshold value is inconsistent

The Severely Error Seconds 24 hr. (SERS24) threshold value stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the SERS24 value of the NPC from hardware
- d1 First byte of the SERS24 value of the NPC from hardware
- d2 Second byte of the SERS24 value of the NPC from UC data base
- d3 First byte of the SERS24 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

236 NPC (DIU/DPC) Unavailable Seconds 24 hr. threshold value is inconsistent

The Unavailable Seconds 24 hr. (US24) threshold value stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the US24 value of the NPC from hardware
- d1 First byte of the US24 value of the NPC from hardware
- d2 Second byte of the US24 value of the NPC from UC data base
- d3 First byte of the US24 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

- 237 NPC (DIU/DPC) Slips Error Seconds 24 hr. threshold value is inconsistent

The Slips Error Seconds 24 hr. (SLP24) threshold value stored in the UC data base does not match with that in the hardware.

- d0 Second byte of the SLP24 value of the NPC from hardware
- d1 First byte of the SLP24 value of the NPC from hardware
- d2 Second byte of the SLP24 value of the NPC from UC data base
- d3 First byte of the SLP24 value of the NPC from UC data base
- d4 NPC number
- d5 Unit number

- 238 DPC NPC Degraded Minute 1 hr (DM) threshold value is inconsistent

The Degraded Minute 1 hr. threshold value stored in UC data base does not match that stored in the DPC hardware.

- d0 Second byte of the DM value from DPC hardware
- d1 First byte of the DM value from DPC hardware
- d2 Second byte of the DM value from UC data base
- d3 First byte of the DM value from UC data base
- d4 NPC number
- d5 UNIT number

- 239 DPC NPC Degraded Minute 24 hr (DM24) threshold value is inconsistent

The Degraded Minute 24 hr. threshold value stored in UC data base does not match that stored in the DPC hardware.

- d0 Second byte of the DM24 value from DPC hardware
- d1 First byte of the DM24 value from DPC hardware
- d2 Second byte of the DM24 value from UC data base
- d3 First byte of the DM24 value from UC data base
- d4 NPC number
- d5 UNIT number

- 240 SLC carrier NPC SANE threshold value is inconsistent

The SLC carrier NPC SANE threshold value stored in the UC data base does not match with that stored in the DDC hardware

- d0 Second byte of the sane threshold value from DDC hardware
- d1 First byte of the sane threshold value from DDC hardware
- d2 Second byte of the sane threshold value from UC data base
- d3 First byte of the sane threshold value from UC data base
- d4 NPC number
- d5 UNIT number

241 SLC carrier NPC SAFE threshold value is inconsistent

The SLC carrier NPC SAFE threshold value stored in the UC data base does not match with that stored in the DDC hardware

- d0 Second byte of the SAFE threshold value from DDC hardware
- d1 First byte of the SAFE threshold value from DDC hardware
- d2 Second byte of the SAFE threshold value from UC data base
- d3 First byte of the SAFE threshold value from UC data base
- d4 NPC number
- d5 UNIT number

242 SLC carrier NPC SELF alarm threshold value is inconsistent

The SLC carrier NPC SELF alarm threshold value stored in the UC data base does not match with that stored in the DDC hardware

- d0 Second byte of the SELF alarm threshold value from DDC hardware
- d1 First byte of the SELF alarm threshold value from DDC hardware
- d2 Second byte of the SELF alarm threshold value from UC data base
- d3 First byte of the SELF alarm threshold value from UC data base
- d4 NPC number
- d5 UNIT number

250 HUB-ID value in hardware is inconsistent

The HUB-ID is inconsistent between the MP data base and the hardware.

- d0 HUB-ID value from MP data base
- d1 HUB-ID value from the hardware
- d2 Not used
- d3 Not used
- d4 NPC number
- d5 Unit number

251 The time slot hardware image or control memory is inconsistent

The EC Hardware Image/Control Memory is inconsistent between MP data base and the hardware.

- d0 The EC image value from MP data base
- d1 The EC image value from the hardware
- d2 SRM hardware data
- d3 The time slot number
- d4 The NPC number of the time slot
- d5 The Unit number of the time slot

26F Invalid value of Transmit System Mode register

d0 Not used  
d1 Not used  
d2 Expected value  
d3 Actual value read back from the hardware  
d4 NPC number  
d5 Unit Number

- 270 NPC Daily Near-end Path Coding Violations threshold values are inconsistent

The Daily Near-end Path Coding Violations of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long ANSI threshold value in the hardware
- d1 Long ANSI threshold value in the hardware
- d2 Long ANSI threshold value in the hardware
- d3 Long ANSI threshold value in the hardware
- d4 Long ANSI threshold value in the data base
- d5 Long ANSI threshold value in the data base
- d6 Long ANSI threshold value in the data base
- d7 Long ANSI threshold value in the data base
- d8 NPC number
- d9 UNIT number

- 271 NPC Daily Near-end Path Errorred Seconds threshold values are inconsistent

The Daily Near-end Path Errorred Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long ANSI threshold value in the hardware
- d1 Long ANSI threshold value in the hardware
- d2 Long ANSI threshold value in the hardware
- d3 Long ANSI threshold value in the hardware
- d4 Long ANSI threshold value in the data base
- d5 Long ANSI threshold value in the data base
- d6 Long ANSI threshold value in the data base
- d7 Long ANSI threshold value in the data base
- d8 NPC number
- d9 UNIT number

272     NPC Daily Near-end Path Severely Errored Seconds threshold  
         values are inconsistent

The Daily Near-end Path Severely Errored Seconds of the ANSI NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

d0     Long ANSI threshold value in the hardware  
d1     Long ANSI threshold value in the hardware  
d2     Long ANSI threshold value in the hardware  
d3     Long ANSI threshold value in the hardware  
d4     Long ANSI threshold value in the data base  
d5     Long ANSI threshold value in the data base  
d6     Long ANSI threshold value in the data base  
d7     Long ANSI threshold value in the data base  
d8     NPC number  
d9     UNIT number

273     NPC Daily Near-end Severely Errored Framing Seconds threshold  
         values are inconsistent

The Daily Near-end Severely Errored Framing Seconds of the ANSI NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

d0     Long ANSI threshold value in the hardware  
d1     Long ANSI threshold value in the hardware  
d2     Long ANSI threshold value in the hardware  
d3     Long ANSI threshold value in the hardware  
d4     Long ANSI threshold value in the data base  
d5     Long ANSI threshold value in the data base  
d6     Long ANSI threshold value in the data base  
d7     Long ANSI threshold value in the data base  
d8     NPC number  
d9     UNIT number

- 274      NPC Daily Near-end Controlled Slip Seconds threshold values are inconsistent

The Daily Near-end Controlled Slip Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 275      NPC Daily Near-end Unavailable Seconds threshold values are inconsistent

The Daily Near-end Unavailable Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 276      NPC Daily Near-end Line Coding Violations threshold values are inconsistent

The Daily Near-end Line Coding Violations of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 277      NPC Daily Near-end Line Errored Seconds threshold values are inconsistent

The Daily Near-end Line Errored Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 278      NPC Daily Near-end Line Severely Errored Seconds threshold  
         are inconsistent

The Daily Near-end Line Severely Errored Seconds of the ANSI NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 279      NPC Daily Far-end Path Coding Violations threshold values are  
         inconsistent

The Daily Far-end Path Coding Violations of the ANSI NPC threshold  
value stored in the unit data base does not match that stored in the  
hardware

- d0      Long ANSI threshold value in the hardware
- d1      Long ANSI threshold value in the hardware
- d2      Long ANSI threshold value in the hardware
- d3      Long ANSI threshold value in the hardware
- d4      Long ANSI threshold value in the data base
- d5      Long ANSI threshold value in the data base
- d6      Long ANSI threshold value in the data base
- d7      Long ANSI threshold value in the data base
- d8      NPC number
- d9      UNIT number

27A NPC Daily Far-end Path Errored Seconds threshold values are inconsistent

The Daily Far-end Path Errored Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

|    |                                            |
|----|--------------------------------------------|
| d0 | Long ANSI threshold value in the hardware  |
| d1 | Long ANSI threshold value in the hardware  |
| d2 | Long ANSI threshold value in the hardware  |
| d3 | Long ANSI threshold value in the hardware  |
| d4 | Long ANSI threshold value in the data base |
| d5 | Long ANSI threshold value in the data base |
| d6 | Long ANSI threshold value in the data base |
| d7 | Long ANSI threshold value in the data base |
| d8 | NPC number                                 |
| d9 | UNIT number                                |

27B NPC Daily Far-end Path Severely Errored Seconds threshold values are inconsistent

The Daily Far-end Path Severely Errored Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

|    |                                            |
|----|--------------------------------------------|
| d0 | Long ANSI threshold value in the hardware  |
| d1 | Long ANSI threshold value in the hardware  |
| d2 | Long ANSI threshold value in the hardware  |
| d3 | Long ANSI threshold value in the hardware  |
| d4 | Long ANSI threshold value in the data base |
| d5 | Long ANSI threshold value in the data base |
| d6 | Long ANSI threshold value in the data base |
| d7 | Long ANSI threshold value in the data base |
| d8 | NPC number                                 |
| d9 | UNIT number                                |

27C    NPC Daily Far-end Severely Errored Framing Seconds threshold values are inconsistent

The Daily Far-end Severely Errored Framing Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0    Long ANSI threshold value in the hardware
- d1    Long ANSI threshold value in the hardware
- d2    Long ANSI threshold value in the hardware
- d3    Long ANSI threshold value in the hardware
- d4    Long ANSI threshold value in the data base
- d5    Long ANSI threshold value in the data base
- d6    Long ANSI threshold value in the data base
- d7    Long ANSI threshold value in the data base
- d8    NPC number
- d9    UNIT number

27D    NPC Daily Far-end Controlled Slip Seconds threshold values are inconsistent

The Daily Far-end Controlled Slip Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0    Long ANSI threshold value in the hardware
- d1    Long ANSI threshold value in the hardware
- d2    Long ANSI threshold value in the hardware
- d3    Long ANSI threshold value in the hardware
- d4    Long ANSI threshold value in the data base
- d5    Long ANSI threshold value in the data base
- d6    Long ANSI threshold value in the data base
- d7    Long ANSI threshold value in the data base
- d8    NPC number
- d9    UNIT number

27E    NPC Daily Far-end Unavailable Seconds threshold values are  
inconsistent

The Daily Far-end Unavailable Seconds of the ANSI NPC threshold value  
stored in the unit data base does not match that stored in the  
hardware

|    |                                            |
|----|--------------------------------------------|
| d0 | Long ANSI threshold value in the hardware  |
| d1 | Long ANSI threshold value in the hardware  |
| d2 | Long ANSI threshold value in the hardware  |
| d3 | Long ANSI threshold value in the hardware  |
| d4 | Long ANSI threshold value in the data base |
| d5 | Long ANSI threshold value in the data base |
| d6 | Long ANSI threshold value in the data base |
| d7 | Long ANSI threshold value in the data base |
| d8 | NPC number                                 |
| d9 | UNIT number                                |

27F    NPC Daily Far-end Line Errored Seconds threshold values are  
inconsistent

The Daily Far-end Line Errored Seconds of the ANSI NPC threshold value  
stored in the unit data base does not match that stored in the  
hardware

|    |                                            |
|----|--------------------------------------------|
| d0 | Long ANSI threshold value in the hardware  |
| d1 | Long ANSI threshold value in the hardware  |
| d2 | Long ANSI threshold value in the hardware  |
| d3 | Long ANSI threshold value in the hardware  |
| d4 | Long ANSI threshold value in the data base |
| d5 | Long ANSI threshold value in the data base |
| d6 | Long ANSI threshold value in the data base |
| d7 | Long ANSI threshold value in the data base |
| d8 | NPC number                                 |
| d9 | UNIT number                                |

280      NPC 15-Minute Near-end Path Coding Violations threshold values  
         are inconsistent

The 15-Minute Near-end Path Coding Violations of the ANSI NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

d0      Long ANSI threshold value in the hardware  
d1      Long ANSI threshold value in the hardware  
d2      Long ANSI threshold value in the hardware  
d3      Long ANSI threshold value in the hardware  
d4      Long ANSI threshold value in the data base  
d5      Long ANSI threshold value in the data base  
d6      Long ANSI threshold value in the data base  
d7      Long ANSI threshold value in the data base  
d8      NPC number  
d9      UNIT number

281      NPC 15-Minute Near-end Path Errored Seconds threshold values  
         are inconsistent

The 15-Minute Near-end Path Errored Seconds of the ANSI NPC threshold  
value stored in the unit data base does not match that stored in the  
hardware

d0      Long ANSI threshold value in the hardware  
d1      Long ANSI threshold value in the hardware  
d2      Long ANSI threshold value in the hardware  
d3      Long ANSI threshold value in the hardware  
d4      Long ANSI threshold value in the data base  
d5      Long ANSI threshold value in the data base  
d6      Long ANSI threshold value in the data base  
d7      Long ANSI threshold value in the data base  
d8      NPC number  
d9      UNIT number

282     NPC 15-Minute Near-end Path Severely Errored Seconds threshold values are inconsistent

The 15-Minute Near-end Path Severely Errored Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

d0     Long ANSI threshold value in the hardware  
d1     Long ANSI threshold value in the hardware  
d2     Long ANSI threshold value in the hardware  
d3     Long ANSI threshold value in the hardware  
d4     Long ANSI threshold value in the data base  
d5     Long ANSI threshold value in the data base  
d6     Long ANSI threshold value in the data base  
d7     Long ANSI threshold value in the data base  
d8     NPC number  
d9     UNIT number

283     NPC 15-Minute Near-end Severely Errored Framing Seconds threshold values are inconsistent

The 15-Minute Near-end Severely Errored Framing Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

d0     Long ANSI threshold value in the hardware  
d1     Long ANSI threshold value in the hardware  
d2     Long ANSI threshold value in the hardware  
d3     Long ANSI threshold value in the hardware  
d4     Long ANSI threshold value in the data base  
d5     Long ANSI threshold value in the data base  
d6     Long ANSI threshold value in the data base  
d7     Long ANSI threshold value in the data base  
d8     NPC number  
d9     UNIT number

284 NPC 15-Minute Near-end Controlled Slip Seconds threshold values are inconsistent

The 15-Minute Near-end Controlled Slip Seconds of the ANSI NPC threshold value stored in the unit data base does not match that stored in the hardware

|    |                                            |
|----|--------------------------------------------|
| d0 | Long ANSI threshold value in the hardware  |

| d9 | UNIT number                                |

290 NPC Daily CRC Block Error Count threshold values are inconsistent

The Daily CRC Block Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

291 NPC Daily Framing Error Count threshold values are inconsistent

The Daily Framing Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

292 NPC Daily Out of Frame Seconds threshold values are inconsistent

The Daily Out of Frame Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

293 NPC Errored Seconds threshold values are inconsistent

The Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

- 294      NPC Daily Severely Errored Seconds threshold values are inconsistent

The Daily Severely Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long enhanced-30-channel threshold value in the hardware
- d1      Long enhanced-30-channel threshold value in the hardware
- d2      Long enhanced-30-channel threshold value in the hardware
- d3      Long enhanced-30-channel threshold value in the hardware
- d4      Long enhanced-30-channel threshold value in the data base
- d5      Long enhanced-30-channel threshold value in the data base
- d6      Long enhanced-30-channel threshold value in the data base
- d7      Long enhanced-30-channel threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 295      NPC Daily Controlled Slip Seconds threshold values are inconsistent

The Daily Controlled Slip Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long enhanced-30-channel threshold value in the hardware
- d1      Long enhanced-30-channel threshold value in the hardware
- d2      Long enhanced-30-channel threshold value in the hardware
- d3      Long enhanced-30-channel threshold value in the hardware
- d4      Long enhanced-30-channel threshold value in the data base
- d5      Long enhanced-30-channel threshold value in the data base
- d6      Long enhanced-30-channel threshold value in the data base
- d7      Long enhanced-30-channel threshold value in the data base
- d8      NPC number
- d9      UNIT number

296 NPC Daily Code Violation Count threshold values are inconsistent

The Daily Code Violation Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

297 NPC Daily Unavailable Seconds threshold values are inconsistent

The Daily Unavailable Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

- 298      NPC Daily Unavailable Time Count threshold values are inconsistent

The Daily Unavailable Time Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long enhanced-30-channel threshold value in the hardware
- d1      Long enhanced-30-channel threshold value in the hardware
- d2      Long enhanced-30-channel threshold value in the hardware
- d3      Long enhanced-30-channel threshold value in the hardware
- d4      Long enhanced-30-channel threshold value in the data base
- d5      Long enhanced-30-channel threshold value in the data base
- d6      Long enhanced-30-channel threshold value in the data base
- d7      Long enhanced-30-channel threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 299      NPC Daily Multiframe Alignment Error Count threshold values are inconsistent

The Daily Multiframe Alignment Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0      Long enhanced-30-channel threshold value in the hardware
- d1      Long enhanced-30-channel threshold value in the hardware
- d2      Long enhanced-30-channel threshold value in the hardware
- d3      Long enhanced-30-channel threshold value in the hardware
- d4      Long enhanced-30-channel threshold value in the data base
- d5      Long enhanced-30-channel threshold value in the data base
- d6      Long enhanced-30-channel threshold value in the data base
- d7      Long enhanced-30-channel threshold value in the data base
- d8      NPC number
- d9      UNIT number

- 29A    NPC Daily Far End Block Error Count threshold values are inconsistent

The Daily Far End Block Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0    Long enhanced-30-channel threshold value in the hardware
- d1    Long enhanced-30-channel threshold value in the hardware
- d2    Long enhanced-30-channel threshold value in the hardware
- d3    Long enhanced-30-channel threshold value in the hardware
- d4    Long enhanced-30-channel threshold value in the data base
- d5    Long enhanced-30-channel threshold value in the data base
- d6    Long enhanced-30-channel threshold value in the data base
- d7    Long enhanced-30-channel threshold value in the data base
- d8    NPC number
- d9    UNIT number

- 29B    NPC Daily Far End Errored Seconds threshold values are inconsistent

The Daily Far End Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0    Long enhanced-30-channel threshold value in the hardware
- d1    Long enhanced-30-channel threshold value in the hardware
- d2    Long enhanced-30-channel threshold value in the hardware
- d3    Long enhanced-30-channel threshold value in the hardware
- d4    Long enhanced-30-channel threshold value in the data base
- d5    Long enhanced-30-channel threshold value in the data base
- d6    Long enhanced-30-channel threshold value in the data base
- d7    Long enhanced-30-channel threshold value in the data base
- d8    NPC number
- d9    UNIT number

29C NPC Daily Far End Severely Errored Seconds threshold values are inconsistent

The Daily Far End Severely Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

29D NPC Daily Far End Unavailable Seconds threshold values are inconsistent

The Daily Far End Unavailable Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

- d0 Long enhanced-30-channel threshold value in the hardware
- d1 Long enhanced-30-channel threshold value in the hardware
- d2 Long enhanced-30-channel threshold value in the hardware
- d3 Long enhanced-30-channel threshold value in the hardware
- d4 Long enhanced-30-channel threshold value in the data base
- d5 Long enhanced-30-channel threshold value in the data base
- d6 Long enhanced-30-channel threshold value in the data base
- d7 Long enhanced-30-channel threshold value in the data base
- d8 NPC number
- d9 UNIT number

29E     NPC 15-Minute CRC Block Error Count threshold values are  
         inconsistent

The 15-Minute CRC Block Error Count of the enhanced-30-channel NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

d0     Long enhanced-30-channel threshold value in the hardware  
d1     Long enhanced-30-channel threshold value in the hardware  
d2     Long enhanced-30-channel threshold value in the hardware  
d3     Long enhanced-30-channel threshold value in the hardware  
d4     Long enhanced-30-channel threshold value in the data base  
d5     Long enhanced-30-channel threshold value in the data base  
d6     Long enhanced-30-channel threshold value in the data base  
d7     Long enhanced-30-channel threshold value in the data base  
d8     NPC number  
d9     UNIT number

29F     NPC 15-Minute Framing Error Count threshold values are  
         inconsistent

The 15-Minute Framing Error Count of the enhanced-30-channel NPC  
threshold value stored in the unit data base does not match that  
stored in the hardware

d0     Long enhanced-30-channel threshold value in the hardware  
d1     Long enhanced-30-channel threshold value in the hardware  
d2     Long enhanced-30-channel threshold value in the hardware  
d3     Long enhanced-30-channel threshold value in the hardware  
d4     Long enhanced-30-channel threshold value in the data base  
d5     Long enhanced-30-channel threshold value in the data base  
d6     Long enhanced-30-channel threshold value in the data base  
d7     Long enhanced-30-channel threshold value in the data base  
d8     NPC number  
d9     UNIT number

2A0 NPC 15-Minute Out of Frame Seconds threshold values are inconsistent

The 15-Minute Out of Frame Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A1 NPC 15-Minute Errored Seconds threshold values are inconsistent

The 15-Minute Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A2 NPC 15-Minute Severely Errored Seconds threshold values are inconsistent

The 15-Minute Severely Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A3 NPC 15-Minute Controlled Slip Seconds threshold values are inconsistent

The 15-Minute Controlled Slip Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A4 NPC 15-Minute Code Violation Count threshold values are inconsistent

The 15-Minute Code Violation Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A5 NPC 15-Minute Unavailable Seconds threshold values are inconsistent

The 15-Minute Unavailable Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A6 NPC 15-Minute Unavailable Time Count threshold values are inconsistent

The 15-Minute Unavailable Time Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A7 NPC 15-Minute Multiframe Alignment Error Count threshold values are inconsistent

The 15-Minute Multiframe Alignment Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A8 NPC 15-Minute Far End Block Error Count threshold values are inconsistent

The 15-Minute Far End Block Error Count of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2A9 NPC 15-Minute Far End Errored Seconds threshold values are inconsistent

The 15-Minute Far End Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2AA NPC 15-Minute Far End Severely Errored Seconds threshold values are inconsistent

The 15-Minute Far End Severely Errored Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2AB NPC 15-Minute Far End Unavailable Seconds threshold values are inconsistent

The 15-Minute Far End Unavailable Seconds of the enhanced-30-channel NPC threshold value stored in the unit data base does not match that stored in the hardware

d0 Long enhanced-30-channel threshold value in the hardware  
d1 Long enhanced-30-channel threshold value in the hardware  
d2 Long enhanced-30-channel threshold value in the hardware  
d3 Long enhanced-30-channel threshold value in the hardware  
d4 Long enhanced-30-channel threshold value in the data base  
d5 Long enhanced-30-channel threshold value in the data base  
d6 Long enhanced-30-channel threshold value in the data base  
d7 Long enhanced-30-channel threshold value in the data base  
d8 NPC number  
d9 UNIT number

2B1 NPC Transmit or Receive Pseudo Framing Word values are inconsistent

The Transmit or Receive Pseudo Framing Word of the NPC mismatch between unit data base and the hardware

d0 The Receive Pseudo Framing Word of NPC from hardware  
d1 The Receive Pseudo Framing Word of NPC from unit data base  
d2 The Transmit Pseudo Framing Word of NPC from hardware  
d3 The Transmit Pseudo Framing Word of NPC from unit data base  
d4 NPC number  
d5 UNIT number

2B2 NPC Non Framing Setting values are inconsistent

The Non Framing Setting value the NPC mismatch between unit data base and the hardware

- d0 Fourth byte the Non Framing Setting of NPC from hardware
- d1 Third byte of the Non Framing Setting of NPC from hardware
- d2 Fourth byte of the Non Framing Setting of NPC from unit data base
- d3 Third byte of the Non Framing Setting of NPC from unit data base
- d4 NPC number
- d5 UNIT number

301 CCN sides is unpested (INS) in DB but pested in hardware (BXREG).

- 308 CI links is in-service in DB but out of service in CI hardware data
- d0 Not used
  - d1 Not used
  - d2 Not used
  - d3 Not used
  - d4 Not used
  - d5 link number
- 310 TLR entity priority is different b/t DB and SYNC data (TE and TP)
- d0 Not used
  - d1 SYNC hardware TLR priority
  - d2 Data base priority
  - d3 TLR number
  - d4 TLI number
  - d5 SYNC side
- 311 TLR entity x and y value is different b/t DB and SYNC data
- d0 SYNC hardware y value
  - d1 Data base y value
  - d2 SYNC hardware x value
  - d3 Data base x value
  - d4 [AB] A = TLI number; B = TLR number;
  - d5 SYNC side

312 SYNC entity architect or stratum value is different b/t DB and SYNC.

- d0 SYNC hardware stratum value
  - 0 - domestic stratum 3
  - 1 - CEPT local exchange
  - 2 - CEPT toll exchange
  - 3 - domestic stratum 2
- d1 Data base stratum value
  - 0 - no type defined
  - 1 - stratum 2 sync
  - 2 - stratum 3 sync
  - 3 - CEPT local
  - 4 - CEPT toll
- d2 SYNC hardware architect value
  - 0 - slaved in master-slave system
  - 1 - master in master-slave system
  - 2 - mutual synchronization system
- d3 Data base architect value
  - 0 - no type defined
  - 1 - master in master-slave system
  - 2 - slaved in master-slave system
  - 3 - mutual synchronization system
- d4 Not used
- d5 SYNC side

313 SYNC entity mode is different b/t DB and SYNC data

- d0 Not used
- d1 Not used
- d2 SYNC hardware mode value
  - 0 - normal
  - 1 - fast
  - 2 - holdover
- d3 Data base sync mode value
  - 1 - normal
  - 2 - fast
  - 3 - holdover
- d4 Not used
- d5 SYNC side

314 SYNC timing source or active link is different b/t DB and hardware

d0 SYNC hardware active link

This field is only valid when the source is timing link and the architecture field is slave in the master-slave system

- 0 - TLI #1, Link #0
- 1 - TLI #1, Link #1
- 2 - TLI #2, Link #0
- 3 - TLI #2, Link #1
- 4 - TLI #3, Link #0
- 5 - TLI #3, Link #1
- 6 - TLI #4, Link #0
- 7 - TLI #4, Link #1

d1 Data base sync active link

This field is only valid when the source is timing link and the architecture field is slave in the master-slave system

- 0 - TLI #1, Link #0
- 1 - TLI #1, Link #1
- 2 - TLI #2, Link #0
- 3 - TLI #2, Link #1
- 4 - TLI #3, Link #0
- 5 - TLI #3, Link #1
- 6 - TLI #4, Link #0
- 7 - TLI #4, Link #1

d2 SYNC hardware timing source

- 0 - holdover
- 1 - timing link
- 2 - cross couples
- 3 - CRO

d3 Data base sync timing source

- 1 - holdover
- 2 - timing link
- 3 - cross couples
- 4 - CRO

d4 Not used

d5 SYNC side

315 SYNC TLI type is different b/t DB and SYNC hardware

d0 Not used

d1 Data base TLIs x option if TLI type is TDTYPE

d2 SYNC hardware type

d3 Data base TLI type

d4 TLI number

d5 SYNC side

316 ECCN sides is unpested (INS) in DB but pested in hardware (BXREG).

## GRTH

---

This section documents the **GRTH** command.

## **GRTH,FRAME,CHAR,UID**

### **GROWTH FRAME**

#### **Explanation Of Command**

This command allows the optional frame identifier and unique frame identifier to be set.

Until this command is used, the frame identifier defaults to 00.

#### **⇒ NOTE:**

**Note:** If the frame identifier is protected (hard wired), it cannot be changed by this command.

The **CHAR** field determines the number of characters in the frame identifier (2 is the default).

For DACS II Capacity Expansion Frames (CEF), this command also results in the provisioning of virtual NPCs [9]961, [9]962, [9]963, [9]964, [9]965, and [9]966 (99101, 99102, 99103, 99104, 99105, and 99106 in the hierarchical NPC numbering format), default type VI100.

For Non-CEF frames, this command also results in the provisioning of virtual NPCs 961 and 962 (99101 and 99102 in the hierarchical NPC numbering format), default type VI100. This NPC type may be changed if necessary by the **CHG : NPC, TYPE** command (Message 38211).

#### **Command**

[I.30101]

**GRTH:FRM xy,SEQ ww:FRAME fg[,CHAR m][,UID <uid>]!**

### **Completion Message**

---

[O.30101]

M hh:mm:ss fg,ww n[vv] GRTH FRAME fg CHAR m UID [<uid>] COMPL

### **Denial Message**

---

[O.30101.01]

M hh:mm:ss xy,ww n[vv] GRTH FRAME fg CHAR m UID [<uid>] \  
COND cc DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**FRAME** - Frame

**fg** - Frame identifier. (alphanumeric, 01 through ZZ).

The frame identifier is required. If the disk-stored frame identifier is 00, then this command sets the frame identifier to fg. Until the GRTH::FRAME command is used, the frame number defaults to 00.

The frame identifier is used in input and output messages.

**CHAR** - Character

**m** - The number of characters in the frame identifier. (2 or 3).

**UID** - Unique identifier

**uid** - Unique frame identifier. (1 to 20 alphanumeric characters)

If the UID field is entered, the unique frame identifier will be assigned the value of uid.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**81** Frame ID is protected

## **GRTH,NPC,NPCTG**

### **GROWTH TEST-ACCESS GROUP NPC**

#### **Explanation Of Command**

This command is used to designate a network processing circuit (NPC) as a test-access group NPC (NPCTG).

To provision an individual test-access group (TG) use the GRTH::TG,NPCTG command

#### **Command**

##### **Nonhierarchical**

[I.31401]

GRTH:FRM xy,SEQ ww:NPC [s]abc,NPCTG rrr!

##### **Hierarchical**

[I.31401]

GRTH:FRM xy,SEQ ww:NPC uvmnp,NPCTG rrr!

#### **Completion Message**

##### **Nonhierarchical**

[O.31401]

M hh:mm:ss xy,ww n[vv] GRTH NPC [s]abc NPCTG rrr COMPL

### **Hierarchical**

[O.31401]

M hh:mm:ss xy,ww n[vv] GRTH NPC uvmnp NPCTG rrr COMPL

### **Denial Message**

### **Nonhierarchical**

[O.31401.01]

M hh:mm:ss xy,ww n[vv] GRTH NPC [s]abc NPCTG rrr COND cc DNY

### **Hierarchical**

[O.31401.01]

M hh:mm:ss xy,ww n[vv] GRTH NPC uvmnp NPCTG rrr COND cc DNY

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**NPCTG** - NPC (for) test group

**rrr** - Test-access Group NPC number (1 through 400)  
NPC used as a test-access group NPC.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 01** Subject entity is equipped
- 15** NPC is unequipped
- 26** NPC type error
- 83** Attention: preceding ccode 83 is an anomaly - see problem list
- 85** NPC has been designated as NPCTP
- 10** NPC out of service or failed
- 57** Designated TG or circuit to be tested in process of being rolled
- A1** NPC has been designated as NPCTG
- A2** All channels assigned, cannot be grown as NPCTG

## **GRTH,NPC,NPCTP**

### **GROWTH TEST PORT NPC**

#### **Explanation Of Command**

This message requests the designation of a Network Processing Circuit as a test port NPC.

The growth of an individual test port is described in GRTH,TP.

#### **Command**

##### **Nonhierarchical**

[I.31381]

GRTH:FRM xy,SEQ ww:NPC [s]abc,NPCTP n!

##### **Hierarchical**

[I.31381]

GRTH:FRM xy,SEQ ww:NPC uvmnp,NPCTP n!

#### **Completion Message**

##### **Nonhierarchical**

[O.31381]

COMPL

### **Hierarchical**

[O.31381]

M hh:mm:ss xy,ww n[vv] GRTH NPC uvmnp NPCTP n TPS kk-mm\  
COMPL

### **Denial Message**

### **Nonhierarchical**

[O.31381.01]

M hh:mm:ss xy,ww n[vv] GRTH NPC [s]abc NPCTP n COND cc DNY

### **Hierarchical**

[O.31381.01]

M hh:mm:ss xy,ww n[vv] GRTH NPC uvmnp NPCTP n COND cc DNY

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

## **GRTH,NPC,TYPE**

### **PROVISION DIGITAL SIGNAL PROCESSING UNIT NPC**

#### **Explanation Of Command**

This command is used to request the provisioning of a signaling conversion circuit pack in an integrated facility terminating unit. This pack performs signaling conversion between an E1 NPC and T1 NPC. Two time slots are allocated per cross-connected circuit; one for the E1 side and one for the T1 side. A maximum of 32 cross-connections can be processed per signaling conversion circuit pack.

Only odd numbered NPCs may be provisioned. The next higher even numbered NPC is not available for other NPC types and must be unequipped when the SP100 NPC is provisioned. When specifying a range of NPCs to be provisioned the beginning and end of the range must be specified as odd numbers and must not extend into a domestic module.

## Explanation Of Parameters

**NPC** - Network Processing Circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

**[t]def** - The 3- or 4-digit nonhierarchical NPC number designating the end of a range specification

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

If NPC numbers are expressed in three digits, the valid values are:

SP type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-031</b> | <b>161-191</b> | <b>321-351</b> | <b>481-511</b> | <b>641-671</b> | <b>801-831</b> |

## **GRTH,NPC,TYPE**

### **PROVISION DIGITAL SIGNAL PROCESSING UNIT NPC**

#### **Explanation Of Command**

This command requests the provisioning of a non-FTU (facility terminating unit) type network processing circuit (NPC). There are two NPCs in a non-FTU circuit pack. Although only one network processing circuit is specified in the command, two NPCs will be provisioned; NPCs [s]abc and [s]abc+1. Provisioning of both NPCs will be reported in the output message.

For the Subrate Feature, there is only one network processing circuit per circuit pack.

The growth command results in the provisioning of all NPCs in the circuit pack on both duplicated sides. For subrate circuit packs, there is only one NPC per circuit pack.

## **GRTH,NPC,TYPE,OPTS,IW,X**

---

### **PROVISION NPC TYPE DS**

#### **Explanation Of Command**

---

This SLC® 96 carrier command requests the equipage of network processing circuit (NPC) type **DSxyz**. It may also be used to request the equipage of a range of NPCs. Arguments **x**, **y**, and **z** following **DS** specify the multiframe format for the digroup, line and signaling format, and counting sequence format.

The **OPTS** keyword is used to select prestored values for facility performance parameter alarm thresholds from a secondary data base using the variables **rr** and **m**. **rr** specifies the alarm threshold to be set and **m** selects from the secondary data base one of the prestored values of the given threshold. Values of **rr** range from 01 through 10. There are four values stored for each of the ten facility performance parameters. All unspecified options will be set to the default value 0.

A special code, called the disconnect code (DCC), is transmitted by this NPC on unassigned channels. This code is specified by **pq** in the optional field **IW X'pq**. The default is the unassigned channel code with the value **X'7F**. The DCC may be assigned any 2-digit hexadecimal value.

The execution of this command may be stopped by entering **ABT**.

#### **Command**

---

#### **Nonhierarchical**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number the first NPC number of a range.

**[t]def** - The 3- or 4-digit nonhierarchical NPC number the last NPC number of a range.

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**OPTS** - Options

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected.

**m** - Facility performance parameter threshold index (0 through 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist, that is, must have been programmed, prior to being selected. These other thresholds can be set by using the CHG::SETOP (I.38201) command. Thresholds of all unspecified parameters will be set to the default value associated with m=0. The options field must not be given without the NPC type field.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For DS type NPCs, parameters with values rr = 1 through 10 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| rr | Parameter                             | Threshold                  | Default            |
|----|---------------------------------------|----------------------------|--------------------|
|    |                                       | Value<br>Range             | Threshold<br>Value |
| 01 | Slip major                            | 000 to 255                 | 255                |
| 02 | Slip minor                            | 000 to 255                 | 4                  |
| 03 | Bit Error Rate major                  | 1E-3* to 1E-6 <sup>†</sup> | 1E-3*              |
| 04 | Bit Error Rate minor                  | 1E-3* to 1E-6 <sup>†</sup> | 1E-6               |
| 05 | Errored Seconds <sup>‡</sup>          | 00001 to 65535             | 864                |
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255                 | 225                |
| 07 | Change of Frame Alignment major       | 001 to 511                 | 511                |
| 08 | Change of Frame Alignment minor       | 001 to 255                 | 17                 |
| 09 | Shelf Alarm Near End(SANE)§           | 00001 to 65535             | 00000              |
| 10 | Shelf Alarm Far End(SAFE)§            | 00001 to 65535             | 00000              |

\* 4 for clear-DS1 NPCs or DS type NPCs (default)

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

§ Applicable only to DS type NPCs

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

**Note 3:** The SANE and SAFE parameters are not applicable to DS1yz and DS7yz type NPCs.

**Note 4:** Except for BER, major thresholds may not be equal to or less than the minor thresholds. The BER major threshold can be equal to the BER minor threshold.

**Note:** If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options are still correctly output in this case.

In addition, some parameters are not applicable to all NPCs. Certain parameters may or may not be collected based on NPC type. In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes.

- IW** - Insertion word
- pq** - Insertion word value (hexadecimal)  
  
Variable pq is a user defined insertion word. The default value of pq is 7F. The insertion word FF is recommended for unconnected channels in the SLC® interface and CPI applications.
- [s]jkl** - The 3- or 4-digit nonhierarchical NPC number ( $[s]abc \leq [s]jkl \leq [t]def$ )
- [t]mno** - The 3- or 4-digit nonhierarchical DS TYPE NPC number denoting the end of a range ( $[s]jkl \leq [t]mno \leq [t]def$ )
- uvjkl** - Hierarchical DS TYPE NPC number ( $uvmnp \leq uvjkl \leq uvmno$ )
- uvmno** - Hierarchical DS TYPE NPC number ( $uvjkl \leq uvmno \leq uvqqr$ )
- mmm** - SLIP major alarm threshold (0 through 255)
- nnn** - SLIP minor alarm threshold (0 through 255)
- e** - SLIP major option selection (0 through 3)
- f** - SLIP minor option selection (0 through 3)
- p** - BER major alarm threshold (4 through 6)
- q** - BER minor alarm threshold (4 through 6)
- g** - BER major option selection (0 through 3)
- h** - BER minor option selection (0 through 3)
- rrrrr** - ERS threshold (1 through 65535)
- i** - ERS option selection (0 through 3)
- sss** - SERS threshold (1 through 255)
- j** - SERS option selection (0 through 3)

**ttt** - COFA major alarm threshold (1 through 511)  
**uuu** - COFA minor alarm threshold (1 through 255)  
**k** - COFA major option selection (0 through 3)  
**l** - COFA minor option selection (0 through 3)  
  
**xxxxx** - SANE threshold (0 through 65535)  
**v** - SANE option selection (0 through 3)  
  
**zzzzz** - SAFE threshold (0 through 65535)  
**w** - SAFE option selection (0 through 3)  
  
**ss/n** - First improper values of "rr/m" for which message is denied.  
  
**cc** - Hexadecimal condition code

**cc** *Explanation*

**00** No conditions  
**10** Unit is not equipped  
**11** UC is out of service  
**12** UC is in service but failed  
**13** FTMI is not equipped  
**20** Option rr/m has not been set up on 2nd database  
**21** Minor >= major for SLIP opt  
**22** Minor <= major for BER opt  
**23** Minor >= major for COFA opt  
**24** Unit type error  
**34** NPC type option xyz is unassigned  
**83** NPC type is inconsistent with FTMI type  
**84** Incompatible types of NPCs in a DDC  
**7C** Different DSxyz types are used for DGA/DGP on same DDC for Mode I  
**7F** NPC is not added  
**8A** x & z parameters on DSxyz are inconsistent  
**BE** NPC type option Y is invalid for SLC-96 NPC  
**FD** NPC range crosses unit boundary  
**1A** The facility parameter not programmable for specified x or z parameter  
**0A** Minor Slip threshold disabled before Major Slip threshold

## **GRTH,NPC,TYPE,OPTS,IW,X,INCL,AIS,INFO**

### **GROWTH ANSI NPC**

#### **Explanation Of Command**

This command provisions type DA<sub>xyz</sub> Network Processing Circuits (NPCs) in DACS II Facility Terminating Units and type TA<sub>xyz</sub> (NPCs) in DACS II DS3 Units. A single NPC or a range of NPCs may be provisioned with one input command.

This command also provisions the alert thresholds for DS1 facility performance parameters on the NPC. Default threshold values will be programmed if the optional parameter threshold selection arguments are not specified. The parameter threshold selection arguments are indices into the DACS II threshold database, which must be preconfigured by the user.

The maximum length of this input command must not exceed 208 characters. Any input command longer than 208 characters is treated as a syntax error by DACS II. Options that do not fit into this GRTH command can be specified in additional commands.

An idle code is transmitted on the NPC's unassigned DS0 channels. The idle code is specified by **pq** in the optional field **Iw X'pq** (in this application pq is called the growth insertion word). The growth insertion word may be assigned a 2-digit hexadecimal value. If **pq** is not specified, it will default to the hexadecimal value 7F if the NPC is provisioned with D4 or ESF framing, and to the hexadecimal value 18 if the NPC is provisioned with T1DM framing.

As a protection to users, the INCL keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs provisioned in the D4 format (DA1yz/TA1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h represent the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

For clear DS1 NPCs, the insertion word option is NOT available and the message will be denied if this option is entered. The alarm indication signal is transmitted in the disconnected or idle state.

Since a growth command which addresses a range of NPCs can take considerable time to complete, the ABT command is allowed with this message. If the ABT command is entered, DACS II will stop execution on the current NPC growth and will report what has been completed.

One output message is printed for each NPC requested and successfully provisioned.

Provisioning commands where the specified NPC range crosses a Unit boundary will be denied.

When a provisioning command addressing a range of NPCs is denied for successive NPCs in the range for the same reason, a summary denial message will be output, giving the range of NPC numbers denied and the reason for the denial.

When a provisioning command addressing a range of NPCs within a unit crosses a facility terminating module (FTM) boundary, if the FTM is unequipped or provisioned as a CEPT module, then the FTM will be skipped as a whole, with a summary denial message, as noted below.

- If the type field is specified, and it is inconsistent with the first FTM specified or the first FTM specified is unequipped, the entire command is denied. Otherwise, the specified type field is applied to the entire NPC range.
- If the type field is omitted, the NPC type will default to the type of the first FTM, either domestic or CEPT.

Whether or not the type field is specified, if an FTM, beyond the first one addressed, is of a different type, that entire FTM will be denied.

The execution of the normal completions, or of denials for a reason other than diagnostic failures, then resumes at the next NPC and continues until the end of the range.

A summary denial message will not be issued for denial of range NPC RESTORE commands if the reason is an NPC diagnostic failure. In this case, there is one output

message for each NPC in the range.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, denoting the beginning of a range specification

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, denoting the end of a range specification

The valid numbers are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**uvmpnp** - Hierarchical NPC number

**uvkqr** - Specific Hierarchical NPC number

**uv** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid numbers are:

DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**TYPE** - Type

**mnxyz** - NPC-type identifier

*mn*      *Explanation*

DA      FTU DS1 ANSI NPC type

TA      DS3U DS1 ANSI NPC type

If the NPC type field is omitted in the input command, the NPC will default to a non-ANSI DE100 NPC type in an FTU and a non-ANSI TE100 NPC type in a DS3U.

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the **y** field if the **x** field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TE<sub>x</sub>3<sub>z</sub>**).

**OPTS** - Options

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected

**m** - Facility performance parameter threshold index (0 through 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist; that is, must have been programmed prior to being selected. The non-default thresholds can be set by using the CHG::SETOP (I.38201) command. Thresholds of all unspecified parameters will be set to the default value associated with m=0. The options field must not be given without the NPC type field.

Clear-DS1 ANSI NPCs (DA<sub>x</sub>y9/TA<sub>x</sub>y9) provide the same set of path and line performance monitoring parameters that are provided by channelized DS1 ANSI NPC types. ANSI NPCs in DS3 Units (TA<sub>x</sub>yz) do not provide near-end DS1 line performance monitoring parameters.

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the following Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the following Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. All of the following Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the following Near-end Path parameters are valid, but the Near-End Line parameters (rr = 47-49, 63-65) are invalid. The only valid Far-end parameter is Unavailable Seconds (rr = 55,71).

| rr | Parameter                                           | Threshold Value Range  | Default Threshold Value |
|----|-----------------------------------------------------|------------------------|-------------------------|
| 41 | Daily Near-end Path Coding Violations               | 000000000 to 134217727 | 132960 <sup>†</sup>     |
| 42 | Daily Near-end Path Errored Seconds                 | 00000 to 86400         | 648                     |
| 43 | Daily Near-end Path Severely Errored Seconds        | 00000 to 86400         | 100                     |
| 44 | Daily Near-end Severely Errored Framing Seconds     | 00000 to 86400         | 17                      |
| 45 | Daily Near-end Controlled Slip Seconds              | 00000 to 86400         | 4                       |
| 46 | Daily Near-end Unavailable Seconds                  | 00000 to 86400         | 10                      |
| 47 | Daily Near-end Line Coding Violations               | 000000000 to 134217727 | 133400                  |

† The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default Daily value is 691.

‡ The value shown applies to ESF framing and is a count of CRC errors. When the DS1 has D4 or T1DM framing, framing errors are counted and the default 15-Minute value is 72.

**Note:** If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options will still be correctly output.

In addition, certain parameters do not apply to ANSI NPCs depending on whether the NPC is equipped in a Facility Terminating Unit (DA type NPCs) or a DS3 Unit (TA type NPCs) and whether the NPC is using ESF framing or not. In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes.

**IW** - Insertion word

**pq** - Hexadecimal value of the growth insertion word (GIW). Specifies the insertion word in the transmit direction on unassigned channels.

An eight-bit code, called the growth insertion word, is transmitted by this NPC on unassigned DS0 channels. This code is specified by the optional keyword IW and its argument pq. This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the cross-connect insertion word, which is transmitted when the disconnect message with the DCC option is used.

Although any 2-digit hexadecimal code may be used, the default GIWs are:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                                                               |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | Unassigned Channel Code (UAC), the default value for DA/TA type NPCs provisioned with D4 or ESF framing.                                                                                                                         |
| 18        | Unassigned Multiplex Code (UMC), the default value for DA/TA type NPCs provisioned with T1DM framing. This value should only be provisioned with T1DM framing (DA4yz or TA4yz), so the growth command enforces this restriction. |

For Clear-DS1 NPCs, the insertion word option is **NOT** available and the message will be denied if this option is entered.

The alarm indication signal (AIS) is transmitted in the disconnect or idle state.

**INCL** - Inclusive

As a protection to users, this keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs grown in the D4 format (DA1yz/TA1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word "pq" is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h define the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

**AIS** - Alarm indication signal

**INFO** - Information

Information message (not an alarm). This is the default option.

**MJ** - Major

### **GROWTH NPC**

#### **Explanation Of Command**

This message requests the equipage of the facility terminating unit network processing circuit, type DExyz/TExyz. It may also be used to request the equipage of a range of NPCs.

The optional alarm threshold arguments are indices used to select prestored values for facility performance parameter alarm thresholds from a secondary data base.

A special code, called the idle code, is transmitted by this NPC on unassigned channels. The idle code is specified by pq in the optional field **IW X'pq** (generally called the growth insertion word) or it defaults to the hexadecimal value 7F (unassigned channel code) for DE type NPCs. The growth insertion word may be assigned any 2-digit hexadecimal value.

As a protection to users, the INCL keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs grown in the D4 format (DA1yz/TA1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h represent the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

For clear DS1 NPCs, the insertion word option is NOT available and the message will be denied if this option is entered. The alarm indication signal is transmitted in the disconnect or idle state.

Since range provisioning commands could take considerable time to complete, the ABT command is allowed with this message. If the ABT command is entered, DACS II will quit on execution of the current NPC growth and will report what has been finished.

One output message is printed for each NPC requested and successfully provisioned.

Provisioning commands where the specified NPC range crosses a Unit boundary will be denied.

When a provisioning command addressing a range of NPCs is denied for successive NPCs in the range for the same reason, a summary denial message will be output, giving the range of NPC numbers denied and the reason for the denial.

When a provisioning command addressing a range of NPCs within a unit crosses a facility terminating module (FTM) boundary, if the FTM is unequipped or provisioned as a CEPT module, then the FTM will be skipped as a whole, with a summary denial message, as noted below.

- If the type field is specified, and it is inconsistent with the first FTM specified or the first FTM specified is unequipped, the entire command is denied. Otherwise, the specified type field is applied to the entire NPC range.
- If the type field is omitted, the NPC type will default to the type of the first FTM, either domestic or CEPT.

Whether or not the type field is specified, if an FTM, beyond the first one addressed, is of a different type, that entire FTM will be denied.

The execution of the normal completions, or of denials for a reason other than diagnostic failures, then resumes at the next NPC and continues until the end of the range.

A summary denial message will not be issued for denial of range NPC RESTORE commands if the reason is an NPC diagnostic failure. In this case, there is one output message for each NPC in the range.

## Command

---

### Nonhierarchical

---

[I.31352]

```
GRTH:FRM xy,SEQ ww:NPC [s]abc[-[t]def][,TYPE mnxyz]\

## Autonomous Message

Not applicable.

## Explanation Of Parameters

- [s]abc** - The 3- or 4-digit nonhierarchical NPC number, denoting the beginning of a range specification
- [t]def** - The 3- or 4-digit nonhierarchical NPC number, denoting the end of a range specification

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number  
**uvkqr** - Specific Hierarchical NPC number

**uv** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The valid numbers are:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**TYPE** - Type

If the NPC type field is omitted, the NPC type will be set to the default type.

**mnxyz** - NPC-type identifier

| <i>mn</i>  | <i>Type</i>                         |
|------------|-------------------------------------|
| DE         | FTU DS1 NPC; default type is DE100  |
| TE         | DS3U DS1 NPC; default type is TE100 |
| <b>xyz</b> | - Format specification              |

DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

**OPTS** - Options

**rr** - Facility performance parameter number

Variable rr specifies the parameter whose alarm threshold is being selected

**m** - Facility performance parameter threshold index (0 through 3)

Variable m is used to select threshold values previously programmed for rr. The default threshold value, the value selected by m=0, for each parameter is shown in the table below under the column heading "Default Threshold Value". Threshold values selected by m=1 through m=3 must exist; that is, must have been programmed prior to being selected. These other thresholds can be set by using the CHG::SETOP (I.38201) command. Thresholds of all unspecified parameters will be set to the default value associated with m=0. The options field must not be given without the NPC type field.

Clear-DS1 FTU NPCs have a limited number of parameters for performance monitoring, 01 through 04 only. Clear-DS1 DS3U NPCs have only parameters 01 and 02.

For DE type NPCs, parameters with values rr = 1 through 8 are valid.  
For TE type NPCs, parameters with values rr = 1 through 8 are valid.  
For Clear-DS1 DE type NPCs, parameters with values rr = 1 through 4 are valid.  
For Clear-DS1 TE type NPCs, parameters with values rr = 1 through 2 are valid.

| <b>rr</b> | Parameter                    | Threshold<br>Value<br>Range | Default<br>Threshold<br>Value |
|-----------|------------------------------|-----------------------------|-------------------------------|
| <b>01</b> | Slip major                   | 000 to 255                  | 255                           |
| <b>02</b> | Slip minor                   | 000 to 255                  | 4                             |
| <b>03</b> | Bit Error Rate major         | $10^{-3*}$ to $10^{-6†}$    | $10^{-3*}$                    |
| <b>04</b> | Bit Error Rate minor         | $10^{-3*}$ to $10^{-6†}$    | $10^{-6}$                     |
| <b>05</b> | Errored Seconds <sup>‡</sup> | 00001 to 65535              | 864                           |

|    |                                       |            |     |
|----|---------------------------------------|------------|-----|
| 06 | Severely Errored Seconds <sup>‡</sup> | 001 to 255 | 225 |
| 07 | Change of Frame Alignment major       | 001 to 511 | 511 |
| 08 | Change of Frame Alignment minor       | 001 to 255 | 17  |

\* 4 for clear-DS1 NPCs or DS type NPCs

<sup>†</sup> 7 on DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

<sup>‡</sup> Only applicable to DE or TE type NPCs using T1DM (x = 4) or ESF (x = 2 or 3) framing

**Note 1:** Major thresholds must be greater than minor thresholds.

**Note 2:** For Bit Error Rates, enter only the power of 10 (DACS assumes its sign is negative). For example, for a BER of  $10^{-3}$  (.001), enter 3.

**Note 3:** Slip major and Slip minor threshold crossing alarms may be disabled by programming threshold values of zero for the respective parameters.

1E-4 for TG80B circuit pack operates as clear-DS1 FTU NPC, the BER is calculated from BPV rate; otherwise, parameter rr can only have values 01 and 02 for clear-DS1 NPCs

**Note:** If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options are still correctly output in this case.

In addition, some parameters are not applicable to all NPCs. Certain parameters may or may not be collected based on NPC type, whether the NPC is equipped in a Facility Terminating Unit (DE type NPC) or a DS3 Unit (TE type NPC) and whether the NPC carries a Clear or Channelized facility.

In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes.

**IW** - Insertion word

**pq** - Hexadecimal value of the growth insertion word (GIW). Specifies the insertion word in the transmit direction on unassigned channels.

An eight-bit code, called the growth insertion word, is transmitted by this NPC on unassigned DS0 channels. This code is specified by the optional keyword IW and its argument pq. This code was previously called the Disconnect Code (DCC), but that name is properly reserved for the cross-connect insertion word, which is transmitted when the disconnect message with the DDC specified is used.

Although any 2-digit hexadecimal code may be used, the default GIWs are:

| <i>pq</i> | <i>Explanation</i>                                                                                                                                                                                                               |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7F        | Unassigned Channel Code (UAC), the default value for DE/TE type NPCs provisioned with D4 or ESF framing.                                                                                                                         |
| 18        | Unassigned Multiplex Code (UMC), the default value for DE/TE type NPCs provisioned with T1DM framing. This value should only be provisioned with T1DM framing (DA4yz or TA4yz), so the growth command enforces this restriction. |

For Clear-DS1 NPCs, the insertion word option is **NOT** available and the message will be denied if this option is entered.

The alarm indication signal (AIS) is transmitted in the disconnect or idle state.

**INCL** - Inclusive

As a protection to users, this keyword must be added to provision an NPC with D4 framing and an Insertion Word with bit 2 equal to zero. NPCs grown in the D4 format (DE1yz/TE1yz) transmit a DS1 yellow alarm by setting bit 2 to zero in all 24 DS0 channels. If the Insertion Word "pq" is unknowingly provisioned in this manner, the NPC will transmit a D4 yellow alarm signal when it is restored. The D4 yellow alarm is generated by any Insertion Word with the binary value a0cdefgh, where the letters a-h define the eight bits of the binary word. The D4 yellow alarm is not generated by an Insertion Word with a binary value a1cdefgh.

**AIS** - Alarm indication signal

**INFO** - Information

Information message (not an alarm). This is the default option.

**MJ** - Major

- MN** - Minor
- ss/n** - First improper value of "rr/m" for which the message is denied.
- mmm** - Slip major alarm threshold (0 through 255)  
**nnn** - Slip minor alarm threshold (0 through 255)
- e** - Slip major alarm threshold selection (0 through 3)  
**f** - Slip minor alarm threshold selection (0 through 3)
- p** - BER major alarm threshold,  $(1.0(10^{-5}), 3^{\dagger}$  through  $6^*$ )  
**q** - BER minor alarm threshold,  $(1.0^{-q}, 3^{\dagger}$  through  $6^*$ )
- \* 7 on T1DM and Fe framing  
† 4 for clear-DS1 FTU NPC
- g** - BER major alarm threshold selection (0 through 3)  
**h** - BER minor alarm threshold selection (0 through 3)
- rrrrr** - ERS threshold (1 through 65535, or ----- if not applicable)  
**i** - ERS threshold selection (0 through 3)
- sss** - SERS threshold (1 through 255, or --- if not applicable)  
**j** - SERS threshold selection (0 through 3)
- ttt** - COFA major alarm threshold (1 through 511)  
**uuu** - COFA minor alarm threshold (1 through 255)
- k** - COFA major alarm threshold selection (0 through 3)  
**l** - COFA minor alarm threshold selection (0 through 3)

**Note:** Major thresholds must be greater than minor thresholds. For clear-DS1 FTU NPC only SLIP and BER parameters are listed. For clear-DS1 DS3U NPC only SLIP parameters are listed.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 00** No conditions  
**10** Unit is not equipped  
**11** UC is out of service  
**12** UC is in service but failed  
**13** FTMI is not equipped  
**20** Option rr/m has not been set up on 2nd database  
**21** Minor  $\geq$  major for SLIP opt  
**22** Minor  $\leq$  major for BER opt  
**23** Minor  $\geq$  major for COFA opt  
**24** Unit type error

**cc**    *Explanation*

- 26**    NPC type error
- 29**    IW is UMUX (18) but NPC not type DE4yz
- 2A**    DMI combined with T1DM
- 2B**    Maj|Min BER threshold is 7, but not in T1DM or Fe mode
- 34**    NPC type option xyz is unassigned
- 83**    NPC type is inconsistent with FTMI type
- 84**    Incompatible types of NPCs in a DDC
- 25**    Invalid FPI value
- 37**    Major/Minor BER threshold value is invalid for SLC NPCs
- 4E**    IW option is not allowed for new type of Clear-DS1 NPC
- 4F**    BER must not be less than 4 for Clear DS1
- BF**    MIU is not equipped
- F1**    Parameter only valid with PA, PB, or PC type NPCs
- FC**    ZBTSl option is only valid with the ESF mode
- FD**    NPC range crosses unit boundary
- 05**    This NPC type does not allow unframed Clear-DS1
- 1A**    The facility parameter not programmable for specified x or z parameter
- 9B**    The MXR is not grown
- A5**    AIS keyword incompatible with NPC type
- 04**    This NPC type does not allow Payload
- 07**    Mismatch between MXR and NPC types
- 0A**    Minor Slip threshold disabled before Major Slip threshold
- 35**    Invalid use of INCL keyword
- 36**    INCL keyword needed when restricted Insertion Word specified
- 91**    Option not programmable for this NPC type
- E5**    Invalid combination of "x" and "z" values
- E7**    Invalid combination of "x" and "y" values

**3**      Stratum 2

**CRO** - Clock reference oscillator

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**      *Explanation*

**01**      Subject entity is equipped

**16**      SYNC TB is not equipped

**33**      Wrong TLI type

**A5**      (Timing Distributor) TLI is not equipped

**A7**      Sync 0 is not in-service

**A8**      Sync 1 is not in-service

**A9**      Both syncs are out-of-service

**AA**      Syncs are equipped

**AB**      Bad sync mode

## **GRTH,SYNC,TLI,TYPE,SSP,SRC**

### **PROVISION SYNCHRONIZER TIMING LINK INTERFACE**

#### **Explanation Of Command**

This message requests provisioning of the synchronizer's timing link interface. The TLI can be configured as a timing extractor or as a timing distributor.

If the timing extractor is selected, you must also select synchronizer sync port (SSP) 0 or 1 and its source for priority.

Timing extractor types must be compatible for both **SSP 0** and **SSP 1**.

### **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**TLI** - Timing link interface

**m** - TLI number (1 through 4)

**TYPE** - Type

**texyz** - Timing Extractor type

| <i>te</i> | <i>Explanation</i>                      |
|-----------|-----------------------------------------|
| TC        | Composite Clock Timing Extractor        |
| TE        | DS1 Timing Extractor                    |
| TP        | Primary Block Timing Extractor          |
| TR        | Basic System Reference Frequency (BSRF) |
| TU        | Unipolar Clock Timing Extractor         |

**Note:** For the TC, TU and TR timing extractors the x, y and z parameters can be any value from 0 to 9.

Valid x, y, and z values for the other timing extractors are:

TE-type TLI xyz fields

**x** - Frame format

| <b>x</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |         |
|----------|---------|
| <b>0</b> | Invalid |
|----------|---------|

|          |           |
|----------|-----------|
| <b>1</b> | D4 Format |
|----------|-----------|

|             |            |
|-------------|------------|
| <b>2, 3</b> | ESF Format |
|-------------|------------|

|          |                   |

| <b>3</b> | Invalid |
|----------|---------|

|             |                     |
|-------------|---------------------|
| <b>4, 5</b> | Bipolar Line Coding |
|-------------|---------------------|

|          |                  |
|----------|------------------|
| <b>6</b> | B8ZS Line Coding |
|----------|------------------|

|            |         |
|------------|---------|
| <b>7-9</b> | Invalid |
|------------|---------|

**z** - Channel format

| <b>z</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|            |            |
|------------|------------|
| <b>0-9</b> | Unassigned |
|------------|------------|

**SSP** - Synchronizer synchronization port

**a** - SSP number (0 or 1)

Required when texyz is specified.

**Note:** Timing Extractors must have the same "te" type for both SSP 0 and SSP 1.

**SRC** - Source

**p** - Priority (1 through 8)

Required when texyz is specified. 1 = HIGHEST priority, 8 = LOWEST priority

**TDxyz** - Timing Distributor type

The valid values for x, y, and z are:

TD-type TLI xyz fields

**x** - Timing distributor identification

**x** *Explanation*

**1** Composite Clock Timing Distribution

**2** Sinusoidal 2.048 MHz Timing Distribution

**y** - Unassigned

**z** - Unassigned

**cc** - Hexadecimal condition code

**cc** *Explanation*

**01** Subject entity is equipped

**16** SYNC TB is not equipped

**A7** Sync 0 is not in-service

**A8** Sync 1 is not in-service

**A9** Both syncs are out-of-service

**AC** Timing Extractor type TLI (need SSP info)

**AD** Not Timing Extractor type TLI (not SSP)

**AE** Wrong TLI type (need CRO grow command)

**AF** 3 Timing Distributor type TLIs are equipped

**B1** Illegal priority value

**B2** Illegal SSP type (not same as other SSPs)

**B3** X option is illegal

**B4** Y option is illegal

**B5** Z option is illegal

**BE** Hardware mismatch or not present

**CB** NPC parameter only valid with TU type TLI

**CC** NPC is still provisioned to provide sync timing

**CD** NPC not designated as sync timing source

**CE** NPC already allocated as sync timing source

**F1** Parameter only valid with PA, PB, or PC type NPCs

**E4** NPC already has Equipment Loopback

## **GRTH,TG,NPCTG**

### **GROWTH TEST-ACCESS GROUP**

#### **Explanation Of Command**

This command is used to provision a test-access group (TG) as a network processing circuit for test groups (NPCTG) covering a specific channel range.

The TG consists of two bundles of n consecutive DS0 channels each. The TG's width is determined by the number of channels within the range specified in the command. The east bundle of the TG is located on the first NPCTG and spans the given channel range; the west bundle is located on the second NPCTG and spans the second channel range. Both bundles may be assigned to the same NPCTG, provided the necessary bandwidth is available.

#### **Command**

[I.31421]

#### **Denial Message**

[O.31421.01]

**M hh:mm:ss xy,ww n[vv] GRTH TG mmm[ <tc>] COND cc DNY**

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**TG** - Test (access) group

**mmm** - TG number (1 through 400)

**NPCTG** - NPC (for) test group

**rrr** - NPCTG number supporting the east bundle

**sss** - NPCTG number supporting the west bundle, may be same as rrr

**eee, fff**  
- Channel range for east bundle

**www, xxx**  
- Channel range for west bundle

001 through 024

**tc** - Trunk conditioning  
For this command trunk conditioning is limited to "TRSP,IW X'pq".  
Any other trunk conditioning specification will be denied.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                                                  |
|-----------|------------------------------------------------------------------|
| <b>1E</b> | Customer control or red circuit exists                           |
| <b>85</b> | Using the 24th channel of a T1DM NPC                             |
| <b>86</b> | Using the 24th channel of a DMI NPC                              |
| <b>4A</b> | channel part of a TP or TG                                       |
| <b>4B</b> | channel already under test                                       |
| <b>57</b> | Designated TG or circuit to be tested in process of being rolled |
| <b>59</b> | Invalid TC specification                                         |
| <b>5D</b> | Inconsistent Signaling on CEPT NPCTGs                            |
| <b>64</b> | TG width too large for single NPCTG                              |
| <b>65</b> | Ending channel is out of range                                   |

**cc**    *Explanation*

- 66**    TG number previously assigned
- 95**    TG East/West type inconsistent with each other or circuit
- A3**    Channels assigned, cannot be grown as test group
- A8**    NPCTG not grown

## **GRTH,TP**

---

### **GROW TEST PORT**

#### **Explanation Of Command**

---

This message requests the provisioning of a test port.

If trunk conditioning is omitted from the input command the test port is provisioned as a *dynamic* test port. A dynamic test port's trunk conditioning is set to match the trunk conditioning of the circuit under test at the time the circuit is accessed.

If trunk conditioning is given in the input command the test port is provisioned as a *static* test port. A static test port's trunk conditioning is set at the time the port is provisioned. Its trunk conditioning does not change when a circuit is accessed for testing.

The *static* or *dynamic* designations have meaning only for access to unmapped terminations.

For access to a mapped termination, trunk conditioning is always adopted from the circuit under test.

TP - Test port

kk - Test port number (01 through 96)

A 1.544Mbit/s non-SLC NPC will support 12 test ports numbered as follows:

| TA Port                 | Channel |    |
|-------------------------|---------|----|
|                         | FROM    | TO |
| 01,13,25,37,49,61,73,85 | 1       | 2  |
| 02,14,26,38,50,62,74,86 | 3       | 4  |
| 03,15,27,39,51,63,75,87 | 5       | 6  |
| 04,16,28,40,52,64,76,88 | 7       | 8  |
| 05,17,29,41,53,65,77,89 | 9       | 10 |
| 06,18,30,42,54,66,78,90 | 11      | 12 |
| 07,19,31,43,55,67,79,91 | 13      | 14 |
| 08,20,32,44,56,68,80,92 | 15      | 16 |
| 09,21,33,45,57,69,81,93 | 17      | 18 |
| 10,22,34,46,58,70,82,94 | 19      | 20 |
| 11,23,35,47,59,71,83,95 | 21      | 22 |
| 12,24,36,48,60,72,84,96 | 23      | 24 |

#### tc

- Trunk conditioning

Represents the desired signaling and insertion word to be applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. For example, TRSP,IW X'pq (input form).

| <i>signaling</i>       | <i>Explanation</i>                   |
|------------------------|--------------------------------------|
| TC(ijkl,mnop)          | 2-way, 4-state signaling in binary.  |
| TC(ijklmnop,qrstuvwxy) | 2-way, 16-state signaling in binary. |
| TC(X'ab,X'cd)          | 2-way, 16-state in hexadecimal.      |
| TRSP                   | Transparent, no signaling.           |

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                       |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4.                                                                                                 |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                  |

For 4-state signaling, the A/B signaling bits of both test port channels are specified by ijkl for the receive time slot interchange (RTSI), and by mnop for the transmit time slot interchange (TTSI).

For 16-state signaling, the A/B/C/D signaling bits of both test port channels are specified by efghijkl (or hexadecimal digits ab) for the RTSI, and by mnopqrst (or hexadecimal digits cd) for the TTSL.

**NPCTP** - NPC for test ports

**UEQD** - Unequipped

**TP NSO** - Test port not in sequence order

**TERM** - Terminated

**ASGN** - Assigned

**IMPR** - Improper

**TC** - Trunk conditioning

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**1E** Customer control or red circuit exists

**82** Can not use 12-th TP when NPCTP is in the T1DM or DMI mode

**FF** Termination is in process of being rolled

**50** Invalid MIU/MXR type specified

**4B** channel already under test

## **GRTH,UNIT,FTMI,EQL**

### **PROVISION FACILITY TERMINATING MODULE INTERFACE**

### Explanation Of Parameters

|              |                                                                                                         |
|--------------|---------------------------------------------------------------------------------------------------------|
| <b>UNIT</b>  | - Unit                                                                                                  |
| <b>[q]q</b>  | - Unit number (1 through 16)                                                                            |
| <b>MXR</b>   | - Multiplexer                                                                                           |
| <b>c</b>     | - MXR number within the unit (1 through 6)                                                              |
| <b>d</b>     | - MXR number within the unit (1 through 6)                                                              |
|              | Variable d is used to specify a range of MXRs                                                           |
| <b>a</b>     | - MXR number within the range of MXR c and MXR d                                                        |
| <b>TYPE</b>  | - Type                                                                                                  |
| <b>mnxyz</b> | - The requested DS3 format that will be processed by the MXR                                            |
| <b>mn</b>    | - DS3 type                                                                                              |
|              | <i>mn Explanation</i>                                                                                   |
|              | MX The original Release 4.0 DS3 facility type supported by the Multiplexer (MXR) circuit pack           |
|              | EX The enhanced Release 6.0 DS3 facility type supported by the Enhanced Multiplexer (EMXR) circuit pack |
|              | Default is the MX type for backward compatibility.                                                      |
| <b>x</b>     | - DS3 framing format                                                                                    |
|              | <i>x Format</i>                                                                                         |
|              | 1 M13 format (default)                                                                                  |
|              | 2 C-bit parity format                                                                                   |
| <b>y</b>     | - Not assigned (the only valid value is 0)                                                              |
| <b>z</b>     | - Not assigned (the only valid value is 0)                                                              |

The optional settings available for each MXR are:

|             |                                                             |
|-------------|-------------------------------------------------------------|
| <b>BERM</b> | - Bit error rate calculation method                         |
| <b>s</b>    | - The requested BER calculation method                      |
| <i>s</i>    | <i>BER calculation method</i>                               |
| <b>B</b>    | Bipolar violations (default)                                |
| <b>P</b>    | DS3 Parity Errors                                           |
| <b>BERT</b> | - Bit error rate threshold for declaring High BER condition |
| <b>t</b>    | - Requested BER threshold                                   |
| <i>t</i>    | <i>BER threshold</i>                                        |
| <b>3</b>    | Corresponds to threshold of $10^{-3}$ (default)             |
| <b>6</b>    | Corresponds to threshold of $10^{-6}$                       |
| <b>LBO</b>  | - Line buildout                                             |
| <b>b</b>    | - LBO specification                                         |
| <i>b</i>    | <i>Explanation</i>                                          |
| <b>ON</b>   | Line build out is turned on                                 |
| <b>OFF</b>  | Line build out is turned off (default)                      |

LBO is required as shown in the following table.

|                                                      |
|------------------------------------------------------|
| 734A Cabling to DSX-3KS-19224,L2 Cabling to DSX-3LBO |
| 0 to 225 feet    0 to 75 feetON                      |
| 225 to 450 feet    75 to 150 feetOFF                 |

**Note:** LBO <b> may be used to change the LBO setting of an in-service, traffic- carrying Multiplexer-Multiplexer Interface Unit (MMFG).

**cc**    - Hexadecimal condition code

**cc**    *Explanation*

|           |                             |
|-----------|-----------------------------|
| <b>10</b> | Unit is not equipped        |
| <b>11</b> | UC is out of service        |
| <b>12</b> | UC is in service but failed |

## **GRTH,UNIT,TYPE,CONN**

### **PROVISION A UNIT**

#### **Explanation Of Command**

This command requests the provisioning of a DACS II unit.

For a NonCEF frame this will result in the provisioning of all cross-connect and time slot interchange circuit packs. For a CEF frame this will result in the provisioning of the expanded time slot interchanger. When this request has completed, all circuit packs required by the subject unit to cross-connect to other equipped units have been provisioned.

The unit type is optionally specified in the **TYPE** field.

The unit type can be a facility terminating unit, a DS3 terminating unit, or a digital signal processing unit.

If the unit is a digital signal processing unit, its associated digital signal processing interface is also provisioned. If the unit is a DS3 facility terminating unit, both of its associated service and protection facility line interface packs, both sides of its formatter packs (side 0 and 1), and its protection multiplexer are also provisioned.

**Note:** DMB, TSI, and FMT circuit packs must be inserted into the inactive side of DACS II. Inserting circuit packs into the active side may result in transmission "hits."

#### **Command**

For DACS II Non-CEF frames:  
[I.31211]

```
GRTH:FRM xy,SEQ ww:UNIT q[,TYPE utxyz]\  
[,CONN(a[,b[,c[,d[,e [,f]]]]))!]
```

For DACS II CEF frames:

[I.31211]

GRTH:FRM xy,SEQ ww:UNIT [q]q[,TYPE utxyz]!

### Completion Message

---

For DACS II Non-CEF frames:

[O.31211]

### Explanation Of Parameters

|              |                                               |
|--------------|-----------------------------------------------|
| <b>UNIT</b>  | - Unit                                        |
| <b>[q]q</b>  | - Unit number (1 through 16)                  |
| <b>utxyz</b> | - Unit type as submitted in the input message |
| <b>uexyz</b> | - Type of unit already equipped as            |
|              | <i>uexyz      Explanation</i>                 |
|              | FT100    FT = Facility Terminating Unit       |
|              | DP100    DP = Digital Signal Processing Unit  |
|              | DT100    DT = DS3 Facility Terminating Unit   |

The unit type is optionally specified in the TYPE utxyz field. The unit type can be an FTxyz (Facility Terminating Unit), DTxyz (DS3 Terminating Unit), or a DPxyz (Digital Signal Processing Unit) type.

Currently, only FT100, DT100, and DP100 types are supported by DACS II.

The unit type entered must be consistent with the unit type entered for the configuration file.

If the unit is a DPxyz type, its associated DSPI (Digital Signal Processing Interface) is also provisioned.

If the unit is a DTxyz type, both of its associated Service and Protection Facility Line Interface (FLI) packs, both sides of its Formatter (FMT) packs (side 0 and 1), and its Protection Multiplexer (MXR) pack are also provisioned.

For both Non-CEF and CEF frames, if the unit type is not entered, the unit type will default to FT100.

For Non-CEF frames, the optional CONN field is used if only a partial complement of the unit's TSI circuit packs is to be provisioned. If this field is not used, all TSI circuit packs are provisioned and the unit has full connectivity with other provisioned units.

**CONN**

- Connectivity

**a, b, c, d, e, f**

- Time slot interchange numbers

A partial complement of the unit's TSIs have been provisioned. (If this field is absent, all of the unit's TSIs were provisioned.)

**CCB**

- Cross-connect buffer

**0q**

- CCB number side 0

**1q**

- CCB number side 1

0q and 1q identify the cross-connect buffer(s) provisioned. q is the unit number (see UNIT above).

**tt**

- Total number of provisioned TSIs in frame (02 through 72)

|             |                                                                                                             |
|-------------|-------------------------------------------------------------------------------------------------------------|
| <b>NEW</b>  | - New                                                                                                       |
| <b>TSIS</b> | - Time slot interchangers                                                                                   |
| <b>nn</b>   | - Number of TSIs provisioned by command (02 through 22)                                                     |
| <b>sft</b>  | - TSI equipped status                                                                                       |
| <b>s</b>    | - Service side number (0 or 1)                                                                              |
| <b>f</b>    | - Equipped FROM unit number (1 through 6) if equipped                                                       |
| -           | - Not equipped                                                                                              |
| <b>t</b>    | - Equipped TO unit number (1 through 6) if equipped                                                         |
| -           | - Not equipped                                                                                              |
| <b>e</b>    | - Number of lines in message                                                                                |
|             | Equals either 4 or 5 depending on the type of the unit provisioned.                                         |
| <b>ETSI</b> | - Expanded timeslot interchanger                                                                            |
| <b>0qq</b>  | - ETSI number side 0                                                                                        |
| <b>1qq</b>  | - ETSI number side 1                                                                                        |
|             | 0qq and 1qq identify the ETSI packs provisioned by this command.<br>qq is the unit number (see UNIT above). |
|             | Three dashes "---" are shown if an ETSI pack is not provisioned.                                            |
| <b>kk</b>   | - Total number of provisioned ETSIs in frame (02 through 32)                                                |
| <b>rr</b>   | - Unit number with the same definition as qq.                                                               |
| <b>FMT</b>  | - Formatter, sides 0 and 1 (automatically provisioned with DT100 units)                                     |
| <b>FLI</b>  | - Facility line      interface                                                                              |
| <b>S</b>    | - Service FLI (automatically provisioned with DT100 units)                                                  |
| <b>FLI</b>  | - Facility line      interface                                                                              |
| <b>P</b>    | - Protection FLI (automatically provisioned with DT100 units)                                               |
| <b>MXR</b>  | - Multiplexer                                                                                               |
| <b>P</b>    | - Protection multiplexer (automatically provisioned with DT100 units)                                       |
| <b>EQD</b>  | - Equipped                                                                                                  |
| <b>NSUP</b> | - Not supported                                                                                             |

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 27** Illegal connectivity specified
- 28** Connectivity contains unequipped units
- 97** Entity can't be addressed in this configuration
- 99** Unit type (xyz) not supported
- CA** Connectivity can not be specified for CEF unit

## **IN — INVALID**

---

This section documents the commands **IN** through **INVALID**.

## **IN,PROGRESS**

### **GENERIC IN PROGRESS MESSAGE**

#### **Explanation Of Command**

This output message indicates that the requested action (verb) is in progress.

#### **Command**

Not applicable.

#### **Completion Message**

[O.55703]

M hh:mm:ss xy,ww n[vv] <verb> IN PROGRESS

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

#### **Explanation Of Parameters**

Not applicable.

## **INH,PMREPT,NPC,ALL**

### **INHIBIT DS1 PERFORMANCE MONITORING REPORT**

#### **Explanation Of Command**

This message inhibits DACS II scheduled performance monitoring report output for DA and TA type NPCs. The user may inhibit performance monitoring report output for a single, range or all NPCs on the frame.

This command will handle NPC addressing in the input command as follows: If only a single NPC is addressed in the input command, then either a completion or denial response will be generated for the addressed NPC. DACS II will always deny invalid commands to specifically addressed NPCs.

If a range of NPCs is addressed and the feature applies to one or more NPCs within the range, DACS II will inhibit outputting the scheduled reports for the NPCs in the range that support this feature, but skip the NPCs which do not support this feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports this feature, DACS II will generate a completion response for the entire range of NPCs; individual denial responses will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range support the requested feature, DACS II will generate a range denial response.

#### **Command**

##### **Nonhierarchical**

[I.51161]

**INH:FRM xy,SEQ ww:PMREPT,{NPC [s]abc[-[t]def]|ALL}!**

### **Hierarchical**

---

[I.51161]

INH:FRM xy,SEQ ww:PMREPT,{NPC uvmnp[-wxkqr]|ALL}!

### **Completion Message**

---

#### **Nonhierarchical**

---

[O.51161]

M hh:mm:ss xy,ww n[vv] INH PMREPT {NPC [s]abc[-[t]def]|ALL} COMPL

#### **Hierarchical**

---

[O.51161]

M hh:mm:ss xy,ww n[vv] INH PMREPT {NPC uvmnp[-wxkqr]|ALL} COMPL

### **Denial Message**

---

#### **Nonhierarchical**

---

[O.51161.01]

M hh:mm:ss xy,ww n[vv] INH PMREPT {NPC [s]abc[-[t]def]|ALL} COND cc DNY

#### **Hierarchical**

---

[O.51161.01]

M hh:mm:ss xy,ww n[vv] INH PMREPT {NPC uvmnp[-wxkqr]|ALL} COND cc DNY

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

NPC - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical starting NPC number

[t]def - The 3- or 4-digit nonhierarchical ending NPC number

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
