**cc** - Hexadecimal condition code

**cc** *Explanation*

**15** NPC is unequipped

**26** NPC type error

**0C** PM scheduling report is already inhibited for this entity

**17** Command did not execute for any entity specified in the command

## **INHSW,UNIT,MMFG,TOPRTN,TOSRVC**

### **INHIBIT SWITCH MMFG**

#### **Explanation Of Command**

This message requests the inhibition of automatic protection switching from multiplexer-multiple interface unit functional group (MMFG) c on a DS3 unit to MMFG P or the automatic switchback from MMFG P to service MMFG c (when MMFG c becomes in-service). Only automatic switches due to failure will be affected by this message.

If **TOPRTN** is specified and MMFG P is already protecting the MMFG c's facility, the command will be denied.

If **TOSRVC** is specified and MMFG c is not under protection, the command will be denied.

This inhibition will be removed if a switch occurs from the "selected" MMFG.

#### **Command**

[I.35311]

**INHSW:FRM xy,SEQ ww:UNIT [q]q,MMFG c[-d],{TOPRTN|TOSRVC}!**

#### **Completion Message**

[O.35311]

**M hh:mm:ss xy,ww n[vv] INHSW UNIT [q]q MMFG a {TOPRTN|TOSRVC} \**  
**COMPL**

### **Denial Message**

---

[O.35311.01]

**M** hh:mm:ss xy,ww n[vv] **INHSW UNIT** [q]q **MMFG a** {TOPRTN|TOSRVC} \

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MMFG** - Multiplexer-multiplexer interface unit functional group

**c, d** - The number of the MMFG within the unit (1 - 6)

**TOPRTN** - To protection

**TOSRVC** - To service

When TOSRVC is specified, a range of MMFGs is not acceptable. In this case the command will be denied.

**a** - The number of the service MMFG within the range c and d

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**44** Service MXR is not equipped

**4B** The Service MMFG is already under protection

**4C** The Service MMFG is not under protection

**4E** The switch is already inhibited

## **INVALID,SFW,ID,BLOCK,COND**

### **INVALID SOFTWARE IDENTIFICATION BLOCK**

#### **Explanation Of Command**

This message indicates that either a software identification block check failed or that a mismatch exists in the generic number, point issue, or release number.

#### **Command**

Not applicable.

## **LINE — LOGOFF**

---

This section documents the commands **LINE** through **LOGOFF**.

## **LINE**

---

### **QUERY LINE NUMBER**

#### **Explanation Of Command**

---

This command retrieves the current line number and the total number of lines within the macro while in a macro session.

#### **Command**

---

[I.19071]

**LINE[:FRM xy,SEQ ww:]!**

#### **Completion Message**

---

[O.19071]

**M hh:mm:ss xy,ww n[vv] LINE <line pointer> TOTAL \  
<line total> COMPL**

#### **Denial Message**

---

Not applicable.

#### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**LINE** - Line

**line pointer**

- Current line number

**TOTAL** - Total

**line total**

- Total number of lines within the macro

## **LIST,END**

---

### **LIST MACRO CONTENTS**

#### **Explanation Of Command**

---

This command is used to list the contents of a macro. If neither a range of line numbers nor END is specified then the line pointed to by the line pointer (the current line) is listed.

#### **Command**

---

[I.19061]

```
LIST[:FRM xy,SEQ ww:{<starting line>|END}[-{<ending line>|\
END}]]!
```

#### **Completion Message**

---

If the macro contains no component command,

[O.19061]

```
M hh:mm:ss xy,ww n[vv] LIST[ {<starting line>|\
END}[-{<ending line>|END}]] NONE COMPL
```

If the macro contains one or more component commands,

[O.19062]

```
M hh:mm:ss xy,ww n[vv] LIST[ {<starting line>|\
END}[-{<ending line>|END}]] e LN MSG:
00001 <first 65 characters of 1st component command text>
    <remaining characters of 1st component command text>
    .
    .
    .
mmmmm <first 65 characters of mth component command text>
    <remaining characters of mth component command text> \
{EOM|COMPL}

M hh:mm:ss xy,ww n[vv] LIST[ <starting line>\
[-<ending line>]] e LN MSG:
nnnnn <first 65 characters of nth component command text>
    <remaining characters of nth component command text>
    .
    .
    .
ppppp <first 65 characters of pth component command text>
    <remaining characters of pth component command text> \
{EOM|COMPL}

M hh:mm:ss xy,ww n[vv] LIST[ <starting line>\

qqqqq <first 65 characters of qth component command text>
    <remaining characters of qth component command text>
    .
    .
    .
zzzzz <first 65 characters of zth component command text>
    <remaining characters of zth component command text> \
COMPL
```

### Denial Message

---

[O.19061.01]

```
M hh:mm:ss xy,ww n[vv] LIST[ {<starting line>|\
END}[-{<ending line>|END}]] COND cc DNY
```

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

### **starting line**

- Beginning line number of a line range (1, 2, ..., n)

Starting line indicates the line number of the first line of a range of lines within a macro that are to be listed.

### **ending line**

- Ending line number of a line range (2, 3, ..., n+1)

Ending line indicates the line number of the last line of a range of lines within a macro that are to be deleted.

**END** - End

Line number of the line at the end of the macro.

**00001,**

**mmmmm,**

**nnnnn,**

**ppppp,**

**qqqqq,**

**zzzzz** - Component command line numbers (00001 through 99999)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**6B** Invalid line number

**6E** No edit session active

## **LOGIN,USER,PASSWD**

### **LOG ON TO DACS II**

#### **Explanation Of Command**

**Note:** Before logging on to DACS II for the first time, it is suggested that the user thoroughly read the documentation for this message.

This command allows a user or frame administrator to identify himself/herself to DACS II by an identification code, the **user id**, on any link.

DACS II checks the user id and password against entries previously stored in the data base. If the user is not authorized, DACS II will deny the input command.

A user can log on to DACS II from more than one link.

*If on a Snider administrative link, the command must be entered as follows:*

**LOGIN:FRM xy,SEQ ww:USER <user id>!**

The DACS II system will respond with the following dialogue:

PASSWD: The user enters a password. Note that the password is not echoed by DACS II.

*If on an X.25 administrative link, the command must be entered as follows:*

**LOGIN:FRM xy,SEQ ww:USER <user id>,PASSWD <user password>!**

Output from this command is sent only to the link on which the command was input.

### **Command**

---

[I.39001]

**LOGIN:FRM xy,SEQ ww:USER <user id>[,PASSWD <user password>]!**

If the user is on a Snider protocol administrative link, the message is entered as follows:

[I.39001]

**LOGIN:FRM xy,SEQ ww:USER <user id>!**

Then DACS II will prompt the following:

**PASSWD: <user enters the user password>**

### **Completion Message**

---

[O.39001]

**M hh:mm:ss xy,ww n[vv] LOGIN USER <user id> COMPL**

#### **WARNING MESSAGE**

**THIS SYSTEM IS RESTRICTED TO [AT&T ]AUTHORIZED USERS FOR  
BUSINESS PURPOSES. UNAUTHORIZED ACCESS IS A VIOLATION OF THE  
LAW. THIS SERVICE MAY BE MONITORED FOR ADMINISTRATIVE AND SECU-  
RITY REASONS. BY PROCEEDING, YOU CONSENT TO THIS MONITORING.**

### **Denial Message**

---

[O.39001.01]

**M hh:mm:ss xy,ww n[vv] LOGIN USER <user id> COND cc DNY**

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**USER** - User

**user id**

- User identifier

The user login identification (two to eight alphabetic characters)

**PASSWD** - Password

**user password**

- User password (at least six alphanumeric characters)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D3** User does not exist

**D4** A user is already logged in on the link/vc

**D6** Incorrect or missing password

## **LOGOFF,USER,LINK,INCL**

### **LOG OFF USER OR LINK**

#### **Explanation Of Command**

This command requests DACS II to log off a user or a link. A user is specified by his or her **<user id>**; a link, by its physical link number. The virtual circuit number is optional. The INCL keyword is also optional. The virtual circuit number and INCL are mutually exclusive. The INCL keyword must be specified to log off all virtual circuits of an X.25 link (5 or 6).

The DACS II frame administrator can use the **<user id>** option from any link to log off any user on another link. If the user is logged in on more than one link and is not the frame administrator, DACS II will log the user off every link. An autonomous message will appear on the user's link if the frame administrator logs a user out.

Output from this command is sent only to the link on which the command was input.

#### **Command**

[I.39101]

**LOGOFF:FRM xy,SEQ ww:{USER <user id>|LINK j[mm][,INCL]}!**

#### **Completion Message**

[O.39101]

**M hh:mm:ss xy,ww n[vv] LOGOFF {USER <user id>|LINK j[mm][,INCL]} \**  
**COMPL**

### **Denial Message**

---

[O.39101.01]

**M** hh:mm:ss xy,ww n[vv] LOGOFF {USER <user id>|LINK j[mm][,INCL]} \

**COND** cc DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**USER** - User

**user id**

- User identifier (two to eight alphabetic characters)

User login identification

**TERM** - Terminal (link)

**LINK** - Link

**j [mm]** - Administrative link number

**j** - Physical link number (1 through 6)

**mm** - Virtual circuit number (01 through 16)

The virtual circuit number must be entered when logging off a single virtual circuit of an X.25 link.

**INCL** - Inclusive

Include virtual circuits of links 5 and 6. The INCL keyword can only be entered with X.25 links 5 and 6, and no virtual circuit number is allowed when this keyword is used. That is, "mm" and "INCL" are mutually exclusive. In addition, the INCL keyword is also mutually exclusive with the "<user id>". When the INCL keyword is entered, it means that the logoff applies to all the virtual circuits of X.25 link (5 or 6).

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

- D3** User does not exist
- D5** No user is logged in on the link/vc
- D7** Cannot execute privileged command
- DA** User is not logged in
- E1** Virtual circuit is not specified for X.25 link
- E2** Invalid link number specified
- E3** Invalid keyword(s) combination specified

## **MC — MTC**

---

This section documents the commands **MC** through **MTC**.

## **MC,MCOND**

---

### **UTILITIES**

#### **Explanation Of Command**

---

This autonomous message reports that the Main Controller is in maintenance condition during the boot process.

#### **Command**

---

Not applicable.

#### **Completion Message**

---

Not applicable.

#### **Denial Message**

---

Not applicable.

#### **Autonomous Message**

---

[O.58011]

I hh:mm:ss xy,ww MC MCOND

### **Explanation Of Parameters**

---

**MC** - Main controller

**MCOND** - Maintenance condition

## **MC,RESET,RELEASE,ISSUE,FPKG,COND**

### **MAIN CONTROLLER RESET RELEASE DACS II ISSUE**

#### **Explanation Of Command**

This message is used to report that the reset procedure has successfully completed.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01261]

I hh:mm:ss xy,ww n[vv] MC RESET RELEASE DACSIgg.pp ISSUE r \\  
2 LN MSG:  
FPKG kkttuuvv [COND cc] COMPL

### **Explanation Of Parameters**

---

**MC** - Main controller

**RESET** - Reset

**RELEASE**  
- Release

**ISSUE** - Issue

**gg.pp** - DACS II software release number

**r** - Software issue number of the release

**FPKG** - Feature package

**kkttuuvv**  
- Feature package identification (Hex)

| kkttuuvv | Feature                                       |
|----------|-----------------------------------------------|
| 00000001 | DS1                                           |
| 00000002 | CEPT                                          |
| 00000004 | Subrate                                       |
| 00000008 | Direct SLC® 96 and Series 5 Carrier Interface |
| 00000010 | DS3 Terminations                              |
| 00000020 | Enhanced CEPT                                 |
| 00000040 | Switched Teleconferencing                     |
| 00000080 | CEF                                           |
| 00000100 | Enhanced DS1 Performance Monitoring           |
| 00000200 | DS0/DS1 Roll                                  |
| 00000400 | AT&T Security Warning Message                 |
| 00000800 | Nx64kbit Test Access                          |
| 00001000 | Clear 2MB/s Interface                         |
| 00002000 | TS0 to Non-TS0 Cross-connection               |
| 00004000 | 2MB/S Roll                                    |

In general a feature package identification code is a combination of several individual feature package numbers. To determine the individual features that make up a feature package it is necessary to decode the feature package identification code. This code is an eight digit hexadecimal number. Each hexadecimal number represents a four-bit binary number. Within this binary number each feature is associated with one particular bit. Consequently to determine the feature list from a feature package identification code it is necessary to convert each hexadecimal digit to its binary equivalent and look up the features in the list above. For example the feature package identification code 0000000F can be converted to the following binary number working from left to right one hex digit at a time.

0000 0000 0000 0000 0000 0000 0000 1111

This number contains eight binary numbers each representing one of the hexadecimal numbers in the feature package identification code 0000000F. The rightmost number of the code contains four features since there are four bits set to one. This would be decoded as follows using the table of features above.

|       | binary | hex | Feature                      |
|-------|--------|-----|------------------------------|
|       | 0001   | 1   | DS1                          |
|       | 0010   | 2   | CEPT                         |
|       | 0100   | 4   | Subrate                      |
|       | 1000   | 8   | Direct SLC                   |
| Total | 1111   | F   | (DS1 + CEPT + Subrate + SLC) |

**COND** - Condition

**DACSII** - Digital access and crossconnect system II

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 46** Failed to boot CONF file
- 47** Failed to boot DB
- 48** Failed to boot journal--recurrence indicates database corruption
- 49** Failed to boot unit
- 4A** SMEM error, boot from PMEM
- 4B** PMEM error, boot from SMEM
- 4C** Failed to boot CI
- 51** General boot failure (vanilla flavor)
- 18** DSPI not equipped, not in service, or failed
- 20** Software Identification Block is not readable
- 21** Software Identification Block failed comparison

**cc**    *Explanation*

- 22**    Release number mismatch
- 23**    Point number mismatch
- 24**    PDI Version number mismatch
- 4D**    MP database not consistent with Configuration file
- 52**    Database is empty
- 3F**    G4 to G4.1 retrofit failed
- 91**    Can't mount or unmount SMEM
- 92**    Can't mount or unmount PMEM

## **MOVE, FROM, END, TO**

### **MOVE MACRO LINES**

#### **Explanation Of Command**

This command is used to move one or more lines and place them after a specified line in the macro while in a macro session.

If only one line is specified, the **starting line** or **END**, then only that line is moved to **destination line**.

#### **Command**

[I.19091]

```
MOVE:FRM xy,SEQ ww:FROM {<starting line>|END}\  
[-{<ending line>|END}],TO {<destination line>|END}!
```

#### **Completion Message**

[O.19091]

```
M hh:mm:ss xy,ww n[vv] MOVE FROM {<starting line>|END}\  
[-{<ending line>|END}] TO {<destination line>|END}  COMPL
```

#### **Denial Message**

[O.19091.01]

```
M hh:mm:ss xy,ww n[vv] MOVE FROM {<starting line>|END}\  
[-{<ending line>|END}] TO {<destination line>|END}  COND cc \  
DNY
```

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**FROM** - From

#### **starting line**

- Beginning line number of a line number range (1, 2, ..., n)

Starting line indicates the first line of the group of lines to be moved.

#### **ending line**

- Ending line number of a line number range (2, 3, ..., n+1)

Ending line indicates the end line of the group of lines to be moved.

**END** - End

END is a special line number that marks the position of the last line in the macro. If END is specified in place of ending line then the lines from starting line through END will be moved to destination line.

If END is specified as destination line then the line range specified in the command will be moved, as a unit, to the line following END.

The line number associated with END will change to the new line number of the last line moved.

**TO** - To

#### **destination line**

- Destination line number for the move (0, 1, 2, ..., n)

The first line of the lines to be moved will be placed on the line following destination line.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**6B** Invalid line number

## **MP,STARTUP,STF,ATP**

### **STARTUP**

#### **Explanation Of Command**

This message indicates that The main processor has initialized itself, established local area network communications between itself and the communications interface or the enhanced communications interface and has performed self-diagnostics. The results of these diagnostics are reported as some tests failed or all tests passed.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01221]

**MP STARTUP {STF|ATP}**

### **Explanation Of Parameters**

---

**MP** - Main processor

**STARTUP**

- Startup

Indicates initialization

**STF** - Some tests failed

**ATP** - All tests passed

## **MTC,STF,ATP**

### **MAINTENANCE**

#### **Explanation Of Command**

This message indicates that the maintenance controller has initialized itself and has performed self-diagnostics. The results of these diagnostics are reported as some tests failed or as all tests passed passed.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01281]

**MTC {STF|ATP}**

### **Explanation Of Parameters**

---

**MTC** - Maintenance circuit

**STF** - Some tests failed

**ATP** - All tests passed

---

## **OCNT — OVERLOAD**

---

This section documents the commands **OCNT** through **OVERLOAD**.

## **OCNT, FROM, TO, MPM, CUS, INCL, RDC**

### **ONE-WAY CROSS-CONNECT TERMINATED MULTIPOINT CIRCUIT**

#### **Explanation Of Command**

This message requests a leg to be one-way terminated and cross-connected to a multipoint circuit. The terminated cross-connection means that the circuit will be set up in the terminated state with the disconnect channel code inserted in both directions of transmission. Note that for the SLC<sup>®</sup> related denial messages, "not provisioned" means not added and/or not grown.

The backbone and broadcast terminations are on the virtual NPCs.

#### **Command**

##### **Nonhierarchical**

[|.12121]

OCNT:FRM xy,SEQ ww:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**FROM** - From

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**TO** - To

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical FROM NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC                                   |
|-----------|----------|---------------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02 (DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06 (DACS II CEF frames)</b>     |

**ddd,**  
**jjj**  
**eee,**  
**kkk**

- FROM channel numbers

- TO channel numbers denoting end of range specification

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |

| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

001-500 (Virtual NPC)

001-085 (MB NPC)

**MPM** - Multipoint mode

**fmd** - FROM mode

**tmd** - TO mode

Modes fmd and tmd set the modes of the FROM and TO ends of the circuit.  
There are three possible values of fmd and tmd:

**fmd**

**tmd**     *Explanation*

LEG     Nonvirtual circuit end of the cross-connections. Must be an FTU or DS3U channel.

BRD     Nonbackbone leg of a virtual conference. Must be a virtual NPC channel.

BBL     Backbone leg of a virtual conference. Must be a virtual NPC channel.

For OCNT multipoint circuits, there are two valid combinations for fmd and tmd:

**fmd, tmd**

(LEG,BBL) - for the backbone leg of a broadcast multipoint circuit

(BRD,LEG) - for the broadcast legs of the multipoint circuit.

**Note:** Default values for noise guard (NG) and echo suppression (ES) are applied to symmetrical bridges (multipoint mode SYM) and polling circuits (multipoint mode BBL,BRD). These default values are:

Symmetrical bridges     NG = -18 db     ES = -18 db

Polling circuits     NG = 0 db     ES = 0 db

**NOBBL** - No Backbone Leg

**F**     - From

**T**     - To

**tc**     - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. The tc options allowed are as follows:

| <i>tc</i>     | <i>Explanation</i>                         |
|---------------|--------------------------------------------|
| TRSP, TRB     | no signaling, insertion word pattern of E4 |
| TRSP, MUX     | no signaling, insertion word pattern of 1A |
| TRSP, IW X'pq | no signaling, insertion word pattern of pq |
| TRSP          | no signaling                               |

All leg connections to multipoint circuits using a virtual NPC must use TRSP signaling (no signaling). The insertion word (IW) portion is user specified and may be varied from leg to leg.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

E1 to E1 Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

E1 to DS1 or DS1 to E1 Same explanation as E1 to E1.

DS1 to DS1 Not applicable.

**CUS** - Customer

The optional CUS keyword indicates a Customer Controlled Circuit. All legs on a multipoint Customer-Controlled circuit must be designated as CUS.

A disconnected termination previously marked CUS remains as a Customer Controlled termination.

**INCL** - Inclusive

The INCL keyword must be used to reconnect this termination to other terminations. However, if they are reconnected without the CUS keyword, they lose their Customer Controlled status.

**RDC** - Red circuit

If the optional RDC field is present, the circuit will be flagged as a Red Circuit. All legs on a multipoint Red Circuit must be designated RDC.

**mmm** - FROM channel number involved in the denial (ddd through eee)

**nnn** - TO channel number involved in the denial (jjj through kkk)

**d** - Direction

|   |             |
|---|-------------|
| d | Explanation |
| F | FROM        |
| T | TO          |
| B | Both        |

**st** - Status

**cc** - Hexadecimal condition code

| cc | st    | Explanation                                                           |
|----|-------|-----------------------------------------------------------------------|

## **OCNT, FROM, TO, RDC, CUS, INCL, PRIOUT**

### **ONE-WAY CROSS-CONNECTION TERMINATE**

#### **Explanation Of Command**

This message requests the connection of a one-way terminated circuit or a range of one-way terminated circuits. The circuit(s) will be formed with the disconnect code (DCC) inserted in the direction of transmission unless the trunk conditioning specification TRSP, MUX has been used; in this case, the unassigned multiplex code (UMC = X'18) is inserted.

#### **⇒ NOTE:**

For denial messages related to the SLC<sup>®</sup> carrier, "not provisioned" means not added and/or not grown.

#### **⇒ NOTE:**

For the Gateway application, cross-connection of a CEPT channel to the 24th channel of a T1DM DS1 is not allowed.

#### **Command**

### Autonomous Message

Not applicable.

### Explanation Of Parameters

**FROM** - From

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**TO** -To

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                | Unit<br>2                | Unit<br>3                | Unit<br>4                |
|--------------------------|--------------------------|--------------------------|--------------------------|
| <b>NPC<br/>0001-0160</b> | <b>NPC<br/>0161-0320</b> | <b>NPC<br/>0321-0480</b> | <b>NPC<br/>0481-0640</b> |

**ddd,**  
**jjj** - Channel numbers, denoting the beginning of a range  
**eee,**  
**kkk** - Channel numbers, denoting the end of a range

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The Facility Data Link (FDL) channel 000 is not allowed in a range.  
Only the FDL of DE type NPC with ESF Format can be cross-connected.

**tc** - Trunk conditioning specification

This specifies the signaling and insertion word to be applied to the cross-connection when a failure occurs. In the input command the signaling and insertion word specifications are entered separately, with a comma as the delimiter. An example of tc is "TC(----,mnop),TRB".  
The following signaling options are allowed:

| <i>signaling</i>   | <i>Explanation</i>                                                                                                                                                             |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TC(----,mnop)      | One-way, 4-state signaling in binary. For ESF type framing format, software will expand 4-state to 16-state by duplicating the format on the remaining frames on a superframe. |
| TC(-----,mnopqrst) | One-way, 16-state signaling in binary. Only valid for ESF framing formats                                                                                                      |
| TC(X'--,X'cd)      | One-way, 16-state signaling in hexadecimal                                                                                                                                     |
| TRSP               | Transparent, no signaling                                                                                                                                                      |

The following insertion word options are allowed:

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                      |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line |
| TRB                   | Standard trouble code, equal to IW X'E4.                                                                                                |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                 |

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**CUS** - Customer

The circuit will be flagged as a customer controlled circuit.

**RDC** - Red circuit

**INCL** - Inclusive

A termination designated as CUS or RDC cannot be disconnected or modified without using the INCL keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**mmm** - FROM channel number involved in the denial (ddd through eee)

**nnn** - TO channel number involved in the denial (jjj through kkk)

**d** - Direction

| d | Explanation |
|---|-------------|
| F | From        |
| T | To          |
| B | Both        |

**st** - Status

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                        |

## **OCNT, FROM, TO, RDC, CUS, INCL, PRIOUT**

### **TERMINATED ONE-WAY CROSS CONNECT**

#### **Explanation Of Command**

This message terminates one-way cross-connections of non-channelized network processing circuits (NPCs). The alarm-indication signal (AIS) is the idle code and does not need to be entered. Trunk condition options for 64 kbit/s cross-connections are not allowed for non-channelized connections. When a failure occurs or during an alarm state, the AIS is transmitted toward the TO NPC.

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**FROM** - From

**[s]abc** - The 3- or 4-digit non-hierarchical non-channelized FROM NPC number

**TO** - To

**[t]ghi** - The 3- or 4-digit non-hierarchical non-channelized TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |
| <b>016A-016H</b> | <b>032A-032H</b> | <b>048A-048H</b> | <b>064A-064H</b> |
| Unit<br>5        | Unit<br>6        | Unit<br>7        | Unit<br>8        |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0641-0800</b> | <b>0801-0960</b> | <b>0961-1120</b> | <b>1121-1280</b> |
| <b>080A-080H</b> | <b>096A-096H</b> | <b>112A-112H</b> | <b>128A-128H</b> |
| Unit<br>9        | Unit<br>10       | Unit<br>11       | Unit<br>12       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1281-1440</b> | <b>1441-1600</b> | <b>1601-1760</b> | <b>1761-1920</b> |
| <b>144A-144H</b> | <b>160A-160H</b> | <b>176A-176H</b> | <b>192A-192H</b> |
| Unit<br>13       | Unit<br>14       | Unit<br>15       | Unit<br>16       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**RDC** - Red circuit

**CUS** - Customer

Customer-controller circuit

**INCL** - Inclusive

Inclusive option will remove CUS marking

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**st** - Status of denial

**d** - Direction

| <b>d</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |      |
|---|------|
| F | From |

## OCON, FROM, TO, MPM, CUS, INCL, RDC

### ONE WAY CROSS-CONNECTIONS

#### Explanation Of Command

This message requests a one-way cross-connection from the specified FROM termination(s) and to the TO termination. It is used to construct a one-way multipoint circuit. The backbone and broadcast terminations are on the virtual NPCs.

#### Command

##### Nonhierarchical

[I.11121]

```
OCON:FRM xy,SEQ ww:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\

Not applicable.

## Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

| Unit<br>5        | Unit<br>6        | Unit<br>7        | Unit<br>8        |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0641-0800</b> | <b>0801-0960</b> | <b>0961-1120</b> | <b>1121-1280</b> |
| <b>080A-080H</b> | <b>096A-096H</b> | <b>112A-112H</b> | <b>128A-128H</b> |
| Unit<br>9        | Unit<br>10       | Unit<br>11       | Unit<br>12       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1281-1440</b> | <b>1441-1600</b> | <b>1601-1760</b> | <b>1761-1920</b> |
| <b>144A-144H</b> | <b>160A-160H</b> | <b>176A-176H</b> | <b>192A-192H</b> |
| Unit<br>13       | Unit<br>14       | Unit<br>15       | Unit<br>16       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

**ddd,**  
**jjj**  
**eee,**  
**kkk**

- Channel numbers

- Channel numbers denoting the end of a range specification

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

001-500 (Virtual NPC)

**Note:** Range values -eee, -kkk apply only to the FTU/DS3U end of an FTU/DS3U Virtual NPC circuit, that is, they cannot apply to the Virtual NPC end of the circuit.

**MPM** - Multipoint mode

**fmd** - FROM mode

**tmd** - TO mode

Multipoint modes of the FROM and TO ends of the circuit

|            |                                                                           |
|------------|---------------------------------------------------------------------------|
| <i>fmd</i> |                                                                           |
| tmd        | Explanation                                                               |
| LEG        | Non-VI circuit end of the cross connections. Must be an FTU/DS3U channel. |
| BRD        | Nonbackbone leg of a virtual conference. Must be a virtual NPC channel.   |
| BBL        | Backbone leg of a virtual conference. Must be a Virtual NPC channel.      |

For OCON multipoint circuits, there are two valid combinations for fmd and tmd:

|         |                                                        |
|---------|--------------------------------------------------------|
| fmd,tmd | Explanation                                            |
| LEG,BBL | For the backbone leg of a broadcast multipoint circuit |
| BRD,LEG | For the broadcast legs of the multipoint circuit.      |

**Note:** Default values for noise guard (NG) and echo suppression (ES) are applied to symmetrical bridges (multipoint mode SYM) and polling circuits (multipoint mode BBL,BRD). These default values are:

|                     |            |            |
|---------------------|------------|------------|
| Symmetrical bridges | NG = -18db | ES = -18db |
| Polling circuits    | NG = 0db   | ES = 0db   |

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. The signaling and insertion word specification are entered separately, with a comma as the delimiter.

The following signaling option is allowed:

|           |                            |
|-----------|----------------------------|
| <i>tc</i> | <i>Explanation</i>         |
| TRSP      | Transparent, no signaling. |

The following insertion word options are allowed:

|           |                                                                                                                                          |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------|
| <i>IW</i> | <i>Explanation</i>                                                                                                                       |
| IW X'pq   | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB       | Standard trouble code, equal to IW X'E4, not valid for CEPT.                                                                             |
| MUX       | MUX out of sync code, equal to IW X'1A, not valid for CEPT.                                                                              |
| Omitted   | Only valid for CEPT, will default to IW-X-FF.                                                                                            |

**NOBBL** - No backbone leg

**F** - From

**T** - To

**IW** - Insertion word

The insertion word is provided with the DCC option, an 8-bit pattern that is inserted in the specified time slot when the circuit is disconnected.

During the alarm state, AIS (all ones) is sent out in the specified time slot.

All leg connections to multipoint circuits using a Virtual NPC must use TRSP signaling (no signaling). The insertion word portion is user specified as noted above and may be varied from leg to leg.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

**E1 to E1** Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

**E1 to DS1 or DS1 to E1** Same explanation as E1 to E1.

**DS1 to DS1** Not applicable.

**CUS** - Customer

Customer-controlled circuit

The optional CUS field indicates a customer controlled circuit. All legs on a multipoint customer-controlled circuit must be designated CUS.

**INCL** - Inclusive

A disconnected termination previously marked CUS remains as a customer controlled termination. The INCL keyword must be used to reconnect this termination to other terminations. However, if they are reconnected without the CUS keyword, they lose their customer controlled status.

**RDC** - Red circuit

All legs on a multipoint red circuit must be designated RDC.

ddd, jjj - Channel numbers

mmm - FROM channel number involved in the denial ( $ddd \leq mmm \leq eee$ )

st - Status

d - Direction (F = From, T = To, B = Both)

cc - Hexadecimal condition code

| cc | st    | Explanation                                                           |
|----|-------|-----------------------------------------------------------------------|
| 06 | INERR | Invalid range for specified FROM NPC type                             |

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |

| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The Facility Data Link (FDL) channel 000 is not allowed in a range.  
Only the FDL of DE type NPC with ESF Format can be cross-connected.

**tc** - Trunk conditioning

tc represents the desired cross-connected signaling and insertion word applied when a failure occurs. The signaling and the insertion word specification are entered separately, with a comma as the delimiter. The following signaling options are allowed:

| <i>tc</i>          | <i>Explanation</i>                                                                                                                                                           |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TC(----,mnop)      | 1-way, 4-state signaling in binary. For ESF type framing format, software will expand 4-state to 16-state by duplicating the format on the remaining frames on a superframe. |
| TC(-----,mnopqrst) | 1-way, 16-state in binary. Only valid for ESF framing formats.                                                                                                               |
| TC(X'--,X'cd)      | 1-way, 16-state in hexadecimal.                                                                                                                                              |
| TRSP               | Transparent, no signaling.                                                                                                                                                   |

If the channel being connected is a Facility Data Link (FDL), then ddd (jjj) is 000 and signaling type should be of type TC(ijkl,mnop).

The following insertion word options are allowed:

| <i>IW</i> | <i>Explanation</i>                                                                                                                    |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq   | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted to the downstream direction of a failure on the line. |
| TRB       | Standard trouble code, equal to IW X'E4.                                                                                              |
| MUX       | MUX out of sync code, equal to IW X'1A.                                                                                               |

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

|            |                                                              |
|------------|--------------------------------------------------------------|
| <b>CUS</b> | - Customer<br>Used to indicate a customer-controlled circuit |
| <b>RDC</b> | - Red circuit                                                |

**INCL** - Inclusive

A termination designated as customer controlled or a red circuit cannot be disconnected or modified without using the INCL keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the inclusive keyword is given in the remove message.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**mmm** - FROM channel number involved in the denial (ddd through eee)

**nnn** - TO channel number involved in the denial (jjj through kkk)

**st** - Status of denial

**d** - Direction

*d Explanation*

F From

T To

B Both

**cc** - Hexadecimal condition code

*cc st Explanation*

**06 INERR** Invalid range for specified FROM NPC type

**07 INERR** Invalid range for specified TO NPC type

**08 INERR** Invalid FROM NPC type for AIS insertion

**09 INERR** Invalid TO NPC type for AIS insertion

**12 MCOND** Active CCN side not IS or failed or pested or hardware OOS

**13 MCOND** UNIT not equipped, not in service, or failed

**14 MCOND** CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS

**15 MCOND** FTMI not equipped, not in service, or failed

**16 MCOND** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS

**17 MCOND** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS

**20 MCOND** Line format types are incompatible

## **OCON, FROM, TO, RDC, CUS, INCL, PRIOUT**

### **ONE-WAY NON-CANNELIZED DIGITAL SIGNAL CROSS CONNECT**

#### **Explanation Of Command**

This message requests a one-way cross-connection between two non-channelized network processing circuits.

The idle code is the alarm-indication signal (AIS-all ones), and does not need to be specified. The disconnect code for 64 kbit/s disconnection cannot be used for non-channelized network processing circuits.

When a failure occurs or during an alarm state, the AIS is transmitted toward the TO network processing circuits.

Not applicable.

### Explanation Of Parameters

**[s]abc** - The 3- or 4-digit non-hierarchical non-channelized FROM NPC

**[t]ghi** - The 3- or 4-digit non-hierarchical non-channelized TO NPC

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC                                   |
|-----------|----------|---------------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02 (DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06 (DACS II CEF frames)</b>     |

**ddd, jjj**

- Channel number

**eee, kkk**

- Channel number denoting the end of range.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The backbone termination is on the Virtual NPC (001 through 500).

**INCL** - Inclusive

To disconnect a channel or range of channels including one or more channels marked as a Red Circuit, use the INCL option.

The message will be denied if any circuits in the range are Red Circuits and the INCL option is not used.

**OOS** - Out of service

At least one end of the circuit must be out-of-service or the OOS disconnect will be denied.

**DCC** - Disconnect code

DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the trunk conditioning field of the TCON command that initially connected the channels.

If the DCC option is not used, the disconnect code specified in the grow NPC command will be used.

**NOBBL** - No backbone leg

The optional NOBBL will appear if the multipoint circuit FROM or TO was in the broadcast mode but has no backbone leg.

**MPDIS** - Multipoint disconnect

**F** - From

**T** - To

Full disconnection of the multipoint circuits is indicated by MPDIS for FROM or TO.

**CUS** - Customer

Customer-control circuit

**RDC** - Red circuit

Disconnection was performed on a red circuit.

If the disconnection was given on more than one circuit, then at least one of them was a red circuit.

**mmm, nnn**

- Channel number involved in denial.

**st** - Status of denial

**d** - Direction

| <b>d</b> | <i>Explanation</i> |

Not applicable.

## Explanation Of Parameters

**FROM** - From  
**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**uvmnp** - Hierarchical FROM NPC number for beginning of NPC range

**wxkqr** - Hierarchical TO NPC number for end of NPC range

The valid values are listed below:

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM channel number  
**jjj** - TO channel number  
**eee** - FROM channel number denoting the end of a channel range.  
**kkk** - TO channel number denoting the end of a channel range.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**INCL** - Inclusive

To disconnect a circuit or range of circuits including one or more circuits marked either RDC or CUS, use the optional INCL keyword. If this keyword is not used, the message will be denied if any circuits in the range are red circuits or customer controlled circuits.

**OOS** - Out-of-service

An Out-Of-Service disconnect may be done by giving the optional OOS keyword.

At least one end of the circuit must be out-of-service or the OOS disconnect will be denied.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**DCC** - Disconnect code

If DCC is specified, DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the <tc> field of the TCON command that initially connected the channels. If the DCC option is not used, the disconnect code specified in the GRTH NPC command will be used.

**RDC** - Red circuit

**CUS** - Customer

Customer-controlled circuit

Terminations cross-connected using the optional CUS keyword retain their CUS status when disconnected. If the terminations are reconnected without the CUS or INCL keyword, the command will be denied. When they are reconnected with the INCL keyword, they lose their customer controlled status.

**mmm, nnn**

- Channel number involved in denial. Otherwise the same as ddd.

**d** - Direction

| <i>d</i> | <i>Explanation</i> |
|----------|--------------------|
| F        | From               |
| T        | To                 |
| B        | Both               |

**st** - Status

**cc** - Hexadecimal condition code

## **ODIS, FROM, TO, OOS, INCL, PRIOUT**

### **ONE-WAY DISCONNECT**

#### **Explanation Of Command**

This message disconnects a one-way cross-connection between two non-channelized network processing circuits. When the circuit is disconnected, the idle code (AIS) is transmitted.

#### **Command**

##### **Nonhierarchical**

[I.15111]

ODIS:FRM xy,SEQ ww:FROM [s]abc,TO [t]ghi[,OOS][,INCL][,PRIOUT]!

##### **Hierarchical**

### **Autonomous Message**

---

Not applicable.

### Explanation Of Parameters

- [s]abc** - The 3- or 4-digit non-hierarchical non-channelized FROM NPC number  
**[t]ghi** - The 3- or 4-digit non-hierarchical non-channelized TO NPC number

PRIOUT - Priority Output

This keyword is used on the command line to prioritize the output response.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**uvmnp** - Hierarchical number of non-channelized FROM NPC

**wxkqr** - Hierarchical number of non-channelized TO NPC

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**INCL** - Inclusive  
Required for a customer-controlled circuit or a red circuit

**OOS** - Out-of-Service  
May be specified if one or both NPCs are out of service

**RDC** - Red circuit  
Disconnection of Red circuit

**RDLD** - Red lined

**CUS** - Customer  
Disconnection of Customer-controlled circuit

**st** - Status of denial

**d** - Direction {F-from | T-to | B-both}

**cc** - Hexadecimal condition code

## **OPR,LPBK,NPC,LOCN**

### **FACILITY LOOPBACK ACTIVATE**

#### **Explanation Of Command**

ANSI (American National Standards Institute) T1.403 is a DS1 interface specification, which among other things, specifies the use of the 4kb/s ESF data link for network maintenance. The data link is used to communicate between network elements which transport the DS1 facility.

This command is used to initiate near-end (at the DACS II) and far-end (at the terminal on the other end of the DS1 facility) loopbacks for ESF formatted facilities as defined by ANSI T1.403.

DACS II will execute a near-end payload loopback by transmitting the received information bits of each frame back onto the DS1 facility. The framing bit position is regenerated by DACS II during a payload loopback.

DACS II will also send payload, line, and network loopback commands on the ESF data link to far-end equipment, ordering the equipment on the other end of the DS1 facility to execute the respective loopbacks.

## **OPR,TSIG,NPC**

---

### **FACILITY TEST SIGNAL ACTIVATE**

#### **Explanation Of Command**

This command is used to initiate facility test signals on DACS II DA and TA DS1 facility types. The test signals support network maintenance activities.

For the Yellow Test, High Density Test, Low Density Test, and Quasi-Random Test Signals, once the test signal activation command is received and executed, the test signal remains on the line until it is deactivated by a subsequent user command.

The In-Band Loop-back Activate and In-Band Loop-back Deactivate Signals are temporary test signals. These test signals are activated by a command, transmitted for a duration of 5-8 seconds, and then automatically deactivated. When these are deactivated, the facility returns to its previous state, transmitting either normal data or any previously active test signal.

DACS II always applies downstream trunk conditioning before the NPC begins transmitting the requested test signal.

For DA and TA type DS1 facilities using the ESF format, DACS II will also transmit a Loopback Retention signal on the ESF-DL. Transmission of this signal does not cause DACS II to apply downstream trunk conditioning because the Loopback Retention signal affects only the contents of the ESF-DL.

This signal is defined in ANSI (American National Standards Institute) T1.403 as a Bit Oriented Message which is reserved for network use. ANSI T1.403 is a DS1 interface specification, which among other things, specifies the use of the 4kb/s ESF data link for network maintenance. The data link is used to communicate between network elements which transport the DS1 facility.

#### **⇒ NOTE:**

Test signals overwrite, by design, any cross-connect signal on the line regardless of which was initiated first; the cross-connect or the test signal.

## **OVERLOAD,MP,CI,UNIT,UC,TN,PROCESSOR**

### **OVERLOAD**

#### **Explanation Of Command**

**This troubleshooting message is used only by the DACS II developers** and occurs when the indicated CPU processor has reported an internal error from which recovery is not possible. The error may be in the CPU hardware or related software. The resulting troubleshooting data can be useful in isolating software problems.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

## **Explanation Of Parameters**

---

### **OVERLOAD**

- Overload

**DATA** - Data

**\*\*** - Major Alarm

**MP** - Main processor

**CI** - Communications interface

**UC** - Unit controller

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MC** - Main controller

**TN** - Transaction

**dddd** - Transaction number

The TN number can be specified in UTL::QRY,ERR to retrieve the contents of the DACS II error recovery log file which contains the past history of all error recovery events related to this output report.

The following interpretations are listed in alphabetical order by the capitalized names

**LOCAL** - Local

LOCAL STACK DATA interpretation

**dx**     *Explanation*

01     user stack pointer (A7)

02-32   dump of stack data (in reverse order)

**MEMORY** - Memory

MEMORY DATA interpretation

**dx**     *Explanation*

- 01     Address of bad memory segment
- 02     Number of attached memory segments
- 03     Memory size
- 04-08   Not used
- 09-32   Memory dump

This displays the memory attached to the process at the time of the OVERLOAD. If the memory address and memory dump section contain zeros, this indicates that there was no memory corruption. Otherwise, if corruption was detected, the address of the bad segment along with a memory dump of that segment will be displayed.

**PAUSE** - Pause

**QUEUE** - Queue

PAUSE QUEUE interpretation

**d01-d16**

- process name (ASCII)

This displays the processes that were in the pause queue at the time of the OVERLOAD.

## PROCESSOR

- Processor

### PROCESSOR DATA interpretation

This displays all relevant data about the processor at the time of the OVERLOAD. Note that pcb stands for process control block.

| <b>dx</b> | <i>Explanation</i>  |
|-----------|---------------------|
| 01        | process name        |
| 02        | stack pc            |
| 03        | pcb address         |

**PROGRAM**

- Program

**TEXT** - Text

PROGRAM TEXT interpretation

**d01-d32**

- disassembled listing of program text (ASCII)

This displays the disassembled listing of the program text. The display contains up to 254 ASCII characters starting at the value of the program counter (pc) at the time the OVERLOAD occurred.

**READY** - Ready

READY QUEUE interpretation

**d01-d16**

- process name (ASCII)

This displays the processes that were in the ready-to-run queue at the time of the OVERLOAD.

**STACK** - Stack

**TRACE** - Trace

STACK TRACE interpretation

| <i>dxx</i> | <i>Explanation</i>    |
|------------|-----------------------|
| 01         | previous stack 1 (A6) |
| 02         | program counter       |
| 03-08      | stack dump            |
| 09         | previous stack 2 (A6) |
| 10         | program counter       |
| 11-16      | stack dump            |
| 17         | previous stack 3 (A6) |
| 18         | program counter       |
| 19-24      | stack dump            |
| 25         | previous stack 4 (A6) |
| 26         | program counter       |
| 27-32      | stack dump            |

This message dumps the previous four function calls prior to the function where the OVERLOAD occurred.

## **REPT — RPT**

---

This section documents the commands **REPT** through **RPT**.

## **REPT,PM,NPC,PARAM,COUNT,VLDTY,LOCN,AI**

### **REPORT DS1 PERFORMANCE MONITORING**

#### **Explanation Of Command**

This message is automatically generated by DACS II as the result of a user scheduling automatic DACS II performance reports for DA and TA type NPCs. The autonomous report format specifies the NPC along with all of the data necessary to identify the specific performance parameters and accumulation time periods that are being reported. The actual parameter counts are reported along with their historical validity indicators.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

## Explanation Of Parameters

NPC - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical starting NPC number

[v]ghi - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [t]def)

[u]jkl - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [t]def)

[t]def - The 3- or 4-digit nonhierarchical ending NPC number

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |

**uvmnp** - Hierarchical starting NPC number  
**edhfg** - Hierarchical NPC number (uvmnp through wxkqr)  
**opjst** - Hierarchical NPC number (uvmnp through wxkqr)  
**wxkqr** - Hierarchical ending NPC number

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

Unit    Module NPC  
**01-16 1-4    01-40**

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

Unit    Module    NPC  
**01-16    1-6    01-28**

**PARAM** - Parameter

**pppp** - Parameter name

The type of monitored parameter whose value is reported.

*pppp Explanation*

|      |                                       |
|------|---------------------------------------|
| CVP  | Path Coding Violations                |
| CVL  | Line Coding Violations                |
| ESP  | Path Errored Seconds                  |
| ESL  | Line Errored Seconds                  |
| SESP | Path Severely Errored Seconds         |
| SESL | Line Severely Errored Seconds         |
| SEFS | Path Severely Errored Framing Seconds |
| CSSP | Path Controlled Slip Seconds          |
| UASP | Path Unavailable Seconds              |

**COUNT** - Count

**cccccccc**

- The accumulated count of a monitored parameter.  
(000000000 through 134217728)

This parameter is meaningless if the VLDTY parameter indicates that data is not available for the interval.

**VLDTY** - Validity

**v** - Validity indicator

Indicates the validity of historical monitoring information. This parameter indicates whether the information for the specified accumulation interval was accumulated over the entire interval or some portion of it.

*v Explanation*

|   |                                                              |
|---|--------------------------------------------------------------|
| A | Adjusted, data was manually initialized                      |
| C | Complete, data was accumulated over the entire interval      |
| L | Long, data was accumulated longer than the interval period   |
| P | Partial, data was accumulated over only part of the interval |

**LOCN** - Location

**locn** - The location being performance monitored

*locn Explanation*

|      |          |
|------|----------|
| NEND | Near-end |
| FEND | Far-end  |

**AI** - Accumulation interval

**aaaaa** - Accumulation interval specification

The accumulation or performance monitoring period for the specified parameter.

*aaaaa Explanation*

15MIN Parameter count from a 15-minute accumulator

DAILY Parameter count from a daily accumulator

**MONDAT** - Monitored date

**mddd** - Beginning date of the performance monitoring period

The date on which the performance monitoring period begins. This period is specified in the AI parameter.

**mm** - Month of year (01 through 12)

**dd** - Day of the month (01 through 31)

**MONTIM** - Monitored time

**hhmm** - Time at which performance monitoring begins

When outputting current or historical data, this parameter indicates the beginning time of day of the historical accumulation interval specified in the AI parameter.

**hh** - Hour of day (00 through 23)

**mm** - Minute of hour (00 through 59)

**ABORT** - Abort

The autonomous ABORT message is generated when the buffer is overfilled with scheduled PM reports.

## **RESET,DATE,TOD,FORMAT,MDY,DMY**

### **ERROR RECOVERY**

#### **Explanation Of Command**

This autonomously generated message is used to inform the craft that the system clock has been recovered automatically by the frame. The field can either be date of the year, time of day, or both.

The date and time will default to 12/31/9999 and 00:00:00, respectively.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.01393]

I hh:mm:ss xy,ww RESET {DATE|TOD|TOD DATE} hr:mn:sc \  
{mo/da/yr FORMAT MDY|da/mo/yr FORMAT DMY} COMPL

## **Explanation Of Parameters**

---

**RESET** - Reset

**TOD** - Time of day

**DATE** - Date

**mo/da/yr**

- date DACS II is reset to

**da/mo/yr**

- date DACS II is reset to

**yr** - 4- digit calendar year

**mo** - month (01 through 12)

**da** - day (01 through 31)

**hr:mn:sc**

- time DACS II is reset to

**hr** - hour (00 through 23)

**mn** - minute (00 through 59)

**sc** - second (00 through 59)

**FORMAT** - Date display format

**MDY** - Month/Day/Year format

**DMY** - Day/Month/Year format

## **RESET, STOPPED**

### **STARTUP**

#### **Explanation Of Command**

This autonomous message indicates that the reset procedure has not successfully completed.

#### **Explanation Of Parameters**

## **RLS,LPBK,NPC,LOCN**

### **FACILITY LOOPBACK RELEASE**

#### **Explanation Of Command**

ANSI (American National Standards Institute) T1.403 is a DS1 interface specification, which among other things, specifies the use of the 4kb/s ESF data link for network maintenance. The data link is used to communicate between network elements which transport the DS1 facility.

This command is used to deactivate near-end (at the DACS II) and far-end (at the terminal on the other end of the DS1 facility) loopbacks on ESF formatted facilities as defined by ANSI T1.403.

This command can be used to deactivate a DACS II near-end payload loopback or to cause DACS II to transmit payload, line, or network loopback deactivate commands on the ESF data link to far-end equipment, ordering the equipment on the other end of the DS1 facility to deactivate the respective loopbacks.

#### **Command**

##### **Nonhierarchical**

[I.26151]

**RLS:FRM xy,SEQ ww:LPBK loop,NPC [s]abc,LOCN locn!**

## **RLS,TSIG,NPC**

### **FACILITY TEST SIGNAL DEACTIVATE**

#### **Explanation Of Command**

This command is used to deactivate facility test signals and ANSI data link bit-oriented messages on DACS II DA and TA DS1 facility types. The test signals support network maintenance activities.

This command is required to deactivate any Yellow Test, High Density Test, Low Density Test, or Quasi-Random Test Signal previously applied to a facility because once these test signals are activated, they remain on the line until they are deactivated by this command.

Although this command also deactivates any currently active In-Band Loop-back Activate or In-Band Loop-back Deactivate Signal, these signals are temporary test signals which are transmitted for a duration of 5-8 seconds and then automatically deactivated by DACS II.

Deactivating a test signal also causes DACS II to remove any downstream trunk conditioning that was applied because the test signal was activated.

This command is also used to deactivate all data link test signals on DA or TA type DS1 facilities using the ESF format. Data link test signals include the Yellow Test signal (ESF mode), the Loopback Retention signal, and the ANSI far-end loopback activate/deactivate sequences which are initiated using the "Operate Loopback" command (26141). Data link test signals are defined in ANSI (American National Standards Institute) T1.403 as Bit Oriented Messages. ANSI T1.403 is a DS1 interface specification, which among other things, specifies the use of the 4kb/s ESF data link for network maintenance. The data link is used to communicate between network elements which transport the DS1 facility.

## Explanation Of Parameters

TSIG - Test signal

test - Test signal type

### *test Explanation*

**ALLP** - All Payload Test Signals, including High Density Test Signal, Low Density Test Signal, Quasi-Random Test Signal, In-Band Loopback Activate Signal, In-Band Loopback Deactivate Signal, and Yellow Test Signal in D4/T1DM mode

**ALLD** - All Data Link Test Signals, including Yellow Test Signal in ESF mode, Loopback Retention Signal, and ANSI Bit-Oriented Far-End Loopback Activate/Deactivate Sequences.

**ALL** - All Test Signals in both the payload and data link.

NPC - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical NPC number

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

## **RMV,CCI**

### **REMOVE CLOCK CONTROL INTERFACE**

#### **Explanation Of Command**

This command is applicable only to the capacity expansion frame (CEF).

It requests that the clock and control interface (CCI) in side s be removed from service.

When a CCI pack is removed from service, its two corresponding bus terminator (BT) packs are also removed.

#### **Command**

**cc** - Hexadecimal condition code

**cc** **Explanation**

**04** **Subject entity is out of service**

## **RMV,NPC,SIDE,INCL**

### **REMOVE NPCs**

#### **Explanation Of Command**

This command removes a single Network Processing Circuit (NPC) or a range of NPCs within a unit from service.

The NPCs can belong to a Facility Terminating Unit, a DS3 Unit or a Digital Signal Processing Unit. A range of NPCs cannot be specified for Digital Signal Processing Unit NPCs. The NPCs can belong to a Facility Terminating Unit, or a Digital Signal Processing Unit. When a range of NPCs is being removed, execution of this command may be aborted by entering **ABT**. When a range of NPCs is being removed, execution of this command may be aborted by entering **ABT -CMD**. The **INCL** keyword is required for removal of one or more cross-connected Network Processing Circuits with customer or red circuit marking.

**Note:** **INCL** is also required for subrate Network Processing Circuits with established channels (i.e., channels connected by the **SECH** command). The **INCL** keyword is required for removal of one or more cross-connected Network Processing Circuits with customer or red circuit marking.

**Note:** **INCL** is also required for subrate Network Processing Circuits with established channels (i.e., channels connected by the **CRTE CRS** command). The **INCL** keyword is required for removal of one or more cross-connected Network Processing Circuits with customer or red lined marking.

**Note:** **INCL** is also required for C-bit processing DSPU packs with C-bit connected channels.

One message segment is output for each Network Processing Circuit requested and successfully removed.

For NPCs with a Digital Signal Processing Unit (DSPU), this command results in the removal of all NPCs in the circuit pack on only one of the duplicated sides.

When an NPC restore command addresses a range of NPCs, the restoral of two or more consecutive NPCs in the range or even an entire Facility Terminating Module (FTM) of NPCs can be skipped, with a summary message, for the following conditions: A range command addressing NPCs within a Unit crosses an FTM boundary and the FTM is

unequipped; Addressed NPCs are unequipped; Addressed NPCs are out-of-service; Addressed NPCs have other conditions not involving a failure condition determined by diagnostics.

Specifically:

- (a) Restore commands where the address range crosses a Unit boundary shall be denied.
- (b) For restore commands which address a range of NPCs, denials for sets of two or more NPCs shall be output in a summary command. The summary denial shall use a floating window denial:

#### **Floating Window Denial Message**

When a restore command for a range of NPCs is denied for successive NPCs in the range for the same reason, a summary denial message shall be output, identifying the relevant range of NPCs and the reason. The generation of additional completion or denial responses for reasons other than diagnostic failure resumes at the next NPC and continues to the end of the range.

### Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number (beginning of the range).

**[t]def** - The 3- or 4-digit nonhierarchical NPC number (end of the range).

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical NPC number (beginning of the range).

**uvkqr** - Hierarchical NPC number (end of the range).

**uv** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The allowable values are:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

SP type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-31</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

If NPC numbers are expressed in three digits, the valid values are:

MB, SR, and MJ type NPC numbers listed by unit number,  
Unit Type DP (DSPU)

|            |            |            |            |            |            |
|------------|------------|------------|------------|------------|------------|
| Unit<br>1  | Unit<br>2  | Unit<br>3  | Unit<br>4  | Unit<br>5  | Unit<br>6  |
| <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> |
| <b>001</b> | <b>161</b> | <b>321</b> | <b>481</b> | <b>641</b> | <b>801</b> |

**SIDE** - Side

**s** - Side of duplicated DSPU circuit to be removed (0 or 1)

**INCL** - Inclusive

This keyword is required for removal of one or more NPCs which have cross-connections marked as customer or red. It is also required for Subrate NPCs with established channels. For Subrate circuit packs, there is only one NPC per circuit pack.

**pa** - Priority of action

**pa** *Explanation*

**\*C** Critical

**\*\*** Major

**[s]ghi** - The 3- or 4-digit nonhierarchical number of a successfully removed NPC.

(**[s]abc** through **[t]def**)

**[s]jkl** - The 3- or 4-digit nonhierarchical number of an NPC whose removal is denied.

If used in a range, it denotes the first NPC of the range.

(**[s]abc** through **[t]def**)

**[t]mno** - The 3- or 4-digit nonhierarchical number of an NPC whose removal is denied.

It denotes the last NPC of a range. (**[s]abc** through **[t]def**)

**uvghi** - Hierarchical number of a successfully removed NPC.

(**uvmnp** through **uvkqr**)

**uvjkl** - Hierarchical number of an NPC whose removal is denied.

If used in a range, it denotes the first NPC of the range.

(**uvmnp** through **uvkqr**)

**uvmno** - Hierarchical number of an NPC whose removal is denied.

It denotes the last NPC of a range. (**uvmnp** through **uvkqr**)

**uv** - Unit number

**m, g, k, j**

- Module number

**np, qr, hi, kl, no**

- NPC number within the module

**TYPE** - Type

**mnxyz** - NPC-type identifier

mn Explanation

DA Dual digroup ANSI NPC

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

- B7 The associated MXR is In-Service but pested**
- 69 Use of this NPC is RESERVED for SLC 96 MD 1**

## **RMV,SMEM,PMEM**

### **REMOVE PMEM OR SMEM**

#### **Explanation Of Command**

This message removes the Primary Memory card (PMEM) or Secondary Memory card (SMEM) from service.

The PMEM card may only be removed when the main controller (MC) is in maintenance condition (MCOND). The SMEM card may be removed when the MC is in service (IS) or MCOND.

If either card fails autonomously, they are removed by software. However, if the PMEM fails autonomously, the MC will first go into MCOND.

If the SMEM is removed manually, it is removed by software also. Removing the SMEM card will not change the state of the MC. When the MC is IS, all writes to the card will be completed before the this command completes.

## **RMV,SYNC**

---

### **REMOVE SYNCHRONIZER**

#### **Explanation Of Command**

---

This command is used to remove the synchronizer from service. This includes the timing extractor circuit, the phase-locked loop, the clock generator circuit, and the service and reply circuit.

If the mate synchronizer is not available for switchover, this message will be denied.

#### **Command**

[O.33111.01]

**I** hh:mm:ss xy,ww    **RMV SYNC a TLI m[ CRO] COND cc DNY**

### **Explanation Of Parameters**

---

**SYNC**    - Synchronizer

**a**        - Synchronizer number (0 or 1)

**TLI**      - Timing link interface

**m**        - TLI number (1 through 4)

**CRO**      - Clock Reference Oscillator

**COND**    - Condition

**cc**       - Hexadecimal condition code

#### **cc    Explanation**

**02    Subject entity is not equipped**

**04    Subject entity is out of service**

**33    Wrong TLI type**

**A9    Both syncs are out-of-service**

## **RMV,SYNC,TLI,SSP**

### **REMOVE SYNCHRONIZER'S TLI OR SSP**

#### **Explanation Of Command**

This message requests the removal of the synchronizer's timing link interface from service.

If the timing link interface was configured as a timing extractor, synchronizer sync Port 0 or 1 must also be specified.

#### **Command**

[I.33121]

**RMV:FRM xy,SEQ ww:SYNC a,TLI m[,SSP b]!**

#### **Completion Message**

[O.33121]

**M hh:mm:ss xy,ww n[vv] RMV SYNC a TLI m[ SSP b] COND cc \**  
**COMPL**

#### **Denial Message**

[O.33121.01]

**M hh:mm:ss xy,ww n[vv] RMV SYNC a TLI m[ SSP b] COND cc DNY**

#### **Autonomous Message**

[O.33121]

**I hh:mm:ss xy,ww RMV SYNC a TLI m[ SSP b[ c]] COND 00 COMPL**

[O.33121.01]

**I** hh:mm:ss xy,ww    **RMV SYNC a TLI m[ SSP b[ c]] COND cc DNY**

### **Explanation Of Parameters**

---

**SYNC**    - Synchronizer

**a**        - SYNC number (0 or 1)

**TLI**      - Timing Link Interface

**m**        - TLI number (1 through 4)

**SSP**      - Synchronizer Sync Port

**b, c**      - SSP number of TLI-m (0 or 1)

Only a single SSP, "b", can be specified in the input command. Two SSPs, "b" and "c", can appear in an autonomous removal message.

**cc**        - Hexadecimal condition code

#### **cc    Explanation**

**02**    Subject entity is not equipped

**04**    Subject entity is out of service

**16**    SYNC TB is not equipped

**17**    SYNC is out of service

**33**    Wrong TLI type

**BE**    Hardware mismatch or not present

**C8**    Sync pack denied command

## **RMV,TSI**

---

### **REMOVE TIME SLOT INTERCHANGE**

#### **Explanation Of Command**

---

This command applies only to a noncapacity expansion frame (NCEF).

It requests the removal of the time slot interchange (TSI) from service.

If the TSI on the other side has already been removed this command will be denied unless there are no provisioned circuits for this TSI.

#### **Command**

## **RMV,TSIS,CCN,ALL**

### **REMOVE**

#### **Explanation Of Command**

This command is applicable only to a noncapacity expansion frame (NCEF).

It requests the removal of all in-service time slot interchanges in the cross-connect network side.

This message will be denied if the cross-connect network side specified is the active side and any time slot interchange on the inactive side is out of service. The exception to this is if there are no cross-connected circuits in the system.

**18**      CCNI is out of service

**19**      Mate CCN side is out of service

## **RMV,TSIS,CCN,UNIT,CONN**

### **REMOVE**

#### **Explanation Of Command**

This command is applicable only to a noncapacity expansion frame (NCEF).

This message allows removal of all time slot interchanges (TSI) that connect the specified unit to the indicated units, one of which may be the specified unit in cross-connect network side 0 or 1 through use of the optional field. If the field is omitted, then all TSIs connected to the specified unit are removed.

Note that if the TSI on the other CCN side has already been removed, this command will be executed only if no circuits are cross-connected through the TSI. The reason for allowing removal on both sides is to degrow the UNIT or change its connectivity.

#### **Command**

[I.33231]

```
RMV:FRM xy,SEQ ww:TSIS,CCN s,UNIT q\

## **RMV,UNIT,FLI**

### **REMOVE FACILITY LINE INTERFACE**

#### **Explanation Of Command**

This command requests and reports the removal of one facility line interface (FLI) in a DS3 unit. The removal can be caused by either a manual request or autonomously by error recovery.

A request for removal of a FLI will cause a protection switch. A request to remove an unprotected FLI will be denied unless no service multiplexer (MXR) or protection MIU is equipped and the protection MMFG is out-of-service in that DS3 unit.

This message also reports an unsuccessful automatic attempt to remove an unprotected FLI, which will cause a critical alarm.

least 1 Service MXR is eqd

**39** An autonomous switch is in progress

**B0** FLI is out of service

## **RMV,UNIT,FMT**

### **REMOVE FORMATTER**

#### **Explanation Of Command**

This command requests and reports the removal of one formatter (FMT) in a DS3 unit. The removal can be either manually by a command or autonomously by error recovery.

A successful request to remove an FMT will automatically cause a switch to the other cross-connect side. A request for removal of an FMT will be denied if the switch to the other cross-connect side is not possible. The output of this command also reports an unsuccessful automatic attempt to remove an unprotected FMT. The removal of both FMTs will automatically come into effect when the unit is degrown.

## **RMV,UNIT,MIU,INCL**

### **REMOVE MULTIPLEXER INTERFACE UNIT**

#### **Explanation Of Command**

This message removes from service one or more Multiplexer Interface Unit (MIU) circuit packs in a DS3 unit. Using the INCL (inclusive) option, this remove command removes all TA-type NPCs associated with the MIU. Executing this command results in protection switching if any TA-type NPCs are in-service. TA type NPCs provide ESF data link communications according to the ANSI T1.403-1989 standard and enhanced performance monitoring.

**Note:** This command can not be generated autonomously.

A **RMV IN PROGRESS** message will be generated at 20-second intervals while this command is being executed.

There will be one completion or denial output message for each circuit pack removed.

#### **Command**

**11**    UC is out of service

**12**    UC is in service but failed

**24**    Unit type error

**BF**    MIU is not equipped

**9D**    Attempt to remove a Service MIU which is under protection

**A9**    INCL not specified and at least one NPC In Service

**CF**    MIU is out of service

## **RMV,UNIT,MMFG,FRC,INCL**

### **REMOVE MMFG**

#### **Explanation Of Command**

This command requests and reports the removal of the circuit packs of one or more Multiplexer - Multiplexer Interface Unit Functional Group (MMFG). The removal of an MMFG can be caused either by manual command or autonomous DACS II error recovery action.

An **RMV MMFG** command will remove the Multiplexer (MXR) and the Multiplexer Interface Unit (MIU) if the MIU is in-service. A manual removal request of an MMFG will cause protection switching if protection is available. However, the automatic switch to protection (or the automatic switchback in the case of protection MMFGs) can be inhibited by specifying the FRC option, which can result in loss of service. The FRC option must be used to request the unprotected removal of an MMFG. Any resulting loss of service will not cause an alarm. An attempt to remove more than one MMFG without the FRC option will be denied.

The Inclusive (INCL) keyword must be used if at least one of the DS3's tributary NPCs is in service. This option will remove the NPCs together with the MMFG.

This command also reports the unsuccessful automatic attempt to remove an unprotected MMFG, which will cause a critical alarm. An **RMV IN PROGRESS** message will be generated at 20-second intervals while this command is being executed. There will be one completion or denial output message for each circuit pack removed.

#### **Command**

### **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MMFG** - Multiplexer-Multiplexer Interface Unit functional group.

**c, d** - The number of the MMFG within the unit (P,1 through 6) (P means the protection MMFG)

**a** - The number of the MMFG that is removed or denied (c or d)

**FRC** - Force

This keyword will force a manual removal (in the case that protection is not available) and will prevent automatic protection switching from accompanying the removal, thus forcing the removal of all the DS1 facilities served by the MMFG.

**INCL** - Inclusive

This keyword will cause all tributary NPCs which are still in service to be removed. A command with the INCL keyword must also contain the FRC keyword or it will be denied by DACS II.

**\*C** - Critical priority of action

**\*\*** - Major priority of action

**M** - Manual priority of action

**MXR** - Multiplexer

**a** - MXR identifier (P, 1 through 6)

x      - The DS3 framing format

*x*      *Format*

1      M13 (default)

2      C-bit parity

y      - Not assigned (the only valid value is 0)

z      - Not assigned (the only valid value is 0)

**MIU** - Multiplexer interface unit

**a** - MIU identifier (P, 1 through 6)

**cc** - Hexadecimal condition code

**cc**      **Explanation**

**10**      **Unit is not equipped**

**11**      **UC is out of service**

**12**      **UC is in service but failed**

**24**      **Unit type error**

**9B**      **The MXR is not grown**

**A8**      **The MMFG is Out Of Service**

**cc Explanation**

- A9 INCL not specified and at least one NPC In Service**
- AA Range entered without FRC keyword**
- AB FRC specified for protection, and service MMFG is In Service**
- AC No protection is available for the Service MMFG**
- AD The Protection MMFG is selected, and auto. switchback is unavailable**
- B7 The associated MXR is In-Service but pested**

## **RMV,UNIT,UC**

### **REMOVE UNIT CONTROLLER**

#### **Explanation Of Command**

This message requests removal of the specified unit controller from service.

#### **Command**

[I.33311]

RMV:FRM xy,SEQ ww:UNIT [q]q,UC!

#### **Completion Message**

[O.33311]

M hh:mm:ss xy,wz n RMV UNIT [q]q UC COND cc COMPL

#### **Denial Message**

|-----------|-----------------------------------------|

## **RPT,T,NPC,LOCN,AI,COUNT,THLEV**

### **REPORT NPC THRESHOLD CROSSING**

#### **Explanation Of Command**

This autonomous output message reports a facility performance monitoring parameter threshold crossing event for the specified DA or TA type NPC. For DA and TA type NPCs, this is a non-alarmed event. Threshold crossing alert messages can be generated for both 15-minute and daily parameter accumulation intervals.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

#### **Nonhierarchical**

[O.65061]

I hh:mm:ss xy,ww RPT T-<parameter> NPC [s]abc 2 LN MSG:  
LOCN locn AI aaaaa COUNT cccccccc THLEV llllllll COMPL

## Hierarchical

[O.65061]

**I** hh:mm:ss xy,ww **RPT** T-<parameter> **NPC** uvmnp 2 **LN** MSG:  
**LOCN** locn **AI** aaaaa **COUNT** cccccccc **THLEV** llllllll **COMPL**

## Explanation Of Parameters

**AI** - Accumulation Interval

**aaaaa** - The accumulation time period for the specified parameter

*aaaaa Explanation*

15MIN Parameter count from a 15-minute accumulator

DAILY Parameter count from a daily accumulator

**NPC** - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

### **T-parameter**

- Threshold crossing parameter

**T**

- Threshold

**parameter**

- The type of monitored parameter for which a threshold crossing is reported.

For DA or TA type NPC

| <i>parameter</i> | <i>Explanation</i>                    |
|------------------|---------------------------------------|
| CVP              | Path Coding Violations                |
| CVL              | Line Coding Violations                |
| ESP              | Path Errored Seconds                  |
| ESL              | Line Errored Seconds                  |
| SESP             | Path Severely Errored Seconds         |
| SESL             | Line Severely Errored Seconds         |
| SEFS             | Path Severely Errored Framing Seconds |
| CSSP             | Path Controlled Slip Seconds          |
| UASP             | Path Unavailable Seconds              |

**LOCN** - Location

**locn** - The location being performance monitored

*locn Explanation*

NEND Near-end

FEND Far-end

**COUNT** - Count

**CCCCCCCC**

- The count accumulated for the monitored parameter  
(000000001 through 134217728)

**THLEV** - Threshold Level

**11111111**

- The programmed threshold level of the monitored parameter  
(000000001 through 134217728)

Values of threshold levels within the ranges above may cause  
threshold crossing alert messages

---

## **RST**

---

This section documents the **RST** command.

## **RST,CCB**

### **RESTORE CROSS-CONNECT BUFFER**

#### **Explanation Of Command**

This command applies only to the noncapacity expansion frame (NCEF).

It requests the restoration of the specified cross-connect buffer to service.

#### **Command**

[I.34202]

**RST:FRM xy,SEQ ww:CCB sf!**

#### **Completion Message**

[O.34202]

**M hh:mm:ss xy,ww n[vv] RST CCB sf COND cc COMPL**

#### **Denial Message**

[O.34202.01]

**M hh:mm:ss xy,ww n[vv] RST CCB sf COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**CCB** - Cross-connect buffer

**s** - Side number (0 or 1)

**f** - CCB number (1 through 6)

**COND** - Condition

**cc** - Completion condition code (hexadecimal)

To interpret values see cc.

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>Explanation</b> |

## **RST,CCI**

---

### **RESTORE CONTROL AND CLOCK INTERFACE**

#### **Explanation Of Command**

---

This command applies only to the capacity expansion frame (CEF).

It requests that the clock and control interface pack of side s be restored to service. The two bus terminator packs of side s are also restored along with the CCI pack.

#### **Command**

---

[I.34251]

**RST:FRM xy,SEQ ww:CCI s!**

#### **Completion Message**

---

[O.34251]

**M hh:mm:ss xy,ww n[vv] RST CCI s COND cc COMPL**

#### **Denial Message**

---

[O.34251.01]

**M hh:mm:ss xy,ww n[vv] RST CCI s COND cc DNY**

#### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**CCI** - Clock and control interface

**s** - Side number (0 or 1)

**COND** - Condition

**cc** - Completion condition code (hexadecimal)  
To interpret values see cc below.

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>Explanation</b> |
|-----------|--------------------|
|-----------|--------------------|

| <b>0B</b> | <b>BOOT on subject entity failed</b> |
| <b>16</b> | <b>SYNC TB is not equipped</b>       |
| <b>17</b> | <b>SYNC is out of service</b>        |
| <b>CF</b> | <b>SYNC is inservice but failed</b>  |

## **RST,CCNI**

### **RESTORE CROSS-CONNECT NETWORK INTERFACE**

#### **Explanation Of Command**

This command is applicable only to the noncapacity expansion frame (NCEF).

It allows restoral of a cross-connect network interface to service.

#### **Command**

[I.34201]

**RST:FRM xy,SEQ ww:CCNI s!**

#### **Completion Message**

[O.34201]

**M hh:mm:ss xy,ww n[vv] RST CCNI s COND cc COMPL**

#### **Denial Message**

[O.34201.01]

**M hh:mm:ss xy,ww n[vv] RST CCNI s COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**CCNI** - Cross-connect network interface.

**s** - Side No. (0 or 1).

**COND** - Condition

**cc** - Completion condition code  
To interpret values see cc.

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>Explanation</b> |
|-----------|--------------------|
|-----------|--------------------|

|           |                                      |
|-----------|--------------------------------------|
| <b>03</b> | <b>Subject entity is in service</b>  |
| <b>0A</b> | <b>DGN on subject entity failed</b>  |
| <b>0B</b> | <b>BOOT on subject entity failed</b> |
| <b>16</b> | <b>SYNC TB is not equipped</b>       |
| <b>17</b> | <b>SYNC is out of service</b>        |

| <b>CF</b> | <b>SYNC is inservice but failed</b>  |

## **RST,ETSI**

### **RESTORE EXPANDED TIME SLOT INTERCHANGER**

#### **Explanation Of Command**

This command is applicable only to the capacity expansion frame (CEF).

It requests that an expanded time slot interchanger (ETSI) be restored to service.

#### **Command**

[I.34261]

**RST:FRM xy,SEQ ww:ETSI sqq!**

#### **Completion Message**

[O.34261]

**M hh:mm:ss xy,ww n[vv] RST ETSI sqq COND 00 COMPL**

#### **Denial Message**

[O.34261.01]

**M hh:mm:ss xy,ww n[vv] RST ETSI sqq COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**ETSI** - Expanded time slot interchanger

**s** - Side number (0 or 1)

**qq** - Unit number (01 through 16)

Note that the unit number qq must always be shown with two digits in both the input and output. The leading 0 is required.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**02** Subject entity is not equipped

**03** Subject entity is in service

**0A** DGN on subject entity failed

**0B** BOOT on subject entity failed

**16** SYNC TB is not equipped

**17** SYNC is out of service

**CE** CCI is out of service

**CF** SYNC is inservice but failed

**D1** CCI is not present

**D4** CCI is inservice but failed

---

## **RST,ETISIS,ECCN,ALL**

---

### **RESTORE ALL ETISIS**

#### **Explanation Of Command**

---

This command is applicable only to the capacity expansion frame (CEF).

It requests that all equipped expanded time slot interchangers (ETISIs) in side s of the expanded cross-connect network (ECCN) be restored to service.

#### **Command**

---

[I.34271]

**RST:FRM xy,SEQ ww:ETISIS,ECCN s,ALL!**

#### **Completion Message**

---

[O.34271]

**M hh:mm:ss xy,ww n[vv] RST ETISIS ECCN s ALL 5 LN MSG:**

**TOTAL ETISIS kk**

**s01 r nn s02 r nn s03 r nn s04 r nn s05 r nn s06 r nn**

**s13 r nn s14 r nn s15 r nn s16 r nn** \

**COND cc COMPL**

#### **Denial Message**

---

[O.34271.01]

**M hh:mm:ss xy,ww n[vv] RST ETISIS ECCN s ALL COND cc DNY**

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**ETSiS** - Expanded time slot interchangers

**ECCN** - Expanded cross-connect network

**s** - Side number (0 or 1)

**kk** - Total number of ETSiSs equipped (01 through 16)

**r** - Restore status

Indication of the completion or denial of the restoration for each individual ETSiS pack.

| <i>r</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |           |
|---|-----------|
| C | Completed |
|---|-----------|

|   |        |
|---|--------|
| D | Denied |
|---|--------|

|   |                    |
|---|--------------------|
| - | ETSiS not equipped |
|---|--------------------|

**nn** - Hexadecimal condition code for the particular ETSiS

To interpret values of nn see cc below.

**cc** - Hexadecimal completion condition code.

To interpret values of cc see cc below.

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|           |               |
|-----------|---------------|
| <b>00</b> | No conditions |
|-----------|---------------|

|           |                                |
|-----------|--------------------------------|
| <b>02</b> | Subject entity is not equipped |
|-----------|--------------------------------|

|           |                              |
|-----------|------------------------------|
| <b>03</b> | Subject entity is in service |

| <b>17</b> | SYNC is out of service |
|-----------|------------------------|

**cc**    *Explanation*

- 41**    Failed to boot subject CCN side
- CE**    CCI is out of service
- CF**    SYNC is inservice but failed
- D1**    CCI is not present
- D4**    CCI is inservice but failed

## **RST, LINK**

---

### **RESTORE ADMINISTRATIVE LINK**

#### **Explanation Of Command**

---

This message requests the restoration of the administrative **LINK** to service. The autonomous output message will be generated when the administrative link is successfully restored by the auto-restoration option.

#### **Command**

---

[I.34011]

**RST:FRM xy,SEQ ww:LINK j!**

#### **Completion Message**

---

[O.34011]

**M hh:mm:ss xy,ww n[vv] RST LINK j COND cc COMPL**

#### **Denial Message**

---

[O.34011.01]

**M hh:mm:ss xy,ww n[vv] RST LINK j COND cc DNY**

#### **Autonomous Message**

---

[O.34011]

**A hh:mm:ss xy,ww RST LINK j COND cc COMPL**

### **Explanation Of Parameters**

---

**LINK** - Link

**j** - Administrative link number (1 through 6)

**cc** - Hexadecimal condition code

**cc Explanation**

**00 No conditions**

**03 Subject entity is in service**

**0A DGN on subject entity failed**

## **RST,MC,MCOND,NOJRNL,FRC,CLR,ALL**

### **RESTORE MAIN CONTROLLER**

#### **Explanation Of Command**

The RST::MC command provides different functions when different keywords are entered. DACS II responses to each keyword entered are explained below:

1. **RST:FRM xy,SEQ ww:MC,MCOND!**

The MCOND keyword transfers the DACS II Main Controller (MC) from the normal in-service state to the Maintenance Condition (MCOND) state. MCOND is a state of the MC in which it is not fully OOS but is in a restricted mode to allow certain maintenance operations. Network traffic carried by the system will not be affected by MCOND.

2. **RST:FRM xy,SEQ ww:MC!**

This command restores the MC to the normal in-service state from either the OOS or the MCOND state by using the data base on the PMEM. Therefore, if the primary memory data base contains the state existing prior to entering the OOS or MCOND state, the system will return to the original state without affecting service, that is, no network traffic disruption. Normal in-service or original state imply that only states provisioned by the user are recorded in the data base and will be used for restoral; transient states will not be recorded or used for restoral. This command should be used to restore the system for normal operations.

Any test groups and ports established prior to entering the RST::MC command will be autonomously released by this command. Upon completion of the command a test group release message will be issued for the last test group released as a result of the RST::MC. No messages will be issued for any test ports released during command execution.

3. **RST:FRM xy,SEQ ww:MC,NOJRNL!**

The NOJRNL keyword causes the system to be restored without the data base journals on the PMEM. At the completion of this command the system returns to the state of the last data base backup from RAM to PMEM. The effect of the commands entered after the last data base backup is destroyed. Therefore, if cross-connect commands were executed after the last backup, the resulting cross-connections will be disconnected by this command. This command is useful for system restoration after the system fails to boot due to JOURNAL failure.

4. **RST:FRM xy,SEQ ww:MC,FRC!**

The FRC keyword forces the system to be restored when there is an empty data base in the PMEM. At the completion of the command the MC will be in IS state.

- For Installation and Product Evaluation Only. Can be used only if the AT&T security warning feature bit is set.

**RST:FRM xy,SEQ ww:MC,CLR!**

The CLR keyword erases Main Processor (MP) and all Unit data bases in the processor memory and on the PMEM before restoring the system. Thus, all transmission equipment is de-grown and all cross-connects are disconnected. This command should be used for installation only and should NOT be used for any other maintenance operations. Note that the Communications Interface (CI) data base is not erased by this command.

- For Installation and Product Evaluation Only. Can be used only if the AT&T security warning feature bit is set.

**RST:FRM xy,SEQ ww:MC,CLR,ALL!**

The only difference between using only the CLR keyword and using both the CLR and ALL keywords is that entering ALL will cause the Communications Interface (CI) data base to be erased before restoring the system. Therefore, all information associated with user logins (except the Frame Administrator DAX login) will be deleted from the data base and the provisioning data for the administrative links will return to the default values.

**WARNING:**

The use of the NOJRNL or FRC keywords can also affect existing services. DACS II treats the following commands as restricted commands (See Message 36103 for RMON privilege):

**RST:FRM xy,SEQ ww:MC,NOJRNL!**  
**RST:FRM xy,SEQ ww:MC,FRC!**

**RST:FRM xy,SEQ ww:MC,CLR!**  
**RST:FRM xy,SEQ ww:MC,CLR,ALL!**

That is, these commands are restricted to only the users who have the RMON privilege. In addition, to prevent users from accidentally destroying services, when any of these commands is entered, DACS II will respond with:

**ARE YOU SURE?(YES/NO)**

When the RST::MC,FRC command is entered, DACS II will respond with:

WARNING:

EXECUTION OF THIS COMMAND WILL RESULT IN LOSS OF SERVICE  
AND WILL REQUIRE REPROVISIONING OF THE FRAME.

DO YOU STILL WANT THIS COMMAND EXECUTED?(YES/NO)

Only if the answer is **YES**, will the command be executed. If **NO**, DACS II will display the **COMMAND ABORTED** response.

## **Command**

---

For Normal Operations:  
[I.34001]

**RST:FRM xy,SEQ ww:MC[, {MCOND|NOJRNL|FRC}]!**

For Installation and Product Evaluation Only:  
(Can be used only if the AT&T security warning feature bit is set)

[I.34001]

**RST:FRM xy,SEQ ww:MC,CLR[, ALL]!**

### **Completion Message**

---

For Normal Operations:  
[O.34001]

**M hh:mm:ss xy,ww n[vv] RST MC[ {MCOND|NOJRNL|FRC}] COND cc COMPL**

For Installation and Product Evaluation Only:  
(Will be available only if the AT&T security warning feature bit is set)  
[O.34001]

**M hh:mm:ss xy,ww n[vv] RST MC CLR[ ALL] COND cc COMPL**

### **Denial Message**

---

For Normal Operations:  
[O.34001.01]

**M hh:mm:ss xy,ww n[vv] RST MC[ {MCOND|NOJRNL|FRC}] COND cc DNY**

For Installation and Product Evaluation Only:  
(Will be available only if the AT&T security warning feature bit is set)  
[O.34001.01]

**M hh:mm:ss xy,ww n[vv] RST MC CLR[ ALL] COND cc DNY**

### **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**MC** - Main controller

**MCOND** - Maintenance condition

**NOJRNL** - No Journal

Boot frame without journals.

**FRC** - Force

Force the frame to boot when there is an empty  
data base in the PMEM.

Note that the FRC option is a restricted command.

**cc** - Hexadecimal condition code

### **cc Explanation**

|    |                                                                     |

**cc Explanation**

- F1 PMEM and SMEM synchronization fail**
- F2 Not a DACS II compatible Flash Card**
- F3 Flash Card is empty**
- F4 PMEM and SMEM are different**
- F5 Flash Card is not present**
- F6 Flash Card is bad**

## **RST,NPC,SIDE**

### **RESTORE NPCs**

#### **Explanation Of Command**

This command restores Facility Terminating Unit (FTU), DS3 Unit (DS3U), or Digital Signal Processing Unit (DSPU) Network Processing Circuits (NPC) to service.

A range of FTU and DS3U NPCs may be specified, but DSPU NPCs must be individually restored.

One output message, either completion or denial, is printed for each NPC addressed in the restore command.

DSPU NPCs are duplicated and are associated with the DACS II Cross-Connect Network (CCN) sides. DSPU NPCs are addressed with a side number, and are restored one side at a time. A single DSPU NPC restore command restores only the one addressed side of the duplicated DSPU NPC.

**Note:** Each DMB circuit pack supports two NPCs. Restoring either side of a DMB NPC restores both NPCs supported by the circuit pack.

**Note:** Each Subrate circuit pack supports one NPC. Restoring either side of a Subrate NPC restores the NPC supported by the circuit pack.

**Note:** To restore RT(DL) SLC carrier terminated digroups with the range command, digroup A (DGA) must have been restored previously or must be one of the NPCs specified in the command.

Execution of this command may be stopped by entering the **ABT** command.

### **Command**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number (beginning of the range).

**[t]def** - The 3- or 4-digit nonhierarchical NPC number (end of the range).

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**SIDE** - Side

**s** - Side of duplicated DSPU circuit to be removed (0 or 1)

**[s]ghi** - The 3- or 4-digit nonhierarchical number of a successfully restored NPC.

(**[s]abc** through **[t]def**)

**[s]jkl** - The 3- or 4-digit nonhierarchical number of an NPC whose restoral is denied.

If used in a range, it denotes the first NPC of the range.

(**[s]abc** through **[t]def**)

**[t]mno** - The 3- or 4-digit nonhierarchical number of an NPC whose restoral is denied.

It denotes the last NPC of a range. (**[s]abc** through **[t]def**)

**uvghi** - Hierarchical number of a successfully restored NPC.

(**uvmnp** through **uvkqr**)

**uvjkl** - Hierarchical number of an NPC whose restoral is denied.

If used in a range, it denotes the first NPC of the range.

(**uvmnp** through **uvkqr**)

**uvmno** - Hierarchical number of an NPC whose restoral is denied.

It denotes the last NPC of a range. (**uvmnp** through **uvkqr**)

**uv** - Unit number

**m, g, k, j**

- Module number

**np, qr, hi, kl, no**

- NPC number within the module

**TYPE** - Type of NPC

**mnxyz** - NPC-type identifier

mn Explanation

DA Dual digroup ANSI NPC

DE Dual digroup NPC

DS SLC® carrier NPC

SP Digital Signal Processing Circuit Pack

TA DS3U ANSI NPC

TE DS3U Noninterface unit NPC

MB Digital multipoint bridge NPC

MJ Multipoint junction unit NPC

SR Subrate multiplexer unit NPC

## DE-type xyz fields

| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

## DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

- y** - Fixed at 0
- z** - Fixed at 0

#### TE-type xyz fields

- x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2**      Not assigned
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6-9**   Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      No channel numbering format, clear-DS1

## TA-type xyz fields

**x** - Multiframe format for the digroup**x**      *Explanation*

- 0**      Not assigned
- 1**      D4
- 2**      ESF - Voice
- 3**      ESF - Data
- 4**      DDST (T1DM - R bit connection via channel 24)
- 5-7**   Not assigned
- 8**      Ericsson Cellular format
- 9**      Not assigned

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2**      Not assigned
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6-9**   Not assigned

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      Unchannelized 193-bit Clear DS1 Cross-connection

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

- DA**    ETSI is inservice but failed
- DB**    FC is inservice but failed

## **RST,PMEM,SMEM,CLR,FRC,BKGRND**

### **RESTORE PMEM AND/OR SMEM**

#### **Explanation Of Command**

This message restores the primary memory card (**PMEM**) or secondary memory card (**SMEM**) to service. The **PMEM** card may be restored manually when the main controller (MC) is in maintenance condition (MCOND). The **SMEM** card may be restored manually when the MC is in-service (IS) or in MCOND.

The options **CLR**, **FRC**, and **BKGRND** can only be used with **SMEM**. In addition, the option **CLR** can only be used when the main controller is in MCOND. The options **FRC** and **BKGRND** can only be used when the main controller is IS. The options do the following:

1. The **CLR** option is used when the frame administrator wants to create a blank card. The executables and the database will be erased from the card. The **CLR** option cannot be used together with the **FRC** or **BKGRND** option.
2. The **FRC** option is used when an **SMEM** card is to be synchronized but one or more items on the **SMEM** card are incompatible with the same item on the **PMEM** card. The purpose of the **FRC** option is to allow the frame administrator to force synchronization, even though an incompatibility has been detected.
3. The **FRC** option may be use together with **BKGRND** option. It is incompatible with the **CLR** option.
4. The **BKGRND** option is used when the frame administrator wants to allow the execution of a certain set of commands to proceed while the synchronization of the **SMEM** card is proceeding in the background. The **BKGRND** keyword is incompatible with the **CLR** keyword, but it may be used together with the **FRC** keyword.

#### **Command**

[I.34211]

**RST:FRM xy,SEQ ww:{PMEM|SMEM[{,CLR|[,FRC][,BKGRND]}]}!**

### **Completion Message**

---

[O.34211]

**I hh:mm:ss xy,ww n[vv] RST SMEM BKGRND COMPL**

Error message when command issued during Boot procedure terminates abnormally

[O.34211.01]

**A hh:mm:ss xy,ww n[vv] RST SMEM BKGRND COND cc DNY**

### **Explanation Of Parameters**

---

**PMEM** - Primary memory card.

**CLR** - Clear

The CLR option will cause all volumes on the card inserted in the SMEM slot to be initialized. It is not allowed for the PMEM option.

If the **CLR** keyword is entered, DACS II will respond:

**ARE YOU SURE?(YES/NO)**

If **YES**, the command request will be submitted to DACS II. After completion, all of the file volumes on the SMEM card will be initialized and all information stored previously will be cleared.

If **NO**, DACS II will respond as indicated under the Completion or Denial Message.

**SMEM** - Secondary memory card.

If the MC is in MCOND, the SMEM card will be restored without any transfer of databases or executables to the card. It will be restored if it passes hardware diagnostics and is recognized as a DACS II compatible memory card.

If the MC is IS, restoring an SMEM card will result in the following actions:

1. The card will go through hardware diagnostics and a check to ensure it is a DACS II compatible card.
2. The SMEM card will be made bit-for-bit identical to the PMEM card.
3. The system software will ensure that subsequent writes to the PMEM card will also be written to the SMEM card, so that the PMEM and SMEM cards will always be synchronous.

**FRC** - Force.

If the MC is IS and the SMEM has passed hardware diagnostics and is a compatible card, then the following conditions are checked on the SMEM:

- a) blank or uninitialized card
- b) a frame ID mismatch between the PMEM and SMEM cards
- c) a unique ID mismatch between the PMEM and SMEM cards
- d) a release version mismatch between the PMEM and SMEM cards
- e) the database on the SMEM is corrupted, missing or unrecognizable

If any of the above conditions exist, the frame must generate a warning message listing the condition and deny the command as follows:

**Warning: The SMEM Card being restored has the following problems!**

**<message describing the problem>**

**IF YOU STILL WISH TO PROCEED, USE FRC OPTION**

If the user proceeds with the FRC option, then the following message will appear:

**ARE YOU SURE? (YES/NO)**

A response of YES will cause the command to be executed. Any other response, or a 60-second time interval, will cause the command to be aborted.

**BKGRND** - Background

The BKGRND command is used when the main controller is In Service and is only valid when used with SMEM.

The following is a list of commands that are available while the backup procedure is running in the background.

[I.11001] TCON, FROM, TO, RDC, CUS, INCL  
[I.11011] TCON, FROM, TO, RDC, CUS, INCL (clear DS1/clear 2M bps)

- D8** ETSI is not equipped
- D9** ETSI is out of service
- DA** ETSI is inservice but failed

## **RST,UNIT,MIU,INCL**

### **RESTORE MULTIPLEXER INTERFACE UNIT**

#### **Explanation Of Command**

The purpose of this command is to add ANSI performance monitoring capability to an already operating Multiplexer-Multiplexer Interface Unit Functional Group(s) (MMFG) in a DS3 unit without interrupting service. This command follows a **GRTH UNIT MIU TYPE** command for an already-operating MMFG with only the MXR circuit pack in service.

Failure to restore all equipped TA-type tributary Network Processing Circuits will result in denial of the whole command. The **INCL** option will be ignored if the MMFG is not selected to carry service.

An **RST IN PROGRESS** message will be generated every 20 seconds while this command is being executed.

A completion or denial message occurs for each MIU.

#### **Command**

[I.34431]

**RST:FRM xy,SEQ ww:UNIT [q]q,MIU c[-d][,INCL]!**

#### **Completion Message**

[O.34431]

**M hh:mm:ss xy,ww n[vv] RST UNIT [q]q MIU a[ INCL] TYPE mnxyz \**  
**COMPL**

## Denial Message

[O.34431.01]

- DF**    FLI is inservice but failed

## **RST,UNIT,MMFG,INCL**

### **RESTORE MMFG**

#### **Explanation Of Command**

This message requests and reports the restoration of one or more Multiplexer-Multiplexer Interface Unit Functional Groups (MMFG) in a DS3 Unit. One MMFG consist of one Multiplexer (MXR), and one Multiplexer Interface Unit (MIU). Failure to restore either the MXR or the MIU will result in a denial. There is also an option to restore all equipped NPCs associated with the MMFG using this command.

Failure to restore any of the NPCs will result in denial of the whole command. The **INCL** option will be ignored if the MMFG is not selected to carry service.

A **RST IN PROGRESS** message will be generated every 20 seconds while this command is being executed.

A completion or denial message occurs for each MMFG.

#### **Command**

[I.34421]

**RST:FRM xy,SEQ ww:UNIT [q]q,MMFG c[-d][,INCL]!**

#### **Completion Message**

[O.34421]

**M hh:mm:ss xy,ww n[vv] RST UNIT [q]q MMFG a[ INCL] 2 LN MSG:  
MXR a TYPE mnxyz[ MIU a TYPE MI100] COMPL**

## Denial Message

[O.34421.01]

**M** hh:mm:ss xy,ww n[vv] RST UNIT [q]q MMFG c[ INCL] \  
COND cc DNY

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MMFG** - Multiplexer-multiplexer interface unit functional group

**c, d** - MMFG number within the unit (P,1 through 6)

**INCL** - Inclusive

Restore all tributary NPCs that are equipped. Failure to restore any of the NPCs will result in the denial of the whole command. This INCL option will be ignored if the MMFG is not selected to carry service.

**TYPE** - Type

**mnxyz** - Type identifier

**mn** - Multiplexer type

*mn*

*Type*

MX

DS3 multiplexer (MXR)

EX

Enhanced DS3 multiplexer (EMXR) circuit pack

Default is the MX type for backward compatibility.

**xyz** - Format type

x

- The DS3 framing format

*xFormat*

1M13 (default)

2C-bit parity

y

- Not assigned (the only valid value is 0)

z

- Not assigned (the only valid value is 0)

**MIU** - Multiplexer interface unit

**a** - The number of the MMFG/MXR/MIU within the range of c and d.

**cc** - Hexadecimal condition code

**cc** *Explanation*

## **SAVE — SC**

---

This section documents the commands **SAVE** through **SC**.

## **SAVE**

---

### **SAVE COMPONENT COMMANDS**

#### **Explanation Of Command**

---

This command is used to save the contents of a macro while in the macro session.

#### **Command**

---

[I.19081]

SAVE[:FRM xy,SEQ ww:]!

#### **Completion Message**

---

[O.19081]

M hh:mm:ss xy,ww n[vv] SAVE <macro name> SPACE sss \  
USED uuu COMPL

#### **Denial Message**

---

[O.19081.01]

M hh:mm:ss xy,ww n[vv] SAVE <macro name> SPACE sss \  
USED uuu COND cc DNY

#### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

macro name

- The name of the macro to be saved

**SPACE** - Space

**sss** - Number representing the percent of total disk space allocated to macro storage

**USED** - Used

**uuu** - Number representing the percent of the allocated disk space (sss) being used to store macros

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 60**    User macro/map space is full
- 61**    System macro/map space is full
- 65**    Command invalid while backup in progress
- 6E**    No edit session active
- 6C**    File is empty

---

## **SC,ALM,CGA,DLF,INH,MRV,MSW,PSW,RT,DL**

### **SLC® ALARM**

#### **Explanation Of Command**

This autonomous output message reports a SLC® carrier interface related alarm. The message provides the affected bank, the alarm-causing digroup, the associated network processing circuit (NPC) number, and the state and location of the alarm.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

#### **Nonhierarchical**

[O.65131]

## Explanation Of Parameters

The permissible output parameters are somewhat different if the CGA option is present in this message. These are noted below.

**pa** - Priority of action

| <i>pa</i> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|   |                                |
|---|--------------------------------|
| I | Information (Only without CGA) |
|---|--------------------------------|

|   |                                                         |
|---|---------------------------------------------------------|
| * | Minor alarm, non-service-affecting (no CGA declaration) |
|---|---------------------------------------------------------|

|    |                                                                                           |
|----|-------------------------------------------------------------------------------------------|
| ** | Major alarm, service-affecting, 1 to 5 NPCs including AIS state.<br>(With or without CGA) |
|----|-------------------------------------------------------------------------------------------|

|    |                                                                               |
|----|-------------------------------------------------------------------------------|
| *C | Critical alarm, service-affecting, more than 5 NPCs. (With or<br>without CGA) |
|----|-------------------------------------------------------------------------------|

**SC** - SLC® carrier

**ALM** - Alarm

**state** - Alarm state

| <i>state</i> | <i>Explanation</i> |
|--------------|--------------------|
|--------------|--------------------|

|    |                                   |
|----|-----------------------------------|
| MJ | Major alarm (with or without CGA) |
|----|-----------------------------------|

|    |                                  |
|----|----------------------------------|
| MN | Minor alarm (no CGA declaration) |
|----|----------------------------------|

|      |       |
|------|-------|
| IDLD | Idled |
|------|-------|

**MJ** - Major

**MN** - Minor

**IDLD** - Idled

**CGA** - Carrier group alarm

**DLF** - Data link failure

**INH** - Inhibition (Protection switch)

**MRV** - Manually Removed

**MSW** - Manual (protection) switch

**PSW** - Autonomous protection switch

- RT** - Remote terminal
- DL** - Digital carrier line unit (DCLU)
- ffff** - Bank identification number (0000 through 9999)
- DGA** - SLC Carrier Digroup A
- DGB** - SLC Carrier Digroup B
- DGC** - SLC Carrier Digroup C
- DGD** - SLC Carrier Digroup D
- DGP** - SLC Carrier Digroup P
- NPC** - Network processing circuit
- [s]abc** - The 3- or 4-digit nonhierarchical NPC number

The valid numbers are:

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

**uvmnp** - Hierarchical NPC number

DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**k** - Alarm type

*k Explanation*

|   |                     |
|---|---------------------|
| Y | Yellow              |
| R | Red                 |
| B | Both yellow and red |

**location**

- Alarm location

*location Explanation*

|     |                                                  |
|-----|--------------------------------------------------|
| CLF | Carrier loop failure (with or without CGA)       |
| NE  | Near end (the DACS II end) (with or without CGA) |
| FE  | Far end                                          |

## **SC,ALM,COMP,RT,INDX,LBRV,AB,CD,P,ALP**

### **SLC® CARRIER ALARM**

#### **Explanation Of Command**

This output message reports the existence of a minor alarm between a SLC® Series 5 carrier feature package C (FPC) remote terminal (RT) and the DACS II frame. Also reported is any incompatible provisioning between the two ends. The message keywords indicate the reason for the incompatibility.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

### **SLC® CARRIER ALARM**

#### **Explanation Of Command**

This output message reports the existence of a power (PWR) or miscellaneous (MISC) alarm and its state at the far end.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.65141]

pahh:mm:ss xy,ww SC ALM[ <alarm type>] <state> {RT|DL} \  
ffff[ FE] COMPL

## Explanation Of Parameters

---

**RT** - Remote Terminal

**DL** - Digital Carrier Line Unit (DCLU)

**ffff** - Bank id number (0000 to 9999)

### **alarm type**

- The type of SLC Carrier failure or alarm

| type   | Explanation                                               |
|--------|-----------------------------------------------------------|
| PWR    | Power failure alarm                                       |
| MISC   | Miscellaneous alarm (SLC 96 Carrier only)                 |
| MISC1  | Miscellaneous alarm (SLC Series 5 Carrier FPC only)       |
| MISC2  | Miscellaneous alarm (SLC Series 5 Carrier FPC only)       |
| RGF    | Ringing Generator Failure (SLC Series 5 Carrier FPC only) |
| EEPROM | EEPROM alarm (SLC Series 5 Carrier FPC only)              |
| COMP   | Compatibility alarm (SLC Series 5 Carrier FPC only)       |

**state** - Alarm state

*state*      *Explanation*

|      |             |
|------|-------------|
| MJ   | Major alarm |
| MN   | Minor alarm |
| IDLD | Idled       |

**pa** - Priority of action

*pa*      *Explanation*

|    |                                                                 |
|----|-----------------------------------------------------------------|
| *  | Minor alarm, not service-affecting                              |
| ** | Major alarm, service-affecting, 1 to 5 NPCs including AIS state |

**FE** - Far End

---

## **SCNT — SECH**

---

This section documents the commands **SCNT** through **SECH**.

---

## **SCNT,RATE,MPTM,MJU,MA**

---

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

---

This command performs a subrate terminated multipoint cross-connection of **MJU ssss**.

The master leg of the multipoint circuit (MPTM) is specified by digroup **abc**, channel **ddd**, and customer number **ff**, and serves as the reference for addressing all MJUs and branches in the circuit.

The command inserts the Unassigned multiplexer channel (UMC) code towards both the upstream (MJU) and downstream (branch facility) directions of the cross-connected branch. If a digroup and channel of a customer to be connected to a branch is error corrected, termination takes place after error correction is performed. If no branch field appears in the command, it is denied since there is nothing to terminate.

MJU control legs are not terminated with this command. This includes the control leg of MJU 0001 that is connected to the multipoint master. MJU control legs can be terminated using the STST command. By not terminating control legs, the user can set up a circuit using a mixture of SCNT commands (to connect to terminated branches) and SCON commands (to connect to unterminated or active branches). Also, by not terminating the multipoint master and MJU control legs, transmission to and from the active (not terminated) customers is always preserved.

All channels [s]abcddd and [t]ghijj must be established before they can be cross-connected with SCNT.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**RATE** - Rate

**rr** - Circuit rate specification (24, 48, 96, or 56)

*rr*      *Rate*

|    |                           |
|----|---------------------------|
| 24 | 2.4 kilobit/second (kb/s) |
| 48 | 4.8 kb/s                  |
| 96 | 9.6 kb/s                  |
| 56 | 56 kb/s                   |

**MPTM** - Multipoint Master

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number of the multipoint circuit master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                              |                              |                              |                              |                              |                              |

| 01-05 | (DS0B at 9.6 kb/s)                  |

**NEW** - New

**MJU** - Multipoint junction unit

**ssss** - MJU number of cross-connected MJU (0001-9999)

This command cross-connects MJU ssss to MJU tttt.

**s** - Termination state of the MJU control or branch leg

Indicates whether either or both ends of the cross-connection are in the terminate and leave state. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | RELEASED. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**BR1** - Branch 1

**BR2** - Branch 2

**BR3** - Branch 3

**BR4** - Branch 4

**MA** - Master

**tttt** - MJU number (0001 through 9999)

**u** - Branch number (1 through 4)

MA, tttt, and u specify an MJU to MJU connection. MJU tttt branch u is connected to the control leg of MJU ssss.

**branch** - External facility terminations for branches connected to MJU ssss.

The branch listed in the branch field is connected to the external facility termination, and is left in the terminate and leave state in both directions of transmission. The NEW MJU fields list the resulting cross-connection and terminate and leave status for all connections associated with MJU ssss. Note that the control leg and other branches not named in the SCNT command may be in any of the possible terminate and leave states as a result of previous cross-connect, change, or test access commands.

*branch*

BRI [t]ghijj[/II]

BR - Branch

i - Branch number of MJU ssss (1 through 4)

[t]ghijj[/II- External facility termination of added branch

[t]ghi - The 3- or 4-digit nonhierarchical NPC number of termination connected to BRI.

For valid values see [s]abc above.

jij - Channel number of termination connected to BRI.

For valid values see ddd above.

II - Customer number of termination connected to BRI

For valid values see ff above.

**data** - Branch connection data

## **SCNT,RATE,TPT,FROM,TO**

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a terminated cross-connection of the FROM and TO subrate customers in both directions. The customer number fields are optional for DS-0A terminations. If not specified, the default value is 01.

#### **Command**

##### **Nonhierarchical**

[I.19301]

Not applicable.

## **Explanation Of Parameters**

---

**RATE** - Rate

rr Circuit rate specification (24, 48, 96, or 56)

rr Rate

24 2.4 kilobit/second (kb/s)

48 4.8 kb/s

96 9.6 kb/s

56 56 kb/s

**TPT** - Two-Point

Retained only for DACS/SRDC compatibility.

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

If [s]abctddd or [t]ghijj is an error corrected channel, termination is performed after error correction is done. Also, this command does not allow the FROM and TO customers to be the same (that is, a looped connection), nor does it allow the use of a semi-colon in place of a comma after the TPT keyword. Both directions of the circuit are terminated with insertion of the Unassigned Multiplexer Channel (UMC) control code.

**reason** - Reason for denial

Input Errors

*reason*

CHANNEL [s]abctddd IS A PARITY CHANNEL  
 CUSTOMER NUMBER MUST BE SPECIFIED FOR DS0B CHANNEL [s]abctddd  
 CHANNEL [s]abctddd WITH SR ERROR CORRECTION AND RATE 56 NOT ALLOWED  
 CHANNEL [s]abctddd SR MULTIPLEXER RATE CANNOT SUPPORT CIRCUIT RATE  
 CUSTOMER NUMBER RANGE NOT ALLOWED FOR DS0A CHANNEL [s]abctddd  
 CHANNEL RANGE NOT ALLOWED FOR DS0B CHANNEL [s]abctddd  
 FROM AND TO RANGES ARE NOT THE SAME SIZE  
 FROM AND TO RANGES PARTIALLY OVERLAP  
 INVALID CHANNEL NUMBER FOR CHANNEL [s]abctddd  
 CHANNEL [s]abctddd/ff IS SPECIFIED MORE THAN ONCE  
 CHANNEL [s]abctddd/ff IS CONNECTED BUT NOT AS A MULTIPOINT MASTER LEG  
 SPECIFIED RATE DOES NOT MATCH EXISTING CIRCUIT RATE  
 MJU 1 MUST BE SPECIFIED AS THE MULTIPOINT MASTER LEG MJU  
 CIRCUIT RATE MUST BE SPECIFIED  
 MA FIELD MUST BE SPECIFIED FOR A NEW MJU  
 MA FIELD MUST MATCH CIRCUIT  
 UPSTREAM BRANCH SPECIFIED IN MA FIELD IS ASSIGNED  
 UPSTREAM BRANCH SPECIFIED IN MA FIELD DOES NOT EXIST  
 BR i IS SPECIFIED MORE THAN ONCE  
 MA FIELD NOT ALLOWED WHEN MJU 1 IS SPECIFIED  
 MJU NAMES IN MJU AND MA FIELDS CANNOT BE THE SAME  
 SCNT CANNOT BE SPECIFIED FOR A LOOPED CIRCUIT  
 CUSTOMER NUMBER ff IS OUT OF RANGE FOR DS0A CHANNEL [s]abctddd  
 CUSTOMER NUMBER ff IS OUT OF RANGE FOR DS0B CHANNEL [s]abctddd  
 CHANNEL [s]abctddd IS OUT OF RANGE  
 [s]abctddd-ff IS AN INVALID RANGE OF CHANNELS  
 CHANNEL [s]abctddd/ff IS ASSIGNED  
 BR i IS ALREADY ASSIGNED TO ANOTHER CHANNEL OR MJU  
 MJU ssss ALREADY EXISTS IN THE CIRCUIT  
 CHANNEL [s]abctddd IS NOT ESTABLISHED TO SR FEATURE  
 CHANNEL [s]abctddd/ff IS UNDER TEST  
 NPC [s]abc IS NOT PROVISIONED AS DIGROUP-A OF AN RT  
 THE NPC ASSOCIATED WITH VIRTUAL CHANNEL [s]abctddd IS NOT PROVISIONED  
 NPC [s]abc IS IN LINE LOOPBACK STATE  
 CIRCUIT IS UNDER TEST

## **SCNT,RATE,TPT,FROM,TO**

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a terminated cross-connection of the **FROM** and **TO** customers in both directions.

#### **Command**

##### **Nonhierarchical**

USAGE: The following applies to a range of DS-0A channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcd-dd-eee[/01],\  
TO [t]ghijjj-kkk[/01]!
```

USAGE: The following applies to a range of DS-0B channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcd-dd/ff-mm,\  
TO [t]ghijjj/ll-nn!
```

##### **Hierarchical**

USAGE: The following applies to a range of DS-0A channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmp-ddd-eee[/01],\  
TO wxkqrjjj-kkk[/01]!
```

USAGE: The following applies to a range of DS-0B channels:

[I.19311]

**SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmnpddd/ff-mm,\  
TO wxkqrjjj/ll-nn!**

### **Completion Message**

---

#### **Nonhierarchical**

---

USAGE: The following applies to a range of DS-0A channels:

[O.19311]

**M hh:mm:ss xy,ww n[vv] SCNT RATE rr [s]abcd-dd-eee[/01] \  
[t]ghijjj-kkk[/01] COMPL**

USAGE: The following applies to a range of DS-0B channels:

[O.19311]

**M hh:mm:ss xy,ww n[vv] SCNT RATE rr [s]abcd-dd/ff-mm \  
[t]ghijjj/ll-nn COMPL**

#### **Hierarchical**

---

USAGE: The following applies to a range of DS-0A channels:

[O.19311]

**M hh:mm:ss xy,ww n[vv] SCNT RATE rr uvmnpddd-eee[/01] \  
wxkqrjjj-kkk[/01] COMPL**

USAGE: The following applies to a range of DS-0B channels:

[O.19311]

**M hh:mm:ss xy,ww n[vv] SCNT RATE rr uvmnpddd/ff-mm \  
wxkqrjjj/ll-nn COMPL**

## **Denial Message**

---

### **Nonhierarchical**

---

USAGE: The following applies to a range of DS-0A channels:

[O.19311.01]

```
M hh:mm:ss xy,ww n[vv] SCNT RATE rr FROM [s]abcddd-eee[/01] \
3 LN MSG:
TO [t]ghijjj-kkk[/01] ppp/pp,qqq/qq
<reason> DNY
```

USAGE: The following applies to a range of DS-0B channels:

[O.19311.01]

```
M hh:mm:ss xy,ww n[vv] SCNT RATE rr FROM [s]abcddd/ff-mm \
3 LN MSG:
TO [t]ghijjj/ll-nn ppp/pp,qqq/qq
<reason> DNY
```

### **Hierarchical**

---

USAGE: The following applies to a range of DS-0A channels:

[O.19311.01]

```
M hh:mm:ss xy,ww n[vv] SCNT RATE rr FROM uvmnpddd-eee[/01] \
3 LN MSG:
TO wxqrrjjj-kkk[/01] ppp/pp,qqq/qq
<reason> DNY
```

USAGE: The following applies to a range of DS-0B channels:

[O.19311.01]

```
M hh:mm:ss xy,ww n[vv] SCNT RATE rr FROM uvmnpddd/ff-mm \
3 LN MSG:
TO wxqrrjjj/ff-nn ppp/pp,qqq/qq
<reason> DNY
```

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**rr** - Circuit rate (24, 48, 96 or 56)

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

## **SCON,RATE,MPTM,MJU,MA**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a subrate multipoint cross-connection of the specified MJU. The master leg of the multipoint circuit is specified by digroup and channel and customer number, and serves as the reference for addressing all multipoint junction units and branches in the circuit.

All channels ddd and jjj must be established before they can be cross-connected by this command.

Multipoint circuits are built incrementally, one command at a time. Many commands can address the same multipoint circuit. Indeed, many commands can address the same MJU of a circuit. A command addressing an MJU, say MJU 0005, might connect customers to branches 1 and 2. Another command might also address MJU 0005 and connect a customer to branch 3. This command results in no service interruption to branches 1 and 2 that are already connected.

## Explanation Of Parameters

**RATE** - Rate

**rr** - Transmission rate (24, 48, 96, or 56)

*rr*      *rate in kb/s*

|    |     |
|----|-----|
| 24 | 2.4 |
| 48 | 4.8 |
| 96 | 9.6 |
| 56 | 56  |

rr determines the transmission rate of the customers' cross-connection, and thus, the rate at which the MJU operates. All MJUs in the same circuit must operate at the same rate. The "RATE rr" field must be specified in the first command addressing MJU 0001. "RATE rr" need not be re-specified after it has once been set for MJU 0001. Hence, it is shown as optional. If "RATE rr" is omitted from subsequent commands, any additional MJUs connected will operate at the rate specified for MJU 0001. If "RATE rr" appears in subsequent commands, it will be checked against the rate specified for MJU 0001. If the rates are not the same, the command will be denied.

In addition to assuring that all MJUs in a circuit operate at the same rate, there is an additional check performed on the rate. In circuits that connect customers in DS0B channels, the rate of the MJUs cannot exceed the maximum customer rate of the subrate multiplexers associated with those DS0B channels. The allowed customer numbers used in either the master leg or branch connections depend on the rate of the circuit and the type of DS0B channel associated with each termination, as shown below:

For DS0A channels, rr is checked against the type of error correction previously specified in the SECH command for that channel. Similarly, if the channel has subrate error correction, a circuit rate of 56 is not allowed.

| Circuit<br>Rate | DS0B Type                                      |                                                |                                               |
|-----------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                 | 20-channel<br>(max. customer<br>rate 2.4 kb/s) | 10-channel<br>(max. customer<br>rate 4.8 kb/s) | 5-channel<br>(max. customer<br>rate 9.6 kb/s) |
| RATE 24         | Cust. #s<br>1-20 Allowed                       | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 48         | Denied                                         | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |

**MPTM** - Multipoint master

**[s]abcd**[/ff]

- Termination number

There is exactly one multipoint master for a multipoint circuit. The multipoint master termination number is connected to the control leg of MJU 1. MJU 1 must be the first MJU connected in any circuit. This field uniquely identifies the circuit.

The data sent by this multipoint master is broadcast to all branches on the circuit. The data sent to the multipoint master is a summation of data sent by the branches.

Because the multipoint master is used to uniquely identify the circuit as a whole, it is required for all SCON commands, regardless of which MJU the command addresses (MJU ssss in the message format).

The first time a particular termination number is named in a command as a multipoint master, "MJU ssss" must be specified as "MJU 0001". The system will connect the termination to the control leg of MJU 0001. Subsequently, the multipoint master is included in commands addressing an MJU only to identify the circuit to which the MJU belongs.

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of the multipoint circuit master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**uvmnp** - Hierarchical NPC number of the multipoint circuit master leg

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**MJU** - Multipoint junction unit

**ssss** - MJU number addressed by this command (0001 through 9999)

If the MJU being addressed by the SCON command is 0001 (MJU ssss is MJU 0001) then the field "MA(tttt,u)" must not appear in the command (see the explanation of MA(tttt,u) below).

As previously discussed, it must always be connected to the multipoint master termination. The first time an MJU other than 0001 appears in a command, the command must also contain the MJU connection field.

No MJU can be created with an unconnected control leg.

**MA** - Master

**tttt** - MJU number (1 through 9999)

**u** - Branch number (1 through 4)

The master is also known as the control leg. Every MJU has a control leg. The control leg of MJU 0001 must be connected to the multipoint master. The control leg of an MJU other than 0001 must be connected to a branch of another MJU to form an MJU-to-MJU connection. The field MA(tttt,u) specifies the MJU-to-MJU connection. The control leg of MJU ssss is connected to branch u of MJU tttt.

The first command addressing an MJU in the circuit must address MJU 1. Otherwise, a new MJU of any number can be connected to any existing MJU in the circuit, assuming the new MJU's number is not already used in the circuit and the old MJU has an unconnected branch available to connect to.

The MJU connection field "MA(tttt,u)" specifies where to connect the control leg of MJU ssss. If MJU ssss is addressed in a subsequent SCON command, after a connection for its control leg has been specified, the MJU connection field need not be re-specified. Hence, "MA(tttt,u)" appears as an optional field in the message format. If it is respecified, it will be checked against the actual MJU-to-MJU connection.

It should also be noted that tttt cannot equal ssss. Also, branch u of MJU tttt must not have been previously connected. If it were, it could not be connected to the control leg of MJU ssss.

**branch** - Branch and termination number

*branch termination number*

BRi [t]ghijj[l]

The termination is connected to branch i of MJU ssss.

One branch field is listed for each branch specified in the input command. Since some multipoint SCON input commands do not list any branch data, this line may be absent.

The branch and termination number can appear from zero to four times in a subrate cross-connect command, connecting up to four different customers to the four branches of MJU ssss. The branch fields for the four branches of MJU ssss can appear in any order and any or all branch fields can be omitted. Nothing is connected to branch fields that are omitted from (do not appear in) the command.

Branch fields might be omitted for several reasons. If branches 1 and 2 of MJU ssss were already connected, and the user wished to connect a customer to branch 3 of MJU ssss, then only BR3 and its associated termination number would appear in the command.

Branches 1 and 2 would not appear because they are already connected and branch 4 would not appear because nothing is to be connected to it. Branch 4 might be saved to provide an MJU-to-MJU connection at a later time.

**[t]ghi** - The 3- or 4-digit nonhierarchical NPC number of termination connected to BRi with the same valid values as the master leg.

**jjj** - Channel number of termination connected to BRi with the same valid values as the master leg.

**ll** - Customer number of termination connected to BRi with the same valid values as the master leg.

If the customer is a DS0A customer, ll is optional and if present, must be 01.

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

The customer number is optional when the customer to be connected is in a DS0A signal. This is because there is only one customer in a DS0A signal. If specified, it must appear as 01.

**BR** - Branch

**i** - Branch number (1 through 4)

BRi refers to branch i of MJU ssss, the MJU addressed by this command.

#### Red Circuit and Customer Control Marking

SRDC cross-connections are marked automatically as red circuits. This results in the need to specify the INCL keyword in the RMV,NPC command whenever a facility terminating NPC carrying SRDC circuits is removed. Also, the SCON verb does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished.

#### Secondary Channel Capability

This command supports secondary channel capability. Circuits that use DDS secondary channel capability can be assigned to any DS0B channel, provided that the channel's facility terminating NPC was provisioned without zero suppression. If the facility terminating NPC has zero suppression, the user must ensure that secondary channel services are only assigned to the following customers of the given DS0B type:

| DS0B nn | Customer Numbers Compatible with Secondary Channel |
|---------|----------------------------------------------------|
| DS0B 20 | 2,3,6,8,11,12,13,18                                |
| DS0B 10 | 2,3,6,8                                            |
| DS0B 5  | 2,3                                                |

**ddd** - Channel number of the multipoint circuit master leg

001 through 024

001-047 Odd only (SLC 96® Carrier, Mode 3, DGA)  
 049-095 Odd only (SLC 96 Carrier, Mode 3, DGC)  
 001-024 Odd and Even (SLC 96 Carrier, Mode 1, DGA)  
 025-048 Odd and Even (SLC 96 Carrier, Mode 1, DGB)  
 049-072 Odd and Even (SLC 96 Carrier, Mode 1, DGC)  
 073-096 Odd and Even (SLC 96 Carrier, Mode 1, DGD)  
 001-024 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA)  
 025-048 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB)  
 049-072 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC)  
 073-096 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD)

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

**wxkqr** - Hierarchical NPC number of termination connected to BRi with the same valid values as the master leg.

**data** - Data

The data fields refer to the connection data associated with the four branch legs of MJU ssss. Each branch data field can take one of three forms, depending on whether the branch is unassigned, cross-connected to an external facility termination, or cross-connected to a cascaded MJU control leg.

| <i>data</i> | <i>Explanation</i>                                                         |
|-------------|----------------------------------------------------------------------------|
| 000000/00   | For unassigned branches                                                    |
| ghijjj/ll   | For branches connected to external facility terminations                   |
| MJU nnnn    | For branches connected to another MJU with number nnnn (0002 through 9999) |

**s** - Termination state of the MJU control or branch leg

Variable s contained in the MA and branch data indicates the terminate and leave status of each MJU connection. Branches or MJUs connected by the SCON command are automatically assigned the terminate and leave released status. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | RELEASED. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**reason** - Reason for denial

Reason

CHANNEL [s]abcddd IS A PARITY CHANNEL

## **SCON,RATE,TPT,FROM,TO**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command cross-connects the FROM and TO customers defined by the **ff** and **ll** fields. The customer number fields are optional for DS0A terminations; if not specified, the default value is 01.

#### **Command**

##### **Nonhierarchical**

[I.19201]

```
SCON:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcddd[/ff],\  
TO [t]ghijjj[/ll]!
```

##### **Hierarchical**

[I.19201]

```
SCON:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmnpddd[/ff],\  
TO wxkqrjjj[/ll]!
```

#### **Completion Message**

##### **Nonhierarchical**

[O.19201]

```
M hh:mm:ss xy,ww n[vv] SCON RATE rr,TPT;[s]abcddd/ff,\  
[t]ghijjj/ll COMPL
```

### **Hierarchical**

---

[O.19201.01]

M hh:mm:ss xy,ww n[vv] SCON RATE rr,TPT;uvmnpddd/ff,\  
wxkqrjjj/ll 2 LN MSG:  
<reason> DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**TPT** - Two-Point (optional).

Retained only for DACS/SRDC compatibility. The command format above shows that RATE rr and the optional TPT are followed by a comma (.). To preserve DACS/SRDC compatibility, this comma may also be replaced with a semicolon (;).

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |
| <b>16A-16H</b>               | <b>32A-32H</b>               | <b>48A-48H</b>               | <b>64A-64H</b>               | <b>80A-80H</b>               | <b>96A-96H</b>               |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1                                          | Unit<br>2                                          | Unit<br>3                                          | Unit<br>4                                          |

| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - FROM customer number

**ll** - TO customer number

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**RATE** - Rate

Rate at which the FROM and TO customers are cross-connected

**rr** - Circuit rate (24, 48, 96, or 56)

| <b>rr</b> | rate in kb/s |
|-----------|--------------|
|-----------|--------------|

|    |     |
|----|-----|
| 24 | 2.4 |
| 48 | 4.8 |
| 96 | 9.6 |
| 56 | 56  |

The channels abcd and ghijkl must be established using a subrate establish command before they can be cross-connected.

The RATE cannot exceed the maximum customer rate of the subrate multiplexers associated with those DS0B channels. The allowed customer numbers (ff and ll) depend on the rate of the circuit and the type of DS0B channel associated with each termination, as shown below:

| Circuit<br>Rate rr | DS0B Type                                      |                                                |                                               |
|--------------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                    | 20-channel<br>(max. customer<br>rate 2.4 kb/s) | 10-channel<br>(max. customer<br>rate 4.8 kb/s) | 5-channel<br>(max. customer<br>rate 9.6 kb/s) |
| RATE 24            | Cust. #s<br>1-20 Allowed                       | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 48            | Denied                                         | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 96            | Denied                                         | Denied                                         | Cust. #s<br>1-5 Allowed                       |

The customer numbers ff and ll, are optional when the customer to be connected is in a DS0A signal. This is because there is only one customer in a DS0A signal. If specified, it must appear as 01. Also, for DS0A channels, the RATE is checked against the type of error correction previously specified in the command used to establish that channel. If the channel has subrate error correction, a circuit rate of 56 is not allowed.

The user must ensure that a circuit using the secondary channel capability is assigned only to a facility termination that is compatible with this capability. If the termination is a DS0A or if its associated facility NPC was grown without zero suppression, any assignment of the NEW termination is compatible with the secondary channel capability. If the termination is in a DS0B **and** its associated facility NPC was grown with zero suppression, the user can only assign secondary channel services to a termination with the following customer numbers within the given DS0B type:

| DS0B Type  | Allowed Customer Numbers       |
|------------|--------------------------------|
| 20-channel | 2, 3, 6, 8, 11, 12, 13, and 18 |
| 10-channel | 2, 3, 6, and 8                 |
| 5-channel  | 2 and 3                        |

The fields, FROM [s]abcd[ff] and TO [t]ghij[ll] specify the customers to cross-connect. FROM and TO have no significance to DACS II and either customer of the circuit may be designated FROM or TO. To loop a customer back to itself, specify the FROM and TO fields identically.

Subrate cross-connections are marked automatically as red circuits. This results in the need to specify the INCL keyword in the command to remove an NPC whenever a facility terminating NPC carrying SRDC circuits is removed.

Also, the SCON verb does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished. The **RATE rr** field indicates the customer rate of the circuit specified in the input command **ff** and **ll** define the customer numbers associated with the FROM and TO channel pair. These fields are optional in the input command for DS0A terminations. If the input command did not specify one or both of these numbers, the output value is 01.

## **SCON,RATE,TPT,FROM,TO**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command cross-connects the FROM and TO customers in both directions. This command also extends the format of I.19201 to support ranges of two-point, two-way cross-connections.

#### **Command**

##### **Nonhierarchical**

[I.19211]

For a DS0A Channel

```
SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM [s]abcd-dd-eee[/01],\  
TO [t]ghijjj-kkk[/01]!
```

For a DS0B Channel

```
SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM [s]abcd-dd/ff-mm,\  
TO [t]ghijjj/ll-nn!
```

## **Hierarchical**

---

[I.19211]

For a DS0A Channel

**SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM uvmnpddd-eee[/01],\  
TO wxkqrjjj-kkk[/01]!**

For a DS0B Channel

**SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM uvmnpddd/ff-mm,\  
TO wxkqrjjj/ll-nn!**

## **Completion Message**

---

### **Nonhierarchical**

---

USAGE: For range connections of DS0A channels

## Explanation Of Parameters

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number

[t]ghi - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**RATE** - Circuit rate  
**rr** - Circuit rate value (24, 48, 96, or 56)

The FROM and TO fields specify the customers to cross-connect. The FROM and TO keywords have no significance to DACS II and either customer of the circuit may be designated FROM or TO. To loop a range of customers back to themselves, specify the FROM and TO fields identically.

There are two ways to specify ranges, as evidenced by the two formats that may follow the FROM and TO keywords:

- Range specified in channel field: [s]abcddd-eee[/01]

Ranges must be specified in the channel field when a range of DS0A customers is desired. However, a range is allowed in the channel field only if the channels are DS0A channels. The optional field must, if present, be 01. As an example, [0]001002-010/01 specifies a range of nine DS0A customers on NPC [0]001. [0]001002-010 does the same thing without the optional customer number field.

- Range specified in customer number field: [s]abcddd/ff-mm

Ranges must be specified in the customer number field when a range of DS0B customers is desired. If NPC [0]020, channel 004 was established as a 10-customer DS0B channel, then [0]020004/01-09 specifies a range of nine customers on NPC [0]020 channel 004.

Specifying a range in both the channel and customer number field for the same customer specification, such as [0]001001-009/01-09, will be denied.

**RATE** - Circuit rate

**rr** - Circuit rate value (24, 48, 96, 56)

**ppp/pp** - FROM termination involved in the denial where:

**ppp** - FROM channel number

**pp** - FROM customer number

**qqq/qq** - TO termination involved in the denial where:

**qqq** - TO channel number

**qq** - TO customer number

**reason** - Reason for denial

## **SDCH,TO,PCH,DCC**

### **SUBRATE DISESTABLISH CHANNEL**

#### **Explanation Of Command**

This message disconnects a channel (or a range of channels) in a digroup from use by the subrate feature. If an error correction parity channel is associated with the named channel and is *not* named in the input command, the system automatically finds and disestablishes it as well. However, one should not take this to imply that the parity channel may be disconnected in a range, since this is not the case.

### **Explanation Of Parameters**

[s]abc - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1 | Unit<br>2 | Unit<br>3 | Unit<br>4 | Unit<br>5 | Unit<br>6 |
|-----------|-----------|-----------|-----------|-----------|-----------|
| NPC       | NPC       | NPC       | NPC       | NPC       | NPC       |
| 001-160   | 161-320   | 321-480   | 481-640   | 641-800   | 801-960   |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**PCH** - Parity Channel

**ppp** - Parity error correction channel number

Included only for downward compatibility with the equivalent DACS/Subrate command. The PCH field indicates that a parity channel associated with channel ddd is to be disestablished as well.

If the PCH field is not used and a parity channel is present, the system automatically finds and disestablishes the parity channel associated with channel ddd.

ppp must agree with the parity channel assignment associated with channel ddd or the command will be denied. Channel ranges are not allowed if the range includes any channel associated with parity channel error correction.

**Note:** Disestablishment can only be done after all Subrate cross-connections are disconnected.

**DCC** - Disconnect Code

Causes the Digital Data System (DDS) Unassigned Multiplexer Channel (UMC) control code to be inserted in the disestablished channel(s) towards the digroup facility. If DDC is not specified, the disconnect code specified in the growth NPC command associated with the specified digroup is used.

**OOS** - Out of service

Channels connected with an out-of-service facility NPC may be disestablished with this command. Such disestablishments require no special keyword in the input command, but the output message will contain the OOS keyword to indicate that the facility is out-of-service. The user should note that the appropriate disconnect channel code may not be inserted in the disestablished channel until the facility is restored to service under these conditions.

**CUS** - Customer

Customer-controlled circuit

This disestablish command returns the customer control marking of channels that were previously marked with as CUS prior to being established to the Subrate feature.

The optional **PCH ppp** field appears whenever an associated error correction parity channel is also disestablished. It is not necessary for this field to be included in the input command, as the system automatically locates and disestablishes the parity channel whenever the associated data channel is disestablished.

**qqq** - Channel number involved in the denial (ddd through eee)

The user should note that none of the preceding channels in the range are completed if a problem is found, and subsequent channels may or may not have additional problems.

**reason** - Reason for denial

#### INPUT ERRORS

##### **reason**

CHANNEL NUMBER IS OUT OF RANGE FOR NPC TYPE SPECIFIED  
SPECIFIED CHANNEL IS NOT ESTABLISHED TO THE SUBRATE  
SPECIFIED CHANNEL HAS NO ASSOCIATED PARITY CHANNEL  
SPECIFIED DATA AND PARITY CHANNEL NUMBERS ARE INCONSISTENT  
RANGE DISCONNECT OF CHANNEL WITH PCH IS NOT ALLOWED  
CHANNEL [s]abcddd OR A CUSTOMER IS UNDER TEST  
RANGE DISESTABLISH OF DATA CH [s]abcddd HAVING PCH IS NOT  
ALLOWED  
ACTIVE SUBRATE CROSS-CONNECTS ARE PRESENT ON THE CHANNEL

## **SDIS,RATE,MPTM,MJU**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command provides multipoint branch disconnection of customers in both directions. All channels must have been cross-connected using the **SCON** or **SCNT** commands before they can be disconnected with **SDIS**. It is used to disconnect customers from the branches of a multipoint junction unit (MJU). The MJU itself remains connected to the circuit. As many as four branches can be disconnected from an MJU with one command. This command *cannot* be used to disconnect MJUs or branches that are cascaded to additional MJUs. To disconnect MJUs and branches, see **SDIS : RATE, MPTM, MJU, ALL**

Multipoint circuits can be disconnected incrementally, one command at a time. Many commands can address the same multipoint circuit. Indeed, many commands can address the same MJU of a circuit. A command might address an MJU, say MJU 0005 which has branches 1, 2, 3, and 4 connected, and disconnect customers from branches 1 and 2. This command results in no service interruption to branches 3 and 4 which are still connected. Another command might also address MJU 0005 and disconnect the customer from branch 3, leaving branch 4 undisturbed.

#### *Red Circuit and Customer Control Marking*

Subrate cross-connections are automatically marked as red circuits. Removal (RMV) of a facility terminating NPC with Subrate circuits connected to it requires the INCL keyword.

The **SDIS** action does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is enabled once the channel is disestablished.

Once customers are disconnected, the UMC code is sent towards the customers' facilities. Disconnected customers do not require a re-establishment (**SECH**) of their channels before being re-connected (**SCON** or **SCNT**).

The master leg of the multipoint circuit (MPTM) is specified by digroup abc, channel ddd,

customer number ff, and serves as the reference for addressing all MJUs and branches in the circuit. At least one branch must be specified with its corresponding external facility termination data.

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**RATE** - Rate

**rr** - Circuit rate (24, 48, 56, or 96).

RATE rr is always optional on an **SDIS**. rr specifies the rate at which customers are cross-connected, and thus, the rate at which MJUs operate. All MJUs in the same circuit operate at the same rate. If specified, RATE rr will be checked, and must be the same rate as originally appeared in the **SCON** or **SCNT** command. If it is not the same, the **SDIS** command will be denied.

**MPTM** - Multipoint master

**[s]abcddd[/ff]**

- The **NPC**, **channel**, and optional customer number connected to the control leg of **MJU 1**.

This field is used to identify the circuit as a whole. There is exactly one multipoint master for a multipoint circuit.

The data sent **BY** the multipoint master is broadcast to all branches on the circuit. The data sent **TO** the multipoint master is a summation of data sent by the branches.

The customer number, **ff**, is optional when the customer is in a **DS0A** channel because there is only one customer in a **DS0A** channel. If specified, it must appear as **01**.

A customer number is required when specifying a customer in a **DS0B** signal. Allowed customer numbers differ depending on the type of **DS0B** channel, as shown below.

| <i>DS0B nn</i> | <i>Allowed Subrate Customer Numbers</i> |
|----------------|-----------------------------------------|
| DS0B 20        | 1 through 20                            |
| DS0B 10        | 1 through 10                            |
| DS0B 5         | 1 through 5                             |

Because the multipoint master is used to uniquely identify the circuit as a whole, it is required for all **SDIS** commands, regardless of which **MJU** the command addresses (**MJU ssss** in the message formats above).

**MJU** - Multipoint junction unit

**ssss** - **MJU** number of cross-connected **MJU** (0001-9999)

**MJU ssss** identifies the **MJU** that the command addresses. All **MJUs** are given a number, **ssss**, when the circuit is built with the **SCON** or **SCNT** commands. This number should be used in the **SDIS** command to address an **MJU**.

**branch** - External facility termination for branch connected to MJU ssss

| <b>branch</b>      | <i>Explanation</i>                                                                |
|--------------------|-----------------------------------------------------------------------------------|
| BRi [[t]ghijj]/ll] | Nonhierarchical branch and termination identification (see BRi [t]ghijj/ll below) |
| BRi [wxqrrjj]/ll]  | Hierarchical branch and termination identification (see BRi wxqrrjj/ll below)     |

The termination part of the branch is optional since the system knows what customer is connected to MJU ssss branch i.

The branch field identifies a branch that will be disconnected from the customer connected to it. If the customer is a DS0A customer, the customer number is optional and, if present, must be 01. If the NPC and channel numbers are specified for a DS0B customer the customer number is required.

From one to four branches can be specified in an **SDIS** command; disconnecting up to four customers from the four branches of an MJU. At least one branch must be specified. A maximum of four branches is allowed. The <branch> fields can appear in any order. Nothing is disconnected from branches that are not specified in the command.

Branch fields might be omitted for several reasons. Suppose branches 1, 2, and 3 of MJU ssss are connected with branch 4 unconnected. If the user wished to disconnect only the customer from branch 3, then only **BR3 [ [t]ghijj]/ll ]** would appear in the command. Branches 1 and 2 would not appear because the user does not want to disconnect them. Branch 4 would not appear because there is no customer to disconnect.

If an unconnected branch, like branch 4, is specified in an **SDIS** command, the command will be denied.

**BRi [t]ghijj/ll**  
- Nonhierarchical termination number connected to branch  
i of MJU ssss

**BRi wxqrrjj/ll**  
- Hierarchical termination number connected to branch i of MJU ssss

|               |                                                                                |
|---------------|--------------------------------------------------------------------------------|
| <b>BR</b>     | - Branch                                                                       |
| <b>i</b>      | - Branch number of MJU ssss (1 through 4)                                      |
| <b>[t]ghi</b> | - The 3- or 4-digit nonhierarchical NPC number of termination connected to BRi |

|              |                                                                                                                                                     |

**MA** - Master

MA identifies the upstream MJU number and branch connected to the control leg of MJU ssss. In the case of MJU 1, the control leg is actually the master leg of the circuit and is indicated in the MA field by MPTM.

**OOS** - Out-of-service

OOS appears in the output whenever the disconnection involves an out-of-service or failed facility termination NPC. In this case, the user should note that the Unassigned Multiplexer Channel (UMC) code may not be inserted towards the facilities of the disconnected circuit until the facility is restored to service.

## **SDIS,RATE,MPTM,MJU,ALL**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command provides deletion of MJUs and disconnection of customers in both directions. Customers must have been cross-connected (using the **SCON** or **SCNT** verbs) before they can be disconnected with **SDIS**. This command performs a cascaded MJU disconnection. The **MJU ssss** field identifies the place to begin the disconnection. **MJU ssss** as well as any MJUs cascaded from it will be disconnected. A maximum of 21 MJUs can be disconnected in one command. Message Number I.19421 only disconnects customers from branches of MJUs.

### **Autonomous Message**

---

Not applicable.

### Explanation Of Parameters

**e** - Number of lines in the message

**RATE** - Rate

**rr** - Circuit rate (24, 48, 96, 56)

The optional RATE rr field specifies the rate at which customers are cross-connected, and thus, the rate at which MJUs operate. All MJUs in the same circuit operate at the same rate. If specified, rr will be checked and must be the same rate as given in the SCON or SCNT command. If it is not the same, the SDIS command will be denied.

**MPTM** - Multipoint master

The NPC, channel, and optional customer number of the external facility termination connected to the control leg of MJU 1. There is exactly one multipoint master for a multipoint circuit. This field is used to identify the circuit as a whole. The data sent by this multipoint master is broadcast to all branches on the circuit. The data sent to the multipoint master is a summation of data sent by the branches.

The multipoint master is required for all SDIS commands, since it uniquely identifies the circuit, regardless of which MJU the command addresses (MJU ssss in the INPUT FORMATS).

**[s]abc** - The 3- of 4-digit nonhierarchical NPC number of the multipoint circuit master leg

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

ff is optional when the customer is in a DS0A channel because there is only one customer in a DS0A channel. If specified, it must appear as 01.

ff is required when specifying a customer in a DS0B signal. Allowed customer numbers differ depending on the type of DS0B channel, as shown below.

| <i>DS0B nn</i> | <i>Allowed Subrate Customer Numbers</i> |
|----------------|-----------------------------------------|
| DS0B 20        | 1 through 20                            |
| DS0B 10        | 1 through 10                            |
| DS0B 5         | 1 through 5                             |

**ff** *Explanation*

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**NEW** - New

The lines in the output message associated with the NEW keyword list the new connection data for the just-upstream MJU after the disconnection of the control leg of MJU ssss. These cross-connections remain in effect after completion of the disconnect. If the disconnected MJU ssss is MJU 1, the NEW MJU fields are filled with zeroes, indicating that no MJUs remain in the circuit.

**OLD** - Old

The lines in the output message associated with the OLD keyword list all of the disconnected MJUs and branches associated with MJU ssss. This includes the branch data of MJU ssss, as well as the data for up to twenty additional MJUs that may have been cascaded from MJU ssss and its associated downstream connections.

**MJU** - Multipoint junction unit

**ssss** - MJU number of disconnected MJU (0001 through 9999)

ssss identifies the MJU at which to begin the disconnection. Leading zeros are not required when specifying ssss. All MJUs are given a number, ssss, when the circuit is built with the SCON or SCNT commands. This number should be used in the SDIS command to choose the MJU at which to begin the disconnection. The maximum number of MJUs that can be disconnected with a single command is 21. If there are more than 20 MJUs cascaded (connected directly or indirectly) to MJU ssss, the command will be denied. If by specifying ssss, 21 or fewer MJUs will be disconnected, the control leg of MJU ssss will be disconnected as will everything cascaded from the branches of MJU ssss. If the multipoint circuit is composed of 21 or fewer MJUs and ssss is specified as 0001, the entire multipoint circuit is disconnected.

**ALL** - All

If ALL is not specified, all the branches of MJU ssss must be unconnected. Then, MJU ssss and its control leg will be disconnected.

If ALL is specified, it denotes that MJU ssss, its control leg, and everything connected directly or indirectly to the branches of MJU ssss will be disconnected.

ALL appears in the output message only if present in the input command, and is normally used whenever the disconnection of MJU ssss also results in the disconnection of its branches from external facility terminations or cascaded MJUs.

**MA** - Master

The MA keyword identifies the upstream MJU number and branch connected to the control leg of MJU ssss. In the case of MJU 1, the control leg is actually the master leg of the circuit and is indicated in the MA field by MPTM.

**tttt** - MJU number connected to control leg of MJU ssss (0001 through 9999)  
**u** - Branch number of MJU tttt (1 through 4)

**vvvv** - MJU number of additional cascaded MJUs (0002 through 9999)

**wwwv** - MJU number connected to control leg of MJU vvvv  
**x** - Branch number of MJU connected to control leg of MJU vvvv

**yyyy** - MJU number connected to control leg of MJU tttt  
**z** - Branch number of MJU connected to control leg of MJU tttt

**BR1** - Branch 1

**BR2** - Branch 2

**BR3** - Branch 3

**BR4** - Branch 4

The BRi <data> fields refer to the connection data associated with the four branch legs of MJU ssss. Each branch data field can take one of three forms, depending on whether the branch is unassigned, cross-connected to an external facility termination, or cross-connected to a cascaded MJU control leg.

**data** - Branch connection data in the form:

| <b>data</b>         | <i>Explanation</i>                                                                |
|---------------------|-----------------------------------------------------------------------------------|
| <b>[0]000000/00</b> | - Nonhierarchical format for unassigned branches                                  |
| <b>[t]ghijjj/ll</b> | - Nonhierarchical format for branches connected to external facility terminations |
| <b>00000000/00</b>  | - Nonhierarchical format for unassigned branches                                  |
| <b>wxkqrjjj/ll</b>  | - Nonhierarchical format for branches connected to external facility terminations |
| <b>MJU nnnn</b>     | - For branches connected to another MJU with number nnnn (0002 through 9999)      |

**s** - Termination state of the MJU control or branch leg

Indicates whether either or both ends of the cross-connection are in the terminate and leave state. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | Released. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**OOS** - Out-of-service

If the disconnected facilities are associated with one or more OOS facility terminating NPCs, the OOS keyword appears in the output message. In this case, the user should note that the Unassigned Multiplexer Channel (UMC) code may not be inserted towards the facilities of the disconnected circuits until they are restored to service.

**reason** - Reason for denial

## **SDIS,RATE,TPT,FROM,TO**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command disconnects the **FROM** and **TO** customers in both directions. The channels **abcd** and **ghij** must be cross-connected (using the **SCON** or **SCNT** verbs) before they can be disconnected with **SDIS**.

The optional **RATE rr** field defines the rate at which the **FROM** and **TO** customers were cross-connected. If specified it will be checked and must be the same rate as originally appeared in the **SCON** or **SCNT** command. The **TPT** keyword means two-point and is optional. It conveys no information and is retained for DACS/SRDC compatibility.

## **SDIS,RATE,TPT,FROM,TO**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command disconnects the **FROM** and **TO** customers in both directions. It extends the format of the **SDIS, RATE, TPT, FROM, TO** command to ranges of two-point, two-way disconnections. This command is the same as the **SDIS, RATE, TPT, FROM, TO** command except for the range feature. See the **SDIS, RATE, TPT, FROM, TO** command for an explanation of features not related to the range feature.

The **FROM** and **TO** fields specify the customers to disconnect. The **FROM** and **TO** keywords have no significance to DACS II and either customer or range of customers may be designated **FROM** or **TO**. The **FROM** and **TO** designations do not have to be the same on an **SDIS, RATE, TPT, FROM, TO** command as they were on the corresponding **SCON** or **SCNT** command.

#### **Command**

##### **Nonhierarchical**

[l.19411]

```
SDIS:FRM xy,SEQ ww:[RATE rr,][TPT,] FROM [s]abcddd{-eee[/01]|\  
/ff-mm},TO [t]ghijjj{-kkk[/01]|/ll-nn}!
```

##### **Hierarchical**

[l.19411]

```
SDIS:FRM xy,SEQ ww:[RATE rr,][TPT,] FROM uvmnpdd{-eee[/01]|\  
/ff-mm},TO wxkqrjjj{-kkk[/01]|/ll-nn}!
```

---

Not applicable.

### Explanation Of Parameters

**RATE** - Rate

**rr** - Circuit rate (24, 48, 96, or 56)

**TPT** - Two-Point, Two-way disconnection

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**ff** - FROM DS0A or DS0B Customer number  
**mm** - FROM DS0B Customer number for end of range  
**ll** - TO DS0A or DS0B Customer number, similar to ff  
**nn** - TO DS0B Customer number for end of range

ff explanation

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

There are two ways to specify ranges.

- Range specified in channel field: [s]abcd-dd-eee[/01]

This option applies only to DS0A channels, and the channel range, i.e., eee, must be specified when a range of DS0A customers is desired. The customer number for DS0a channels is always 01. For example, [0]001002-010/01 specifies a range of nine DS0A customers on NPC 001, while [0]001002-010 does the same thing without the optional customer number.

- Range specified in customer number field: [s]abcd-dd/ff-mm

This option applies only to a DS0B channel, and the range must be specified in the customer number field when a range of DS0B customers is desired. If NPC [0]020, channel 004 was established (using the SECH verb) as a 10 customer DS0B channel, then [0]020004/01-09 specifies a range of nine customers on NPC [0]020 channel 004.

Specifying a range in both the channel and customer number field for the same customer specification, such as [0]001001-009/01-09, will be denied.

**00S** - Out-of-service

**reason** - Reason for denial

## **SECH,TO,DS0A,DS0B,SEC,PCH**

### **SUBRATE ESTABLISH CHANNEL**

#### **Explanation Of Command**

This command connects a channel (or a range of channels) in a digroup to the subrate feature. When connected to the subrate feature, the channel is provided with test access capability using the **STST** commands and, if specified, a subrate multiplexer and/or an error correction function. A channel must be established before any cross-connections can be made via the **SCON** command. This command is recommended over the DACS/SRDC-compatible version **SECH: : TO, RATE, DP, PCH** (I.19111) due to its improved clarity.

DACS II will deny this command if it attempts to establish a DS0B channel on channel 24 of a DS1 provisioned with the T1DM framing format.

This command is used to establish five types of channels as follows:

1. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers.
2. A DS0A channel (at any rate) without error correction.
3. A subrate DS0A channel with subrate dataport error correction.
4. A 56-kb/s channel with parity channel error correction. (This type of error correction is also commonly referred to as "56-kb/s dataport" error correction.)
5. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers and parity channel error correction.

When a channel is established, it cannot be already established, cross-connected, or under test access. All channels within a specified range are established with the same parameters.

**Note:** For user convenience, an alphabetical "O" or a numerical "0" can be typed for the zero in DS0.

### **DS0B Channels Without Error Correction**

A DS0B channel is established by specifying a digroup and channel and the DS0B nn field.

The SEC or PCH fields must not be present for this type of channel.

As indicated above, a mix of customer rates can be cross-connected, provided the maximum rate for each type of subrate multiplexer is not exceeded.

### **DS0A Channels Without Error Correction**

A DS0A channel without error correction is established by specifying a digroup and channel and DS0A rr.

Again, the SEC or PCH keywords must not be present.

**Note:** The Subrate feature performs no rate-sensitive processing on this type of channel, and cross-connection is allowed to any other Subrate channel. The user must ensure that the signal rate is compatible with the intended cross-connection.

For example, if a DS0A channel with an actual rate of 4.8 kb/s is established, a cross-connection to a 10-channel or 20-channel multiplexer is allowed, but only the connection to the 10-channel multiplexer will provide error-free transmission.

### **DS0A Channels With Subrate Error Correction**

A subrate DS0A channel with subrate error correction is established by specifying the DS0A keyword with an rr value of 24, 48, or 96, and the SEC keyword. Subrate error correction performs a majority vote among the repeated bytes inherent in the byte-stuffed subrate DS0A signal to determine the corrected data. An rr value of 56 is not allowed, and the PCH keyword must not be present in specifying this type of channel.

### **56 kb/s Channels With Error Correction**

A 56-kb/s channel with parity channel error correction is established by specifying the DS0A keyword with an rr value of 56, and the PCH keyword. This command has the effect of establishing two channels, one for carrying the customer data and one for carrying parity error correction information. If no parity channel number (ppp) is specified, the parity channel is assigned automatically to the next higher numbered channel from the data channel (ddd + 1). Due to the need to assign parity channels, range provisioning of 56 kb/s channels with error correction is not allowed. Also, use of the PCH keyword when the rr value is less than 56 is not allowed.

### **DS0B Channels With Error Correction**

A DS0B channel that also has parity channel error correction performed on it is established by specifying the DS0B nn and PCH keywords. As above, the nn value determines the type of multiplexer, and the PCH keyword assigns a parity channel number ppp or defaults to ddd + 1. Also, range provisioning of this type of channel is not allowed.

Subrate established channels are marked automatically as red circuits. This results in the need to specify the INCL keyword in the RMV NPC command whenever a facility terminating NPC carrying Subrate channels is removed.

Also, the Subrate establish channel command has no effect on the customer controlled marking status of DACS II channels that previously have been marked with the CUS keyword. The CUS marking is disabled while the channel is established to the Subrate feature, but is enabled again once the channel is disestablished.

**Note:** When all 24 channels of an NPC using D4 superframe are established as DS0B channels, a yellow CGA can be declared for the NPC, even though there is no failure, if either of the following conditions exists:

1. The DS1 signal is looped at the DSX-1 and the mux out of sync (MOS) code is transmitted on all channels.
2. The far end is transmitting the MOS code on all 24 channels.

When all 24 channels are receiving MOS, the D4 superframe yellow alarm signal is simulated thus causing the CGA to be declared.

## Explanation Of Parameters

**T0** - To

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**DS0A** - Digital signal 0A

**rr** - DS0A channel rate (24, 48, 96, or 56)

The established channel is a DS0A type, that is, a single customer signal at rate rr.

**DS0B** - Digital signal 0B

**nn** - Number of DS0B subrate customer channels (05, 10, or 20)

The established channel is connected to a subrate multiplexer capable of multiplexing nn customers.

**SEC** - Subrate error correction

Subrate error correction is performed on the established channel. SEC cannot be used for either a DS0A or DS0B channel without error correction.

**PCH** - Parity channel

Parity error correction is performed on this channel. PCH cannot be used for either a DS0A or DS0B channel without error correction.

The SEC and PCH fields are present only if specified in the input command.

**ppp** - Parity channel number

Specifies the associated parity channel number. If not specified in the input command, this number defaults to the channel number + 1 (ddd + 1).

**qqq** - Channel number involved in the denial (ddd through eee)

**reason** - Reason for denial

If a denial pertains to a particular channel in a range, the channel number is given in the optional qqq field. The user should note that *none* of the preceding channels in a range are completed if a problem is found, and subsequent channels may or may not have additional problems.

## **SECH,TO,RATE,DP,PCH**

### **SUBRATE ESTABLISH CHANNEL**

#### **Explanation Of Command**

This message connects a channel or a range of channels in a given digroup to the subrate feature. When connected to the subrate feature, the channel is provided with test access capability using the STST commands and, if specified, a subrate multiplexer and/or an error correction function.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

A channel must be established before any cross-connections can be made.

This command is used to establish five different types of channels as follows:

1. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers.
2. A 56-kb/s channel without error correction.
3. A subrate DS0A channel with subrate dataport error correction.
4. A 56-kb/s channel with parity channel error correction. (This type of error correction is also commonly referred to as "56-kb/s dataport" error correction.)
5. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers and parity channel error correction.

When a channel (or range of channels) is established, it (they) cannot be already established, cross-connected, or under test access. All channels within a specified range are established with the same parameters.

#### DS0B Channels (Without Error Correction)

A DS0B channel is established by specifying a digroup and channel and the RATE rr field. The DP and PCH fields must not be present for this type of channel. The RATE rr field defines the number of customer channels and the maximum customer rate of the subrate multiplexer as follows:

**rr** - Subrate multiplexer rate

| <i>rr</i> | <i>Explanation</i>                  |
|-----------|-------------------------------------|
| 24        | 20 - 2.4-kb/s customers             |
| 48        | 10 - 2.4- or 4.8-kb/s customers     |
| 96        | 5 - 2.4, 4.8, or 9.6-kb/s customers |

As indicated in the table above, a mix of customer rates can be cross- connected provided the maximum rate for each type of subrate multiplexer is not exceeded. 56-kb/s Channels Without Error Correction

A 56-kb/s DS0A channel without error correction is established by specifying a digroup and channel and RATE 56. The DP keyword is also allowed if desired, but otherwise is ignored by the system. The PCH keyword must not be present. This type of channel actually can be operated at any DDS rate since the Subrate performs no rate-sensitive processing on it. The user must ensure, however, that any subsequent cross-connections to other Subrate channels are compatible with the rate actually present in the channel. For example, when the channel actually carries a 4.8-kb/s byte-stuffed DS0A, the user may connect it to a 10-channel multiplexer or to a 20-channel multiplexer. In both cases, the command is allowed, but only the connection to the 10- channel multiplexer will provide error-free transmission.

#### DS0A Channels With Subrate Error Correction

A subrate DS0A channel with subrate error correction is established by specifying an rr value of 24, 48, or 96, and the DP keyword. Subrate error correction performs a majority vote among the repeated bytes inherent in the byte-stuffed subrate DS0A signal to determine the corrected data. An rr value of 56 is not allowed, and the PCH keyword must not be present in specifying this type of channel.

#### 56-kb/s Channels With Error Correction

A 56-kb/s channel with parity channel error correction is established by specifying an rr value of 56 and both the DP and PCH keywords. This command has the effect of establishing two channels, one for carrying the customer data and one for carrying parity error correction information. If no parity channel number (ppp) is specified, the parity channel is assigned automatically to the next higher numbered channel from the data channel (ddd + 1). Due to the need to assign parity channels, range provisioning of 56-kb/s

channels with error correction is not allowed.

#### DS0B Channels With Error Correction

A DS0B channel that also has parity channel error correction performed on it is established by specifying a RATE of 24, 48, or 96, corresponding to 20, 10, or 5 channel multiplexers, respectively, and the DP and PCH keywords. As above, if no parity channel number (ppp) is specified, the parity channel is assigned to ddd + 1. Also, no range provisioning of this type of channel is allowed.

Subrate established channels are marked automatically as red circuits. This results in the need to specify the **INCL** keyword in the RMV NPC command whenever a facility terminating NPC carrying Subrate channels is removed.

Also, the Subrate establish channel command has no effect on the customer control marking status of DACS II channels that previously have been marked with the **CUS** keyword. The **CUS** marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished.

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**ddd** - Channel number

**eee** - Channel number for end of range specified

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The channel is now ready for Subrate cross-connection. Optional field **eee** appears if the input message requested the establishment of a range of channels.

The **RATE rr** field specifies the channel rate. If the optional **DP** and **PCH** fields are not present and rr = 24, 48, or 96, the established channel is connected to a subrate multiplexer capable of multiplexing 20, 10, or 5 customers, respectively. If rr = 56 and the optional fields are not present, the established channel is a DS0A type, i.e., a single customer signal without error correction.

When the optional **DP** field is present and rr = 24, 48, or 96, the established channel is a DS0A type with subrate error correction. If both **DP** and **PCH** fields are present and rr = 24, 48, or 96, the established channel is connected to a subrate multiplexer capable of multiplexing 20, 10, or 5 customers, respectively, and has parity channel error correction.

An **rr** value of 56 in combination with both **DP** and **PCH** fields indicate a 56 kb/s DS0A channel with parity channel error correction.

The **ppp** field specifies the parity channel number associated with the parity channel error correction function. If not specified in the input command, this number is defaulted to ddd + 1.

**qqq** - Channel number involved in the denial ( $ddd \leq qqq \leq eee$ )

**rr** - Channel rate (24, 48, 96, or 56)

**ppp** - Number of parity error correction channel

If the reason for denial pertains to a particular channel in a range, the channel number is given in the optional **qqq** field. The user should note that *none* of the preceding channels in the range are completed if a problem is found, and subsequent channels may or may not have additional problems.

The optional **DP** and **PCH** **ppp** fields indicate subrate and parity channel error correction, respectively. These fields are present only if specified in the input command.

**reason** - reason for denial

### Input Errors

*reason*

SPECIFIED DIGROUP DOES NOT SUPPORT SUBRATE CHANNELS  
CHANNEL dd IS OUT OF RANGE FOR NPC TYPE SPECIFIED  
CHANNEL [s]abcdddd IS A TEST GROUP CHANNEL  
PARITY CHANNEL [s]abcdddd IS A TEST GROUP CHANNEL  
SPECIFIED CHANNEL IS A TEST PORT  
SPECIFIED CHANNEL IS ALREADY ASSIGNED  
SPECIFIED CHANNEL IS UNDER TEST  
SPECIFIED PARITY CHANNEL IS A TEST PORT  
SPECIFIED PARITY CHANNEL IS ALREADY ASSIGNED  
SPECIFIED PARITY CHANNEL IS UNDER TEST  
SPECIFIED PARITY CHANNEL IS ALREADY SPECIFIED AS DATA CHANNEL  
PARITY CHANNEL NUMBER IS OUT OF RANGE  
DP KEYWORD WITHOUT PCH KEYWORD NOT ALLOWED WITH RATE 56  
PCH KEYWORD WITHOUT DP KEYWORD NOT ALLOWED  
PCH KEYWORD NOT ALLOWED FOR RANGE CROSS-CONNECTS  
CONNECTION EXCEEDS REMAINING SRM CAPACITY  
ERROR CORRECTION CAPACITY UNAVAILABLE ON DESIRED TYPE SUBRATE PACK

## **Maintenance Conditions**

### *reason*

ACTIVE CROSS-CONNECT NETWORK SIDE IS FAILED  
SPECIFIED NPC IS UNEQUIPPED  
SPECIFIED NPC IS OUT-OF-SERVICE  
SPECIFIED NPC IS FAILED  
REQUIRED UNIT NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED CCB NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED TSI NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED ETSI NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED FTMI NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED FC NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED DSPI NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED SRM NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED SUBRATE PACK NOT EQUIPPED, NOT IN SERVICE, OR FAILED

## **Error condition code for DS3U**

### *reason*

## SCNT — SW

---

This section documents the commands **SCNT** through **SW**.

## **SCNT,RATE,MPTM,MJU,MA**

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a subrate terminated multipoint cross-connection of **MJU ssss**.

The master leg of the multipoint circuit (MPTM) is specified by digroup **abc**, channel **ddd**, and customer number **ff**, and serves as the reference for addressing all MJUs and branches in the circuit.

The command inserts the Unassigned multiplexer channel (UMC) code towards both the upstream (MJU) and downstream (branch facility) directions of the cross-connected branch. If a digroup and channel of a customer to be connected to a branch is error corrected, termination takes place after error correction is performed. If no branch field appears in the command, it is denied since there is nothing to terminate.

MJU control legs are not terminated with this command. This includes the control leg of MJU 0001 that is connected to the multipoint master. MJU control legs can be terminated using the STST command. By not terminating control legs, the user can set up a circuit using a mixture of SCNT commands (to connect to terminated branches) and SCON commands (to connect to unterminated or active branches). Also, by not terminating the multipoint master and MJU control legs, transmission to and from the active (not terminated) customers is always preserved.

All channels [s]abcddd and [t]ghijj must be established before they can be cross-connected with SCNT.

#### **Command**

#### **Nonhierarchical**

[I.19321]

```
SCNT:FRM xy,SEQ ww:[RATE rr,]MPTM [s]abcddd[/ff],MJU ssss\  
[,MA(tttt,u)],<branch>[,<branch>][,<branch>][,<branch>]!
```

### **Hierarchical**

---

[I.19321]

SCNT:FRM xy,SEQ ww:[RATE rr,]MPTM uvmnpddd[/ff],MJU ssss\  
[,MA(tttt,u)],<branch>[,<branch>][,<branch>][,<branch>]!

### **Completion Message**

---

#### **Nonhierarchical**

Not applicable.

## Explanation Of Parameters

**RATE** - Rate

**rr** - Circuit rate specification (24, 48, 96, or 56)

*rr*      *Rate*

|    |                           |
|----|---------------------------|
| 24 | 2.4 kilobit/second (kb/s) |
| 48 | 4.8 kb/s                  |
| 96 | 9.6 kb/s                  |
| 56 | 56 kb/s                   |

**MPTM** - Multipoint Master

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number of the multipoint circuit master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                              |                              |                              |                              |                              |                              |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |

| 01-05 | (DS0B at 9.6 kb/s)                  |

**NEW** - New

**MJU** - Multipoint junction unit

**ssss** - MJU number of cross-connected MJU (0001-9999)

This command cross-connects MJU ssss to MJU tttt.

**s** - Termination state of the MJU control or branch leg

Indicates whether either or both ends of the cross-connection are in the terminate and leave state. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | RELEASED. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**BR1** - Branch 1

**BR2** - Branch 2

**BR3** - Branch 3

**BR4** - Branch 4

**MA** - Master

**tttt** - MJU number (0001 through 9999)

**u** - Branch number (1 through 4)

MA, tttt, and u specify an MJU to MJU connection. MJU tttt branch u is connected to the control leg of MJU ssss.

**branch** - External facility terminations for branches connected to MJU ssss.

The branch listed in the branch field is connected to the external facility termination, and is left in the terminate and leave state in both directions of transmission. The NEW MJU fields list the resulting cross-connection and terminate and leave status for all connections associated with MJU ssss. Note that the control leg and other branches not named in the SCNT command may be in any of the possible terminate and leave states as a result of previous cross-connect, change, or test access commands.

*branch*

BRI [t]ghijj[/II]

BR - Branch

i - Branch number of MJU ssss (1 through 4)

[t]ghijj[/II] - External facility termination of added branch

[t]ghi - The 3- or 4-digit nonhierarchical NPC number of termination connected to BRI.

For valid values see [s]abc above.

jij - Channel number of termination connected to BRI.

For valid values see ddd above.

II - Customer number of termination connected to BRI

For valid values see ff above.

**data** - Branch connection data

| <i>data</i> | <i>Explanation</i> |
|-------------|--------------------|
|-------------|--------------------|

## **SCNT,RATE,TPT,FROM,TO**

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a terminated cross-connection of the FROM and TO subrate customers in both directions. The customer number fields are optional for DS-0A terminations. If not specified, the default value is 01.

#### **Command**

##### **Nonhierarchical**

[I.19301]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcddd[/ff],\  
TO [t]ghijjj[/ll]!
```

##### **Hierarchical**

[I.19301]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmnpddd[/ff],\  
TO wxkqrjjj[/ll]!
```

#### **Completion Message**

##### **Nonhierarchical**

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**RATE** - Rate

rr Circuit rate specification (24, 48, 96, or 56)

rr Rate

24 2.4 kilobit/second (kb/s)

48 4.8 kb/s

96 9.6 kb/s

56 56 kb/s

**TPT** - Two-Point

Retained only for DACS/SRDC compatibility.

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

| 01-05 | (DS0B at 9.6 kb/s)                  |

If [s]abctddd or [t]ghijj is an error corrected channel, termination is performed after error correction is done. Also, this command does not allow the FROM and TO customers to be the same (that is, a looped connection), nor does it allow the use of a semi-colon in place of a comma after the TPT keyword. Both directions of the circuit are terminated with insertion of the Unassigned Multiplexer Channel (UMC) control code.

**reason** - Reason for denial

Input Errors

*reason*

CHANNEL [s]abctddd IS A PARITY CHANNEL  
CUSTOMER NUMBER MUST BE SPECIFIED FOR DS0B CHANNEL [s]abctddd  
CHANNEL [s]abctddd WITH SR ERROR CORRECTION AND RATE 56 NOT ALLOWED  
CHANNEL [s]abctddd SR MULTIPLEXER RATE CANNOT SUPPORT CIRCUIT RATE  
CUSTOMER NUMBER RANGE NOT ALLOWED FOR DS0A CHANNEL [s]abctddd  
CHANNEL RANGE NOT ALLOWED FOR DS0B CHANNEL [s]abctddd  
FROM AND TO RANGES ARE NOT THE SAME SIZE  
FROM AND TO RANGES PARTIALLY OVERLAP  
INVALID CHANNEL NUMBER FOR CHANNEL [s]abctddd  
CHANNEL [s]abctddd/ff IS SPECIFIED MORE THAN ONCE  
CHANNEL [s]abctddd/ff IS CONNECTED BUT NOT AS A MULTIPOINT MASTER LEG  
SPECIFIED RATE DOES NOT MATCH EXISTING CIRCUIT RATE  
MJU 1 MUST BE SPECIFIED AS THE MULTIPOINT MASTER LEG MJU  
CIRCUIT RATE MUST BE SPECIFIED  
MA FIELD MUST BE SPECIFIED FOR A NEW MJU  
MA FIELD MUST MATCH CIRCUIT  
UPSTREAM BRANCH SPECIFIED IN MA FIELD IS ASSIGNED  
UPSTREAM BRANCH SPECIFIED IN MA FIELD DOES NOT EXIST  
BR i IS SPECIFIED MORE THAN ONCE  
MA FIELD NOT ALLOWED WHEN MJU 1 IS SPECIFIED  
MJU NAMES IN MJU AND MA FIELDS CANNOT BE THE SAME  
SCNT CANNOT BE SPECIFIED FOR A LOOPED CIRCUIT  
CUSTOMER NUMBER ff IS OUT OF RANGE FOR DS0A CHANNEL [s]abctddd  
CUSTOMER NUMBER ff IS OUT OF RANGE FOR DS0B CHANNEL [s]abctddd  
CHANNEL [s]abctddd IS OUT OF RANGE  
[s]abctddd-ff IS AN INVALID RANGE OF CHANNELS  
CHANNEL [s]abctddd/ff IS ASSIGNED  
BR i IS ALREADY ASSIGNED TO ANOTHER CHANNEL OR MJU  
MJU ssss ALREADY EXISTS IN THE CIRCUIT  
CHANNEL [s]abctddd IS NOT ESTABLISHED TO SR FEATURE  
CHANNEL [s]abctddd/ff IS UNDER TEST  
NPC [s]abc IS NOT PROVISIONED AS DIGROUP-A OF AN RT  
THE NPC ASSOCIATED WITH VIRTUAL CHANNEL [s]abctddd IS NOT PROVISIONED  
NPC [s]abc IS IN LINE LOOPBACK STATE  
CIRCUIT IS UNDER TEST

## **SCNT,RATE,TPT,FROM,TO**

### **SUBRATE TERMINATED CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a terminated cross-connection of the **FROM** and **TO** customers in both directions.

#### **Command**

#### **Nonhierarchical**

USAGE: The following applies to a range of DS-0A channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcd-dd-eee[/01],\  
TO [t]ghijjj-kkk[/01]!
```

USAGE: The following applies to a range of DS-0B channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcd-dd/ff-mm,\  
TO [t]ghijjj/ll-nn!
```

#### **Hierarchical**

USAGE: The following applies to a range of DS-0A channels:

[l.19311]

```
SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmp-ddd-eee[/01],\  
TO wxkqrjjj-kkk[/01]!
```

USAGE: The following applies to a range of DS-0B channels:

[I.19311]

**SCNT:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmnpddd/ff-mm,\  
TO wxkqrjjj/ll-nn!**

### **Completion Message**

---

#### **Nonhierarchical**

---

## **SCON,RATE,MPTM,MJU,MA**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command performs a subrate multipoint cross-connection of the specified MJU. The master leg of the multipoint circuit is specified by digroup and channel and customer number, and serves as the reference for addressing all multipoint junction units and branches in the circuit.

All channels ddd and jjj must be established before they can be cross-connected by this command.

Multipoint circuits are built incrementally, one command at a time. Many commands can address the same multipoint circuit. Indeed, many commands can address the same MJU of a circuit. A command addressing an MJU, say MJU 0005, might connect customers to branches 1 and 2. Another command might also address MJU 0005 and connect a customer to branch 3. This command results in no service interruption to branches 1 and 2 that are already connected.

## Explanation Of Parameters

**RATE** - Rate

**rr** - Transmission rate (24, 48, 96, or 56)

*rr*      *rate in kb/s*

|    |     |
|----|-----|
| 24 | 2.4 |
| 48 | 4.8 |
| 96 | 9.6 |
| 56 | 56  |

rr determines the transmission rate of the customers' cross-connection, and thus, the rate at which the MJU operates. All MJUs in the same circuit must operate at the same rate. The "RATE rr" field must be specified in the first command addressing MJU 0001. "RATE rr" need not be re-specified after it has once been set for MJU 0001. Hence, it is shown as optional. If "RATE rr" is omitted from subsequent commands, any additional MJUs connected will operate at the rate specified for MJU 0001. If "RATE rr" appears in subsequent commands, it will be checked against the rate specified for MJU 0001. If the rates are not the same, the command will be denied.

In addition to assuring that all MJUs in a circuit operate at the same rate, there is an additional check performed on the rate. In circuits that connect customers in DS0B channels, the rate of the MJUs cannot exceed the maximum customer rate of the subrate multiplexers associated with those DS0B channels. The allowed customer numbers used in either the master leg or branch connections depend on the rate of the circuit and the type of DS0B channel associated with each termination, as shown below:

For DS0A channels, rr is checked against the type of error correction previously specified in the SECH command for that channel. Similarly, if the channel has subrate error correction, a circuit rate of 56 is not allowed.

| Circuit<br>Rate | DS0B Type                                      |                                                |                                               |
|-----------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                 | 20-channel<br>(max. customer<br>rate 2.4 kb/s) | 10-channel<br>(max. customer<br>rate 4.8 kb/s) | 5-channel<br>(max. customer<br>rate 9.6 kb/s) |
| RATE 24         | Cust. #s<br>1-20 Allowed                       | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 48         | Denied                                         | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |

**MPTM** - Multipoint master

**[s]abcd**[/ff]

- Termination number

There is exactly one multipoint master for a multipoint circuit. The multipoint master termination number is connected to the control leg of MJU 1. MJU 1 must be the first MJU connected in any circuit. This field uniquely identifies the circuit.

The data sent by this multipoint master is broadcast to all branches on the circuit. The data sent to the multipoint master is a summation of data sent by the branches.

Because the multipoint master is used to uniquely identify the circuit as a whole, it is required for all SCON commands, regardless of which MJU the command addresses (MJU ssss in the message format).

The first time a particular termination number is named in a command as a multipoint master, "MJU ssss" must be specified as "MJU 0001". The system will connect the termination to the control leg of MJU 0001. Subsequently, the multipoint master is included in commands addressing an MJU only to identify the circuit to which the MJU belongs.

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of the multipoint circuit master leg

If NPC numbers are expressed in three digits, the valid values are:

**uvmnp** - Hierarchical NPC number of the multipoint circuit master leg

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**MJU** - Multipoint junction unit

**ssss** - MJU number addressed by this command (0001 through 9999)

If the MJU being addressed by the SCON command is 0001 (MJU ssss is MJU 0001) then the field "MA(tttt,u)" must not appear in the command (see the explanation of MA(tttt,u) below).

As previously discussed, it must always be connected to the multipoint master termination. The first time an MJU other than 0001 appears in a command, the command must also contain the MJU connection field.

No MJU can be created with an unconnected control leg.

**MA** - Master

**tttt** - MJU number (1 through 9999)

**u** - Branch number (1 through 4)

The master is also known as the control leg. Every MJU has a control leg. The control leg of MJU 0001 must be connected to the multipoint master. The control leg of an MJU other than 0001 must be connected to a branch of another MJU to form an MJU-to-MJU connection. The field MA(tttt,u) specifies the MJU-to-MJU connection. The control leg of MJU ssss is connected to branch u of MJU tttt.

The first command addressing an MJU in the circuit must address MJU 1. Otherwise, a new MJU of any number can be connected to any existing MJU in the circuit, assuming the new MJU's number is not already used in the circuit and the old MJU has an unconnected branch available to connect to.

The MJU connection field "MA(tttt,u)" specifies where to connect the control leg of MJU ssss. If MJU ssss is addressed in a subsequent SCON command, after a connection for its control leg has been specified, the MJU connection field need not be re-specified. Hence, "MA(tttt,u)" appears as an optional field in the message format. If it is respecified, it will be checked against the actual MJU-to-MJU connection.

It should also be noted that tttt cannot equal ssss. Also, branch u of MJU tttt must not have been previously connected. If it were, it could not be connected to the control leg of MJU ssss.

**branch** - Branch and termination number

*branch termination number*

BRi [t]ghijj[l]

The termination is connected to branch i of MJU ssss.

One branch field is listed for each branch specified in the input command. Since some multipoint SCON input commands do not list any branch data, this line may be absent.

The branch and termination number can appear from zero to four times in a subrate cross-connect command, connecting up to four different customers to the four branches of MJU ssss. The branch fields for the four branches of MJU ssss can appear in any order and any or all branch fields can be omitted. Nothing is connected to branch fields that are omitted from (do not appear in) the command.

Branch fields might be omitted for several reasons. If branches 1 and 2 of MJU ssss were already connected, and the user wished to connect a customer to branch 3 of MJU ssss, then only BR3 and its associated termination number would appear in the command.

Branches 1 and 2 would not appear because they are already connected and branch 4 would not appear because nothing is to be connected to it. Branch 4 might be saved to provide an MJU-to-MJU connection at a later time.

**[t]ghi** - The 3- or 4-digit nonhierarchical NPC number of termination connected to BRi with the same valid values as the master leg.

**jjj** - Channel number of termination connected to BRi with the same valid values as the master leg.

**ll** - Customer number of termination connected to BRi with the same valid values as the master leg.

If the customer is a DS0A customer, ll is optional and if present, must be 01.

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

The customer number is optional when the customer to be connected is in a DS0A signal. This is because there is only one customer in a DS0A signal. If specified, it must appear as 01.

**BR** - Branch

**i** - Branch number (1 through 4)

BRi refers to branch i of MJU ssss, the MJU addressed by this command.

#### Red Circuit and Customer Control Marking

SRDC cross-connections are marked automatically as red circuits. This results in the need to specify the INCL keyword in the RMV,NPC command whenever a facility terminating NPC carrying SRDC circuits is removed. Also, the SCON verb does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished.

#### Secondary Channel Capability

This command supports secondary channel capability. Circuits that use DDS secondary channel capability can be assigned to any DS0B channel, provided that the channel's facility terminating NPC was provisioned without zero suppression. If the facility terminating NPC has zero suppression, the user must ensure that secondary channel services are only assigned to the following customers of the given DS0B type:

| DS0B nn | Customer Numbers Compatible with Secondary Channel |
|---------|----------------------------------------------------|
| DS0B 20 | 2,3,6,8,11,12,13,18                                |
| DS0B 10 | 2,3,6,8                                            |
| DS0B 5  | 2,3                                                |

**ddd** - Channel number of the multipoint circuit master leg

001 through 024

001-047 Odd only (SLC 96® Carrier, Mode 3, DGA)  
 049-095 Odd only (SLC 96 Carrier, Mode 3, DGC)  
 001-024 Odd and Even (SLC 96 Carrier, Mode 1, DGA)  
 025-048 Odd and Even (SLC 96 Carrier, Mode 1, DGB)  
 049-072 Odd and Even (SLC 96 Carrier, Mode 1, DGC)  
 073-096 Odd and Even (SLC 96 Carrier, Mode 1, DGD)  
 001-024 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA)  
 025-048 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB)  
 049-072 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC)  
 073-096 Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD)

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

**wxkqr** - Hierarchical NPC number of termination connected to BRi with the same valid values as the master leg.

**data** - Data

The data fields refer to the connection data associated with the four branch legs of MJU ssss. Each branch data field can take one of three forms, depending on whether the branch is unassigned, cross-connected to an external facility termination, or cross-connected to a cascaded MJU control leg.

| <i>data</i> | <i>Explanation</i>                                                         |
|-------------|----------------------------------------------------------------------------|
| 000000/00   | For unassigned branches                                                    |
| ghijjj/ll   | For branches connected to external facility terminations                   |
| MJU nnnn    | For branches connected to another MJU with number nnnn (0002 through 9999) |

**s** - Termination state of the MJU control or branch leg

Variable s contained in the MA and branch data indicates the terminate and leave status of each MJU connection. Branches or MJUs connected by the SCON command are automatically assigned the terminate and leave released status. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | RELEASED. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**reason** - Reason for denial

Reason

CHANNEL [s]abcddd IS A PARITY CHANNEL

## **SCON,RATE,TPT,FROM,TO**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command cross-connects the FROM and TO customers defined by the **ff** and **ll** fields. The customer number fields are optional for DS0A terminations; if not specified, the default value is 01.

#### **Command**

##### **Nonhierarchical**

[I.19201]

```
SCON:FRM xy,SEQ ww:RATE rr[,TPT],FROM [s]abcddd[/ff],\  
TO [t]ghijjj[/ll]!
```

##### **Hierarchical**

[I.19201]

```
SCON:FRM xy,SEQ ww:RATE rr[,TPT],FROM uvmnpddd[/ff],\  
TO wxkqrjjj[/ll]!
```

#### **Completion Message**

##### **Nonhierarchical**

[O.19201]

```

wxkqrjjj/ll 2 LN MSG:  
<reason> DNY

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**TPT** - Two-Point (optional).

Retained only for DACS/SRDC compatibility. The command format above shows that RATE rr and the optional TPT are followed by a comma (.). To preserve DACS/SRDC compatibility, this comma may also be replaced with a semicolon (;).

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

Values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM channel number  
**jjj** - TO channel number

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - FROM customer number  
**ll** - TO customer number

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**RATE** - Rate

Rate at which the FROM and TO customers are cross-connected

**rr** - Circuit rate (24, 48, 96, or 56)

| <b>rr</b> | rate in kb/s |
|-----------|--------------|
| 24        | 2.4          |
| 48        | 4.8          |
| 96        | 9.6          |
| 56        | 56           |

The channels abcd and ghijkl must be established using a subrate establish command before they can be cross-connected.

The RATE cannot exceed the maximum customer rate of the subrate multiplexers associated with those DS0B channels. The allowed customer numbers (ff and ll) depend on the rate of the circuit and the type of DS0B channel associated with each termination, as shown below:

| Circuit<br>Rate rr | DS0B Type                                      |                                                |                                               |
|--------------------|------------------------------------------------|------------------------------------------------|-----------------------------------------------|
|                    | 20-channel<br>(max. customer<br>rate 2.4 kb/s) | 10-channel<br>(max. customer<br>rate 4.8 kb/s) | 5-channel<br>(max. customer<br>rate 9.6 kb/s) |
| RATE 24            | Cust. #s<br>1-20 Allowed                       | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 48            | Denied                                         | Cust. #s<br>1-10 Allowed                       | Cust. #s<br>1-5 Allowed                       |
| RATE 96            | Denied                                         | Denied                                         | Cust. #s<br>1-5 Allowed                       |
| RATE 56            | Denied                                         | Denied                                         | Denied                                        |

The customer numbers ff and ll, are optional when the customer to be connected is in a DS0A signal. This is because there is only one customer in a DS0A signal. If specified, it must appear as 01. Also, for DS0A channels, the RATE is checked against the type of error correction previously specified in the command used to establish that channel. If the channel has subrate error correction, a circuit rate of 56 is not allowed.

The user must ensure that a circuit using the secondary channel capability is assigned only to a facility termination that is compatible with this capability. If the termination is a DS0A or if its associated facility NPC was grown without zero suppression, any assignment of the NEW termination is compatible with the secondary channel capability. If the termination is in a DS0B **and** its associated facility NPC was grown with zero suppression, the user can only assign secondary channel services to a termination with the following customer numbers within the given DS0B type:

| DS0B Type  | Allowed Customer Numbers       |
|------------|--------------------------------|
| 20-channel | 2, 3, 6, 8, 11, 12, 13, and 18 |
| 10-channel | 2, 3, 6, and 8                 |
| 5-channel  | 2 and 3                        |

The fields, FROM [s]abcd[ff] and TO [t]ghij[ll] specify the customers to cross-connect. FROM and TO have no significance to DACS II and either customer of the circuit may be designated FROM or TO. To loop a customer back to itself, specify the FROM and TO fields identically.

Subrate cross-connections are marked automatically as red circuits. This results in the need to specify the INCL keyword in the command to remove an NPC whenever a facility terminating NPC carrying SRDC circuits is removed.

Also, the SCON verb does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished. The **RATE rr** field indicates the customer rate of the circuit specified in the input command **ff** and **ll** define the customer numbers associated with the FROM and TO channel pair. These fields are optional in the input command for DS0A terminations. If the input command did not specify one or both of these numbers, the output value is 01.

**reason** - Reason for denial

reason

## **SCON,RATE,TPT,FROM,TO**

### **SUBRATE CROSS-CONNECTION**

#### **Explanation Of Command**

This command cross-connects the FROM and TO customers in both directions. This command also extends the format of I.19201 to support ranges of two-point, two-way cross-connections.

#### **Command**

##### **Nonhierarchical**

[I.19211]

For a DS0A Channel

```
SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM [s]abcd-dd-eee[/01],\  
TO [t]ghijjj-kkk[/01]!
```

For a DS0B Channel

```
SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM [s]abcd-dd/ff-mm,\  
TO [t]ghijjj/ll-nn!
```

## **Hierarchical**

---

[I.19211]

For a DS0A Channel

**SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM uvmnpddd-eee[/01],\  
TO wxkqrjjj-kkk[/01]!**

For a DS0B Channel

**SCON:FRM xy,SEQ ww:RATE rr,[TPT,]FROM uvmnpddd/ff-mm,\  
TO wxkqrjjj/ll-nn!**

## **Completion Message**

---

### **Nonhierarchical**

---

USAGE: For range connections of DS0A channels

[O.19211]

**M hh:mm:ss xy,ww n[vv] SCON RATE rr [s]abcd-dd-eee/01 \  
[t]ghijjj-kkk/01 COMPL**

USAGE: For range connections of subrate customer numbers

## Explanation Of Parameters

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number

[t]ghi - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**RATE** - Circuit rate  
**rr** - Circuit rate value (24, 48, 96, or 56)

The FROM and TO fields specify the customers to cross-connect. The FROM and TO keywords have no significance to DACS II and either customer of the circuit may be designated FROM or TO. To loop a range of customers back to themselves, specify the FROM and TO fields identically.

There are two ways to specify ranges, as evidenced by the two formats that may follow the FROM and TO keywords:

- Range specified in channel field: [s]abcddd-eee[/01]

Ranges must be specified in the channel field when a range of DS0A customers is desired. However, a range is allowed in the channel field only if the channels are DS0A channels. The optional field must, if present, be 01. As an example, [0]001002-010/01 specifies a range of nine DS0A customers on NPC [0]001. [0]001002-010 does the same thing without the optional customer number field.

- Range specified in customer number field: [s]abcddd/ff-mm

Ranges must be specified in the customer number field when a range of DS0B customers is desired. If NPC [0]020, channel 004 was established as a 10-customer DS0B channel, then [0]020004/01-09 specifies a range of nine customers on NPC [0]020 channel 004.

Specifying a range in both the channel and customer number field for the same customer specification, such as [0]001001-009/01-09, will be denied.

**RATE** - Circuit rate

**rr** - Circuit rate value (24, 48, 96, 56)

**ppp/pp** - FROM termination involved in the denial where:

**ppp** - FROM channel number

**pp** - FROM customer number

**qqq/qq** - TO termination involved in the denial where:

**qqq** - TO channel number

**qq** - TO customer number

**reason** - Reason for denial

## **SDCH,TO,PCH,DCC**

### **SUBRATE DISESTABLISH CHANNEL**

#### **Explanation Of Command**

This message disconnects a channel (or a range of channels) in a digroup from use by the subrate feature. If an error correction parity channel is associated with the named channel and is *not* named in the input command, the system automatically finds and disestablishes it as well. However, one should not take this to imply that the parity channel may be disconnected in a range, since this is not the case.

**PCH** - Parity Channel

**ppp** - Parity error correction channel number

Included only for downward compatibility with the equivalent DACS/Subrate command. The PCH field indicates that a parity channel associated with channel ddd is to be disestablished as well.

If the PCH field is not used and a parity channel is present, the system automatically finds and disestablishes the parity channel associated with channel ddd.

ppp must agree with the parity channel assignment associated with channel ddd or the command will be denied. Channel ranges are not allowed if the range includes any channel associated with parity channel error correction.

**Note:** Disestablishment can only be done after all Subrate cross-connections are disconnected.

**DCC** - Disconnect Code

Causes the Digital Data System (DDS) Unassigned Multiplexer Channel (UMC) control code to be inserted in the disestablished channel(s) towards the digroup facility. If DDC is not specified, the disconnect code specified in the growth NPC command associated with the specified digroup is used.

**OOS** - Out of service

Channels connected with an out-of-service facility NPC may be disestablished with this command. Such disestablishments require no special keyword in the input command, but the output message will contain the OOS keyword to indicate that the facility is out-of-service. The user should note that the appropriate disconnect channel code may not be inserted in the disestablished channel until the facility is restored to service under these conditions.

**CUS** - Customer

Customer-controlled circuit

This disestablish command returns the customer control marking of channels that were previously marked with as CUS prior to being established to the Subrate feature.

The optional **PCH ppp** field appears whenever an associated error correction parity channel is also disestablished. It is not necessary for this field to be included in the input command, as the system automatically locates and disestablishes the parity channel whenever the associated data channel is disestablished.

**qqq** - Channel number involved in the denial (ddd through eee)

The user should note that none of the preceding channels in the range are completed if a problem is found, and subsequent channels may or may not have additional problems.

**reason** - Reason for denial

#### INPUT ERRORS

##### **reason**

CHANNEL NUMBER IS OUT OF RANGE FOR NPC TYPE SPECIFIED  
SPECIFIED CHANNEL IS NOT ESTABLISHED TO THE SUBRATE  
SPECIFIED CHANNEL HAS NO ASSOCIATED PARITY CHANNEL  
SPECIFIED DATA AND PARITY CHANNEL NUMBERS ARE INCONSISTENT  
RANGE DISCONNECT OF CHANNEL WITH PCH IS NOT ALLOWED  
CHANNEL [s]abcddd OR A CUSTOMER IS UNDER TEST  
RANGE DISESTABLISH OF DATA CH [s]abcddd HAVING PCH IS NOT  
ALLOWED  
ACTIVE SUBRATE CROSS-CONNECTS ARE PRESENT ON THE CHANNEL

## MAINTENANCE CONDITIONS

### **reason**

ACTIVE CROSS-CONNECT NETWORK SIDE IS FAILED  
SPECIFIED NPC IS UNEQUIPPED  
REQUIRED UNIT NOT EQUIPPED, NOT IN SERVICE, OR FAILED  
REQUIRED CCB NOT EQUIPPED, NOT IN SERVICE, OR FAILED

## **SDIS,RATE,MPTM,MJU**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command provides multipoint branch disconnection of customers in both directions. All channels must have been cross-connected using the **SCON** or **SCNT** commands before they can be disconnected with **SDIS**. It is used to disconnect customers from the branches of a multipoint junction unit (MJU). The MJU itself remains connected to the circuit. As many as four branches can be disconnected from an MJU with one command. This command *cannot* be used to disconnect MJUs or branches that are cascaded to additional MJUs. To disconnect MJUs and branches, see **SDIS : RATE,MPTM,MJU,ALL**

Multipoint circuits can be disconnected incrementally, one command at a time. Many commands can address the same multipoint circuit. Indeed, many commands can address the same MJU of a circuit. A command might address an MJU, say MJU 0005 which has branches 1, 2, 3, and 4 connected, and disconnect customers from branches 1 and 2. This command results in no service interruption to branches 3 and 4 which are still connected. Another command might also address MJU 0005 and disconnect the customer from branch 3, leaving branch 4 undisturbed.

#### *Red Circuit and Customer Control Marking*

Subrate cross-connections are automatically marked as red circuits. Removal (RMV) of a facility terminating NPC with Subrate circuits connected to it requires the INCL keyword.

The **SDIS** action does not affect the customer control marking of a channel. The CUS marking is disabled while the channel is established to the Subrate feature, but is enabled once the channel is disestablished.

Once customers are disconnected, the UMC code is sent towards the customers' facilities. Disconnected customers do not require a re-establishment (**SECH**) of their channels before being re-connected (**SCON** or **SCNT**).

The master leg of the multipoint circuit (MPTM) is specified by digroup abc, channel ddd,

customer number ff, and serves as the reference for addressing all MJUs and branches in the circuit. At least one branch must be specified with its corresponding external facility termination data.

## Explanation Of Parameters

---

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number of the master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1 | Unit<br>2 | Unit<br>3 | Unit<br>4 | Unit<br>5 | Unit<br>6 |
|-----------|-----------|-----------|-----------|-----------|-----------|
| NPC       | NPC       | NPC       | NPC       | NPC       | NPC       |
| 001-160   | 161-320   | 321-480   | 481-640   | 641-800   | 801-960   |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**RATE** - Rate

**rr** - Circuit rate (24, 48, 56, or 96).

RATE rr is always optional on an **SDIS**. rr specifies the rate at which customers are cross-connected, and thus, the rate at which MJUs operate. All MJUs in the same circuit operate at the same rate. If specified, RATE rr will be checked, and must be the same rate as originally appeared in the **SCON** or **SCNT** command. If it is not the same, the **SDIS** command will be denied.

**MPTM** - Multipoint master

**[s]abcddd[/ff]**

- The **NPC**, **channel**, and optional customer number connected to the control leg of **MJU 1**.

This field is used to identify the circuit as a whole. There is exactly one multipoint master for a multipoint circuit.

The data sent **BY** the multipoint master is broadcast to all branches on the circuit. The data sent **TO** the multipoint master is a summation of data sent by the branches.

The customer number, **ff**, is optional when the customer is in a **DS0A** channel because there is only one customer in a **DS0A** channel. If specified, it must appear as **01**.

A customer number is required when specifying a customer in a **DS0B** signal. Allowed customer numbers differ depending on the type of **DS0B** channel, as shown below.

| <i>DS0B nn</i> | <i>Allowed Subrate Customer Numbers</i> |
|----------------|-----------------------------------------|
| DS0B 20        | 1 through 20                            |
| DS0B 10        | 1 through 10                            |
| DS0B 5         | 1 through 5                             |

Because the multipoint master is used to uniquely identify the circuit as a whole, it is required for all **SDIS** commands, regardless of which **MJU** the command addresses (**MJU ssss** in the message formats above).

**MJU** - Multipoint junction unit

**ssss** - **MJU** number of cross-connected **MJU** (0001-9999)

**MJU ssss** identifies the **MJU** that the command addresses. All **MJUs** are given a number, **ssss**, when the circuit is built with the **SCON** or **SCNT** commands. This number should be used in the **SDIS** command to address an **MJU**.

**branch** - External facility termination for branch connected to MJU ssss

| <b>branch</b>      | <i>Explanation</i>                                                                |
|--------------------|-----------------------------------------------------------------------------------|
| BRi [[t]ghijj]/ll] | Nonhierarchical branch and termination identification (see BRi [t]ghijj/ll below) |
| BRi [wxkqrjj]/ll]  | Hierarchical branch and termination identification (see BRi wxkqrjj/ll below)     |

The termination part of the branch is optional since the system knows what customer is connected to MJU ssss branch i.

The branch field identifies a branch that will be disconnected from the customer connected to it. If the customer is a DS0A customer, the customer number is optional and, if present, must be 01. If the NPC and channel numbers are specified for a DS0B customer the customer number is required.

From one to four branches can be specified in an **SDIS** command; disconnecting up to four customers from the four branches of an MJU. At least one branch must be specified. A maximum of four branches is allowed. The <branch> fields can appear in any order. Nothing is disconnected from branches that are not specified in the command.

Branch fields might be omitted for several reasons. Suppose branches 1, 2, and 3 of MJU ssss are connected with branch 4 unconnected. If the user wished to disconnect only the customer from branch 3, then only **BR3 [ [t]ghijj]/ll ]** would appear in the command. Branches 1 and 2 would not appear because the user does not want to disconnect them. Branch 4 would not appear because there is no customer to disconnect.

If an unconnected branch, like branch 4, is specified in an **SDIS** command, the command will be denied.

**BRi [t]ghijj/ll**

- Nonhierarchical termination number connected to branch  
i of MJU ssss

**BRi wxkqrjj/ll**

- Hierarchical termination number connected to branch i of MJU ssss

|               |                                                                                |
|---------------|--------------------------------------------------------------------------------|

| B            | BOTH (BOTH sides are terminated)                                                                                                                    |
| R            | RELEASED (Neither side is terminated)                                                                                                               |

**MA** - Master

MA identifies the upstream MJU number and branch connected to the control leg of MJU ssss. In the case of MJU 1, the control leg is actually the master leg of the circuit and is indicated in the MA field by MPTM.

**OOS** - Out-of-service

OOS appears in the output whenever the disconnection involves an out-of-service or failed facility termination NPC. In this case, the user should note that the Unassigned Multiplexer Channel (UMC) code may not be inserted towards the facilities of the disconnected circuit until the facility is restored to service.

## **SDIS,RATE,MPTM,MJU,ALL**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command provides deletion of MJUs and disconnection of customers in both directions. Customers must have been cross-connected (using the **SCON** or **SCNT** verbs) before they can be disconnected with **SDIS**. This command performs a cascaded MJU disconnection. The **MJU ssss** field identifies the place to begin the disconnection. **MJU ssss** as well as any MJUs cascaded from it will be disconnected. A maximum of 21 MJUs can be disconnected in one command. Message Number I.19421 only disconnects customers from branches of MJUs.

### **Autonomous Message**

---

Not applicable.

### Explanation Of Parameters

**e** - Number of lines in the message

**RATE** - Rate

**rr** - Circuit rate (24, 48, 96, 56)

The optional RATE rr field specifies the rate at which customers are cross-connected, and thus, the rate at which MJUs operate. All MJUs in the same circuit operate at the same rate. If specified, rr will be checked and must be the same rate as given in the SCON or SCNT command. If it is not the same, the SDIS command will be denied.

**MPTM** - Multipoint master

The NPC, channel, and optional customer number of the external facility termination connected to the control leg of MJU 1. There is exactly one multipoint master for a multipoint circuit. This field is used to identify the circuit as a whole. The data sent by this multipoint master is broadcast to all branches on the circuit. The data sent to the multipoint master is a summation of data sent by the branches.

The multipoint master is required for all SDIS commands, since it uniquely identifies the circuit, regardless of which MJU the command addresses (MJU ssss in the INPUT FORMATS).

**[s]abc** - The 3- of 4-digit nonhierarchical NPC number of the multipoint circuit master leg

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |

**uvmnp** - Hierarchical NPC number of the multipoint circuit master leg

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number of the multipoint circuit master leg

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number of the multipoint circuit master leg (1 through 20)

ff is optional when the customer is in a DS0A channel because there is only one customer in a DS0A channel. If specified, it must appear as 01.

ff is required when specifying a customer in a DS0B signal. Allowed customer numbers differ depending on the type of DS0B channel, as shown below.

| <i>DS0B nn</i> | <i>Allowed Subrate Customer Numbers</i> |
|----------------|-----------------------------------------|
| DS0B 20        | 1 through 20                            |
| DS0B 10        | 1 through 10                            |
| DS0B 5         | 1 through 5                             |

**ff** *Explanation*

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**NEW** - New

The lines in the output message associated with the NEW keyword list the new connection data for the just-upstream MJU after the disconnection of the control leg of MJU ssss. These cross-connections remain in effect after completion of the disconnect. If the disconnected MJU ssss is MJU 1, the NEW MJU fields are filled with zeroes, indicating that no MJUs remain in the circuit.

**OLD** - Old

The lines in the output message associated with the OLD keyword list all of the disconnected MJUs and branches associated with MJU ssss. This includes the branch data of MJU ssss, as well as the data for up to twenty additional MJUs that may have been cascaded from MJU ssss and its associated downstream connections.

**MJU** - Multipoint junction unit

**ssss** - MJU number of disconnected MJU (0001 through 9999)

ssss identifies the MJU at which to begin the disconnection. Leading zeros are not required when specifying ssss. All MJUs are given a number, ssss, when the circuit is built with the SCON or SCNT commands. This number should be used in the SDIS command to choose the MJU at which to begin the disconnection. The maximum number of MJUs that can be disconnected with a single command is 21. If there are more than 20 MJUs cascaded (connected directly or indirectly) to MJU ssss, the command will be denied. If by specifying ssss, 21 or fewer MJUs will be disconnected, the control leg of MJU ssss will be disconnected as will everything cascaded from the branches of MJU ssss. If the multipoint circuit is composed of 21 or fewer MJUs and ssss is specified as 0001, the entire multipoint circuit is disconnected.

**ALL** - All

If ALL is not specified, all the branches of MJU ssss must be unconnected. Then, MJU ssss and its control leg will be disconnected.

If ALL is specified, it denotes that MJU ssss, its control leg, and everything connected directly or indirectly to the branches of MJU ssss will be disconnected.

ALL appears in the output message only if present in the input command, and is normally used whenever the disconnection of MJU ssss also results in the disconnection of its branches from external facility terminations or cascaded MJUs.

**MA** - Master

The MA keyword identifies the upstream MJU number and branch connected to the control leg of MJU ssss. In the case of MJU 1, the control leg is actually the master leg of the circuit and is indicated in the MA field by MPTM.

**tttt** - MJU number connected to control leg of MJU ssss (0001 through 9999)  
**u** - Branch number of MJU tttt (1 through 4)

**vvvv** - MJU number of additional cascaded MJUs (0002 through 9999)

**www** - MJU number connected to control leg of MJU vvvv  
**x** - Branch number of MJU connected to control leg of MJU vvvv

**yyyy** - MJU number connected to control leg of MJU tttt  
**z** - Branch number of MJU connected to control leg of MJU tttt

**BR1** - Branch 1  
**BR2** - Branch 2  
**BR3** - Branch 3  
**BR4** - Branch 4

The BRi <data> fields refer to the connection data associated with the four branch legs of MJU ssss. Each branch data field can take one of three forms, depending on whether the branch is unassigned, cross-connected to an external facility termination, or cross-connected to a cascaded MJU control leg.

**data** - Branch connection data in the form:

| <b>data</b>         | <i>Explanation</i>                                                                |
|---------------------|-----------------------------------------------------------------------------------|
| <b>[0]000000/00</b> | - Nonhierarchical format for unassigned branches                                  |
| <b>[t]ghijjj/ll</b> | - Nonhierarchical format for branches connected to external facility terminations |
| <b>00000000/00</b>  | - Nonhierarchical format for unassigned branches                                  |
| <b>wxkqrjjj/ll</b>  | - Nonhierarchical format for branches connected to external facility terminations |
| <b>MJU nnnn</b>     | - For branches connected to another MJU with number nnnn (0002 through 9999)      |

**s** - Termination state of the MJU control or branch leg

Indicates whether either or both ends of the cross-connection are in the terminate and leave state. The "TO" direction is defined as the direction facing the MJU.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | Released. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**OOS** - Out-of-service

If the disconnected facilities are associated with one or more OOS facility terminating NPCs, the OOS keyword appears in the output message. In this case, the user should note that the Unassigned Multiplexer Channel (UMC) code may not be inserted towards the facilities of the disconnected circuits until they are restored to service.

**reason** - *Reason for denial*

#### **reason**

## **SDIS,RATE,TPT,FROM,TO**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command disconnects the **FROM** and **TO** customers in both directions. The channels **abcd** and **ghij** must be cross-connected (using the **SCON** or **SCNT** verbs) before they can be disconnected with **SDIS**.

The optional **RATE rr** field defines the rate at which the **FROM** and **TO** customers were cross-connected. If specified it will be checked and must be the same rate as originally appeared in the **SCON** or **SCNT** command. The **TPT** keyword means two-point and is optional. It conveys no information and is retained for DACS/SRDC compatibility.

## **SDIS,RATE,TPT,FROM,TO**

### **SUBRATE DISCONNECTION**

#### **Explanation Of Command**

This command disconnects the **FROM** and **TO** customers in both directions. It extends the format of the **SDIS, RATE, TPT, FROM, TO** command to ranges of two-point, two-way disconnections. This command is the same as the **SDIS, RATE, TPT, FROM, TO** command except for the range feature. See the **SDIS, RATE, TPT, FROM, TO** command for an explanation of features not related to the range feature.

The **FROM** and **TO** fields specify the customers to disconnect. The **FROM** and **TO** keywords have no significance to DACS II and either customer or range of customers may be designated **FROM** or **TO**. The **FROM** and **TO** designations do not have to be the same on an **SDIS, RATE, TPT, FROM, TO** command as they were on the corresponding **SCON** or **SCNT** command.

#### **Command**

##### **Nonhierarchical**

[I.19411]

```
SDIS:FRM xy,SEQ ww:[RATE rr,][TPT,] FROM [s]abcddd{-eee[/01]|\  
/ff-mm},TO [t]ghijjj{-kkk[/01]|/ll-nn}!
```

##### **Hierarchical**

[I.19411]

```
SDIS:FRM xy,SEQ ww:[RATE rr,][TPT,] FROM uvmnpdd{-eee[/01]|\  
/ff-mm},TO wxkqrjjj{-kkk[/01]|/ll-nn}!
```

Not applicable.

### Explanation Of Parameters

**RATE** - Rate

**rr** - Circuit rate (24, 48, 96, or 56)

**TPT** - Two-Point, Two-way disconnection

**FROM** - From

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**wxkqr** - Hierarchical TO NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM Channel number  
**eee** - FROM channel number for end of range specified  
**jjj** - TO Channel number  
**kkk** - TO channel number for end of range specified

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |

**ff** - FROM DS0A or DS0B Customer number  
**mm** - FROM DS0B Customer number for end of range  
**ll** - TO DS0A or DS0B Customer number, similar to ff  
**nn** - TO DS0B Customer number for end of range

ff explanation

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

There are two ways to specify ranges.

- Range specified in channel field: [s]abcd-dd-eee[/01]

This option applies only to DS0A channels, and the channel range, i.e., eee, must be specified when a range of DS0A customers is desired. The customer number for DS0a channels is always 01. For example, [0]001002-010/01 specifies a range of nine DS0A customers on NPC 001, while [0]001002-010 does the same thing without the optional customer number.

- Range specified in customer number field: [s]abcd-dd/ff-mm

This option applies only to a DS0B channel, and the range must be specified in the customer number field when a range of DS0B customers is desired. If NPC [0]020, channel 004 was established (using the SECH verb) as a 10 customer DS0B channel, then [0]020004/01-09 specifies a range of nine customers on NPC [0]020 channel 004.

Specifying a range in both the channel and customer number field for the same customer specification, such as [0]001001-009/01-09, will be denied.

**00S** - Out-of-service

**reason** - Reason for denial

*Reason*

CHANNEL [s]abcd-dd IS A PARITY CHANNEL

## **SECH,TO,DS0A,DS0B,SEC,PCH**

### **SUBRATE ESTABLISH CHANNEL**

#### **Explanation Of Command**

This command connects a channel (or a range of channels) in a digroup to the subrate feature. When connected to the subrate feature, the channel is provided with test access capability using the **STST** commands and, if specified, a subrate multiplexer and/or an error correction function. A channel must be established before any cross-connections can be made via the **SCON** command. This command is recommended over the DACS/SRDC-compatible version **SECH: : TO, RATE, DP, PCH** (I.19111) due to its improved clarity.

DACS II will deny this command if it attempts to establish a DS0B channel on channel 24 of a DS1 provisioned with the T1DM framing format.

This command is used to establish five types of channels as follows:

1. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers.
2. A DS0A channel (at any rate) without error correction.
3. A subrate DS0A channel with subrate dataport error correction.
4. A 56-kb/s channel with parity channel error correction. (This type of error correction is also commonly referred to as "56-kb/s dataport" error correction.)
5. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers and parity channel error correction.

When a channel is established, it cannot be already established, cross-connected, or under test access. All channels within a specified range are established with the same parameters.

**Note:** For user convenience, an alphabetical "O" or a numerical "0" can be typed for the zero in DS0.

### **DS0B Channels Without Error Correction**

A DS0B channel is established by specifying a digroup and channel and the DS0B nn field.

The SEC or PCH fields must not be present for this type of channel.

As indicated above, a mix of customer rates can be cross-connected, provided the maximum rate for each type of subrate multiplexer is not exceeded.

### **DS0A Channels Without Error Correction**

A DS0A channel without error correction is established by specifying a digroup and channel and DS0A rr.

Again, the SEC or PCH keywords must not be present.

**Note:** The Subrate feature performs no rate-sensitive processing on this type of channel, and cross-connection is allowed to any other Subrate channel. The user must ensure that the signal rate is compatible with the intended cross-connection.

For example, if a DS0A channel with an actual rate of 4.8 kb/s is established, a cross-connection to a 10-channel or 20-channel multiplexer is allowed, but only the connection to the 10-channel multiplexer will provide error-free transmission.

### **DS0A Channels With Subrate Error Correction**

A subrate DS0A channel with subrate error correction is established by specifying the DS0A keyword with an rr value of 24, 48, or 96, and the SEC keyword. Subrate error correction performs a majority vote among the repeated bytes inherent in the byte-stuffed subrate DS0A signal to determine the corrected data. An rr value of 56 is not allowed, and the PCH keyword must not be present in specifying this type of channel.

### **56 kb/s Channels With Error Correction**

A 56-kb/s channel with parity channel error correction is established by specifying the DS0A keyword with an rr value of 56, and the PCH keyword. This command has the effect of establishing two channels, one for carrying the customer data and one for carrying parity error correction information. If no parity channel number (ppp) is specified, the parity channel is assigned automatically to the next higher numbered channel from the data channel (ddd + 1). Due to the need to assign parity channels, range provisioning of 56 kb/s channels with error correction is not allowed. Also, use of the PCH keyword when the rr value is less than 56 is not allowed.

### **DS0B Channels With Error Correction**

A DS0B channel that also has parity channel error correction performed on it is established by specifying the DS0B nn and PCH keywords. As above, the nn value determines the type of multiplexer, and the PCH keyword assigns a parity channel number ppp or defaults to ddd + 1. Also, range provisioning of this type of channel is not allowed.

Subrate established channels are marked automatically as red circuits. This results in the need to specify the INCL keyword in the RMV NPC command whenever a facility terminating NPC carrying Subrate channels is removed.

Also, the Subrate establish channel command has no effect on the customer controlled marking status of DACS II channels that previously have been marked with the CUS keyword. The CUS marking is disabled while the channel is established to the Subrate feature, but is enabled again once the channel is disestablished.

**Note:** When all 24 channels of an NPC using D4 superframe are established as DS0B channels, a yellow CGA can be declared for the NPC, even though there is no failure, if either of the following conditions exists:

1. The DS1 signal is looped at the DSX-1 and the mux out of sync (MOS) code is transmitted on all channels.
2. The far end is transmitting the MOS code on all 24 channels.

When all 24 channels are receiving MOS, the D4 superframe yellow alarm signal is simulated thus causing the CGA to be declared.

## Explanation Of Parameters

**T0** - To

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

**DS0A** - Digital signal 0A

**rr** - DS0A channel rate (24, 48, 96, or 56)

The established channel is a DS0A type, that is, a single customer signal at rate rr.

**DS0B** - Digital signal 0B

**nn** - Number of DS0B subrate customer channels (05, 10, or 20)

The established channel is connected to a subrate multiplexer capable of multiplexing nn customers.

**SEC** - Subrate error correction

Subrate error correction is performed on the established channel. SEC cannot be used for either a DS0A or DS0B channel without error correction.

**PCH** - Parity channel

Parity error correction is performed on this channel. PCH cannot be used for either a DS0A or DS0B channel without error correction.

The SEC and PCH fields are present only if specified in the input command.

**ppp** - Parity channel number

Specifies the associated parity channel number. If not specified in the input command, this number defaults to the channel number + 1 (ddd + 1).

**qqq** - Channel number involved in the denial (ddd through eee)

**reason** - Reason for denial

If a denial pertains to a particular channel in a range, the channel number is given in the optional qqq field. The user should note that *none* of the preceding channels in a range are completed if a problem is found, and subsequent channels may or may not have additional problems.

## **SECH,TO,RATE,DP,PCH**

### **SUBRATE ESTABLISH CHANNEL**

#### **Explanation Of Command**

This message connects a channel or a range of channels in a given digroup to the subrate feature. When connected to the subrate feature, the channel is provided with test access capability using the STST commands and, if specified, a subrate multiplexer and/or an error correction function.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

A channel must be established before any cross-connections can be made.

This command is used to establish five different types of channels as follows:

1. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers.
2. A 56-kb/s channel without error correction.
3. A subrate DS0A channel with subrate dataport error correction.
4. A 56-kb/s channel with parity channel error correction. (This type of error correction is also commonly referred to as "56-kb/s dataport" error correction.)
5. A DS0B channel capable of multiplexing 5, 10, or 20 subrate customers and parity channel error correction.

When a channel (or range of channels) is established, it (they) cannot be already established, cross-connected, or under test access. All channels within a specified range are established with the same parameters.

#### DS0B Channels (Without Error Correction)

A DS0B channel is established by specifying a digroup and channel and the RATE rr field. The DP and PCH fields must not be present for this type of channel. The RATE rr field defines the number of customer channels and the maximum customer rate of the subrate multiplexer as follows:

**rr** - Subrate multiplexer rate

| <i>rr</i> | <i>Explanation</i>                  |
|-----------|-------------------------------------|
| 24        | 20 - 2.4-kb/s customers             |
| 48        | 10 - 2.4- or 4.8-kb/s customers     |
| 96        | 5 - 2.4, 4.8, or 9.6-kb/s customers |

As indicated in the table above, a mix of customer rates can be cross- connected provided the maximum rate for each type of subrate multiplexer is not exceeded. 56-kb/s Channels Without Error Correction

A 56-kb/s DS0A channel without error correction is established by specifying a digroup and channel and RATE 56. The DP keyword is also allowed if desired, but otherwise is ignored by the system. The PCH keyword must not be present. This type of channel actually can be operated at any DDS rate since the Subrate performs no rate-sensitive processing on it. The user must ensure, however, that any subsequent cross-connections to other Subrate channels are compatible with the rate actually present in the channel. For example, when the channel actually carries a 4.8-kb/s byte-stuffed DS0A, the user may connect it to a 10-channel multiplexer or to a 20-channel multiplexer. In both cases, the command is allowed, but only the connection to the 10- channel multiplexer will provide error-free transmission.

#### DS0A Channels With Subrate Error Correction

A subrate DS0A channel with subrate error correction is established by specifying an rr value of 24, 48, or 96, and the DP keyword. Subrate error correction performs a majority vote among the repeated bytes inherent in the byte-stuffed subrate DS0A signal to determine the corrected data. An rr value of 56 is not allowed, and the PCH keyword must not be present in specifying this type of channel.

#### 56-kb/s Channels With Error Correction

A 56-kb/s channel with parity channel error correction is established by specifying an rr value of 56 and both the DP and PCH keywords. This command has the effect of establishing two channels, one for carrying the customer data and one for carrying parity error correction information. If no parity channel number (ppp) is specified, the parity channel is assigned automatically to the next higher numbered channel from the data channel (ddd + 1). Due to the need to assign parity channels, range provisioning of 56-kb/s

channels with error correction is not allowed.

#### DS0B Channels With Error Correction

A DS0B channel that also has parity channel error correction performed on it is established by specifying a RATE of 24, 48, or 96, corresponding to 20, 10, or 5 channel multiplexers, respectively, and the DP and PCH keywords. As above, if no parity channel number (ppp) is specified, the parity channel is assigned to ddd + 1. Also, no range provisioning of this type of channel is allowed.

Subrate established channels are marked automatically as red circuits. This results in the need to specify the **INCL** keyword in the RMV NPC command whenever a facility terminating NPC carrying Subrate channels is removed.

Also, the Subrate establish channel command has no effect on the customer control marking status of DACS II channels that previously have been marked with the **CUS** keyword. The **CUS** marking is disabled while the channel is established to the Subrate feature, but is returned once the channel is disestablished.

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The channel is now ready for Subrate cross-connection. Optional field **eee** appears if the input message requested the establishment of a range of channels.

The **RATE rr** field specifies the channel rate. If the optional **DP** and **PCH** fields are not present and rr = 24, 48, or 96, the established channel is connected to a subrate multiplexer capable of multiplexing 20, 10, or 5 customers, respectively. If rr = 56 and the optional fields are not present, the established channel is a DS0A type, i.e., a single customer signal without error correction.

When the optional **DP** field is present and rr = 24, 48, or 96, the established channel is a DS0A type with subrate error correction. If both **DP** and **PCH** fields are present and rr = 24, 48, or 96, the established channel is connected to a subrate multiplexer capable of multiplexing 20, 10, or 5 customers, respectively, and has parity channel error correction.

An **rr** value of 56 in combination with both **DP** and **PCH** fields indicate a 56 kb/s DS0A channel with parity channel error correction.

The **ppp** field specifies the parity channel number associated with the parity channel error correction function. If not specified in the input command, this number is defaulted to ddd + 1.

**qqq** - Channel number involved in the denial ( $ddd \leq qqq \leq eee$ )

**rr** - Channel rate (24, 48, 96, or 56)

**ppp** - Number of parity error correction channel

If the reason for denial pertains to a particular channel in a range, the channel number is given in the optional **qqq** field. The user should note that *none* of the preceding channels in the range are completed if a problem is found, and subsequent channels may or may not have additional problems.

The optional **DP** and **PCH** **ppp** fields indicate subrate and parity channel error correction, respectively. These fields are present only if specified in the input command.

**reason** - reason for denial

## **STOP,MACRO,LINK**

### **STOP MACRO**

#### **Explanation Of Command**

This command is used to stop the execution of a macro.

A regular DACS II user can use the link number option to stop macro execution on the link he or she is currently using. A frame administrator may use this option to stop macro execution on any link.

If this command was entered by the frame administrator then output from this command will be sent only to the link on which the frame administrator entered the command.

Not applicable.

### **Explanation Of Parameters**

---

**MACRO** - Macro

**LINK** - Link

**l[mm]** - Administrative link number

**l** - Physical link number (1 through 6)

**mm** - Virtual circuit number (01 through 16)

Variable m is the virtual circuit number in the administrative link.  
mm may only be specified when l is 5 or 6.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**6A** No macro is currently executing

**D0** Command is Frame administrator (DAX) only.

## **STST,MON,TO,MJU,TP**

### **SUBRATE TEST ACCESS**

#### **Explanation Of Command**

This command requests monitor test access on test port **kk** to a Subrate multipoint circuit. In this mode, data transmission in the tested circuit is not interrupted.

This command can only be used when the test port is in the released mode. If the desired multipoint test access point is already in the split mode, the STST,MON,TO,TP command can be used to place it in the monitor mode.

This command overrides any static trunk conditioning that may have been specified for the test port. The test port is given TRSP,MUX trunk conditioning for the duration of the Subrate test access and returned to its previous trunk conditioning state upon release.

## **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of the multipoint circuit master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |
| <b>016A-016H</b> | <b>032A-032H</b> | <b>048A-048H</b> | <b>064A-064H</b> |

| Unit<br>5        | Unit<br>6        | Unit<br>7        | Unit<br>8        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |

**uvmnp** - Hierarchical NPC number of the multipoint circuit muster leg

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number of the multipoint circuit master leg

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - TO customer number of the multipoint circuit master leg (1 through 20)

The customer number **ff** is required when the master leg of the multipoint circuit is a customer within a multiplexed DS0B channel. When the master leg is a nonmultiplexed (DS0A) channel, the customer number is entered as **01**, or if the user prefers, the customer number can be omitted and the system will default the value to 01. The customer number will appear in the output message only if specified in the input command.

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**MON** - Monitor

**TO** - To

**MJU** - Multipoint junction unit

**ssss** - MJU number of accessed MJU (0001 through 9999)

**ssss** is the MJU requested for connection to the TO test port. If MJU 0001 is specified, the TO test port faces the control leg of MJU 0001 and the FROM test port faces the master leg external facility termination. If an MJU number other than 0001 is specified and the **BR** is not listed, the TO side faces towards the control leg of the specified MJU and the FROM side faces upstream towards the branch of a cascaded MJU.

**BR** - Branch

**i** - Branch number of MJU **ssss** (1 through 4)

Specify **BRi** to connect branch *i* (*i* = 1 through 4) of MJU **ssss** to the TO test port. The FROM side will face downstream.

**BRi** is present only if specified in the input command.

**RATE** - Rate

**rr** - Transmission rate specification

**rr**      *rate in kb/s*

**24**      2.4

**48**      4.8

**96**      9.6

**56**      56

**TP** - Test port

**kk** - Test port number (01 through 96)

Indicates the test port number used for test access to the circuit.

**UNMAPPED**

- Unmapped

**UNMAPPED** is output if the specified test access point is not cross-connected. (This situation can occur only when test access to a branch is specified.) When the test access point is unmapped, no signal is connected to the odd test port channel.

**MPTM** - Multipoint master

[s]abcddd/ff or uvmnpddd/ff specifies the NPC, channel, and optional customer number of the multipoint master (MPTM) leg of the circuit. Note that this is *not* the facility connected to the TO side of the test port. The TO test port is connected to an MJU defined by ssss.

**CGA** - Carrier group alarm

**ftp** - CGA status

**f** - FROM CGA state

*f*      *Explanation*

F      FROM facility in CGA

0      FROM facility is not in CGA

**t** - TO CGA state

*t*      *Explanation*

T      TO facility in CGA

0      TO facility is not in CGA

**p** - Test port digroup CGA state

*p*      *Explanation*

P      Test port digroup in CGA

0      Test port digroup is not in CGA

The side of the test access port that faces the control leg of an MJU (that is, downstream) always has the corresponding CGA status listed as "0", indicating no alarm. The CGA status of a side facing upstream corresponds to the status of the circuit's master leg facility.

**F** - FROM facility in CGA

**0** - FROM facility is not in CGA

**T** - TO facility in CGA

**0** - TO facility is not in CGA

- P** - Test port digroup in CGA  
**0** - Test port digroup is not in CGA

The side of the test access port that faces the control leg of an MJU (that is, downstream) always has the corresponding CGA status listed as "0"; indicating no alarm. The CGA status of a side facing upstream corresponds to the status of the circuit's master leg facility.

- TLA** - Terminate and leave active

- s** - Terminate and leave status of the test access point.

s determines whether the access point is terminated in the FROM, TO, or BOTH, directions, or whether all terminations are released. The user should note that unmapped access points cannot be terminated.

|          |                                      |
|----------|--------------------------------------|
| <i>s</i> | <i>Explanation</i>                   |
| R        | RELEASED. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

## **STST,MON,TO,TP**

### **SUBRATE TEST ACCESS**

#### **Explanation Of Command**

This command requests a change of test port **kk** to the monitor mode for a Subrate circuit. [Note: The format of this command is compatible with DACS/SRDC.] In this mode, data transmission in the tested circuit is not interrupted.

The named external facility termination can be part of a two-point circuit or the master leg or branch termination of a multipoint circuit. (See STST,MON,TO,MJU,BR for a monitor command that specifies the test point in terms of MJU and branch numbers.)

If the test access point specified is established to the Subrate feature but not cross-connected, the output message will contain the keyword **UNMAPPED**. When the test access point is unmapped, no signal is connected to the odd test port channel. A **DS0B** channel is always considered mapped, even when there are no customers cross-connected to it. In this case, the even test port faces the external facility and the odd test port faces the internal subrate multiplexer hardware.

This command can also be entered by using the **TTST** verb. In the case where an external facility termination is specified, no customer number can be present or the command will be denied. This limits this case to testing either entire **DS0B** channels or nonmultiplexed **DS0A** channels. If the Subrate circuit is already under test, the **TTST** verb can be used to place any type of Subrate termination in the monitor mode. In all cases, the resulting output format is the same as that for the **STST** command except for the substitution of the **TTST** verb for the **STST** verb.

This command also overrides any static trunk conditioning that may have been specified for the test port. The test port is given TRSP,MUX trunk conditioning for the duration of the

Substrate test access and returned to its previous trunk conditioning state upon release.

### **Explanation Of Parameters**

---

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number of the circuit side  
to be connected to the TO test port channel

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number of the circuit side connected to the TO test port channel

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

**kk** - Test port number (01 through 96)

kk is used to indicate the test port number to be used for test access to the circuit.

**MON** - Monitor

If the test port is in the released mode, the **[s]abcddd[/ff]** external facility termination must be specified. This termination is connected to the even test port channel. If the test port already has a Subrate circuit under test, the external facility termination must not be specified or the command will be denied.

Variable **[s]abcddd/ff** specifies the NPC, channel, and customer numbers to be connected to the test port. If a multiplexed DS0B channel is tested, the customer number **ff** is omitted. To test a single customer in the DS0B channel, the customer number field must be specified. When the tested channel is a nonmultiplexed (DS0A) channel, the customer number is listed as **01**, or if the user prefers, the customer number can be omitted and the system will default the value to 01.

**RATE** - Circuit rate  
**rr** - Circuit rate value (24, 48, 96, or 56)

rr indicates the customer rate of the circuit. If the circuit is mapped; i.e., subrate cross-connected, the listed RATE is equal to the subrate cross-connect rate. For unmapped circuits, in which case the **UNMAPPED** keyword appears in the output, the listed rate depends on the type of test access point. If test access is to a DS0A established channel, the establish channel rate is listed. If the access is to an unconnected subrate channel of a DS0B, the listed rate is the maximum subrate supported by the DS0B. If the circuit is mapped; that is, subrate cross-connected, the listed RATE is equal to the subrate cross-connect rate.

**CGA** - Carrier group alarm

**ftp** - CGA status

ftp defines the alarm status of the FROM, TO, and test port facilities, respectively. In the case where the FROM side of the test access faces the master leg of a multipoint circuit, the corresponding FROM CGA status is always listed as "0"; i.e., no alarm. If the test access is associated with a branch of a multipoint circuit, in which case the FROM side faces upstream towards an MJU, the CGA status of the circuit's master leg facility is listed in the FROM field.

**f** - FROM CGA state

*f*      *Explanation*

F      FROM facility in CGA  
0      FROM facility is not in CGA

**t** - TO CGA state

*t*      *Explanation*

T      TO facility in CGA  
0      TO facility is not in CGA

**p** - Test port digroup CGA state

*p*      *Explanation*

P      Test port digroup in CGA  
0      Test port digroup is not in CGA

**DS0B**   - Subrate customer channel

**nn**      - Number of subrate customer channels (05, 10, or 20)

**TLA**    - Terminate and leave activate

**s**        - Termination state of the access point

s indicates the terminate and leave status of the test access point.  
s states whether the access point is terminated in the FROM, TO, or  
BOTH, directions, or whether all terminations are released. The user  
should note that unmapped or looped access points cannot be terminated.

*s            Explanation*

B      BOTH sides are terminated  
F      FROM side is terminated  
R      Neither side is terminated  
T      TO side is terminated

**LPD**    - Looped

Appears in the case of a two-point circuit that is looped on itself.

**[s]abcddd/ff**

- External facility termination connected to the TO test port  
channel

**reason 1**

- Coded reason for denial

**reason 2**

- Explanation of reason 1

## **STST,SPL,TO,MJU,TP**

### **SUBRATE TEST ACCESS SPLIT**

#### **Explanation Of Command**

This command requests split test access on a test port to a Subrate multipoint circuit.

This command overrides any static trunk conditioning that may have been specified for the test port. The test port is given TRSP,MUX trunk conditioning for the duration of the subrate test access and returned to its previous trunk conditioning state upon release.

The master leg of the multipoint circuit is specified by network processing circuit, channel, and customer number and serves as the circuit reference for the multipoint junction unit named in the command.

| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number of the multipoint circuit master leg

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number of the multipoint circuit master leg

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

The optional customer number **ff** is required when the master leg of the multipoint circuit is a customer within a multiplexed DS0B channel. When the master leg is a nonmultiplexed (DS0A) channel, the customer number is listed as **01**, or if the user prefers, the customer number can be omitted and the system will default the value to 01.

The external facility termination of the circuit is given by the NPC, channel, and customer number for the master leg of the multipoint circuit. Note that this is *not* the facility defined as the TO side of the circuit.

**MJU** - Multipoint junction unit

**ssss** - MJU number of accessed MJU (0001 through 9999)

The TO test port is connected to an MJU defined by **ssss**.

If MJU 0001 is specified, the TO test port faces the control leg of MJU 0001 and the FROM test port faces the master leg external facility termination. If an MJU number other than 0001 is specified and a branch has not been entered, the TO side faces towards the control leg of the specified MJU and the FROM side faces upstream towards the branch of a cascaded MJU.

If branch *i* was specified then branch *i* of MJU **ssss** is connected to the TO test port and the FROM side faces downstream.

**BR** - Branch

**i** - Branch number of MJU **ssss** (1 through 4)

If the **BRi** field is present, the TO side faces upstream towards the indicated branch of the specified MJU and the FROM side faces downstream, either towards another MJU or towards an external facility termination.

**TP** - Test port

**kk** - Test port number (01 through 96)

kk indicates the test port number used for test access to the circuit.

#### **UNMAPPED**

- Unmapped

This keyword will be output if the test access point specified is not cross-connected. (This situation can occur only when test access to a branch is specified.) When the test access point is unmapped, no signal is connected to the odd test port channel.

**TLA** - Terminate and leave activate

**s** - Termination state of the access point

s defines whether the access point is terminated in the FROM, TO, or BOTH, directions, or whether all terminations are released. The user should note that unmapped access points cannot be terminated.

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| R        | Released. Neither side is terminated |
| F        | FROM side is terminated              |
| T        | TO side is terminated                |
| B        | BOTH sides are terminated            |

**RATE** - Rate

**rr** - Transmission rate specification

**rr**      *rate in kb/s*

|           |     |
|-----------|-----|
| <b>24</b> | 2.4 |
| <b>48</b> | 4.8 |
| <b>96</b> | 9.6 |
| <b>56</b> | 56  |

The customer rate of the circuit is indicated by rr. If the access is to an unconnected or unmapped branch the listed rate is the same as the rest of the multipoint circuit.

**MPTM** - Multipoint master

The multipoint master leg of the circuit is specified by the termination number which consists of the NPC, channel, and customer numbers combined. Note that this is *not* the facility connected to the TO side of the test port.

**CGA** - Carrier group alarm

**ftp** - Alarm status, FROM, TO, and test port, respectively

The side of the test access port that faces the control leg of an MJU (that is, downstream) always has the corresponding CGA status listed as "0"; indicating no alarm. The CGA status of a side facing upstream corresponds to the status of the circuit's master leg facility.

**f** - FROM CGA state

*f*      *Explanation*

F      FROM facility in CGA

0      FROM facility is not in CGA

**t** - TO CGA state

*t*      *Explanation*

T      TO facility in CGA

0      TO facility is not in CGA

**p** - Test port digroup CGA state

*p*      *Explanation*

P      Test port digroup in CGA

0      Test port digroup is not in CGA

## **STST,SPL,TO,TP**

### **SUBRATE SPLIT TEST ACCESS**

#### **Explanation Of Command**

This command connects a subrate circuit to test port **kk** and places it in the split mode. In this mode, data transmission in the tested circuit is interrupted.

The user must specify the termination number (digroup, channel, and customer numbers) to be connected to the test port. To test a single customer in a DS0B channel, the customer number is required.

Split test access to an entire multiplexed DS0B channel (rather than a single DS0B customer) can only be done by first monitoring the channel and then splitting it by use of this command without a digroup and channel number. When the tested channel is a nonmultiplexed (DS0A) channel, the customer number is entered as **01**, or if the user prefers, the customer number can be omitted and the system will default the value to **01**.

The specified termination can be part of a two-point circuit or the master leg or branch termination of a multipoint circuit.

The TTST,SPL,TP command can also be used to perform this function however the command will be denied if the customer number is specified.

The TTST command is limited to testing only nonmultiplexed DS0A channels. If the subrate circuit is already under test, the TTST command can be used to place any type of subrate termination in the split mode.

This command overrides any static trunk conditioning that may have been specified for the test port. The test port is given TRSP,MUX trunk conditioning for the duration of the subrate test access, and returned to its previous trunk conditioning state upon release.

**CAUTION:** Split test access to a **DS0B** channel can potentially cause loss of service to

as many as 20 subrate customers.

---

Not applicable.

### Explanation Of Parameters

---

**SPL** - Split

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of the circuit side connected to the TO test port channel

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**ff** - Customer number of the circuit side connected to the TO test port channel

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)  
01-20 (DS0B at 2.4 kb/s)  
01-10 (DS0B at 4.8 kb/s)  
01-05 (DS0B at 9.6 kb/s)

**TP** - Test port

**kk** - Test port number (01 through 96)

The **TP kk** field indicates the test port number used for test access to the channel.

If the test port is in the released mode, [s]abcddd[/ff] or uvmnpddd[/ff] must be specified. This termination is connected to the even test port channel. If the test port already has a Subrate circuit under test, the external facility termination must not be specified or the command will be denied.

#### UNMAPPED

- Unmapped

**UNMAPPED** appears in the output message if the test access point specified is established to the subrate feature but not cross-connected. When the test access point is unmapped, no signal is connected to the odd test port channel.

A DS0B channel is always considered mapped, even when there are no customers cross-connected to it. In this case, the even test port faces the external facility and the odd test port faces the internal subrate multiplexer hardware.

**DS0B** - Digital Signal 0B

**nn** - Number of subrate customer channels (05, 10, or 20)

**LOOPED** - Looped

The two-point circuit is looped upon itself.

**RATE** - Customer rate

**rr** - Circuit rate (24, 48, 96, or 56)

If the circuit is mapped; that is, subrate cross-connected the listed RATE is equal to the subrate cross-connect rate. For unmapped circuits, in which case the **UNMAPPED** keyword appears in the output, the listed rate depends on the type of test access point. If test access is to a DS0A established channel, the establish channel rate is listed. If the access is to an unconnected subrate channel of a DS0B, the listed rate is the maximum subrate supported by the DS0B.

**CGA** - Carrier group alarm

**ftp** - FROM, TO, and test port CGA status, respectively

Where the FROM side of the test access faces the master leg of a multipoint circuit, the corresponding FROM CGA status is always listed as "0"; indicating no alarm. If the test access is associated with a branch of a multipoint circuit, in which case the FROM side faces upstream towards an MJU, the CGA status of the circuit's master leg facility is listed in the FROM field.

**f** - FROM CGA state

*f* Explanation

F FROM facility in CGA

0 FROM facility is not in CGA

**t** - TO CGA state

*t* Explanation

T TO facility in CGA

0 TO facility is not in CGA

**p** - Test port digroup CGA state

*p* Explanation

P Test port digroup in CGA

0 Test port digroup is not in CGA

**TLA** - Terminate and leave active

**s** - Termination state of the access point

For DS0B access points  $s = R$  since such access points cannot be terminated.

| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |                                      |
|---|--------------------------------------|
| R | RELEASED. Neither side is terminated |
|---|--------------------------------------|

|   |                         |
|---|-------------------------|
| F | FROM side is terminated |
|---|-------------------------|

|   |                       |
|---|-----------------------|
| T | TO side is terminated |
|---|-----------------------|

|   |                           |
|---|---------------------------|
| B | BOTH sides are terminated |
|---|---------------------------|

**LPD** - Looped

## **STST,TLA,TLR,TP**

### **SUBRATE TEST ACCESS**

#### **Explanation Of Command**

This command requests termination of a subrate circuit under test on test port **kk**. Before using this command, the circuit must be attached to a test port by use of either the STST,MON,TO,TP or the STST,SPL,TO,TP command.

This command can only be used on cross-connected two-point or multipoint circuits. It cannot be used during test access to entire **DS0B** channels or to unmapped (established but not cross-connected) external facility terminations and unmapped multipoint circuit branches. It also cannot be used for two-point circuits that are looped on themselves.

#### **Command**

[I.19661]

**STST:FRM xy,SEQ ww:{TLA|TLR} m,TP kk!**

#### **Completion Message**

#### **Nonhierarchical**

USAGE: For standard (DS0A) access points:

[O.19661]

**M hh:mm:ss xy,ww n[vv] STST {TLA|TLR} m [s]abcddd/ff RATE rr \  
TP kk 2 LN MSG:  
CGA (ftp) TLA s COMPL**

USAGE: For access points specified in terms of an MJU and (optional) branch number:

[O.19662]

M hh:mm:ss xy,ww n[vv] STST {TLA|TLR} m MPTM [s]abcddd/ff\  
MJU ssss[ BRi] 2 LN MSG:  
RATE rr TP kk CGA(ftp) TLA s COMPL

### **Hierarchical**

---

USAGE: For standard (DS0A) access points:

[O.19661]

M hh:mm:ss xy,ww n[vv] STST {TLA|TLR} m uvmnpddd/ff RATE rr \  
TP kk 2 LN MSG:  
CGA (ftp) TLA s COMPL

USAGE: For access points specified in terms of an MJU and (optional) branch number:

[O.19662]

M hh:mm:ss xy,ww n[vv] STST {TLA|TLR} m MPTM uvmnpddd/ff  
MJU ssss[ BRi] 2 LN MSG:  
RATE rr TP kk CGA(ftp) TLA s COMPL

### **Denial Message**

---

[O.19661.01]

M hh:mm:ss xy,ww n[vv] STST {TLA|TLR} m TP kk <reason 1> \  
2 LN MSG:  
<reason 2> DNY

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

- TLA** - Terminate and leave activate  
**TLR** - Terminate and leave released  
**s** - The resulting terminate and leave state of the access point upon completion of the command.  
**m** - The requested TLA/TLR modification:

| <i>m</i> | <i>Explanation</i>              |
|----------|---------------------------------|
| F        | Terminate/release the FROM side |
| T        | Terminate/release the TO side   |
| B        | Terminate/release BOTH sides    |

m is used to specify the terminate and leave state change for either the FROM, TO, or BOTH direction(s) of the circuit. The TO side is defined as the side of the circuit connected to the even numbered test port channel, and the FROM side is connected to the odd numbered test port channel. The Unassigned Multiplexer Channel (UMC) control code is inserted in the direction towards the named circuit end(s).

| PRIOR STATE | REQUESTED CHANGE | NEW STATE | PRIOR STATE | REQUESTED CHANGE | NEW STATE |

**TP** - Test Port

**kk** - Test port number (01 through 96)

kk indicates the test port number used for test access to the circuit.

**MJU** - Multipoint junction unit

**ssss** - MJU number of MJU under test (0001 through 9999)

**BR** - Branch

**i** - Branch number of MJU under test (1 through 4)

**ff** - Customer number of circuit under test, or of multipoint master leg

01 (DS0A at 2.4, 4.8, 9.6, or 56 kb/s)

01-20 (DS0B at 2.4 kb/s)

01-10 (DS0B at 4.8 kb/s)

01-05 (DS0B at 9.6 kb/s)

**[s]abc** - Nonhierarchical NPC number of the external facility termination connected to the TO test port channel or of multipoint master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

**RATE** - Rate

**rr** - Transmission rate specification

| <b>rr</b> | <i>rate in kb/s</i> |
|-----------|---------------------|
| <b>24</b> | 2.4                 |
| <b>48</b> | 4.8                 |
| <b>96</b> | 9.6                 |
| <b>56</b> | 56                  |

The customer rate of the circuit is indicated by rr. This is the rate at which the circuit is mapped (that is, subrate cross-connected via an SCON or SCNT command.

**CGA** - Carrier group alarm

**ftp** - FROM, TO, and test port CGA alarm status.

Where the FROM side of the test access faces the master leg of a multipoint circuit, the corresponding FROM CGA status is always listed as "0"; indicating no alarm.

If the test access is associated with a branch of a multipoint circuit, in which case the FROM side faces upstream towards an MJU, the CGA status of the circuit's master leg facility is listed in the FROM field.

**f** - FROM CGA state

*f* Explanation

F FROM facility in CGA

0 FROM facility is not in CGA

**t** - TO CGA state

*t* Explanation

T TO facility in CGA

0 TO facility is not in CGA

**p** - Test port digroup CGA state

*p* Explanation

P Test port digroup in CGA

0 Test port digroup is not in CGA

**F** - FROM facility in CGA

**0** - FROM facility is not in CGA

**T** - TO facility in CGA

**0** - TO facility is not in CGA

**P** - Test port digroup in CGA

**0** - Test port digroup is not in CGA

**s** - Termination state of the access point

*s* Explanation

|   |                            |
|---|----------------------------|
| F | FROM side is terminated    |
| T | TO side is terminated      |
| B | BOTH sides are terminated  |
| R | Neither side is terminated |

## **STST,TPR,ALL,LINKS**

### **DISCONNECT TEST ACCESS TIME SLOT**

#### **Explanation Of Command**

This command releases all Subrate circuits from test access and restores the circuit to normal. If the **ALL** keyword is specified, only those test ports whose test access was originally connected by administrative link **n[vv]** are released. If the **LINKS** keyword is specified, all test ports connected to subrate channels or customers are released, regardless of which administrative link initiated the test access.

This command does not affect the terminate and leave state of the released circuit. If the circuit was terminated either before or during test access, it will retain the termination state upon release.

### **Explanation Of Parameters**

---

**TPR** - Test port release

**ALL** - All

When specified, this keyword causes the release of only those test ports whose test access was initiated (that is, originally connected) by administrative link n[vv]. If the ALL keyword is used, both SRDC and non-SRDC circuits are released.

**LINKS** - Links

When specified, this keyword causes all test ports connected to Subrate channels or customers to be released, regardless of which administrative link initiated the test access.

## **STST,TPR,TP**

### **SUBRATE TEST ACCESS**

#### **Explanation Of Command**

This command releases a subrate circuit from test access on a test port and restores the circuit to normal. The output from this command depends upon whether the access point is a DS0A, DS0B, or MJU.

This command does not affect the terminate and leave state of the released circuit. If the circuit is terminated either before or during test access, it will retain the termination state upon release.

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**TPR** - Test port release

The termination number (combined NPC, channel, and customer number) indicates the external facility termination of the circuit released from the TO side of the test port.

**TP** - Test port

**kk** - Test port number (01 through 96)

**[s]abcddd/ff**

- External facility termination released from the TO test port channel

**RATE** - Rate

**rr** - Transmission rate specification

**rr** *rate in kb/s*

**24** 2.4

**48** 4.8

**96** 9.6

**56** 56

If the circuit is mapped (subrate cross-connected) the listed RATE is equal to the subrate cross-connect rate. For unmapped circuits, the listed rate depends on the type of test access point. If test access is to a DS0A established channel, the establish channel rate is listed. If the access is to an unconnected subrate channel of a DS0B, the listed rate is the maximum subrate supported by the DS0B.

**UNMAPPED**

- Unmapped

**LOOPED**

- Looped

This keyword appears when a two-point circuit is looped on itself.

**TLA**

- Terminate and leave status of the circuit after it is released from test access.

**s**

- Termination state of the released circuit

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| F        | FROM side is terminated              |
| B        | BOTH sides are terminated            |
| R        | RELEASED. Neither side is terminated |
| T        | TO side is terminated                |

**[s]abc**

- The 3- or 4-digit nonhierarchical NPC number of circuit under test, or of multipoint master leg

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

## **SW,BCAST,OLD,NEW,INCL**

### **DS0 CIRCUIT ROLL - BRIDGE COMMAND**

#### **Explanation Of Command**

This command is used to perform the Bridge step of the DS0 (64kbit/s) Roll operation.

Test signals may exist on the new DS0. If allowed to remain they will overwrite the signal transferred from the old DS0.

The DS0 (64kbit/s) Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new DS0 as well as the old DS0.

2. Roll

This step rolls the service by switching the receive data from the old DS0 to the new DS0.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old DS0.

#### **⇒ NOTE:**

The user should limit the number of subrate channels established to a digroup using D4-type framing. When the unassigned multiplex code (UMC) is present on too many channels it simulates a yellow alarm. A limit of 10 channels is safe for an AT&T D-bank. This problem only exists when the DS0Bs are established but not connected.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**BCAST** - Broadcast

**OLD** - Old

The bridge step does not need the OLD NPC or the OLD NPC hierarchy to be in service, however the roll step does. Therefore, it is possible that the bridge step will be allowed when the subsequent roll step will be denied.

**NEW** - New

**[s]abc** - The 3- or 4-digit nonhierarchical OLD NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical NEW NPC number

**Note:** Valid types for old and new NPC's are DExyz and DAxyz (except DE9y9 and DA9y9) and TExyz and TAxzy (except TE9y9 and TA9y9).

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**uvmnp** - Hierarchical OLD NPC number  
**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd, jjj**  
- Channel numbers for beginning of channel range

**eee, kkk**  
- Channel numbers for end of channel range

To connect a range of channels, use the optional fields eee and kkk.

**INCL** - Inclusive

A circuit designated as a customer controlled circuit or a red circuit cannot be modified without using the inclusive keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

**mmm** - The OLD channel number involved in denial (ddd through eee).

**nnn** - The NEW channel number involved in denial (jjj through kkk).

**cc** - Hexadecimal condition code

| <b>9C</b> |              | Parity channel cannot be within the range of a DS0 command. |

## **SW,BCAST,OLD,NEW,INCL**

### **FACILITY ROLL - BRIDGE COMMAND**

#### **Explanation Of Command**

This input message is used to perform the Bridge step of the DS1 or 2Mbit/s Roll operation.

Test signals may exist on the new DS0. If allowed to remain they will overwrite the signal transferred from the old DS0.

The DS1 or 2Mbit/s Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new NPC as well as the old NPC.

2. Roll

This step rolls the service by switching the receive data from the old NPC to the new NPC.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old NPC.

#### **⇒ NOTE:**

The user should limit the number of subrate channels established to a digroup using D4-type framing.

When the unassigned multiplex code (UMC) is present on too many channels it simulates a yellow alarm.

A limit of 10 channels is safe for an AT&T D-bank.

This problem only exists when the DS0Bs are established but not connected.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**BCAST** - Broadcast

**OLD** - Old

The bridge step does not need the OLD NPC or the OLD NPC hierarchy to be in service, however the roll step does. Therefore, it is possible that the bridge step will be allowed but the subsequent roll step will be denied.

**NEW** - New

**[s]abc** - The 3- or 4-digit nonhierarchical OLD NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical NEW NPC number

**Note:** Valid types for old and new NPC's are DExyz, DAxyz, TExyz and TAxzy.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

**uvmnp** - Hierarchical OLD NPC number  
**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**INCL** - Inclusive

A circuit designated as a customer controlled circuit or a red circuit cannot be modified without using the inclusive keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

**cc** - Hexadecimal condition code

**cc** *Explanation*

| <b>1C</b> | Reqd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS |
| <b>1D</b> | Required MIU not equipped, not in service, or failed                   |
| <b>46</b> | NPC Failed or Out of Service                                           |
| <b>A9</b> | Cross-connect not consistent with feature package                      |
| <b>B6</b> | C-bit operations are enabled                                           |
| <b>B7</b> | No DSP unit equipped                                                   |
| <b>B8</b> | No CBTYPE NPC equipped                                                 |
| <b>B9</b> | No CBTYPE NPC capacity remaining                                       |
| <b>BA</b> | Inactive side NPC out of service and inactive side in service          |
| <b>EA</b> | AIS invalid for cross-connection specified                             |
| <b>0A</b> | All CBTYPE NPCs out of service or failed                               |
| <b>E0</b> | ETSI not equipped, not in service, or failed                           |
| <b>68</b> | NEW NPC already cross-connect or mapped channel(s) on new              |
| <b>6B</b> | No mapped channel on old                                               |
| <b>6D</b> | One NPC is a non-channelized type and the other is not                 |
| <b>6F</b> | The OLD or NEW NPC is already being rolled.                            |
| <b>70</b> | One of the FAR end channels is being rolled                            |
| <b>72</b> | One of the far NPC(s) is SLC                                           |
| <b>73</b> | Channel has a FAR, which is within the range                           |
| <b>74</b> | Old and new are the same NPC in a DS1 command                          |
| <b>77</b> | Obsolete circuit type                                                  |
| <b>79</b> | DCTN conference channel cannot be rolled                               |
| <b>7A</b> | Testport/testgroup channel cannot be rolled                            |
| <b>7B</b> | Channel out of bound in a BCON/v.c                                     |
| <b>7C</b> | Parity channel out of bound on new                                     |
| <b>7D</b> | Not first channel in a BCON/virtual conf                               |

**cc**    *Explanation*

**9B**    Termination is under test or is a test port or group

**9C**    Parity channel cannot be within the range of a DS0 command.

## **SW,DISC,OOS**

### **DS0 CIRCUIT ROLL - DISCONNECT COMMAND**

#### **Explanation Of Command**

This input message is used to perform the Cut step of the DS0 (or 64kbit/s) Roll operation.

The DS0 (or 64kbit/s) Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new DS0 as well as the old DS0.

2. Roll

This step rolls the service by switching the receive data from the old DS0 to the new DS0.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old DS0.

Not applicable.

## Explanation Of Parameters

**DISC** - Disconnect

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

**Note:** Valid NPC types are DExyz and DAxyz (except DE9y9 and DA9y9) and TExyz and TAxz (except TE9y9 and TA9y9).

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |

**uvmnp** - Hierarchical OLD NPC number  
**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number for beginning of channel range

**eee** - Channel number for end of channel range

To connect a range of channels, use the optional field eee.

**OOS** - Out Of Service

The OOS keyword is used to force a disconnect from an NPC which is out of service.

**mmm** - The channel number involved in denial (ddd through eee).

**cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b> | <i>Explanation</i>                                                    |

## **SW,DISC,OOS**

### **FACILITY ROLL - DISCONNECT COMMAND**

#### **Explanation Of Command**

This input message is used to perform the Cut step of the DS1 or 2Mbit/s Roll procedure.

The DS1 or 2Mbit/s Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new NPC as well as the old NPC.

2. Roll

This step rolls the service by switching the receive data from the old NPC to the new NPC.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old NPC.

## Explanation Of Parameters

**DISC** - Disconnect

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

**Note:** Valid NPC types are DExyz, DAxyz, TExyz, TAxzy.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

| <b>C8</b> | Exceeded depth limit of 6 on broadcast conference concatenation        |
| <b>1A</b> | Required FLI not equipped, not in service, or failed                   |
| <b>1B</b> | Required MXR not equipped, not in service, or failed                   |
| <b>1C</b> | Reqd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS |
| <b>1D</b> | Required MIU not equipped, not in service, or failed                   |
| <b>A9</b> | Cross-connect not consistent with feature package                      |
| <b>B7</b> | No DSP unit equipped                                                   |
| <b>B8</b> | No CBTYPE NPC equipped                                                 |
| <b>B9</b> | No CBTYPE NPC capacity remaining                                       |

**cc**    *Explanation*

- BA**    Inactive side NPC out of service and inactive side in service
- 0A**    All CBTYPE NPCs out of service or failed
- E0**    ETSI not equipped, not in service, or failed
- 67**    Improper roll command sequence
- 6B**    No mapped channel on old
- 75**    Old and new channels have not been paired by a BCAST command.
- 76**    Channel or NPC not bridged
- 79**    DCTN conference channel cannot be rolled
- 7A**    Testport/testgroup channel cannot be rolled
- 7B**    Channel out of bound in a BCON/v.c
- 7C**    Parity channel out of bound on new
- 7D**    Not first channel in a BCON/virtual conf
- 9C**    Parity channel cannot be within the range of a DS0 command.

## **SW,NPC,RT,PSW,USW,ALW,INH,FRC,INCL**

**SWITCH::**

### **Explanation Of Command**

This command requests the activation (PSW), termination (USW), permission (ALW) or inhibition (INH) of protection switching on the SLC® Carrier terminated digroups. The **INCL** keyword must always be used for any digroup A switching activity such as activation, inhibition, permission, or termination. The **FRC** keyword is meaningful only when used with the **INH** option to inhibit a failed digroup from being protected.

## Explanation Of Parameters

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**uvmnp** - Hierarchical NPC number

uv     - Unit number  
m       - Module number within the unit  
np       - NPC number within the module  
The allowable values are presented below:

DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**RT**     - Remote terminal  
**ffff**   - RT bank identification number (0000 - 9999 inclusive)

**xxx**     - Digroup designation

| xxx | Explanation                          |
|-----|--------------------------------------|
| DGA | Digroup A                            |
| DGB | Digroup B                            |
| DGC | Digroup C                            |
| DGD | Digroup D                            |
| ALL | All Digroups (DGA, DGB, DGC and DGD) |

The "ALL" option is not applicable to the MML message.  
The "DGx" in the autonomous output means DGA, DGB, DGC, or DGD.

**PSW**     - Perform a protection switch  
**USW**     - Perform an unswitch  
**ALW**     - Allow a digroup to be protected  
**INH**     - Inhibit a digroup from protection  
**FRC**     - Force  
**INCL**    - Inclusive

**cc**       - Hexadecimal condition code

| cc        | Explanation                      |
|-----------|----------------------------------|
| <b>10</b> | Unit is not equipped             |
| <b>11</b> | UC is out of service             |
| <b>12</b> | UC is in service but failed      |
| <b>13</b> | FTMI is not equipped             |
| <b>15</b> | NPC is unequipped                |
| <b>46</b> | NPC Failed or Out of Service     |
| <b>63</b> | NPC is a DGP                     |
| <b>6A</b> | NPC type is not DS type          |
| <b>78</b> | Protection switch process failed |

**cc**    *Explanation*

- 7E**    Bank id number not found
- 7F**    NPC is not added
- 87**    DGP is protecting a primary digroup
- 8B**    Digroup name and bank id don't match
- C9**    The INCL keyword is needed for DGA
- CA**    No protection switch is currently active
- CB**    Protection entity out of service or failed
- CC**    Protection entity is unequipped
- CD**    Data link failed
- CE**    Far end failed to respond
- D1**    Protection switch existing is autonomous
- D2**    Protection switching is already inhibited
- D3**    Protection switching is already allowed
- D4**    Active CCN side is out of service
- D5**    Boot in progress, can't service request
- FD**    Line Loop Back is active
- A6**    Invalid switch request for DCLU

## **SW,ROLL,OLD,NEW,INCL,FRC,OOS**

### **DS0 CIRCUIT ROLL- ROLL COMMAND**

#### **Explanation Of Command**

This input message is used to perform the Roll step of the DS0 (or 64kbit/s) Roll operation.

The DS0 (or 64kbit/s) Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new DS0 as well as the old DS0

2. Roll

This step rolls the service by switching the receive data from the old DS0 to the new DS0.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old DS0.

#### **Command**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**ROLL** - Roll

**OLD** - Old termination

**NEW** - New termination

**[s]abc** - The 3- or 4-digit nonhierarchical OLD NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical NEW NPC number

**Note:** Valid types for old and new NPC's are DExyz and DAxyz (except DE9y9 and DA9y9) and TExyz and TAxz (except TE9yz and TA9y9).

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical OLD NPC number

**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd, jjj**

- Channel numbers for beginning of channel range

**eee, kkk**

- Channel numbers for end of channel range

To connect a range of channels, use the optional fields eee and kkk.

**INCL** - Inclusive

A circuit designated as a customer controlled circuit or a red circuit cannot be modified without using the inclusive keyword in the message.

**FRC** - Force

The FRC keyword is used to force a roll to an NPC which is in CGA.

**OOS** - Out of service

The OOS keyword is used to force a roll from an NPC which is out of service.

- mmm** - The OLD channel number involved in denial (ddd through eee).
- nnn** - The NEW channel number involved in denial (jjj through kkk).
- cc** - Hexadecimal condition code

| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                     |

## **SW,ROLL,OLD,NEW,INCL,FRC,OOS,TWAY**

### **FACILITY ROLL - ROLL COMMAND**

#### **Explanation Of Command**

This input message is used to perform the Roll step of the DS1 or 2Mbit/s Roll procedure.

The DS1 or 2Mbit/s Roll procedure consists of three commands:

1. Bridge

This step will bridge the transmit data by broadcasting to the new NPC as well as the old NPC.

2. Roll

This step rolls the service by switching the receive data from the old NPC to the new NPC.

3. Cut

This step takes down the bridge by disconnecting the transmit data from the old NPC.

Not applicable.

## Explanation Of Parameters

**ROLL** - Roll

**OLD** - Old  
The old termination

**NEW** - New  
The new termination

**[s]abc** - The 3- or 4-digit nonhierarchical OLD NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical NEW NPC number

**Note:** Valid types for old and new NPC's are DExyz, DAxyz, TExyz and TAxzy.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical OLD NPC number  
**wxkqr** - Hierarchical NEW NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**INCL** - Inclusive

A circuit designated as a customer controlled circuit or a red circuit cannot be modified without using the inclusive keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

**FRC** - Force

The FRC keyword is used to force a roll to an NPC which is in CGA.

**OOS** - Out of service

The OOS keyword is used to force a roll from an NPC which is out of service.

**TWAY** - Two-way

The TWAY keyword is used to request a two-way Roll (Bridge and Roll combined).

**cc** - Hexadecimal condition code

**cc** *Explanation*

## **SW,UNIT,FLI,TOPRTN**

### **SWITCH FLI TO PROTECTION**

#### **Explanation Of Command**

This message requests and reports a switch from the selected facility line interface (FLI) on a DS3 unit. This message only covers the direction of switch from the service FLI in a DS3 unit to protection. The other direction of the FLI switch is covered in Message I.35105. The output message reports the occurrence of autonomous protection switching.

#### **Command**

#### **Autonomous Message**

[O.35105]

I hh:mm:ss xy,ww SW UNIT [q]q FLI TOSRVC COMPL

### **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**TOSRVC** - To Service Pack

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**40** The service FLI is out of service or pested (TOSRVC option)

**42** The service FLI is already selected (TOSRVC option)

## **SW,UNIT,MMFG,TOPRTN,FRC**

### **SWITCH MMFG TO PROTECTION**

#### **Explanation Of Command**

This command requests and reports a switch from multiplexer-multiple interface unit functional group (MMFG) c to MMFG P on a DS3 unit. The input message can force MMFG P to serve the MMFG c facility, even though MMFG P was serving another facility which can result in that facility being out-of-service. Alarm reporting is discussed below in the case of a switch that results in that facility being out-of-service.

**Alarm reporting in the case of double MMFG failures:**

(For example, a unit is equipped with MMFG 1 , 2 and P).

Event           MMFG 1 fails  
Automatic protection switch occurs

Message       I hh:mm:ss xy,ww SW UNIT q MMFG 1 TOPRTN COMPL  
MMFG 1 is autonomously removed

Message       \*\*hh:mm:ss xy,ww RMV UNIT q MMFG 1 COMPL

Event           MMFG 2 fails

Message       \*C hh:mm:ss xy,ww RMV UNIT q MMFG 2 COND cc DNY

Event           The craft decides that MMFG-2 is more important and makes  
a switch

Command       SW:FRM xy,ww:UNIT q,MMFG 2,TOPRTN,FRC!

Message       M hh:mm:ss xy,ww[ n[vv]] SW UNIT q MMFG 1 TOPRTN FRC COMPL  
MMFG 1 will switch back to service automatically

Message       I hh:mm:ss xy,ww SW UNIT q MMFG 1 TOSRVC COMPL

Notice that after the switch to protection of MMFG 2, there will be no alarm reporting associated with loss of service of MMFG 1. The alarm condition, which is escalated to critical after loss of service of MMFG 2, actually covers both failures. If the FRC keyword is used, then the MMFG that WAS under protection will no longer be in alarm but will still need to be restored. When the FRC keyword is used, the alarm is idled on the MMFG that WAS under protection, even though it is still OOS. Note also that the autonomous switch message will precede the removal command on the first failure.

**Command**

[I.35111]

**SW:FRM xy,SEQ ww:UNIT [q]q,MMFG c,TOPRTN[,FRC]!**

### **Completion Message**

---

[O.35111]

M hh:mm:ss xy,ww[ n[vv]] SW UNIT [q]q MMFG c TOPRTN[ FRC] \  
COMPL

### **Denial Message**

---

[O.35111.01]

M hh:mm:ss xy,ww n[vv] SW UNIT [q]q MMFG c TOPRTN[ FRC] COND \  
cc DNY

### **Autonomous Message**

---

[O.35111]

I hh:mm:ss xy,ww[ n[vv]] SW UNIT [q]q MMFG c TOPRTN[ FRC] \  
COMPL

### **Explanation Of Parameters**

---

- UNIT** - Unit
- [q]q** - Unit number (1 through 16)
- MMFG** - Multiplexer-multiplexer interface unit functional Group
- c** - The number of the service MMFG within the unit ( $1 \leq c \leq 6$ )
- TOPRTN** - Protection Pack
- FRC** - Force the switch to protection MMFG even though it was serving another facility.
- cc** - Hexadecimal condition code

#### **cc Explanation**

- 10** Unit is not equipped
- 11** UC is out of service
- 12** UC is in service but failed
- 1A** Required FLI not equipped, not in service,  
or failed

**cc Explanation**

- 1C** Req'd FMT not eq'd, not IS, or failed, or inactive FMT not eq'd, or not IS
- 44** Service MXR is not equipped
- 47** Protection MXR is out of service
- 48** Protection MIU is not equipped
- 49** Protection MIU is out of service
- 4A** The protection MMFG is serving another facility
- 4B** The Service MMFG is already under protection

## **SW,UNIT,MMFG,TOSRVC**

### **SWITCH MMFG TO SERVICE**

#### **Explanation Of Command**

This command requests and reports a switch from multiplexer-multiple interface unit functional group (MMFG) P to MMFG c on a DS3 unit. MMFG P was serving the DS3 facility associated with MMFG c. The output message also reports the occurrence of automatic switchback from protection.

#### **Command**

[I.35121]

**SW:FRM xy,SEQ ww:UNIT [q]q,MMFG c,TOSRVC!**

#### **Completion Message**

[O.35121]

**M hh:mm:ss xy,ww n[vv] SW UNIT [q]q MMFG c TOSRVC COMPL**

#### **Denial Message**

[O.35121.01]

### **Notice**

Every effort was made to ensure that the information in this document was complete and accurate at the time of printing. However, information is subject to change.

### **Security Statement**

In rare instances, unauthorized individuals make connections to the telecommunications network through the use of remote access features. In such event, applicable tariffs require that the customer pay all network charges for traffic. AT&T cannot be responsible for such charges, and will not make any allowance or give any credit for charges that result from unauthorized access.

### **Documentation Ordering Information**

The ordering number for this document is AT&T 365-353-052. To order this document, call the AT&T Customer Information Center in Indianapolis, Indiana, on 1-800-432-6600. For more ordering information, refer to "How to Order Documentation" in the section "About this Document."

### **Technical Support Telephone Number**

The AT&T Regional Technical Assistance Center (RTAC) provides a technical assistance telephone number which is staffed 24 hours a day. For technical assistance, simply call 1-800-225-RTAC.

### **Documentation Support Telephone Number**

AT&T provides a telephone number for you to report errors or to ask questions about the information in this document. The support telephone numbers are:

Outside North Carolina - 1-800-334-0404  
Inside North Carolina - 1-919-727-6681.

# About This Document

---

## Purpose

---

The *DACS II Release 7.0 Command and Message Manual* describes the input commands and output messages of Release 7.0 of the Digital Access and Cross-Connect System II (DACS II). In addition, it provides full support for previous product releases.

 **NOTE:**

Those customers using this manual with Releases 3 through 6.1 software should be aware that all features of a particular message shown for Release 7.0 may or may not apply to previous releases.

This manual consists of three volumes as follows:

- **Volume I** - This volume contains general information about the document, a detailed introduction that defines DACS II messages, relates how to communicate with DACS II, introduces the administrative links, and discusses in detail NPC addressing, on-line help feature, system configuration and features a listing of related documentation and a glossary. Message listings in this volume include alphabetical and numerical, summary list of input commands and a list of autonomous messages. A comprehensive presentation of input commands and output messages (ABT through DGN) concludes this volume.
- **Volume II and III** - These two volumes contain input commands and output messages in the following order:
  - **Volume II** - DGRTH through SW
  - **Volume III** - TABS through UTL

---

## **Release 7.0.3 Addendum**

---

The *DACS II Release 7.0.3 Command and Message Manual Addendum* consists of the following list of items to be inserted or replaced in your *DACS II Release 7.0 Command and Message Manual*:

- Updated manual Table of Contents for each volume
- Updated "About this Document" section for each volume
- Updated "Alphabetic Message List" (Chapter 2)
- Updated "Numeric Message List" (Chapter 3)
- Updated "Summary of Input Commands" (Chapter 4)
- New section, "Release 7.0.3 Addendum," consisting of updated and new commands applicable to Release 7.0.3.
- Updated manual index for each volume

The instructional page enclosed with the Addendum will explain how to incorporate these new items into the Release 7.0 documentation.

## **Intended Audiences**

---

This manual is a catalog of messages intended for reference by a technician or craftperson who needs additional details about a message. It provides the user with supplemental information for the Digital Access and Cross-Connect System II (DACS II) that is programmed in the Program Documentation Standards (PDS) language. An example of a user is someone performing a task from an operation and maintenance manual who needs the definition of a specific keyword to complete the task.

## **How to Order Documentation**

---

To order additional copies of this document, send or call in an order as follows:

- To order by Mail:

Lucent Technologies  
Customer Information Center  
Attention: Order Entry Section  
2855 N. Franklin Road  
P. O. Box 19901  
Indianapolis, IN 46219

- 
- To order by Telephone (Monday through Friday);

Within the United States of America:

**1-800-432-6600** (7:30 a.m. to 6:30 p.m. EST)

From Canada:

**1-800-255-1242**

Worldwide:

Toll: **1-317-352-8557**

FAX: **1-317-352-8484**

For RBOC/BOC customers, process orders through your Company Documentation Coordinator.

For commercial customers, a check, money order, purchase order number, or charge card number is required with all orders. Make checks payable to Lucent Technologies.

Lucent Technologies entities should use Form IND 1-80.80 FA, available through the Customer Information Center.

One-time orders include a binder (if applicable) and the document contents for the current issue in effect at the time of order. After placing a one-time order, you can request a standing order for any document revisions *of that software release*. Documents for new software releases do *not* go to standing-order customers. You will only get those documents if you order the new software release.

## **How to Comment on This Document**

A feedback form is located at the beginning of this publication, immediately after the title page. Please fill out the feedback form and return it (postage free) to the address on the back.

If the feedback form is missing, send comment on this publication to:

Lucent Technologies  
DACS II Documentation Coordinator  
2400 Reynolda Rd.  
Winston Salem, NC 27106

## **TABS — TTST**

---

This section documents the commands **TABS** through **TTST**.

## **TABS**

---

### **TABS COMPLETE**

#### **Explanation Of Command**

---

This autonomous message indicates a remote TABS (Telemetry Asynchronous Block Serial) protocol request has completed on DACS II.

#### **Command**

---

Not applicable.

#### **Completion Message**

---

Not applicable.

#### **Denial Message**

---

Not applicable.

#### **Autonomous Message**

---

[O.55705]

I hh:mm:ss xy,ww TABS COMPL

#### **Explanation Of Parameters**

---

**TABS** - Telemetry asynchronous block serial

## **TABS,IN,PROGRESS**

### **TELEMETRY ASYNCHRONOUS BLOCK SERIAL IN PROGRESS**

#### **Explanation Of Command**

This autonomous output message indicates that a remote request using a telemetry asynchronous block serial protocol has been submitted to the DACS II frame and is in progress.

#### **Command**

Not applicable.

#### **Completion Message**

Not applicable.

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.55704]

I hh:mm:ss xy,ww    TABS IN PROGRESS

#### **Explanation Of Parameters**

**TABS**    - Telemetry asynchronous block serial

## **TCNT, FROM, TO, AIS, CUS, INCL, RDC, PRIOUT**

### **TWO-WAY CROSS-CONNECTION TERMINATED**

#### **Explanation Of Command**

This command requests a set of terminated cross-connections over a range of specified From-direction and To-direction terminations.

The circuit will be formed in the terminated state with the disconnect code (DCC) inserted in both directions of transmission unless the trunk conditioning was specified as **TRSP, MUX**; in this case, the Unassigned Multiplex Code (UMC), equal to hex 18, is inserted.

#### **Command**

##### **Nonhierarchical**

[I.12001]

```
TCNT:[FRM xy,SEQ ww]:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\  
<tc>[,AIS][,{CUS|INCL}][,RDC][,PRIOUT]!
```

##### **Hierarchical**

[I.12001]

```
TCNT:[FRM xy,SEQ ww]:FROM uvmnpddd[-eee],TO wxkqrjjj[-kkk],\  
<tc>[,AIS][,{CUS|INCL}][,RDC][,PRIOUT]!
```

## **Completion Message**

---

### **Nonhierarchical**

---

[O.12001]

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**FROM** - From

**[s]abcd**

- Nonhierarchical termination in to direction

**[s]abc** - The 3- or 4-digit NPC number  
**ddd** - Channel number, beginning of range

**TO** - To

**[s]ghij**

- Nonhierarchical termination in from direction

**[s]ghi** - NPC number  
**jjj** - Channel number, beginning of range  
The values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

#### uvmnpddd

- Hierarchical termination in from direction

#### wxkqrjjj

- Hierarchical termination in to direction

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

**ddd, jjj**

- Channel number, beginning of range

The values are listed below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

#### eee, kkk

- Channel numbers for end of channel range

To connect a range of channels, use the optional fields **eee** and **kkk**.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The Facility Data Link (FDL) channel 000 is not allowed in a range.  
Only the FDL of DE type NPC with ESF Format can be cross-connected.

**tc** - Trunk conditioning

Defines the cross-connected insertion word and signaling applied to the circuit during a failure condition. The insertion word and signaling are separately specified, using a comma as the delimiter.

Valid values for two-way cross-connects are:

| <i>4-state signaling</i>      | <i>16-state signaling</i>             |
|-------------------------------|---------------------------------------|
| <b>TC(ijkl,mnop), TRB</b>     | <b>TC(efghijkl,mnopqrst), TRB</b>     |
| <b>TC(ijkl,mnop), IW X'nn</b> | <b>TC(X'uv,X'yz), TRB</b>             |
|                               | <b>TC(efghijkl,mnopqrst), IW X'nn</b> |
|                               | <b>TC(X'uv,X'yz), IW X'nn</b>         |

*Transparent signaling*

**TRSP, TRB**  
**TRSP, IW X'nn**  
**TRSP, MUX**  
**TRSP**

**Note:** For ESF type framing, 4-state signaling will be expanded to 16-state by duplicating the bits.

**ijkl** - 4-state binary signaling value - From direction

**mnop** - 4-state binary signaling value - To direction

**efghijkl**

- 16-state binary signaling value - From direction

**mnopqrst**

- 16-state binary signaling value - To direction

**uv** - 16-state hexadecimal signaling value - From direction

**yz** - 16-state hexadecimal signaling value - To direction

**nn** - Hexadecimal Insertion Word

**TRB** - Trouble Code

Equal to **nn** value of **E4**.

**MUX** - Multiplexer Out of Sync Code

Equal to **nn** value of **1A**. This keyword can not be entered in combination with signaling trunk conditioning. Instead, it must always be accompanied by the **TRSP** keyword. The Multiplexer Out of Sync Code is only used for cross-connections of T1DM data circuits which do not use robbed bit signaling.

**TRSP** - Transparent

No robbed bit signaling is performed.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**AIS** - Alarm indication signal

This optional keyword is used to cause the all ones signal to be inserted on the downstream digroup when detected on the incoming digroup or when the incoming digroup exhibits a CGA (Carrier Group Alarm).

**CUS** - Customer

This optional keyword is used to flag a circuit as a customer controlled circuit. On output it indicates that the circuit is customer controlled.

**RDC** - Red circuit

This optional keyword is used to mark a circuit as a Red Circuit. On output it indicates that the circuit is a Red Circuit.

**INCL** - Inclusive

A termination designated as a customer controlled circuit or a red circuit cannot be disconnected or modified without using this keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless this keyword is given in the remove command.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**mmm** - The From-direction channel number involved in denial (**ddd** through **eee**).

**nnn** - The To-direction channel number involved in denial (**jjj** through **kkk**).

**d** - Direction

|          |                    |
|----------|--------------------|
| <b>d</b> | <i>Explanation</i> |
| <b>F</b> | FROM               |
| <b>T</b> | TO                 |
| <b>B</b> | Both               |

**st** - Status of denial

**cc** - Hexadecimal condition code

|           |              |                                                                           |
|-----------|--------------|---------------------------------------------------------------------------|
| <b>cc</b> | <b>st</b>    | <i>Explanation</i>                                                        |

## **TCNT, FROM, TO, MPM, NTR, RDC, CUS, INCL**

**TWO-WAY CROSS-CONNECT TERMINATE,  
FROM, TO, MULTIPOINT MODE**

### **Explanation Of Command**

This message requests the two-way terminated cross-connection of a leg to a multipoint circuit. The circuit will be set up in the terminated state with the disconnect channel code (DCC) inserted in both directions of transmission.

**Note:** Range values apply only to the FTU end of an FTU to Virtual NPC circuit.

### **Command**

#### **Nonhierarchical**

[I.12021]

```
TCNT:FRM xy,SEQ ww:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\  
MPM(fmd,tmd),<tc>[,NTR m][,RDC][,{CUS|INCL}]!
```

#### **Hierarchical**

[I.12021]

```
TCNT:FRM xy,SEQ ww:FROM uvmnpddd[-eee],TO wxkqrjjj[-kkk],\  
MPM(fmd,tmd),<tc>[,NTR m][,RDC][,{CUS|INCL}]!
```

### Autonomous Message

Not applicable.

### Explanation Of Parameters

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number  
[t]ghi - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**9961-9966**

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The list of valid values given below is limited by the equipage of the frame.

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**ddd,**  
**jjj**  
**eee,**  
**kkk**

- Channel numbers

- Channel numbers denoting the end of a range specification

Range variables **eee** and **kkk** apply only to the FTU end of an FTU to Virtual NPC circuit; that is, they cannot apply to the Virtual NPC end. Range variables do not apply to either end of an FTU to DMB or DMB to DMB circuit.

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers  
001-085 (MB NPC)  
  
001-500 (Virtual NPC)

Cross-connections may be between various Network Processing Circuit (NPC) types:

Facility Terminating Unit (IFTU/FTU)/DS3U NPC and DMB  
DMB and DMB  
IFTU/FTU/DS3U NPC and Virtual NPC

**MPM** - Multipoint mode

**fmd** - Multipoint mode of FROM end of the circuit

**tmd** - Multipoint mode of TO end of the circuit

The direction of data flow is indicated by MPM (**fmd**, **tmd**)

For DMB circuits, there are four possible values for fmd and tmd:

| <b>fmd</b> |                                                                                             |
|------------|---------------------------------------------------------------------------------------------|
| <b>tmd</b> | <i>Explanation</i>                                                                          |
| SYM        | For legs of a symmetrical multipoint circuit (must be a DMB channel)                        |
| BRD        | For nonbackbone (tributary) legs of a broadcast multipoint circuit (must be a DMB channel)  |
| BBL        | For the backbone leg of a broadcast multipoint circuit (must be a DMB channel)              |
| LEG        | For the end that does not terminate on the multipoint circuit (must be an FTU/DS3U channel) |

For virtual NPC circuits, there are three possible values for fmd and tmd:

| <b>fmd</b> |                                                                                           |
|------------|-------------------------------------------------------------------------------------------|
| <b>tmd</b> | <i>Explanation</i>                                                                        |
| BRD        | For nonbackbone legs of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| BBL        | For the backbone leg of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| LEG        | For the end that does not terminate on the multipoint circuit (must be FTU/DS3U channels) |

The possible combinations are:

For within a DMB or virtual conference:

LEG,BBL  
LEG,BRD  
SYM,LEG (only for DMB)

For concatenation of conferences:

BRD,BBL  
BBL,BBL  
SYM,SYM

**Note:** To avoid possible transmission delays in the conferencers, DACS II will not allow DMB broadcast conferences to be concatenated more than six deep. However, each concatenated conference will support the maximum allowable number of legs. This allows conferences to branch out at any point in the daisy chain, as long as each branch does not concatenate more than six conferences from the backbone leg.

**Note:** Default values for noise guard (NG) and echo suppression (ES) are applied to symmetrical bridges (multipoint mode SYM) and polling circuits (multipoint mode BBL, BRD). These default values are:

|                     |            |            |
|---------------------|------------|------------|
| Symmetrical bridges | NG = -18db | ES = -18db |
| Polling circuits    | NG = 0db   | ES = 0db   |

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. For example, TRSP, IW X'pq (input form).

The following signaling options are allowed:

| <i>signaling</i> | <i>Explanation</i>        |
|------------------|---------------------------|
| TRSP             | Transparent, no signaling |

The following insertion word options are allowed:

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                                                               |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | pq is a user specified insertion word. The binary pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4                                                                                                                                          |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                                                          |

All leg connections to multipoint circuits using a DMB NPC or a Virtual NPC must use TRSP signaling. The insertion word portion is user specified as noted above and may be varied from leg to leg.

For all multipoint to multipoint conference cross-connections (DMB concatenated conferences) the only allowable trunk conditioning specification is TRSP, and need not be specified, as it is the default. An insertion word is not valid for concatenated conferences.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the

E1 NPC towards its facility is always X'FF.

**NTR** - No transmit

**m** - Direction in which transmission is shut off

| <i>m</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |      |
|---|------|
| F | FROM |
|---|------|

|   |    |
|---|----|
| T | TO |
|---|----|

To set up one-way connections; that is, to shut off transmission towards a FROM or TO termination, use NTR and specify the direction in variable m. If NTR m is specified on the BBL (backbone leg) of a multipoint circuit, then the broadcast (BRD) legs of this circuit have their outward transmission turned off.

NTR m is optional if the virtual NPC is part of the circuit.

**NOBBL** - No backbone leg

If the type of circuit was a broadcast circuit, NOBBL indicates that no backbone leg is yet specified in either the FROM or TO direction. This argument will appear until a backbone leg is specified for this circuit.

**F** - From

**T** - To

**CUS** - Customer

Customer-controlled circuit

The optional CUS keyword is used to flag a circuit as a customer controlled circuit. On output it indicates that the circuit is customer controlled.

All legs on a multipoint customer controlled circuit must be designated as CUS.

**RDC** - Red circuit

On input the optional RDC keyword is used to mark a circuit as a Red Circuit. On output it indicates that the circuit is a Red Circuit.

All legs on a multipoint Red Circuit must be designated RDC.

**INCL** - Inclusive

A termination designated as CUS or RDC cannot be disconnected or modified without using the INCL keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless the INCL keyword is given in the remove message.

A disconnected termination previously marked CUS remains a customer controlled termination. The INCL keyword must be used to reconnect this termination to other terminations. However, if they are reconnected without the CUS keyword, they lose their customer controlled status.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

E1 to E1      Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

E1 to DS1 or      Same explanation as E1 to E1.  
DS1 to E1

DS1 to DS1      Not applicable.

**mmm** - FROM channel number involved in the denial (ddd through eee)

**nnn** - TO channel number involved in the denial (jjj through kkk)

**st** - Status of denial

**d** - Direction

|   |             |
|---|-------------|
| d | Explanation |
| B | Both        |
| F | FROM        |
| T | TO          |

**cc** - Hexadecimal condition code

## **TCNT, FROM, TO, RDC, CUS, INCL, PRIOUT**

### **TERMINATED TWO-WAY CROSS CONNECT**

#### **Explanation Of Command**

This message terminates two-way cross connections of non-channelized network processing circuits. The alarm-indication signal (AIS) is the idle code and does not need to be entered. Trunk condition options for 64 kbit/s cross connection are not allowed for non-channelized connections.

When a failure occurs or during an alarm state, the AIS is transmitted toward the TO NPC.

**uvmnp** - Hierarchical non-channelized FROM NPC number

**wxkqr** - Hierarchical non-channelized TO NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**INCL** - Inclusive  
This option will remove CUS marking

**PRIOUT** - Priority Output  
This keyword is used on the command line to prioritize  
the output response.

**st** - Status of denial

**d** - Direction

## TCON, FROM, TO, AIS, CUS, INCL, RDC, PRIOUT

### TWO-WAY CROSS-CONNECTION

#### Explanation Of Command

This command requests the two-point two-way connection of two specified cross-connect circuits or a range of cross-connected circuits.

#### Command

##### Nonhierarchical

[I.11001]

```
TCON:[FRM xy,SEQ ww]:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\  
<tc>[,AIS][,{CUS|INCL}][,RDC][,PRIOUT]!
```

##### Hierarchical

[I.11001]

```
TCON:[FRM xy,SEQ ww]:FROM uvmnpddd[-eee],TO wxkqrjjj[-kkk],\  
<tc>[,AIS][,{CUS|INCL}][,RDC][,PRIOUT]!
```

#### Completion Message

##### Nonhierarchical

[O.11001]

```
M hh:mm:ss xy,ww n[vv] TCON [s]abcddd[-eee],[t]ghijjj[-kkk] \  
<tc>[ AIS][ CUS][ RDC][ PRIOUT] COMPL
```

[O.11002]

M hh:mm:ss xy,ww n[vv] TCON [s]abcddd[-eee],[t]ghijjj[-kkk] 2 LN MSG:  
<tc>[ AIS][ CUS][ RDC][ PRIOUT] COMPL

### **Hierarchical**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**FROM** - From

**[s]abcd**

- Nonhierarchical termination in from direction

**[s]abc** - The 3- or 4-digit NPC number  
**ddd** - Channel number, beginning of range

**TO** - To

**[s]ghij**

- Nonhierarchical termination in to direction

**[s]ghi** - The 3- or 4-digit NPC number  
**jjj** - Channel number, beginning of range

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnpddd**

- Hierarchical termination in from direction

**wxkqrjjj**

- Hierarchical termination in to direction

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

**ddd, jjj**

- Channel number, beginning of range

The values are listed below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

If the channel being connected is an FDL (Facility Data Link), then **ddd**

(**jjj**) is **000** and signaling type should be of type **TC(ijkl, mnop)**.

Only the FDL of DE type NPC with ESF Format can be cross-connected.

**eee, kkk**

- Channel numbers for end of channel range

To connect a range of channels, use the optional fields **eee** and **kkk**.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**tc** - Trunk conditioning

Defines the cross-connected insertion word and signaling applied to the circuit during a failure condition. The insertion word and signaling are separately specified, using a comma as the delimiter.

Valid values for two-way cross-connects are:

|                              |                                      |
|------------------------------|--------------------------------------|
| <i>4-state signaling</i>     | <i>16-state signaling</i>            |
| <b>TC(ijkl,mnop),TRB</b>     | <b>TC(efghijkl,mnopqrst),TRB</b>     |
| <b>TC(ijkl,mnop),IW X'nn</b> | <b>TC(X'uv,X'yz),TRB</b>             |
|                              | <b>TC(efghijkl,mnopqrst),IW X'nn</b> |
|                              | <b>TC(X'uv,X'yz),IW X'nn</b>         |

*Transparent signaling*

**TRSP,TRB**  
**TRSP,IW X'nn**  
**TRSP,MUX**  
**TRSP**

**Note:** For ESF type framing, 4-state signaling will be expanded to 16-state by duplicating the bits.

**ijkl** - 4-state binary signaling value - From direction

**mnop** - 4-state binary signaling value - To direction

**efghijkl**

- 16-state binary signaling value - From direction

**mnopqrst**

- 16-state binary signaling value - To direction

**uv** - 16-state hexadecimal signaling value - From direction

**yz** - 16-state hexadecimal signaling value - To direction

**nn** - Hexadecimal Insertion Word

**TRB** - Trouble Code  
Equal to **nn** value of **E4**.

**MUX** - Multiplexer Out of Sync Code  
Equal to **nn** value of **1A**. This keyword can not be entered in combination with signaling trunk conditioning. Instead, it must always be accompanied by the **TRSP** keyword. The Multiplexer Out of Sync Code is only used for cross-connections of T1DM data circuits which do not use robbed bit signaling.

**TRSP** - Transparent  
No robbed bit signaling is performed.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**AIS** - Alarm indication signal

This optional keyword is used to cause the all ones signal to be inserted on the downstream digroup when detected on the incoming digroup or when the incoming digroup exhibits a CGA (Carrier Group Alarm).

**CUS** - Customer

This optional keyword is used to flag a circuit as a customer controlled circuit. On output it indicates that the circuit is customer controlled.

**RDC** - Red circuit

This optional keyword is used to mark a circuit as a Red Circuit. On output it indicates that the circuit is a Red Circuit.

**INCL** - Inclusive

A termination designated as a customer controlled circuit or a red circuit cannot be disconnected or modified without using this keyword in the message. Also, an NPC which supports these circuits cannot be manually removed unless this keyword is given in the remove command.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**mmm** - The From-direction channel number involved in denial (**ddd** through **eee**).

**nnn** - The To-direction channel number involved in denial (**jjj** through **kkk**).

**d** - Direction

**d** *Explanation*

**F** FROM

**T** TO

**B** Both

**st** - Status

**cc** - Hexadecimal condition code

**cc** **st** *Explanation*

|           |              |                                                                           |

## **TCON, FROM, TO, MPM, NTR, RDC, CUS, INCL**

### **TWO-WAY CROSS-CONNECT FROM, TO MULTIPOINT MODE**

#### **Explanation Of Command**

This message requests a multipoint two-way cross-connection between the specified FROM and TO end terminations and is used to connect a DS0 leg to a multipoint circuit, or to cross-connect a leg, consisting of a single or a contiguous range of DS0 channels, to a multipoint circuit in the virtual network processing circuit. Cross-connections may be between various network processing circuit types.

#### **Command**

##### **Nonhierarchical**

[I.11021]

```
TCON:FRM xy,SEQ ww:FROM [s]abcddd[-eee],TO [t]ghijjj[-kkk],\  
MPM(fmd,tmd),<tc>,[NTR m][,RDC][,{CUS|INCL}]!
```

##### **Hierarchical**

[I.11021]

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

|           |          |              |                                 |
|-----------|----------|--------------|---------------------------------|
| Unit      | Module   | NPC          |                                 |
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**ddd,**

**jjj** - Channel or conference numbers

**eee,**

**kkk** - Channel or conference numbers denoting the end of range specification

Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

001-085 (MB NPC)

001-500 (Virtual NPC)

Cross-connections may be between various Network Processing Circuit (NPC) types:

Facility Terminating Unit (FTU)/IFTU/DS3U NPC and DMB  
DMB and DMB  
FTU/IFTU/DS3U NPC and Virtual NPC

Range values -eee and -kkk apply only to the FTU/IFTU/DS3U end of an FTU/IFTU/DS3U-Virtual NPC circuit; i.e., cannot apply to the Virtual NPC end. No range values can apply to either end of an FTU/IFTU/DS3U NPC-DMB or DMB-DMB circuit. Note also that the range of allowable NPC numbers is dependent on the equipage of the frame.

**MPM** - Multipoint mode

**fmd** - FROM mode

**tmd** - TO mode

Multipoint modes of the FROM and TO ends of the circuit

For DMB circuits, there are four possible values for fmd and tmd:

**fmd**

**tmd**

- |     |                                                                                             |
|-----|---------------------------------------------------------------------------------------------|
| SYM | For legs of a symmetrical multipoint circuit (must be a DMB channel)                        |
| BRD | For nonbackbone (tributary) legs of a broadcast multipoint circuit (must be a DMB channel)  |
| BBL | For the backbone leg of a broadcast multipoint circuit (must be a DMB channel)              |
| LEG | For the end that does not terminate on the multipoint circuit (must be an FTU/DS3U channel) |

For virtual NPC circuits, there are three possible values for fmd and tmd:

**fmd**

**tmd**

- |     |                                                                                           |
|-----|-------------------------------------------------------------------------------------------|
| BRD | For nonbackbone legs of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| BBL | For the backbone leg of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| LEG | For the end that does not terminate on the multipoint circuit (must be FTU/DS3U channels) |

The valid combinations of fmd and tmd are:

For within a DMB or virtual conference:

LEG,BBL or BBL,LEG  
LEG,BRD or BRD,LEG  
SYM,LEG or LEG,SYM (only for DMB)

For concatenation of conferences:

BRD,BBL or BBL,BRD  
BBL,BBL  
SYM,SYM

**Note:** Default values for noise guard (NG) and echo suppression (ES) are applied to symmetrical bridges (multipoint mode SYM) and polling circuits (multipoint mode BBL,BRD). These default values are:

|                     |            |            |
|---------------------|------------|------------|
| Symmetrical bridges | NG = -18db | ES = -18db |
| Polling circuits    | NG = 0db   | ES = 0db   |

**Note:** To avoid possible transmission delays in the conferencers, DACS II will not allow DMB broadcast conferences to be concatenated more than six deep. However, each concatenated conference will support the maximum allowable number of legs. This allows conferences to branch out at any point in the daisy chain, as long as each branch does not concatenate more than six conferences from the backbone leg.

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. For example, TRSP,IW X'pq (input form).

The following signaling options are allowed:

| <i>signaling</i> | <i>Explanation</i>        |
|------------------|---------------------------|
| TRSP             | Transparent, no signaling |

The following insertion word options are allowed:

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                                                               |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | pq is a user specified insertion word. The binary pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4                                                                                                                                          |

All leg connections to multipoint circuits using a DMB NPC or a Virtual NPC must use TRSP signaling. The insertion word is user specified and may be varied from leg to leg.

For all multipoint to multipoint conference cross-connections (DMB concatenated conferences) only TRSP signaling is allowed and is the default hence it need not be specified. The insertion word is not valid for concatenated conferences.

**Note:** In a gateway application, when E1 channels are connected to T1 channels, the following rules apply to the transmittal of the Insertion Word (IW) towards the facility. If the Insertion Word needs to be transmitted towards the facility as a result of consequent action, then the Insertion Word transmitted by the T1 NPC towards its transmission facility is the Insertion Word specified in this command; however, the Insertion Word transmitted by the E1 NPC towards its facility is always X'FF.

**NTR** - No Transmit

**m** - The direction toward which transmission is shut off

*m Explanation*

F FROM

T TO

The NTR option is used to set up one-way connections; that is, to shut off transmission towards the specified FROM or TO termination.

If NTR m is specified on the BBL (backbone leg) of a multipoint circuit, then the BRD (broadcast) legs of this circuit have their outward transmission turned off.

The NTR field is optional if the virtual NPC is part of the circuit.

The direction of the data flow is indicated by the MPM (fmd,tmd) field.

**CUS** - Customer

All legs on a multipoint customer controlled circuit must be designated as CUS. A disconnected termination previously marked CUS remains as a customer controlled termination.

**INCL** - Inclusive

The INCL keyword must be used to reconnect a termination to other terminations. However, if they are reconnected without the CUS keyword, they lose their customer controlled status.

**NAM** - No A-law to  $\mu$ -law

The A-law to  $\mu$ -law and  $\mu$ -law to A-law code translators on the E1 type NPC are disabled. This keyword is valid in the following types of cross-connects:

*Multi-Point:*

E1 to E1 Multi-point cross-connects have A-law to  $\mu$ -law and  $\mu$ -law to A-law set as a default. This conversion is performed on pure E1 multi-point connections in case a DS1 leg is ever added to the broadcast connection. The **NAM** keyword is used to disable the conversions. It may be desirable to disable conversions in a pure E1 multi-point cross-connect since such a connection has more quantization noise than a pure E1 two-point cross-connect. This is due to the back to back A-law to  $\mu$ -law and  $\mu$ -law to A-law conversions which are taking place.

E1 to DS1 or  
DS1 to E1 Same explanation as E1 to E1.

DS1 to DS1 Not applicable.

**RDC** - Red circuit

If the optional RDC field is present, the circuit will be flagged as a Red Circuit. All legs on a multipoint red circuit must be designated RDC.

**NOBBL** - No backbone leg

If the type of circuit was a broadcast circuit, the optional NOBBL indicates that no backbone leg is yet specified in either the FROM or TO direction. This argument will appear until a backbone leg is specified for this circuit.

**F** - From

**T** - To

**mmm** - FROM channel number involved in the denial (ddd through eee)

**nnn** - TO channel number involved in the denial (jjj through kkk)

**st** - Status

**d** - Direction

*d*      *Explanation*

F      FROM

T      TO

B      BOTH

**cc** - Hexadecimal condition code

**cc**    **st**      *Explanation*

**06**    **INERR**    Invalid range for specified FROM NPC type

**07**    **INERR**    Invalid range for specified TO NPC type

**08**    **INERR**    Invalid FROM NPC type for AIS insertion

**09**    **INERR**    Invalid TO NPC type for AIS insertion

**12**    **MCOND**    Active CCN side not IS or failed or pested or hardware OOS

## **TCON, FROM, TO, RDC, CUS, INCL, PRIOUT**

### **TWO-WAY NON-CANNELIZED DIGITAL SIGNAL CROSS CONNECTION**

#### **Explanation Of Command**

This message is used to form a two-way cross-connection between two non-channelized network processing circuits (NPCs). It is also used to form a terminated two-way cross-connection. The idle code is the alarm-indication signal (AIS, all ones) and does not need to be specified. The disconnect code (DCC) for 64 kbit/s disconnection cannot be used for non-channelized NPCs.

When a failure occurs or during an alarm state, the AIS is transmitted toward the TO NPC.

NPCs with customer-controlled marking retain the CUS status when disconnected. When the NPCs are reconnected without CUS or inclusive (INCL) keyword, the command will be denied. If the NPCs are reconnected with INCL keyword, they lose the CUS status.

Red circuit marking is removed when the circuit is disconnected.

### Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module  
The values are listed below:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**RDC** - Red circuit  
**CUS** - Customer

Indicates a customer-controlled Circuit

**INCL** - Inclusive

Inclusive option must be used to remove CUS marking

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**st** - Status of denial

**d** - Direction

| <b>d</b> | <i>Explanation</i> |
|----------|--------------------|
| F        | From               |
| T        | To                 |
| B        | Both               |

**cc** - Hexadecimal condition code

## **TDIS, FROM, TO, INCL, OOS, DCC**

### **TWO-WAY DISCONNECTIONS**

#### **Explanation Of Command**

This message requests a disconnection between the specified FROM and TO end terminations and is used to disconnect a leg or legs from a multipoint circuit.

Disconnections may be between various Network Processing Circuit (NPC) types:

Facility Terminating Unit (FTU)/DS3U NPC and Digital Signal Processing (DSPU) Unit NPC

FTU/DS3U NPC and Virtual NPC

DSPU NPC and DSPU NPC

#### **Command**

##### **Nonhierarchical**

[I.15002]

**TDIS:FRM xy,SEQ ww:FROM [s]abcddd,TO [t]ghijjj[,INCL][,OOS]\[,DCC]!**

##### **Hierarchical**

[I.15002]

### Autonomous Message

Not applicable.

### Explanation Of Parameters

**FROM** - From termination  
**TO** - To termination

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**9961-9966**

**uvmnp** - Hierarchical FROM NPC number for beginning of NPC range

**wxkqr** - Hierarchical TO NPC number for end of NPC range

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**Note:** The range of allowable NPC numbers is dependent on the equipage of the frame.

**ddd** - FROM channel or conference number

**jjj** - TO channel number or conference number

## Channel Numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

## Conference Numbers

|         |               |
|---------|---------------|
| 001-085 | (MB NPC)      |
| 001-500 | (Virtual NPC) |

### **INCL** - Inclusive

To disconnect a channel or range of channels including one or more channels marked as a Red Circuit, use the INCL (inclusive) option. If this option is not used, the message will be denied if any circuits in the range are Red Circuits.

### **OOS** - Out-of-service

An Out-Of-Service disconnection may be done by giving the optional OOS keyword. At least one end of the circuit must be out-of-service or the OOS disconnection will be denied.

### **DCC** - Disconnect code

If DCC is specified, DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the trunk conditioning field of the TCON command that initially connected to the channels. If the DCC option is not used, the disconnect code specified in the GRTH NPC command will be used.

### **mmm, nnn**

- Channel numbers involved in the denial. Otherwise, the same as ddd.

### **CUS** - Customer

Indicates the circuit is a customer controlled Circuit.

**NOBBL** - No backbone leg

This optional field will appear if the multipoint circuit(s) FROM or TO is in the broadcast mode but has no backbone leg after the TDIS command.

**MPDIS** - Multipoint disconnect

Full disconnection of the multipoint circuits is indicated by MPDIS for FROM, TO, or BOTH.

**RDC** - Red circuit

RDC indicates that the disconnection was performed on a Red Circuit. This implies that the INCL keyword was given in the input message. If the disconnection was given on more than one circuit, then at least one of them was a Red Circuit.

**d** - Direction

*d Explanation*

**F** - From

**T** - To

**B** - Both

**st** - Status of denial

17 Required ETSI not equipped, not in service, or failed or inactive side ETSI not equipped or not in service

**cc** - Hexadecimal condition code

*cc st Explanation*

**04 INERR** No NPC's out of service and OOS keyword used

**06 INERR** Invalid range for specified FROM NPC type

**07 INERR** Invalid range for specified TO NPC type

**12 MCOND** Active CCN side not IS or failed or pested or hardware OOS

**13 MCOND** UNIT not equipped, not in service, or failed

**15 MCOND** FTMI not equipped, not in service, or failed

**16 MCOND** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS

**17 MCOND** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS

**18 MCOND** DSPI not equipped, not in service, or failed

**71 CONFERR** Try to delete a BBL leg from VC; however, VC has no BBL leg

**72 CONFERR** The NPC of VC BBL leg doesn't match that in the input command

**73 CONFERR** The first channel of VC BBL leg doesn't match that in the input command

| <b>cc</b> | <b>st</b>      | <i>Explanation</i>                                                        |

Not applicable.

## Explanation Of Parameters

**FROM** - From termination  
**TO** - To termination

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module  
 The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
 Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
 Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd, jjj**  
 - Channel numbers  
**eee, kkk**  
 - Channel numbers, denoting the end of a range.

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**INCL** - Inclusive

To disconnect a circuit or range of circuits including one or more circuits marked either RDC or CUS, use the optional INCL keyword. If this keyword is not used, the message will be denied if any circuits in the range are red circuits or customer controlled circuits.

**OOS** - Out of service

An Out-Of-Service disconnection may be done by giving the optional OOS keyword. At least one end of the circuit must be out-of-service or the OOS disconnection will be denied. This keyword is not valid if the DSPP NPC is the only NPC out-of-service.

**DCC** - Disconnect code

If the Disconnect Code (DCC) option is specified, DACS II will insert the user-defined disconnect code and signaling into the disconnected channels. This disconnect code and signaling are specified by the trunk conditioning field of the cross connect command that initially connected the channels. Only the post 2.5 second signaling will be inserted in the disconnected channels. If the DCC option was specified on a fully transparent (TRSP with no insertion word) domestic circuit, DACS II will insert the default trouble code X'E4. If the DCC option is not used, the disconnect code specified in the grow NPC command will be used.

**PRIOUT** - Priority Output

This keyword is used on the command line to prioritize the output response.

**CUS** - Customer

Customer-controlled circuit

Terminations cross-connected using the optional CUS keyword retain their CUS status when disconnected. If the terminations are reconnected without the CUS or INCL keyword, the command will be denied. When they are reconnected with the INCL keyword, they lose their customer controlled status.

**RDC** - Red circuit

**mmm, nnn**

- Channel number involved in the denial. Otherwise the same as ddd.

**d** - Direction

| <b>d</b> | <i>Explanation</i> |
|----------|--------------------|
| F        | From               |
| T        | To                 |

## **TDIS, FROM, TO, OOS, INCL, PRIOUT**

### **TWO-WAY DISCONNECTION**

#### **Explanation Of Command**

This message disconnects a two-way cross-connection between two non-channelized network processing circuits. When the circuit is disconnected, the idle code (AIS) is transmitted.

#### **Command**

##### **Nonhierarchical**

## Explanation Of Parameters

**FROM** - From termination  
**TO** - To termination

**[s]abc** - The 3- or 4-digit non-hierarchical non-channelized FROM NPC number  
**[t]ghi** - The 3- or 4-digit non-hierarchical non-channelized TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

## **TTST,HUB,TO,TG**

### **NX64Kbit/s TWO-WAY TEST ACCESS, HUB**

#### **Explanation Of Command**

To set up an Nx64Kbit/s hub test access connection via a test-access group to an Nx64Kbit/s TO termination. The TO termination consists of two Nx64Kbit/s bundles that will be connected to the test-access group's east and west bundles. These channel bundles must be of the same width as the test-access group. If all of the channels, starting at the number specified for the TO termination, are not available the first unavailable channel encountered will cause the command to be denied. The channel that caused the denial will be reported in the denial message.

Not applicable.

## Explanation Of Parameters

**TG** - Test (access) group

**mmm** - Test access group number (001 through 400)

TG is designated as in the GRTH,TG,NPCTG command.

**HUB** - Hub

**[s]abc** - 3- or 4-digit non-hierarchical first TO NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical second TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical first TO NPC number

**wxkqr** - Hierarchical second TO NPC number

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Starting channel number of first TO NPC  
**jjj** - Starting channel number of second TO NPC  
**ppp** - First channel causing denial

001 through 024

**tc** - Trunk conditioning

If the static tc was not furnished in the growth TG command, it must be dynamically specified in this command or the test access will be denied. A dynamic tc will override any static tc. The effective tc will be used for all channels used in this test connection, and will be shown in the output.

**CGA** - Carrier group alarm

**PBA** - Primary block alarm

**fsb** - CGA or PBA state

f - First TO NPC CGA or PBA state

*f Explanation*

|   |                                   |
|---|-----------------------------------|
| F | First TO NPC is in CGA or PBA     |
| 0 | First TO NPC is not in CGA or PBA |

s - Second TO NPC CGA or PBA state

*s Explanation*

S Second TO NPC is in CGA or PBA  
0 Second TO NPC is not in CGA or PBA

b - TG digroup CGA or PBA state

*b Explanation*

E East-bundle NPCTG in CGA or PBA  
W West-bundle NPCTG in CGA or PBA  
B NPCTG(s) supporting both bundles in CGA or PBA  
0 NPCTG(s) not in CGA or PBA

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**COND** - Condition

**NN** - TG width (1 through 24)

**cc** - Hexadecimal condition code

*cc Explanation*

26 NPC type error

4B channel already under test  
4D Gateway test access not supported  
51 TG width incompatible with circuit  
53 inconsistent HUB width for specified TG

**cc**    *Explanation*

- 59**    Invalid TC specification
- 5A**    NPC not in service or failed
- 5D**    Inconsistent Signaling on CEPT NPCTGs
- 5E**    invalid test access mode
- 5F**    input channel out of range (SLC not supported)
- 60**    circuit contains mapped channels for HUB request
- 95**    TG East/West type inconsistent with each other or circuit
- 96**    incompatible HUB feature types

## **TTST,HUB,TO,TP**

### **TWO-WAY TEST ACCESS, HUB**

#### **Explanation Of Command**

This command requests a hubbing mode test access via a specified test port (TP) to the TO termination. In the hubbing mode, DACS II is used as a test access concentrator to connect a local TP to a remote TP. The cross-connection will be made between TP **kk** and two 64-kb/s channels, the TO end of which is specified in the command. Successive termination numbers **jjj** and **ddd** correspond to lower and upper channels of the test port, respectively. These two channels are from a test port in another DACS II or other test access device to be cross-connected. DACS II does not know if the requested access is, in fact, to a hubbed test port on another frame; however, the request will be denied if either channel is mapped, under test, or if channel **jjj** would be out of range on the NPC.

Trunk conditioning **<tc** may be specified, however, it only has an effect on Gateway (T1-E1) conversion circuits. For hub test access of non-Gateway circuits, any trunk conditioning values entered by the user will be overwritten by all one values for the circuit's signaling and insertion word.

### Autonomous Message

Not applicable.

### Explanation Of Parameters

**HUB** - Hub

**TO** - To

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

**uvmnp** - Hierarchical TO NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**jjj** - TO channel number

The TO channel number must correspond to a lower channel of a test port.

**tc** - Trunk conditioning

tc represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. The signaling and the insertion word specification are entered separately, with a comma as the delimiter.

|                        |                                      |
|------------------------|--------------------------------------|
| <i>signaling</i>       | <i>Explanation</i>                   |
| TC(ijkl,mnop)          | 2-way, 4-state signaling in binary.  |
| TC(ijklmnop,qrstuvwxy) | 2-way, 16-state signaling in binary. |
| TC(X'ab,X'cd)          | 2-way, 16-state in hexadecimal.      |
| TRSP                   | Transparent, no signaling.           |

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                       |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4.                                                                                                 |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                  |
| <b>mmm</b>            | - Channel number<br>Variable mmm is equal to jjj + 1. Must be an even number.                                                            |
| <b>TP</b>             | - Test port                                                                                                                              |

## **TTST,LPD,TG**

### **NX64Kbit/s LOOPED TEST ACCESS**

#### **Explanation Of Command**

This command is used to place both bundles of a test-access group (TG) in the looped mode. If the TG is not provisioned or currently assigned the command will be denied.

#### **Command**

[I.29021]

**TTST:FRM xy,SEQ ww:LPD,TG mmm[,<tc>]!**

#### **Completion Message**

[O.29021]

**M hh:mm:ss xy,ww n[vv] TTST LPD TG mmm NN <tc> COMPL**

#### **Denial Message**

[O.29021.01]

**M hh:mm:ss xy,ww n[vv] TTST LPD TG mmm COND cc DNY**

#### **Autonomous Message**

Not applicable.

## Explanation Of Parameters

**LPD** - Looped

**TG** - Test (access) group

**mmm** - TG number (001 through 400)

**tc** - Trunk conditioning

If the static tc was not furnished in the growth TG command, it must be dynamically specified in this command or the test access will be denied. A dynamic tc will override any static tc. The effective tc will be used, and will be output.

**COND** - Condition

**NN** - TG width (1 through 24)

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 12** Active CCN side not IS or failed or pested or hardware OOS
- 13** UNIT not equipped, not in service, or failed
- 14** CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15** FTMI not equipped, not in service, or failed
- 16** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 18** DSPI not equipped, not in service, or failed
- 1A** Required FLI not equipped, not in service, or failed
- 1B** Required MXR not equipped, not in service, or failed
- 1C** Reqd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS
- 1D** Required MIU not equipped, not in service, or failed
- E0** ETSI not equipped, not in service, or failed
- 49** test group unequipped
- 59** Invalid TC specification
- 5A** NPC not in service or failed
- 5D** Inconsistent Signaling on CEPT NPCTGs
- 5E** invalid test access mode
- 95** TG East/West type inconsistent with each other or circuit

## **TTST,LPD,TP**

### **LOOPED TEST ACCESS**

#### **Explanation Of Command**

This message requests that both test port channels on a given test port be placed in the looped mode.

Trunk conditioning *may be specified* to loop a static test port **kk**. If specified it will override the specification given when the test port was equipped. If not specified it will default to the specification given when the test port was equipped.

Trunk conditioning *must be specified* to loop a dynamic test port **kk** since tc is dynamically set when any test access message makes the test port active. If trunk conditioning is omitted, the request will be denied.

**TTST::TPR,TP** will undo this command.

The test port is mapped to predesignated channels of a network processing circuit for test ports (NPCTP) during the provisioning of that test port. All domestic non-SLC NPC types can be provisioned as NPCTP. For the mapping between the test ports and the channels of the test NPCs, see the GRTH::TP message.

#### **Command**

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**LPD** - Looped

**TP** - Test port

**kk** - Test port number (01 through 96)

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. For example, TRSP,IW X'pq (input form).

The following signaling options are allowed:

| <i>signaling</i>      | <i>Explanation</i>                                                                                                                                                          |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TC(ijkl,mnop)         | 2-way,4-state signaling in binary. For ESF type framing format, software will expand 4-state to 16-state by duplicating the format on the remaining frames on a superframe. |
| TC(efghijkl,mnopqrst) | 2-way,16-state in binary. Only valid for ESF framing format.                                                                                                                |
| TC(X'ab,X'cd)         | 2-way,16-state in hexadecimal                                                                                                                                               |
| TRSP                  | Transparent, no signaling                                                                                                                                                   |

The following insertion words options are allowed:

*insertion word Explanation*

|         |                                                                                                                                          |
|---------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted to the downstream direction of a failure on either line. |
| TRB     | Standard trouble code, equal to IW X'E4.                                                                                                 |
| MUX     | MUX out of sync code, equal to IW X'A1.<br>(only valid with signaling option TRSP)                                                       |

The following trunk conditioning usage applies:

- If trunk conditioning is omitted from this message and was omitted from GRTH::TP, the message will be denied.
- If trunk conditioning is omitted from this message but was provided in GRTH::TP, the trunk conditioning value provided in GRTH::TP, is applied.
- If trunk conditioning is provided in this message, it overrides the value, (if provided), in GRTH::TP.

## Explanation Of Parameters

**TG** - Test-access group

**mmm** - Test-access group number (001 through 400)

The TG is designated as in message 31421, and must have the same width as the number of channels specified in this message.

**MON** - Monitor

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM Channel numbers

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If TO channel is mapped to a channel 000, the circuit can only be tested as N = 1, the corresponding FROM channel ddd will be '000'.

**tc** - Trunk conditioning

For mapped circuits, <tc> will be omitted.

For unmapped circuits, the effective <tc> will be output.

**SG** - Signaling

**g** - Signaling mode of the TG

*g Explanation*

T All channels are Transparent (TRSP)

R One or more channels is robbed-bit or non-TRSP

**CGA** - Carrier group alarm

**PBA** - Primary block alarm

**ftb** - CGA or PBA state

f - FROM CGA or PBA state

*f Explanation*

F FROM NPC is in CGA or PBA

0 FROM NPC is not in CGA or PBA

t - TO CGA or PBA state

*t Explanation*

T TO NPC is in CGA or PBA

0 TO NPC is not in CGA or PBA

b - TG digroup CGA or PBA state

*b Explanation*

E East-bundle NPCTG in CGA or PBA

W West-bundle NPCTG in CGA or PBA

B NPCTG(s) supporting both bundles in CGA or PBA

0 NPCTG(s) not in CGA or PBA

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**ONEWAY** - One-way

The cross-connection tested is a one-way circuit.

**BCAST** - Broadcast

The cross-connection tested is part of a broadcast circuit.

**TLA** - Terminate and leave active

**s**

- Termination state of the circuit

| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |                           |
|---|---------------------------|
| R | All channels are released |
|---|---------------------------|

|   |                                        |
|---|----------------------------------------|
| F | One or more FROM channel is terminated |
|---|----------------------------------------|

|   |                                      |
|---|--------------------------------------|
| T | One or more TO channel is terminated |
|---|--------------------------------------|

|   |                                                    |
|---|----------------------------------------------------|
| B | One or more of FROM and TO channels are terminated |
|---|----------------------------------------------------|

**UMPD** - Unmapped

The circuit under test is unmapped.

**COND** - Condition

**cc** - Hexadecimal condition code

- 5E**    invalid test access mode

## **TTST,MON,TO,TG**

### **NX64Kbit/s TWO-WAY TEST ACCESS, MONITOR**

#### **Explanation Of Command**

This command is used to request a monitor test access of a specified group of Nx64Kbit/s terminations. The test access is made through the test-access group specified in the command line.

The N TO channels to be tested may be entered as a range, a list, or a combination of both, in ascending order. For two-point circuits, the numbers do not have to be consecutive, and the circuits may have been cross-connected separately. For a one-way circuit under test, the other direction of the same termination cannot be tested at the same time. For Nx64Kbit/s broadcast circuits, the channels have to be consecutive and must have been set up together for the same broadcast circuit.

The primary output line will not echo the input with range(s) of channels, but will show a list of all channels.

#### **Command**

##### **Nonhierarchical**

Not applicable.

## Explanation Of Parameters

**MON** - Monitor

**TO** - To

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical FROM NPC number  
**wxkqr** - Hierarchical TO NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

Unit    Module NPC  
**01-16 1-4    01-40**

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

For an unmapped TO termination, or a backbone leg (BBL) without return, the FROM NPC number will be shown as zeroes.

**ddd** - FROM Channel number

**jjj, kkk, lll**

- TO Channel numbers

**ppp** - First TO Channel number causing denial

kkk is shown as an example of a range jjj-kkk of TO channels, and lll is an example of an item on a list of TO channels.

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If channel jjj is mapped to a channel 000, the circuit can only be tested as N = 1, and the corresponding FROM channel ddd will be '000'.

**tc** - Trunk conditioning

For mapped circuits, regardless of what is specified here, the circuit's tc will be used but not shown in the output response.

For unmapped circuits, if the static tc was not furnished when the TG was provisioned, it must be dynamically specified in this command or the test access will be denied. A dynamic tc will override any static tc. The effective tc will be used for all channels under test, and will be shown in the output.

**TG** - Test-access Group

**mmm** - Test-access Group number (001 through 400)

The TG is designated as in GRTH::TG,NPCTG and must have the same width as the number of channels specified in this message.

**SG** - Signaling

**g** - Signaling mode of the TG

*g*      *Explanation*

T      All channels are Transparent (TRSP)

R      One or more channels is robbed-bit or non-TRSP

**CGA** - Carrier group alarm

**PBA** - Primary block alarm

**ftb** - CGA or PBA state

f - FROM CGA or PBA state

*f*      *Explanation*

F      FROM NPC is in CGA or PBA

0      FROM NPC is not in CGA or PBA

t - TO CGA or PBA state

*t*      *Explanation*

T      TO NPC is in CGA or PBA

0      TO NPC is not in CGA or PBA

b - TG digroup CGA or PBA state

*b*      *Explanation*

B      NPCTG(s) supporting both bundles in CGA or PBA

E      East-bundle NPCTG in CGA or PBA

W      West-bundle NPCTG in CGA or PBA

0      NPCTG(s) not in CGA or PBA

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**ONEWAY** - One-way

The cross-connection tested is a one-way circuit.

**BCAST** - Broadcast

The cross-connection tested is part of a broadcast circuit.

**TLA** - Terminate and leave active

**S**

- Termination state of the circuit

| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|

**cc**    *Explanation*

- 49**    test group unequipped
- 4A**    channel part of a TP or TG
- 4B**    channel already under test
- 4C**    BCON BBL has one or more legs under test
- 4D**    Gateway test access not supported
- 4F**    inconsistent BCON width for test access
- 50**    invalid channel designation for BCON
- 51**    TG width incompatible with circuit
- 52**    FDL selected with width not 1
- 57**    Designated TG or circuit to be tested in process of being rolled
- 59**    Invalid TC specification
- 5A**    NPC not in service or failed
- 5B**    channel is OCON in opposite direction
- 5C**    Inconsistent or invalid circuit type for Nx64Kbit TA
- 5D**    Inconsistent Signaling on CEPT NPCTGs
- 5E**    invalid test access mode
- 5F**    input channel out of range (SLC not supported)
- 61**    not all FROM channels on same NPC
- 95**    TG East/West type inconsistent with each other or circuit
- A9**    Circuits TCONed itself cannot be UTST

## **TTST,MON,TO,TP**

### **TWO-WAY TEST ACCESS, MONITOR**

#### **Explanation Of Command**

This message can be used to do one of two things:

1. To set up a previously unassigned test port to monitor a particular termination.
2. To change a previously assigned test port to monitor mode.

If the test port is already in the monitor mode, DACS II will deny the execution of the message.

The trunk conditioning (**tc**) specified in this command applies only when accessing an unmapped termination. For an access to a mapped circuit, **tc** is adopted from the circuit being accessed and, therefore, will be ignored if specified.

The DACS II test ports are either static or dynamic. A test port is defined as static when trunk conditioning is specified in a test port provisioning command otherwise it is a dynamic test port. If this test port is static, trunk conditioning must be specified.

If the test port is in the split mode, do not specify the TO NPC number.

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**TP** - Test port

**kk** - Test port number (01 through 96)

A test port is mapped to predesignated channels of a network processing circuit for test ports (NPCTP) during the provisioning of that test port.

Only nonSLC® NPC types can be provisioned as an NPCTP.

For the mapping between the test ports and the channels of the test NPCs, see the GRTH::TP Message

The DACS II test ports are either static or dynamic, as defined in the GRTH::TP message.

If the test port is in the split mode, TO [t]ghijj may not be specified.

In a gateway frame NPC types that have been provisioned for channel associated signaling (CAS) can also be provisioned as an NPCTP.

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**jjj** - TO Channel number

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers  
001-085 (MB NPC)

If channel **jjj** is an FDL (Facility Data Link), then **jjj** = 000.

**tc** - Trunk conditioning

If the tc option was not furnished in the test port provisioning command, it must be furnished in this input command to provide a test connection for unmapped circuits; otherwise, the test access will be denied.

Represents the desired signaling and insertion word to be applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification. For example, TRSP,IW X'pq (input form).

tc cannot be specified if jjj = 000.

**Note:** For mapped terminations, tc takes on the mapped cross-connect tc value and overrides any tc option provided in the input command.

For unmapped terminations, trunk conditioning will be applied as follows:

If tc is omitted from this command and was omitted in the test port provisioning command, the command will be denied.

If tc is omitted from this command but was provided in the test port provisioning command, the tc value provided in the provisioning command is applied.

If tc is provided in this command, it overrides the value, (if provided), in the test port provisioning command.

| <i>signaling</i>     | <i>Explanation</i>                   |
|----------------------|--------------------------------------|
| TC(ijkl,mnop)        | 2-way, 4-state signaling in binary.  |
| TC(ijklmnop,qrstuvw) | 2-way, 16-state signaling in binary. |
| TC(X'ab,X'cd)        | 2-way, 16-state in hexadecimal.      |
| TRSP                 | Transparent, no signaling.           |

| <i>insertion word</i> | <i>Explanation</i>                                                                                                                       |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| IW X'pq               | The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line. |
| TRB                   | Standard trouble code, equal to IW X'E4.                                                                                                 |
| MUX                   | MUX out of sync code, equal to IW X'1A.                                                                                                  |

For 4-state signaling, the A/B signaling bits of both test port channels are specified by ijkl for the receive time slot interchange (RTSI), and by mnop for the transmit time slot interchange (TTSI).

For 16-state signaling, the A/B/C/D signaling bits of both test port channels are specified by efghijkl (or hexadecimal digits ab) for the RTSI, and by mnopqrst (or hexadecimal digits cd) for the TTSI.

- [s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number
- [s]klm** - The 3- or 4-digit nonhierarchical FROM NPC number
- [t]pqr** - The 3- or 4-digit nonhierarchical TO NPC number

- uvmnp** - Hierarchical TO NPC number
- wxkqr** - Hierarchical FROM NPC number.

Supports the termination that is cross-connected to channel ghijj.

- [s]klmnnn**
  - Nonhierarchical format termination being tested as FROM on test port kk otherwise the same as [s]abcddd. If this field is all zeroes, test port kk is assigned to an unmapped termination.

- edhfgnnn**
  - Hierarchical format of [s]klmnnn

- pqrsss** - Nonhierarchical format termination being tested as TO on test port kk; otherwise, the same as abcd.

- opjstsss**
  - Hierarchical format of [t]pqrsss

- ddd** - FROM channel number of the termination that is cross-connected to
- nnn** - FROM channel number of the termination that is cross-connected to channel [t]ghi-jjj.

- sss** - TO channel number

**SG** - Signaling

**g** - Signaling mode of test port kk

*g*      *Explanation*

R      Robbed Bit Signaling

T      Transparent

**CGA** - Carrier group alarm

**ftp** - CGA state

f - FROM CGA state

*f*      *Explanation*

F      FROM NPC is in CGA

0      FROM NPC is not in CGA

t - TO CGA state

*t*      *Explanation*

T      TO NPC is in CGA

0      TO NPC is not in CGA

p - Test port digroup CGA state

*p*      *Explanation*

P      Test port NPC is in CGA

0      Test port NPC is not in CGA

**RDC** - Red circuit

**CUS** - Customer

The cross-connection tested is a customer controlled circuit.

**ONEWAY** - One-way

The cross-connection tested is a one-way circuit.

**TLA** - Terminate and leave activate

**s**

- Termination state of the circuit

*s*      *Explanation*

R RELEASED. Neither side is terminated  
F FROM side is terminated  
T TO side is terminated  
B BOTH sides are terminated

**ASGN** - Assigned

The test port is already assigned to another termination, denoted by [s]klmnnn,[t]pqrsss (or edhfgnnn,opjstsss)

**UMPD** - Unmapped

**reason** - Reason for denial

**cc** - Hexadecimal condition code

**cc st Explanation**

**D1 SCERR** TO NPC is not provisioned as DGA  
**D4 SCERR** Corresponding NPC for TO virtual channel is not provisioned  
**D7 SCERR** Invalid TO channel number

**st Explanation**

**BADCCB** CCB OOS or failed

## **TTST,RT,DGA,DGB,DGC,DGD,DGP,LLB,TO**

### **TWO-WAY TEST ACCESS LINE LOOPBACK**

#### **Explanation Of Command**

This message will enable the users to initiate, terminate, allow or inhibit a line loopback (LLB) towards the RT or the DL (DCLU) on one of the digroups of the specified bank, optionally.

If neither the TO nor the FROM option is specified, the system will take the TO option as the default value and will respond accordingly.

The TO option will enable the user to program the DACS II to take appropriate action; that is, INI, TRM, ALW or INH, with regard to sending a far-end loopback (FELP) message towards the RT or the DL.

The FROM option will enable the user to program the DACS II to take appropriate action; that is, INH or ALW, in the case where a FELP is received from an RT or DL.

If the FROM keyword is used, the INI or TERM options are not allowed.

Note that an autonomous message will be reported if a loopback is initiated (terminated) by the remote terminal.

#### **Command**

[I.26101]

TTST:FRM xy,SEQ ww:RT ffff,{DGA|DGB|DGC|DGD|DGP},\  
LLB[, {TO|FROM}], {INI|TRM|ALW|INH}!

[O.26101]

I hh:mm:ss xy,ww n[vv] TTST RT ffff {DGA|DGB|DGC|DGD|DGP} \  
LLB FROM {INI|TRM} COMPL

### **Explanation Of Parameters**

---

**LLB** - Line loopback

**INI** - Initiate LLB

**TRM** - Terminate LLB

**ALW** - Allow LLB

**INH** - Inhibit LLB

**RT** - Remote Terminal

**ffff** - Bank identification number (0000 - 9999)

**DGA** - Digroup A of the bank

**DGB** - Digroup B of the bank

**DGC** - Digroup C of the bank

**DGD** - Digroup D of the bank

**DGP** - Digroup P of the bank

- TO** - Allows the loopback message to be sent toward the RT
- FROM** - Allows the loopback message to be received from the RT
- COND** - Condition
- cc** - Hexadecimal condition code

**cc** *Explanation*

- 35** NPC has active circuit
- 6B** Operation mode and digroup name don't match
- 7E** Bank id number not found
- 8B** Digroup name and bank id don't match
- A1** Loop back inhibited for digroup
- A2** The requested digroup is carrying service
- A3** LLB not initiated
- A5** Autonomous loopback is active on DGA

## **TTST,SPL,TG**

### **NX64Kbit/s TWO-WAY TEST ACCESS, SPLIT**

#### **Explanation Of Command**

This command is used to split each direction of transmission of an Nx64Kbit/s circuit that is currently under test access in monitor mode.

**Note:** If the test-access group is connected to an unmapped Nx64Kbit/s termination, this command connects both directions of the unmapped termination to the test-access group's west bundle.

#### **Command**

[I.23021]

**ddd** - FROM Channel numbers

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If TO channel is mapped to a channel 000, the circuit can only be tested as N = 1, the corresponding FROM channel ddd will be '000'.

**tc** - Trunk conditioning

For mapped circuits, <tc> will be omitted.

For unmapped circuits, the effective <tc> will be output.

**SG** - Signaling

**g** - Signaling mode of the TG

*g Explanation*

T All channels are Transparent (TRSP)

R One or more channels is robbed-bit or non-TRSP

**CGA** - Carrier group alarm

**PBA** - Primary block alarm

**ftb** - CGA or PBA state

f - FROM CGA or PBA state

*f Explanation*

F FROM NPC is in CGA or PBA

0 FROM NPC is not in CGA or PBA

t - TO CGA or PBA state

*t Explanation*

T TO NPC is in CGA or PBA

0 TO NPC is not in CGA or PBA

b - TG digroup CGA or PBA state

*b Explanation*

E East-bundle NPCTG in CGA or PBA

W West-bundle NPCTG in CGA or PBA

B NPCTG(s) supporting both bundles in CGA or PBA

0 NPCTG(s) not in CGA or PBA

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**TLA** - Terminate and leave active

**S**

- Termination state of the circuit

*s Explanation*

R All channels are released

F One or more FROM channel is terminated

T One or more TO channel is terminated

B One or more of FROM and TO channels are terminated

**COND cc**

- Condition code

**cc** - Hexadecimal condition code

**cc** *Explanation*

**5A** NPC not in service or failed

**5E** invalid test access mode

## **TTST,SPL,TP**

### **TWO-WAY TEST ACCESS**

#### **Explanation Of Command**

This message splits a mapped circuit in the normal circuit state. Also, in the normal circuit state, it connects both directions of an unmapped termination to test port **kk** (01 through 48). If the test port is connected to an unmapped termination, this command will connect both directions of an unmapped termination to the test port. When this command is used with the subrate feature for a circuit termination, the system response will be a subrate test access message.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**TP** - Test port

**kk** - Test port number (01 through 96)

The test port is mapped to predesignated channels of a network processing circuit for test ports (NPCTP) during the provisioning of that test port. The NPC types that can be provisioned as NPCTP are all domestic non-SLC NPC types and all CEPT types that have been provisioned for channel associated signaling (CAS). For the mapping between the test ports and the channels of the test NPCs, see Message No. 31411.

The DACS II test ports are either static or dynamic, as defined in Message No. I.31411.

**SPL** - Split

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number  
**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

## **TTST,TGR,TG,OOS**

### **NX64Kbit/s TWO-WAY TEST ACCESS, TEST- ACCESS GROUP RELEASE**

#### **Explanation Of Command**

This command is used to release one or more currently active test-access groups, and restore any circuits under test to their normal, terminated, or unmapped state. The OOS keyword is required to release a test-access group in two cases:

1. The associated circuit under test is out-of-service.
2. One of both of the NPCs supporting the test-access group is out-of-service.

Where more than one test-access group is specified in the input command the completion message will list the test-access groups in ascending order by the test-access group number and provide information for all test-access groups. If an attempt is made to release a range of test-access groups and no test-access groups in the range have been provisioned the release will be denied. The output for test-access groups testing in other monitor or split modes is printed with a mapping of channels.

When an administrative link fails, all test-access groups associated with that link will be released; automatically. All circuits under test by those TGs will be restored to their normal state; mapped or unmapped. Any termination state entered before or during the test access will remain in effect.

If a failure in an entity involved in an autonomous test-access group release causes the release to fail the release may be performed manually by this command.

## **Explanation Of Parameters**

---

**TGR** - Test (access) group release

**TG** - Test (access) group

**mmm** - TG number (001 through 400)

**nnn** - TG number (001 through 400, greater than mmm)

Variable mmm is used to specify a single TG number or to specify the beginning of a range of TG numbers. Variable nnn is used to specify the end of a range of TG numbers.

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number or first TO NPC number if TG is in HUB mode

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number or second TO NPC number if TG is in HUB mode

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |

**uvmnp** - Hierarchical FROM NPC number or first TO NPC number if TG is in HUB mode

**wxkqr** - Hierarchical TO NPC number or second TO NPC number if TG is in HUB mode

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

For an unmapped TO termination, or a backbone leg (BBL) without a return, the FROM NPC number will be shown as zeroes.

**ddd** - FROM channel number or starting channel of first TO NPC in HUB mode  
**jjj** - Starting channel of second TO NPC in HUB mode

001 through 024

|          |                                                          |
|----------|----------------------------------------------------------|
| 001-031* | Primary NPCs grown as Channel Associated Signaling (CAS) |
| 001-031  | Primary NPCs grown as Non Signaling Associated (NSA)     |

\* Circuits involving CAS channel 31 can only be tested for N = 1.

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s).  
If channel jjj is mapped to a channel 000 (N = 1 only), the corresponding FROM channel ddd will be '000'.

**OOS** - Out-of-service

**RDC** - Red circuit

The circuit is a red circuit

**CUS** - Customer

The circuit is customer controlled

**TLA** - Terminate and leave active

**s** - Termination state of the circuit

**s** Explanation

**R** All channels are released

**F** One or more FROM channel is terminated

**T** One or more TO channel is terminated

**B** One or more of FROM and TO channels are terminated

**NTR** - No Transmit

Backbone leg with no return

**UASGN** - Unassigned

TG is unassigned or idle

**LPD** - Looped

**UEQD** - Unequipped

TG is not equipped

**HUB** - Hub

TG is in Hub mode

**COND** - Condition

**NN** - TG width (1 through 24)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**12** Active CCN side not IS or failed or pested or hardware OOS

**13** UNIT not equipped, not in service, or failed

**14** CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS

**15** FTMI not equipped, not in service, or failed

**16** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS

**17** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS

**18** DSPI not equipped, not in service, or failed

**1A** Required FLI not equipped, not in service, or failed

**1B** Required MXR not equipped, not in service, or failed

**1C** Reqd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS

**1D** Required MIU not equipped, not in service, or failed

**E0** ETSI not equipped, not in service, or failed

**49** test group unequipped

**cc**    *Explanation*

**58**    NPC is OOS for a TGR command and OOS keyword not specified

**5A**    NPC not in service or failed

## **TTST,TLA,NOT,TP**

### **TWO-WAY TEST ACCESS**

#### **Explanation Of Command**

This message is used to modify the terminate and leave activate status of one or both ends of the cross-connected channel associated with the specified test port. The test port is mapped to a predesignated channel of a network processing circuit for test ports during the provisioning of that test port. All domestic NPC types except SLC® NPCs can be provisioned as NPC test ports (NPCTP). All CEPT NPC types that have been provisioned with channel associated signaling may be provisioned as NPC test ports (NPCTP).

Not applicable.

### **Explanation Of Parameters**

---

**TLA** - Terminate and leave activate

**m** - The end of the tested circuit that must be put into the TLA state.  
Set m to one of the values given below:

| <i>m</i> | <i>Explanation</i>        |
|----------|---------------------------|
| F        | Apply TLA to the FROM end |
| T        | Apply TLA to the TO end   |
| B        | Apply TLA to BOTH ends    |

The following apply only to a DMB/conference

|   |                                          |
|---|------------------------------------------|
| L | Apply TLA on all legs towards facilities |
| G | Apply TLA on all legs towards bridge     |
| A | Apply TLA on all legs in both directions |

The end or ends of the channel to which termination has been applied will transmit the idle code specified in the insertion word entered in the GRTH::NPC message, or its default, instead of passing data from the other end of the circuit. If the growth insertion word is MUX (X'1A), the terminate transmit word is the UMC code (X'18).

This message will be denied if test port kk is not in the monitor or split mode or if the tested circuit is already in the specified termination state.

**[t]rst** - The 3- or 4-digit nonhierarchical NPC number of a termination that must not be affected by this command.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical TO NPC number of a termination that must not be affected by this command.

**uv** - Unit number

**m** - Module number

**np** - NPC number within the module

The values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

|           |          |              |                                 |
|-----------|----------|--------------|---------------------------------|
| Unit      | Module   | NPC          |                                 |
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**vvv** - Channel or conference number

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

001-085 (MB NPC)

001-500 (Virtual NPC)

**NOT** - Not

Not means that the following channel number must not be affected by this command. This field is only valid if the termination state is equal to L, G, or A.

**TP** - Test port

**kk** - Test port number (01 through 96)

The test port is mapped to predesignated channels of a Network Processing Circuit for test ports (NPCTP) during the provisioning of that test port.

The NPC types that can be provisioned as an NPCTP are all domestic non-SLC NPC types.

For information on the mapping between the test ports and the channels of the test NPCs (NPCTP), see GRTH::TP kk[,<tc>].

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number with the same valid values as [t]rst.

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number with the same valid values as [t]rst.

**wxkqr** - Hierarchical NPC number of the TO termination of the circuit assigned to the test port (with the same valid values as uvmnp).

**edhfg** - Hierarchical NPC number side of the FROM termination of the circuit assigned to the test port. If the test port is assigned to an unmapped termination, this field will be all zeroes (with the same valid values as uvmnp).

**ed,wx** - Unit number  
**h,k** - Module number  
**fg,qr** - NPC number

**jjj** - TO channel number with the same value as vvv.  
**ddd** - FROM channel number with the same value as vvv.

**s** - Termination state of the circuit

| <i>s</i> | <i>Explanation</i>                   |
|----------|--------------------------------------|
| B        | BOTH sides are terminated            |
| F        | FROM side is terminated              |
| R        | RELEASED. Neither side is terminated |
| T        | TO side is terminated                |

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**T UASGN**  
- The test port is assigned to an unmapped termination.

**PTLA** - The requested TLA state is the present TLA state.

**reason** - Denial reason

| <i>st</i>       | <i>Explanation</i>                                           |
|-----------------|--------------------------------------------------------------|
| <b>SCERR D2</b> | NOT NPC is not provisioned as DGA                            |
| <b>SCERR D5</b> | Corresponding NPC for NOT virtual channel is not provisioned |

## **TTST,TLA,TG**

---

### **NX64Kbit/s TWO-WAY TEST ACCESS, TERMINATE- AND-LEAVE-ACTIVE**

#### **Explanation Of Command**

---

This command is used to terminate one or both ends of an Nx64Kbit/s cross-connection associated with a test-access group.

**Note:** In the terminated state the data normally transmitted over the circuit is replaced by the trunk conditioning specified when the cross-connection was made. The Nx64Kbit/s circuit must be an unterminated, mapped one-way or two-way circuit that is currently in the Monitor or Split test access mode.

#### **Command**

Not applicable.

## Explanation Of Parameters

**TG** - Test-access Group

**mmm** - Test-access Group number (001 through 400)

The TG is designated as in message 31421

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |

**uvmnp** - Hierarchical FROM NPC number  
**wxkqr** - Hierarchical TO NPC number

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM Channel numbers

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If TO channel is mapped to a channel 000, the circuit can only be tested as N = 1, the corresponding FROM channel ddd will be '000'.

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**TLA** - Terminate and leave active

**m**

- Direction of the circuit to be terminated

|          |                    |
|----------|--------------------|
| <i>m</i> | <i>Explanation</i> |
|----------|--------------------|

|   |                         |
|---|-------------------------|
| F | FROM side is terminated |
|---|-------------------------|

|   |                       |
|---|-----------------------|
| T | TO side is terminated |
|---|-----------------------|

|   |                           |
|---|---------------------------|
| B | BOTH sides are terminated |
|---|---------------------------|

**s**

- Termination state of the circuit

|          |                    |
|----------|--------------------|
| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|

|   |                                        |
|---|----------------------------------------|
| F | One or more FROM channel is terminated |
|---|----------------------------------------|

|   |                                      |
|---|--------------------------------------|
| T | One or more TO channel is terminated |
|---|--------------------------------------|

|   |                                                    |
|---|----------------------------------------------------|
| B | One or more of FROM and TO channels are terminated |
|---|----------------------------------------------------|

**UMPD** - Unmapped

Circuit under test is unmapped.

**COND cc**

- Condition code

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 12** Active CCN side not IS or failed or pested or hardware OOS
- 13** UNIT not equipped, not in service, or failed
- 14** CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15** FTMI not equipped, not in service, or failed
- 16** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 18** DSPI not equipped, not in service, or failed
- 1A** Required FLI not equipped, not in service, or failed
- 1B** Required MXR not equipped, not in service, or failed
- 1C** Reqd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS
- 1D** Required MIU not equipped, not in service, or failed
- E0** ETSI not equipped, not in service, or failed
- 44** Invalid direction specified for NTST TLA/TLR
- 49** test group unequipped
- 54** invalid mode for TLA/TLR
- 55** circuit already terminated
- 5A** NPC not in service or failed

## **TTST,TLR,NOT,TP**

### **TWO-WAY TEST ACCESS**

#### **Explanation Of Command**

This message is used to modify the Terminate and Leave Release status of one or both ends of the cross-connected channels associated with the specified test port. This message will be denied if the specified test port is not in the monitor or split mode or if the tested circuit is already in the specified termination release state. When used with the Subrate Feature for a circuit termination, the system response will be STST TLA TP or STST TLA MPTM TP. When used with the Subrate Feature for a circuit termination, the system response will be DISC TACC TS RLS or DISC TACC TS RLS MJU.

Not applicable.

### Explanation Of Parameters

---

**TLR** - Terminate and leave release

**m** - The end of the tested circuit that must be put into the terminate and leave release state.

Set m to one of the values listed below:

| <i>m</i> | <i>Explanation</i>        |
|----------|---------------------------|
| F        | Apply TLR to the FROM end |
| T        | Apply TLR to the TO end   |
| B        | Apply TLR to BOTH ends    |

The following apply only to multipoint circuits

|   |                                          |
|---|------------------------------------------|
| L | Apply TLR on all legs towards facilities |
| G | Apply TLR on all legs towards bridge     |
| A | Apply TLR on all legs in both directions |

**NOT** - Not

NOT means that the termination number following the NOT keyword is not to be affected by this command. This field is only valid for m values L, G, or A.

**TP** - Test port

**kk** - Test port number (01 through 96)

The test port is mapped to predesignated channels of a network processing circuit for test ports (NPCTP) during the provisioning of that test port. All domestic nonSLC NPC types can be provisioned as NPCTP. For the mapping between the test ports and the channels of the test NPCs, see the GRTH::TP message.

**[t]rst** - The 3- or 4-digit Nonhierarchical NPC number of a termination that must not be affected by the command.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical NPC number of a termination that must not be affected by this command

**uv** - Unit number

**m** - Module number

**np** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**vvv** - Channel or conference number

Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

|         |               |
|---------|---------------|
| 001-085 | (MB NPC)      |
| 001-500 | (Virtual NPC) |

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number with the same valid values as [t]rst.

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number with the same valid values as [t]rst.

**wxkqr** - The hierarchical NPC number of the TO termination of the circuit assigned to the test port with the same valid values as uvmnp.

**edhfg** - The hierarchical NPC number of the FROM termination of the circuit assigned to the test port. If the test port is assigned to an unmapped termination, this field will be all zeros (with the same valid values as uvmnp).

**ed,wx** - Unit number  
**h,k** - Module number  
**fg,qr** - NPC number

**jjj** - TO channel with the same valid values as vvv.  
**ddd** - FROM channel with the same valid values as vvv.

**CUS** - Customer  
The circuit is a Customer-controlled Circuit

**RDC** - Red circuit  
The tested circuit is a protected circuit

**s** - Termination state of the circuit

*s Explanation*

F FROM side is terminated  
T TO side is terminated  
B BOTH sides are terminated  
R Neither side is terminated

**T UASGN**

- The test port is assigned to an unmapped termination

**NTLA** - The requested TLA state is the present TLR (RLS) state

**reason** - Denial reason

*st Explanation*

**SCERR D2** NOT NPC is not provisioned as DGA  
**SCERR D5** Corresponding NPC for NOT virtual channel is not provisioned  
**SCERR D8** Invalid NOT channel number  
**BADCCN** CCN OOS or failed  
**BADFC** FC OOS or failed  
**BADFLI** FLI OOS or failed  
**BADFMT** FMT (Formatter) OOS or failed  
**BADFTMI** FTMI OOS or failed  
**BADMIU** MIU OOS or failed  
**BADMXR** MXR OOS or failed  
**BADUNIT** UNIT OOS or failed  
**CHREST** CAS channel 031 not allowed  
**F FAIL** FROM side NPC is marked failed  
**F OOS** FROM side NPC (abc) is out of service  
**FAIL** Test port Group NPC failed  
**INERR** Input error in the specification of TLA direction  
**MCOND** An entity in the network is OOS or failed  
**NA** DACS CCN or UNIT involved cannot perform the cross-connect  
**OOS** Test port Group NPC out of service  
**T FAIL** TO side NPC is marked failed  
**T OOS** TO side NPC is Out Of Service

## **TTST,TLR,TG**

### **NX64Kbit/s TWO-WAY TEST ACCESS, TERMINATE- AND-LEAVE-RELEASE**

#### **Explanation Of Command**

This command is used to release one or both ends of an Nx64Kbit/s cross-connection associated with the specified test-access group. The circuit to be released must be a terminated, mapped one-way or two-way circuit, that is currently in the Monitor or Split test access mode. Upon release normal data transmission is restored in the direction specified in the command.

Not applicable.

## Explanation Of Parameters

**TG** - Test-access group

**mmm** - Test-access Group number (001 through 400)

The TG is designated as in message 31421

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM Channel number

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If TO channel is mapped to a channel 000, the circuit can only be tested as N = 1, the corresponding FROM channel ddd will be '000'.

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**TLR** - Terminate and leave released

**m**

- Direction of the circuit to be released

|          |                    |
|----------|--------------------|
| <i>m</i> | <i>Explanation</i> |
|----------|--------------------|

|   |                       |
|---|-----------------------|
| F | FROM side is released |
|---|-----------------------|

|   |                     |
|---|---------------------|
| T | TO side is released |
|---|---------------------|

|   |                         |
|---|-------------------------|
| B | BOTH sides are released |
|---|-------------------------|

**TLA** - Terminate and leave active

**s**

- Termination state of the circuit

|          |                    |
|----------|--------------------|
| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|

|   |                           |
|---|---------------------------|
| R | All channels are released |
|---|---------------------------|

|   |                                        |
|---|----------------------------------------|
| F | One or more FROM channel is terminated |
|---|----------------------------------------|

|   |                                      |
|---|--------------------------------------|
| T | One or more TO channel is terminated |
|---|--------------------------------------|

**UMPD** - Unmapped

Circuit under test is unmapped.

**COND cc**

- Condition code

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 12** Active CCN side not IS or failed or pested or hardware OOS
- 13** UNIT not equipped, not in service, or failed
- 14** CCB not eqd, not IS, or failed or inactive side CCB not eqd or not IS
- 15** FTMI not equipped, not in service, or failed
- 16** FC not eqd, not IS, or failed or inactive side FC not eqd or not IS
- 17** TSI not eqd, not IS, or failed or inactive side TSI not eqd or not IS
- 18** DSPI not equipped, not in service, or failed
- 1A** Required FLI not equipped, not in service, or failed
- 1B** Required MXR not equipped, not in service, or failed
- 1C** Req'd FMT not eqd,not IS,or failed,or inact side FMT not eqd, or not IS
- 1D** Required MIU not equipped, not in service, or failed
- E0** ETSI not equipped, not in service, or failed
- 44** Invalid direction specified for NTST TLA/TLR
- 49** test group unequipped
- 56** circuit not terminated
- 5A** NPC not in service or failed

## **TTST,TPR,ALL,OOS**

### **TEST PORT RELEASE**

#### **Explanation Of Command**

This command requests that all test ports set up by the link on which this command is input be restored to the released mode. An individual output message will be received for each test port released (see TTST,TPR,TP,OOS)

This output message will be received after all test ports have been released.

Substrate test sessions are also released by this command.

#### **Command**

[I.27002]

TTST:FRM xy,SEQ ww:TPR,ALL[,OOS]!

#### **Completion Message**

[O.27002]

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

[O.27002]

I hh:mm:ss xy,ww TTST TPR ALL COND cc COMPL

### **Explanation Of Parameters**

---

**TPR** - Test Port Release

**ALL** - All

**OOS** - Out-of-service

The OOS keyword is used to release test ports on an out-of-service circuit. Any test port, regardless of the type of circuit accessed, will be released.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

**00** No conditions

**01** No test ports were activated by link n

**02** One or more test ports could not be released

## **TTST,TPR,TP,OOS**

### **TWO-WAY TEST ACCESS**

#### **Explanation Of Command**

This command allows a circuit under test to be put in the release mode and to be restored to its mapped (terminated or normal) state. When the Subrate Feature is used for a circuit termination, the system response will be a Subrate test port release message.

#### **Command**

### Explanation Of Parameters

**TP** - Test port

**kk** - Test port number (01 through 96)

**OOS** - Out-of-service

Used to release test ports on an out-of-service circuit

**[s]abc** - The 3- or 4-digit nonhierarchical FROM NPC number

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**  
**9961-9966**

**uvmnp** - Hierarchical TO NPC number of the circuit assigned to the test port.

**wxkqr** - Hierarchical FROM NPC number of the circuit assigned to the test port.

If the test port is assigned to an unmapped termination, this field will be all zeroes.

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**ddd** - FROM channel or conference number  
**jjj** - TO channel or conference number

Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

|         |               |
|---------|---------------|
| 001-085 | (MB NPC)      |
| 001-500 | (Virtual NPC) |

**TPR** - Test port release

**TLA** - Terminate and leave active

**s** - Termination state of the circuit

|          |                                      |
|----------|--------------------------------------|
| <b>s</b> | Explanation                          |
| <b>R</b> | RELEASED. Neither side is terminated |
| <b>F</b> | FROM side is terminated              |
| <b>T</b> | TO side is terminated                |
| <b>B</b> | Both sides are terminated            |

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**NTR** - No transmit

|               |                                                                           |

## UTL

---

This section documents the **UTL** command.

## **UTL,ACO**

---

### **ALARM CUTOFF**

#### **Explanation Of Command**

---

This message executes an audible alarm cutoff (ACO), silencing any currently active central office audible frame alarms. DACS II also illuminates the green ACO LED on the front status panel. The ACO remains active and the green LED remains illuminated until all frame alarms are retired or a new alarm appears on the system.

Note that executing an ACO **does not** inhibit subsequent audible alarms from being generated for additional failures. In addition, the ACO does not retire local or remote **visible** indications and does not cause the system to issue an alarm clear notification.

Executing an ACO by inputting this command is equivalent to pressing the status panel ACO push-button. When the ACO push-button is pressed, a message indicating that the ACO has been activated is generated by the system.

#### **Command**

---

[I.51111]

**UTL:FRM xy,SEQ ww:ACO!**

#### **Completion Message**

---

[O.51111]

**pahh:mm:ss xy,ww n[vv] UTL ACO {ACTIVE|INACT} COMPL**

#### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**ACO** - Alarm cutoff

**ACTIVE** - Active alarm

The appearance of this keyword indicates that the audible alarm cutoff has been activated in the system.

**INACT** - Inactive alarm

The appearance of this keyword indicates that there were no alarms on the system and the audible alarm cutoff was not activated.

## **UTL,BMTR,FROM,TO,EXCT,INCL**

### **BACKUP MEMORY TRANSFER**

#### **Explanation Of Command**

This message performs the following functions:

1. When the MC is in-service, it may be used to request a transfer of database information from random access memory (RAM) to the memory device (MEM) or devices that are in-service. The Primary Memory (PMEM) device will always be in-service. The Secondary Memory (SMEM) device may or may not be in-service. If SMEM is in-service, then a transfer of database information will be performed from RAM to SMEM.
2. When the MC is in maintenance condition (MCOND), it may be used to request a transfer of executables or database information between PMEM and SMEM or between SMEM and PMEM. If the optional EXCT keyword is **not** used only database information will be transferred. If the EXCT keyword is used only executables will be transferred.

Restricted maintenance privilege is required for transfers of executables or database information from SMEM to PMEM.

Every ten minutes the state of the frame is checked to look for changes in provisioning and/or cross connections. If a change has occurred within that period, an autonomous request is made to transfer data base information from RAM to MEM.

If the user issues a command transferring database information or executables from PMEM to SMEM, the command is executed immediately; however, if the transfer occurs from SMEM to PMEM the following message will appear:

#### **ARE YOU SURE? (YES/NO)**

Only if the answer is YES, will the command be executed. If the answer is not YES or the user does not respond within 60 seconds, the following will be displayed:

#### **COMMAND ABORTED**

### **Command**

---

## Explanation Of Parameters

---

**BMTR** - Backup memory transfer

**FROM** - From

**from** - Source for backup memory transfer

**TO** - To

**to** - Destination for backup memory transfer

RAM Random access memory  
PMEM Primary memory device  
SMEM Secondary memory device  
MEM PMEM, SMEM or both

**Note:** The only permissible combinations are listed below:

**from to**

RAM MEM  
PMEM SMEM  
SMEM PMEM

**EXCT** - Executable

Transfer generic executable software only. May not be used when transferring memory contents from RAM to MEM. Frame must be in maintenance condition state (MCOND) when transferring executable software from PMEM to SMEM or SMEM to PMEM. Additionally, SMEM to PMEM requires restricted maintenance (RMON) privileges.

**INCL** - Inclusive

The INCL keyword is used to request that the data base on the PMEM be transferred to the SMEM excluding the generic journal files.  
This keyword cannot be combined with the EXCT keyword.  
INCL may not be used when transferring RAM to MEM.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**8C** DB MP or units ram error  
**8D** DB PMEM error OP-CL-RD-WR-SK  
**8E** DB can't send or receive mail  
**8F** Can't lock or unlock ram database  
**90** DB can't get the slave mail box  
**95** Invalid option,mailbox or flag  
**96** Unit(s) OOS, and additional backup required  
**97** Entity can't be addressed in this configuration  
**98** Checksums verification failed

**cc**    *Explanation*

- 99**    G1 SMEM for SMEM->PMEM w/journals
- 20**    Software Identification Block is not readable
- 21**    Software Identification Block failed comparison
- A5**    FPI on SMEM does not match one on PMEM
- 84**    Problem occurred while accessing SMEM or unformatted SMEM
- 85**    Problem occurred while accessing PMEM
- 86**    Source does not contain requested information
- 88**    SMEM is a normal SMEM
- 89**    Problem occurred while accessing BOTH\_MEM
- 90**    Can't mount or unmount BOTH\_MEM
- 91**    Can't mount or unmount SMEM
- 92**    Can't mount or unmount PMEM
- 93**    SMEM is not present
- 94**    SMEM unit is not restored
- E6**    DB SMEM error OP-CL-RD-WR-SK
- E7**    PMEM not restored
- F0**    SSC Diagnostic Failure
- FC**    Invalid executable on card
- FF**    DB retrofit fail

## **UTL,BOOT,FRAME,CLR**

### **UTILITY BOOT**

#### **Explanation Of Command**

This message requests the transfer of the data base from the PMEM to the random access memory (RAM). This utility message, rather than the BOOT command, updates the frame from the PMEM data base.

The optional CLR keyword is unnecessary but it is allowed for compatibility with older software releases.

#### **Command**

[I.58001]

**UTL:FRM xy,SEQ ww:BOOT,FRAME[,CLR]!**

#### **Completion Message**

[O.58001]

**M hh:mm:ss xy,ww n[vv] UTL BOOT FRAME[ CLR] COND cc COMPL**

[O.58002]

**M hh:mm:ss xy,ww n[vv] UTL BOOT FRAME IN PROGRESS**

#### **Denial Message**

[O.58001.01]

**M hh:mm:ss xy,ww n[vv] UTL BOOT FRAME[ CLR] COND cc DNY**

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**CLR** - Clear

The optional CLR keyword is unnecessary but it is allowed for compatibility with older software releases.

**PMEM** - Primary memory card.

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 46**    Failed to boot CONF file
- 47**    Failed to boot DB
- 48**    Failed to boot journal--recurrence indicates database corruption
- 49**    Failed to boot unit
- 4C**    Failed to boot CI
- 51**    General boot failure (vanilla flavor)
- 18**    DSPI not equipped, not in service, or failed
- 52**    Database is empty

## **UTL,CLR,ALL**

---

### **UTILITY CLEAR**

#### **Explanation Of Command**

---

This message requests a clear of the counters or state on a specified facility performance parameter for all in-service network processing circuits (NPCs) which have the specified parameter.

DACS II will silently skip NPCs which can not be cleared.

#### **Command**

---

[I.56011]

UTL:FRM xy,SEQ ww:CLR,<parameter>,ALL!

#### **Completion Message**

---

[O.56011]

M hh:mm:ss xy,ww n UTL CLR <parameter> ALL COMPL

#### **Denial Message**

---

[O.56011.01]

M hh:mm:ss xy,ww n UTL CLR <parameter> ALL COND cc DNY

#### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

---

**CLR** - Clear

### **parameter**

- Facility performance monitoring parameter

#### *parameter Explanation*

|      |                                         |
|------|-----------------------------------------|
| BER  | Bit error rate                          |
| BPV  | Bipolar violation                       |
| COFA | Change of frame alignment               |
| CRC  | Cyclic redundancy code                  |
| ER   | Error rate (same as BER for D4 framing) |
| ERS  | Errored seconds                         |
| FRER | Framing error                           |
| OOF  | Out of frame                            |
| SERS | Severely errored seconds                |
| SLIP | Slip count                              |
| SAFE | SAFE count                              |
| SANE | SANE count                              |

**cc** - Hexadecimal condition code

#### **cc** *Explanation*

|           |                                                          |
|-----------|----------------------------------------------------------|
| <b>04</b> | Subject entity is out of service                         |
| <b>10</b> | Unit is not equipped                                     |
| <b>11</b> | UC is out of service                                     |
| <b>12</b> | UC is in service but failed                              |
| <b>14</b> | FTMI is out of service                                   |
| <b>15</b> | NPC is unequipped                                        |
| <b>1F</b> | FTMI is in service but failed                            |
| <b>24</b> | Unit type error                                          |
| <b>26</b> | NPC type error                                           |
| <b>46</b> | NPC Failed or Out of Service                             |
| <b>47</b> | IU/TI type NPC                                           |
| <b>7E</b> | Bank id number not found                                 |
| <b>A0</b> | No SAFE alarm for DGP                                    |
| <b>A1</b> | The parameter specified does not match with the NPC type |

## **UTL,CLR,ERR,HWER,SWER**

### **UTILITY CLEAR HARDWARE/SOFTWARE ERROR RECOVERY LOG FILE**

#### **Explanation Of Command**

This message clears the DACS II error rate (ERR) recovery log. The log is a file that contains the history of the recovery events.

#### **Command**

[I.56061]

**UTL:FRM xy,SEQ ww:CLR,ERR,{HWER|SWER}!**

#### **Completion Message**

[O.56061]

**M hh:mm:ss xy,ww n[vv] UTL CLR ERR {HWER|SWER} COMPL**

#### **Denial Message**

[O.56061.01]

**M hh:mm:ss xy,ww n[vv] UTL CLR ERR {HWER|SWER} COND cc DNY**

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**CLR** - Clear

**ERR** - Error rate recovery

**HWER** - Hardware error recovery log file

**SWER** - Software error recovery log file

**cc** - Hexadecimal condition code

**cc** *Explanation*

**F1** File has already been cleared

## **UTL,CLR,NPC,ALL,AI,LOCN,MONDAT,MONTIM**

### **UTILITY CLEAR DA/TA/PA NPC PARAMETERS**

#### **Explanation Of Command**

This message clears the facility performance monitoring parameter counts of DA and TA type NPCs.

This command will handle NPC addressing in the input command as follows: If only a single NPC is addressed in the input command, then either a completion or denial response will be generated for the addressed NPC. DACS II will always deny invalid commands to specifically addressed NPCs.

If a range of NPCs is addressed or the ALL NPC keyword is used and the feature applies to one or more NPCs within the range, DACS II will perform the operation on the NPCs in the range that support the requested feature, but skip the NPCs which do not support the requested feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports the requested feature, DACS II will generate a completion response for the entire range of NPCs; individual denial responses will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range support the requested feature, DACS II will generate a range denial response. NPC - Network processing circuit

If an NPC range is specified in the input command, the following floating window rules apply:

1. Unequipped NPCs within the requested range will be skipped.
2. If a CEPT gap is within the requested range, the NPCs in the gap will be skipped.
3. If an endpoint of the requested range is in a CEPT gap, then the command will be denied."

## **Command**

## **Autonomous Message**

Not applicable.

## **Explanation Of Parameters**

**NPC** - Network processing circuit

**ALL** - All

This keyword is a valid option for NPCs rather than specifying a single or range of NPCs. It is used to clear a single parameter on all ANSI NPCs. If the ALL NPC option is selected, the input command must specify only a single facility parameter. An input command with the ALL NPC key word and any facility parameter groupings will be denied.

[s]abc - The 3- or 4-digit nonhierarchical NPC number

[t]def - The 3- or 4-digit nonhierarchical NPC number

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

Unit    Module    NPC  
**01-16    1-6    01-28**

## parameter

- Parameter name

The type of monitored parameter accumulation registers which are to be reset. If only a single NPC is specified in the input command, all types of its parameter accumulators may be reset (possibly restricted by the choices of other input parameters) by selecting the value ALLPAR in the <parameter> field. If more than one NPC is specified in the input command, then ALLPAR, ALLL, and ALLP are not valid values for parameter.

The values ALLL and ALLP may be selected only if MONDAT and MONTIM are set to a value of HIST to clear a set of historical registers. They are used to clear all historical 15-minute and daily line parameters and path parameters, respectively, as a group. The AI parameter must not be entered on the input command line. (The value ALLPAR may also be selected if the MONDAT and MONTIM parameters are programmed to clear a set of historical registers. It is used to clear the group of all historical line and path parameters.)

### parameter      *Explanation*

ALLL    All line parameters listed below  
ALLP    All path parameters listed below  
ALLPAR    All parameters listed below  
CSSP    Path Controlled Slip Seconds  
CVL    Line Coding Violations  
CVP    Path Coding Violations  
ESL    Line Errored Seconds  
ESP    Path Errored Seconds  
SEFS    Path Severely Errored Framing Seconds  
SESL    Line Severely Errored Seconds  
SESP    Path Severely Errored Seconds  
UASP    Path Unavailable Seconds

**AI**      - Accumulation interval

**aaaaa**    - The accumulation time period for the specified parameter.

This parameter must be specified in the input command line unless MONDAT and MONTIM are programmed to reset a group of historical performance parameters. When a group of historical parameters is reset, both the 15-minute and daily accumulators are reset.

### **aaaaa**      *Explanation*

15MIN    Parameter count from a 15-minute accumulator  
DAILY    Parameter count from a daily accumulator

**LOCN** - Location

**locn** - Facility location

The facility location which corresponds to the set of performance monitoring registers which are to be reset. If this optional parameter is not present in the input command, it defaults to a value of NEND.

**locn**    *Explanation*

ALL      Near-end and Far-end

FEND    Far-end

NEND    Near-end

**MONDAT**            - Monitored Date

**dddd**    - Performance monitoring period begin date

The date of the beginning of the performance monitoring period to reset (specified in the AI parameter) as MMDD, where MM is the month (01-12) and DD is the day (01-31) of the month. If this optional input parameter is not present in the command, it defaults to a value of CURD, the current date.

The value HIST is an option for input commands. The value HIST provides a group reset of near-end and/or far-end historical 15-minute and daily accumulators on a per-line and per-path basis. If the value HIST is selected for MONDAT, it must also be selected for MONTIM. The only valid options for <parameter> in this case are {ALLPAR|ALL|ALLP} and the valid options for LOCN are {NEND|FEND|ALL}. The AI parameter must not be entered on the input command line.

**dddd**                            *Explanation*

{01-12}{01-31}    Month of Year/Day of Month Format

CURD              Current Date

HIST               All historical accumulators

**MONTIM** - Monitored Time

**tttt** - Performance monitoring period begin time

The beginning time of day of the performance monitoring period to reset (specified in the AI parameter) as HHMM, where HH is the hour (00-23) and MM is the minute {00,15,30,45} of the hour. If this optional input parameter is not present in the command, it defaults to a value of CURT, the current time.

The value HIST is an option for input commands. The value HIST provides a group reset of near-end and/or far-end historical 15-minute and daily accumulators on a per-line and per-path basis. If the value HIST is selected for MONTIM, it must also be selected for MONDAT. The only valid options for <parameter> in this case are {ALLPAR|ALLL|ALLP} and the valid options for LOCN are {NEND|FEND|ALL}. The AI parameter must not be entered on the input command line.

This parameter must not appear in input commands which specify daily accumulation intervals (AI = DAILY).

| <b>tttt</b>          | <i>Explanation</i>          |
|----------------------|-----------------------------|
| {00-23}{00,15,30,45} | Hour of Day/Minute of Hour  |
| HIST                 | All historical accumulators |
| CURT                 | Current Time                |

**uvmnp** - Hierarchical NPC number

**wxkqr** - Hierarchical NPC number

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                                              |
|-----------|-----------------------------------------------------------------|
| <b>04</b> | Subject entity is out of service                                |
| <b>11</b> | UC is out of service                                            |
| <b>12</b> | UC is in service but failed                                     |
| <b>14</b> | FTMI is out of service                                          |
| <b>15</b> | NPC is unequipped                                               |
| <b>1F</b> | FTMI is in service but failed                                   |
| <b>26</b> | NPC type error                                                  |
| <b>0C</b> | The MONDAT and MONTIM parameters can not both be specified      |
| <b>B7</b> | The associated MXR is In-Service but pested                     |
| <b>A1</b> | The parameter specified does not match with the NPC type        |
| <b>17</b> | Command did not execute for any entity specified in the command |
| <b>1B</b> | Historical data can not be specified                            |
| <b>1E</b> | Monitored Date field is not allowed                             |
| <b>20</b> | Only DAILY for accumulation interval is allowed                 |
| <b>21</b> | Only 15MIN for accumulation interval is allowed                 |
| <b>22</b> | FTMI is PESTED                                                  |

**cc**    *Explanation*

- 23**    No PM data available
- 24**    Monitored Time field is not allowed
- 25**    Accumulation Interval field is missing
- 27**    Only historical data can be specified
- 31**    Accumulation Interval field is not allowed
- 89**    Interval is not valid/not available

## **UTL,CLR,NPC,PARAMS**

### **CLEAR FACILITY PERFORMANCE PARAMETERS**

#### **Explanation Of Command**

This message requests the facility performance parameters be cleared of the values or state for one network processing circuit (NPC).

This command does not clear the parameters on a digital interface unit (DIU) NPC.

### **Explanation Of Parameters**

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**CLR** - Clear

**PARAMS** - Parameters

For domestic NPCs, the parameters which will be cleared with this command are:

| <i>Parameter</i> | <i>Explanation</i>                      |
|------------------|-----------------------------------------|
| BER              | Bit Error Rate                          |
| BPV              | Bipolar Violation                       |
| COFA             | Change Of Frame Alignment               |
| CRC              | Cyclic Redundancy Code                  |
| ER               | Error Rate (same as BER for D4 framing) |
| ERS              | Errored Seconds                         |
| FRER             | Framing Error                           |
| OOF              | Out Of Frame                            |
| SERS             | Severely Errored Seconds                |
| SLIP             | Slip count                              |
| SAFE             | Shelf Alarm Far End count               |
| SANE             | Shelf Alarm Near End count              |

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                          |
|-----------|---------------------------------------------|
| <b>02</b> | Subject entity is not equipped              |
| <b>04</b> | Subject entity is out of service            |
| <b>10</b> | Unit is not equipped                        |
| <b>11</b> | UC is out of service                        |
| <b>12</b> | UC is in service but failed                 |
| <b>13</b> | FTMI is not equipped                        |
| <b>14</b> | FTMI is out of service                      |
| <b>1F</b> | FTMI is in service but failed               |
| <b>45</b> | IU/TI type NPC failed                       |
| <b>46</b> | NPC Failed or Out of Service                |
| <b>47</b> | IU/TI type NPC                              |
| <b>B7</b> | The associated MXR is In-Service but pested |

## **UTL,CLR,NPC,RT,DL**

### **UTILITY CLEAR**

#### **Explanation Of Command**

This message requests a given facility performance parameter be cleared of the count or state for a single network processing circuit (NPC) or a range of circuits in a facility terminating unit (FTU) or a DS3 unit.

Note that if the remote terminal (RT) or the digital carrier line unit (DL) option is specified during input, the specified parameter clears the count on all digroups in that bank which have the specified parameter.

#### **Command**

##### **Nonhierarchical**

[I.56001]

```
UTL:FRM xy,SEQ ww:CLR,<parameter>,{NPC [s]abc[-[t]def]}|\

## **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**CLR** - Clear

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, the first NPC number of a range

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, the last NPC number of a range

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**uvmnp** - Hierarchical NPC number, the first NPC number of a range

**wxkqr** - Hierarchical NPC number, the last NPC number of a range

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

#### parameter

- One chosen from the list below:

| Parameter | Explanation                                                           |
|-----------|-----------------------------------------------------------------------|
| BER       | Bit Error Rate                                                        |
| BPV       | Bipolar Violation                                                     |
| COFA      | Change Of Frame Alignment                                             |
| CRC       | Cyclic redundancy (CR) code<br>CR checksum errors (CRC-6) in ESF mode |
| ER        | Error Rate (same as BER for D4 framing)                               |
| ERS       | Errored Seconds                                                       |
| FRER      | Framing Error                                                         |
| LOFA      | Loss of Frame Alignment Events                                        |
| OOF       | Out Of Frame                                                          |
| SAFE      | Shelf Alarm Far End count                                             |
| SANE      | Shelf Alarm Near End count                                            |
| SERS      | Severely Errored Seconds                                              |
| SLIP      | Slip count                                                            |

**Note:** Only the BER and SLIP parameters are allowed for Clear-DS1 NPCs.  
SERS, ERS, and SLIP are only individually clearable for domestic NPCs.  
For CEPT NPCs they will be cleared by the PM parameter.

**RT** - Remote terminal (SLC® carrier system)

**DL** - Digital carrier line unit (SLC carrier system)

**ffff** - Bank identification number (0000 through 9999) (SLC carrier system)

**MD** - Mode

**[g]g** - Mode of operation

| <i>[g]g</i> | <i>Explanation</i>                       |
|-------------|------------------------------------------|
| 1           | SLC 96 Carrier Mode 1                    |
| 3           | SLC 96 Carrier Mode 3                    |
| C           | SLC Series 5 Carrier (Feature Package C) |

**UEQD** - Unequipped

**BADNPC** - Bad NPC

The selected parameter is not valid for this NPC.

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                                                    |

| A1        | The parameter specified does not match with the NPC type              |

## **UTL,DATE,FORMAT,INT**

### **SET DATE**

#### **Explanation Of Command**

This command sets the date (month, day, year) and the interval at which it will be printed for the DACS II clock. The time (hour, minute, second) can also be set, but not simultaneously with the date.

#### **Command**

[I.51021]

**UTL:FRM xy,SEQ ww:DATE <new-date>[,FORMAT ggg][,INT ii]!**

#### **Completion Message**

[O.51021]

**M hh:mm:ss xy,ww n[vv] UTL DATE aa/bb/cc FORMAT ggg INT ii COMPL**

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

## Explanation Of Parameters

---

**DATE** - Date

### **new-date**

- Date specified in one of the following formats:

| <i>new-date</i> | <i>Date format</i>                       |
|-----------------|------------------------------------------|
| moda[ce]yr      | Month, followed by day, followed by year |
| damo[ce]yr      | Day, followed by month, followed by year |

**mo** - month  
**da** - day  
**ce** - century  
**yr** - year

The 2-digit century (ce) field is optional. If the user enters a 2-digit number for the year field, DACS II assumes a default value of 19 for the century and accepts only the range of years from 86 through 99. However, any 4-digit century-year entry from 1986 onward is acceptable.

**INT** - Interval

**ii** - Interval at which DACS II will print the date

| <i>ii</i> | <i>Meaning</i>                                        |
|-----------|-------------------------------------------------------|
| 01        | Every hour on the hour                                |
| 02        | Every even hour on the hour                           |
| 04        | Every fourth hour on the hour: 04, 08, 12, 16, 20, 24 |
| 06        | Every sixth hour on the hour: 06, 12, 18, 24          |
| 08        | Every eighth hour on the hour: 08, 16, 24             |
| 12        | Twice daily on the hour: 12, 24                       |
| 24        | Once daily at midnight (default)                      |

**FORMAT** - Format

**ggg** - Date format

The format to be used for interpreting the date from the input message and printing it on PDS output messages.

|     |                                       |
|-----|---------------------------------------|
| ggg | Date format                           |
| MDY | Month/Day/Year (USA format)           |
| DMY | Day/Month/Year (International format) |

**DATE** - Date

**aa** - Month or day

**bb** - Day or Month

**cc** - Year (2 or 4 digits)

The DATE will be displayed in either the USA format or the International format, depending on the value of ggg.

## **UTL,INIT,ALM**

---

### **UTILITIES, ALARM REPORTING**

#### **Explanation Of Command**

---

This message sets the DACS II audio/visual alarm reporting method to either remote only (**a = 2**) or to local and remote (**a = 3**).

#### **Command**

---

[I.51101]

**UTL:FRM xy,SEQ ww:INIT,ALM a!**

#### **Completion Message**

---

[O.51101]

**M hh:mm:ss xy,ww n[vv] UTL INIT ALM a COMPL**

#### **Denial Message**

---

[O.51101.01]

**M hh:mm:ss xy,ww n[vv] UTL INIT ALM a COND cc DNY**

#### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**INIT** - Initialize

**ALM** - Alarm

**a** - Alarm reporting method

- |   |                  |
|---|------------------|
| a | Explanation      |
| 2 | Remote           |
| 3 | Local and Remote |

**cc** - Hexadecimal condition code

**cc** *Explanation*

| <b>11</b> | UC is out of service          |
| <b>12</b> | UC is in service but failed   |
| <b>14</b> | FTMI is out of service        |
| <b>15</b> | NPC is unequipped             |
| <b>1F</b> | FTMI is in service but failed |
| <b>0B</b> | Invalid CEPT NPC              |
| <b>44</b> | NPC not IU/TI type            |
| <b>46</b> | NPC Failed or Out of Service  |

## **UTL,LOC**

---

### **UTILITY LOCATION**

#### **Explanation Of Command**

---

This message requests a printout of the physical location of a plug-in entity using the equipment location (EQL) method. A similar method must be used if nonplug-in entities must be located, such as a network processing circuit, main controller, cross-connect network, etc.

#### **Command**

---

[I.56401]

**UTL:FRM xy,SEQ ww:LOC,<entity>!**

## Explanation Of Parameters

---

**LOC** - Location

Physical location

**entity** - Plug-in equipment entity

Main Controller Entities:

| <i>entity</i> | <i>Explanation</i>                              |                 |
|---------------|-------------------------------------------------|-----------------|
| MC            | Main controller                                 |                 |
| CPU           | Central processing unit                         |                 |
| BX            | Bus extender                                    | (SBF/Non-CEF)   |
| MTC           | Maintenance circuit pack                        | (SBF/Non-CEF)   |
| EBX           | Expanded bus extender                           | (CEF/ECEF/ESBF) |
| EMTC          | Expanded maintenance circuit pack               | (CEF/ECEF/ESBF) |
| CI            | Communications interface                        |                 |
| PMEM          | Primary Memory Card, within CPU board           |                 |
| DISK          | Secondary Memory Card, plugs into the CPU board |                 |
| STATUS PANEL  | (Note 1)                                        |                 |

**Note 1:fp** The location of this entity is not on the designation strip. The approximate location is returned in the output message.

The entity CPU cannot be used with UNIT to query the Unit Controller; instead only the entity UC can be used.

**Synchronizer entities:**

*entity    Explanation*

**SYNC 0                    Synchronizer**  
**SYNC 1**

**SYNC 0,TB               Synchronizer Time Base**  
**SYNC 1,TB**

**SYNC 0,TLI 1    Synchronizer Timing Link Interface**  
**SYNC 0,TLI 2**  
**SYNC 0,TLI 3**  
**SYNC 0,TLI 4**  
**SYNC 1,TLI 1**  
**SYNC 1,TLI 2**  
**SYNC 1,TLI 3**  
**SYNC 1,TLI 4**

**SYNC,TLI 3,CRO           Synchronizer Clock Reference Oscillator (Note 2)**

**Note 2:** The location of the CRO is not on the designation strip. It is a Time Base application for TLI slots 3 and 4 on sides 0 and 1.

**Cross-Connect entities:**

| <b>entity</b>                                                                                                        | <b>Explanation</b>              |                    |

| UNIT 14 | NPC 2081                                      |
| UNIT 15 | NPC 2241                                      |
| UNIT 16 | NPC 2401                                      |

UNIT [q]q,UC            Unit controller

**FTU entities:**

*entity*            **Explanation**

UNIT [q]q,UBX            Unit bus extender

UNIT [q]q,FTMI b        Facility terminating module interface  
(b = 1 through 4)

UNIT [q]q,FC 0b            Format converter

UNIT [q]q,FC 1b

**DSPU entities:**

*entity*            **Explanation**

UNIT [q]q,DSPI            Digital signal processing interface

If the unit is equipped as a DS3 Unit:

**UNIT Common Equipment entities:**

| <i>entity</i>   | <i>Explanation</i>                        |
|-----------------|-------------------------------------------|
| UNIT [q]q       | Unit [q]q's Protection MXR (1 through 16) |
| UNIT [q]q,UC    | Unit Controller                           |
| UNIT [q]q,MXR d | Multiplexer (d = P,1 through 6)           |
| UNIT [q]q,MIU d | Multiple Interface Unit                   |
| UNIT [q]q,FLI k | Facility Line Interface (k = S or P)      |
| UNIT [q]q,FMT s | Formatter (s = 0 or 1)                    |

**Network Processing Circuit entities of an FTU:**

| <i>entity</i>       | <i>Explanation</i>         |
|---------------------|----------------------------|
| NPC [s]abc[-[t]def] | Nonhierarchical NPC number |
| NPC uvmpnp[-wxkqr]  | Hierarchical NPC number    |

**Network Processing Circuit entities of a DS3U:**

| <i>entity</i>       | <i>Explanation</i>         |
|---------------------|----------------------------|
| NPC [s]abc[-[t]def] | Nonhierarchical NPC number |
| NPC uvmpnp[-wxkqr]  | Hierarchical NPC number    |

uv, wx - Unit number  
m, k - Module number  
np, qr - NPC number within the module

If an NPC is in an FTU, the command will return the location of the Dual Digroup Card that processes the NPC.

The valid nonhierarchical FTU NPC numbers are:

If NPC numbers are expressed in three digits, the valid values are:

**DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)**

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

The valid hierarchical FTU NPC numbers are:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

If an NPC is in a DS3 Unit, the command will return the location of the Service MXR that processes the NPC.

Network Processing Circuit entities of a DSPU:

*entity*

NPC [s]abc[-[t]def],SIDE-s  
NPC uvmnp[-wxkqr],SIDE-s

**uv,wx** - Unit number  
**m,k** - Module number  
**np,qr** - NPC number within the module

As shown above, the command will return the location of the DSPC pack including the side information, the value of "s" can be either 0 or 1.

The valid nonhierarchical DSPU NPC numbers are:

If NPC numbers are expressed in three digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-002</b> | <b>161-162</b> | <b>321-322</b> | <b>481-482</b> | <b>641-642</b> | <b>801-802</b> |
| <b>021-022</b> | <b>181-182</b> | <b>341-342</b> | <b>501-502</b> | <b>661-662</b> | <b>821-822</b> |
| <b>041-042</b> | <b>201-202</b> | <b>361-362</b> | <b>521-522</b> | <b>681-682</b> | <b>841-842</b> |
| <b>061-062</b> | <b>221-222</b> | <b>381-382</b> | <b>541-542</b> | <b>701-702</b> | <b>861-862</b> |
| <b>081-082</b> | <b>241-242</b> | <b>401-402</b> | <b>561-562</b> | <b>721-722</b> | <b>881-882</b> |
| <b>101-102</b> | <b>261-262</b> | <b>421-422</b> | <b>581-582</b> | <b>741-742</b> | <b>901-902</b> |
| <b>121-122</b> | <b>281-282</b> | <b>441-442</b> | <b>601-602</b> | <b>761-762</b> | <b>921-922</b> |
| <b>141-142</b> | <b>301-302</b> | <b>461-462</b> | <b>621-622</b> | <b>781-782</b> | <b>941-942</b> |

If NPC numbers are expressed in four digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |

The valid hierarchical DSPU NPC numbers are:

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

SR and MJ NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**b, c** - Bay number (1 through 7)

The bay in which the entity is located.

**[q]q** - Unit number (1 through 16)

**vv,uu** - Entity height, in inches.

For an FTU, the value is the number of inches from the bottom of the unit shelf to the center of the entity. The possible vv and uu values are:

02, 06, 10, 14, and 18 inches

For a DSPU the value of variables vv and uu can only be 06.

**vv,uu** - Entity height, in inches.

For an FTU, the value is the number of inches from the bottom of the unit shelf to the center of the entity. The possible vv and uu values are:

02, 06, 10, 14, and 18 inches

For a DS3U the value of variables vv and uu can only be 06.

**hhh,iii**

- Entity horizontal location in inches

Entity horizontal distance from the left front side of the bay, approximately 1-1/4 inches to the right of the bay upright, in 1/8 inch increments, to the center of the circuit pack slot of the entity (000 through 158).

The values for any entity will be the same as those shown on the designation strips for that entity, located above the entity. Note, however, that for duplicated entities the side (0 or 1) value precedes the name on the designation strip. **cc** - Hexadecimal condition code

**cc**    *Explanation*

**97**    Entity can't be addressed in this configuration

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**ALL** - All

#### **parameter**

- Facility performance parameter

The parameter and its period of measurement are chosen from the set below:

| <i>parameter</i> | <i>Explanation</i>                         | <i>Period of measurement</i> |
|------------------|--------------------------------------------|------------------------------|
| BER              | Bit Error Rate                             | Total since local midnight   |
| BPV              | Bipolar Violation                          | Total since local midnight   |
| COFA             | Change Of Frame Alignment                  | Total since local midnight   |
| CGA              | Carrier Group Alarm                        | Total since local midnight   |
| CRC              | Cyclic Redundancy Code                     | Total since local midnight   |
| ER               | Error Rate<br>(same as BER for D4 framing) | Previous 24-hour total       |
| ERS              | Errored Seconds                            | Previous 24-hour total       |
| FRER             | Framing Error                              | Total since local midnight   |
| OOF              | Out Of Frame                               | Total since local midnight   |
| SERS             | Severely Errored Seconds                   | Previous 24-hour total       |
| SLIP             | Slip count                                 | Previous 24-hour total       |
| SAFE             | Shelf Alarm Far End count                  | Total since local midnight   |
| SANE             | Shelf Alarm Near End count                 | Total since local midnight   |

**Note:** If the frame contains NPCs that are provisioned with D4 framing only the ER parameter should be used, the BER parameter should not be used.

A message segment will be omitted for:

- Unequipped FTMs
  - DS3 modules in the case of BPV request
- Equipped FTM with no equipped NPC
- Equipped FTM with all NPCs having zero value of <parameter>
- Equipped CEPT FTM with all NPCs being PA type but with a parameter other than BER.

**xxxxxx** - Parameter count values

Dashes ("-") will be output for NPCs that are not equipped or are provisioned with a type unapplicable to the parameter. If an entire FTM is unequipped or all its NPCs are dashes, the segment is skipped.

**xx** - BER states

|           |                                            |
|-----------|--------------------------------------------|
| <i>xx</i> | <i>State</i>                               |
| MJ        | Major                                      |
| MN        | Minor                                      |
| ER        | Error                                      |
| CL        | Clear (a facility type NPC without errors) |
| --        | Unequipped NPC                             |

Unless the CHG::NPC, TS0 command is used to redefine the active value of bit 4 of CTS 0, the RBER values are:

*RBER Explanation*

|   |          |
|---|----------|
| 1 | Inactive |
| 0 | Active   |

NPC(S) - Network processing circuit(s)

**[s]abc** - The first 3- or 4-digit nonhierarchical NPC number in a module

**[t]def** - The last 3- or 4-digit nonhierarchical NPC number in a module

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**uvmnp** - Hierarchical NPC number of the first NPC in a module

**uvmqr** - Hierarchical NPC number of the last NPC in a module

**uv,** - Unit number

**m,** - Module number

**np, qr** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

The parameter value for the first NPC is listed in the first position (upper left corner) of the first line of each message segment. The value for the last NPC occurs in the last position (lower right corner).

**TOT** - Total

**nnnn** - Cumulative count of NPCs returning nonzero states or values

The last nnnn, the one printed out in the last message module, gives the total number of NPCs with nonzero states or values in the frame.

**RESET** - Reset

Indicates that one or more autonomous resets have occurred.

---

## UTL,QRY,ALL,COMMON

---

### QUERY ALL COMMON EQUIPMENT

#### Explanation Of Command

---

This message is used to request reports on the out-of-service, fail, or pest status of the common frame equipment. Common frame equipment includes the administrative links, cross-connects, clock and control interfaces or cross-connect network interfaces (CEF or nonCEF, respectively), synchronizers, clock reference oscillator, timing link interfaces, time slot interchangers and expanded time slot interchangers.

#### Command

---

[I.53104]

UTL:FRM xy,SEQ ww:QRY,ALL,COMMON!

#### Completion Message

### Denial Message

---

Not applicable.

### Autonomous Message

---

Not applicable.

### Explanation Of Parameters

---

**ALL** - All

**COMMON** - Common

**OOS** - Out of service

**FAIL** - Fail

**PEST** - Pest

For the OOS, FAIL and PEST keywords, variables g through p each represent a frame entity. The values of these variables give the OOS, FAIL, or PEST status of the associated entity. Values are interpreted using the table below. The entity associated with a given variable is given following the explanation of PEST below.

| Value | OOS            | FAIL           | PEST           |
|-------|----------------|----------------|----------------|
| 1     | out-of-service | failed         | pested         |
| 0     | in service     | not failed     | unpested       |
| -     | not applicable | not applicable | not applicable |

to the particular entity. For example, an unequipped circuit would display a "-" in the position of its OOS, FAIL and PEST indicators g through p.

The keyword PEST is used to indicate that error reporting is disabled. Out-of-service (OOS) entities and entities related to a side that is out of service are pested to prevent error messages from being reported to the main controller. Error reporting is undesirable if an entity is OOS since it would interrupt normal operations by repeatedly interrupting the microprocessor.

- g** - Link 1
- h** - Link 2
- i** - Link 3
- j** - Link 4
- k** - Link 5
- l** - Link 6
- m** - XC0 (cross-connect 0)
- n** - XC1 (cross-connect 1)

#### CEF frame

- o** - CCI 0 (clock and control interface 0)
- p** - CCI 1 (clock and control interface 1)

#### nonCEF frame

- o** - CCNI (cross-connect network interface 0)
- p** - CCNI (cross-connect network interface 1)

**SYNC** - Synchronizer

**ofp** - Side 0 synchronizer status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**ofp** - Side 1 synchronizer status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**CRO** - Clock reference oscillator

**ofp** - CRO status

**o** - Out of service  
**f** - Fail  
**p** - Pest

To aid in interpreting the variables associated with the timing link interface the following lines from the message are printed here for reference.

|<----- Side 0 ----->|<----- Side 1 ----->|

| TLI | ofp<br>a | ofp<br>b | ofp<br>c | ofp<br>d | ofp<br>e | ofp<br>f | ofp<br>g | ofp<br>h | ofp<br>i | ofp<br>j | ofp<br>k | ofp<br>l | ofp<br>m | ofp<br>n | ofp<br>o | ofp<br>p | EOM |
|-----|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|-----|
| 1   | 1        | 2        | 2        | 3        | 3        | 4        | 4        | 1        | 1        | 2        | 2        | 3        | 3        | 4        | 4        | TLI No.  |     |
| 0   | 1        | 0        | 1        | 0        | 1        | 0        | 1        | 0        | 1        | 0        | 1        | 0        | 1        | 0        | 1        | SSP No.  |     |

**TLI** - Timing link interface

**ofp** - Side 0 TLI status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**ofp** - Side 1 TLI status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**TLI** - Timing link interface

There are four TLIs in each synchronizer side and each TLI has two synchronizer synchronization ports (SSP) for a total of eight SSPs per side. Variables a through p represent these SSPs and are associated with each TLI as shown below. The values of a through p give the priority of each SSP as a synchronization source. Priorities range in value from 1 through 8 and are interpreted as shown below.

**1** - Highest priority  
**8** - Lowest priority

**a** - TLI 1 SSP 0 priority  
**b** - TLI 1 SSP 1 priority

**c** - TLI 2 SSP 0 priority  
**d** - TLI 2 SSP 1 priority

**e** - TLI 3 SSP 0 priority  
**f** - TLI 4 SSP 1 priority

**g** - TLI 4 SSP 0 priority  
**h** - TLI 4 SSP 1 priority

**i** - TLI 1 SSP 0 priority  
**j** - TLI 1 SSP 1 priority

**k** - TLI 2 SSP 0 priority  
**l** - TLI 2 SSP 1 priority

**m** - TLI 3 SSP 0 priority  
**n** - TLI 3 SSP 1 priority

**o** - TLI 4 SSP 0 priority  
**p** - TLI 4 SSP 1 priority

**TSI** - Time slot interchanger

**ETSI** - Expanded time slot interchanger

**f** - FROM unit (1 through 6)  
**t** - TO Unit (1 through 6)

**ofp** - Side 0 TLI status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**ofp** - Side 1 TLI status

**o** - Out of service

**f** - Fail

**p** - Pest

**TSIS** - Time slot interchanger

**ETSIS** - Expanded time slot interchangers

**tt** - Total number of equipped TSIs or ETSIs

**oo** - Total number of out-of-service TSIs or ETSIs.

**ff** - Total number of failed TSIs or ETSIs.

**pp** - Total number of pested TSIs or ETSIs.

## **UTL, QRY, ALL, UNIT**

### **QUERY ALL**

#### **Explanation Of Command**

This message is used to request reports on the out-of-service, fail, or pest status of the entire DACS II frame, the common frame equipment, or the equipment in a specific unit.

The text of the output message varies depending on the input message format and immediately follows the input format.

**Note:** The odd and even DSPU NPCs do not have independent service states.

#### **Command**

[I.53101]

**UTL:FRM xy,SEQ ww:QRY,ALL[,UNIT [q]q]!**

## Completion Message

---

### Nonhierarchical

---

The response to UTL::QRY,ALL starts with:

[O.53101]

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL COMMON 4 LN MSG:
OOS g h i j k l m n o p
FAIL g h i j k l m n o p

31 ofp ófp 32 ofp ófp 33 ofp ófp 34 ofp ófp 35 ofp ófp 36 ofp ófp
41 ofp ófp 42 ofp ófp 43 ofp ófp 44 ofp ófp 45 ofp ófp 46 ofp ófp EOP
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL TOTAL TSIS tt oo ff pp 3 LN MSG:
51 ofp ófp 52 ofp ófp 53 ofp ófp 54 ofp ófp 55 ofp ófp 56 ofp ófp
61 ofp ófp 62 ofp ófp 63 ofp ófp 64 ofp ófp 65 ofp ófp 66 ofp ófp EOM
```

For DACS II CEF frames, the following segment describes the ECCN hardware:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL TOTAL ETSIS tt oo ff pp 5 LN MSG:
01 ofp ófp 02 ofp ófp 03 ofp ófp 04 ofp ófp
05 ofp ófp 06 ofp ófp 07 ofp ófp 08 ofp ófp
09 ofp ófp 10 ofp ófp 11 ofp ófp 12 ofp ófp
13 ofp ófp 14 ofp ófp 15 ofp ófp 16 ofp ófp EOM
```

If one or more FTU is equipped, the FTU segment shown below will be output:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU 3 LN MSG:
UNIT [q]q UC ofp FTMI ofp ofp ofp ofp [CCB ofp ofp]
FC ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

If one or more DS3U is equipped, the DS3U segment shown below will be output:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DS3U 3 LN MSG:
UNIT [q]q UC ofp FLI ofp ofp FMT ofp ofp [CCB ofp ofp]
MXR ofp ofp ofp ofp ofp ofp ofp MIU ofp ofp ofp ofp ofp ofp EOM
```

If one or more DSPU is equipped, the DSPU segment shown below will be output:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q UC aaa DSPI bbb [CCB rfr sss] EOM
```

Then, the output message continues with information about individual NPCs. One output segment will be printed for each FTM, each MXR, or each unit in the case of a DSPU.

If an equipped FTM has at least one NPC in the PEST, FAIL, or OOS state, the output segment for a DS1 FTM, shown below, will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU NPCS [s]aaa-[t]bbb tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp OOS oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

If a DS3U MXR has at least one NPC in the PEST, FAIL, or OOS state, the output segment for a DS3U MXR, shown below, will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DS3U NPCS [s]aaa-[t]bbb tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp OOS oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp EOM
```

If a DSPU has at least one NPC in the PEST, FAIL, or OOS state, the output segment for DSPU NPCs, shown below, will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DSPU NPCS [s]aaa-[t]bbb 3 LN MSG:
[z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp
[z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp EOM
```

For an equipped FTM/MXR/DSPU with no equipped NPC in PEST, FAIL and/or OOS state, the following output segment will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL {FTU|DS3U|DSPU} NPCS [s]aaa-[t]bbb tt 2 LN MSG:
OOS oo FAIL oo PEST oo EOM
```

If an FTM/MXR/DSPU is not equipped or if it is equipped but has no NPCs equipped, the message segment for that FTM/MXR/DSPU will not appear.

The following segment is output to complete the message:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL COMPL
```

The response to UTL::QRY,ALL,UNIT starts with:

For an FTU (Facility Terminating Unit):

[O.53101]

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU UNIT [q]q 3 LN MSG:
UC ofp FTMI ofp ofp ofp ofp [CCB ofp ofp]
FC ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

This message will be followed by up to 4 of the following segments depending on the FTM equipage:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q FTU NPCS [s]aaa-[t]bbb tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp 00S oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

For a DS3U:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DS3U UNIT [q]q 3 LN MSG:
UC ofp FLI ofp ofp FMT ofp ofp [CCB ofp ofp]
MXR ofp ofp ofp ofp ofp ofp ofp ofp MIU ofp ofp ofp ofp ofp ofp ofp EOM
```

This message is followed by up to 7 of the following segments depending on the MXR equipage:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q DS3U NPCS [s]aaa-[t]bbb tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp 00S oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp EOM
```

For a Digital Signal Processing Unit (DSPU):

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q UC aáa DSPI bbb [CCB rfr sss] EOM

M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q DSPU NPCS [s]aaa-[t]bbb tt 3 LN MSG:
[z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp
[z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp [z]zzz ofp ofp EOM
```

For an equipped FTM/MXR/DSPU with no equipped NPC in PEST, FAIL and/or OOS state, the following segment will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q {FTU|DS3U|DSPU} NPCS [s]aaa-[t]bbb
tt 2 LN MSG:
OOS 00 FAIL 00 PEST 00 EOM
```

If an FTM/MXR/DSPU is not equipped or if it is equipped but has no NPCs equipped, the message segment for that FTM/MXR/DSPU will not appear.

The following segment is output to complete the message:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q COMPL
```

## Hierarchical

The response to UTL::QRY ALL starts with:

[O.53101]

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL COMMON 4 LN MSG:
OOS g h i j k l m n o p
FAIL g h i j k l m n o p
PEST g h i j k l m n o p EOM
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL COMMON 4 LN MSG:
SYNC ofp ofp CRO ofp
TLI ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
a b c d e f g h i j k l m n o p EOM
```

For DACS II Non-CEF frames, the next segment describes the CCN hardware:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL TOTAL TSIS tt oo ff pp 5 LN MSG:
11 ofp ofp 12 ofp ofp 13 ofp ofp 14 ofp ofp 15 ofp ofp 16 ofp ofp
21 ofp ofp 22 ofp ofp 23 ofp ofp 24 ofp ofp 25 ofp ofp 26 ofp ofp
31 ofp ofp 32 ofp ofp 33 ofp ofp 34 ofp ofp 35 ofp ofp 36 ofp ofp
41 ofp ofp 42 ofp ofp 43 ofp ofp 44 ofp ofp 45 ofp ofp 46 ofp ofp EOP
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL TOTAL TSIS tt oo ff pp 3 LN MSG:
51 ofp ofp 52 ofp ofp 53 ofp ofp 54 ofp ofp 55 ofp ofp 56 ofp ofp
61 ofp ofp 62 ofp ofp 63 ofp ofp 64 ofp ofp 65 ofp ofp 66 ofp ofp EOM
```

For DACS II CEF frames, the next segment describes the ECCN hardware:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL TOTAL ETSIS tt oo ff pp 5 LN MSG:
01 ofp ofp 02 ofp ofp 03 ofp ofp 04 ofp ofp
05 ofp ofp 06 ofp ofp 07 ofp ofp 08 ofp ofp
09 ofp ofp 10 ofp ofp 11 ofp ofp 12 ofp ofp
13 ofp ofp 14 ofp ofp 15 ofp ofp 16 ofp ofp EOM
```

The output then continues with segments about the common equipment in the units. One module will be generated per unit, in ascending order by number. The unit equipped for a given unit number determines the output segment printed.

The output segment for an FTU:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU 3 LN MSG:
UNIT [q]q UC ofp FTMI ofp ofp ofp ofp [CCB ofp ofp]
FC ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

The output segment for a DS3 Unit:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DS3U 3 LN MSG:
UNIT [q]q UC ofp FLI ofp ofp FMT ofp ofp [CCB ofp ofp]
MXR ofp ofp ofp ofp ofp ofp ofp ofp MIU ofp ofp ofp ofp ofp ofp EOM
```

The output segment for a DSPU:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL UNIT [q]q UC aáa DSPI bbb [CCB rfr sss] EOM
```

Then, the output continues with information about individual NPCs. One output message will be printed for each FTM (Facility Terminating Module), each MXR (Multiplexer), or each unit in the case of a DSPU.

The output segment for a DS1 FTM:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU NPCS uvmnp-uxkqr tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp 00S oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

The output segment for NPCs of a DS3U MXR:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DS3U NPCS uvmnp-uxkqr tt 5 LN MSG:
ofp ofp ofp ofp ofp ofp ofp ofp 00S oo FAIL ff PEST pp
ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp
ofp ofp ofp ofp ofp ofp ofp ofp EOM
```

The output segment for NPCs of a DSPU:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL DSPU NPCS uvmnp-uxkqr 3 LN MSG:
zzzzz ofp ofp zzzzz ofp ofp zzzzz ofp ofp zzzzz ofp ofp
zzzzz ofp ofp zzzzz ofp ofp zzzzz ofp ofp zzzzz ofp ofp EOM
```

The output segment for an equipped FTM/MXR/DSPU with no NPC in FAIL, PEST and/or OOS state:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL {FTU|DS3U|DSPU} NPCS uvmnp-uxkqr tt 2 LN MSG:
00S 00 FAIL 00 PEST 00 EOM
```

If an FTM/MXR/DSPU is not equipped or if it is equipped but has no NPC equipped, then the message segment for that FTM will not appear.

The following segment is output to complete the message:

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL COMPL
```

The response to UTL::QRY ALL UNIT starts with:

The output segment for an FTU (Facility Terminating Unit):

[O.53101]

```
M hh:mm:ss xy,ww n[vv] UTL QRY ALL FTU UNIT [q]q 3 LN MSG:
UC ofp FTMI ofp ofp ofp ofp [CCB ofp ofp]
FC ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp EOM

## Explanation Of Parameters

To aid referencing the parameters listed for a given message the line containing the parameters is listed below just before the explanation of that particular set of parameters is given.

**ALL** - All

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

The UNIT option is specified to query that unit. The UNIT field will be null when the command is used for the entire frame. If the UNIT option is specified, only the information related to the equipment in that unit will be generated.

**OOS** - Out of service

**FAIL** - Fail

**PEST** - Pest

For the OOS, FAIL and PEST keywords, variables g through p each represent a frame entity. The values of these variables give the OOS, FAIL, or PEST status of the associated entity. Values are interpreted using the table below. The entity associated with a given variable is given following the explanation of PEST below.

| Value | <b>OOS</b>     | <b>FAIL</b>    | <b>PEST</b>    |
|-------|----------------|----------------|----------------|
| 1     | out-of-service | failed         | pested         |
| 0     | in service     | not failed     | unpested       |
| -     | not applicable | not applicable | not applicable |

As shown above, a hyphen "-" indicates the parameter is not applicable to the particular entity. For example, an unequipped circuit would display a "-" in the position of its OOS, FAIL and PEST indicators g through p.

The keyword PEST is used to indicate that error reporting is disabled. Out-of-service (OOS) entities and entities related to a side that is out of service are pested to prevent error messages from being reported to the main controller. Error reporting is undesirable if an entity is OOS since it would interrupt normal operations by repeatedly interrupting the microprocessor.

**OOS** g h i j k l m n o p (message line for reference)  
**FAIL** g h i j k l m n o p "  
**PEST** g h i j k l m n o p **EOM** "

The DACS II entities and their status fields are as follows:

**g** - Link 1  
**h** - Link 2  
**i** - Link 3  
**j** - Link 4  
**k** - Link 5  
**l** - Link 6  
**m** - XC0 (Cross-Connect 0)  
**n** - XC1 (Cross-Connect 1)  
**o** - CCNI 0 (Cross-Connect Network Interface 0) NonCEF  
**p** - CCNI 1 (Cross-Connect Network Interface 1) NonCEF  
**o** - CCI 0 (Clock and Control Interface 0) CEF  
**p** - CCI 1 (Clock and Control Interface 1) CEF

**SYNC ofp ofp CRO ofp** (message line for reference)

**SYNC** - Synchronizer

**ofp** - Side 0 sync status  
**ofp** - Side 1 sync status

**o, o** - OOS  
**f, f** - FAIL  
**p, p** - PEST

**CRO** - Clock reference oscillator

**ofp** - CRO status

**o** - OOS  
**f** - FAIL  
**p** - PEST

To aid in interpreting the variables associated with the timing link interface two lines from the message are printed below for reference. These lines have been marked with identifying information.

```
|<----- Side 0 ----->|<----- Side 1 ----->|

  TLI ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp ofp
    a  b  c  d  e  f  g  h  i  j  k  l  m  n  o  p  EOM

TLI No.  1  1  2  2  3  3  4  4  1  1  2  2  3  3  4  4
SSP No.  0  1  0  1  0  1  0  1  0  1  0  1  0  1  0  1
```

**TLI** - Timing link interface

**ofp** - Side 0 TLI status

**o** - Out of service  
**f** - Fail  
**p** - Pest

**ofp** - Side 1 TLI status

**o** - Out of service  
**f** - Fail  
**p** - Pest

There are four TLIs in each synchronizer side and each TLI has two synchronizer synchronization ports (SSP) for a total of eight SSPs per side. Variables a through p represent these SSPs and are associated with each TLI as shown below. The values of a through p give the priority of each SSP as a synchronization source. Priorities range in value from 1 through 8 and are interpreted as shown below.

**1** - Highest priority  
**8** - Lowest priority

- a** - TLI 1 SSP 0 priority
- b** - TLI 1 SSP 1 priority
  
- c** - TLI 2 SSP 0 priority
- d** - TLI 2 SSP 1 priority
  
- e** - TLI 3 SSP 0 priority
- f** - TLI 4 SSP 1 priority
  
- g** - TLI 4 SSP 0 priority
- h** - TLI 4 SSP 1 priority
  
- i** - TLI 1 SSP 0 priority
- j** - TLI 1 SSP 1 priority
  
- k** - TLI 2 SSP 0 priority
- l** - TLI 2 SSP 1 priority
  
- m** - TLI 3 SSP 0 priority
- n** - TLI 3 SSP 1 priority
  
- o** - TLI 4 SSP 0 priority
- p** - TLI 4 SSP 1 priority

### Explanation Of Parameters

---

**ALM** - Alarm

**TOT** - Total number of facilities reporting alarms

**ppp** - The total number of DS3 facilities in the output segment that are reporting critical facility alarms

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

- LOS** - Loss of signal
- OOF** - Out of frame
- BER** - Bit error rate
- AIS** - Alarm indication signal
- IDLE** - Idle signal
  
- xx** - The facility alarm status of the DS3:
  - CR** - Critical alarm
  - - The DS3 is unequipped
  - ER** - Error (either the MMFG selected to serve the facility is Out of Service or In Service\_Pested, or the FLI selected to serve the facility is In Service\_Pested)
  - CL** - Clear (no alarm, no AIS or IDLE condition)
  - UX** - The unit is out of service, data unavailable
  
- l** - The loss of signal alarm status for a DS3 facility:
  - 0** - The loss of signal alarm is clear
  - 1** - The loss of signal alarm is active
  - - The xx field is either UX, ER or --
  
- o** - The out of frame alarm status for a DS3 facility:
  - 0** - The out of frame alarm is clear
  - 1** - The out of frame alarm is active
  - - The xx field is either UX, ER or --
  
- b** - The high bit error rate alarm status for a DS3 facility:
  - 0** - The high BER alarm is clear
  - 1** - The high BER alarm is active
  - - The xx field is either UX, ER or --
  
- a** - The alarm indication signal (AIS) alarm status for a DS3 facility:
  - 0** - The AIS alarm is clear
  - 1** - The AIS alarm is active
  - - The xx field is either UX, ER or --
  
- i** - The idle signal alarm status for a DS3 facility:
  - 0** - The idle signal alarm is clear
  - 1** - The idle signal alarm is active
  - - The xx field is either UX, ER or --
  
- e** - Number of lines in each segment (2 to 5)

## **UTL, QRY, ALMOPT, NPC, AIS**

### **UTILITY QUERY, ALARM OPTION, AIS**

#### **Explanation Of Command**

This message requests alarm indication signal (AIS) information for one or more facility terminating unit (FTU) or DS3 unit (DS3U) network processing circuits. The range can cross the unit boundary, and the two NPCs entered can be from different types of units. This message is not applicable to digital signal processing unit (DSPU) NPCs. DSPU NPCs will be skipped in the output message if they are within the range.

**np, qr** - NPC number within the module

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**[t]def** - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [u]jkl)

**[u]jkl** - The 3- or 4-digit nonhierarchical NPC number ([t]def through [v]ghi)

**edfgh** - Hierarchical NPC number (uvmnp through ijklm)

**ijklm** - Hierarchical NPC number (edfgh through wxkqr)

**ed** - Unit number (uv through wx)

**f** - Module number

**gh** - NPC number

**e** - Number of lines in message

The number of lines in the message depends on the number of equipped NPCs to be reported.

**nnn** - Total number of alarms

**TOT** - Total

**tttt** - AIS Alarm option programmed for the NPC

*tttt Explanation*

INFO Information message (for all domestic NPCs)

MJ Major alarm (for all domestic NPCs)

MN Minor alarm (for domestic non-SLC type NPCs)

-- Unequipped

**UEQD** - Unequipped

**cc** - Hexadecimal condition code

*cc Explanation*

**0B** Invalid CEPT NPC

**60** Selectable AIS not valid for specified NPC(s) type

**61** All NPC(s) are either not valid or not grown

## **UTL,QRY,ALMS**

### **UTILITY QUERY ALARMS**

#### **Explanation Of Command**

This message reports the source of all alarms currently on the DACS II frame. For each entity that has been autonomously removed the resulting alarm state is given.

If there are no alarms to report, a single line message is output indicating that the total number of alarms is **000**.

#### **Command**

[I.53111]

**UTL:FRM xy,SEQ ww:QRY,ALMS!**

#### **Completion Message**

#### **Nonhierarchical**

When there are no alarms active on the frame, the following output appears:

[O.53112]

**M hh:mm:ss xy,ww n[vv] UTL QRY ALMS TOTAL 000 COMPL**

When there are alarms active on the frame, the following output appears:

[O.53111]

For NonCEF:

### **Denial Message**

Not applicable.

---

### **Autonomous Message**

Not applicable.

---

### **Explanation Of Parameters**

To aid referencing the parameters listed for a given message the line containing the parameters is listed below just before the explanation of that particular set of parameters is given.

The DACS II frame alarm state summary is given by the first line of the alarm report for these variables:

CR t MJ u MN v MC w PWR z

**CR** - Critical

**t** - Critical alarm status

**MJ** - Major

**u** - Major alarm status

**MN** - Minor

**v** - Minor alarm status

**MC** - Main controller

**w** - Main controller alarm status

**PWR** - Power

**z** - Power alarm status

The value of variables t, u, v, w, and z determines the alarm status.  
These values and their meaning are given below for t through z.

*t-z      Status*

1      Active

0      Not Active

**w** - Power failure indicator

Each w in the output message corresponds to a particular power unit in the frame. The w's are numbered from left to right beginning with 1. If the frame is a non-CEF frame, the w's will end with 10. If the frame is a CEF, the w's will end with 20.

Determine the number associated with the w of interest  
then use the table below to determine the affected power unit.

The value of w determines the status of the power unit

| <i>w</i> | <i>Power unit status</i>              |
|----------|---------------------------------------|
| M        | Power failure (Major)                 |
| -        | No power failure                      |
| 1        | Power unit of unit 1                  |
| 2        | Power unit of unit 2                  |
| 3        | Power unit of unit 3                  |
| 4        | Power unit of unit 4                  |
| 5        | Power unit of unit 5                  |
| 6        | Power unit of unit 6                  |
| 7        | Synchronizer (SYNC) 0                 |
| 8        | SYNC 1                                |
| 9        | Cross-Connect Network (CCN or ECCN) 0 |
| 10       | CCN or ECCN 1                         |

For CEF frames,

|    |                       |
|----|-----------------------|
| 11 | power unit of unit 7  |
| 12 | power unit of unit 8  |

ALMS a b c d e f g h i j k l m n o p q r s

#### **ALMS** - Alarms

Each of the letters a through s following the keyword ALMS, represents an entity in the DACS II frame. The entities are listed following this paragraph by the letter used to represent them. The values these letters assume give the alarm status of the particular entity. These values are listed immediately following the entity listing. Some entities do not use the full range of values but their values are separately described in the list of entities.

|          |                                                                                                                      |
|----------|----------------------------------------------------------------------------------------------------------------------|
| <b>a</b> | - MC (Main controller)                                                                                               |
| <b>b</b> | - MP (Main processor)                                                                                                |
| <b>c</b> | - CI/ECI (Communications interface)                                                                                  |
| <b>d</b> | - SCC (Secondary source controller)                                                                                  |
| <b>e</b> | - PMEM                                                                                                               |
| <b>f</b> | - SMEM                                                                                                               |
| <b>g</b> | - Link 1                                                                                                             |
| <b>h</b> | - Link 2                                                                                                             |
| <b>i</b> | - Link 3                                                                                                             |
| <b>j</b> | - Link 4                                                                                                             |
| <b>k</b> | - Link 5                                                                                                             |
| <b>l</b> | - Link 6                                                                                                             |
| <b>m</b> | - XC0 (Cross-Connect 0)                                                                                              |
|          | m Explanation                                                                                                        |
|          | - No alarm active                                                                                                    |

|          | Value Explanation                                                                                                    |
|          | a Autonomously removed                                                                                               |
|          | - Does not apply, or part of a larger failure group                                                                  |
|          | * Minor alarm                                                                                                        |
|          | M Major alarm                                                                                                        |
|          | C Critical alarm                                                                                                     |

Where a failure group includes more than one circuit pack and individual circuit pack information is available, the character "a" will be used to indicate removal or attempted removal of that pack.

A hyphen (-) indicates the alarm state is not applicable to the particular circuit. For example, an unequipped circuit would display a "-" in its status field.

*DS3U equipment entities:*

Failure of a circuit pack might set the alarm bits of related circuit packs. Alarm bits a through s will be set according to the following rules.

- All DS3 circuit pack entities can be in either state "a" or "-".
- A multiplexer-multiplexer interface unit functional group (MMFG) or an incoming DS3 signal failure will put the associated NPCs in the state "-".
- A failure of a multiplexer (MXR) will not cause the multiplexer interface unit (MIU) pair to be marked "a", even though the failure may cause the attempt to remove that MIU. If only the MXR fails, the MIU will still be in state "-".
- A failure of an MIU will not cause the MXR pair to be marked "a", even though the failure may cause the attempt to remove that MXR. If only the MIU fails, the MXR will still be in state "-".
- A manual removal of a DS3 facility will remove any alarm that might exist on its associated MXR or MIU.
- Because of protection switching in the DS3U, autonomous removal indications (a) for DS3U circuit packs are preserved across a frame boot. The boot operation is required to configure the unit to the protection state maintained in the data base. Data base consistency requires preservation of the "a" state.

*SLC carrier equipment entities:*

Alarm bits a through s will be set according to the following rules.

- Because of protection switching for SLC carrier NPCs, an autonomous removal of a SLC carrier NPC is preserved across a frame boot. The boot operation is required to configure SLC carrier circuits to the protection state maintained in the data base. Data base consistency requires preservation of the "a" state.

SYNC x y

**SYNC** - Synchronizer

**x** - Side 0 alarm status of the synchronizer

**y** - Side 1 alarm status of the synchronizer

x Explanation

M Major alarm

- No alarm

- CRO** - Clock reference oscillator
- x** - Side 0 alarm status of the oscillator
- |   |             |
|---|-------------|
| x | Explanation |
| M | Major alarm |
| - | No alarm    |

TLI a b c d e f g h a b c d e f g h

**TLI** - Timing link interface

- |          |                                                           |
|----------|-----------------------------------------------------------|
| <b>a</b> | - TLI 1 or Synchronizer sync port (SSP) 0 of TLI 1 side 0 |
| <b>b</b> | - SSP 1 of TLI 1 side 0                                   |
| <b>c</b> | - TLI 2 or SSP 0 of TLI 2 side 0                          |
| <b>d</b> | - SSP 1 of TLI 2 side 0                                   |
| <b>e</b> | - TLI 3 or SSP 0 of TLI 3 side 0                          |
| <b>f</b> | - SSP 1 of TLI 3 side 0                                   |
| <b>g</b> | - TLI 4 or SSP 0 of TLI 4 side 0                          |
| <b>h</b> | - SSP 1 of TLI 4 side 0                                   |
|          |                                                           |
| <b>a</b> | - TLI 1 or SSP 0 of TLI 1 side 1                          |
| <b>b</b> | - SSP 1 of TLI 1 side 1                                   |
| <b>c</b> | - TLI 2 or SSP 0 of TLI 2 side 1                          |
| <b>d</b> | - SSP 1 of TLI 2 side 1                                   |
| <b>e</b> | - TLI 3 or SSP 0 of TLI 3 side 1                          |
| <b>f</b> | - SSP 1 of TLI 3 side 1                                   |
| <b>g</b> | - TLI 4 or SSP 0 of TLI 4 side 1                          |
| <b>h</b> | - SSP 1 of TLI 4 side 1                                   |

See the ALMS section given previously for the alarm status values.

For NonCEF frames only:

TSIS tt nn

**TSIS** - Time slot interchangers

**tt** - Total No. of equipped TSIs (1-36)

**nn** - Total No. of alarming TSIs (0-36)

**ft** - Unit numbers

**f** - FROM unit number (1-6)

**t** - TO unit number (1-6)

**x** - Side 0 alarm status of the TSI

**y** - Side 1 alarm status of the TSI

Variables x and y can assume one of the two alarm status values given below.

- - No alarm active

**M** - Major alarm

For CEF frames only:

ETSIS tt nn

**ETSIS** - Expanded time slot interchangers

**tt** - Total No. of equipped ETSIs (01 through 32)

**nn** - Total No. of alarming ETSIs (01 through 32)

UNIT [q]q UC a FTMI b c d e FC f g h i j k l m [CCB r s] [OOS]

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**UC** - Unit controller

**a** - UC status

The UC status values are the same as those given previously for entities a through s in the explanation of ALMS. This table follows the explanation of variable s.

FTMI b c d e

**FTMI** - Facility terminating module interface

- b** - Status for FTMI 1 of specified unit
- c** - Status for FTMI 2 of specified unit
- d** - Status for FTMI 3 of specified unit
- e** - Status for FTMI 4 of specified unit

See the ALMS section given previously for the alarm status values.

FC f g h i j k l m

**FC** - Format converter

- f** - Status for FC 01 of specified FTU
- g** - Status for FC 11 of specified FTU
- h** - Status for FC 02 of specified FTU
- i** - Status for FC 12 of specified FTU
- j** - Status for FC 03 of specified FTU
- k** - Status for FC 13 of specified FTU
- l** - Status for FC 04 of specified FTU
- m** - Status for FC 14 of specified FTU

See the ALMS section given previously for the alarm status values.

For NonCEF frames only:

CCB r s

**CCB** - Cross-connect buffer

- r** - Status for CCB 0q in CCN 0 for specified unit q
- 1G**
- s** - Status for CCB 1q in CCN 1 for specified unit q

See the ALMS section given previously for the alarm status values.

**OOS** - Out-of-Service

The OOS state applies to the Unit Controller.

#### FMT l m

**FMT** - Formatter

**l** - Status for FMT 0 of specified DS3 unit

**m** - Status for FMT 1 of specified DS3 unit

See the ALMS section given previously for the alarm status values.

#### FLI b c

**FLI** - Facility line interface

**b** - Status for service FLI of specified DS3 unit

**c** - Status for protection FLI of specified DS3 unit

See the ALMS section given previously for the alarm status values.

#### MXR d e f g h i j

**MXR** - Multiplexer

**d** - Status for protection MXR of specified DS3 unit

**e** - Status for MXR 1 of specified DS3 unit

**f** - Status for MXR 2 of specified DS3 unit

**g** - Status for MXR 3 of specified DS3 unit

**h** - Status for MXR 4 of specified DS3 unit

**i** - Status for MXR 5 of specified DS3 unit

**j** - Status for MXR 6 of specified DS3 unit

See the ALMS section given previously for the alarm status values.

#### MIU n o p q u v w

**MIU** - Multiple interface unit

**n** - Status for protection MIU of specified DS3 unit

**o** - Status for MIU 1 of specified DS3 unit

**p** - Status for MIU 2 of specified DS3 unit

**q** - Status for MIU 3 of specified DS3 unit

**u** - Status for MIU 4 of specified DS3 unit

**v** - Status for MIU 5 of specified DS3 unit

**w** - Status for MIU 6 of specified DS3 unit

See the ALMS section given previously for the alarm status values.

DSPI b

**DSPI** - Digital signal processing interface

**b** - Status for DSPI (digital signal processing interface) of specified DSPU

See the ALMS section given previously for the alarm status values.

DU DS3 Unprotected Alarm

**aa** - Status of alarm

See the ALMS section given previously for the alarm status values.

### *DS3 FACILITY ALARMS*

ALMS DS3 rr

**DS3** - Digital signal 3 (44.736 Mb/s rate)

**rr** - Total number of **equipped** DS3 facilities in the frame  
NonCEF (01 through 06)  
CEF (01 through 96)

UNIT [q]q y y y y y ALMS gg

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**y** - DS3 facility alarm status.

**gg** - Total number of alarming DS3 facilities in the frame  
NonCEF (01 through 06)  
CEF (01 through 96)

### *SLC CARRIER ALARMS*

**ffff** - RT or DCLU Bank Identification Number (0000 through 9999)

**x** - Status of RT or DCLU alarm

See the ALMS section given previously for the alarm status values.

*FOR FTU AND DS3U NPC ALARM DATA LINES*

- [s]aaa** - The 3- or 4-digit nonhierarchical number of the first NPC in the module
- [t]bbb** - The 3- or 4-digit nonhierarchical number of the last NPC in the module

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|

**uvmnp** - Hierarchical number of the first NPC in the module

**wxkqr** - Hierarchical number of the last NPC in the module

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

Valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
 Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
 Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**tt** - Total number of equipped NPCs in the FTM  
 01 through 40

**nn** - Total number of alarming NPCs in the FTM  
 01 through 40

*FOR DSPU NPC ALARM DATA LINE*

**[s]zzz** - The 3- or 4-digit nonhierarchical DSPU NPC number

If NPC numbers are expressed in three digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |

## Explanation Of Parameters

---

ALM(S) - Alarm(s)

**DBASE** - Data base

Used to provide the output necessary to verify data base coherence between DACS II and the DACS controller.

**c** - Duplex frame alarm status

*c*      *Explanation*

1      Duplex frame alarm

0      No Duplex frame alarm

**NPC** - Network processing circuit

**e** - Number of lines in message (from 1 to 5 lines)

**FTU** - Facility terminating unit

Only alarmed FTU NPCs will be reported. Hence the number of NPCs in the message and the number of lines will be variable.

**[s]abc, [t]def**

- The 3- or 4-digit nonhierarchical NPC numbers.

**uvmnp** - Hierarchical FTU NPC number

**wxkqr** - Hierarchical FTU NPC number

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The values are:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**BOFL** - Buffer overflow

**A00S** - Autonomous out-of-service (autonomous removal)

**CGA** - Carrier group alarm

**k, l, m, . . .**

- Representation for multiple alarms

*k, l, or m (CGA) Explanation*

|          |                                                                             |
|----------|-----------------------------------------------------------------------------|
| <b>A</b> | AIS - Alarm Indication Signal; also known as All Ones Signal or Blue Signal |
| <b>B</b> | Both - Yellow and Red (Note: B is valid only for SLC® Series 5 NPCs)        |
| <b>L</b> | LMA - Local Multiframe Alarm                                                |
| <b>M</b> | RMA - Remote Multiframe Alarm                                               |
| <b>R</b> | Red                                                                         |
| <b>Y</b> | Yellow                                                                      |

## UTL, QRY, ALMS, RT, DL

### UTILITY QUERY ALARMS

#### Explanation Of Command

This message retrieves the information of non-digroup-associated alarm(s) declared for a SLC<sup>®</sup> carrier remote terminal. Two completion output formats, O.53141 and O.53142, are employed for this message. Message O.53141 is used to present SLC<sup>®</sup> Series 5 carrier Feature Package C (FPC) related alarms, and message O.53142 is used for SLC 96 carrier-related alarms.

#### Command

[I.53141]

UTL:FRM xy,SEQ ww:QRY,ALMS,{RT|DL} ffff!

#### Completion Message

[O.53141]

Not applicable.

---

### Explanation Of Parameters

**ALMS** - Alarm

**RT** - Remote terminal

**DL** - Digital carrier line unit (DCLU)

**ffff** - Remote Terminal ID number (0000 through 9999)

**MD** - Mode

**g[g]** - Operation Mode of a SLC® carrier bank

| g[g] | Explanation              |
|------|--------------------------|
| 1    | SLC 96 carrier Mode 1    |
| 3    | SLC 96 carrier Mode 3    |
| C    | SLC Series 5 carrier FPC |

**DLF** - Data link failure

**tuu** - DLF states

| tuu | Explanation                         |
|-----|-------------------------------------|
| AMN | DLF on Digroup A causes minor alarm |
| PMN | DLF on Digroup P causes minor alarm |
| --- | No DLF                              |

**MISC1** - Miscellaneous alarm 1

**MISC2** - Miscellaneous alarm 2

**PWR** - Power alarm

**COMP** - Compatibility alarm

**EEPROM** - EEPROM Alarm

**RGF** - Ringing generator failure

**uu** - States for other alarms

uu Explanation

MJ Major alarm

MN Minor alarm

MM Major alarm and Minor alarm coexisting

-- No alarm

**SWMN** - Protection switch related minor alarm

**x** - Protection switch related minor alarm handling setting

*x Explanation*

R Declare locally and send MN via data link to the DCLU

L Declare locally only

**cc** - Hexadecimal condition code

*cc Explanation*

**11** UC is out of service

**12** UC is in service but failed

**7E** Bank id number not found

**FA** The mode of the RT is not applicable

## UTL, QRY, BCAST, ALL

---

### QUERY BROADCAST ALL

#### Explanation Of Command

---

This message requests a source listing for all the FROM terminations or for the clear DS1 network processing circuits that are associated with broadcast connections.

The ABT command may be used to stop the output of this message. The ABT-CMD command may be used to stop the output of this message.

## Explanation Of Parameters

**BCAST** - Broadcast

**ALL** - All (NPCs)

**xx** - Number of data fields (terminations) in a segment (01 through 32)

**e** - Number of lines in a message segment (2 through 5)

**[s]rstjjj**

- Nonhierarchical termination number of a broadcast source

The termination number will be output as 0000000 if there is no source information for the termination.

**[s]rst** - The 3- or 4-digit nonhierarchical NPC number belonging to FTU or DS3U

**jjj** - Source channel number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

#### uvmnpjjj

- Hierarchical NPC number of a broadcast source

The termination number will be output as 0000000 if there is no source information for the termination.

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module  
**jjj** - Source channel number

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**jjj** - Source channel number

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |

| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

## **UTL,QRY,BCAST,FROM**

### **UTILITY QUERY BROADCAST**

#### **Explanation Of Command**

This command requests a listing of the tributaries (**TO**) connected to a specified broadcast type source (**FROM**).

The output message header line lists the full tributary, and the data lines list all the tributaries (**TOs**) connected to a broadcast type circuit with the specified source (**FROM**). Other **TOs** will appear in following lines, with sufficient lines to report all of the **TOs** involved, six per line. The last line of the message will be filled with zeros if there are less than eight **TOs** (or a multiple thereof) connected.

You must enter the first channel of the broadcast source for this command.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

[s]abcd

- Nonhierarchical FROM termination number

[s]abc - The 3- or 4-digit nonhierarchical FROM NPC number belonging to FTU (FT type) or DS3U (DT type)

ddd - Channel number denoting the first channel of a channel range specification

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical FROM termination number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

001-024 (Domestic)

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

If a data line contains fewer tributaries than data fields the data fields without corresponding tributary information will be filled with zeros.

**[t]ghi**

- Nonhierarchical termination number

**[t]ghi** - The 3- or 4-digit nonhierarchical NPC number of the full tributary with the same valid values as [s]abc.

**jjj** - Channel number of the full tributary with the same valid values as ddd.

**[t]rstuu**

- Nonhierarchical termination number

**[t]rst** - The 3- or 4-digit nonhierarchical NPC number of additional tributaries with the same valid values as [s]abc.

**uuu** - Channel number of additional tributaries with the same valid values as ddd.

**[t]aaa** - The 3- or 4-digit nonhierarchical TO NPC number of an RT/DL Digroup A with the same valid values as [s]abc.

**wxkqr** - Hierarchical TO termination number with the same valid values as uvmnp.

**edhfg** - Hierarchical TO termination number with the same valid values as uvmnp

**wxjaa** - Hierarchical TO termination number of an RT/DL Digroup A with the same valid values as uvmnp

**eee** - Channel number denoting the last channel of a range specification with the same valid values as ddd.

**xx** - Number of data fields in the current message segment (01 through 32)

**e** - Number of lines in the message (2 through 5)

**UEQD** - Unequipped

**NOBBL** - No backbone leg

The requested printout of all the tributaries connected to the DACS II broadcast source abcd44 was denied because the source NPC was not a backbone leg.

**RT** - Remote terminal

**ffff** - Bank identification number (0000 through 9999)

**MD** - Mode

**[g]g** - Mode of operation

| <i>[g]g</i> | <i>Explanation</i> |
|-------------|--------------------|
|-------------|--------------------|

|   |                       |
|---|-----------------------|
| 1 | SLC 96 Carrier Mode 1 |
|---|-----------------------|

|   |                       |
|---|-----------------------|
| 3 | SLC 96 Carrier Mode 3 |
|---|-----------------------|

|   |                                          |

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**BCAST** - Broadcast

**FROM** - From

Source network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical non-channelized source (FROM)  
NPC Number, whose tributaries will be listed

**[t]ghi** - The 3- or 4-digit full tributary (TO) NPC number

**[t]rst** - The 3- or 4-digit tributary (TO) NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|

### **QUERY PARTIAL CROSS-CONNECT MAP**

#### **Explanation Of Command**

---

This command requests a printout of the DACS II cross-connect map for a single network processing circuit (NPC) or a range of NPCs in a facility terminating unit (FTU), digital signal processing unit (DSPU), or DS3 unit (DS3U).

If a range of NPCs is specified in this command, DACS II will output the cross-connect maps for only those NPCs that are equipped and have at least one cross-connected channel.

The execution of the command and the generation of the output are aborted by entering ABT

If the range includes non-channelized NPCs, only the DAxyz types are mapped and listed. If the NPCs are unmapped, the TO NPC number is omitted.

The output segment has one or two lines.

For 64 kbit/s test access, the FROM and TO terminations under test by the corresponding active testport channels will be displayed rather than far-end mapped terminations.

For non-channelized digital signal test access, the FROM and TO NPCs of the circuit under test are listed, and if only one NPC is actually under test, it is listed first.

**Note:** No range is allowed for virtual NPCs.

**Note 2:** This command is invalid for Subrate NPCs.

## Completion Message

### Nonhierarchical

**Note:** The following message segments will be output for each DE, DS, DA, TE, and TA NPC.

If the 3-digit nonhierarchical NPC number is used, the following message segment will be output for each 24-channel NPC. Each segment shall contain eight terminations per line as shown below, where **ghi** is the nonhierarchical NPC number:

If the header line has 80 or less characters:

[O.52011]

```
M hh:mm:ss xy,ww n[vv] UTL QRY CMAP abc mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ kkk][ {SWMR|SWAR}][ FDL tlmndddr][ {NPCTP|NPCTG|ROLL}] 4 LN MSG:
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

If the header line is longer than 80 characters:

[O.52011]

```
M hh:mm:ss xy,ww n[vv] UTL QRY CMAP def mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ kkk][ {SWMR|SWAR}] 5 LN MSG:
[ FDL tlmndddr][ {NPCTP|NPCTG|ROLL}]
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

**Note:** If the 3-digit nonhierarchical NPC number is used, the following message segment will be output for each Clear-DS1 NPC.

[O.52011]

```
M hh:mm:ss xy,ww n[vv] UTL QRY CMAP jkl mnxyz[ {FAD <tmode>|ROLL}] \
[t]ghi[r][ ghi] EOM
```

If the 4-digit nonhierarchical NPC number is used, the following message segment will be output for each 24-channel NPC. Each segment shall contain six terminations per line as shown below, where the **vgghi** is the nonhierarchical NPC number.

If the header line has 80 or less characters:

[O.52011]

```
M hh:mm:ss xy,ww n[vv] UTL QRY CMAP sabc mnxyz ccc-ddd[ {ACTPL|NACPL}]\

**CMAP** - Cross-connect map

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, the first number of a range

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, the last number of a range

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical NPC number, the first number of a range

**wxkqr** - Hierarchical NPC number, the last number of a range

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

SP type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-31</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC                                   |
|-----------|----------|---------------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02 (DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06 (DACS II CEF frames)</b>     |

**[s]jkl** - Nonhierarchical non-channelized NPC number in range [s]abc-[s]def

**edhfg** - Hierarchical non-channelized NPC number in range uvmnp-wkxqr

**mnxyz** - NPC-type identifier

*mnxyz Explanation*

|    |                                        |
|----|----------------------------------------|
| DA | Dual digroup ANSI NPC                  |
| DE | Dual digroup NPC                       |
| DS | SLC® carrier NPC                       |
| SP | Digital Signal Processing Circuit Pack |
| TA | DS3U ANSI NPC                          |
| TE | DS3U Noninterface unit NPC             |
| MB | Digital multipoint bridge NPC          |

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

**y** *Explanation*

- 0** ZCS - Zero code suppression
- 1\*** NZCS - No zero code suppression
- 2\*** B8ZS - Bipolar with 8 zero substitution
- 3** Not assigned
- 4** ZCS/DMI - Zero code suppression/DMI signaling
- 5** NZCS/DMI - No zero code suppression/DMI signaling
- 6** B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling
- 7-9** Not assigned

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z** *Explanation*

- 0** D4 channel bank channel numbering
- 1** D2 channel bank channel numbering
- 2** D1D channel bank channel numbering
- 3-8** Not assigned
- 9** Unchannelized 193-bit Clear DS1 Cross-connection

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

DE-type xyz fields

**x** - Multiframe format for the digroup

**x**      *Explanation*

**0**      Not assigned

**1**      D4

**2**      ESF - Voice

**3**      ESF - Data

**4**      DDST (T1DM - R bit connection via channel 24)

**5-7**    Not assigned

**8**      Ericsson Cellular format

**9**      No framing format, transparent (TRSP), clear-DS1

**y** - Line and signaling format

**y**      *Explanation*

**0**      ZCS - Zero code suppression

**1\***    NZCS - No zero code suppression

**2\***    B8ZS - Bipolar with 8 zero substitution

**3†**    ZBTSl - Zero-bit time-slot interchanger

**4**      ZCS/DMI - Zero code suppression/DMI signaling

**5**      NZCS/DMI - No zero code suppression/DMI signaling

**6**      B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling

**7-9**    Not assigned

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

**0**      D4 channel bank channel numbering

**1**      D2 channel bank channel numbering

**2**      D1D channel bank channel numbering

**3-8**    Not assigned

**9**      No channel numbering format, clear-DS1

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |
| <b>1</b>   | D4                               |
| <b>2</b>   | ESF - Voice                      |
| <b>3</b>   | Not assigned                     |
| <b>4</b>   | Not assigned                     |
| <b>5</b>   | Not assigned                     |
| <b>6</b>   | SLC® 96 carrier Fs               |
| <b>7</b>   | SLC 5 carrier ESF with data link |
| <b>8-9</b> | Not assigned                     |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TE<sub>x</sub>3<sub>z</sub>**).

MB-type xyz fields

**x** - Fixed at 1

**y** - Fixed at 0

**z** - Fixed at 0

**DPLX** - Duplex

Duplex equipped

#### **ccc-ddd**

- Channel number range

The channel number range varies with the NPC type. It is not printed for non-channelized NPCs

**ccc-ddd**      *Explanation*

**001-024**      Channel range for type DExyz and DAxyz NPC

**001-024**      Channel range for type TExyz and TAxyz NPC

For DSxyz-type NPC (SLC® carrier interface digroup)

*ccc-ddd*      *Digroup & Mode*

001-047      Odd only (SLC 96® Carrier, Mode 3, DGA)

049-095      Odd only (SLC 96 Carrier, Mode 3, DGC)

001-024      Odd and Even (SLC 96 Carrier, Mode 1, DGA)

025-048      Odd and Even (SLC 96 Carrier, Mode 1, DGB)

049-072      Odd and Even (SLC 96 Carrier, Mode 1, DGC)

073-096      Odd and Even (SLC 96 Carrier, Mode 1, DGD)

001-024      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA)

025-048      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB)

049-072      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC)

073-096      Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD)

Conference numbers

001-085      (MB NPC)

**SWMR** - Switch manually requested

Protection switch manually requested for SLC carrier NPC

**SWAR** - Switch automatically requested

Protection switch automatically requested for SLC carrier NPC

**ACTPL** - Active protection line

Queried SLC carrier NPC is a protection line which is active

**NACPL** - Nonactive protection line

Queried SLC carrier NPC is a protection line which is not active

**[t]kkk** - Nonhierarchical corresponding SLC carrier Digroup A (DGA) NPC number  
(with the same valid values as [s]abc)

**uvkkk** - Hierarchical SLC carrier Digroup A (DGA) NPC number

**FDL** - Facility data link

Only for DE-type NPCs

**[u]lmnddd**

- Nonhierarchical termination number to which the FDL is mapped

**jklmnddd**

- Hierarchical termination number to which the FDL is mapped

**[u]lmn** - The 3- or 4-digit nonhierarchical NPC number (with the same valid values as [s]abc)

**t** *Type of connection*

**\*** One-way

**" "** Two-way (a blank)

**B** Broadcast (BCON)

**R** Roll

**T** Test Access\*

**S** Signaling conversion is being applied

\* T will not be displayed for mapped terminations.

**NPCTP** - Network processing circuit for test port

DExyz or TExyz type NPC for DS0 Test Ports

**ROLL** - Roll  
Bridged facility in Roll procedure

**FAD** - Facility access digroup  
Non-channelized test NPC

**Note:** In a segment containing information for a FAD type NPC, the NPCs under test will be listed without the type of the connection they are in.

**tmode** - Test mode of non-channelized test NPC

**tmode** *Test mode*

|               |                   |
|---------------|-------------------|
| <b>HUB</b>    | Hub               |
| <b>LOOPE</b>  | Loop E            |
| <b>LOOPF</b>  | Loop F            |
| <b>LPBKT</b>  | Terminal Loopback |
| <b>MONE</b>   | Monitor E(FROM)   |
| <b>MONEF</b>  | Monitor E and F   |
| <b>MONF</b>   | Monitor F(TO)     |
| <b>SPLTA</b>  | Split A           |
| <b>SPLTAB</b> | Split A and B     |
| <b>SPLTB</b>  | Split B           |
| <b>SPLTE</b>  | Split E           |
| <b>SPLTEF</b> | Split E and F     |
| <b>SPLTF</b>  | Split F           |

**[v]ghi****jjj**

- Nonhierarchical number of NPC and channel or conference port number/circuit ID. For a non-channelized cross-connect, the channel number **jjj** will not be shown.

**[v]ghi** - Nonhierarchical NPC with the same valid values as **[s]abc**.

For an FAD, the tested NPC is listed first if only one of the two mapped NPCs is under test.

**jjj** - Channel number (If **[v]ghi** is MB type, the range for **jjj** is 001 to 085.)

Some examples of **[v]ghijjj** are listed below:

**[v]ghijjj** Explanation

**[0]000000** Unmapped channel

**[v]ghi000** Mapped channel connected to an FDL of NPC **[v]ghi**

**[s]SECH-** Mapped channel connected to a Subrate (SR)  
or MJ-type NPC.

**[v]ghijj** Mapped channel NOT connected to an FDL, SR or MJ channel

**r** - Termination status

**r** *Termination status*

**T** Terminated

**blank** Not Terminated

**ghikljjj**

- Hierarchical number of NPC and channel or conference port  
number/circuit ID. For a non-channelized cross-connection,  
the channel number jjj will not be shown.

**00000000**

- Unmapped channel

**ghikl000**

- Mapped channel connected to a FDL of NPC ghikl

**ghikljjj**

- Mapped channel NOT connected to an FDL, SR and MJ channel

**jjj** - Channel number

If ghikl is an MB type, the range for jjj is 001 to 085.

**[s]cbn** - The 3- or 4-digit nonhierarchical CB type NPC number.

**[s]mbn** - The 3- or 4-digit nonhierarchical MB type NPC number

**mbnop** - Hierarchical MB type NPC number

**mb** - Unit number

**n** - Module number

**op** - NPC number

**lll** - Number of legs for the multipoint termination (003 through 256)

**[s]vnp** - The 3- or 4-digit nonhierarchical virtual NPC number

**vnprs** - Hierarchical virtual NPC number

**vn** - Unit number

**p** - Module number

**rs** - NPC number

- xx** - Number of conferences reported in the segment (01 through 48)
- e** - Number of lines in the segment
- t nnn** - Virtual conference type and number
- t** - *Virtual conference type*
- | <b>t</b>   | Explanation       |
|------------|-------------------|
| <b>*</b>   | One-way           |
| <b>" "</b> | Two-way (a blank) |
- nnn** - Virtual conference number (001 through 500)
- [w]mno** - The 3- or 4-digit nonhierarchical NPC number that caused the denial ([s]abc through [t]def)
- edmno** - Hierarchical NPC number that caused the denial (uvmnp through wxkqr)
- cc** - Hexadecimal condition code
- | <b>cc</b> | <i>Explanation</i>                 |
|-----------|------------------------------------|
| <b>0B</b> | Invalid CEPT NPC                   |
| <b>7F</b> | NPC is not added                   |
| <b>91</b> | SR NPC was specified - not allowed |

### Explanation Of Parameters

---

**ID** - Identifier (frame)

**xy** - Frame identifier (00 through ZZ)

**UID** - Unique identifier

**uid** - Unique (frame) identifier (1 to 20 alphanumeric characters)

**SS** - Software serial number

**ssn** - Software serial number value (1 to 10 alphanumeric characters)

The software serial number may be assigned by the user to identify a particular software package. This would eliminate problems in an office where the user has multiple frames and more than one software package is in use.

**BAY** - Bay

**aa** - Total number of bays, in decimal (01 through 07)

**TYPE** - Type

**fff-fff**

- Bay types (-, 1, or 2)

Variable fff-fff gives the bay type assigned to each bay in the frame. Bays are numbered from 1 through 7. When viewed from the front of the frame the bays are positioned in the frame in the same order as the bay numbers shown below. Consult this table to determine the bay associated with the position of a given f.

|             |               |
|-------------|---------------|
| Bay numbers | 6 4 1 2 3 5 7 |
| Assignment  | f f f - f f f |

| <i>f</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |                                          |
|---|------------------------------------------|
| - | Not configured or the Switch Bay (Bay 2) |
|---|------------------------------------------|

|   |                        |
|---|------------------------|
| 1 | Original Interface Bay |
|---|------------------------|

|   |                        |
|---|------------------------|
| 2 | Flexible Interface Bay |
|---|------------------------|

**UNITS** - Units

**bb** - Number of equipped units, in decimal (01 through 16)

**CCN** - Cross-connect network

**c** - Cross-connect network type

| <i>c</i> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |              |
|---|--------------|
| 1 | Multibay CCN |
|---|--------------|

|   |                |
|---|----------------|
| 2 | Single-bay CCN |
|---|----------------|

|   |      |
|---|------|
| E | ECCN |
|---|------|

**HG** - Height

**d** - Height of bay

## **UTL, QRY, CS, NPC**

---

### **UTILITY QUERY CIRCUIT STATUS, NPC**

#### **Explanation Of Command**

---

This message requests the Circuit Status (CS) of an ANSI type Network Processing Circuit (NPC). The response to this query displays the ANSI NPC's Near-end and Far-end Alarm/Status bytes. ANSI capability is supported by DA-type NPCs in a DACS II Facility Terminating Unit or TA-type NPCs in a DACS II DS3 Unit.

**Note:** This message will be denied if the NPC is not equipped as an DA/TA type NPC.

### **Explanation Of Parameters**

---

**CS** - Circuit status

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |

**furyatlo**

- Near-end circuit status. The bits in the near-end byte identify the following alarm/status conditions:

| Field | Explanation                                           |
|-------|-------------------------------------------------------|
| f     | f = 1, if u or r or y or a or t or l or o = 1         |
| u     | u = 1, if an unavailable signal status exists         |
| r     | r = 1, if a Red-CGA exists                            |
| y     | y = 1, if a Yellow-CGA exists                         |
| a     | a = 1, if an AIS-CGA exists                           |
| t     | t = 0, (unused)                                       |
| l     | l = 1, if a payload loopback or test signal is active |
| o     | o = 0, (unused)                                       |

**fumcablo**

- Far-end circuit status. The bits in the far-end byte identify the following alarm/status conditions:

| Field | Explanation                                                     |
|-------|-----------------------------------------------------------------|
| f     | f = 1, if u or m or c or a or b or l or o = 1                   |
| u     | u = 1, if a far-end unavailable signal status exists            |
| m     | m = 1, if no ANSI PRMs or RAI has been received for 4.5 seconds |
| c     | c = 1, if loopback retention code is being received             |
| a     | a = 1, if a far-end AIS-CGA or Red-CGA exists                   |
| b     | b = 1, if loopback retention code is being transmitted          |
| l     | l = 1, if a far-end payload loopback is active                  |
| o     | o = 0, (unused)                                                 |

I hh:mm:ss xy,ww UTL QRY DATE aa/bb/cc FORMAT ggg INT ii COMPL

## **Explanation Of Parameters**

---

**INT** - Interval

**ii** - Interval at which DACS II will print the date.

ii      Meaning

01      Every hour on the hour.

02      Every even hour on the hour.

04      Every fourth hour on the hour: 04, 08, 12, 16, 20, 24

06      Every sixth hour on the hour: 06, 12, 18, 24

08      Every eighth hour on the hour: 08, 16, 24

12      Twice daily on the hour: 12, 24

24      Once daily at midnight (default).

**DATE** - Date

**aa** - Month or day

**bb** - Day or Month

**cc** - Year (2 or 4 digits)

The DATE will be displayed in the International format

**FORMAT** - Format

**ggg** - Date format

*ggg*      *Date format*

MDY      Month/Day/Year (USA format)

DMY      Day/Month/Year (International format)

## **UTL,QRY,DMAP**

---

### **QUERY FULL CROSS-CONNECT MAP**

#### **Explanation Of Command**

---

This command requests a printout of the DACS II map on ALL cross-connected channels.

The output lists all FROM and TO side identifiers for all equipped network processing circuits (NPCs). Unequipped and fully unassigned Network Processing Circuits will not be listed. The outputs are similar to the **UTL : : QRY, CMAP** output. This command may produce a large volume of output. To terminate the output enter the **ABT** command. The outputs are similar to the **RTRV-CRS-T1 : : : MAP** output. This command may produce a large volume of output. To terminate the output enter the **ABT-CMD** command.

#### **Command**

---

[I.52031]

**UTL : [FRM xy, SEQ ww] : QRY, DMAP !**

## Completion Message

### Nonhierarchical

**Note:** The following message segment will be output for each DE, DS, DA, TE, and TA NPC.

If the 3-digit nonhierarchical NPC number is used, the following message segment will be output for each 24-channel NPC. Each segment shall contain eight terminations per line as shown below, where the **ghi** is the nonhierarchical NPC number.

If the header line has 80 or less characters:

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP abc mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ kkk {SWMR|SWAR}][ FDL tlmndddr][ {NPCTP|NPCTG|ROLL}] 4 LN MSG:
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

If the header line is longer than 80 characters:

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP abc mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ kkk {SWMR|SWAR}] 5 LN MSG:
[FDL tlmndddr][ {NPCTP|NPCTG|ROLL}]
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

**Note:** If the 3-digit nonhierarchical NPC number is used, the following message segment will be output for each Clear-DS1 NPC.

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP jkl mnxyz[ {FAD <tmode>|ROLL}] \
[t]ghi[r][ [v]ghi] EOM
```

If the 4-digit nonhierarchical NPC number is used, the following message segment will be output for each 24-channel NPC. Each segment shall contain six terminations per line as shown below, where the **vghi** is the nonhierarchical NPC number.

If the header line has 80 or less characters:

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP sabc mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ tkkk {SWMR|SWAR}][ FDL tulmndddr][ {NPCTP|NPCTG|ROLL}] 5 LN MSG:

tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr EOM
```

If the header line is longer than 80 characters:

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP sabc mnxyz ccc-ddd[ {ACTPL|NACPL}]\
[ tkkk {SWMR|SWAR}] 6 LN MSG:
[FDL tuImndddr][ {NPCTP|NPCTG|ROLL}]
tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr
tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr
tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr
tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr tvghijjrr EOM
```

If the 4-digit nonhierarchical NPC number is used, the following message segment will be output for each Clear-DS1 NPC.

[O.52031]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP sjkl mnxyz[ {FAD <tmode>|ROLL}] \
[t]vghi[r][ vghi] EOM
```

If the 3-digit nonhierarchical NPC number is used, the following two message segments will be output for each SP100 NPC. Each segment shall contain eight terminations per line as shown below, where the **ghi** is the nonhierarchical NPC number.

[O.52037]

```
M hh:mm:ss xy,ww n[vv] UTL QRY DMAP jkl SP100 001-032 5 LN MSG:
ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj
ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj ghijjj

## Denial Message

Not applicable.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**DMAP** - Digroup map

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number  
For FT NPCs excluding non-channelized NPCs.

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |

| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The valid values are:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

SP type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-31</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**mnxyz** - NPC-type identifier

*mn*      *Explanation*

DA      Dual digroup ANSI NPC  
DE      Dual digroup NPC  
  
DS      SLC® carrier NPC

|    |                                        |
|----|----------------------------------------|
| SP | Digital Signal Processing Circuit Pack |
| MB | Digital multipoint bridge NPC          |
| TA | DS3U ANSI NPC                          |
| TE | DS3U Noninterface unit NPC             |

#### DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |
| <b>1</b>   | D4                               |
| <b>2</b>   | ESF - Voice                      |
| <b>3</b>   | Not assigned                     |
| <b>4</b>   | Not assigned                     |
| <b>5</b>   | Not assigned                     |
| <b>6</b>   | SLC® 96 carrier Fs               |
| <b>7</b>   | SLC 5 carrier ESF with data link |
| <b>8-9</b> | Not assigned                     |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### SP-type xyz fields

- x** - Fixed at 1
- y** - Fixed at 0
- z** - Fixed at 0

#### TE-type xyz fields

- x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2**      Not assigned
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6-9**   Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      No channel numbering format, clear-DS1

TA-type xyz fields

**x** - Multiframe format for the digroup

**x**      *Explanation*

- 0**      Not assigned
- 1**      D4
- 2**      ESF - Voice
- 3**      ESF - Data
- 4**      DDST (T1DM - R bit connection via channel 24)
- 5-7**   Not assigned
- 8**      Ericsson Cellular format
- 9**      Not assigned

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2**      Not assigned
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6-9**   Not assigned

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      Unchannelized 193-bit Clear DS1 Cross-connection

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

MB-type xyz fields

- x**      - Fixed at 1
- y**      - Fixed at 0
- z**      - Fixed at 0

**ccc** - Starting channel or conference number  
**ddd** - Ending channel or conference number

Channel numbers  
001 through 024

| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

001-064          Signaling conversion time slot numbers

Conference numbers  
001-085          (MB NPC)

**FDL** - Facility data link

Only for DE type NPCs

The FDL is mapped to the following termination:

**t[u]l m d d d r**

- Nonhierarchical termination number and state

**t** - Type of connection

**[u]l m n** - The 3- or 4-digit nonhierarchical NPC number

**d d d** - Channel number

**r** - Termination state

**t j k l m d d d**

- Hierarchical termination number

**t** - Type of connection

**j k** - Unit number

**l** - Module number

**m n** - NPC number within the module

**d d d** - Channel number

**r** - Termination state

**r** *Explanation*

**T** Terminated

**b l a n k** Not Terminated

**NPCTP** - NPC for DS0 Test Ports

**NPCTG** - NPC for Nx64 kbit/s Test-access Groups

**ROLL** - bridged facility in Roll procedure

**t[v]ghi[j]r**

- Nonhierarchical termination number and state

**t** - Type of connection

**[v]ghi** - Nonhierarchical NPC number

**[j]** - Channel/conference number

**r** - Termination state

**t** *Explanation*

**\*** One-way

**blank** Two-way

**B** Broadcast

**R** Bridged (from Roll)

**T** Test access

**S** Signaling conversion is being applied

**[v]ghi[j]**

- Nonhierarchical termination number

Number of NPC and channel or conference port number/circuit ID.

[0]000000 Unmapped termination number

[v]ghi000 Mapped termination number connected to an FDL

[-]-SECH- Mapped termination connected to a Subrate (SR)  
or Multijunction (MJ) type NPC.

**r** *Explanation*

**T** Terminated

**blank** Not Terminated

# **tghikljrr**

- Hierarchical termination number and state

**t** - Type of connection

**gh** - Unit number

**i** - Module number

**kl** - NPC number

**jjj** - Channel/conference number

**r** - Termination state

**ghikljrr** Hierarchical termination number

**00000000** Unmapped termination number

**ghikl000** Mapped termination number connected to an FDL

**---SECH---** Mapped termination connected to a Subrate (SR)  
or Multijunction (MJ) type NPC.

**[s]mbn** - The 3- or 4-digit nonhierarchical MB type NPC number

If NPC numbers are expressed in three digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-002</b> | <b>161-162</b> | <b>321-322</b> | <b>481-482</b> | <b>641-642</b> | <b>801-802</b> |
| <b>021-022</b> | <b>181-182</b> | <b>341-342</b> | <b>501-502</b> | <b>661-662</b> | <b>821-822</b> |
| <b>041-042</b> | <b>201-202</b> | <b>361-362</b> | <b>521-522</b> | <b>681-682</b> | <b>841-842</b> |
| <b>061-062</b> | <b>221-222</b> | <b>381-382</b> | <b>541-542</b> | <b>701-702</b> | <b>861-862</b> |
| <b>081-082</b> | <b>241-242</b> | <b>401-402</b> | <b>561-562</b> | <b>721-722</b> | <b>881-882</b> |

**mbnop** - Hierarchical MB type NPC number

**mb** - Unit number  
**n** - Module number  
**op** - NPC number

The valid values are:

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit  | Module | NPC   |
|-------|--------|-------|
| 01-16 | 1-8    | 01-02 |

**lll** - Number of legs involved in the multipoint conference (000 through 256)

**[s]vnp** - The 3- or 4-digit nonhierarchical virtual NPC number

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**vnprs** - Hierarchical virtual NPC number

**vn** - Unit number

**p** - Module number

**rs** - NPC number

The valid values are:

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**e** - Number of lines in the message segment

**tnnn** - Virtual conference type and number

**t** - Virtual conference type

**nnn** - Virtual conference number (001 through 500)

**t** *Explanation*

**\*** one-way

**blank** two-way

**DPLX** - Duplex

Duplex equipped

**ACTPL** - Active protection line

Queried SLC<sup>®</sup> carrier NPC is a protection line which is active

**NACPL** - Nonactive protection line

Queried SLC carrier NPC is a protection line which is not active

**[t]kkk** - The 3- or 4-digit nonhierarchical NPC number

Corresponding SLC carrier Digroup A (DGA) NPC number

Valid values are identical to [s]abc

**uvkkk** - Hierarchical NPC number

SLC carrier digroup A (DGA) NPC number

**SWMR** - Switch manually requested

Protection switch manually requested for SLC carrier NPC

**SWAR** - Switch automatically requested

Protection switch automatically requested for SLC carrier NPC

**FAD** - Facility access digroup

Non-channelized Test NPC

**Note:** In a message segment containing information for an FAD type NPC, the NPCs under test will be listed without the type of the connection they are in.

**tmode** - Nonchannelized test mode

**E-end** - Equipment end

**F-end** - Facility end

*tmode Explanation*

**MONE** Monitor signal from E-end NPC to F-end NPC of unmapped or one-/two-way mapped test session

**MONF** Monitor signal from F-end NPC to E-end NPC of a two-way mapped test session

**MONEF** Monitor a two-way mapped connection in both directions  
Two FADs are connected for the test session,  
and test mode can only be changed to SPLTEF

**SPLTA** Split the A signal from the E-end NPC to the F-end NPC of one-/two-way mapped test session

**SPLTB** Split the B signal from the F-end NPC to the E-end NPC of a mapped two-way test session

**SPLTAB** Split a two-way mapped circuit in both directions

**SPLTE** Split the input and output ports of E-end NPC of an unmapped or two-way mapped test session

**SPLTF** Split the input and output ports of F-end NPC of a two-way mapped test session

**SPLTEF** Split a two-way mapped test session in both directions  
Two FADs are connected for the test session,  
and test mode can only be changed to MONEF

**LOOPE** Loop the E-end input port to the output port,  
and connect the looped signal to the FAD

The test session may include an unmapped or two-way mapped connection

**LOOPF** Loop the F-end input port to the output port,  
and connect the looped signal to the FAD

Only for a two-way mapped test session  
Not allowed for one-way broadcast tributaries

**[s]jkl** - The 3- or 4-digit nonhierarchical NPC number

Values are identical to [s]abc

For Clear DS1 NPCs

**edhfg** - Hierarchical NPC number

**ed** - Unit number  
**h** - Module number  
**fg** - NPC number within the module

Valid values are identical to uvmnp

**[t][v]ghi[r]**

- Nonhierarchical termination number and state

**t** - Type of connection  
**[v]ghi** - The 3- or 4- digit nonhierarchical NPC number  
**r** - Termination state

Valid values are identical to abc

**[t]ghikl[r]**

- Hierarchical termination number and state

**t** - Type of connection  
**gh** - Unit number  
**i** - Module number  
**kl** - NPC number  
**r** - Termination state

Valid values are identical to uvmnp

**Note:** For an FAD, the tested NPC is listed first if only one of the two mapped NPCs is under test.

## **UTL, QRY, DS3, BERMT, UNIT**

### **UTILITY QUERY DS3 BIT ERROR RATE**

#### **Explanation Of Command**

This message reports the bit error rate calculation method and the bit error rate threshold setting for the DS3 facilities in a DS3 unit or for all of the DS3 units in a DACS II frame.

#### **Command**

[I.53221]

UTL:FRM xy,SEQ ww:QRY,DS3,BERMT[,UNIT [q]q]!

## **UTL, QRY, ECLOC**

---

### **QUERY ERROR CORRECTION LOCATION**

#### **Explanation Of Command**

---

This Subrate message requests the current setting of the error correction location (ECLOC) functions. The ECLOC is the type of Subrate circuit pack to which all new error correction functions will be allocated. Such resources are allocated for channels requiring parity channel error correction and for circuits with Subrate error correction that do not connect to a Subrate multiplexer or a multipoint junction unit. The ECLOC is set using the CHG, FROM, TO, NOT or CHG, FROM, TO, TLP commands. The ECLOC is set using the ED, PRMTR, T0, INCL, TERM or ED, PRMTR, T0, INCL, TLP commands.

#### **Command**

**TLI 3, SSP 1**

**TLI 4, SSP 0**

**TLI 4, SSP 1**

**TSIS** - Time slot interchanges **NonCEF**

**ETSIS** - Expanded time slot interchangers **CEF**

**f** - FROM unit (1 through 6)

**t** - TO Unit (1 through 6)

**SYNC** - Synchronizer

**x** - Side 0 synchronizer equipage status

**y** - Side 1 synchronizer equipage status

**CRO** - Clock reference oscillator

**x** - CRO equipage status

**tt** - Total number of equipped TSIs/ETSIs.

---

## UTL, QRY, EQD, CONN

---

### UTILITY QUERY, EQUIPMENT CONNECTIVITY

#### Explanation Of Command

---

This message requests a printout of an interunit connectivity matrix. A "1" indicates cross-connections are made between the two units listed in the row and column. A "0" indicates no connectivity between the two units.

The matrix also serves as an equiPAGE map of the time slot interchange (TSI) circuit packs on each side of the cross-connect network.

The 6 X 6 matrix is shown in halves in the PDS output message.

#### Command

**y** - not assigned (the only valid value is 0)

**z** - not assigned (the only valid value is 0)

**Note:** If a particular MXR is not equipped, five hyphens(-----) will occupy the mnxyz field.

## **UTL, QRY, EQD, NPCS, TOTAL, UNIT**

### **QUERY EQUIPPED NPCS**

#### **Explanation Of Command**

This command reports the equipage state for each of the network processing circuits (NPCs) on the DACS II frame and can provide the total number of circuits that are equipped in the facility terminating units (FTU), DS3 units (DS3U), and digital signal processing units (DSPU).

The results of the output message are in fragment sequence starting with the lowest unit number and ending with the highest NPC number.

Within a fragment, the information is listed in NPC number sequence, starting with the lowest number at the top left and increasing to the right. The next line starts with the next highest NPC number.

The output of a partially equipped frame should conform to these rules:

- Omit the output message fragments for half of a DS1 facility terminating module (FTM) for which there are no equipped NPCs.
- In nonhierarchical addressing, omit the output message fragment for one DS3 FTM (multiplexer) for which there are no equipped NPCs.
- In hierarchical addressing, omit the output message fragment for half a DS3 FTM (multiplexer) for which there are no equipped NPCs.
- Unequipped unit or module will not be reported
- The output will report on NPCs in increasing unit number order, regardless of whether the units are equipped as FTU, DS3U, or DSPU.
- If there are no DSPUs, the DSPU part is omitted.
- If there are no equipped FTUs, DS3Us, and DSPU NPCs, the output is given in message 53043.
- The DS3U keyword will only be generated in message 53043 if the DS3 feature bit is enabled in the software.
- The range of NPCs in one DS1 FTM will be spanned in two output segments.
- The range of nonhierarchical NPCs in one DS3 FTM will be spanned in one output segment.
- The range of hierarchical NPCs in one DS3 FTM will be spanned in two output segments.
- The range of NPCs in one DSPU will be spanned by one output segment.

## Explanation Of Parameters

---

**EQD** - Equipped

Request equipage status

**NPCS** - Network processing circuits

Request information on NPCs

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**TOTAL** - Total

Request summary information

**tt** - Total number of NPCs in a segment

**mnxyz** - The equipage state and type of the NPCs

**mnxyz** *Explanation*

----- Not equipped

**mn** - The type of NPC

Valid values are listed below:

| mn | Explanation |
|----|-------------|
|----|-------------|

|    |                       |
|----|-----------------------|
| DA | Dual digroup ANSI NPC |
|----|-----------------------|

|    |                  |
|----|------------------|
| DE | Dual digroup NPC |
|----|------------------|

|    |                  |
|----|------------------|
| DS | SLC® carrier NPC |
|----|------------------|

|    |                               |
|----|-------------------------------|
| MB | Digital multipoint bridge NPC |
|----|-------------------------------|

|    |                              |
|----|------------------------------|
| MJ | Multipoint junction unit NPC |
|----|------------------------------|

|    |                              |
|----|------------------------------|
| SR | Subrate multiplexer unit NPC |
|----|------------------------------|

|    |               |
|----|---------------|
| TA | DS3U ANSI NPC |
|----|---------------|

|    |                            |
|----|----------------------------|
| TE | DS3U Noninterface unit NPC |
|----|----------------------------|

**xyz** - The parameters used to provision the NPC.

See GRTH,NPC,TYPE and GRTH,NPC,TYPE,OPTS,IW,X,AIS,INFO,MJ,MN for values.

**[a]aaa** - The 3- or 4-digit nonhierarchical NPC number for DSPU NPCs

Valid values are listed below (or ---).

If NPC numbers are expressed in three digits, the valid values are:

MB, SR, and MJ type NPC numbers listed by unit number,  
Unit Type DP (DSPU)

| Unit<br>1  | Unit<br>2  | Unit<br>3  | Unit<br>4  | Unit<br>5  | Unit<br>6  |

|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB, SR, and MJ type numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

|              |            |           |
|--------------|------------|-----------|
| Unit         | Module     | NPC       |
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**nnnn** - Total number of FTU NPCs on the frame.

Dashes (----) will be shown if no unit is grown.

**fff** - Total number of NPCs on each FTU.

Dashes (---) will be shown if the unit is not grown or is not grown as an FTU.

**pppp** - Total number of DSPU NPCs on the frame.

Dashes (----) will be shown if no unit is equipped.

**qqq** - Total number of NPCs on each DSPU.

Dashes (---) will be shown if the unit is not grown or is not grown as a DSPU.

**e** - number of lines in a segment

**[c]ccc** - The 3- or 4-digit nonhierarchical NPC number for domestic DS1 FTM

Valid values are listed below (or ---).

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                |                |                |                |                |                |
|----------------|----------------|----------------|----------------|----------------|----------------|
| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**hhhh** - Total number of DS3U NPCs on the frame.

Dashes (----) will be shown if no unit is grown.

**ggg** - Total number of NPCs on each DS3U.

Dashes (---) will be shown if the unit is not grown or is not grown as a DS3U.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped

---

## UTL, QRY, EQD, TSIS

---

### UTILITY QUERY EQUIPPED

#### Explanation Of Command

---

This message requests a printout for all the equipped time slot interchange (TSI) circuit packs.

A fully equipped Enclosed Single Bay Frame (ESBF) shows the following TSI equipage status:

11 15 51 55

A fully equipped non-ESBF frame shows the following TSI equipage status:

|                   |                   |
|-------------------|-------------------|
| 11 12 13 14 15 16 | 41 42 43 44 45 46 |
| 21 22 23 24 25 26 | 51 52 53 54 55 56 |
| 31 32 33 34 35 36 | 61 62 63 64 65 66 |

#### Command

---

[I.53021]

UTL:FRM xy,SEQ ww:QRY,EQD,TSIS!

#### Completion Message

---

[O.53021]

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TSIS 5 LN MSG:  
TOTAL TSIS tt  
ft ft ft ft ft ft ft ft ft ft ft ft  
ft ft ft ft ft ft ft ft ft ft ft ft  
ft ft ft ft ft ft ft ft ft ft ft COMPL

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**EQD** - Request equipage status

**TSIS** - Request information on TSI circuit packs

**tt** - Total number of equipped TSIs on the in-service side. The total number of equipped TSIs in the frame is twice this number.

**ft** - TSI equipage status:

| <i>ft</i> | <i>Explanation</i> |
|-----------|--------------------|
| 00        | Unequipped         |
| TSI No.   | Equipped           |

## **UTL, QRY, EQD, UNIT**

### **UTILITY QUERY ENTITY EQUIPAGE**

#### **Explanation Of Command**

This command is used to retrieve the state information associated with equipment.

The UNIT option is specified only when the EQPT modifier is used to query that unit. The UNIT field will be null when the command is used to query the whole frame.

#### **Command**

[I.53108]

**UTL:FRM xy,SEQ ww:QRY,EQD[,UNIT [q]q]!**

## **Completion Message**

### **Nonhierarchical**

If the unit number is not entered, the following output messages will be generated:

The output message starts with:

[O.53108]

M hh:mm:ss xy,ww n[vv] UTL QRY EQD g h i j k l m n o p EOM

M hh:mm:ss xy,ww n[vv] UTL QRY EQD 3 LN MSG:

SYNC x x CRO x

TLI x x x x x x x x x x x x x x x x EOM

For DACS II Non-CEF frames, the next segment describes the CCN hardware:

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL TSIS tt 5 LN MSG:

11 x 12 x 13 x 14 x 15 x 16 x

21 x 22 x 23 x 24 x 25 x 26 x

31 x 32 x 33 x 34 x 35 x 36 x

41 x 42 x 43 x 44 x 45 x 46 x EOP

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL TSIS tt 3 LN MSG:

51 x 52 x 53 x 54 x 55 x 56 x

61 x 62 x 63 x 64 x 65 x 66 x EOM

For DACS II CEF frames, the segment describes the ECCN hardware:

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL ETSIS tt 3 LN MSG:

01 x 02 x 03 x 04 x 05 x 06 x 07 x 08 x

09 x 10 x 11 x 12 x 13 x 14 x 15 x 16 x EOM

The output then continues with segments that contain information about common equipment in the equipped units. If more than 4 units are equipped, the unit equipage output will be divided into multiple segments.

[O.53108]

```
[M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNITS e LN MSG:]
[<data line for common equipment in the first equipped unit>]
[<data line for common equipment in the second equipped unit>]
[<data line for common equipment in the third equipped unit>]
[<data line for common equipment in the fourth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNITS e LN MSG:]
[<data line for common equipment in the fifth equipped unit>]
[<data line for common equipment in the sixth equipped unit>]
[<data line for common equipment in the seventh equipped unit>]
[<data line for common equipment in the eighth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNITS e LN MSG:]
[<data line for common equipment in the ninth equipped unit>]
[<data line for common equipment in the tenth equipped unit>]
[<data line for common equipment in the eleventh equipped unit>]
[<data line for common equipment in the twelfth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNITS e LN MSG:]
[<data line for common equipment in the thirteenth equipped unit>]
[<data line for common equipment in the fourteenth equipped unit>]
[<data line for common equipment in the fifteenth equipped unit>]
[<data line for common equipment in the sixteenth equipped unit> EOM]
```

Data line for a unit equipped as a DS1 FTU:

```
UNIT [q]q UC a FTMI b c d e FC f g h j k m p q[ CCB r s]
```

Data line for a unit equipped as a DS3U:

```
UNIT [q]q UC a FLI b c FMT l m MXR d e f g h j k MIU n o p q u v w[ CCB r s]
```

Data line for a unit equipped as a DSPU:

```
UNIT [q]q UC a DSPI b[ CCB r s]
```

The output message then lists the NPC numbers of equipped NPCs in each FTM/MXR/DSPU. Output messages will be generated successively in ascending order by NPC number. If an FTM/MXR/DSPU has no NPC equipped, the segment for that FTM/MXR/DSPU will not be output.

Output message for equipage of NPCs in a DS1 FTM:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD FTU NPCS [a]aaa-[b]bbb tt 5 LN MSG:
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx EOM
```

Output message for equipage of NPCs in a DS3U MXR:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD DS3U NPCS [a]aaa-[b]bbb tt 5 LN MSG:
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx EOM
```

Output message for equipage of NPCs in a DSPU:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD DSPU NPCS [a]aaa-[b]bbb tt 2 LN MSG:
[z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz EOM
```

After the above information is output, the following format will be generated to complete the output response:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD COMPL
```

If the unit number is specified in the input, the following output messages will be generated:

Output message format for an FTU:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD 2 LN MSG:
UNIT [q]q UC a FTMI b c d e FC f g h j k m p q[ CCB r s] EOM
```

The output then continues with up to 4 of the following segment; one for each FTM:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNIT qq FTU NPCS [a]aaa-[b]bbb tt 5 LN MSG:
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx EOM
```

Output message format for a DS3U:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD 2 LN MSG:

[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx
[x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx [x]xxx EOM
```

Output message format for a DSPU:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNIT [q]q UC a DSPI b[ CCB r s] EOM

M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNIT [q]q DSPU NPCS [a]aaa-[b]bbb tt 2 LN MSG:
[z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz [z]zzz EOM
```

After the above information is output, the following message will be generated to complete the response:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNIT [q]q COMPL
```

## Hierarchical

If the unit number is not entered, the following output messages will be generated:

The output message starts with:

[O.53108]

M hh:mm:ss xy,ww n[vv] UTL QRY EQD g h i j k l m n o p EOM

M hh:mm:ss xy,ww n[vv] UTL QRY EQD 3 LN MSG:  
SYNC x x CRO x  
TLI x x x x x x x x x x x x x x EOM

For DACS II Non-CEF frames, the next segment describes the CCN hardware:

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL TSIS tt 5 LN MSG:  
11 x 12 x 13 x 14 x 15 x 16 x  
21 x 22 x 23 x 24 x 25 x 26 x  
31 x 32 x 33 x 34 x 35 x 36 x  
41 x 42 x 43 x 44 x 45 x 46 x EOP

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL TSIS tt 3 LN MSG:  
51 x 52 x 53 x 54 x 55 x 56 x  
61 x 62 x 63 x 64 x 65 x 66 x EOM

For DACS II CEF frames, the segment describes the ECCN hardware:

M hh:mm:ss xy,ww n[vv] UTL QRY EQD TOTAL ETSIS tt 3 LN MSG:  
01 x 02 x 03 x 04 x 05 x 06 x 07 x 08 x  
09 x 10 x 11 x 12 x 13 x 14 x 15 x 16 x EOM

The output then continues with segments that contain information about common equipment in the equipped units. If more than 4 units are equipped, the unit equipage output will be divided into multiple segments.

[O.53108]

```

```

Data line for a unit equipped as a DS1 FTU:

```
UNIT [q]q UC a FTMI b c d e FC f g h j k m p q[ CCB r s]
```

Data line for a unit equipped as a DS3U:

```
UNIT [q]q UC a FLI b c FMT l m MXR d e f g h j k MIU n o p q u v w[ CCB r s]
```

Data line for a unit equipped as a DSPU:

```
UNIT [q]q UC a DSPI b[ CCB r s]
```

The output message then lists the NPC numbers of equipped NPCs in each FTM/MXR/DSPU. Output messages will be generated successively in ascending order by NPC number. If an FTM/MXR/DSPU has no NPC equipped, the segment for that FTM/MXR/DSPU will not be output.

Output message for equipage of NPCs in a DS1 FTM:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD FTU NPCS uvmnp-uxkqr tt 5 LN MSG:
xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx
xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx
xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx
xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx EOM
```

Output message for equipage of NPCs in a DS3U MXR:

[O.53108]

```
M hh:mm:ss xy,ww n[vv] UTL QRY EQD DS3U NPCS uvmnp-uxkqr tt 5 LN MSG:
xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx xxxxx

### Autonomous Message

Not applicable.

---

### Explanation Of Parameters

**EQD** - Equipped

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

The UNIT option is specified to query that unit. The UNIT field will be null when the command is used for the entire frame. If the UNIT option is specified, only the information related to the equipment in that unit will be generated.

For the equipped query, each entity in the DACS II frame is represented by a single character variable. This variable can have a value of 1 or 0 indicating the following status:

| Value | EQD or EQPD |
|-------|-------------|
| 1     | equipped    |
| 0     | unequipped  |

The DACS II entities and their status fields are as follows:

|             |                                                                                                                     |
|-------------|---------------------------------------------------------------------------------------------------------------------|
| <b>g</b>    | - Link 1                                                                                                            |
| <b>h</b>    | - Link 2                                                                                                            |
| <b>i</b>    | - Link 3                                                                                                            |
| <b>j</b>    | - Link 4                                                                                                            |
| <b>k</b>    | - Link 5                                                                                                            |
| <b>l</b>    | - Link 6                                                                                                            |
| <b>m</b>    | - XC0 (cross-connect 0)                                                                                             |
| <b>n</b>    | - XC1 (cross-connect 1)                                                                                             |
| <b>o</b>    | - CCNI/CCI 0 (cross-connect network interface 0 for non-CEF frame)<br>(clock and control interface 0 for CEF frame) |
| <b>p</b>    | - CCNI/CCI 1 (cross-connect network interface 1 for non-CEF frame)<br>(clock and control interface 1 for CEF frame) |
| <b>SYNC</b> | - Synchronizer                                                                                                      |

**CRO** - Clock reference oscillator

**TLI** - Timing link interface

The TLI entities are reported in the following order:

**TLI 1, SSP 0, Side 0**  
**TLI 1, SSP 1, Side 0**  
**TLI 2, SSP 0, Side 0**  
**TLI 2, SSP 1, Side 0**  
**TLI 3, SSP 0, Side 0**  
**TLI 3, SSP 1, Side 0**  
**TLI 4, SSP 0, Side 0**  
**TLI 4, SSP 1, Side 0**

**TLI 1, SSP 0, Side 1**  
**TLI 1, SSP 1, Side 1**  
**TLI 2, SSP 0, Side 1**  
**TLI 2, SSP 1, Side 1**  
**TLI 3, SSP 0, Side 1**  
**TLI 3, SSP 1, Side 1**  
**TLI 4, SSP 0, Side 1**  
**TLI 4, SSP 1, Side 1**

**TSIS** - Time slot interchangers                      NonCEF  
**ETSIS** - Expanded time slot interchangers              CEF

**f** - FROM unit (1 through 6)

**t** - TO Unit (1 through 6)

**x** - Equipage indication of an entity or of a side 0 entity if duplicated.

**x** - Equipage indication of a side 1 entity.

**UC** - Unit controller

**FTMI** - Facility terminating module interface

**FC** - Format converter

**FLI** - Facility line interface

**FMT** - Formatter

**MXR** - Multiplexer

**MIU** - Multiple interface unit

**DSPI** - Digital signal processing interface

**[a]aaa** - The first 3- or 4-digit nonhierarchical NPC number of an FTM/MXR/DSPU.  
**[b]bbb** - The last 3- or 4-digit nonhierarchical NPC number of an FTM/MXR/DSPU.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**[z]zzz** - The 3- or 4-digit nonhierarchical DSPU NPC number, the span refers to the odd DSPU circuit pack NPCs, and the total is the number of NPC pairs equipped.

**uvmnp** - The first hierarchical NPC number of an FTM/MXR/DSPU or a hierarchical DSPU NPC number.

**uxkqr** - The last hierarchical NPC number of an FTM/MXR/DSPU

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB, SR, and MJ type numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**tt** - Total number of equipped NPCs

For FTU Entities:

**a** - Status for UC

**b** - Status for FTMI 1 of specified Unit

**c** - Status for FTMI 2 of specified Unit

**d** - Status for FTMI 3 of specified Unit

**e** - Status for FTMI 4 of specified Unit

**f** - Status for FC 01 of specified Unit

**g** - Status for FC 11 of specified Unit

**h** - Status for FC 02 of specified Unit

**j** - Status for FC 12 of specified Unit

**k** - Status for FC 03 of specified Unit

**m** - Status for FC 13 of specified Unit

**p** - Status for FC 04 of specified Unit

**q** - Status for FC 14 of specified Unit

**CCB** - Cross-connect buffer NonCEF

**r** - Status for CCB 0q in CCN 0 for specified Unit q

**s** - Status for CCB 1q in CCN 1 for specified Unit q

For DS3U Entities:

- a** - Status for UC
- l** - Status for FMT 0 of specified DS3 Unit
- m** - Status for FMT 1 of specified DS3 Unit
- b** - Status for service FLI of specified DS3 Unit
- c** - Status for protection FLI of specified DS3 Unit
- d** - Status for protection MXR of specified DS3 Unit
- e** - Status for MXR 1 of specified DS3 Unit
- f** - Status for MXR 2 of specified DS3 Unit
- g** - Status for MXR 3 of specified DS3 Unit
- h** - Status for MXR 4 of specified DS3 Unit
- j** - Status for MXR 5 of specified DS3 Unit
- k** - Status for MXR 6 of specified DS3 Unit
- n** - Status for protection MIU of specified DS3 Unit
- o** - Status for MIU 1 of specified DS3 Unit
- p** - Status for MIU 2 of specified DS3 Unit
- q** - Status for MIU 3 of specified DS3 Unit
- u** - Status for MIU 4 of specified DS3 Unit
- v** - Status for MIU 5 of specified DS3 Unit
- w** - Status for MIU 6 of specified DS3 Unit

For DSPU Entities:

- a** - Status for UC
- b** - Status of DSPI for specified unit

**[x]xxx** - The 3- or 4-digit nonhierarchical FTU/DS3U NPC number ([a]aaa through [b]bbb)

**xxxxx** - Hierarchical FTU/DS3U NPC number (uvmnp through uxkqr)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**02** Subject entity is not equipped

## **UTL,QRY,EQD,UNITS**

### **UTILITIES, EQUIPAGE STATUS**

#### **Explanation Of Command**

This message requests a printout of all units that are equipped.

#### **Command**

[I.53011]

UTL:FRM xy,SEQ ww:QRY,EQD,UNITS!

#### **Completion Message**

[O.53011]

M hh:mm:ss xy,ww n[vv] UTL QRY EQD UNIT 2 LN MSG:  
aa bb cc dd ee ff gg hh ii jj kk ll mm nn oo pp COMPL

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**EQD** - Request equipage status

**UNITS** - Request information on units

**aa** - Equipage status of Unit number 01  
**bb** - Equipage status of Unit number 02  
**cc** - Equipage status of Unit number 03  
**dd** - Equipage status of Unit number 04  
**ee** - Equipage status of Unit number 05  
**ff** - Equipage status of Unit number 06  
**gg** - Equipage status of Unit number 07  
**hh** - Equipage status of Unit number 08  
**ii** - Equipage status of Unit number 09  
**jj** - Equipage status of Unit number 10  
**kk** - Equipage status of Unit number 11  
**ll** - Equipage status of Unit number 12  
**mm** - Equipage status of Unit number 13  
**nn** - Equipage status of Unit number 14  
**oo** - Equipage status of Unit number 15  
**pp** - Equipage status of Unit number 16

If the unit is equipped, the unit number will be shown in its corresponding position. If the unit is not equipped, the number "00" will be shown.

## UTL,QRY,ERR,SWER,HWER,INT,DATE,TOD,TN

### QUERY SOFTWARE/HARDWARE ERROR RECOVERY

#### Explanation Of Command

This message requests a printout of the contents of the error recovery log file. The log file contains the past history of error recovery events and can be very large. Therefore, the printout can be aborted. Because the printout is of a technical nature, assistance may be necessary for interpretation.

At least one option must be specified in the input command or it will be denied. **Note:** Both the USA date format and international date format are supported by this command. The date format is set by the UTL::DATE,FORMAT,INT command and this message must use the same format. The date format shown in the output for this command will match the current setting. **Note:** Both the USA date format and international date format are supported by this command. The date format is set by the ED-DATE command and this message must use the same format. The date format shown in the output for this command will match the current setting.

## **Explanation Of Parameters**

---

**ERR** - Error recovery

Refers to the error recovery log file

**SWER** - Software error

Query the software error log file.

**HWER** - Hardware error

Query the hardware error log file.

**INT** - Time interval

The user may retrieve entries by specifying a past interval of time. This interval may be specified as the last 59 minutes or less or as the interval beginning at a specified date and time of day (see DATE and TOD keywords). If the time but not the optional date is specified, DACS II assumes the present date.

During a system boot the time on the system clock defaults to the time 00:00:00 and the date 12/31/1999 until the clock is initialized. Errors occurring during the boot process consequently are logged as though they occurred in the future when actually they occurred in the past. Because of this behavior a user requesting the errors over one of the intervals mentioned above may experience a large volume of error output listing errors that will (seemingly) occur in the future. These errors actually occurred before the system clock was initialized and should be interpreted as such.

**mn** - minutes (00 to 59)

**DATE** - date

moda[ce]yr

**mo** - Month (01 through 12)

**da** - Day (01 through 31)

**ce** - Century (19 or 20)

**yr** - Year (00 through 99)

**TOD** - time of day

**hrmns** - Hours, minutes, seconds

hr-mn-sc

**hr** - hour (00 through 23)

**mn** - Minutes (00 through 59)

**sc** - seconds (00 through 59)

**TN** - Transaction

**X** - Hexadecimal

**dddd** - Transaction number

**EVENT** - Event

**eeee** - Event number

**ERCL** - Error class

This keyword applies only to queries of the hardware error log file (HWER option). It is not applicable to queries of the software error log file (SWER option) and it returns no data for the software case. The hardware log file may be queried for errors of either the hardware or transient error class.

**HARD** - Hard

Hardware error detected by Error Recovery

**TRANS** - Transient

Transient error detected by Error Recovery

**APPINT** - Application interrupt

Hardware error detected by applications

**ENTY** - Entity (hardware)

This keyword applies only to queries of the hardware error log file (HWER option). It is not applicable to queries of the software error log file (SWER option) and it returns no data for the software case. The hardware log file may be queried for entries related to particular DACS II hardware entities.

**entity** - Entity type

*entity Explanation*

|      |                                       |
|------|---------------------------------------|

Not applicable.

## **Explanation Of Parameters**

**ESR** - Error source register

**CCN** - Cross-connect network

**s** - Cross-connect network side (0 or 1)

**CCB** - Cross-connect buffer

### **abcdef, ghijkl**

- MAIN,CCB error source register information

- a is set to indicate an error has occurred on the synchronizer.
- b is set to indicate a parity error was detected on the address bus.
- c is set to indicate a parity error was detected on the low byte of data.
- d is set to indicate a parity error was detected on the high byte of data.
- e is set to indicate an error was detected on the BSR (Bus Status Register). This error indicates that there was a parity error over the work written in the register.
- f is set to indicate a parity error has occurred on autonomous Switch Enable Circuit - ghijkl represents CCB 1 through 6.

**FTMI** - Facility terminating module interface

### **abcd,efgh,ijkl,mnop,qrst,uvwx**

- FTMI error source register information

- abcd** - FTMI 1 - 4 of Unit 1 (not used)
- efgh** - FTMI 1 - 4 of Unit 2 (not used)
- ijkl** - FTMI 1 - 4 of Unit 3 (not used)
- mnop** - FTMI 1 - 4 of Unit 4 (not used)
- qrst** - FTMI 1 - 4 of Unit 5 (not used)
- uvwx** - FTMI 1 - 4 of Unit 6 (not used)

**TSI** - Time slot interchange

<tsi a>,...,<tsi f> - TSI error source register information.

Each register is six bits long. A bit set indicates the denoted entity is either out of frame or in frame but under alarm state.

- tsi a** - Denotes for TSI 1,1; 1,2; 1,3; 1,4; 1,5; 1,6
- tsi b** - Denotes for TSI 2,1; 2,2; 2,3; 2,4; 2,5; 2,6
- tsi c** - Denotes for TSI 3,1; 3,2; 3,3; 3,4; 3,5; 3,6
- tsi d** - Denotes for TSI 4,1; 4,2; 4,3; 4,4; 4,5; 4,6
- tsi e** - Denotes for TSI 5,1; 5,2; 5,3; 5,4; 5,5; 5,6
- tsi f** - Denotes for TSI 6,1; 6,2; 6,3; 6,4; 6,5; 6,6

**cc** - Hexadecimal condition code

**cc** *Explanation*

**04** Subject entity is out of service

## **UTL, QRY, ESR, ECCN**

### Autonomous Message

---

Not applicable.

## Explanation Of Parameters

**ESR** - Error source register

**e** - Number of lines in the segment (2 through 5)

**ECCN** - Expanded cross-connect network

**s** - ECCN side (0 or 1)

**qq** - Unit number (01 through 16)

**ETSI** - Expanded Time Slot Interchanger

The ESR data for a ETSI will be shown only if the ETSI is restored. If no ETSI in the ECCN side is restored, only the ESR data of the CCI will be shown.

**CCI** - Clock and Control Interface

**wd02,**

**wd01,**

**wd00** - Error source register data words for the CCI. Each word is a 4-digit hexadecimal number.

*wdx* *Definition*

wd00 CCI System Status Register

wd01 CCI Status Register

wd02 CCI Bus Status Register

**Note:** wd02 shows the active side; therefore, it is normal to have a non-zero value.

**aaaa,**

**bbbb,**

**cccc,**

**dddd** - CCI register for ETSI alarm information.

This 16 bit register is shown as four 4-bit binary numbers. Each bit represents one ETSI. The ETSIs are arranged by unit number in descending order from left to right. That is, the left-most bit reports alarm information for the unit 16 ETSI, while the right-most bit reports alarm information for the unit 1 ETSI.

**Descending order-->**

**aaaa bbbb cccc dddd**

**^**

**^**

**|**

**Unit 1 ETSI**

**Unit 16 ETSI**

**eeee,**  
**ffff,**  
**gggg,**  
**hhhh** - CCI register for ETSI equipage information

See the explanation given for aaaa-dddd above.

**iiii,**  
**jjjj,**  
**kkkk,**  
**llll** - CCI register for ETSI ready timeout information

See the explanation given for aaaa-dddd above.

**mmmm,**  
**nnnn,**  
**oooo,**  
**pppp** - CCI register for ETSI read high information

See the explanation given for aaaa-dddd above.

**sqq** - Combined ECCN side and unit number

See the definitions of s and qq above.

**wd05,**  
**wd04,**

...,

**wd00** - Error source register data words for the ETSI

Each word is a 4-digit hexadecimal number representing the contents of the error source register listed in the table below.

*wdxx    Definition*

|      |                                     |
|------|-------------------------------------|
| wd00 | Circuit Pack Summary Register       |
| wd01 | Receive Status Register             |
| wd02 | Transmit Status Register            |
| wd03 | Control RAM Status Register         |
| wd04 | Control RAM Port Alarm Register     |
| wd05 | Control RAM Data RAM Alarm Register |

## **UTL, QRY, ESR, MP**

## Explanation Of Parameters

**ESR** - Error source register

**MP** - Main Processor

Variables aa, bb, cc, dd, ee, ff, gg, hh, and ii are two digit hexadecimal numbers representing error source registers. The bits in these registers are numbered as shown below:

hex hh = bbbbbb binary  
76543210 Bit numbering

**aa** - Error Source Bit (ESB) group. (hexadecimal)

*aa Function*

|    |                             |
|----|-----------------------------|
| a0 | SYNC 0 power supply ESB     |
| a1 | SYNC 1 power supply ESB     |
| a2 | CCN/ECCN 0 power supply ESB |
| a3 | CCN/ECCN 1 power supply ESB |
| a4 | Spare                       |
| a5 | Spare                       |
| a6 | Spare                       |
| a7 | Spare                       |

**bb** - Error Source Bit (ESB) group. (hexadecimal)

*bb Function*

|    |                                                   |
|----|---------------------------------------------------|
| b0 | UC 01 power supply ESB                            |
| b1 | UC 02 power supply ESB                            |
| b2 | UC 03 power supply ESB                            |
| b3 | UC 04 power supply ESB                            |
| b4 | UC 05 power supply ESB                            |
| b5 | UC 06 power supply ESB                            |
| b6 | UC 07 power supply ESB for CEF, Spare for Non-CEF |
| b7 | Spare                                             |

**cc** - Error Source Bit (ESB) group. (hexadecimal)

| <i>cc</i> | <i>Function</i>                      |
|-----------|--------------------------------------|
| c0        | UC 01 ESB                            |
| c1        | UC 02 ESB                            |
| c2        | UC 03 ESB                            |
| c3        | UC 04 ESB                            |
| c4        | UC 05 ESB                            |

| i7        | Spare           |

## **UTL, QRY, ESR, NPC, SIDE**

### **UTILITY QUERY ESR FOR FTU OR SUBRATE NPC**

#### **Explanation Of Command**

This message requests a print out of the error source register for a particular network processing circuit (NPC) or Subrate circuit pack. Any attempt to input the command for an NPC in a DS3 unit will be denied. Instead, input the command for the error source register for a multiplexer (MXR), a multiplexer interface unit (MIU), or a facility line interface (FLI).

## Explanation Of Parameters

**ESR** - Error source register

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

SR and MJ type NPC numbers listed by unit number, Unit Type DP (DSPU)

|                          |                          |                          |                          |                          |                          |

**SIDE** - Side

**s** - Side number (0 or 1)

Substrate type circuit packs are duplicated; therefore, the side must be specified in order to request the contents of the error source register. The side must not be specified when the NPC is a facility terminating NPC.

**uvmnp** - Hierarchical NPC number

- uv** - Unit number
- m** - Module number
- np** - NPC number within the module

The allowable values are presented below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

SR and MJ NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**Note:** In the error source register listings below, the bits are each shown set individually (bit value = 1). In actual practice the bits may be set in combination. For example a value of 0C for register dd would be interpreted as follows:

X'0C = 00001100 binary

Bits 2 and 3 are set to one. An examination of the bits for register dd shows that X'0C means RAM diagnostic complete and power up ready.

**aa** - Communications Interface ESR 1 (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>            |
|------------|--------------|----------------------------------|
| 0          | 1            | Channel controller error         |
| 1          | 1            | Unassigned                       |
| 2          | 1            | Chip identification parity error |
| 3          | 1            | Sync error                       |
| 4          | 1            | Facility processor sanity error  |
| 5          | 1            | Hardware error                   |
| 6          | 1            | Transceiver A error              |
| 7          | 1            | Transceiver B error              |

**bb** - Not used

**cc** - Channel Controller ESR (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>               |
|------------|--------------|-------------------------------------|
| 0          | 1            | Exercise indicator                  |
| 1          | 1            | Receive data parity error           |
| 2          | 1            | Transmit data parity error          |
| 3          | 1            | Instruction RAM parity error        |
| 4          | 1            | Configuration register parity error |
| 5          | 1            | Processor error                     |
| 6          | 1            | Sync error                          |
| 7          | 1            | Loss of clock (8 MHz)               |

**dd** - Hardware error data from DDC shared RAM (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>   |
|------------|--------------|-------------------------|
| 0          | 1            | Not used                |
| 1          | 1            | Not used                |
| 2          | 1            | RAM diagnostic complete |
| 3          | 1            | Power up ready          |
| 4          | 1            | Not used                |
| 5          | 1            | Not used                |
| 6          | 1            | RAM diagnostic failure  |
| 7          | 1            | ROM checksum failure    |

**ee** - Transceiver A ESR (framer alarms) (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>                     |
|------------|--------------|-------------------------------------------|
| 0          | 1            | Device error Remote Frame Alignment       |
| 1          | 1            | Device error Remote Multiframe Alignment  |
| 2          | 1            | Device error Loss of Multiframe Alignment |
| 3          | 1            | Device error Framing Bit Error            |
| 4          | 1            | Not used                                  |
| 5          | 1            | Not used                                  |
| 6          | 1            | Not used                                  |
| 7          | 1            | Not used                                  |

**ff** - Transceiver A ESR (receive sync alarms) (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>             |
|------------|--------------|-----------------------------------|
| 0          | 1            | STOMP block device error          |
| 1          | 1            | ALU block device error            |
| 2          | 1            | ALU block device error            |
| 3          | 1            | Data link                         |
| 4          | 1            | Missing receive synchronizer sync |
| 5          | 1            | Signaling RAM parity error        |
| 6          | 1            | PCM RAM parity error              |
| 7          | 1            | E signaling bit error             |

**gg** - Transceiver A ESR (transmitter alarms) (Hexadecimal)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>                        |
|------------|--------------|----------------------------------------------|
| 0          | 1            | Transmit framing bit generator circuit       |
| 1          | 1            | Transmitter SLIP                             |
| 2          | 1            | Internal parity error                        |
| 3          | 1            | Missing transmit sync                        |
| 4          | 1            | Misaligned transmit sync                     |
| 5          | 1            | Transmit SLC®-96 carrier framer device alarm |
| 6          | 1            | Missing SLC 96 carrier Fs superframe sync    |
| 7          | 1            | Misaligned SLC 96 carrier Fs superframe sync |

**hh** - Transceiver A ESR (framer alarms) (Hexadecimal)

Values and explanations are the same as ee

**ii** - Transceiver B ESR (receive sync alarms) (Hexadecimal)

Values and explanations are the same as ff

**jj** - Transceiver B ESR (transmitter alarms) (Hexadecimal)

Values and explanations are the same as gg

**mnxyz** - NPC type

*mnxyz Explanation*

MJ100 Multipoint junction unit  
SR100 Subrate multiplexer unit

The meaning of the bits for types MJ100 and SR100 depends upon the type reported in the output message.

#### TYPE SR100

##### defghijk

- First 8 bits of Subrate circuit pack error source register

| <i>Bit</i> | <i>Value</i> | <i>Fault</i>                                                                                                                   |
|------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| d          | 1            | Parallel interface between the DSPU processor and the SR100                                                                    |
| e          | 1            | Data interface between the DSPU backplane and the SR100                                                                        |
| f          | 1            | Data path internal to the SR100 including the Error Correction Device (ECD)                                                    |
| g          | 1            | Data interface between the DSPU backplane and the SR100, or data path internal to the SR100 including the ECD, or PROM5 device |
| h          | 1            | Output block of SR100, or bus feeding the output block                                                                         |
| i          | 1            | Internal data RAM                                                                                                              |
| j          | 1            | Multiplexer state machine, or bus feeding the output block                                                                     |
| k          | 1            | Clock circuitry                                                                                                                |

##### lmnopqrs

- Second 8 bits of Subrate circuit pack error source register

| <i>Bit</i> | <i>Value</i> | <i>Fault</i>              |
|------------|--------------|---------------------------|
| l          | 1            | Built-in self test on ECD |
| m-s        | 0            | Unused                    |

#### TYPE MJ100

##### defghijk

- First 8 bits of Subrate circuit pack error source register

| <i>Bit</i> | <i>Value</i> | <i>Fault</i>                                                                                                                          |
|------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------|
| d          | 1            | Parallel interface Device (PID), or parallel control bus                                                                              |
| e          | 1            | Data interface between the ETSI and the MJ100                                                                                         |

### Explanation Of Parameters

**ESR** - Error source register

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**aa** - FTU ESR

*aa Explanation*

A2 Error from FTMI 1

A4 Error from FTMI 2

A5 Error from FTMI 3

A6 Error from FTMI 4

**bbbb** - DS3U Interrupt holding register 0.

Hexadecimal digits are numbered 3210 in left to right order.

*hex*

| digit | Bit  | Value | Definition                |
|-------|------|-------|---------------------------|
| 0     | 0    | 1     | Ram Parity Error          |
| 0     | 1    | 1     | Internal Bus Error        |
| 0     | 2    | 1     | Parallel Bus Parity Error |
| 0     | 3    | 1     | Series Bus Parity Error   |
| 1-3   | 4-15 |       | Unused                    |

**cccc** - DS3U Interrupt holding register 1  
Hexadecimal digits are numbered 3210 in left to right order.

| <i>hex</i><br>digit | Bit | Value | Definition                |
|---------------------|-----|-------|---------------------------|
| 0                   | 0   | 1     | MXR1 Power Loss Interrupt |
| 0                   | 1   | 1     | MXR2 Power Loss Interrupt |
| 0                   | 2   | 1     | MXR3 Power Loss Interrupt |
| 0                   | 3   | 1     | MXR4 Power Loss Interrupt |
| 1                   | 4   | 1     | MXR5 Power Loss Interrupt |
| 1                   | 5   | 1     | MXR6 Power Loss Interrupt |
| 1                   | 6   | 1     | MXRP Power Loss Interrupt |
| 1                   | 7   | 1     | SFLI Power Loss Interrupt |
| 2                   | 8   | 1     | MIU1 Power Loss Interrupt |
| 2                   | 9   | 1     | MIU2 Power Loss Interrupt |
| 2                   | 10  | 1     | MIU3 Power Loss Interrupt |
| 2                   | 11  | 1     | MIU4 Power Loss Interrupt |
| 3                   | 12  | 1     | MIU5 Power Loss Interrupt |
| 3                   | 13  | 1     | MIU6 Power Loss Interrupt |
| 3                   | 14  | 1     | MIUP Power Loss Interrupt |
| 3                   | 15  | 1     | PFLI Power Loss Interrupt |

**dddd** - DS3U Interrupt holding register 2 (hexadecimal)  
Hexadecimal digits are numbered 3210 in left to right order.

| <i>hex</i><br>digit | Bit | Value | Definition                |
|---------------------|-----|-------|---------------------------|
| 0                   | 0   | 1     | MXR1 Interrupt            |
| 0                   | 1   | 1     | MXR2 Interrupt            |
| 0                   | 2   | 1     | MXR3 Interrupt            |
| 0                   | 3   | 1     | MXR4 Interrupt            |
| 1                   | 4   | 1     | MXR5 Interrupt            |
| 1                   | 5   | 1     | MXR6 Interrupt            |
| 1                   | 6   | 1     | MXRP Interrupt            |
| 1                   | 7   | 1     | 0FMT Power Loss Interrupt |
| 2                   | 8   | 1     | MIU1 Interrupt            |
| 2                   | 9   | 1     | MIU2 Interrupt            |
| 2                   | 10  | 1     | MIU3 Interrupt            |
| 2                   | 11  | 1     | MIU4 Interrupt            |
| 3                   | 12  | 1     | MIU5 Interrupt            |
| 3                   | 13  | 1     | MIU6 Interrupt            |
| 3                   | 14  | 1     | MIUP Interrupt            |
| 3                   | 15  | 1     | 1FMT Power Loss Interrupt |

**eeee** - DS3U CI error source register (hexadecimal)  
Hexadecimal digits are numbered 3210 in left to right order.

| <i>hex</i><br>digit | Bit   | Value | Definition           |
|---------------------|-------|-------|----------------------|
| 0                   | 0     | 1     | Link 1 Error         |
| 0                   | 1     | 1     | Link 2 Error         |
| 0                   | 2     | 1     | Link 3 Error         |
| 0                   | 3     | 1     | Link 4 Error         |
| 1                   | 4     | 1     | Link 5 Error         |
| 1                   | 5     | 1     | Link 6 Error         |
| 1                   | 6     | 1     | Link 7 Error         |
| 1                   | 7     | 1     | Link 8 Error         |
| 2                   | 8     | 1     | CI device ID Error   |
| 2                   | 9     | 1     | Address Parity Error |
| 2                   | 10    | 1     | Data Strobe Error    |
| 2                   | 11    | 1     | Loss of Timing Error |
| 3                   | 12-15 |       | Not Used             |

## Explanation Of Parameters

**ESR** - Error source register

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FC** - Format converter

**s** - Side (0 or 1)

**b** - Format converter number (1 through 4)

**Note:** Data bytes aa through gg must be converted from hexadecimal to binary before the tables below can be used to interpret the data byte values. Each hexdigit converts to 4 binary digits. Bits are numbered from right to left starting from 0 as follows; 76543210.

For example if aa = 01 the binary equivalent of this is 0000 0001. Using the table for aa below this indicates that there is an alarm on the Receive formatter.

| Bit value | Explanation                 |
|-----------|-----------------------------|
| 0         | Indicates NO error or alarm |
| 1         | Indicates an error or alarm |

**aa** - Communications interface (CI) error source register 0 (ESR0) (Hexadecimal)

| <i>Bit</i> | <i>Explanation</i>                                                        |
|------------|---------------------------------------------------------------------------|
| 0          | Receive formatter summary (look at bytes bb, cc, dd , and ee for details) |
| 1          | Transmit formatter summary (look at byte ee for details)                  |
| 2          | Circuit ID error                                                          |
| 3          | Timing error                                                              |
| 4-7        | Not used                                                                  |

**bb** - Receive Formatter (RF) device ESR0 (Hexadecimal)

| <i>Bit</i> | <i>Explanation</i> |
|------------|--------------------|
| 0          | Port 0 alarm       |
| 1          | Port 1 alarm       |
| 2          | Port 2 alarm       |
| 3          | Port 3 alarm       |
| 4          | Port 4 alarm       |
| 5          | Port 5 alarm       |
| 6          | Port 6 alarm       |
| 7          | Port 7 alarm       |

**cc** - RF device ESR1 (Hexadecimal)

| <i>Bit</i> | <i>Explanation</i> |
|------------|--------------------|
| 8          | Port 8 alarm       |
| 9          | Port 9 alarm       |
| 10         | Port 10 alarm      |
| 11         | Port 11 alarm      |
| 12         | Port 12 alarm      |
| 13         | Port 13 alarm      |
| 14         | Port 14 alarm      |
| 15         | Port 15 alarm      |

**dd** - RF device ESR2 (Hexadecimal)

| <i>Bit</i> | <i>Explanation</i> |
|------------|--------------------|
| 0          | Port 17 alarm      |
| 1          | Port 18 alarm      |
| 2          | Port 19 alarm      |
| 3          | Port 20 alarm      |
| 4-7        | Not used           |

**ee** - RF/Transmitter Formatter (TF) device status register (Hexadecimal)

| <i>Bit</i> | <i>Explanation</i>                          |
|------------|---------------------------------------------|
| 0          | Domestic/CEPT mode (Domestic = 0, CEPT = 1) |

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FLI** - Facility line interface

**k** - The identifier of the FLI:

*k*      *Explanation*

S      Service FLI

P      Protection FLI

**ESR** - Error source register

**aa, bb, ee, dd**

- The error register of the queried circuit pack

Variables aa, bb, ee, and dd are two-digit hexadecimal numbers representing error source registers. The bits in these registers are numbered as shown below:

76543210      Bit numbering

Bit values have the following meaning:

0      No error

1      Error

**aa** - Communication Interface (CI) ESR 1

*bit*      *Explanation*

0      Summary of facility line interface (FLI) ESR 1

1      Summary of FLI ESR 2

2      Chip identification parity error indicator

3      Sync absence or internal counter error indicator

4-7      Not used ( set to zero )

**Example:**

aa = 05 (= 00000101 binary). At least one bit in the FLI ESR 1 is set, and a chip ID error has been identified.

**Note:** In practice, the bits may be set in combination.

**bb** - CI ESR 2

*bit*      *Explanation*

0      Address Parity Error

1-7      Not Used

**ee** - FLI ESR 1

| <i>Bit</i> | <i>Value</i> | <i>Explanation</i>                      |
|------------|--------------|-----------------------------------------|
| 0          | 1            | The LOC alarm for DS-3 # 1 is activated |
| 1          | 1            | The LOC alarm for DS-3 # 2 is activated |
| 2          | 1            | The LOC alarm for DS-3 # 3 is activated |
| 3          | 1            | The LOC alarm for DS-3 # 4 is activated |
| 4          | 1            | The LOC alarm for DS-3 # 5 is activated |
| 5          | 1            | The LOC alarm for DS-3 # 6 is activated |
| 6,7        |              | Not Used                                |

**dd** - FLI ESR 2

| <i>Bit</i> | <i>Value</i> | <i>Explanation</i>                        |
|------------|--------------|-------------------------------------------|
| 0          | 1            | The LOS alarm for DS-3 # 1 is activated   |
| 1          | 1            | The LOS alarm for DS-3 # 2 is activated   |
| 2          | 1            | The LOS alarm for DS-3 # 3 is activated   |
| 3          | 1            | The LOS alarm for DS-3 # 4 is activated   |
| 4          | 1            | The LOS alarm for DS-3 # 5 is activated   |
| 5          | 1            | The LOS alarm for DS-3 # 6 is activated   |
| 6          | 1            | Lock and Key procedure alarm is activated |
| 7          |              | Not Used                                  |

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                           |
|-----------|----------------------------------------------|
| <b>10</b> | Unit is not equipped                         |
| <b>11</b> | UC is out of service                         |
| <b>12</b> | UC is in service but failed                  |
| <b>13</b> | UNIT not equipped, not in service, or failed |
| <b>B0</b> | FLI is out of service                        |

## **UTL, QRY, ESR, UNIT, FMT**

### **QUERY ERROR SOURCE REGISTER FORMATTER**

#### **Explanation Of Command**

This message requests a printout of the error source register (ESR) for one formatter (FMT) circuit pack.

#### **Command**

[I.55811]

## Explanation Of Parameters

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FMT** - Formatter

**s** - Formatter side number

*s*      *Side*

0      Side 0

1      Side 1

**ESR** - Error source register

Variables mm through r42 represent error source registers of the queried circuit pack. Interpretation of the information in these registers requires knowledge of the source code and access to the code.

mm, c0, ...,

**r42** - The error register of the queried circuit pack (2-digit hexadecimal format).

**mm** - Maintenance Register

**c0** - CI Error Source Register 0

**c1** - CI Error Source Register 1

**t0** - Transmit Formatter 0 (TF0) Status Register

**t1, t2, t3, t4**

- TF1, TF2, TF3, TF4 Status Register

**r00, r01, r02**

- Receive Formatter 0 (RF0) Error Source Register 0,1,2

**r10, r11, r12**

## **UTL, QRY, ESR, UNIT, FTMI**

### **QUERY ERROR SOURCE REGISTER FTMI**

#### **Explanation Of Command**

This message requests a printout of the error source register for a facility terminating module interface in a unit.

#### **Command**

[I.55511]

UTL:FRM xy,SEQ ww:QRY,ESR,UNIT [q]q,FTMI d!

#### **Completion Message**

[O.55511]

M hh:mm:ss xy,ww n[vv] UTL QRY ESR UNIT [q]q FTMI d 2 LN MSG:  
aa bb cc dd ee ff gg COMPL

#### **Denial Message**

[O.55511.01]

M hh:mm:ss xy,ww n[vv] UTL QRY ESR UNIT [q]q FTMI d COND cc DNY

#### **Autonomous Message**

Not applicable.

## Explanation Of Parameters

**ESR** - Error source register

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FTMI** - Facility terminating module interface

**d** - Facility terminating module interface number (1 through 4)

**Note:** Data bytes aa through gg must be converted from hexadecimal to binary before the tables below can be used to interpret the data byte values. Each hex digit converts to 4 binary digits. Bits are numbered from right to left starting from 0 as follows; 76543210.

For example if aa = 01 the binary equivalent of this is 0000 0001. Using the table for aa below this indicates that there is an alarm on the Communications interface device C.

| Bit value | Explanation                 |
|-----------|-----------------------------|
| 0         | Indicates NO error or alarm |
| 1         | Indicates an error or alarm |

**aa** - FTMI error status register

| <i>Bit</i> | <i>Explanation</i>                                                                                      |
|------------|---------------------------------------------------------------------------------------------------------|
| 0          | Error summary bit from Communications interface device C (CIC)<br>(look at bytes bb and ee for details) |
| 1          | Error summary bit from CIB (look at bytes bc and ff for details)                                        |
| 2          | Error summary bit from CIA (look at bytes dd and gg for details)                                        |
| 3          | Bus error alarm                                                                                         |
| 4-7        | Not used                                                                                                |

**bb** - Communications interface (CI) device A error source register

| <i>Bit</i> | <i>Explanation</i>                    |
|------------|---------------------------------------|
| 0          | Chip identification comparison failed |

## **UTL, QRY, ESR, UNIT, MIU**

### **QUERY ERROR SOURCE REGISTER MULTIPLEXER INTERFACE UNIT**

#### **Explanation Of Command**

This message requests a printout of the error source register (ESR) for one Multiplexer Interface Unit (MIU) circuit pack.

#### **Command**

[I.55831]

UTL:FRM xy,SEQ ww:QRY,ESR,UNIT [q]q,MIU c!

#### **Completion Message**

[O.55831]

M hh:mm:ss xy,ww n[vv] UTL QRY ESR UNIT [q]q MIU c 2 LN MSG:  
aa bb COMPL

#### **Denial Message**

[O.55831.01]

M hh:mm:ss xy,ww n[vv] UTL QRY ESR UNIT [q]q MIU c COND cc DNY

#### **Autonomous Message**

Not applicable.

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**MIU** - Multiplexer interface unit

**c** - The number of the MIU within the unit (1 through 6,P)

**ESR** - Error source register

**aa, bb** - The error register of the queried circuit pack. (Hexadecimal format)

**aa** - EMIU ESR

The two hexadecimal digits of aa or bb may be converted to an eight-bit binary word. The eight bits of this word are interpreted as shown below. Bit numbering is as follows: 76543210 (left to right)

| <i>Bit</i> | <i>Value</i> | <i>Bit definition</i>                   |
|------------|--------------|-----------------------------------------|
| 0          | 1            | EMIU interrupt from Unit Controller     |
| 1-2        |              | Not Used                                |
| 3          | 1            | Reset in progress                       |
| 4          | 1            | The EMIU was reset                      |
| 5          | 1            | Facility threshold exception            |
| 6          | 1            | ESF data link message response received |
| 7          | 1            | Hardware and firmware error             |

**bb** - EMIU error code (set only when bit 7 of the ESR is set)

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                |
|-----------|--------------------------------|
| <b>02</b> | Subject entity is not equipped |
| <b>10</b> | Unit is not equipped           |
| <b>11</b> | UC is out of service           |
| <b>12</b> | UC is in service but failed    |
| <b>BF</b> | MIU is not equipped            |
| <b>CF</b> | MIU is out of service          |

## **UTL, QRY, ESR, UNIT, MXR**

### **QUERY ERROR SOURCE REGISTER MULTIPLEXER**

#### **Explanation Of Command**

This message requests a printout of the error source register (ESR) for one multiplexer (MXR) circuit pack.

#### **Command**

| 00004000 | 2MB/S Roll                                    |

In general a feature package identification code is a combination of several individual feature package numbers. To determine the individual features that make up a feature package it is necessary to decode the feature package identification code. This code is an eight digit hexadecimal number. Each hexadecimal number represents a four-bit binary number. Within this binary number each feature is associated with one particular bit. Consequently to determine the feature list from a feature package identification code it is necessary to convert each hexadecimal digit to its binary equivalent and look up the features in the list above. For example the feature package identification code 0000000F can be converted to the following binary number working from left to right one hex digit at a time.

0000 0000 0000 0000 0000 0000 0000 1111

This number contains eight binary numbers each representing one of the hexadecimal numbers in the feature package identification code 0000000F. The rightmost number of the code contains four features since there are four bits set to one. This would be decoded as follows using the table of features above.

|       | binary | hex | Feature                      |
|-------|--------|-----|------------------------------|
|       | 0001   | 1   | DS1                          |
|       | 0010   | 2   | CEPT                         |
|       | 0100   | 4   | Subrate                      |
|       | 1000   | 8   | Direct SLC                   |
| Total | 1111   | F   | (DS1 + CEPT + Subrate + SLC) |

- gg** - DACS II software release number
- pp** - DACS II software release point number
- r** - DACS II software PDI number

## **UTL,QRY,FROM**

---

### **UTILITY QUERY FROM**

#### **Explanation Of Command**

---

This command is used to query the FROM side of a one-way cross-connected circuit or a range of similar circuits. For a SLC® carrier denial message relating to terminating digroups, the bank identification number, the operation mode, and the digroup A network processing circuit (NPC) number are reported. The normal response, if the NPC is a SLC NPC currently under protection, will show the protection digroup NPC number.

## Explanation Of Parameters

**[s]abc** - The 3- or 4-digit non-hierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-002</b> | <b>161-162</b> | <b>321-322</b> | <b>481-482</b> | <b>641-642</b> | <b>801-802</b> |
| <b>021-022</b> | <b>181-182</b> | <b>341-342</b> | <b>501-502</b> | <b>661-662</b> | <b>821-822</b> |
| <b>041-042</b> | <b>201-202</b> | <b>361-362</b> | <b>521-522</b> | <b>681-682</b> | <b>841-842</b> |
| <b>061-062</b> | <b>221-222</b> | <b>381-382</b> | <b>541-542</b> | <b>701-702</b> | <b>861-862</b> |
| <b>081-082</b> | <b>241-242</b> | <b>401-402</b> | <b>561-562</b> | <b>721-722</b> | <b>881-882</b> |
| <b>101-102</b> | <b>261-262</b> | <b>421-422</b> | <b>581-582</b> | <b>741-742</b> | <b>901-902</b> |
| <b>121-122</b> | <b>281-282</b> | <b>441-442</b> | <b>601-602</b> | <b>761-762</b> | <b>921-922</b> |
| <b>141-142</b> | <b>301-302</b> | <b>461-462</b> | <b>621-622</b> | <b>781-782</b> | <b>941-942</b> |

If NPC numbers are expressed in four digits, the valid values are:

MB type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0002</b> | <b>0161-0162</b> | <b>0321-0322</b> | <b>0481-0482</b> |

| <b>NPC</b><br><b>1921-2080</b><br><b>208A-208H</b> | <b>NPC</b><br><b>2081-2240</b><br><b>224A-224H</b> | <b>NPC</b><br><b>2241-2400</b><br><b>240A-240H</b> | <b>NPC</b><br><b>2401-2560</b><br><b>256A-256H</b> |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical NPC number

**uv** - Unit number

**m** - Module number

**np** - NPC number within the module

The valid values are listed below:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

|           |          |              |                                 |
|-----------|----------|--------------|---------------------------------|
| Unit      | Module   | NPC          |                                 |
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**ddd** - Starting channel number

**eee** - Channel number denoting the end of the range.

The valid values are listed below:

Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|

**xyz** - Multiframe, line and signaling, and channel numbering formats

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

#### TE-type xyz fields

##### **x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |

| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

**DGP** - SLC carrier digroup P (protection)

**[t]ppp** - The 3- or 4-digit nonhierarchical SLC carrier digroup P NPC number.  
Valid values are identical to those for [s]abc.

**[t]ghi** - The 3- or 4-digit nonhierarchical TO NPC number.  
Valid values are identical to those for [s]abc.

**wxkqr** - Hierarchical SLC carrier digroup P NPC number  
Valid values are identical to those for uvmnp

**edhfg** - Hierarchical TO NPC number  
Valid values are identical to those for uvmnp

**jjj, kkk**  
- TO channel numbers  
Valid values are identical to those for ddd.

**ppqqq** - TO termination NPC information

**pp** - TO termination NPC type  
Valid values are listed below:

| <b>pp</b> | <i>Explanation</i>            |
|-----------|-------------------------------|
| DA        | Dual digroup ANSI NPC         |
| DE        | Dual digroup NPC              |
| TA        | DS3U ANSI NPC                 |
| TE        | DS3U Noninterface unit NPC    |
| DS        | SLC® carrier NPC              |
| MB        | Digital multipoint bridge NPC |
| VI        | Virtual NPC                   |

**qqq** - See xyz above for definition and values.

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word specification.

pq is a user specified insertion word. The binary pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line.

**tc**

```

          TC(X'--,X'cd), TRB
          TC(X'--,X'cd), IW X'pq
TC(----,mnop), TRB
TC(----,mnop), IW X'pq
TRSP, TRB
TRSP, MUX
TRSP, IW X'pq
TRSP (DMB to DMB)

```

**Note:** Because there is no signal from the FROM direction, ijkl is replaced by ---- in the specification TC(ijkl,mnop) and ab is replaced by -- in the specification TC(X'ab,X'cd).

**Note:** If the channel being connected is an FDL (Facility Data Link), then ddd is 000 and trunk conditioning should be of type TC(----,mnop).

The FDL is not supported by the DS-type NPC.

The following insertion word options are allowed:

*insertion word Explanation*

IW X'pq      The 8-bit pattern corresponding to the hexadecimal value of pq will be inserted in the downstream direction of a failure on either line.

Omitted      Will default to IW X'FF.

**RDC** - Red circuit

**CUS** - Customer  
Customer-controlled circuit

**UTST** - Under test  
Given termination is under test

---

**TP** - Test Port

**kk** - Test port number (01-96)

**TG** - Test Group

**mmm** - Test group number (001-400)

**TLA** - Terminate and leave active

**T** - To  
TO termination is in the terminate and leave state

**DCC** - Disconnect code

**RT** - Remote terminal

**DL** - Digital carrier line unit (DCLU)

**ffff** - RT or DL bank identification (0000 through 9999)

**MD** - Mode

**g[g]** - RT or DL operation mode

| <b>g[g]</b> | <i>Explanation</i>       |
|-------------|--------------------------|
| 1           | SLC 96 carrier Mode I    |
| 3           | SLC 96 carrier Mode III  |
| C           | SLC Series 5 carrier FPC |

**[t]aaa** - Nonhierarchical RT or DL digroup A NPC number with the same valid values as [s]abc.

**UNEQD** - Unequipped

**uvjkl** - Hierarchical RT or DL digroup A NPC number with the same valid values as uvmnp.

**NOT** - Not

**COND** - Condition

**RNGIE** - Range input error

**UASGN** - Unassigned

**cc** - Hexadecimal condition code

**cc Explanation**

### **Explanation Of Parameters**

**FROM** - From

**[s]abc** - The 3- or 4-digit non-hierarchical non-channelized FROM NPC  
The valid values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1 | Unit<br>2 | Unit<br>3 | Unit<br>4 | Unit<br>5 | Unit<br>6 |
|-----------|-----------|-----------|-----------|-----------|-----------|
| NPC       | NPC       | NPC       | NPC       | NPC       | NPC       |
| 001-160   | 161-320   | 321-480   | 481-640   | 641-800   | 801-960   |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                |                                                |                                                |                                                |                                                |                                                |
|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|

**uvmnp** - Hierarchical NPC number of non-channelized FROM NPC

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**[t]ghi** - The 3- or 4-digit nonhierarchical number of TO NPC mapped to the FROM NPC

**wxkqr** - Hierarchical number of TO NPC mapped to the FROM NPC

**TYPE** - NPC type

**mnxyz** - NPC type of TO or FROM NPC

**DExyz** - FTU NPC

**TExyz** - DS3U NPC

----- - Unequipped NPC

**AIS** - Alarm indication signal is the idle code for non-channelized digital signal cross-connection.

**CUS** - Customer controlled circuit

**RDC** - Red circuit

**UTST** - Under test

**TLA T** - Terminate and leave activate TO  
Connection is terminated in the TO direction

**cc** - Hexadecimal condition code

**cc** *Explanation*

**15** NPC is unequipped

**0B** Invalid CEPT NPC

**62** Invalid channel number

**B4** NPC is channelized type

**4F** NPC is not part of a one-way connection

## **UTL, QRY, HUBID**

---

### **UTILITY QUERY HUB IDENTIFIER**

#### **Explanation Of Command**

---

This command requests the current setting of the DACS II hub identification code (HUBID).

#### **Command**

---

[I.51501]

UTL:FRM xy,SEQ ww:QRY,HUBID!

#### **Completion Message**

---

```

### Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

**LIST** - List

**MACRO** - Macro

### **macro name**

- Macro name (seven characters maximum length)

The name of a collection of DACS II commands executed as a group.

A macro name is a string of capitalized alphanumeric characters. There are two type of macros; public and private. A private macros is created by a user in space allocated to the user by the system administrator. Only the user that created it can execute or read (LIST) a private macro. A public macro is created by the system administrator and is executable and readable by all users. A public macro name must start with the letter "P". A private macro name must not start with the letter "P".

**USER** - User

user id - User identifier (two to eight alphabetic characters)

User login identification

A user can query their own macros but only the frame administrator can use the command to query macros owned by other users. The frame administrator must specify the user id to query other users' macros.

**l,  
m,  
n,  
s** - Macro command line numbers

**NONE** - The macro contains no commands

**cc** - Hexadecimal condition code

**cc**    *Explanation*

**62**    File is being accessed  
**64**    File doesn't exist/can't be accessed  
**D0**    Command is Frame administrator (DAX) only.  
**D3**    User does not exist  
**D5**    No user is logged in on the link/vc

## **UTL, QRY, LIST, MAP, USER**

### **UTILITY QUERY LIST MAP**

#### **Explanation Of Command**

This message lists the user's own login on which link and at what time.

Any user can query his/her own login identification but only the frame administrator can query a login owned by another user.

#### **Command**

[I.54101]

UTL:FRM xy,SEQ ww:QRY,LIST,MAP <name>[,USER <user id>]!

### Explanation Of Parameters

---

**MAP** - Alternate MAP

**name** - Name of the specified alternate MAP. A MAP name may have up to seven alphanumeric characters. The first character of a MAP name must be an alphabetic character. All alphabetic characters of a MAP name must be capitalized.

**USER** - User

**user id**  
- User login identification is two to eight alphabetic characters.

**STATS** - Status

**ab** - Status field

| <i>ab</i> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|    |                                 |
|----|---------------------------------|
| 00 | Map is valid (can be activated) |
|----|---------------------------------|

|    |                                                                               |
|----|-------------------------------------------------------------------------------|
| 01 | Map is not valid (contains conflicting circuits and thus cannot be activated) |
|----|-------------------------------------------------------------------------------|

|    |                                                                           |
|----|---------------------------------------------------------------------------|
| D0 | USER <id> is not your login name and your are not the frame administrator |
|----|---------------------------------------------------------------------------|

|    |                          |
|----|--------------------------|
| D3 | USER <id> does not exist |
|----|--------------------------|

|    |                                                  |
|----|--------------------------------------------------|
| D5 | The command cannot be entered without logging in |
|----|--------------------------------------------------|

**e** - Number of lines in the output segment

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 62** File is being accessed
- 64** File doesn't exist/can't be accessed
- D0** Command is Frame administrator (DAX) only.
- D3** User does not exist
- D5** No user is logged in on the link/vc

## **UTL,QRY,LOAD,NPC,TOTAL**

### **UTILITY QUERY, LOAD**

#### **Explanation Of Command**

This Subrate message requests allocation information on one circuit pack or on all circuit packs in the frame.

#### **Command**

#### **Nonhierarchical**

[I.52581]

UTL:FRM xy,SEQ ww:QRY,LOAD,{NPC [s]abc|TOTAL}!

#### **Hierarchical**

[I.52581]

UTL:FRM xy,SEQ ww:QRY,LOAD,{NPC uvmnp|TOTAL}!

## **Completion Message**

---

### **Nonhierarchical**

---

If the NPC is a substrate multiplexer circuit pack:

[O.52581]

```
M hh:mm:ss xy,ww n[vv] UTL QRY LOAD NPC [s]abc TYPE SR100 4 LN MSG:

## Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

**LOAD** - Request information concerning resource utilization in substrate circuit packs. Current valid circuit packs are:

SR100 substrate multiplexer  
MJ100 multijunction unit

**NPC** - Network processing circuit

Request resource information for the substrate circuit pack specified.

**[s]abc** - The 3- or 4-digit nonhierarchical Substrate or Multijunction NPC number

If NPC numbers are expressed in three digits, the valid values are:

SR and MJ type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1  | Unit<br>2  | Unit<br>3  | Unit<br>4  | Unit<br>5  | Unit<br>6  |
|------------|------------|------------|------------|------------|------------|
| <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> |
| <b>001</b> | <b>161</b> | <b>321</b> | <b>481</b> | <b>641</b> | <b>801</b> |

**uvmnp** - Hierarchical NPC number

Valid values are listed below:

SR and MJ NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC       |
|--------------|------------|-----------|
| <b>01-16</b> | <b>1-8</b> | <b>01</b> |

**TOTAL** - Request summarized resource information for all substrate circuit packs.

**MJU** - Multipoint junction unit

#### **ALLOCATED**

- Allocated time slots

**ttt** - Number of time slots allocated

**FREE** - Free time slots

**vvv** - Number of free time slots

**PEC** - Parity channel error correctors

**ppp** - Number of parity channel error correctors

**SEC** - Subrate error correctors

**eee** - Number of subrate error correctors allocated to cross-connected circuits

**aa** - Number of subrate error correctors allocated to test access

**ss** - Number of 5-channel subrate multiplexer channels

**qq** - Number of 10-channel subrate multiplexer channels

**rr** - Number of 20-channel subrate multiplexer channels

**jjj** - Number of 2.4-kb/s Multipoint Junction Unit (MJU) channels

**kkk** - Number of 4.8-kb/s MJU channels

**lll** - Number of 9.6-kb/s MJU channels

**nnn** - Number of 56-kb/s MJU channels

**ttttt** - Total number of time slots allocated on the frame

**vvvvv** - Total number of free time slots allocated on the frame

**ppppp** - Total number of parity channel error correctors on the frame

**eeeee** - Total number of subrate error correctors allocated to cross-connected circuits on the frame

**ssss** - Total number of 5-channel subrate multiplexer channels on the frame

**qqqq** - Total number of 10-channel subrate multiplexer channels on the frame

**rrrr** - Total number of 20-channel subrate multiplexer channels on the frame

**jjjj** - Total number of 2.4-kb/s MJU channels on the frame

**kkkk** - Total number of 4.8-kb/s MJU channels on the frame

**llll** - Total number of 9.6-kb/s MJU channels on the frame

**nnnn** - Total number of 56-kb/s MJU channels on the frame

**reason** - Reason for denial

*reason*

NO SRM OR MJU TYPE NPC IS EQUIPPED

UNIT qq IS NOT EQUIPPED  
NPC [s]abc IS NOT EQUIPPED

NPC [s]abc IS NOT SRM OR MJU TYPE

## **UTL, QRY, LOG, ALL**

### **QUERY LOG**

#### **Explanation Of Command**

This command is used to query DACS II for the link, user identifier, and date and time of login of the user issuing the command. The frame administrator uses the **ALL** keyword to list information on all current users.

Output from this command is sent only to the link on which the command was input.

Not applicable.

### **Explanation Of Parameters**

---

**LOG** - Login

**ALL** - All

All user logins. Used only by the frame administrator.

**USER** - User

**user id**

- User identifier (two to eight alphabetic characters)

User login identification

**LINK** - Link

**j [mm]** - The link number the user is logged onto

**j** - Administrative link number (5 or 6)

**mm** - Virtual link number (1 through 16)

**DATE** - Date

mm/dd/yy,dd/mm/yy

- Date, current

mm Month number (01 through 12)

dd Day number (01 through 31)

yy Year number (00 through 99)

**FORMAT** - Date format

**MDY** - Month/Day/Year format

**DMY** - Day/Month/Year format

**TOD** - Time of day

**hh:mm:ss**

- Time of day in hours, minutes, and seconds

hh Hours number (00 through 23)

mm Minutes number (00 through 59)

ss Seconds number (00 through 59)

**NONE** - No user is logged in to DACS II

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**D3** User does not exist

**D7** Cannot execute privileged command

**DF** Command and protocol are inconsistent

## **UTL,QRY,LPBK,NPC**

---

### **UTILITY QUERY LOOPBACK**

#### **Explanation Of Command**

---

This message is used to request a report indicating which Network Processing Circuits are in the loopback state. For DA and TA type NPCs, loopbacks being executed by far-end equipment as well as loopbacks being executed by DACS II are reported.

#### **Command**

---

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**LPBK** - Loopback

**NPC** - Network processing circuit

If an NPC range is specified in the input command, the following floating window rules apply:

1. Unequipped NPCs within the requested range will be skipped.
2. If a CEPT gap is within the requested range, the NPCs in the gap will be skipped.
3. If an endpoint of the requested range is in a CEPT gap, then the NPCs in the portion of the range which is in the gap will be denied.

**TOT** - Total

**nnn** - Total Number of NPCs in the module that are in the loopback state

**COND** - Condition

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number, start of NPC range

**[t]def** - The 3- or 4-digit nonhierarchical NPC number, end of NPC range

**[u]ghi** - Lowest numbered NPC in the FTM that contains NPC [s]abc

**[v]mno** - Lowest numbered NPC in the FTM that contains NPC [t]def

**[u]jkl** - Highest numbered NPC in the FTM that contains NPC [s]abc

**[v]pqr** - Highest numbered NPC in the FTM that contains NPC [t]def

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical NPC number for beginning of NPC range

**wxkqr** - Hierarchical NPC number for end of NPC range

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are:

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

The range of NPCs in the denial messages will be given either as module or unit boundaries depending upon the reason for the denial.

**uvmaa** - Lowest numbered NPC in the FTM that contains NPC uvmnp  
The parameter value for NPC aa is in the first position, first line of the message.

**uvmbb** - Highest numbered NPC in the FTM that contains NPC uvmnp  
The parameter value for NPC bb is just before EOM or COMPL.

**wxkaa** - Lowest numbered NPC in the FTM that contains NPC wxkqr

**wxkbb** - Highest numbered NPC in the FTM that contains NPC wxkqr

**spp** - ANSI Loopback Type

Values of "spp" are presented in NPC order, grouped within messages by Facility Terminating Module (FTM). For FTM's in Facility Terminating Units, each row of output contains 10 values. For FTM's in DS3 Units, each row of output contains 7 values.

*s*      *Explanation*

\*      Loopback enabled  
' '      Loopback disabled

*pp*      *Explanation*

NP      ANSI Near-end payload loopback active  
FP      ANSI Far-end payload loopback active  
FL      ANSI Far-end line loopback active  
NN      No loopback active  
00      NPC not specified in input range command  
--      NPC not equipped, or non-ANSI type

**[u]ghi**      - Lowest numbered NPC in the FTM that contains NPC [s]abc  
**[v]mno**      - Lowest numbered NPC in the FTM that contains NPC [t]def

**[u]jkl**      - Highest numbered NPC in the FTM that contains NPC [s]abc  
**[v]pqr**      - Highest numbered NPC in the FTM that contains NPC [t]def

The range of NPCs in the denial messages will be given either as module or unit

boundaries depending upon the reason for the denial. **cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped  
**13** FTMI is not equipped  
**25** FTMI type error  
**0B** Invalid CEPT NPC

## **UTL,QRY,MACRO,ATTR,USER,ALL**

### **QUERY MACRO ATTRIBUTES**

#### **Explanation Of Command**

This message queries the macro attributes associated with all personally-owned macros and any public macros. The frame administrator can query ALL the macro attributes of any macro, public or private.

For each macro, DACS II lists:

- The macro name
- The user who owns the macro
- The number of parameters in the macro
- The language used
- The amount of space used by the macro.

#### **Command**

[I.54211]

**UTL:FRM xy,SEQ ww:QRY,MACRO,ATTR[, {USER <user id>|ALL}]!**

---

Not applicable.

## **Explanation Of Parameters**

---

**ATTR** - Attributes

**user id**

- Query the specified user's private and public macro attributes

User login identification is two to eight alphabetic characters.

**ALL** - Query all private and public macros' attributes (used by the frame administrator only)

**MACRO** - The keyword used to indicate that the "name" shown is a macro name. A Macro is a collection of DACS II commands that can be executed as a group.

**name** - The macro name which is a string of uppercase alphanumeric characters from one to seven characters long. The first character must be an alphabetic character.

A macro name start with the character "P" is a public macro. Only the frame administrator is allowed to create a public macro.

**LANG** - Language

**M** - Man-Machine Language

**P** - Program Documentation Standard

**PRMTR** - Macro parameters

**tt** - Total number of macro parameters used (01 - 10)

**SPACE** - Macro space

**nnn** - Macro space used by the macro in percentage of the user macro space allocation (000 - 100)

**NPCAD** - NPC addressing scheme

**E** - 3-digit extended (nonhierarchical) NPC addressing scheme

**X** - 4-digit extended (nonhierarchical) NPC addressing scheme

**H** - Hierarchical NPC addressing scheme, i.e., address the NPC by using the unit number, module number, and NPC number within the module.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**D3** User does not exist

**D5** No user is logged in on the link/vc

## **UTL, QRY, MACRO, MAP, SPACE, USER, ALL**

### **UTILITY QUERY MACRO/MAP SPACE**

#### **Explanation Of Command**

This message requests the amount of space that the user's alternate map or macro requires and how much space is still available.

The frame administrator can query for all user's macro or alternate map space requirements and for the system space requirements and allocation.

In summary, a user can query his/her own alternate map or macro space, but only the frame administrator can use the ALL and SYSTEM options of the command to query space owned by another user.

### Autonomous Message

---

Not applicable.

### **Explanation Of Parameters**

---

**MAP** - Map

**MACRO** - Macro

**USER** - User

**user id**

- query the specified user's macro/map space status.

User login identification is two to eight alphabetic characters.

**ALL** - query all users' macro/map space status.

**SYSTEM** - query the system macro/map space status.

**nnn** - percentage of macro/map space allocated (000 to 100%). If user ID or ALL option is used, nnn is the user macro/map space allocation percentage. If SYSTEM option is used, nnn is the percentage of system macro/map space allocated, and it is always 100 (i.e., 100%).

**AVAIL** - Percentage of space available.

**xxx** - percentage of user or system macro/map space still available (000 to 100%)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**D0** Command is Frame administrator (DAX) only.

**D3** User does not exist

**D5** No user is logged in on the link/vc

## **UTL, QRY, MACRO, USER**

### **UTILITY QUERY MACRO**

#### **Explanation Of Command**

This command is used to query the attributes of a macro including the language, the number of macro parameters, the amount of user macro space used by the macro, the NPC addressing scheme used by the macro, and the total number of macro command lines in the macro.

A user can query his or her own macros but only the frame administrator can query macros owned by another user.

## **Explanation Of Parameters**

---

### **MACRO** - Macro

**name** - The macro name (seven characters maximum length)

The name of a collection of DACS II commands executed as a group.

A macro name is a string of capitalized alphanumeric characters. There are two type of macros; public and private. A private macros is created by a user in space allocated to the user by the system administrator. Only the user that created it can execute or read (LIST) a private macro. A public macro is created by the system administrator and is executable and readable by all users. A public macro name must start with the letter "P". A private macro name must not start with the letter "P".

### **USER** - User

#### **user id**

- User identifier (two to eight alphabetic characters)

User login identification

A user can query their own macros but only the frame administrator can use the command to query macros owned by other users. The frame administrator must specify the user id to query other users' macros.

### **LANG** - Language

**M** - Man-Machine language

**P** - Program documentation standards

### **PRMTR** - Parameter

**jk** - Total number of macro parameters used (01 through 10)

### **SPACE** - Space

**sss** - User macro or map space allocation (000 through 100 percent)

Variable sss represents the space allocated to user macros or maps for the entire DACS II system as a percentage of the system macro space.

### **TOTAL** - Total

#### **line total**

- Total number of macro command lines in the macro

### **NPCAD** - NPC addressing scheme

- E** - 3-digit extended (non-hierarchical) NPC addressing scheme
- X** - 4-digit extended (non-hierarchical) NPC addressing scheme
- H** - Hierarchical NPC addressing scheme, that is, address the NPC by using the unit number, module number, and NPC number within the module.
- cc** - Hexadecimal condition code

**cc**    *Explanation*

- 64**    File doesn't exist/can't be accessed
- D0**    Command is Frame administrator (DAX) only.
- D3**    User does not exist
- D5**    No user is logged in on the link/vc

## **UTL, QRY, MAP, ATTR, ALL, USER, MAPNM**

### **UTILITY QUERY MAP**

#### **Explanation Of Command**

This message requests the following information on the user's alternate map:

- User identifier
- Status of the map
- Amount of space used by the map.

Only the administrator can request information on other users or request ALL alternate maps on the DACS II frame.

#### **Command**

[I.54201]

UTL:FRM xy,SEQ ww:QRY,MAP,ATTR[, {ALL|USER <user id>|MAPNM <name>}]!

**Note:** Only the DACS II frame administrator can use the ALL option.

## Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

MAP - Map

ATTR - Attributes

**ALL** - All

**USER** - User

**user id**

- User identifier

User login identification is two to eight alphabetic characters.

The USER option is available to a regular DACS II user to query his or her own maps. Only the administrator can use the option to request information on other users or ALL alternate maps on the DACS II frame.

**MAPNM** - Alternate map name

**name** - The alternate map name which is a string of uppercase alphanumeric characters from one to seven characters long. The first character must be an alphabetic character.

A user can query his or her own maps but only the frame administrator can use the command to query maps owned by other users. To do so, the optional USER field must be entered.

**STATS** - Status of the alternate map

**bb** - Map Status

bb Explanation

00 Map is valid (can be activated)

01 Map is not valid (it contains conflicting circuits and therefore cannot be activated)

**SPACE** - Alternate map space

**nnn** - Alternate Map space used by the alternate map in percentage of the user alternate map space allocation (000 - 100)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**64** File doesn't exist/can't be accessed

**D0** Command is Frame administrator (DAX) only.

**D3** User does not exist

**D5** No user is logged in on the link/vc

## **UTL, QRY, MARK**

---

### **UTILITY QUERY MARKINGS**

#### **Explanation Of Command**

---

This command is used to query a single or a range of network processing circuits (NPCs) in a facility terminating unit, a digital signal processing unit, or a DS3 unit. This command can be aborted before the entire printout has completed.

When specifying a single NPC, the channel and conference or non-channelized circuit with markings (red circuit and/or customer controlled) are listed. The output for a channel or conference with markings is skipped. When the circuit does not contain markings, the output message indicates this with the NONE keyword. A denial message is printed when the NPC is unequipped.

When specifying a range of NPCs, the channel and conference or non-channelized circuit with markings (red circuit and/or customer controlled) are listed for each equipped NPC. The output for an unequipped or unmarked channel and conference or non-channelized NPC is skipped.

For a non-channelized with markings, a one-line output message segment is printed for each NPC marked, but the channel or conference information is not printed.

For a disconnected channel which was previously used in both two-way and one-way cross-connections, the CUS marking is retained for the two-way cross-connection in output by default.

Outputs are skipped under the following conditions:

- NPC is unequipped
- Channel or conference point has no **RDC** or **CUS** marking.

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical NPC number denoting beginning of range specification

**wxkqr** - Hierarchical NPC number denoting end of range specification

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The valid values are presented below:

DE, DS, and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**[t]jkl** - The 3- or 4-digit NPC number in range [s]abc-[t]def, of a non-channelized NPC.

**edhfg** - Hierarchical non-channelized NPC number in range uvmnp-wxkqr

**TYPE** - Type

**mnxyz** - NPC type

*mnxyz Explanation*

DExyz FTU NPC

DSxyz SLC® carrier interface

MB100 Digital Multipoint Bridge

MJ100 Multipoint Junction

TExyz DS3U unit NPC

SR100 Subrate Multiplexer

VIxyz Virtual circuit

**xx** - Total number of marked channels in the message segment (01 through 24)

**FDL** - Facility data link

**t** - Cross-connection type

*t Explanation*

B For broadcast cross-connection

D For disconnection

\* For one-way cross-connection

'' Blank for two-way cross-connection,

T A Facility Access Digroup (FAD) or a Test Port (TP) channel

**nnn** - Channel or conference number

**ccc** - CUS if customer controlled or --- if not customer controlled

**rrr** - RDC if red circuit or --- if not red circuit

**UEQD** - Unequipped

----- - Unknown NPC type

**cc** - Hexadecimal condition code

**cc** *Explanation*

**0B** Invalid CEPT NPC

## **UTL,QRY,MARK**

---

### **QUERY CHANNEL MARKS**

#### **Explanation Of Command**

---

This command is used to query a network processing circuit for the channel and conference points that are **MARKed** as red or customer controlled circuits.

The command can be entered to request a listing for a group of channels or conference points or for a single channel or conference point. This command can be aborted before the entire printout has completed.

For a disconnected channel which was previously used in both two-way and one-way cross-connections, the CUS marking retained for the two-way cross-connection is output by default.

Outputs are skipped under the following conditions:

- Unequipped NPC
- Channel/conference point has no red circuit or customer controlled marking.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**MARK** - Mark

Red circuit and customer controlled MARKings

**NONE** - None

This keyword indicates that no channel or conference point is marked as a red and/or customer controlled circuit.

**[s]abcjjj**

- Termination number

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

**jjj** - Channel or conference point number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit  
-

**NPC**  
**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

**uvmnp** - Hierarchical NPC number

**uv** - Unit number

**m** - Module number

**np** - NPC number within the module

**jjj** - Channel or conference point number

The valid values follow:

DE and DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

MB type NPC numbers listed by unit, module, and NPC Number

Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

TE NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

VI NPC numbers listed by unit, module, and NPC Number

Unit Type VI (Virtual)

| Unit      | Module   | NPC          |                                 |
|-----------|----------|--------------|---------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02</b> | <b>(DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06</b> | <b>(DACS II CEF frames)</b>     |

**kkk** - Channel or conference point number

Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers

001-085 (MB NPC)

001-500 (Virtual NPC)

**tnnnccrrr**

- Channel or conference information

**t** - Cross-connection type

**t** *Explanation*

\* One-way cross-connection

B Broadcast cross-connection,  
Blank for two-way cross-connection,

D Disconnection

**nnn** - Channel or conference point number (jjj through kkk)

**ccc** - Customer controlled marking

**ccc** *Explanation*

CUS Customer controlled

--- Not customer controlled

**rrr** - Red circuit marking

**rrr** *Explanation*

RDC Red circuit

--- Not red circuit

**xx** - Total number of data fields in the segment (01 through 24)

**RT** - Remote terminal

SLC® carrier remote terminal

**DL** - Digital carrier line unit

**ffff** - SLC carrier RT or DCLU Bank identification number (0000 through 9999)

**MD** - Mode

**g[g]** - Mode of operation

**g[g]** *Explanation*

|   |                                        |
|---|----------------------------------------|
| 1 | SLC 96 carrier Mode I                  |
| 3 | SLC 96 carrier Mode III                |
| C | SLC Series 5 carrier Feature Package C |

**[t]aaa** - The 3- or 4-digit nonhierarchical SLC carrier digroup A NPC number.

**uvkqr** - Hierarchical SLC carrier digroup A NPC number.

|           |                 |

### **RETRIEVE MEMORY STATUS**

#### **Explanation Of Command**

---

This message identifies the current contents of the system memory devices. A separate line of information is provided for the Main Controller RAM, Primary Memory Card (PMEM) and Secondary Memory Card (SMEM). The message response provides the following information for each particular memory device that can be accessed:

1. Software Release of the Executable Program
2. Software Release of the Database
3. Date and Time Stamps of the Database
4. Frame ID and Unique ID
5. Feature Package ID
6. Serial number of the database
7. Serial number of the SunDisk card (PMEM and SMEM only)
8. Service state of the card (PMEM and SMEM) and the service state of the RAM as it corresponds to the state of the MC. If the MC is in-service RAM is in-service, if the MC is in maintenance condition RAM is out-of-service.

This message may be executed either while the Main Controller is In-Service or in Maintenance Condition.

### Explanation Of Parameters

#### MEMSTAT

- Memory Status

**DEV** - Device

**dddd** - Device identifier.

This field identifies a system memory device. The data following the memory device describes the current contents of the memory device. The system memory devices are:

**dddd** *Explanation*

**RAM** Main Controller Random Access Memory

**PMEM** Primary Memory Card

**SMEM** Secondary Memory Card

**EXCT** - Executables

**gg.pp.r**

- Software release identifier.

This field identifies the software release of the executable program that is stored in the memory device. The software release ID is a three part number composed of a release number, a point number, and a version number. This field will appear as a set of dashes if no executable program can be found on the memory device. The software release number "gg.pp.r" is composed of:

**gg** - Software release number  
**pp** - Point release number  
**r** - Version number

**DBASE** - Database

**dd.rr.v**

- Database release identifier.

This field identifies the release of executable program that the database stored in the memory device is formatted for. A database is formatted for a particular executable program release; however, it is compatible with not only the shown release but all other executable program releases that have a greater release ID. The release ID is a three part number composed of a release number, a point number and a version number. This field will appear as a set of dashes if no database can be found on the memory device. The database release number "dd.rr.v" is composed of:

**dd** - Release number  
**rr** - Point release number  
**v** - Version number

**DATE** - Date

**aa/bb/yr**

- Date of last update to the database.

This field identifies the date that the database was created or last updated. For the RAM data line, this field shows the current system date. For the PMEM and SMEM data lines, this field shows the date that the most recent database backup to the Flash Card occurred.

The date field will appear as a set of dashes if no database can be found on the memory device. The date may be generated in either the month-day-year or the day-month-year format, depending on how the user has provisioned it using message I.51021, UTL::DATE.

**aa** Month or Day, depending on selected date format.  
**bb** Day or Month, depending on selected date format.  
**yr** Year

**TIME** - Time

**hr:mn:sc**

- Time of last update to the database.

This field identifies the time that the database was created or last updated. For the RAM memory data line, this field shows the current system time. For the PMEM and SMEM data lines, this field shows the time of day that the most recent database backup to the Flash Card occurred. This field will appear as a set of dashes if no database can be found on the memory device.

**hr** - Hour (00 through 23)  
**mn** - Minute (00 through 59)  
**sc** - Second (00 through 59)

**FID** - Frame ID

**fg** - Frame identifier of the memory device.

This field displays the two alphanumeric character frame identifier "fg" of the memory device. For the MC RAM memory device, the frame ID shown is that of the DACS II system. For the flash cards, PMEM and/or SMEM, the frame ID identifies the system that the memory card belongs to. This field will be shown as dashes if no frame ID can be found on the memory device.

**UID** - Unique ID

**uid** - Unique identifier of the memory device.

This field displays the unique identifier **<uid>**, up to 20 alpha-numeric characters, of the memory device. For the MC RAM memory device, the unique ID shown is that of the DACS II system. For the flash cards, PMEM and/or SMEM, the unique ID identifies the system that the flash card belongs to. This field will be shown as dashes if no unique ID can be found on the memory device.

**FPKG** - Feature Package ID

**nnnnnnnn**

- Feature package identifier.

This field displays the eight character hexadecimal identifier of the feature package. For the MC RAM memory device, the feature package ID shown is that of the DACS II system. For the flash cards, PMEM and/or SMEM, the feature package ID identifies the system that the flash card belongs to. This field will be shown as dashes if no feature package ID can be found on the memory device.

**DBSN** - Database Serial Number

**0000000000**

- Database serial number.

This field displays the ten character numeric identifier of the serial number of the database. For the MC RAM memory device, the database serial number shown is that of the DACS II system. For the flash cards, PMEM and/or SMEM, the database serial number identifies the system that the flash card belongs to. This field will be shown as dashes if no serial number can be found on the memory device.

This field will be padded with blanks if necessary.

**FCSN** - Flash Card

**qqqqqqqqqqqqqqqqqqqqqq**

- Flash card serial number.

This field displays the 20 character alpha-numeric serial number of the flash card. For the MC RAM memory device, the flash card serial number shown is that of the DACS II system. For the flash cards, PMEM and/or SMEM, the serial number identifies the system that the flash card belongs to. This field will be shown as dashes if no serial number can be found on the memory device.

This field will be padded with blanks if necessary.

**STATE** - Service State

**state** - Identifies the state of the memory device.

This field displays the service state of the memory device. The valid states are:

**state** *Explanation*

**IS** In State

**OOS** Out Of State

## **UTL,QRY,NPC,ALL,AI,LV,LOCN,MONDAT**

### **QUERY PERFORMANCE MONITORING DATA FOR DA, TA, AND PA TYPE NPCS**

#### **Explanation Of Command**

This message retrieves current and/or historical DS1 performance monitoring data from DA and TA type NPCs. The message response is output in two distinct formats depending on whether the input command is applied to ALL NPCs on the frame or a set of specifically addressed NPCs.

When the command is applied to ALL NPCs, DACS II responds with the current parameter counts of a single specified performance parameter for ALL NPCs. No output level thresholding is performed and all counts, whether they are zero or greater, are output. The output is formatted on a module-by-module basis for Facility Terminating Units and DS3 Units. If a particular NPC within a module is not a DA or TA type NPC, its accumulator count will be printed as a string of dashes.

When a single NPC or range of NPCs is specifically addressed in the input command, all of the optionally entered user parameters are programmable. DACS II outputs the requested data in a different format, which accommodates the various user options.

This command will handle NPC addressing as follows: If only a single NPC is addressed in the input command, then either a completion or denial response will be generated for the addressed NPC. DACS II will always deny invalid commands to specifically addressed NPCS.

If a range of NPCs is addressed and the feature applies to one or more NPCs within the range, DACS II will perform the command on the NPCs in the range that support the requested feature, but skip the NPCs which do not support the requested feature. DACS II does not output denial responses for range of NPCs.

Restrictions are placed on the use of the "ALL" options for various keywords to constrain the amount of data that will be output for a single command. In particular,

1. If all parameters are requested, the input command is restricted to specifying a single NPC and a single monitored date and/or historical accumulation interval (monitored time).

2. If all daily accumulation registers are requested, the input command is restricted to specifying a single NPC and a single parameter.
3. If all 15-minute accumulation registers are requested, the input command is restricted to specifying a single NPC and a single parameter.

## Command

### Explanation Of Parameters

**NPC** - Network processing circuit  
**NPCS** - Network processing circuits

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number  
**[v]ghi** - The 3- or 4-digit nonhierarchical NPC number  
**[u]jkl** - The 3- or 4-digit nonhierarchical NPC number  
**[t]def** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |

**e** - Number of lines in the message

**ALL** - All

**PARAM** - Parameter

**parameter**

- Parameter name

**pppp** - Parameter value

The parameter whose value is requested and/or reported. The parameter ALLPAR is an input parameter only. If ALLPAR is specified, the following restrictions apply to the input command:

- 1) The command must specify only a single NPC; ranges are not allowed.
- 2) The MONTIM input parameter may not have a value of ALL.
- 3) The MONDAT input parameter may not have a value of ALL.
- 4) The optional LV input parameter must not be present in the command; it defaults to a value of 1-Up and parameter counts of zero are not shown.

| <b>ALLE</b>      | All Near-end parameters listed above              |
| <b>ALLF</b>      | All Far-end parameters (marked by *) listed above |

**LV** - Level

**lllllllll**

- The discriminating level for the requested parameter

If llllllll is not specified in the input command, it defaults to a value of 1-Up.

If "ALL" is specified in the input command a default value of 0-Up is applied. This provides the current counts (zero included, unfiltered) of the specified parameter for all NPCs on the frame.

Keywords LV and ALL are mutually exclusive.

**lllllllll**

*Explanation*

**{00000000-134217728}U**

Discriminating Level-Up Direction

**{00000000-134217728}D**

Discriminating Level-Down Direction

**Up** - Parameters with values equal to or greater than the specified "discriminating level" are reported.

**Down** - Parameters with values equal to or less than the specified "discriminating level" are reported.

**LOCN** - Location

**locn** - The location being performance monitored

If this optional parameter is not present in the input command, it defaults to a value of NEND.

**locn** *Explanation*

**NEND** Near-end

**FEND** Far-end

**AI** - Accumulation interval

**aaaaa** - The accumulation time period for the specified parameter

**aaaaa** *Explanation*

**15MIN** Parameter count from a 15-minute accumulator

**DAILY** Parameter count from a daily accumulator

**COUNT** - Count

**cccccccc**

- The accumulated value of a monitored parameter (nine digits)

This parameter is meaningless if the VLDTY parameter indicates that data is not available for the interval.

All leading 0's will be output.

|                              |                           |
|------------------------------|---------------------------|
| <b>cccccccc</b>              | <i>Explanation</i>        |
| <b>{000000000-134217728}</b> | Range of parameter counts |

**VLDTY** - Validity

**v** - Validity indicator

This parameter indicates whether the information for the specified accumulation interval was accumulated over the entire interval or some portion of it.

|          |                                                              |
|----------|--------------------------------------------------------------|
| <b>v</b> | <i>Explanation</i>                                           |
| <b>A</b> | Adjusted, data was manually initialized                      |
| <b>C</b> | Complete, data was accumulated over the entire interval      |
| <b>L</b> | Long, data was accumulated longer than the interval period   |
| <b>P</b> | Partial, data was accumulated over only part of the interval |

**MONDAT** - Monitored Date

**dddd** - Begin date of performance monitoring period

As an input parameter, this specifies the date of the beginning of the performance monitoring period (specified in the AI parameter) as MMDD, where MM is the month (01-12) and DD is the day (01-31) of the month. If this optional input parameter is not present in the command, it defaults to a value of CURD.

The value ALL is an option only for input commands. If the value ALL is selected, all of the daily accumulation registers are retrieved. If the value ALL is selected, only a single NPC can be specified in the input command. The input command must also select the value of DAILY for the AI parameter, and must not contain the MONTIM parameter.

The following restriction applies to the use of MONDAT in input commands:

This parameter must not appear in input commands  
which select AI = 15MIN and MONTIM = ALL.

As an output parameter, this specifies the date of the beginning of the performance monitoring period as MMDD, where MM is the month (01-12) and DD is the day (01-31) of the month.

| <b>dddd</b>           | <i>Explanation</i>                              |
|-----------------------|-------------------------------------------------|
| <b>{01-12}{01-31}</b> | Month of Year/Day of Month Format               |
| <b>ALL</b>            | All daily accumulators (historical and current) |
| <b>CURD</b>           | Current Date                                    |

**MONTIM** - Monitored Time

**tttt** - Begin time of the performance monitoring period

This parameter specifies the beginning time of day of the requested performance monitoring period (specified in the AI parameter) as HHMM, where HH is the hour (00-23) and MM is the minute {00,15,30,45} of the hour. If this optional input parameter is not present in the command, it defaults to a value of CURT.

The value ALL is an option only for input commands. Selecting the value ALL retrieves all 97 (historical and current) 15-minute accumulation registers of the selected NPC. If the value ALL is selected, only a single NPC can be specified in the input command. The input command must also select the value of 15MIN for the AI parameter. In addition, an input command which specifies parameter = ALLPAR can not also select MONTIM = ALL.

The following restriction applies to the use of MONTIM in input commands:

This parameter must not appear in input commands which specify daily accumulation intervals (AI = DAILY).

| <b>tttt</b>                 | <i>Explanation</i>         |
|-----------------------------|----------------------------|
| <b>{00-23}{00,15,30,45}</b> | Hour of Day/Minute of Hour |
| <b>ALL</b>                  | All 15-minute accumulators |
| <b>CURT</b>                 | Current Time               |

**COND** - Condition

**cc** - Hexadecimal condition code

**cc** *Explanation*

|           |                                                                   |
|-----------|-------------------------------------------------------------------|
| <b>04</b> | Subject entity is out of service                                  |

| <b>12</b> | UC is in service but failed                                       |
| <b>14</b> | FTMI is out of service                                            |
| <b>15</b> | NPC is unequipped                                                 |
| <b>1F</b> | FTMI is in service but failed                                     |
| <b>26</b> | NPC type error                                                    |
| <b>0B</b> | Invalid CEPT NPC                                                  |
| <b>0C</b> | The MONDAT and MONTIM parameters can not both be specified        |
| <b>A0</b> | The selected MXR associated with the NPC is Out-Of-Service        |
| <b>A1</b> | The selected MXR associated with the NPC is In-Service but failed |
| <b>B7</b> | The associated MXR is In-Service but pestered                     |
| <b>A1</b> | The parameter specified does not match with the NPC type          |
| <b>0E</b> | Only one parameter is allowed                                     |
| <b>1B</b> | Historical data can not be specified                              |

**cc**    *Explanation*

- 1D**    Level field is not allowed
- 1E**    Monitored Date field is not allowed
- 20**    Only DAILY for accumulation interval is allowed
- 21**    Only 15MIN for accumulation interval is allowed
- 22**    FTMI is PESTED
- 23**    No PM data available
- 24**    Monitored Time field is not allowed
- 89**    Interval is not valid/not available
- 9E**    MONDAT set to ALL is not allowed
- 9F**    MONTIM set to ALL is not allowed

## **UTL,QRY,NPC,MAP,USER**

### **UTILITY QUERY NPC MAP**

#### **Explanation Of Command**

This message lists all network processing circuits (NPCs) added to the alternate map except for the two-point, two-way cross-connect circuits (TCONS).

A user can query their own maps or macros but only the frame administrator can query maps or macros owned by another user.

#### **Command**

Not applicable.

## Explanation Of Parameters

**NPC** - Network processing circuit

**MAP** - Alternate Map

**name** - The alternate map name which is a string of uppercase alphanumeric characters from one to seven characters long. The first character must be an alphabetic character.

**USER** - User

**user id**

- User login identification is two to eight alphabetic characters.

A user can query his or her own maps but only the frame administrator can use the command to query maps owned by other users. To do so, the optional USER field must be entered.

**[x]xxx** - The 3- or 4-digit nonhierarchical NPC Number

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

- 62** File is being accessed
- 64** File doesn't exist/can't be accessed
- D0** Command is Frame administrator (DAX) only.
- D3** User does not exist
- D5** No user is logged in on the link/vc

## **UTL, QRY, NPC, RT, DL**

---

### **QUERY NETWORK PROCESSING CIRCUIT PARAMETER**

#### **Explanation Of Command**

---

This message requests a printout of the values for a specified facility performance parameter for a single network processing circuit (NPC), a range of circuits, or a SLC® carrier remote terminal or Digital Carrier Line Unit.

These values may be cleared at any time by using the UTL, CLR, ALL command. This message requests a printout of the values for a specified facility performance parameter for a single network processing circuit (NPC) or a range of circuits.

These values may be cleared at any time by using the INIT, REG, ALL command. This message also reports on the CEPT BER status of NPCs. The responses generated by this command are determined by the number of NPCs addressed in the command.

- If a single NPC is addressed in the input command then one message, either a completion or denial, will be generated for the addressed NPC. DACS II will always deny invalid commands to specifically addressed NPCs.
- If a range of NPCs is addressed in the input command, no denial response will be generated.

#### **Command**

### Explanation Of Parameters

- [s]abc** - The 3- or 4-digit nonhierarchical NPC number, the first number of a range
- [t]def** - The 3- or 4-digit nonhierarchical NPC number, the last number of a range

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**parameter**  
- Facility performance parameter

For domestic frames, the parameter and its period of measurement are chosen from the list below:

| <i>Parameter</i> | <i>Explanation</i>         | <i>Period of measurement</i>                           |
|------------------|----------------------------|--------------------------------------------------------|
| BER              | Bit Error Rate             | Total since "local midnight"                           |
| BPV              | Bipolar Violation          | Total since "local midnight"                           |
| COFA             | Change Of Frame Alignment  | Total since "local midnight"                           |
| CRC              | Cyclic Redundancy Code     | Total since "local midnight"                           |
| ER               | Error Rate                 | Previous 24-hour total<br>(same as BER for D4 framing) |
| ERS              | Errored Seconds            | Previous 24-hour total                                 |
| FRER             | Framing Error              | Total since "local midnight"                           |
| OOF              | Out Of Frame               | Total since "local midnight"                           |
| SERS             | Severe Errored Seconds     | Previous 24-hour total                                 |
| SLIP Slip count  | Previous 24-hour total     |                                                        |
| SAFE             | Shelf Alarm Far End count  | Total since "local midnight"                           |
| SANE             | Shelf Alarm Near End count | Total since "local midnight"                           |

**Note:** If the frame contains NPCs that are provisioned with D4 framing only the ER parameter should be used, the BER parameter should not be used.

A message segment will be omitted for:

- Unequipped FTMs
- Equipped FTMs having no NPCs
- Equipped FTMs with NPCs having zero parameter values.
- DS3 modules in case of BPV request (for domestic only)
- Equipped CEPT FTM with all NPCs being PA type but with a parameter other than BER.

xxxxxx - Parameter count values

Note that dashes ("-") will be output for NPCs that are not equipped or are provisioned with a type inapplicable to the parameter. If an entire FTM is unequipped or all its NPCs are dashes, the segment is skipped.

xx - BER states

For xx representing North American BER states:

| <i>xx</i> | <i>Explanation</i>                         |
|-----------|--------------------------------------------|
| --        | Unequipped NPC                             |
| CL        | Clear (a facility type NPC without errors) |
| ER        | Error state                                |
| MJ        | Major state                                |
| MN        | Minor state                                |

*RBER Explanation*

|   |          |
|---|----------|
| 1 | Inactive |
| 0 | Active   |

**[s]jjj** - The Lowest 3- or 4-digit nonhierarchical NPC number in the FTM/MXR that contains NPC [s]abc

**[t]kkk** - The Highest 3- or 4-digit nonhierarchical NPC number in the FTM/MXR that contains NPC [s]abc

**[s]ooo** - The Lowest 3- or 4-digit nonhierarchical NPC number in the FTM/MXR that contains NPC [t]def

**[t]ppp** - The Highest 3- or 4-digit nonhierarchical NPC number in the FTM/MXR that contains NPC [t]def

**uvmkl** - Lowest hierarchical NPC number in the FTM/MXR that contains NPC uvmnp

**uvmppq** - Highest hierarchical NPC number in the FTM/MXR that contains NPC uvmnp

**wxkfg** - Lowest hierarchical NPC number in the FTM/MXR that contains NPC wxkqr

**wxkst** - Highest hierarchical NPC number in the FTM/MXR that contains NPC wxkqr

**RESET** - Reset. Indicates that one of more autonomous resets have occurred

The parameter value for the first NPC is in the first position (upper left corner); first line of the message. The parameter value for the last NPC is located in the lower right corner.

**nnnn** - Cumulative count of NPCs returning nonzero states or values. The last nnnn, the one printed out in the message concluding with COMPL gives the total number of NPCs with nonzero states or values over the specified range.

If NPCs are in a single FTM, then only one 5-line message is printed.

**DGA** - Digroup A  
**DGB** - Digroup B  
**DGC** - Digroup C  
**DGD** - Digroup D  
**DGP** - Digroup P, the protection digroup

**[s]aaa** - The 3- or 4-digit nonhierarchical digroup A NPC number

**[s]bbb**

- The 3- or 4-digit nonhierarchical digroup B NPC number

**[s]ccc** - The 3- or 4-digit nonhierarchical digroup C NPC number

**[s]ddd** - The 3- or 4-digit nonhierarchical digroup D NPC number

**[s]ppp** - The 3- or 4-digit nonhierarchical digroup P NPC number

**ffff** - SLC carrier bank identification number (0000 through 9999)

**g[g]** - Mode of Operation

*[g]g Explanation*

1 SLC 96 carrier Mode 1

3 SLC 96 carrier Mode 3

C SLC Series 5 carrier (Feature Package C)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**04** Subject entity is out of service

**10** Unit is not equipped

**11** UC is out of service

**12** UC is in service but failed

**13** FTMI is not equipped

**14** FTMI is out of service

**15** NPC is unequipped

**1F** FTMI is in service but failed

**24** Unit type error

**0B** Invalid CEPT NPC

**46** NPC Failed or Out of Service

**7E** Bank id number not found

**A0** No SAFE alarm for DGP

**0E** The specified parameter is not applicable to operation mode of the RT

**A1** The parameter specified does not match with the NPC type

## **UTL,QRY,NPCTG**

---

### **UTILITY QUERY TEST-ACCESS GROUP NPC**

#### **Explanation Of Command**

---

This command is used to request information regarding one or more network processing circuits used for test-access groups (NPCTGs). the following information will be provided for each designated NPCTG:

1. All test-access groups (TGs)
2. TG width
3. The bundle being supported (east or west)
4. the channel assignment on the NPCTG

The TGs are listed in the order of bandwidth assignment.

Not applicable.

### Explanation Of Parameters

**TG** - Test (access) group

**mmm** - TG number (001 through 400)

**NPCTG** - NPC (for) test group

**rrr** - TG number (001 through 400)

**sss** - TG number (001 through 400, must be greater than rrr)

Variable sss is used to specify the end of an NPCTG range

**[s]abc** - 3- or 4-digit non-hierarchical NPC number designated as NPCTG rrr

**[t]def** - 3- or 4-digit non-hierarchical NPC number designated as NPCTG sss

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**62** None of the designated NPCTG(s) are equipped

## **UTL, QRY, OPT, TYPE, ALL, NPCS**

### **UTILITY QUERY OPTIONS NPCS**

#### **Explanation Of Command**

This message requests a printout of the parameter threshold values for NPC types stored in the DACS II threshold data base.

If an NPC type is specified, the output message shows the threshold values for all parameters associated with the designated NPC type. If the ALL keyword is entered, the output message shows the threshold values for the parameters and all NPC types.

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**OPT** - Option

In the output messages the first value shown following the keyword OPT is the option number. The value immediately following the option number is the default alarm threshold value. The next three fields show user-programmed values. Any user-programmed values that have not been initialized in the DACS II data base will be shown as "----[----]". Until they are initialized, user-programmable values can not be used as valid alarm thresholds.

For ANSI NPC types (DA and TA type NPCs), a programmed alarm threshold value of zero for any parameter disables threshold crossing alert messages for that parameter.

For the Major Slip and Minor Slip parameters (OPT 01 and 02, respectively) a programmed threshold value of zero disables the respective threshold crossing alarms.

**TYPE** - Type

**mn** - NPC type

| <i>mn</i> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|    |                                               |
|----|-----------------------------------------------|
| DA | Facility Terminating Unit (FTU) ANSI NPC type |
| DE | Facility Terminating Unit (FTU) NPC type      |
| DS | SLC® carrier NPC type                         |
| TA | DS3 Unit ANSI NPC type                        |
| TE | DS3 Unit NPC type                             |

**ALL** - Indicates all NPC types associated with the features being turned on in the frame (for example, TE for the DS3 feature and DS for the SLC carrier feature).

If neither an NPC type nor the ALL keyword are specified, the default NPC type is DE.

If the frame is a Gateway frame the default NPC type is DE.

**NPCS** - Network processing circuits

**SLIP** - Slip

**BER** - Bit Error Rate

**ERS** - Errored Seconds

**SERS** - Severely Errored Seconds

**COFA** - Change of Frame Alignment

**SAFE** - Shelf Alarm Far End

**SANE** - Shelf Alarm Near End

**MJ** - Major

**MN** - Minor

**DE** - Facility Terminating Unit (FTU) NPC type

Threshold parameters for ANSI NPC types

**CVP** - Coding Violations, Path

**CVL** - Coding Violations, Line

**ESP** - Errored Seconds, Path

**ESL** - Errored Seconds, Line

**SESP** - Severely Errored Seconds, Path

**SESL** - Severely Errored Seconds, Line

**SEFS** - Severely Errored Framing Seconds

**CSSP** - Controlled Slip Seconds, Path

**UASP** - Unavailable Seconds, Path

**D** - Daily

**Q** - 15 minute

**N** - Near-end

**F** - Far-end

**TRSP** - Transparent

This keyword indicates that the message contains the BER alarm threshold options for clear-DS1 NPCs. User-defined options with values other than 4, 5 or 6 are shown as '-----'

## **UTL, QRY, PEST, FAIL, OOS, COMMON**

### **UTILITY QUERY STATUS COMMON EQUIPMENT**

#### **Explanation Of Command**

This message is used to request reports on one of the following parameters:

PEST    Pest states  
FAIL    Failed components  
OOS    Out-of-service components

The output message reports the status of the requested parameter on common equipment of the frame.

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

## Explanation Of Parameters

**PEST** - Pested

**FAIL** - Failed

**OOS** - Out of service

For the PEST, FAIL and OOS indications, each entity in the DACS II frame is represented by a single character variable. This variable can have the value of 1, 0 or "-" indicating the following status:

| <i>Value</i> | <i>OOS</i>     | <i>FAIL</i>    | <i>PEST</i>    |
|--------------|----------------|----------------|----------------|
| 1            | out of service | failed         | pested         |
| 0            | in service     | not failed     | unpested       |
| -            | not applicable | not applicable | not applicable |

A hyphen (-) indicates the parameter is not applicable to the particular entity. For example, an unequipped circuit displays a "-" for its OOS, FAIL and PEST indicators.

The DACS II entities and their status fields are as follows:

- g** - Link 1
- h** - Link 2
- i** - Link 3
- j** - Link 4
- k** - Link 5
- l** - Link 6
- m** - XC0 (cross-connect 0)
- n** - XC1 (cross-connect 1)
- o** - CCNI/CCI 0 (cross-connect network interface 0 for non-CEF frame)  
(clock and control interface 0 for CEF frame)
- p** - CCNI/CCI 1 (cross-connect network interface 1 for non-CEF frame)  
(clock and control interface 1 for CEF frame)

**SYNC** - Synchronizer

**CRO** - Clock reference oscillator

**TLI** - Timing link interface

**x** - TLI status, side 0

**x** - TLI status, side 1

TLI information is listed in the message from left to right, starting with status information for TLI 1, SSP 0, Side 0 in the first position and ending with status information for TLI 4, SSP1, Side 1 in the last position. The entities for which status is reported are listed below in the order they appear in the output message.

The status is represented by the variable x or x. The value of the variable is interpreted as follows.

*x* Explanation (PEST, FAIL, or OOS will be indicated in message)

0 Unpested, in-service, or not failed

1 Pested, out-of-service, or failed

Side 0

**TLI 1, SSP 0**

**TLI 1, SSP 1**

**TLI 2, SSP 0**

**TLI 2, SSP 1**

**TLI 3, SSP 0**

**TLI 3, SSP 1**

**TLI 4, SSP 0**

**TLI 4, SSP 1**

Side 1

**TLI 1, SSP 0**

**TLI 1, SSP 1**

**TLI 2, SSP 0**

**TLI 2, SSP 1**

**TLI 3, SSP 0**

**TLI 3, SSP 1**

**TLI 4, SSP 0**

**TLI 4, SSP 1**

**TSI** - Time slot interchange

**f** - FROM unit (1 through 6)

**t** - TO Unit (1 through 6)

**ETSI** - Expanded time slot interchanger

- x** - Status indication for the entity or for the side 0 entity if duplicated.
- x** - Status indication for side 1 entity.
- tt** - Total number of equipped TSIs/ETSIs.
- nn** - Total number of equipped TSIs/ETSIs having the requested status.

## **UTL,QRY,PEST,FAIL,OOS,UNIT**

### **UTILITY QUERY STATUS OF ENTITIES/EQUIPMENT**

#### **Explanation Of Command**

This message requests reports on any one of the following parameters:

PEST          FAIL          OOS

These reports may be on the entire DACS II frame or on the common equipment of the frame.

#### **Command**

[I.53103]

UTL:FRM xy,SEQ ww:QRY,{PEST|FAIL|OOS}[ ,UNIT [q]q]!

## Completion Message

### Nonhierarchical

If the optional unit number is not entered, the following output segments will be generated:

The output starts out with:

[O.53103]

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} \
g h i j k l m n o p EOM
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} 3 LN MSG:
SYNC x x CRO x
TLI x x x x x x x x x x x x \
x x x x EOM
```

For DACS II nonCEF frames, the next segment describes the CCN hardware:

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} TOTAL \
TSIS tt nn 5 LN MSG:
11 x x 12 x x 13 x x 14 x x 15 x x 16 x x
21 x x 22 x x 23 x x 24 x x 25 x x 26 x x
31 x x 32 x x 33 x x 34 x x 35 x x 36 x x
41 x x 42 x x 43 x x 44 x x 45 x x 46 x x EOP
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} TOTAL \
TSIS tt nn 3 LN MSG:
51 x x 52 x x 53 x x 54 x x 55 x x 56 x x
61 x x 62 x x 63 x x 64 x x 65 x x 66 x x EOM
```

For DACS II CEF frames, the segment describes the ECCN hardware:

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} TOTAL \
ETSIS tt nn 3 LN MSG:
01 x x 02 x x 03 x x 04 x x 05 x x 06 x x \
07 x x 08 x x
09 x x 10 x x 11 x x 12 x x 13 x x 14 x x \
15 x x 16 x x EOM
```

The output then continues with information about the common equipment in the units. The data line will only appear for units that are equipped. If more than four units are equipped, the output for the equipage of the units will be divided into multiple segments.

[O.53103]

```
[M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} UNITS e LN MSG:]
[<data line for the common equipment in the first equipped unit>]
[<data line for the common equipment in the second equipped unit>]
[<data line for the common equipment in the third equipped unit>]
[<data line for the common equipment in the fourth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} UNITS e LN MSG:]
[<data line for the common equipment in the fifth equipped unit>]
[<data line for the common equipment in the sixth equipped unit>]
[<data line for the common equipment in the seventh equipped unit>]
[<data line for the common equipment in the eighth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} UNITS e LN MSG:]
[<data line for the common equipment in the ninth equipped unit>]
[<data line for the common equipment in the tenth equipped unit>]
[<data line for the common equipment in the eleventh equipped unit>]
[<data line for the common equipment in the twelfth equipped unit> EOM]
```

```
[M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} UNITS e LN MSG:]
[<data line for the common equipment in the thirteenth equipped unit>]
[<data line for the common equipment in the fourteenth equipped unit>]
[<data line for the common equipment in the fifteenth equipped unit>]
[<data line for the common equipment in the sixteenth equipped unit> EOM]
```

Data line for a unit equipped as DS1 FTU:

```
UNIT [q]q UC a FTMI b c d e FC f g h j k m p q[ CCB r s]
```

Data line for a unit equipped as a DS3U:

```
UNIT [q]q UC a FLI b c FMT l m MXR d e f g h j k MIU n o p q u v w \
[CCB r s]
```

Data line for a unit equipped as a DSPU:

```
UNIT [q]q UC a DSPI b[ CCB r s]
```

Then the output message continues with information about individual NPCs. For each FTM/MXR (or unit in the case of a DSPU), one output message will be printed.

Output message for PEST, FAIL, or OOS status of NPCs on an equipped DS1 FTM:

[O.53103]

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} FTU \
NPCS [a]aaa-[b]bbb tt 5 LN MSG:
x x x x x x x x x x {PEST|FAIL|OOS} nn
x x x x x x x x x x
x x x x x x x x x x
x x x x x x x x x x
x x x x x x x x x x EOM
```

Output message for PEST, FAIL, or OOS status of NPCs on an equipped DS3 MXR:

[O.53103]

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} DS3U \
NPCS [a]aaa-[b]bbb tt 5 LN MSG:
x x x x x x x {PEST|FAIL|OOS} nn
x x x x x x x
x x x x x x x
x x x x x x x
x x x x x x x EOM
```

Output message for PEST, FAIL, or OOS status of NPCs on an equipped DSP Unit:

[O.53103]

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} DSPU \
NPCS [a]aaa-[b]bbb tt 3 LN MSG:
[z]zzz x x [z]zzz x x [z]zzz x x [z]zzz x x
[z]zzz x x [z]zzz x x [z]zzz x x [z]zzz x x \
{PEST|FAIL|OOS} nn EOM
```

Output message for NPCs on an equipped FTM/MXR/DSPU with no NPC in PEST, FAIL, or OOS state:

[O.53103]

```
M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} \
{FTU|DS3U|DSPU} NPCS [a]aaa-[b]bbb tt 2 LN MSG:
{PEST|FAIL|OOS} 00 EOM
```

After the above information is output, the following message will be generated to complete the response:

[O.53103]

M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} COMPL

If the unit number is specified, the following output segments will be generated:

For entities in an FTU:

[O.53103]

M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} 2 LN MSG:  
UNIT [q]q UC a FTMI b c d e FC f g h j k m p q[ CCB r s] EOM

The output then continues with up to four of the following segment depending on the FTM equipage:

[O.53103]

M hh:mm:ss xy,ww n[vv] UTL QRY {PEST|FAIL|OOS} UNIT [q]q FTU \  
NPCS [a]aaa-[b]bbb tt 5 LN MSG:

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

The UNIT option is specified to query that unit. The UNIT field will be null when the command is used for the entire frame. If the UNIT option is specified, only the information related to the equipment in that unit will be generated.

**OOS** - Out of service

Out of Service Components

**FAIL** - Failed

Failed Components

**PEST** - Pested

Pest States

For the OOS, FAIL and PEST indications, each entity in the DACS II frame is represented by a single character variable. This variable can have the value of 1, 0 or "-" indicating the following status:

| <i>Value</i> | <i>OOS</i>     | <i>FAIL</i>    | <i>PEST</i>    |
|--------------|----------------|----------------|----------------|
| 1            | out of service | failed         | pested         |
| 0            | in service     | not failed     | unpested       |
| -            | not applicable | not applicable | not applicable |

A hyphen (-) indicates the parameter is not applicable to the particular entity. For example, an unequipped circuit displays a "-" for its OOS, FAIL and PEST indicators.

The DACS II entities and their status fields are as follows:

**g** - Link 1  
**h** - Link 2  
**i** - Link 3  
**j** - Link 4  
**k** - Link 5  
**l** - Link 6  
**m** - XC0 (cross-connect 0)  
**n** - XC1 (cross-connect 1)  
**o** - CCNI/CCI 0 (cross-connect network interface 0 for non-CEF frame)  
(clock and control interface 0 for CEF frame)  
**p** - CCNI/CCI 1 (cross-connect network interface 1 for non-CEF frame)  
(clock and control interface 1 for CEF frame)

**SYNC** - Synchronizer

**CRO** - Clock reference oscillator

**TLI** - Timing link interface

The order of the TLI presented in the output is shown below:

**TLI 1, SSP 0, Side 0**  
**TLI 1, SSP 1, Side 0**  
**TLI 2, SSP 0, Side 0**  
**TLI 2, SSP 1, Side 0**  
**TLI 3, SSP 0, Side 0**  
**TLI 3, SSP 1, Side 0**  
**TLI 4, SSP 0, Side 0**  
**TLI 4, SSP 1, Side 0**

**TLI 1, SSP 0, Side 1**  
**TLI 1, SSP 1, Side 1**  
**TLI 2, SSP 0, Side 1**

**TLI 3, SSP 0, Side 1**  
**TLI 3, SSP 1, Side 1**  
**TLI 4, SSP 0, Side 1**  
**TLI 4, SSP 1, Side 1**

**TSIS** - Time slot interchanges NonCEF

**f** - FROM unit (1 through 6) NonCEF

**t** - TO Unit (1 through 6) NonCEF

**ETSIS** - Expanded time slot interchangers

- x** - Status of the entity or the side 0 entity if the entity is duplicated
- x** - Status of the side 1 entity
- tt** - Total number of equipped entities
- nn** - Total number of entities having the requested status
- UC** - Unit controller
- FTMI** - Facility terminating module interface
- FC** - Format converter
- CCB** - Cross-connect buffer

For an FTU equipment output, the definition of each character is given below:

- a** - status of UC
- b** - status of FTMI 1
- c** - status of FTMI 2
- d** - status of FTMI 3
- e** - status of FTMI 4
- f** - status of FC 01
- g** - status of FC 11
- h** - status of FC 02
- j** - status of FC 12
- k** - status of FC 03
- m** - status of FC 13
- p** - status of FC 04
- q** - status of FC 14
- r** - status of side 0 CCB
- s** - status of side 1 CCB
- FLI** - Facility line interface
- FMT** - Formatter
- MXR** - Multiplexer
- MIU** - Multiple interface unit

For a DS3U equipment output, the definition of each character is given below:

- a - status of UC
- b - status of service FLI
- c - status of protection FLI
- d - status of protection MXR
- e - status of MXR 1
- f - status of MXR 2
- g - status of MXR 3
- h - status of MXR 4
- j - status of MXR 5
- k - status of MXR 6
- l - status of side 0 FMT
- m - status of side 1 FMT
- n - status of protection MIU
- o - status of MIU 1
- p - status of MIU 2
- q - status of MIU 3
- u - status of MIU 4
- v - status of MIU 5
- w - status of MIU 6
- r - status of side 0 CCB
- s - status of side 1 CCB

**DSPI** - Digital signal processing interface

For a DSPU equipment output, the definition of each character is as below:

- a - status of UC
- b - status of DSPI
- r - status of side 0 CCB
- s - status of side 1 CCB

- [a]aaa** - The first 3- or 4-digit nonhierarchical NPC number of an FTM/MXR/DSPU.
- [b]bbb** - The last 3- or 4-digit nonhierarchical NPC number of an FTM/MXR/DSPU.

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

### **QUERY DS1 PERFORMANCE MONITORING REPORT SCHEDULE**

#### **Explanation Of Command**

This message retrieves information on the user-programmed schedule of autonomous performance monitoring reports, which DACS II will generate for DA and TA type NPCs. The user may retrieve the PM report schedule information for a single, a range or all applicable NPCs on the frame.

This command will handle NPC addressing in the input command as follows:

If only a single NPC is addressed in the input command, and it is of an applicable type, then a completion response will be generated. The choice of completion response depends on if any scheduled report exists for that NPC. If the NPC type is not applicable, DACS II will always deny invalid commands to a specifically addressed NPC.

If a range of NPCs is addressed, and one or more NPCs within the range is of applicable types, DACS II will retrieve the information for each of the NPCs in the range that support this feature, but skip the NPCs which do not support this feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports this feature, DACS II will generate a completion response with one output segment containing the information for each applicable NPC in the range; individual denial responses will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range supports the requested feature, DACS II will generate a range denial response.

If the 'ALL' option is used, and there is one or more PM report schedule(s) on the frame, DACS II will response by echoing all the PM report data as they were entered when the report was scheduled, with the current NI and RT values , and omitting the inhibit information. The output information is necessary for a PM report to be deleted. If there are

no applicable NPC types on the DACS II frame, the response will be a denial.

### **Command**

---

#### **Nonhierarchical**

---

[I.51151]

UTL:FRM xy,SEQ ww:QRY,PMSCHED,{NPC [s]abc[-[t]def]|ALL}!

#### **Hierarchical**

---

[I.51151]

UTL:FRM xy,SEQ ww:QRY,PMSCHED,{NPC uvmnp[-wxkqr]|ALL}!

### **Completion Message**

---

#### **Nonhierarchical**

---

Output message when there are no scheduled reports for the addressed NPCs:

[O.51151]

M hh:mm:ss xy,ww n[vv] UTL QRY PMSCHED {NPC [s]abc[-[t]def]|ALL} 000 COMPL

Output message for one or a range of NPCs, and there is at least one schedule to report:

[O.51151]

M hh:mm:ss xy,ww n[vv] UTL QRY PMSCHED NPC [v]ghi RI rrrrr 3 LN MSG:  
RD dddd RT cccc NI nn <parameter> LV llllllllll LOCN locn AI aaaaa  
TOF ttttt[-ooooo] IM iii[ LK p[vv][ q[vv]]] EOM

.  
.  
.

[M hh:mm:ss xy,ww n[vv] UTL QRY PMSCHED NPC [u]jkl RI rrrrr 3 LN MSG:]  
[RD dddd RT cccc NI nn <parameter> LV llllllllll LOCN locn AI aaaaa]  
[TOF ttttt[-ooooo] IM iii[ LK p[vv][ q[vv]]] EOM]

M hh:mm:ss xy,ww n[vv] UTL QRY PMSCHED NPC [s]abc[-[t]def] COMPL

Output message for 'ALL' NPCs, and there is at least one schedule to report:

[O.51151]

## Explanation Of Parameters

NPC - Network processing circuit

[s]abc - The 3- or 4-digit nonhierarchical starting NPC number

[t]def - The 3- or 4-digit nonhierarchical ending NPC number

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TA type NPC numbers listed by unit number  
Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TA type NPC numbers listed by unit number  
Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical starting NPC number

**wxkqr** - Hierarchical ending NPC number

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ALL** - All report schedules are queried for all NPCs.  
Each scheduled report is displayed with its range of NPCs.

[v]ghi - The 3- or 4-digit nonhierarchical NPC number ([s]abc through [u]jkl)

[u]jkl - The 3- or 4-digit nonhierarchical NPC number ([v]ghi through [t]def)  
Or range of NPCs for a scheduled report, if ALL NPCs are queried.

edhfg - Hierarchical NPC number (uvmnp through opjst)

opjst - Hierarchical NPC number (edhfg through wxkqr)  
Or range of NPCs for a scheduled report, if ALL NPCs are queried.

**RI** - Report interval

**rrrrr** - The interval between performance monitoring reports

| <i>rrrrr</i> | <i>Explanation</i>         |
|--------------|----------------------------|
| {0001-1440}M | Report interval in minutes |
| {0001-0024}H | Report interval in hours   |
| {0001-0007}D | Report interval in days    |

**RD** - Report date

**dddd** - The date for the next performance monitoring report.

| <i>dddd</i>    | <i>Explanation</i>                |
|----------------|-----------------------------------|
| {01-12}{01-31} | Month of Year/Day of Month Format |

**RT** - Report time

**cccc** - The time of day for the next performance monitoring report.

| <i>cccc</i>    | <i>Explanation</i>                |
|----------------|-----------------------------------|
| {00-23}{00-59} | Hour of Day/Minute of Hour Format |

**NI** - Number of intervals

**nn** - The remaining number of intervals over which performance monitoring is to be reported. If this parameter is CT, the performance monitoring schedule will remain in effect until the schedule is canceled using another "Schedule PM Report" command.

| <i>nn</i> | <i>Explanation</i>                 |
|-----------|------------------------------------|
| {01-96}   | Finite number of scheduled reports |
| CT        | Continuous reports until cancelled |

**parameter**

- The parameter for which reporting is being scheduled.

| <i>parameter</i> | <i>Explanation</i>                    |
|------------------|---------------------------------------|
| CVP              | Path Coding Violations                |
| CVL              | Line Coding Violations                |
| ESP              | Path Errored Seconds                  |
| ESL              | Line Errored Seconds                  |
| SESP             | Path Severely Errored Seconds         |
| SESL             | Line Severely Errored Seconds         |
| SEFS             | Path Severely Errored Framing Seconds |
| CSS              | Path Controlled Slip Seconds          |
| UAS              | Path Unavailable Seconds              |
| ALLPAR           | All listed parameters                 |

**LV** - Level

**llllllllll**

- The discriminating level for the requested parameter.

| <i>llllllllll</i>      | <i>Explanation</i>                  |
|------------------------|-------------------------------------|
| {000000000-134217728}U | Discriminating Level-Up Direction   |
| {000000000-134217728}D | Discriminating Level-Down Direction |

Up - Parameters with values equal to or greater than the "discriminating level" specified are reported.

Down - Parameters with values equal to or less than the "discriminating level" specified are reported.

**LOCN** - Location

**locn** - The location being performance monitored.

*locn Explanation*

NEND Near-end

FEND Far-end

**AI** - Accumulation interval

**aaaaa** - The accumulation time period for the specified parameter.

*aaaaa Explanation*

15MIN Parameter count from a 15-minute accumulator

DAILY Parameter count from a daily accumulator

**TOF** - Time offset

**ttttt** - The age of the requested data registers(s) at the reporting time, measured backwards in time from the end of last completed accumulation interval to the beginning of the requested interval.

**ooooo** - If the report interval is an integral number of accumulation intervals, this parameter specifies a range of up to four historical data registers per scheduled report.

*tttt,ooooo Explanation*

{0-7}{00-23}{00,15,30,45,60} Day/Hour/Minute

If the value 7 is given for day, then Hour and Minute must be zero.

To produce reports that contain historical data of completed accumulation intervals, the scheduled report times (set up with "start time" and "report interval") usually coincide with the end of accumulation intervals, and the time offset must be an integral number of accumulation intervals.

A time offset value of 00000 or any value less than the accumulation interval produces a report that contains data from the current register.

**IM** - Inhibit Mode

**iii** - Indicates whether the reporting of performance monitoring data for the facility is currently inhibited or enabled. This information shall be omitted for the 'ALL' case.

*iii Explanation*

ALW Performance monitoring reporting is allowed

INH Performance monitoring reporting is inhibited

**LK** - Link

**p[vv]** - Up to two administrative links to which the scheduled report output will be transmitted. The user may omit these optional parameters, specify a single link, or specify two links which will both receive all output generated by this scheduled report. If these optional parameters are omitted, the scheduled report output will by default be transmitted only to the link that the schedule command was received on.

**cc** - Hexadecimal condition code

**cc** *Explanation*

**15** NPC is unequipped

**26** NPC type error

**A1** The parameter specified does not match with the NPC type

**0F** Frame time is not set

**1F** Scheduled reporting for this npc is inhibited

## UTL, QRY, PSTATE, UNIT

### QUERY UNIT PROTECTION STATE

#### Explanation Of Command

This message reports the maintenance and protection state for the facility line interface (FLI) circuit pack and for the multiplexer multiple-line interface functional group (MMFG) pack in a DS3 unit. It also indicates whether alarm generation for unprotected DS3 (due to manual commands) is enabled or disabled. The enabling/disabling of alarm generation applies to all DS3Us in the DACS frame. It is not on a per DS3U basis.

### **Explanation Of Parameters**

---

**PSTATE** - Protection state

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**S** - Service

**P** - Protection

**FLI** - Facility line interface

**vvv** - FLI maintenance state

*vvv Explanation*

IS In-service

ISF In-service failed or pested

OOS Out-of-service

**zzzz** - FLI protection state

*zzzz Explanation*

SLT Selected (designated to carry service)

USLT Unselected (not designated to carry service)

**MMFG** - Multiplexer-multiplexer interface unit functional group

**xxxx** - Multiplexer (MXR) maintenance state

*xxxx Explanation*

IS In service

ISF In service Failed/Pested

OOS Out of service

UEQD Not equipped (not possible for a protection MXR)

**yyyy** - Multiplexer interface unit maintenance state

**yyyy** *Explanation*

|      |                          |
|------|--------------------------|
| IS   | In service               |
| ISF  | In service failed/pested |
| OOS  | Out of service           |
| UEQD | Not equipped             |

**aaaaa** - Service MMFG protection state

**aaaaa** *Explanation*

|       |                                                                                                                                                |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------|
| SALW  | The service MMFG is selected to carry service, and protection switching is ALLOWED                                                             |
| SINH  | The service MMFG is selected to carry service, and AUTOMATIC protection switching is INHIBITED. Manual switching is permitted.                 |
| MPALW | The facility on this MMFG is being served by the protection pack as a result of a manual switch command, and automatic switchback is ALLOWED   |
| APALW | The facility on this MMFG is being served by the protection pack as a result of an automatic switch, and automatic switchback is ALLOWED       |
| MPINH | The facility on this MMFG is being served by the protection pack as a result of a manual switch command, and automatic switchback is INHIBITED |
| APINH | The facility on this MMFG is being served by the protection pack as a result of an automatic switch, and automatic switchback is INHIBITED     |
| ----  | The service MXR is not equipped                                                                                                                |

**bbbb** - Selection status of the protection MMFG

**bbbb** *Explanation*

|      |                                              |
|------|----------------------------------------------|
| SLT  | Selected (designated to carry service)       |
| USLT | Unselected (not designated to carry service) |

**ccc** - Availability of protection switch in case of failure:

**ccc** *Explanation*

|     |                                                                                                            |
|-----|------------------------------------------------------------------------------------------------------------|
| AVL | Protection switch available                                                                                |
| NVL | Protection switch not available (if the aaaa field is SINH, MPINH or APINH, this field will always be NVL) |
| --- | The MMFG is not selected                                                                                   |

**COND** - Condition

**DS3UNPROTALM**

- DS3 Unprotected Alarm

**dd**                      *Explanation*

ON      Enabled.

Alarm will be generated when DS3 service is unprotected due to manual commands.

OFF     Disabled.

Alarm will not be generated when DS3 service is unprotected due to manual commands.

**cc**      - Hexadecimal condition code

**cc**      *Explanation*

**02**      Subject entity is not equipped

## **UTL, QRY, ROLL, DS0, NPC, ALL, UNIT**

### **UTILITY QUERY ROLL DS0**

#### **Explanation Of Command**

This command is used to request a report on the roll status of all of the channels in a network processing circuit (NPC). The roll status request may be for a single NPC, a range of NPCs, all NPCs in a unit, or all NPCs in the DACS II frame.

The output message shows the correspondence between the bridge and service legs of the Roll procedure. Original Service and Original Bridged leg refer to the service and bridged leg designations created by the Bridge step of the Roll procedure. New Service and New Bridged leg refer to the service and bridged leg designations created by the Roll step of the Roll procedure.

The output message displays the roll status of each of the 24 channels of an NPC.

The top left position corresponds to channel one of the NPC and the bottom right position corresponds to channel twenty-four of the NPC. All dashes are displayed if there is neither a Service leg nor a Bridged leg associated with a channel.

The display is repeated for each NPC in the range.  
If there are no rolled channels on an NPC within a range, then no roll status output will be generated for that NPC.

**Note:** The processing time to query the roll status of a fully equipped frame could exceed 9 minutes.

The specified NPC range can cross a unit boundary and is applicable to facility terminating unit (FTU) and DS3 unit (DS3U) types.

## **Command**

---

### **Nonhierarchical**

---

[I.52081]

UTL:FRM xy,SEQ ww:QRY,ROLL,DS0,{NPC [s]abc[-[t]def]|ALL[,UNIT [q]q]}!

### **Hierarchical**

---

[I.52081]

UTL:FRM xy,SEQ ww:QRY,ROLL,DS0,{NPC uvmp[-wxkqr]|ALL[,UNIT [q]q]}!

## **Completion Message**

---

### **Nonhierarchical**

---

The output message in nonhierarchical PDS form will span one output segment per NPC.

If the 3- or 4-digit nonhierarchical NPC number is used, the output will be six channels per line as shown below:

[O.52081]

```

## **Denial Message**

---

Not applicable.

## **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

**[s]abc** - 3- or 4-digit nonhierarchical NPC number, the first number of a range or a single NPC number.

**[t]def** - 3- or 4-digit nonhierarchical NPC number, the last number of a range.

**ALL** - All  
Keyword indicating that all NPCs in the frame are being queried for Roll status.

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

Keyword used to limit query to all NPCs in a Unit.

**[u]ghi** - The 3- or 4-digit nonhierarchical NPC number of the Service or Bridged channel associated with the queried NPC.

**ghikl** - Hierarchical NPC number of the Service or Bridged leg associated with the queried NPC

**jjj** - Channel number of the Service or Bridged leg associated with the queried NPC

**rr** - The Roll status of a channel interpreted as follows:

*rr*      *Type of Leg*

OS      Indicates that channel [u]ghijjj or ghikljjj is the Original Service leg and the corresponding channel is the Original Bridged leg.

NS      Indicates that channel [u]ghijjj or ghikljjj is the New Service leg and the corresponding channel is the New Bridged leg.

OB      Indicates that channel [u]ghijjj or ghikljjj is the Original Bridged leg and the corresponding channel is the Original Service leg.

NB      Indicates that channel [u]ghijjj or ghikljjj is the New Bridged leg and the corresponding channel is the New Service leg.

--      Indicates that the channel is not a Service or Bridged leg

**uvmnp** - Hierarchical NPC number, the first number of a range or a single NPC number

**wxkqr** - Hierarchical NPC number, the last number of a range

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

**Note:** Valid NPC types for DS0 Roll are DExyz (except DE9y9), TExyz (except TE9y9), DAxyz (except DAxy9), and TAxzy (except TAxzy9).

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

If NPC numbers are expressed in hierarchical form, the valid values are:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

## **UTL,QRY,ROLL,DS1,NPC,ALL,UNIT**

### **UTILITY QUERY ROLL DS1**

#### **Explanation Of Command**

This command is used to request a report on the roll status of DS1 facilities.

The roll status request may be for a single network processing circuit (NPC), a range of NPCs, all NPCs in a unit, or all NPCs in the DACS II frame. The output message shows the correspondence between the bridge and service facilities of the Roll procedure.

Original Service and Original Bridged facility refer to the service and bridged facility designations created by the Bridge step of the Roll procedure.

New Service and New Bridged facility refer to the service and bridged facility designations created by the Roll step of the Roll procedure.

The output message displays the roll status of each of the NPCs in a Facility Terminating Module (FTM) or DS3.

The top left position corresponds to the first NPC in the FTM or DS3 and the bottom right position corresponds to the last NPC in that FTM or DS3. All dashes are displayed if there is neither a Service facility nor a Bridged facility associated with an NPC.

The display is repeated for each FTM or DS3 in the range.

If the range queried in the input message is a subset of an FTM or DS3, all NPCs of that FTM or DS3 will still be displayed.

If there are no rolled channels in an FTM or DS3, then no roll status output will be generated for that FTM or DS3.

The specified NPC range can cross a unit boundary and is applicable to facility terminating unit (FTU) and DS3 unit (DS3U) types.

If only one NPC is queried, then the output display will be one line with the roll status information for the requested NPC.

## Command

### Nonhierarchical

[I.52091]

UTL:FRM xy, SEQ ww:QRY, ROLL, DS1, {NPC [s]abc[-[t]def]|ALL[, UNIT [q]q]}!

### Hierarchical

[I.52091]

UTL:FRM xy, SEQ ww:QRY, ROLL, DS1, {NPC uvmnp[-wxkqr]|ALL[, UNIT [q]q]}!

## Completion Message

### Nonhierarchical

The output message in nonhierarchical PDS form will span one output segment per FTM for FTU NPC ranges, one output segment per DS3 for DS3U NPC ranges, and one line for a single FTU or DS3U NPC.

If the 3- or 4-digit nonhierarchical NPC number in an FTU range is used, the output will be ten NPCs per line as shown below:

[O.52091]

```
M hh:mm:ss xy,ww n[vv] UTL QRY ROLL DS1 FTU NPC [a]aaa-[b]bbb 5 LN MSG:
rr[u]ghi rr[u]ghi rr[u]ghi rr[u]ghi rr[u]ghi rr[u]ghi rr[u]ghi rr[u]ghi \

### **Denial Message**

---

Not applicable.

### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

**[s]abc** - 3- or 4-digit nonhierarchical NPC number, the first number of a range or a single NPC number.

**[t]def** - 3- or 4-digit nonhierarchical NPC number, the last number of a range.

**ALL** - All  
Keyword indicating that all NPCs in the frame are being queried for Roll status.

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)  
Keyword used to limit query to all NPCs in a Unit.

**[q]q** - The 1- or 2-digit Unit number

**[a]aaa** - 3- or 4-digit nonhierarchical NPC number, the first NPC number of an FTM or DS3.

**[b]bbb** - 3- or 4-digit nonhierarchical NPC number, the last NPC number of an FTM or DS3.

**[u]ghi** - The 3- or 4-digit nonhierarchical NPC number of the Service or Bridged facility associated with the queried NPC.

**ghikl** - Hierarchical NPC number of the Service or Bridged facility associated with the queried NPC.

**rr** - NPC Roll status interpreted as follows:

*rr*      *Type of Facility*

- OS      Indicates that NPC [u]ghi or ghikl is the Original Service facility and the corresponding NPC is the Original Bridged facility.
- NS      Indicates that NPC [u]ghi or ghikl is the New Service facility and the corresponding NPC is the New Bridged facility.
- OB      Indicates that NPC [u]ghi or ghikl is the Original Bridged facility and the corresponding NPC is the Original Service facility.
- NB      Indicates that NPC [u]ghi or ghikl is the New Bridged facility and the corresponding NPC is the New Service facility.
- Indicates that the NPC is not a Service or Bridged facility.

**bcdef** - Hierarchical NPC number, the first NPC number of an FTM or DS3.

**edhfg** - Hierarchical NPC number, the last NPC number of an FTM output segment.

**fhjrk** - Hierarchical NPC number, the first NPC number of an FTM output segment.

**stxyz** - Hierarchical NPC number, the last NPC number of an FTM or DS3.

**uvmnp** - Hierarchical NPC number, the first NPC number of a range or a single NPC number.

**wxkqr** - Hierarchical NPC number, the last NPC number of a range.

**uv, wx, bc, st, fh, ed**

- Unit number

**m, k, d, x, j, h**

- Module number

**np, qr, ef, yz, rk, fg**

- NPC number within the module

**Note:** Valid NPC types for DS1 Roll are DExyz, DAxyz, TExyz and TAxzy.

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|

| <b>NPC</b><br><b>1281-1440</b><br><b>144A-144H</b> | <b>NPC</b><br><b>1441-1600</b><br><b>160A-160H</b> | <b>NPC</b><br><b>1601-1760</b><br><b>176A-176H</b> | <b>NPC</b><br><b>1761-1920</b><br><b>192A-192H</b> |
| Unit<br>13                                         | Unit<br>14                                         | Unit<br>15                                         | Unit<br>16                                         |
| <b>NPC</b><br><b>1921-2080</b><br><b>208A-208H</b> | <b>NPC</b><br><b>2081-2240</b><br><b>224A-224H</b> | <b>NPC</b><br><b>2241-2400</b><br><b>240A-240H</b> | <b>NPC</b><br><b>2401-2560</b><br><b>256A-256H</b> |

If NPC numbers are expressed in hierarchical form, the valid values are:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

## **UTL,QRY,RTMAP,DLMAP**

### **UTILITY QUERY, RTMAP, DLMAP**

#### **Explanation Of Command**

This message shows all connections on a specific remote terminal (RT) or data link (DL) for a digital carrier line unit or shows all cross-connections for all of the RTs or DLs terminated on the frame provided the bank identification option is not present on the input.

On output, the SWMR or SWAR network processing circuit shows only the digroup which is switch protected. Bank identification numbers are listed in ascending order.

#### **Command**

[I.52311]

**UTL:FRM xy,SEQ ww:QRY,{RTMAP|DLMAP}[ ffff]!**

## Completion Message

### Nonhierarchical

[O.52311]

If the 3-digit nonhierarchical NPC numbering scheme is used by the link/user  
The following output will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff MD g[g] 5 LN MSG:
DGA aaa[ {SWMR|SWAR} DGP ppp] DSxyz ccc-ddd[ {sss|NDL|RTF}]
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

.  
.  
.

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff MD g[g] 5 LN MSG:
DGx bbb[ {SWMR|SWAR} DGP ppp] DSxyz ccc-ddd[ {sss|NDL|RTF}]
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr
tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr tghijjrr EOM
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff COMPL
```

If the 4-digit nonhierarchical NPC numbering scheme is used by the link/user  
The following output will be generated:

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff MD g[g] 6 LN MSG:
DGA aaaa[ {SWMR|SWAR} DGP pppp] DSxyz ccc-ddd[ {sss|NDL|RTF}]
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr EOM
```

.  
.  
.

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff MD g[g] 6 LN MSG:
DGx bbbb[ {SWMR|SWAR} DGP pppp] DSxyz ccc-ddd[ {sss|NDL|RTF}]
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr
tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr tsghijjrr EOM
```

```
M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} ffff COMPL
```

For each RTMAP/DLMAP, if the 3-digit nonhierarchical NPC number is used by the link/user, the following output will be generated:

[O.52312]

M hh:mm:ss xy,ww n[vv] UTL QRY {RTMAP|DLMAP} kkk {EOM|COMPL}

## Explanation Of Parameters

**RTMAP** - Remote terminal (RT) channel map (SLC® carrier)

**DLMAP** - Digital carrier line unit (DCLU) channel map

**ffff** - Bank identification number (0000 through 9999)

**hhhh** - Bank identification number ( $ffff \leq hhhh$ )

**MD** - Mode

**g[g]** - Mode of operation

| <i>g[g]</i> | <i>Explanation</i>       |
|-------------|--------------------------|
| 1           | SLC 96 Carrier Mode I    |
| 3           | SLC 96 Carrier Mode III  |
| C           | SLC Series 5 Carrier FPC |

**DGA** - Digroup A of a SLC carrier bank

**DGx** - Digroup x (x = B, C, or D) of a SLC carrier bank

**DGP** - Digroup P of a SLC carrier bank

**aaa** - 3-digit nonhierarchical DGA NPC number

**bbb** - 3-digit nonhierarchical DGB, DGC, or DGD NPC number

**ppp** - 3-digit nonhierarchical DGP NPC number

**aaaa** - 4-digit nonhierarchical DGA NPC number

**bbbb** - 4-digit nonhierarchical DGB, DGC, or DGD NPC number

**pppp** - 4-digit nonhierarchical DGP NPC number

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**DSxyz** - SLC® Carrier Terminating NPC type

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |
| <b>1</b>   | D4                               |
| <b>2</b>   | ESF - Voice                      |
| <b>3</b>   | Not assigned                     |
| <b>4</b>   | Not assigned                     |
| <b>5</b>   | Not assigned                     |
| <b>6</b>   | SLC® 96 carrier Fs               |
| <b>7</b>   | SLC 5 carrier ESF with data link |
| <b>8-9</b> | Not assigned                     |

**y** - Line and signaling format

**y** *Explanation*

- 0** Zero code suppression (ZCS)
- 1** No zero code suppression (NZCS)
- 2** Bipolar with 8 zero substitution (B8ZS)
- 3-9** Not assigned

**z** - Counting sequence format

**z** *Explanation*

- 0** SLC 96 carrier Mode III D4 counting sequence
- 1** SLC 96 carrier Mode III D1D counting sequence
- 2** SLC 96 carrier Mode I D1D counting sequence
- 3** SLC Series 5 carrier D4 counting sequence
- 4-9** Not assigned

**uvjaa** - Hierarchical DGA NPC number

**wxlaa** - Hierarchical DGA NPC number of the last RT or DCLU listed.

**uvkbb** - Hierarchical DGB, DGC, or DGD NPC number

**wxmbb** - Hierarchical DGB, DGC, or DGD NPC number of the last RT or, DCLU listed.

**uvjpp** - Hierarchical DGP NPC number

**wxlpp** - Hierarchical DGP NPC number of the last RT or DCLU listed.

**uv,wx** - Unit number

**j,k,l,m**

- Module number

**aa** - NPC number

**bb** - NPC number

**pp** - NPC number

The valid values are:

DS type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**SWMR** - Switch manually requested

**SWAR** - Switch automatically requested

Switch refers to a protection switch.

**ccc** - Beginning channel number  
**ddd** - Ending channel number

| <i>ccc-ddd</i>      | <i>Digroup</i> | <i>Mode</i>  |
|---------------------|----------------|--------------|
| 001-024             | DGA            | Mode I and C |
| 001-047(odd # only) | DGA            | Mode III     |
| 025-048             | DGB            | Mode I and C |
| 049-072             | DGC            | Mode I and C |
| 049-095(odd # only) | DGC            | Mode III     |
| 073-096             | DGD            | Mode I and C |

**sss** - SLC 96 carrier remote terminal power or miscellaneous alarm option

| <i>sss</i> | <i>Explanation</i>                           |
|------------|----------------------------------------------|
| PMJ        | Power major alarm from the data link         |
| PMN        | Power minor alarm from the data link         |
| MMJ        | Miscellaneous major alarm from the data link |
| MMN        | Miscellaneous minor alarm from the data link |

**NDL** - No data link

**RTF** - Retrofit (only applicable to SLC Series 5 carrier FPC RT)

**kkk** - Total number of SLC carrier RT or DCLU banks

**tghijjrr**  
- Termination with 3-digit nonhierarchical NPC number

**t[s]ghijjrr**  
- Termination with 4-digit nonhierarchical NPC number.

**tuvmpjjrr**  
- Termination with hierarchical NPC number

| <i>t</i> | <i>Type of Connection</i> |
|----------|---------------------------|
| *        | One-way                   |
| " "      | Two-way (a blank)         |
| B        | Broadcast                 |

**[s]ghijj**

- The mapped 3- or 4-digit nonhierarchical NPC and channel numbers.

|                 |                    |
|-----------------|--------------------|
| <i>[s]ghijj</i> | <i>Explanation</i> |
| [0]000000       | Unmapped           |
| [-]-SECH-       | Subrate channel    |

**[s]ghi**

- The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                              |                              |                              |                              |                              |                              |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|

DACS II Non-CEF frames support two virtual NPCs using the three digit NPC numbering scheme. The valid values for Non-CEF frames are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-962**

DACS II CEF frames support six virtual NPCs using either a three digit or four digit NPC numbering scheme. If NPC numbers are expressed in three digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**961-966**

If NPC numbers are expressed in four digits, the valid values are:

VI type NPC numbers listed by unit number, Unit Type VI (Virtual)

Unit

-

**NPC**

**9961-9966**

#### **uvmnpjjj**

- Mapped hierarchical NPC and channel numbers.

| <i>uvmnpjjj</i> | <i>Explanation</i> |
|-----------------|--------------------|
| 00000000        | unmapped           |
| --SECH--        | Subrate channel    |

#### **uv-m-npjjj**

- Mapped hierarchical NPC and channel numbers.

| <i>uv-m-npjjj</i> | <i>Explanation</i> |
|-------------------|--------------------|
| 00-0-00000        | unmapped           |
| --SECH--          | Subrate channel    |
| ---SECH---        | Subrate channel    |

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The valid values are:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

MB type NPC numbers listed by unit, module, and NPC Number  
Unit Type DP (DSPU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-8</b> | <b>01-02</b> |

VI NPC numbers listed by unit, module, and NPC Number  
Unit Type VI (Virtual)

| Unit      | Module   | NPC                                   |
|-----------|----------|---------------------------------------|
| <b>99</b> | <b>1</b> | <b>01-02 (DACS II Non-CEF frames)</b> |
| <b>99</b> | <b>1</b> | <b>01-06 (DACS II CEF frames)</b>     |

**jjj** - Channel number

The valid channel numbers for each NPC type are:

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers  
001-500 (Virtual NPC)

001-085 (MB NPC)

**r** - Termination status

*r* Explanation

T Terminated

blank Not Terminated

**cc** - Hexadecimal condition code

**cc** *Explanation*

**7E** Bank id number not found

## **UTL, QRY, SCON, CH, TO**

### **UTILITY QUERY**

#### **Explanation Of Command**

This message requests the far end information for each customer in the connected channel or range of connected channels.

Only one customer will be reported for a DS0A channel. For a DS0B channel, the number of customers reported will be 5, 10, or 20, depending on how the channel was established.

#### **Command**

##### **Nonhierarchical**

[I.52511]

UTL:FRM xy,SEQ ww:QRY,SCON,CH,TO [s]abcddd[-eee]!

##### **Hierarchical**

### Explanation Of Parameters

**CH** - Channel

**TO** - To designation

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

**uvmnp** - Hierarchical FROM NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number for NPC specified in input  
**eee** - Channel number for NPC specified in input denoting end of range

The allowable values are presented below:

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**hhh** - Channel number ( ddd through eee )

**far-end**

- Far-end data in the form:

| <b>far-end</b>      | <i>Explanation</i>                                                                         |
|---------------------|--------------------------------------------------------------------------------------------|
| <b>[t]ghijjj/ll</b> | Far-end FROM customer                                                                      |

## Explanation Of Parameters

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number for FROM NPC specified in input  
**hhh** - Channel number for TO NPC specified in input

The allowable values are presented below:

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number of FROM NPC  
**ll** - Customer number of TO NPC

The allowable values are presented below:

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**[t]ghi** - The 3- or 4-digit nonhierarchical NPC number

**edhfg** - Hierarchical NPC number  
**wxkqr** - Hierarchical NPC number

The above definitions apply to the multipoint circuit master leg or the FROM side of a two-point circuit. See definition of [s]abc

**jjj** - Channel number of multipoint circuit master leg or of FROM side of two-point circuit.

**RATE** - Rate

**rr** - Circuit rate (24, 48, 56, 96)

**MJU** - Multipoint junction unit

**TLA** - Terminate and leave active

**t** - Terminate and leave status of the two-point or MJU connection.

The "TO" direction is defined as facing toward the specified facility termination or alternatively as facing toward what is connected to the specified branch or master.

| <b>t</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|   |      |
|---|------|
| F | FROM |
|---|------|

|   |    |
|---|----|
| T | TO |
|---|----|

|   |      |
|---|------|
| B | BOTH |
|---|------|

**UTST** - Under test

For a multipoint circuit, the position of the indicator "UTST" in the output message precisely identifies the point in the circuit to which a test port is connected. When specified, the indicator "UTST" implies that the circuit is under test at some point between the TO and FROM terminations.

**MPTM** - Multipoint mode

**BR1** - Branch 1

**BR2** - Branch 2

**BR3** - Branch 3

**BR4** - Branch 4

**[t]def** - The 3- or 4-digit nonhierarchical NPC number of the external facility termination of the multipoint master

**ggg** - The external facility termination channel of the multipoint master

**hh** - Customer number

**ssss** - MJU number of MJU cascaded from this branch (0002 - 9999)  
**tttt** - MJU number connected to control leg of MJU ssss (0002 - 9999)  
**u** - Branch number of MJU tttt (1 - 4)

**br\_data**

- Branch leg connection data in the form:

| <b>br_data</b>      | <i>Explanation</i>                          |
|---------------------|---------------------------------------------|
| <b>[t]ghijjj/ii</b> | External facility termination number        |
| <b>jklnnhhh/ii</b>  | External facility termination number        |
| <b>MJU ssss</b>     | MJU number of MJU cascaded from this branch |
| <b>UASGN</b>        | Branch is unassigned                        |

The external facility termination number is composed of a hierarchical or nonhierarchical NPC number, channel number, and customer number.

**reason** - Reason for denial

**reason**

UNIT qq IS NOT EQUIPPED  
NPC [s]abc IS NOT EQUIPPED

CHANNEL [s]abcddd/ff IS UNASSIGNED

NPC [s]abc IS NOT PART OF AN RT  
CHANNEL [s]abcddd IS NOT ESTABLISHED TO SR FEATURE

## **UTL,QRY,SCR,LINK,USER,LINKS,USERS**

### **QUERY USER|LINK SCREENING OPTION**

#### **Explanation Of Command**

This command is used to query the user/administrative link for screening options, command category, and the restricted maintenance privilege. These items are set when the user accesses the link.

The frame administrator may query any one or all users and may query the screening options for any one or all administrative links.

This command can not be used to query users/administrative links provisioned for TABS or Modified Snider protocol since screening options do not apply to them.

The RMON/RMOFF option indicates that the user/administrative link is assigned the privilege or not assigned the privilege of issuing the commands restricted to the frame administrator. Default is RMOFF.

The restricted commands are:

```
I.37301 DLT::FPKG  
I.34001 RST::MC:CLR[,ALL];  
I.34001 RST::MC:TAPE;  
I.34211 RST::DISK[,CLR];  
I.34211 RST::[,CLR]|TAPE;  
I.58001 UTL::BOOT,FRAME[, {TAPE|CLR}];  
I.55701 UTL::BMTR, FROM {RAM|DISK|TAPE}[, {EXCT|INCL}];  
I.51051 UTL::CLR,BMTR;
```

Output from this command is sent only to the link on which the command was input.

## Command

[I.54001]

UTL:FRM xy,SEQ ww:QRY,SCR,{LINK j[mm[-jnn]]|USER <user id>|\

## Explanation Of Parameters

**SCR** - Screening

**n** - Screening option number (1 - 5)

| <i>n</i> | <i>Explanation</i>                                                                                                  |
|----------|---------------------------------------------------------------------------------------------------------------------|
| 1        | Responses to input at the same link.                                                                                |
| 2        | Responses to input at the same link and autonomous messages.                                                        |
| 3        | Responses to messages input at the same link and some specified sets of action verbs.                               |
| 4        | Responses to messages input at the same link and some specified sets of action verbs including autonomous messages. |
| 5        | Responses to input messages on all links and autonomous messages                                                    |

**LINK** - Link

**j [mm]** - Administrative link number

**j** - Physical link number (1 through 6)

**mm** - Virtual circuit number (01 through 16) for j = 5 or 6

Variable j[mm] when used in combination with p[nn] denotes a range of administrative link numbers beginning with j[mm] and ending with p[nn]. In the general case j is the same value as p; that is, there is no link range. A range of links may only be specified by the Frame Administrator and may only be used for synchronous links, not the asynchronous links 1 through 4.

**o[uu]** - Next administrative link number in command range

**g[vv]** - Next administrative link number in command range

**h[ii]** - Next administrative link number in command range

**j[kk]** - Next administrative link number in command range

**r[tt]** - Next administrative link number in command range

**s[yy]** - Next administrative link number in command range

**p[nn]** - Administrative link number at end of command range

|                      |                                         |
|----------------------|-----------------------------------------|
| o,g,h,j,r,s,p        | Physical link numbers (1 through 6)     |
| uu,vv,ii,kk,tt,yy,nn | Virtual circuit numbers (01 through 16) |
|                      | for o, g, h, j, r, s, or p = 5 or 6     |

**USER** - User

**user id**

- User identifier

The user's login identifier (two to eight alphabetic characters). The frame administrator may use specify any user\_id but an individual user is restricted to their own user\_id.

**LINKS** - Links

All administrative links (frame administrator only)

**USERS** - Users

All users (frame administrator only)

**LANG** - Language

**P** - Program Documentation Standards (PDS)

**M** - Man-Machine Language (MML)

**F** - Facility Data Link (FDL)

This language may only be provisioned for a single virtual circuit on an X.25 link. A virtual circuit provisioned with this language provides a communication path between an Operations Support System and the ESF data link of a DA or TA type (ANSI) Network Processing Circuit. Such a virtual circuit is completely dedicated to this function and does not interact with other DACS II input/output (I/O) messages. Once the X.25 link is set up, provisioning this function only requires the user to specify the language "F" for the virtual circuit; no other I/O parameters apply, except for the NPC addressing (NPCAD) option.

**NPCAD** - NPC Addressing scheme

**E** - Extended 3-digit nonhierarchical NPC addressing

**X** - Extended 4-digit nonhierarchical NPC addressing

**H** - Hierarchical NPC addressing

**LEV** - Level

- a** - Execution priority level for circuit provisioning commands
- b** - Execution priority level for equipment provisioning commands
- c** - Execution priority level for maintenance commands
- d** - Execution priority level for test access commands
- e** - Execution priority level for monitoring commands
- f** - Execution priority level for common commands

A table giving the command verbs associated with each of the above command sets is given below.

LEV is used in combination with the command set identifiers a through f to set the execution priority level for each command set. A priority level applies to a user or link as appropriate. Priority levels range from 0 through 3. A list of these levels and their meaning is given below for a. The list for b through f is similar to the a list.

| <i>a</i> | <i>Explanation</i>                                                                                                                                                                                                        |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0        | Commands in the command set assigned this execution priority level cannot be executed.                                                                                                                                    |
| 1        | Highest execution priority level. Commands in the command set assigned this execution priority level will be executed before commands with priority level 2 or 3.                                                         |
| 2        | Middle execution priority level. Commands in the command set assigned this execution priority level will be executed before commands with priority level 3                                                                |
| 3        | Lowest execution priority level. Commands in the command set assigned this execution priority level will be executed after all priority level 1 and 2 commands have been executed. Level 3 is the default priority level. |
| -        | The execution priority level of the command set assigned this execution priority level is not to be changed.                                                                                                              |

**Note:** The commands used to login, logoff, cross-connect, stop, and abort always have the highest priority.

A single queue is used for DACS II commands. When multiple commands arrive at the same time, they will be queued for execution according to the priority assigned to their command set. Commands with the same priority will be executed in the order of arrival, that is, first come first served. A timeout feature insures that no command will wait in the queue forever. When the timeout period has expired for a given command that command will be executed regardless of its priority level.

**RMON** - Restricted maintenance privilege on

**RMOFF** - Restricted maintenance privilege off (default)

- GR** - Group
- a** - Screening level for circuit provisioning commands
  - b** - Screening level for equipment provisioning commands
  - c** - Screening level for maintenance commands
  - d** - Screening level for test access commands
  - e** - Screening level for monitoring commands
  - f** - Screening level for common commands

A table giving the command verbs associated with each of the above command sets is given in the Explanation of Message section.

The command set identifiers a through f are used to set the group screening level for each command set. Screening levels range from 0 through 1. A list of these levels and their meaning is given below for a. The list for b through f is similar to the a list.

| a | Explanation                                                                                                                                             |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Output messages from other links are allowed,                                                                                                           |
| 0 | Output messages from other links are not allowed (the screening option for commands LOGIN, LOGOFF, STOP and ABT is not changeable, and it is set to 1). |

Note: Group information applies only to screening options 3 or 4; it does not appear for options 1, 2, and 5.

- MCON** - Macro component completion messages screening on  
**MCOFF** - Macro component completion messages screening off

**RLK** - Remove link

**A** - Allowed

**I** - Inhibited

A and I are used to assign to a user or link the privilege of removing a link. There is a relationship between the link privilege and the execution priority level. If c (see previous Command Sets table) in the LEV field is set to zero then the command to remove a link cannot be executed hence the remove link privilege is inhibited even if the RLK option is set to A or I.

**cc** - Hexadecimal condition code

**cc** *Explanation*

- D0** Command is Frame administrator (DAX) only.
- D3** User does not exist
- D7** Cannot execute privileged command
- DF** Command and protocol are inconsistent
- E1** Virtual circuit is not specified for X.25 link
- E2** Invalid link number specified

## **UTL, QRY, SECH, TO**

---

### **UTILITY QUERY**

#### **Explanation Of Command**

---

This message requests data or information on an established channel or range of channels.

Data is printed out for the following types of channels.

- An unestablished channel.
- A DS0B channel capable of multiplexing 5, 10, or 20 Subrate customers.
- A DS0A channel (at any rate) without error correction.
- A Subrate DS0A channel with Subrate dataport error correction.
- A 56 kb/s channel with parity channel error correction.
- A DS0B channel capable of multiplexing 5, 10, or 20 Subrate customers and parity channel error correction.
- A parity channel.

#### **Command**

### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number  
The allowable values are presented below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|

**uvmnp** - Hierarchical NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number  
**eee** - Channel number denoting end of range specification

The allowable values are presented below:

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |

| ---            | No error correction                                     |

### reason

- Reason for denial

*reason*

UNIT qq NOT EQUIPPED  
NPC [s]abc IS NOT EQUIPPED

INVALID CHANNEL NUMBER FOR CHANNEL [s]abcddd  
NPC [s]abc IS NOT A VALID NPC NUMBER

NPC [s]abc IS NOT PART OF AN RT

[s]abcddd-fff IS AN INVALID RANGE OF CHANNELS

## **UTL,QRY,SIGST**

---

### **QUERY TRUNK SIGNALING CONVERSION STATE**

#### **Explanation Of Command**

---

This command is used to query the signaling state of a trunk which is using the E1/T1 signaling conversion feature. This feature is implemented on the Digital Signal Processing Platform (DSPP) circuit pack.

The signaling state on any given trunk will change rapidly with respect to time. This command will only take a snapshot of the state of the specified trunk. This snapshot will only be useful if the circuit is stuck in one given state. Thus it will give field personnel a way of tracking down the real problem.

# **uvmnpddd**

- E1/T1 trunk termination

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module  
**ddd** - Channel number

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

Valid values are listed below:

|                |                      |
|----------------|----------------------|
| <b>ddd</b>     | <i>Explanation</i>   |
| <b>001-024</b> | T1 NPC channel range |
| <b>001-030</b> | E1 NPC channel range |

**TYPE** - Type

**mnxyz** - NPC Type and provisioning options

**tdir** - Trunk direction

The direction of the trunk as viewed from this channel. A trunk will have a direction specified in the circuit provisioning command which established the cross-connection. That direction will be either "from T1 to E1" or "from E1 to T1". This represents the direction in which a call is being established on the trunk between two switches. Valid values are listed below:

|             |                                                                |
|-------------|----------------------------------------------------------------|
| <b>tdir</b> | <i>Explanation</i>                                             |
| <b>T1IC</b> | T1 Incoming, Channel belongs to a T1 NPC receiving the call    |
| <b>T1OG</b> | T1 Outgoing, Channel belongs to a T1 NPC originating the call  |
| <b>E1IC</b> | E1 Incoming, Channel belongs to an E1 NPC receiving the call   |
| <b>E1OG</b> | E1 Outgoing, Channel belongs to an E1 NPC originating the call |

**ab** - E1 Transmitting AB signaling bits associated with this channel

**cd** - E1 Receiving AB signaling bits associated with this channel

**e** - T1 Transmitting A signaling bit associated with this channel

**g** - T1 Receiving A signaling bit associated with this channel

Valid values for each bit are zero or one.

**sigst** - Signaling state value

| <b>sigst</b> | <i>Explanation</i>    |
|--------------|-----------------------|
| <b>ANS</b>   | Answer                |
| <b>BLK</b>   | Blocking              |
| <b>CLB</b>   | Clear Backward        |
| <b>CLF1</b>  | Clear Forward 1       |
| <b>CLF2</b>  | Clear Forward 2       |
| <b>DIL0</b>  | Dial 0                |
| <b>DIL1</b>  | Dial 1                |
| <b>IDL</b>   | Idle                  |
| <b>SEI</b>   | Seizure               |
| <b>SEA</b>   | Seize Acknowledgement |

**Note:** An asterisk (\*) may be appended to any of the above states. This means that the current received signaling bit value(s) do not correspond to the current signaling state.

**COND** - Condition

**cc** - Hexadecimal condition code

| <b>cc</b> | <i>Explanation</i>                                    |

**m** - Module number  
**np** - NPC number within the module

The allowable values are presented below:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel for NPC specified in input

The allowable values are presented below:

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

**ff** - Customer number

The allowable values are presented below:

|       |                                     |
|-------|-------------------------------------|
| 01    | (DS0A at 2.4, 4.8, 9.6, or 56 kb/s) |
| 01-20 | (DS0B at 2.4 kb/s)                  |
| 01-10 | (DS0B at 4.8 kb/s)                  |
| 01-05 | (DS0B at 9.6 kb/s)                  |

**[t]ghi** - Nonhierarchical NPC number of multipoint circuit master leg or of  
FROM side of two-point circuit

**edfhg** - Hierarchical NPC number of multipoint circuit master leg or of FROM side of two-point circuit

**hhh** - Channel number of multipoint circuit master leg or of FROM side of two-point circuit

**ll** - Customer number of multipoint circuit master leg or of FROM side of two-point circuit

**from** - Far-end connection in the form:

| <b>from</b>  | <i>Explanation</i>               |
|--------------|----------------------------------|
| [v]defjjj/ii | Far-end customer                 |
| wxkqrjjj/ii  | Far-end customer                 |
| UASGN        | Far-end customer is not assigned |

**ec** - Error corrector NPC number in the form:

| <b>ec</b>  | <i>Explanation</i>                                             |
|------------|----------------------------------------------------------------|
| SEC [w]eee | Subrate error corrector on NPC [w]eee (nonhierarchical)        |
| PEC [w]ppp | Parity channel error corrector on NPC [w]ppp (nonhierarchical) |
| SEC wxkee  | Subrate error corrector on NPC wx-k-ee                         |
| PEC uvlpp  | Parity channel error corrector on NPC uv-l-pp                  |
| ---        | No error corrector applicable                                  |

**mux** - Subrate multiplexer NPC information in the form:

| <b>mux</b> | <i>Explanation</i>                                  |
|------------|-----------------------------------------------------|
| MUX [w]mmm | Subrate multiplexer on NPC [w]mmm (nonhierarchical) |
| MUX edjmm  | Subrate multiplexer on NPC edjmm                    |
| ---        | No subrate multiplexer applicable                   |

**[s]abcdddff**  
- Customer for which trace was requested

**[t]ghijjjll**  
- External facility termination of multipoint master

**MJU** - Multipoint junction unit

**ssss** - MJU number (0002 - 9999)

**tttt** - MJU number providing input to MJU ssss

**BR** - Branch

**i** - Branch number of MJU tttt providing signal to MJU ssss

**[u]aaa** - Nonhierarchical Subrate NPC number

If NPC numbers are expressed in three digits, the valid values are:

SR and MJ type NPC numbers listed by unit number, Unit Type DP (DSPU)

| Unit<br>1  | Unit<br>2  | Unit<br>3  | Unit<br>4  | Unit<br>5  | Unit<br>6  |
|------------|------------|------------|------------|------------|------------|
| <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> | <b>NPC</b> |

## **UTL, QRY, SROOF, TO, ALL**

### **UTILITY QUERY**

#### **Explanation Of Command**

This message requests the framing status of a Subrate multiplexer that is associated with a single DS0B channel or a range of channels or all the DS0B channels in the frame.

The DS0B channels that are reported in the output message must be established and have active cross-connections where multiple channels are listed. Also listed are the carrier group alarm and the failure status of the digroup that is associated with the DS0B channel. This allows the user to determine if the out-of-frame condition is being caused by a failure in a digroup facility or in the equipment.

#### **Command**

##### **Nonhierarchical**

[I.56501]

UTL:FRM xy,SEQ ww:QRY,SROOF,{TO [s]abcddd[-eee]|ALL}!

##### **Hierarchical**

[I.56501]

UTL:FRM xy,SEQ ww:QRY,SROOF,{TO uvmpddd[-eee]|ALL}!

## Completion Message

### Nonhierarchical

[O.56501]

```
M hh:mm:ss xy,ww n[vv] UTL QRY SROOF [s]abcddd 3 LN MSG:
CHAN DS0B STATUS NPC STATUS
[s]abcddd <mux_stat> <npc_stat> COMPL
```

**Note:** The above message applies if a single channel was requested.

[O.56501]

```

<reason> DNY

**Note:** The above message applies when there are no established DS0B channels with active cross-connections that are out-of-frame.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**SROOF** - Subrate out-of-frame

**TO** - To NPC

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                |                                                |                                                |                                                |                                                |                                                |
|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|------------------------------------------------|
| Unit<br>1                                      | Unit<br>2                                      | Unit<br>3                                      | Unit<br>4                                      | Unit<br>5                                      | Unit<br>6                                      |
| <b>NPC</b><br><b>001-160</b><br><b>16A-16H</b> | <b>NPC</b><br><b>161-320</b><br><b>32A-32H</b> | <b>NPC</b><br><b>321-480</b><br><b>48A-48H</b> | <b>NPC</b><br><b>481-640</b><br><b>64A-64H</b> | <b>NPC</b><br><b>641-800</b><br><b>80A-80H</b> | <b>NPC</b><br><b>801-960</b><br><b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE type NPC numbers listed by unit number, Unit Type DT (DS3U)

|                                                    |                                                    |                                                    |                                                    |

**uvmnp** - Hierarchical subrate or multijunction NPC number

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - Channel number  
**eee** - Channel number indicating end of channel range

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

The reported DS0B channels must be already established, and where multiple channels are listed, the DS0Bs must have active cross-connections. This utility also lists the CGA and failure status of the digroup associated with the DS0B to enable the user to determine if the OOF condition is being caused by a digroup facility or equipment failure.

**ALL** - All channels

The ALL keyword cannot be used simultaneously with a single channel or a range of channels.

**e** - The number of lines in the segment (2 through 5)

**mux\_stat**

- Status of DS0B multiplexer in the form:

| <i>mux_stat</i> | <i>Explanation</i>          |
|-----------------|-----------------------------|
| OOF             | Multiplexer is out-of-frame |
| ---             | Multiplexer is in-frame     |

**npc\_stat**

- Status of the facility terminating NPC specified as one or more of the following:

| <i>npc_stat</i> | <i>Explanation</i>                           |
|-----------------|----------------------------------------------|
| OOS             | NPC is out-of-service                        |
| FAIL            | NPC is in the fail state                     |
| ---             | NPC is not failed, out-of-service, or in CGA |
| CGA <state>     | NPC is in one of the following CGA state:    |

| <i>state</i> | <i>Explanation</i>              |
|--------------|---------------------------------|
| AIS          | Alarm Indication Signal         |
| RED          | Received DS-1 framing failure   |
| YEL          | Remote DS-1 framing failure     |
| LMA          | Loss of multiframe alignment    |
| RMA          | Remote multiframe alarm         |
| FFE          | Frame format error rate alarm   |
| LFV          | Loss of signal/line format      |
| MUL          | More than one CGA reported      |
| NA - UC OOS  | No access, UC is out-of-service |

dsob\_stat

- Status of the DS0B channel requested:

| <i>dsob_stat</i> | <i>Explanation</i>                |
|------------------|-----------------------------------|
| OOF              | Multiplexer is out-of-frame       |
| NA - SRM FAIL    | No access, SRM is failed          |
| NA - SRM PEST    | No access, SRM is pested          |
| NA - DSPU OOS    | No access, DSPU is out-of-service |
| NA - DSPU FAIL   | No access, DSPU is failed         |
| NA - DSPU PEST   | No access, DSPU is pested         |
| NA - DSPI OOS    | No access, DSPI is out-of-service |
| NA - DSPI FAIL   | No access, DSPI is failed         |
| NA - DSPI PEST   | No access, DSPI is pested         |

CHANNEL NOT ESTABLISHED AS DS0B      NO DS0B CHANNELS ARE  
OUT-OF-FRAME

**reason**      - Reason for denial

*reason*

UNIT [q]q IS NOT EQUIPPED  
NPC [s]abc IS NOT EQUIPPED

NPC [s]abc IS NOT PART OF AN RT  
CHANNEL [s]abcddd IS NOT ESTABLISHED AS DS0B

[s]abcdddd-fff IS AN INVALID RANGE OF CHANNELS

INVALID CHANNEL NUMBER FOR CHANNEL [s]abcddd  
NPC abc IS NOT A VALID NPC NUMBER

UNIT [q]q IS OUT-OF-SERVICE  
DSPI IN UNIT [q]q IS OUT-OF-SERVICE

UNIT [q]q IS FAILED  
DSPI IN UNIT [q]q IS FAILED

## **UTL, QRY, STATE, ACO**

### **UTILITY QUERY STATE ALARM CUT OFF**

#### **Explanation Of Command**

This message queries for the active or inactive status of the alarm cutoff.

#### **Command**

[I.54340]

UTL:FRM xy,SEQ ww:QRY,STATE,ACO!

#### **Completion Message**

[O.54340]

M hh:mm:ss xy ww n[vv] UTL QRY STATE ACO <mode> COMPL

#### **Denial Message**

Not applicable.

#### **Autonomous Message**

Not applicable.

### Explanation Of Parameters

---

**STATE** - State

**ACO** - Alarm cut off

**mode** - Alarm mode

Current state of alarm cut off

*mode*

*Explanation*

ACTIVE

Alarm cutoff is active

INACT

Alarm cutoff is inactive

## **UTL, QRY, STATE, NPC**

### **UTILITY QUERY STATE**

#### **Explanation Of Command**

This message requests the provisioning and status information of a single Network Processing Circuit (NPC) or range of NPCs for one or more Facility Terminating Units (FTU) or DS3 Units (DS3U) or for a single Digital Signal Processing Unit (DSPU).

If the type of NPC specified is either DS1yz or DS6yz SLC carrier, the complete output message will be printed. If any other NPC type is specified, the second segment of the output format will not be printed.

In the output message, the "PREVIOUS SHORT INTERVAL" data should be ignored for the first 15 minutes following the execution of the CHG::SETOP (Message I.38201) or CHG::NPC, OPTS (Message I.38221) command. These CHG commands clear the stored data, which results in a value of zero being printed for the interval count.

**Note:** If the accumulated count of a parameter reaches or exceeds its programmed threshold, an autonomous alarm message is generated.

If an NPC range is specified in the input command, the following floating window rules apply:

- Unequipped NPCs within the requested range will be skipped.
- If a CEPT gap is within the requested range, the NPCs in the gap will be skipped.
- If an endpoint of the requested range is in a CEPT gap, then the NPCs in the portion of the range which is in the gap will be denied.

## Command

### Nonhierarchical

[I.56311]

UTL: [FRM xy, SEQ ww]: QRY, STATE, NPC [s]abc[-[t]def]!

### Hierarchical

[I.56311]

UTL: [FRM xy, SEQ ww]: QRY, STATE, NPC uvmnp[-wxkqr]!

## Completion Message

### Nonhierarchical

**Note:** The first following message segment will be output for each DE, DA, TE, and TA NPC. The second following message segment will be output in addition for DS NPCs.

## Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit starting nonhierarchical NPC number

**[t]def** - The 3- or 4-digit ending nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

| TA        | DS3U ANSI NPC                 |
| TE        | DS3U Noninterface unit NPC    |
| MB        | Digital multipoint bridge NPC |
| MJ        | Multipoint junction unit NPC  |
| SR        | Subrate multiplexer unit NPC  |

DE-type xyz fields

x - Multiframe format for the digroup

| <i>x</i> | <i>Explanation</i>                               |
|----------|--------------------------------------------------|
| 0        | Not assigned                                     |
| 1        | D4                                               |
| 2        | ESF - Voice                                      |
| 3        | ESF - Data                                       |
| 4        | DDST (T1DM - R bit connection via channel 24)    |
| 5-7      | Not assigned                                     |
| 8        | Ericsson Cellular format                         |
| 9        | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2\***     B8ZS - Bipolar with 8 zero substitution
- 3†**     ZBTSI - Zero-bit time-slot interchanger
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6**      B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling
- 7-9**    Not assigned

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**    Not assigned
- 9**      No channel numbering format, clear-DS1

DS-type xyz fields

**x** - Multiframe format

**x**      *Explanation*

- 0**      Not assigned
- 1**      D4
- 2**      ESF - Voice
- 3**      Not assigned
- 4**      Not assigned
- 5**      Not assigned
- 6**      SLC® 96 carrier Fs
- 7**      SLC 5 carrier ESF with data link
- 8-9**    Not assigned

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2**      Not assigned
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6-9**   Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      No channel numbering format, clear-DS1

TA-type xyz fields

**x** - Multiframe format for the digroup

**x**      *Explanation*

- 0**      Not assigned
- 1**      D4
- 2**      ESF - Voice
- 3**      ESF - Data
- 4**      DDST (T1DM - R bit connection via channel 24)
- 5-7**   Not assigned
- 8**      Ericsson Cellular format
- 9**      Not assigned

**y** - Line and signaling format

**y**      *Explanation*

**0**      ZCS - Zero code suppression

**1\***     NZCS - No zero code suppression

**2**      Not assigned

**3**      Not assigned

**4**      ZCS/DMI - Zero code suppression/DMI signaling

**5**      NZCS/DMI - No zero code suppression/DMI signaling

**6-9**   Not assigned

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z**      *Explanation*

**0**      D4 channel bank channel numbering

**1**      D2 channel bank channel numbering

**2**      D1D channel bank channel numbering

**3-8**   Not assigned

**9**      Unchannelized 193-bit Clear DS1 Cross-connection

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TE<sub>x</sub>3<sub>z</sub>**).

MB-type xyz fields

**x**      - Fixed at 1

**y**      - Fixed at 0

**z**      - Fixed at 0

SR- and MJ-type xyz fields

- x** - Fixed at 1
- y** - Fixed at 0
- z** - Fixed at 0

**RESET** - Indicates that one or more autonomous resets have occurred.

**IW** - Insertion word

**pq** - Insertion word value (Hexadecimal)

Also referred to as the Disconnect Code (DCC) or idle code. This value is inserted in the transmit direction on unassigned channels. DCC is not applicable to clear-DS1 NPCs, and is not printed. Some common disconnect codes are:

| <b>pq</b> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

- |           |                                                                                                                |
|-----------|----------------------------------------------------------------------------------------------------------------|
| <b>7F</b> | Unassigned Channel code (UAC), the default value                                                               |
| <b>18</b> | Unassigned Multiplex Code (UMC), should only be used with type DE4yz, for a T1DM formatted facility.           |
| <b>FF</b> | Per channel all ones code, needed for not connected channels in SLC <sup>®</sup> carrier and CPI applications. |

**OOS** - Out-of-Service

**a** - Out of Service flag, applies to FTU NPCs and DSP NPCs on Side 0

**a** - Out of Service flag, applies to DSP NPCs on Side 1

| <i>a, a</i> | <i>Explanation</i> |
|-------------|--------------------|
|-------------|--------------------|

- |          |                    |
|----------|--------------------|
| <b>1</b> | Out-of-service     |
| <b>0</b> | Not Out-of-service |

**FAIL** - Fail

**b** - Failed flag, applies to FTU NPCs and DSP NPCs on Side 0

**b** - Failed flag, applies to DSP NPCs on Side 1

| <i>b, b</i> | <i>Explanation</i> |
|-------------|--------------------|
|-------------|--------------------|

- |          |            |
|----------|------------|
| <b>1</b> | Failed     |
| <b>0</b> | Not failed |

**PEST** - Pest

- c** - Pested flag, applies to FTU NPCs and DSP NPCs on Side 0
- c** - Pested flag, applies to DSP NPCs on Side 1

*c, c Explanation*

- 1** Pested
- 0** Not pested

**CGA** - Carrier group alarm

- d** - Carrier Group Alarm flag

*d Explanation*

- 0** No CGA
- A** Alarm Indication Signal (AIS) CGA (non-alarmed)
- B** Both Yellow and Red CGA (SLC Series 5 NPCs only)
- L** LMA - Local Multiframe Alarm
- M** RMA - Remote Multiframe Alarm
- R** Red CGA
- Y** Yellow CGA

**Note:** The facility monitoring parameters accumulated by the NPC are described below. If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options are still correctly output in this case.

In addition, some parameters are not applicable to all NPCs. Certain parameters may or may not be collected based on NPC type, whether the NPC is equipped in a Facility Terminating Unit (DE type NPC) or a DS3 Unit (TE type NPC) and whether the NPC carries a Clear or Channelized facility. In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes.

**00F** - Out-of-Frame

**www** - Out-of-Frame count

**SLIP** - Slip

**fff** - Slip count

**mmm** - Slip major alarm threshold (0 through 255)

The value zero indicates that Slip major threshold crossing alarms are disabled.

**e** - Slip major alarm option selection (0 through 3)

**nnn** - Slip minor alarm threshold (0 through 255)

A value of 000 indicates that the Slip minor threshold crossing alarms are disabled. The Slip minor alarm threshold can not be set to zero unless the Slip major alarm threshold is first set to zero. When the slip minor and major thresholds are not disabled, the major threshold must be greater than the minor threshold.

**f** - Slip minor alarm option selection (0 through 3)

**BER** - Bit error rate

**st** - BER alarm status

**st**     *Explanation*

**CL**     BER alarm cleared

**ER**     Error Rate

**MJ**     Major Bit Error Rate

**MN**     Minor Bit Error Rate

**p** - BER major alarm threshold, (1E-p, p can range from 3 through 6\*)

**q** - BER minor alarm threshold, (1E-q, q can range from 3 through 6\*)

**Note:** \* p can range to 7 on T1DM and Fe framing  
q ranges from 4 for TG80B or TG186 circuit pack provisioned as clear-DS1

**g** - BER major alarm option selection (0 through 3)

**h** - BER minor alarm option selection (0 through 3)

**Note:** Major thresholds may not be equal to minor thresholds.

**ERS** - Errored Seconds

**cccc** - ERS count

**tttt** - ERS threshold

**i** - ERS option selection (0 through 3)

**SERS** - Severely Errored Seconds

**bbbb** - SERS count

**sss** - SERS threshold (1 through 255)

**j** - SERS option selection (0 through 3)

**COFA** - Change of frame alignment

**yyyy** - COFA count

**ttt** - COFA major alarm threshold (1 through 511)

**k** - COFA major alarm option selection (0 through 3)

**uuu** - COFA minor alarm threshold (1 through 255)

**l** - COFA minor alarm option selection (0 through 3)

**Note:** Major thresholds may not be equal to minor thresholds.

**BPV** - Bipolar violation

**kkkk** - BPV count

**Note:** This field will be filled with ----- for a TE type NPC.

**SANE** - Shelf alarm near end

**uuuuu** - SANE count

**xxxxx** - SANE threshold (1 through 65535)

**p** - SANE alarm option selection (0 through 3)

**SAFE** - Shelf alarm far end

**Note:** The SAFE parameter is not applicable for the Digroup P (DGP) of SLC 96 RTs. Therefore, dashes ("-") are used in the SAFE count (vvvvv), threshold (zzzzz), and option (q) fields for NPCs provisioned as SLC 96 DGPs.

**vvvvv** - SAFE count

**zzzzz** - SAFE threshold (1 through 65535)

**q** - SAFE alarm option selection (0 through 3)

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                                  |
|-----------|----------------------------------|
| <b>00</b> | No conditions                    |
| <b>04</b> | Subject entity is out of service |
| <b>11</b> | UC is out of service             |
| <b>12</b> | UC is in service but failed      |
| <b>14</b> | FTMI is out of service           |
| <b>1F</b> | FTMI is in service but failed    |
| <b>0B</b> | Invalid CEPT NPC                 |
| <b>46</b> | NPC Failed or Out of Service     |
| <b>AE</b> | MXR is failed                    |
| <b>AF</b> | MIU is failed                    |
| <b>B1</b> | FMT is out of service            |
| <b>B2</b> | MXR is out of service            |
| <b>CF</b> | MIU is out of service            |

## **UTL, QRY, STATE, NPC**

### **UTILITY QUERY NPC STATE**

#### **Explanation Of Command**

This message requests the provisioning and status information of a single Network Processing Circuit (NPC) or range of NPCs. The output format shown in this message applies to DA and TA type NPCs in one or more Facility Terminating Unit(s) (FTU) or DS3 Units (DS3U).

Similar information for other domestic and international NPC types are retrieved using message 56311.

If an NPC range is specified in the input command, the following floating window rules apply:

- Unequipped NPCs within the requested range will be skipped.
- For gateway frames, if a CEPT gap is within the requested range, the NPCs in the gap will be skipped.
- For gateway frames, if an endpoint of the requested range is in a CEPT gap, then the NPCs in the portion of the range which is in the gap will be denied.

**NOTE:** Similar information for other NPC types are given by message 56311.

#### **Command**

## Explanation Of Parameters

**NPC** - Network Processing Circuit

**[s]abc** - The first 3- or 4-digit nonhierarchical NPC Number of a range  
**[t]def** - The last 3- or 4-digit nonhierarchical NPC Number of a range  
**[t]ghi** - A 3- or 4-digit nonhierarchical NPC number ([s]abc through [t]def)

If NPC numbers are expressed in three digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TA type NPC numbers listed by unit number  
Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TA type NPC numbers listed by unit number  
Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |

**uvmnp** - The first hierarchical NPC number of a range

**wxkqr** - The last hierarchical NPC number of a range

**edhfg** - A 3- or 4-digit hierarchical NPC number (uvmnp through wxkqr)

**uv, wx** - Unit number  
**m, k** - Module number  
**np, qr** - NPC number within the module

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**mnxyz** - NPC type

**DAxyz** - FTU ANSI NPC  
**TAxyz** - DS3U ANSI NPC

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2\***     B8ZS - Bipolar with 8 zero substitution
- 3**      Not assigned
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6**      B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling
- 7-9**   Not assigned

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**   Not assigned
- 9**      Unchannelized 193-bit Clear DS1 Cross-connection

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the x field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the z field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its y option selecting ZBTSI (**DEx3z**).

# TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

**IW** - Insertion Word

**pq** - Hexadecimal value of the DCC (disconnect code)

This value is inserted in the transmit direction on unassigned channels. DCC is not applicable to Clear-DS1 NPCs, and is not printed. Although any 2-digit hexadecimal code may be specified, the following are commonly used codes:

| <i>pq</i> | <i>Explanation</i>                                                                                              |
|-----------|-----------------------------------------------------------------------------------------------------------------|
| 7F        | UAC (Unassigned Channel code), the default value.                                                               |
| 18        | UMC (Unassigned Multiplex Code), should only be used with types DA4yz and TA4yz, for a T1DM formatted facility. |

**OOS** - Out-of-Service

**q** - Out-of-service indicator

| <i>q</i> | <i>Explanation</i>        |
|----------|---------------------------|
| 1        | NPC is out-of-service     |
| 0        | NPC is not out-of-service |

**FAIL** - Failed

**r** - Failed indicator

| <i>r</i> | <i>Explanation</i> |
|----------|--------------------|
| 1        | NPC is failed      |
| 0        | NPC is not failed  |

**PEST** - Pested

**s** - Pested indicator

| <i>s</i> | <i>Explanation</i> |
|----------|--------------------|
| 1        | NPC is pested      |
| 0        | NPC is not pested  |

**CGA** - Carrier group alarm  
**t** - Carrier group alarm indicator

| <i>t</i> | <i>Explanation</i>                |
|----------|-----------------------------------|
| A        | Alarm Indication Signal (AIS) CGA |
| L        | LMA - Local Multiframe Alarm      |
| M        | RMA - Remote Multiframe Alarm     |
| O        | No CGA                            |
| R        | Red CGA                           |
| Y        | Yellow CGA                        |

**LOS** - Loss of signal  
**u** - Loss of signal indicator

| <i>u</i> | <i>Explanation</i> |
|----------|--------------------|
| 1        | LOS alarm          |
| 0        | No LOS alarm       |
| -        | Not applicable     |

**Note:** The LOS alarm indicator is displayed as a dash for ANSI NPCs which are equipped in a DS3 Unit (TA type NPCs) because the LOS alarm does not apply to them. TA type NPCs can not monitor DS1 line failures (LOS) because the line signal is at the DS3 rate.

#### NE-STATUS

- Near-end Circuit Status

furyatlo

- The bits in the near-end byte identify the following alarm/status conditions:

#### *Field Explanation*

|   |                                                       |
|---|-------------------------------------------------------|
| f | f = 1, if u or r or y or a or t or l or o = 1         |
| u | u = 1, if an unavailable signal status exists         |
| r | r = 1, if a Red-CGA exists                            |
| y | y = 1, if a Yellow-CGA exists                         |
| a | a = 1, if an AIS-CGA exists                           |
| t | t = 0, (unused)                                       |
| l | l = 1, if a payload loopback or test signal is active |
| o | o = 0, (unused)                                       |

## FE-STATUS

- Far-end Circuit Status

fumcablo

- The bits in the far-end byte identify the following alarm/status conditions:

### *Field Explanation*

|   |                                                                 |
|---|-----------------------------------------------------------------|
| f | f = 1, if u or m or c or a or b or l or o = 1                   |
| u | u = 1, if a far-end unavailable signal status exists            |
| m | m = 1, if no ANSI PRMs or RAI has been received for 4.5 seconds |
| c | c = 1, if loopback retention code is being received             |
| a | a = 1, if a far-end AIS-CGA or Red-CGA exists                   |
| b | b = 1, if loopback retention code is being transmitted          |
| l | l = 1, if a far-end payload loopback is active                  |
| o | o = 0, (unused)                                                 |

### *Parameter Explanation*

|      |                                  |
|------|----------------------------------|
| CVP  | Path Coding Violations           |
| CVL  | Line Coding Violations           |
| ESP  | Path Errored Seconds             |
| ESL  | Line Errored Seconds             |
| SESP | Path Severely Errored Seconds    |
| SESL | Line Severely Errored Seconds    |
| SEFS | Severely Errored Framing Seconds |
| CSSP | Path Controlled Slip Seconds     |
| UASP | Path Unavailable Seconds         |

**Note:** If the queried NPC can not be accessed for some reason, for example because the Facility Terminating Module is not equipped or the FTMI or Unit Controller is out of service, then the NPC's parameter count fields are printed as a string of dashes to indicate that the counts are not available. The parameter thresholds and options will still be correctly output.

In addition, certain parameters do not apply to ANSI NPCs depending on whether the NPC is equipped in a Facility Terminating Unit (DA type NPCs) or a DS3 Unit (TA type NPCs) and whether the NPC is using ESF framing or not. In the cases where specific parameters do not apply to the queried NPC, the respective parameter count fields, threshold values and threshold options are all displayed as a string of dashes. Specifically:

For Channelized and Clear-DS1 DA type NPCs with ESF framing, all of the Near-end and Far-end parameters are valid.

For Channelized and Clear-DS1 DA type NPCs with D4 or T1DM framing, all of the Near-end parameters are valid, but the only valid Far-end parameter is Unavailable Seconds.

For Channelized and Clear-DS1 TA type NPCs with ESF framing, all of the Near-end Path parameters are valid, but the Near-End Line parameters are invalid. All of the Far-end parameters are valid.

For Channelized and Clear-DS1 TA type NPCs with D4 or T1DM framing, the Near-end Path parameters are valid, but the Near-End Line parameters are invalid. The only valid Far-end parameter is Unavailable Seconds.

**B1** FMT is out of service  
**B2** MXR is out of service  
**CF** MIU is out of service

## **UTL, QRY, STATE, SCDG, NPC, RT, DL, ALL**

### **UTILITY QUERY SCDG**

#### **Explanation Of Command**

This message requests a printout of the list of SLC<sup>®</sup> carrier digroups (DCLU) terminated on this frame. Additionally, if the STATE option is used on the input message, the system reports the status of the digroup(s) with regard to protection switching, line loopback, and the outstanding alarm states.

For Message O.52322, the appearance order for the RTs and DLs (for digital carrier line unit) is such that the RT with the smallest identification number appears first, followed by the DL that has the same identification number.

If a DL is found without the same identification number, then the RT with the next smallest identification number appears next, and so on.

If an RT (DL) is not terminated on this frame, then the output message only includes the first line of the message with the SLC carrier or DCLU digroup value set to zero.

For Message O.52321 and if the NPC number is entered, the RT or DL id number and the operation mode number are shown in the first output line.

The power/miscellaneous (sss) option shows a SLC 96 carrier RT if it is specified in the ADD::RT command.

The retrofit (RTF) option shows a retrofit SLC carrier RT with FPC.

## Autonomous Message

Not applicable.

## Explanation Of Parameters

**SCDG** - SLC® carrier digroup

**STATE** - State

Status of protection switching, line loopback, and alarms

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical DS-type NPC number belonging to  
FTU (Unit type FT)  
The valid values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DS type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**uvmnp** - Hierarchical DS-type NPC number

uv - Unit number  
m - Module number  
np - NPC number

Valid values are listed below:

DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|                      |                      |                     |
|----------------------|----------------------|---------------------|
| Unit<br><b>01-16</b> | Module<br><b>1-4</b> | NPC<br><b>01-40</b> |
|----------------------|----------------------|---------------------|

**RT** - Remote terminal

**DL** - Digital carrier line unit (DCLU)

**ffff** - Bank identification number (0000 through 9999)

**ALL** - All  
All SLC carrier RTs or DLs on this frame

**e** - Number of lines in output message

**gggg, hhhh**  
- Bank identification number used in the output message when the NPC number or ALL option was specified in the input message. These bank identification numbers have the same values as ffff.

**MD** - Mode

**g[g]** - Mode of operation  
Mode of operation for the RT/DL SLC carrier bank

| <i>g[g]</i> | <i>Explanation</i> |
|-------------|--------------------|
|-------------|--------------------|

|   |                           |
|---|---------------------------|
| 1 | SLC carrier 96 Mode I     |
| 3 | SLC carrier 96 Mode III   |
| C | SLC carrier, Series 5 FPC |

**llll** - Total number of SLC carrier and DCLU digroups terminated on this frame

**mmm** - Total number of digroups terminated for this bank

**sss** - PWR/MISC alarm option

| <i>sss</i> | <i>Explanation</i> |
|------------|--------------------|
|------------|--------------------|

|     |                                                                |
|-----|----------------------------------------------------------------|
| PMJ | The PWR/MISC alarm from the data link is a power major alarm   |
| PMN | The PWR/MISC alarm from the data link is a power minor alarm   |
| MMJ | The PWR/MISC alarm from the data link is a miscellaneous major |
| MMN | The PWR/MISC alarm from the data link is a miscellaneous minor |

**RTF** - Retrofit

**DGA** - Digroup A of a SLC carrier bank

**DGB** - Digroup B of a SLC carrier bank

**DGC** - Digroup C of a SLC carrier bank

**DGD** - Digroup D of a SLC carrier bank

**DGP** - Digroup P of a SLC carrier bank

**[t]aaa** - The 3- or 4-digit Nonhierarchical DGA NPC number  
**[t]bbb** - The 3- or 4-digit Nonhierarchical DGB NPC number  
**[t]ccc** - The 3- or 4-digit Nonhierarchical DGC NPC number  
**[t]ddd** - The 3- or 4-digit Nonhierarchical DGD NPC number  
**[t]ppp** - The 3- or 4-digit Nonhierarchical DGP NPC number

**uvjaa,wxjaa**  
- Hierarchical DGA NPC number

**uvkbb,wxkbb**  
- Hierarchical DGB NPC number

**uvlcc,wxlcc**  
- Hierarchical DGC NPC number

**uvmdd,wxmdd**  
- Hierarchical DGD NPC number

**uvjpp,wxjpp**  
- Hierarchical DGP NPC number

**uv,wx** - Unit number

**j,k,l,m**

- Module number (j=k=l=m for SLC carrier Series 5 FPC RT)

**aa** - NPC number

**bb** - NPC number

**cc** - NPC number

**dd** - NPC number

**pp** - NPC number

**NDL** - No data link

**PLSW** - Protection line switch (status)

xxxx Explanation

SWMR Manually requested PLSW is performing

SWPR Manually requested PLSW is pending

SWAR Automatically requested PLSW is performing

INHB Protection line switch for the digroup is inhibited

NORM Protection line switch status is normal

**LLB** - Line loopback (status)

xxxx Explanation

FRTA LLB request from RT is active  
FRTI LLB request from RT is inhibited  
TRTA LLB request to RT is active  
TRTI LLB request to RT is inhibited  
LBPR LLB request to RT is pending  
INHB LLB request from and to RT is inhibited  
NORM The LLB is not active nor inhibited

**ALST** - Alarm status

xxxx Explanation

MNNE Minor alarm, location near end  
MJNE Major alarm, location near end  
MNFE Minor alarm, location far end  
MJFE Major alarm, location far end  
MNCL Minor alarm, location carrier line  
MJCL Major alarm, location carrier line  
---- No alarm is active

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**10** Unit is not equipped  
**11** UC is out of service  
**12** UC is in service but failed  
**13** FTMI is not equipped  
**15** NPC is unequipped  
**0B** Invalid CEPT NPC  
**6A** NPC type is not DS type  
**7E** Bank id number not found  
**7F** NPC is not added

## **UTL, QRY, STATE, SYNC**

---

### **UTILITY QUERY**

#### **Explanation Of Command**

---

This message requests the state of the synchronizer.

Not applicable.

## Explanation Of Parameters

---

**SYNC** - Synchronizer

**CFR** - Configure

**arch** - {MASTER | SLAVED}

**STRATUM**

- Stratum

**stratum**

- {STR2 | STR3 | CEPT TOLL | CEPT LOCAL}

**MODE** - Mode

**pllop0** - {HOLDOVER | FAST | NORMAL} for side 0

**pllop1** - {HOLDOVER | FAST | NORMAL} for side 1

**SOURCE** - Source

**source0**

- {HOLDOVER | TLI | MATE | CRO} for side 0

**source1**

- {HOLDOVER | TLI | MATE | CRO} for side 1

**DPLL** - Digital phase-locked loop

**a** - Digital Phase-Locked Loop, side 0

**b** - Digital Phase-Locked Loop, side 1

**a**

**b** *Explanation*

0 Out of service

1 In service

**TB** - Time base

**c** - Time Base, side 0

**d** - Time Base, side 1

**c**

**d** *Explanation*

0 Out of service

1 In service

**SOURCE** - Timing source

**e** - Timing Source status, side 0

**f** - Timing Source status, side 1

**e**

**f** *Explanation*

0 No SSP on side 1 is in service

1 At least one SSP on side 1 is in service

**gh,**

**ij** - Active SSP number

These variables will be output as "--" if no active SSP is present for  
SYNC 0 and SYNC 1, respectively

**g, i** - Timing link interface number of active SSP

**h, j** - Synchronizer synchronization port (SSP) number

**PLL** - Phase locked loop

**k** - Phase-locked loop timing error, side 0

**l** - Phase-locked loop timing error, side 1

**k**

**l** *Explanation*

0 No errors

1 PLL error exists

**cc** - Hexadecimal condition code

**cc** *Explanation*

**16** SYNC TB is not equipped

## **UTL,QRY,STATE,UNIT,DS3**

### **QUERY STATE UNIT DS3**

#### **Explanation Of Command**

This message requests the alarm status, facility parameter threshold, enabled/disabled status of alarm generation for unprotected DS3 due to manual commands, and protection switching status of a DS3 facility or a range of DS3 facilities within a DS3 unit.

Either a completion or denial output message is generated for each DS3 facility.

#### **Command**

[I.56361]

UTL:FRM xy,SEQ ww:QRY,STATE,UNIT [q]q,DS3 c[-d]!

#### **Completion Message**

[O.56361]

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**DS3** - DS3 facility

**c, d** - The number of the DS3 facility within the unit (1 through 6)

**mnxyz** - The DS3 format processed by the MXR:

**mn**      *Explanation*

**MX**      the original R4.0 DS3 facility type supported by the Multiplexer (MXR) circuit pack

**EX**      the enhanced R6.0 DS3 facility type supported by the Enhanced Multiplexer (EMXR) circuit pack

Default is the MX type for backward compatibility.

MX/EX-type xyz fields

**x**      - the DS3 framing format

**x**      *Explanation*

**1**      M13 format (default)

**2**      C-bit parity format

**y**      - not assigned (the only valid value is 0)

**z**      - not assigned (the only valid value is 0)

**PSTATE**      - Protection state

**aaaaa** - Protection state of the service MMFG where aaaaa can be:

**SALW**      The Service MMFG is selected to carry service, and protection switching is ALLOWED

**SINH**      The Service MMFG is selected to carry service, and protection switching is INHIBITED

**MPALW**      The facility is being served by the Protection pack as a result of a manual switch command, and automatic switchback is ALLOWED

**APALW**      the facility is being served by the Protection pack as a result of an automatic switch, and automatic switchback is ALLOWED

**MPINH**      The facility is being served by the Protection pack as a result of a manual switch command, and automatic switchback is INHIBITED

**APINH**      The facility is being served by the Protection pack as a result of an automatic switch, and automatic switchback is INHIBITED

**ccc** - Availability of protection switch in case of failure:

AVL = Protection Switch available

NVL = Protection Switch not available (if the aaaaa field is SINH, MPINH or APINH, this field will always be NVL)

**OOS** - Out-of-service

**z** - "Selected" MMFG in service status:

**1** - the MMFG is in service

**0** - the MMFG is out-of-service

**FAIL** - Failed

**b** - "Selected" MMFG failure status:

**1** - the MMFG is failing

**0** - the MMFG is not failing

**PEST** - Pested

**p** - "Selected" MMFG pest status:

**1** - the MMFG is pested

**0** - the MMFG is not pested

If this field is 1, the OOF, LOS, High BER and AIS field will be filled with a hyphen (-)

**OOF** - Out of frame

**d** - Out-of-frame status for the facility:

**1** - Out-of-Frame alarm for the facility is active

**0** - Out-of-Frame alarm for the facility is idle

- - The facility is pested or OOS, or UC OOS or failed.

**LOS** - Loss of signal

**e** - Loss-of-signal status for the facility:

**1** - Loss-of-signal alarm for the facility is active

**0** - Loss-of-signal alarm for the facility is idle

- - The facility is pested or OOS, or UC OOS or failed.

**HBER** - High bit error rate

**f** - High-bit-error-rate status for the facility:

**1** - High-bit-error-rate alarm for the facility is active

**0** - High-bit-error-rate alarm for the facility is idle

- - The facility is pested or OOS, or UC OOS or failed.

**AIS** - Alarm indication signal

**y** - Alarm indication signal status for the facility:  
    **1** - Alarm indication signal alarm for the facility is active  
    **0** - Alarm indication signal alarm for the facility is idle  
    - - The facility is pested or OOS, or UC OOS or failed.

**IDLE** - Idle signal

**i** - Idle signal status for the facility:  
    **1** - Idle signal alarm for the facility is active  
    **0** - Idle signal alarm for the facility is idle  
    - - The facility is pested or OOS, or UC OOS or failed.

**BERM** - Bit error rate method

**m** - The BER calculation method  
    **B** = Bipolar violations  
    **P** = DS3 Parity Errors

**BERT** - Bit error rate threshold

**t** - The BER threshold:  
    **3** - Corresponding to threshold of 1E-3  
    **6** - Corresponding to threshold of 1E-6

**LBO** - Line buildout

**<|>** - The LBO setting:  
    **ON** - The line buildout is turned on.  
    **OFF** - The line buildout is turned off.

**a** - The number of the DS3 within the range of c and d

**DU** DS3 Unprotected Alarm

**o** Status of alarm indicating unprotected DS3 due to manual commands  
    **0** - No alarm  
    **1** - Alarm is active to indicate unprotected DS3 service

**DS3UNPROTALM** Unprotected Alarm

The enabling/disabling setting to generate an alarm for unprotected DS3 service due to manual commands.

**aaa** The setting to generate alarm for unprotected DS3 service  
    **ON** - Alarm generation is enabled.  
    **OFF** - Alarm generation is disabled.

**cc** - Hexadecimal condition code

**cc Explanation**

|           |                                    |
|-----------|------------------------------------|
| <b>00</b> | <b>No conditions</b>               |
| <b>11</b> | <b>UC is out of service</b>        |
| <b>12</b> | <b>UC is in service but failed</b> |
| <b>B2</b> | <b>MXR is out of service</b>       |

## **UTL, QRY, STR, LINK**

---

### **QUERY LINK STATUS AND PROTOCOL**

#### **Explanation Of Command**

M hh:mm:ss xy,ww n[vv] UTL QRY STR LINK j[mm][-jnn] COND cc DNY

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**STR** - Status register

**LINK** - Link

**j [mm]** - Administrative link number

**j nn** - Administrative link number

**j** - Physical link number (1 through 6)

**mm** - First virtual circuit (VC) number of the VC range mm-nn  
(01 through 16, j must be 5 or 6)

**nn** - Last virtual circuit (VC) number of the VC range mm-nn  
(01 through 16, j must be 5 or 6)

**PTCOL** - Protocol

**S** - Snider

**X** - X.25

**M** - Modified Snider

**T** - TABS

**e** - Number of lines in the message (2, 3, or 4)

**STATUS**- Status

**bb** - Baud rate. For the physical link j alarm class.

**bb** *Baud rate*

03 300 b/s

06 600 b/s

12 1200 b/s (default for CIU link)

24 2400 b/s

48 4800 b/s

96 9600 b/s

00 X.25 links

**Note:** X.25 links are set up to receive external timing only.

**e** - Backspace character echo

**e** *Explanation*

0 Backspace is echoed (default)

1 Backspace is not echoed

**k** - Failure of the X.25 link

**k** *Explanation*

1 Minor alarm (default)

2 Major alarm

**q** - ENQ/ACK Protocol Enable/Disable Control

**q** *ENQ/ACK Protocol State*

0 Disabled

1 Enabled (default)

**x** - XON/XOFF Protocol Enable/Disable Control

**x** *XON/XOFF Protocol State*

0 Disabled (default)

1 Enabled

**m** - Mode

**m** *Status*

0 Idle

1 Input message in progress

2 Output message in progress

**s** - Status

This status applies to the following protocols:

Snider

Modified Snider

X.25 (Single or Range of Virtual Circuits)

TABS

**s** *Explanation*

0 In service

1 Out-of-service (OOS)

**xxxx** - Virtual circuit (VC) status (hexadecimal). Range 0000 through FFFF.

This status applies to the X.25 protocol. A four-digit hexadecimal number will be output in the protocol field whenever a specific VC number is not entered. Each digit represents four bits and each bit is associated with a particular VC. The four hexadecimal digits therefore represent 16 VCs. The bits are assigned to VCs from right to left in increasing order of VC number. That is, bit 1 represents VC 1 and bit 16 represents virtual circuit 16. See below where VC16 marks the position of the bit representing virtual circuit 16 and VC01 similarly marks the position of the bit representing VC 1.

|             |                         |             |                   |
|-------------|-------------------------|-------------|-------------------|
| <b>hex</b>  | <b>binary</b>           |             |                   |
| <b>xxxx</b> | <b>bbbbbbbbbbbbbbbb</b> |             |                   |
|             |                         | ^           | ^                 |
|             |                         | <b>VC16</b> | <b>&lt;--VC01</b> |

The interpretation of the value of a particular bit is given in the explanation of variable *s* above. Some specific examples of the output are interpreted below.

| <b>xxxx</b> | <b>binary expansion</b> | <b>Explanation</b>                      |
|-------------|-------------------------|-----------------------------------------|
| 0000        | 0000000000000000        | All 16 VCs in service                   |
| 0001        | 0000000000000001        | VC 1 OOS, all others in service         |
| 0002        | 0000000000000010        | VC 2 OOS, all others in service         |
| 8004        | 1000000000000100        | VCs 16 and 3 OOS, all others in service |
| FFFF        | 1111111111111111        | All VCs are OOS                         |

**hh** - Hardware status

| <b>hh</b> | <i>Explanation</i>                           |
|-----------|----------------------------------------------|
| 03        | Link hardware in service                     |
| 04        | Link hardware out of service                 |
| 05        | Link hardware pested for autonomous restoral |

- LNKL** - Link Layer
- b** - Maximum number of outstanding I frames (1 through 7). Default is 7
- eee** - Acknowledgment timer (2 through 20 seconds). Default is 3 seconds
- ggg** - Disconnect (or Idle channel) timer (4 through 120 seconds). Default is 26 seconds
- aa** - Maximum number of frame transmissions (2 through 16) (including original transmission). Default is 7
- A** - Data link layer frame address A
- B** - Data link layer frame address B
- PKTL** - Packet layer
- c** - Window size (1 through 7). Default is 2
- ddd** - Packet size P (ddd) can be 128, 256, or 512 octets. Default is 128 octets
- iii** - Restart request response timer (10 through 180 seconds). Default is 180 seconds
- jjj** - Reset request response timer (10 through 180 seconds). Default is 180 seconds
- kkk** - Disconnect (or Idle channel) timer (10 through 180 seconds). Default is 180 seconds
- lll** - Data packet acknowledgement timer (10 through 200 seconds). Default is 200 seconds
- mmm** - Interrupt response timer (10 through 180 seconds). Default is 180 seconds
- nn** - Restart request retransmission counter (1 through 10). Default is 1
- p** - Reset request retransmission counter (1 through 3). Default is 1
- q** - Clear request retransmission counter (1 through 10). Default is 1
- r** - Data packet retransmission counter (0 through 3). Default is 0

**ppss** - Virtual circuit range

**pp** - Range of permanent virtual circuits (PVCs).

**ss** - Range of switched virtual circuits (SVCs).

The sum of the number of PVCs and SVCs must be equal to 16.

Table 1 shows the default values for these fields.

Table 1 and Table 2 show the acceptable values for these fields, allowing for an LCN numbering scheme of 00-255.

TABLE 1

| "pp" | "ss" | Number of PVCs | Number of SVCs | Starting LCN for first PVC Channel | Starting LCN for first SVC Channel |
|------|------|----------------|----------------|------------------------------------|------------------------------------|

**gghh** - Virtual circuit group number

**gg** - Group number of all PVCs

**hh** - Group number for all SVCs (00 through 15)

**APPL** - Application layer

**ASCS** - Alarm surveillance and control, summary

**ASCD** - Alarm surveillance and control, detailed

**PM** - Performance monitoring

**aa** - Layer 2 address

**ttt** - Polling time

**DBIT** - D-bit

**v** - X.25 d-bit setting

**v**      *Explanation*

0    Off (unset) (acknowledgement done from local DTE). Default

1    On (set) (acknowledgement done from remote DTE)

DBIT is valid only on a per link basis and will be denied on an individual virtual circuit.

**COND** - Condition

**cc** - Hexadecimal condition code

**cc**      *Explanation*

**E1**    Virtual circuit is not specified for X.25 link

**E2**    Invalid link number specified

## Explanation Of Parameters

---

**STR** - Status register

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**byte01,**

...,

**byte12**- Status register data bytes

Each data byte contains eight bits. These bits are labeled, in the order they appear in the output, as abcdefgh. These bits are set for the following conditions:

byte01

- a** - Unused by craft
- b** - Sync core hardware fault
- c** - Mate sync is bad or declared out of service
- d** - Time base is bad or missing
- e** - TLI 1 in service without errors
- f** - TLI 2 in service without errors
- g** - TLI 3 in service without errors
- h** - TLI 4 in service without errors

byte02

- a** - Timing Extractor Timing link 1 is in service and good
- b** - Timing Extractor Timing link 2 is in service and good
- c** - Timing Extractor Timing link 3 is in service and good
- d** - Timing Extractor Timing link 4 is in service and good
- e** - Timing Extractor Timing link 5 is in service and good
- f** - Timing Extractor Timing link 6 is in service and good
- g** - Timing Extractor Timing link 7 is in service and good
- h** - Timing Extractor Timing link 8 is in service and good

byte03

- a** - Sync has been reset and awaits configuration
- b** - Hardware error on DPLL pack. See byte06 and byte07
- c** - Time base has an error, see byte09
- d** - PLL symmetry error, see byte08
- e** - Problem with cross-couple timing. See byte10 and byte11
- f** - Problem with CRO timing. See byte12
- g** - Unused bit
- h** - Unused bit

**byte04** - Sync configuration data

**ab** - Sync architecture:

*ab Explanation*

- 00 Sync is slave in master-slave system
- 01 Sync is master in master-slave system

**cde** - Operational stratum

*cde Explanation*

- 000 Domestic stratum 3
- 001 CEPT local exchange
- 010 CEPT toll exchange
- 011 Domestic stratum 2

**fg** - PLL locking mode

*fg Explanation*

- 00 Normal
- 01 Fast
- 10 Holdover

**h** - Unused by craft

**byte05** - Sync configuration data

**ab** - Source of timing to which Sync is presently locking

*ab Explanation*

- 00 Holdover (Not locking)
- 01 Timing link(s)
- 10 Cross couple
- 11 CRO (Clock Reference Oscillator)

**cde** - Active Link: Which timing link the Sync is locking to (This field is meaningful only if byte04 ab = 00 and byte05 ab = 01)

*cde Explanation*

- 000 TLI 1, Link 0
- 001 TLI 1, Link 1
- 010 TLI 2, Link 0
- 011 TLI 2, Link 1
- 100 TLI 3, Link 0
- 101 TLI 3, Link 1
- 110 TLI 4, Link 0
- 111 TLI 4, Link 1

**f** - Unused by craft

**g** - Unused by craft

**h** - Unused by craft

**byte06**- DPLL Hardware status. If any bit equals 1, a DPLL hardware failure is indicated

- a** - ROM error
- b** - RAM error
- c** - Phase/Frequency latch error
- d** - Loss of energy on 2.048 MHz output of frequency synthesizer
- e** - Loss of energy on 2.048 MHz output of phase shifter
- f** - Loss of energy on generated sync pulse
- g** - Loss of energy on time base strobe signal
- h** - Unused by craft

**byte07**- DPLL Hardware status. If any bit equals 1, a DPLL hardware failure is indicated

- a** - Interrupt controller error
- b** - Interrupt holding register error
- c** - UART error
- d** - Control data readable output latch error
- e-h** - Unused bits

**byte08**- PLL status

- a** - PLL end of range indicator
- b** - PLL excessive range error
- c** - PLL real time violation
- d** - Fast start timeout
- e-h** - Unused bits

**byte09**- Time base status

- a** - Loss of energy for time base signal
- b** - Time base I/O error
- c** - Time base oscillator has drifted beyond its specified accuracy limit. (This condition is monitored only when the sync is the master timing source)
- d** - Time base oven is cold. It must warm up for accurate holdover
- e** - Unused bit
- fgh** - Stratum of oscillator:

*fgh Explanation*

- 000 TBS3, Domestic stratum 3
- 001 TBCL, CEPT local exchange
- 010 TBCT, CEPT toll exchange
- 011 TBS2, Domestic stratum 2

**byte10**- Cross Couple Status

- a** - Mate sync declared out-of-service by MC
- b** - Mate sync hardware error
- c** - Loss of energy on the 1 ms cross couple interrupt flag
- d** - Loss of energy on the 30 ms cross couple interrupt flag
- e** - Cross couple fast lock not working
- f** - Sync's time base drifting with respect to CRO in master mode
- g** - Cross couple timing problem
- h** - Cross couple timing problem - mate sync's timing suspected

**byte11**- Cross couple status

- a** - Sync clocks not aligned, cross couple network may alarm
- b-h** - Unused bits

**byte12**- CRO status

The following bits are important only when the sync is a master timing source:

- a** - Timing from CRO bad or declared out of service by MC
- b** - CRO declared out of service by the MC
- c** - Loss of energy on the CRO input signal flag
- d** - In master mode, CRO drifting with respect to sync time bases
- e-h** - Unused bits

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 02**    Subject entity is not equipped
- 04**    Subject entity is out of service
- 05**    Subject entity is pested
- 16**    SYNC TB is not equipped
- 17**    SYNC is out of service
- C8**    Sync pack denied command

## **UTL,QRY,STR,SYNC,TLI**

### **UTILITY QUERY, TIMING LINK INTERFACE**

#### **Explanation Of Command**

This message requests a printout of the 3-byte status register of a timing link interface (TLI) for a specific synchronizer.

#### **Command**

[I.55311]

UTL:FRM xy,SEQ ww:QRY,STR,SYNC a,TLI m!

#### **Completion Message**

[O.55311]

M hh:mm:ss xy,ww n[vv] UTL QRY STR SYNC a TLI m <byte01> \  
<byte02> <byte03> COMPL

#### **Denial Message**

[O.55311.01]

M hh:mm:ss xy,ww n[vv] UTL QRY STR SYNC a TLI m COND cc DNY

#### **Autonomous Message**

Not applicable.

### **Explanation Of Parameters**

---

**STR** - Status register

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**TLI** - Timing link interface

**m** - Timing link interface number (1 through 4)

**byte01,**

...,

**byte03**- Status register data bytes

Each data byte contains eight bits: abcdefgh. These bits are set for the following conditions:

**byte01**- Overall TLI type and configuration

abcd TLI type

0000 TXB1, 1.544 Mb/s DS1 Extractor

0001 TXB2, 2.048 Mb/s Primary Block (120 OHM) Extractor

0010 TXCC, Composite Clock Extractor

0011 TXUC, High Level Unipolar Clock Extractor

0100 TXRF, Basic System Reference Frequency and  
CEPT 2.048 MHz Sine (75 OHM) Extractor

0101 TDCC, 64 kb/s Composite Clock Distributor

0110 TDS2, 2.048 MHz Sine Distributor

0111 TXCP, CEPT 2.048 MHz Sine (120 Ohm) Extractor

**e** - TLI is grown

**f** - TLI out-of-service

**g** - TLI hardware error

**h** - Unused bit

**byte02**- TLI phase detector and timing monitor circuitry status

- a** - Hardware energy detector on the time base strobe signal has failed
- b** - Loss of timebase strobe signal coming from the DPLL
- c** - Hardware energy detector on the CRO signal has failed
- d** - Loss of reference clock signal coming from the CRO

**Note:** Bits c and d have meaning only for TDCC and TDS2 TLIs and when the SYNC is a master timing source.

For TXB1 or TXB2 TLIs:

- e** - Framer chip on side 0 has failed
- f** - Framer chip on side 1 has failed

For TXCC TLIs:

- e** - Out-of-lock detector on side 0 has failed
- f** - Out-of-lock detector on side 1 has failed

**Note:** Bits e and f have meaning only for TE TLIs

**byte03**- Hardware status and diagnostic results for Timing Distributor (TD) type TLI only

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 05**    Subject entity is pested
- 16**    SYNC TB is not equipped
- 17**    SYNC is out of service
- A5**    (Timing Distributor) TLI is not equipped
- C8**    Sync pack denied command

## **UTL,QRY,STR,SYNC,TLI,SSP**

### **UTILITY QUERY SSP**

#### **Explanation Of Command**

This message requests a printout of the 5-byte status register for a select synchronizer port (SSP). The port is located on a timing link interface (TLI) circuit pack of a synchronizer.

#### **Command**

[I.55321]

UTL:FRM xy,SEQ ww:QRY,STR,SYNC a,TLI m,SSP b!

### **Explanation Of Parameters**

---

**STR** - Status register

**SYNC** - Synchronizer

**a** - Synchronizer number (0 or 1)

**TLI** - Timing link interface

**m** - Timing link interface number (1 through 4)

**SSP** - Synchronization Sync Port

**b** - Synchronization Sync Port number (0 or 1)

**NPC** - Network processing circuit

**abc** - Nonhierarchical NPC number

**uvmnp** - Hierarchical NPC number

**uv** - Unit number

**m** - Module number

**np** - NPC number within the module

**byte1, ... byte5**

- Status register data bytes

Each data byte contains eight bits: abcdefgh. These bits are set for the following conditions:

- byte1** - Overall status and configuration
- a** - Timing link is grown
  - b** - Timing link out-of-service
  - c** - Timing link out-of-service; Timing signal from the link has serious enough errors that it will not be accepted as a source of reference clock
  - d** - TE TLI hardware problem; link will not be accepted as a source of reference clock
  - e-h** - Undefined
- byte2** - Timing link priority field. This field ranges from a value of 1 (highest) to 8 (lowest) for master/slave synchronization networks and affects the choice of a link as the active timing source.
- byte3** - Characteristics of the timing source
- abc** - Framing format (TXB1 or TXB2 TE TLIs only)
    - For TXB1 TE TLIs:
      - 000 D4
      - 001 ESF
      - 010 DDS
    - For TXB2 TE TLIs:
      - 000 CCS
      - 001 ERSM
      - 010 CAS0
      - 011 CAS1
  - de** - Line format (TXB1 or TXB2 TE TLIs only)
    - For TXB1 TE TLIs:
      - 00 Bipolar
      - 01 B8ZS
    - For TXB2 TE TLIs:
      - 00 AMI
      - 01 HDB3
  - fgh** - Frequency (TXUC TLIs only)
    - 000 512 kHz
    - 001 1.000 MHz
    - 010 1.544 MHz
    - 011 2.048 MHz
    - 100 5.000 MHz

**byte4** - Timing and line error information on the reference signal

- a** - (TXB1, TXB2, or TXCC TE TLIs only) Carrier failure alarm/loss of signal flag
- b** - Timing signal loss of energy
- c** - (TXUC TE TLIs only) Autobaud failure flag: the frequency of the incoming unipolar clock is not one of the possible frequencies specified in <byte3, ghi>
- d** - Not used
- e** - Excessive jitter flag
- f** - Phase step flag
- g-h** - Not used

**byte5** - Timing and line error information on the reference signal (TXB1 and TXB2 only)

- a** - Out of frame flag
- b** - Major framing error rate flag
- c** - Minor framing error rate flag
- d-h** - Not used

**cc** - Hexadecimal condition code

**cc**    *Explanation*

## **UTL, QRY, STR, XC**

---

### **UTILITY QUERY, STATUS REGISTER**

#### **Explanation Of Command**

---

This message requests a printout of a status register for side 0 or side 1 of a cross-connect network.

#### **Command**

---

[I.55191]

UTL:FRM xy,SEQ ww:QRY,STR,XC a!

#### **Completion Message**

---

[O.55191]

M hh:mm:ss xy,ww n[vv] UTL QRY STR XC a pq rs COMPL

#### **Denial Message**

---

[O.55191.01]

M hh:mm:ss xy,ww n[vv] UTL QRY STR XC a DNY

#### **Autonomous Message**

---

Not applicable.

### **Explanation Of Parameters**

---

- STR** - Status register
- XC** - Cross-connect network
- a** - Cross-connect network side (0 through 1).
- pq** - Cross connect status register byte 1 (hexadecimal, all bits = 0)
- rs** - Cross connect status register byte 0 (hexadecimal)

*rs Explanation*

- |    |                               |
|----|-------------------------------|
| 01 | In service                    |

## UTL,QRY,SYNC,TYPE

---

### UTILITY QUERY, SYNCHRONIZER

#### Explanation Of Command

---

This message is used to request information on the provisioning of the synchronizer unit.

#### Command

---

[I.53001]

UTL:FRM xy,SEQ ww:QRY,SYNC,TYPE!

#### Completion Message

---

[O.53001]

M hh:mm:ss xy,ww n[vv] QRY SYNC TYPE 5 LN MSG:  
TB TYPE mnxyz mnxyz  
TLI TYPE pqxyz rsxyz pqxyz rsxyz pqxyz rsxyz pqxyz rsxyz  
SRC VALUE p p p p p p p p  
SOURCE NPC <xxx> <xxx> <xxx> <xxx> <xxx> <xxx> <xxx> <xxx> COMPL

#### Denial Message

---

Not applicable.

#### Autonomous Message

---

Not applicable.

## **Explanation Of Parameters**

---

**SYNC** - Synchronizer

**TYPE** - Type

Request for provisioning information

**TB** - Time base

**mnxyz** - SYNC time base type

*mnxyz Explanation*

----- Not equipped

TB0yz Domestic Stratum 3

TB3yz Domestic Stratum 2

**TLI** - Timing link interface

**pqxyz** - TLI type provisioned on synchronizer synchronization port (SSP) 0

**rsxyz** - TLI type provisioned on SSP 1

*pqxyz*

*rsxyz Explanation*

----- Not equipped

TCxyz 64 kb/s composite clock timing extractor

TD1yz 64 kb/s composite clock timing distributor

TD2yz Sinusoidal 2.048 MHz timing distributor

TExyz DS1 timing extractor

(xyz should be same as for DExyz NPCs)

TUxyz Unipolar clock timing extractor

TRxyz Basic system reference frequency timing extractor

For CRO applications in MASTER mode, TLI 3 is equipped with a Time Base circuit pack. In this case, "pqxyz" = "mnxyz", showing the Time Base type in the TLI 3 and TLI 4 positions.

**SRC** - Source

**p** - Source for priority for the given TLI/SSP

*p Explanation*

- Not equipped.

1-8 1 is the HIGHEST priority, 8 is the LOWEST priority

**VALUE** - Value

**SOURCE** - Source

**NPC**    - Network processing circuit

**cc**     - Hexadecimal condition code

**cc**    *Explanation*

**00**    No conditions

## **UTL, QRY, TGS**

---

### **UTILITY QUERY TEST-ACCESS GROUP**

#### **Explanation Of Command**

---

This message is used to get a listing of one or a range of Nx64Kbit/s test-access groups (TGs). To retrieve a listing of ALL test-access groups specify the maximum range (1-400).

#### **Command**

---

[I.53081]

UTL:FRM xy,SEQ ww:QRY,TGS mmm[-nnn]!

#### **Completion Message**

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**TG** - Test-access group

**mmm** - Test-access group number (001 through 400)

**nnn** - Test-access group number specifying the end of a TG range (002 through 400)

**NPCTG** - NPC (for) test group

**rrr** - NPCTG number supporting the east bundle (001 through 400)

**sss** - NPCTG number supporting the west bundle, may be same as rrr

**[s]abc**- 3- or 4-digit non-hierarchical NPC number designated as NPCTG rrr

**[t]def**- 3- or 4-digit non-hierarchical NPC number designated as NPCTG sss

If NPC numbers are expressed in three digits, the valid values are:

DE type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |

**uvmnp** - Hierarchical NPC number designated as NPCTG rrr

**wxkqr** - Hierarchical NPC number designated as NPCTG sss

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**eee** - Starting channel for east bundle

**www** - Starting channel for west bundle

**mode** - Test access mode

*mode Explanation*

|      |         |
|------|---------|
| MON  | Monitor |
| SPL  | Split   |
| HUB  | Hub     |
| LPD  | Looped  |
| IDLE | Idle    |

**UEQD** - Unequipped

**NN** - TG width (01 through 24)

**cc** - Hexadecimal condition code

**cc** *Explanation*

**63** None of the designated TG(s) are equipped

## **UTL, QRY, TO**

---

### **QUERY DESTINATION CROSS-CONNECT**

#### **Explanation Of Command**

---

This command requests circuit provisioning information associated with the specified To-direction termination(s). The output messages generated depend upon:

- Whether or not the termination is assigned,
- Whether or not the termination is a test port termination,
- The type of network processing circuit for this termination,
- The far-end to which the termination is mapped (if any).

For this utility command, DACS II terminations can be divided into two categories:

- Multipoint termination, which is a multipoint circuit on a real digital multipoint bridge (DMB) in the digital signaling processing unit (DSPU), or in virtual network processing circuits.
- All other terminations.

If the network processing circuit (NPC) number specified in the command is the number of a remote terminal (DL) digroup currently under protection by the protection digroup (DGP), the execution of the command will be completed and DGP with its associated NPC number appears on the output message.

For a SLC<sup>®</sup> carrier denial message, the following appears on output: the bank identification number, operation mode, and digroup A NPC number for that remote terminal.

## Explanation Of Parameters

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number

If NPC numbers are expressed in three digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE, DS and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |

- ddd** - Beginning range channel or conference number  
**eee** - End range channel or conference number  
**kkk** - Mid-range channel or conference number  
**lll** - Mid-range channel or conference number  
**hhh** - Typical midrange channel or conference number

Valid values are given below

#### Channel numbers

001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

#### Conference numbers

|         |               |
|---------|---------------|
| 001-500 | (Virtual NPC) |
| 001-085 | (MB NPC)      |

**UASGN** - Unassigned

**DCC** - Disconnect code

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word (IW) specification.

Valid values are listed below:

| <b>tc</b>                  | <i>signaling modes</i> |
|----------------------------|------------------------|
| <b>TC(ijkl,mnop) TRB</b>   | <b>2-way 4-state</b>   |
| <b>TC(ijkl,mnop) IW pq</b> | <b>2-way 4-state</b>   |
| <b>TC(----,mnop) TRB</b>   | <b>1-way 4-state</b>   |
| <b>TC(----,mnop) IW pq</b> | <b>1-way 4-state</b>   |
| <b>TC(ab,cd) TRB</b>       | <b>2-way 16-state</b>  |
| <b>TC(ab,cd) IW pq</b>     | <b>2-way 16-state</b>  |
| <b>TC(--,cd) TRB</b>       | <b>1-way 16-state</b>  |
| <b>TC(--,cd) IW pq</b>     | <b>1-way 16-state</b>  |
| <b>TRSP IW pq</b>          |                        |
| <b>TRSP TRB</b>            |                        |
| <b>TRSP</b>                |                        |

**TRB** - Trouble

**MUX** - Multiplexer out of sync

**TRSP** - Transparent

**RT** - Remote terminal

**DL** - Data link

**ffff** - SLC® remote terminal (RT) or digital carrier line unit (DCLU) bank identification number (0000 through 9999)

**MD** - Mode

**g[g]** - Mode of operation of the RT or DCLU

**g[g]** *Explanation*

- 1** SLC 96 Carrier Mode 1
- 3** SLC 96 Carrier Mode 3
- C** SLC Series 5 Carrier Feature Package C (FPC)

**AIS** - Alarm indication signal  
DS1 range cross-connection with AIS specifications

**accpoint**

- Access point under test

**accpoint**      *Explanation*

**[s]abchhh**      The multiplexed DS0B signal.

**[s]abchhh/ee**      The DS0A signal or customer ee data stream only for a DS0B signal.

**MPTM [s]abchhh/ee MJU nnnn [BRi]**

The multipoint master of the circuit [s]abchhh/ee and the leg of MJU nnnn which is under test.

If only "MJU nnnn" is specified, the control leg of MJU nnnn is under test. If "BRi" is specified, branch i of MJU nnnn is under test.

nnnn      (0000 through 9999)

i          (1 through 4)

**DGP** - Digroup P (protection digroup, SLC carrier bank)

**[t]mno**      - The 3- or 4-digit DGP nonhierarchical NPC number

**[t]hij**      - The 3- or 4-digit DGA (digroup A) nonhierarchical NPC number

**feigh** - DGP hierarchical NPC number

**hhijj** - DGA (digroup A) hierarchical NPC number

**[t]defiii**

- Nonhierarchical FROM termination

**[t]def**      - The 3- or 4-digit nonhierarchical NPC number

Valid values are identical to those for [s]abc

**iii**      - Channel number

Valid values are identical to those for ddd

**ppqqq** - NPC type of the FROM termination

To interpret values of ppqqq see the table following mnxyz below.

**Note:** If ppqqq = MB100 or VI100, then FROM is a multipoint termination and TO is not.

**TYPE** - Type

**mnxyz** - NPC Type

**mn**      *Explanation*

|    |                               |
|----|-------------------------------|
| DA | FTU ANSI NPC type             |
| DE | Enhanced digroup NPC          |
| DS | SLC® terminating digroup NPC  |
| MB | Digital multipoint bridge NPC |
| TA | DS3U ANSI NPC type            |
| TE | DS3U enhanced NPC             |
| TI | DS3U interface unit NPC       |
| VI | Virtual NPC                   |

**xyz**      - Multiframe, line and signaling, and channel numbering formats

DA-type xyz fields

**x**      - Multiframe format for the digroup

**x**      *Explanation*

|     |                                               |
|-----|-----------------------------------------------|
| 0   | Not assigned                                  |
| 1   | D4                                            |
| 2   | ESF - Voice                                   |
| 3   | ESF - Data                                    |
| 4   | DDST (T1DM - R bit connection via channel 24) |
| 5-7 | Not assigned                                  |
| 8   | Ericsson Cellular format                      |
| 9   | Not assigned                                  |

**y**      - Line and signaling format

**y**      *Explanation*

|     |                                                           |
|-----|-----------------------------------------------------------|
| 0   | ZCS - Zero code suppression                               |
| 1*  | NZCS - No zero code suppression                           |
| 2*  | B8ZS - Bipolar with 8 zero substitution                   |
| 3   | Not assigned                                              |
| 4   | ZCS/DMI - Zero code suppression/DMI signaling             |
| 5   | NZCS/DMI - No zero code suppression/DMI signaling         |
| 6   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| 7-9 | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

## **z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

## DE-type xyz fields

### **x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

- 0**      ZCS - Zero code suppression
- 1\***     NZCS - No zero code suppression
- 2\***     B8ZS - Bipolar with 8 zero substitution
- 3†**     ZBTSI - Zero-bit time-slot interchanger
- 4**      ZCS/DMI - Zero code suppression/DMI signaling
- 5**      NZCS/DMI - No zero code suppression/DMI signaling
- 6**      B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling
- 7-9**    Not assigned

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

- 0**      D4 channel bank channel numbering
- 1**      D2 channel bank channel numbering
- 2**      D1D channel bank channel numbering
- 3-8**    Not assigned
- 9**      No channel numbering format, clear-DS1

DS-type xyz fields

**x** - Multiframe format

**x**      *Explanation*

- 0**      Not assigned
- 1**      D4
- 2**      ESF - Voice
- 3**      Not assigned
- 4**      Not assigned
- 5**      Not assigned
- 6**      SLC® 96 carrier Fs
- 7**      SLC 5 carrier ESF with data link
- 8-9**    Not assigned

**y** - Line and signaling format

**y** *Explanation*

- 0** Zero code suppression (ZCS)
- 1** No zero code suppression (NZCS)
- 2** Bipolar with 8 zero substitution (B8ZS)
- 3-9** Not assigned

**z** - Counting sequence format

**z** *Explanation*

- 0** SLC 96 carrier Mode III D4 counting sequence
- 1** SLC 96 carrier Mode III D1D counting sequence
- 2** SLC 96 carrier Mode I D1D counting sequence
- 3** SLC Series 5 carrier D4 counting sequence
- 4-9** Not assigned

MB-type xyz fields

- x** - Fixed at 1
- y** - Fixed at 0
- z** - Fixed at 0

TA-type xyz fields

**x** - Multiframe format for the digroup

**x** *Explanation*

- 0** Not assigned
- 1** D4
- 2** ESF - Voice
- 3** ESF - Data
- 4** DDST (T1DM - R bit connection via channel 24)
- 5-7** Not assigned
- 8** Ericsson Cellular format
- 9** Not assigned

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

VI-type xyz fields

**x** - Fixed at 1

**y** - Fixed at 0

**z** - Fixed at 0

**e** - Number of lines in the message segment

**SECH** - Subrate establish channel

**CUS** - Customer

The circuit is a customer controlled circuit

**RDC** - Red circuit

The circuit is a red circuit

**UTST** - Under test

The circuit is under test

**ONEWAY** - One-way

The circuit is a one-way connection

**BCAST** - Broadcast

The circuit is a broadcast-type connection

**ROLL** - Roll

Bridged leg from Roll procedure

**TLA** - Terminate and leave active

**s** - Terminate and leave state

**s** *state*

**F** FROM terminated

**T** TO terminated

**B** BOTH terminated

**trnk** - Trunk type

Used only for custom E1 or T1 signaling conversion applications.

**trnk** *Explanation*

**E1DP** E1 Originated with DP Dialing  
**E1ND** E1 Originated without DP Dialing  
**T1DP** T1 Originated with DP Dialing  
**T1ND** T1 Originated without DP Dialing

**[r]adg** - Nonhierarchical signaling conversion NPC number

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

If NPC numbers are expressed in three digits, the valid values are:

SP type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-031</b> | <b>161-191</b> | <b>321-351</b> | <b>481-511</b> | <b>641-671</b> | <b>801-831</b> |
| <b>041-071</b> | <b>201-231</b> | <b>361-391</b> | <b>521-551</b> | <b>681-711</b> | <b>841-871</b> |
| <b>081-111</b> | <b>241-271</b> | <b>401-431</b> | <b>561-591</b> | <b>721-751</b> | <b>881-911</b> |
| <b>121-151</b> | <b>281-311</b> | <b>441-471</b> | <b>601-631</b> | <b>761-791</b> | <b>921-951</b> |

If NPC numbers are expressed in four digits, the valid values are:

SP type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0031</b> | <b>0161-0191</b> | <b>0321-0351</b> | <b>0481-0511</b> |
| <b>0041-0071</b> | <b>0201-0231</b> | <b>0361-0391</b> | <b>0521-0551</b> |

**klafg** - Hierarchical signaling conversion NPC number

**kl** - Unit number  
**a** - Module number  
**fg** - NPC number within the module

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

SP type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-31</b> |

**ts** - Time slot

001-064      Signaling conversion time slot numbers

**fmd** - FROM multipoint circuit mode of the connection  
**tmd** - TO multipoint circuit mode of the connection

For DMB circuits, there are four possible values for fmd and tmd:

| <b>fmd,</b><br><b>tmd</b> | <i>Explanation</i>                                                                          |
|---------------------------|---------------------------------------------------------------------------------------------|
| SYM                       | For legs of a symmetrical multipoint circuit (must be a DMB channel)                        |
| BRD                       | For nonbackbone (tributary) legs of a broadcast multipoint circuit (must be a DMB channel)  |
| BBL                       | For the backbone leg of a broadcast multipoint circuit (must be a DMB channel)              |
| LEG                       | For the end that does not terminate on the multipoint circuit (must be an FTU/DS3U channel) |

For virtual NPC circuits, there are three possible values for fmd and tmd:

| <b>fmd,</b><br><b>tmd</b> | <i>Explanation</i>                                                                        |
|---------------------------|-------------------------------------------------------------------------------------------|
| BRD                       | For nonbackbone legs of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| BBL                       | For the backbone leg of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| LEG                       | For the end that does not terminate on the multipoint circuit (must be FTU/DS3U channels) |

**snn** - Incoming gain adjust parameters for the DMB NPC  
**smm** - Outgoing gain adjust parameters for the DMB NPC

**s** - Sign (+ or -)  
**nn** - Incoming gain adjust value (-90 through +88)  
**mm** - Outgoing gain adjust value (-90 through +88)

These are the parameters requested for the TO termination. Values are given in steps of two and the units are tenths of a db.

For type VI100 NPCs snn and smm will be output as "---"

The special value --- (three dashes) can be used for either snn or smm (but not both) when no change is to be made to that parameter. This feature allows changing only one of the two parameters if desired. Also, if the cross-connection was provisioned with the NTR (no transmit) option, the gain adjustment in the direction for which transmission is shut off MUST be ---.

**nn** - Noise guard setting (in dB) for the FROM/TO NPC

The following default values apply:

For Symmetrical bridges Default: nn = -18 db

For Polling circuits Default: nn = 0 db

Valid values are listed below:

**nn**

00 db

06 db

12 db

18 db

-- (For VI100 NPCs)

**ee** - Echo suppression setting (in dB) for the FROM/TO NPC

The following default values apply:

For Symmetrical bridges Default: ee = -18 db

For Polling circuits Default: ee = 0 db

Valid values are listed below:

**ee**

00 db

06 db

12 db

18 db

-- (For VI100 NPCs)

**spp** - Incoming gain adjust parameters for the TO DMB NPC

**sqq** - Outgoing gain adjust parameters for the FROM DMB NPC

See snn and smm above for explanation and values.

**vv** - Noise guard setting (in dB) for the FROM DMB NPC

**tt** - Noise guard setting (in dB) for the TO DMB NPC

See nn above for default values.

**vv, tt**

00 db

06 db

12 db

18 db

**ww** - Echo suppression setting (in dB) for the FROM DMB NPC  
**uu** - Echo suppression setting (in dB) for the TO DMB NPC

See ee above for default values.

**ww, uu**

00 db  
06 db  
12 db  
18 db

**NTR** - No transmit

**r** - Direction which has no transmission

**r**      *Explanation*

**F**      FROM

**T**      TO

**TP** - Test port

**kk** - Test port number (01 through 96)

**TG** - Test (access) group

**mmm** - Test group number (001 through 400)

**t sm** - Test mode

Values are listed below:

**t sm**    *Mode*

**HUB**    Hubbed

**LPD**    Looped

**MON**    Monitor

**SPL**    Split

**TPR**    Test Port Released

**TGR**    Test Group Released

**l** - Link used to access this test port (0 if mode is released)

**vv** - Virtual circuit number of an X.25 link used to access this test port  
(01 through 16)

**p** - Channel assignment

Valid values are listed below:

| <b>p</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |                                 |
|----------|---------------------------------|
| <b>F</b> | FROM side of circuit under test |
|----------|---------------------------------|

|          |                                                           |
|----------|-----------------------------------------------------------|
| <b>H</b> | HIGH channel of hubbed test port (only for HUB test mode) |
|----------|-----------------------------------------------------------|

**q** - Channel assignment

Valid values are listed below:

| <b>q</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |                               |
|----------|-------------------------------|
| <b>T</b> | TO side of circuit under test |
|----------|-------------------------------|

|          |                                                          |
|----------|----------------------------------------------------------|
| <b>L</b> | LOW channel of hubbed Test Port (only for HUB test mode) |
|----------|----------------------------------------------------------|

**[s]ghijj**

- Nonhierarchical FROM, HIGH, or DSPP NPC number

If test access is made to a digital signal processing platform (used for signaling conversion between an E1 and a T1 NPC) then [s]ghijj is the SP100 NPC.

**[t]jklenn**

- Nonhierarchical TO, LOW, E1, or T1 NPC number

If test access is made to a digital signal processing platform (used for signaling conversion between an E1 and a T1 NPC) then [t]jklenn is the E1 or T1 NPC.

**edhfg** - Hierarchical FROM/HIGH

**opjst** - Hierarchical TO/LOW

**ed, op** - Unit number

**h, j** - Module number

**fg, st** - NPC number within module

Valid values are identical to those for uvmnp

**[s]ghi, [t]jhk**

- The 3- or 4-digit nonhierarchical NPC number

Valid values are identical to those for [s]abc.

**jjj, nnn**

- Channel or time slot number

Valid values are identical to those for ddd above.

**UEQD** - Unequipped

**RNGIE** - Range input error

**COND** - Condition

**cc** - Hexadecimal condition code

**cc Explanation**

|    |                                                             |
|----|-------------------------------------------------------------|
| 15 | NPC is unequipped                                           |
| E3 | One way unassigned channel/NPC in QRY, TO                   |
| 0B | Invalid CEPT NPC                                            |
| 62 | Invalid channel number                                      |
| 63 | NPC is a DGP                                                |
| 7F | NPC is not added                                            |
| 91 | SR NPC was specified - not allowed                          |
| F7 | Corresponding NPC for virtual channel is<br>not provisioned |
| B4 | NPC is channelized type                                     |

## Explanation Of Parameters

**TO** - To

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of TO  
non-channelized NPC

The valid values are listed below:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| <b>NPC</b><br><b>0001-0160</b> | <b>NPC</b><br><b>0161-0320</b> | <b>NPC</b><br><b>0321-0480</b> | <b>NPC</b><br><b>0481-0640</b> |
| Unit<br>5                      | Unit<br>6                      | Unit<br>7                      | Unit<br>8                      |
| <b>NPC</b><br><b>0641-0800</b> | <b>NPC</b><br><b>0801-0960</b> | <b>NPC</b><br><b>0961-1120</b> | <b>NPC</b><br><b>1121-1280</b> |
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

If NPC numbers are expressed in three digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-160</b> | <b>161-320</b> | <b>321-480</b> | <b>481-640</b> | <b>641-800</b> | <b>801-960</b> |
| <b>16A-16H</b> | <b>32A-32H</b> | <b>48A-48H</b> | <b>64A-64H</b> | <b>80A-80H</b> | <b>96A-96H</b> |

If NPC numbers are expressed in four digits, the valid values are:

TE and TA type NPC numbers listed by unit number, Unit Type DT (DS3U)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0001-0160</b> | <b>0161-0320</b> | <b>0321-0480</b> | <b>0481-0640</b> |
| <b>016A-016H</b> | <b>032A-032H</b> | <b>048A-048H</b> | <b>064A-064H</b> |
| Unit<br>5        | Unit<br>6        | Unit<br>7        | Unit<br>8        |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>0641-0800</b> | <b>0801-0960</b> | <b>0961-1120</b> | <b>1121-1280</b> |
| <b>080A-080H</b> | <b>096A-096H</b> | <b>112A-112H</b> | <b>128A-128H</b> |
| Unit<br>9        | Unit<br>10       | Unit<br>11       | Unit<br>12       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1281-1440</b> | <b>1441-1600</b> | <b>1601-1760</b> | <b>1761-1920</b> |
| <b>144A-144H</b> | <b>160A-160H</b> | <b>176A-176H</b> | <b>192A-192H</b> |
| Unit<br>13       | Unit<br>14       | Unit<br>15       | Unit<br>16       |
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |
| <b>1921-2080</b> | <b>2081-2240</b> | <b>2241-2400</b> | <b>2401-2560</b> |
| <b>208A-208H</b> | <b>224A-224H</b> | <b>240A-240H</b> | <b>256A-256H</b> |

**uvmnp** - Hierarchical NPC number of TO non-channelized NPC

**uv** - Unit number  
**m** - Module number  
**np** - NPC number within the module

The valid values are:

DE and DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE and TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**[t]ghi** - The 3- or 4-digit nonhierarchical number of FROM NPC mapped to TO NPC, or FROM NPC in the test access connection (--- for unassigned NPC)

**[u]klm** - The 3- or 4-digit nonhierarchical number of TO NPC in the test access connection

----- or ----- for unassigned NPC

**wxkqr** - Hierarchical number of FROM NPC mapped to TO NPC

**ghijk** - FROM NPC in the test access connection.

**mnxyz** - NPC type of TO or FROM NPCs

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3</b>   | Not assigned                                              |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its **y** option selecting ZBTSI (**DEx3z**).

#### DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

TE-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

**y**      *Explanation*

**0**      ZCS - Zero code suppression

**1\***     NZCS - No zero code suppression

**2**      Not assigned

**3**      Not assigned

**4**      ZCS/DMI - Zero code suppression/DMI signaling

**5**      NZCS/DMI - No zero code suppression/DMI signaling

**6-9**    Not assigned

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

**z**      *Explanation*

**0**      D4 channel bank channel numbering

**1**      D2 channel bank channel numbering

**2**      D1D channel bank channel numbering

**3-8**    Not assigned

**9**      No channel numbering format, clear-DS1

**AIS** - Alarm indication signal

The idle code for non-channelized cross-connection

**CUS** - Customer-controlled circuit

**RDC** - Red circuit

**UTST** - Circuit is under test

**tmode** - Test access mode

**FAD** - Facility access digroup

**TERM** - Termination

**F**      - From termination

**T**      - To termination

**B**      - Both terminations

**ONEWAY** - One-way connection

**BCAST** - Circuit is part of a broadcast connection

**UASGN** - Unassigned

**TLA s** - Connection is terminated in direction s (F-From, T-To, B-Both)

**ROLL** - Bridged facility from Roll procedure

**kk** - Hexadecimal completion condition code

*kk Explanation*

**E3** One way circuit. This means that although the receive side of the NPC is unassigned, the transmit side of the NPC is one-way connected. Thus, this NPC cannot be subsequently two-way connected.

**E4** Broadcast circuit. This means that although the receive side of the NPC is unassigned, the NPC is the backbone leg of a NTR type broadcast circuit. Thus, this NPC cannot be subsequently cross-connected, either one-way or two-way.

**cc** - Hexadecimal condition code

*cc Explanation*

**15** NPC is unequipped

**0B** Invalid CEPT NPC

**B4** NPC is channelized type

**E4** Broadcast unassigned channel/NPC in QRY, TO

## **UTL, QRY, TOD, CFA**

### **RETRIEVE PERFORMANCE MONITORING REPORT SCHEDULE**

#### **Explanation Of Command**

---

This command is used to query the scheduled time for the daily report of facility performance parameter threshold alarms (FAC) and carrier failure alarms (CFA). This command is used to query the scheduled time for the daily report of primary rate performance parameter threshold alarms (PRIM) and carrier failure alarms (CFA). On a frame with the GATEWAY feature enabled, the normal output response message format includes both the North American and International parameters.

Not applicable.

### **Explanation Of Parameters**

---

**TOD** - Time of day

**CFA** - Carrier Failure Alarm

Used to request the time of day for the daily CFA and FAC/PRIM report for non-PA and non-ANSI type NPCs.

**FAC** - Facility

Facility performance alarm report keyword.

**abcdef** - Facility performance alarm enable (hexadecimal)

The 4-bits in each of the hexadecimal digits correspond to a particular facility parameter. To enable alarm reports for a given facility parameter, set the appropriate bit of abcdef to 1. A bit set to 0 will disable the alarm report. Bit numbering is given below.

| <i>bit<br/>value</i> | <i>meaning</i> |
|----------------------|----------------|
| 0                    | disabled       |
| 1                    | enabled        |

| <i>hex<br/>digit</i> | <i>bit</i> | <i>parameter</i>                 |
|----------------------|------------|----------------------------------|
| f                    | 0          | CGA (Carrier Group Alarm)        |
|                      | 1          | OOF (Out of Frame)               |
|                      | 2          | SLIP                             |
|                      | 3          | BER (Bit Error Rate)             |
| e                    | 4          | ERS (Errored Seconds)            |
|                      | 5          | SERS (Severely Errored Seconds)  |
|                      | 6          | COFA (Change of Frame Alignment) |
|                      | 7          | CRC (Cyclic Redundancy Checksum) |
| d                    | 8          | BPV (Bipolar Violations)         |
|                      | 9          | FRER (Frame Errors)              |
|                      | 10         | Not Used                         |
|                      | 11         | Not Used                         |
| c                    | 12         | Not Used                         |
|                      | 13         | Not Used                         |
|                      | 14         | Not Used                         |
|                      | 15         | Not Used                         |
| b                    | 16         | SANE (Shelf Alarm Near End)      |
|                      | 17         | SAFE (Shelf Alarm Far End)       |
|                      | 18         | DS3 ALM (DS3 Alarm)              |
|                      | 19         | Not Used                         |
| a                    | 20         | Not assigned                     |
|                      | 21         | Not assigned                     |
|                      | 22         | Not assigned                     |
|                      | 23         | Not assigned                     |

**MDNT** - Midnight  
The MDNT will be shown in the output when the CFA option is entered.

**hrmns** - Time of the scheduled performance parameter report

## **UTL,QRY,TPS**

---

### **UTILITY QUERY, TEST PORTS**

#### **Explanation Of Command**

---

This command reports the network processing circuits (NPCs) used for test ports, their designation, and the test modes of each equipped test port. The report includes the DSO test port and non-channelized test NPCs.

Not listed are any test ports that are unequipped with numbers less than that of the highest equipped test port **within** a network processing circuit for test ports (NPCTP) since in each NPC they must be grown in numerical order starting with the lowest numbered test port within each NPCTP (01, 13, 25, etc.).

All non-channelized test NPCs or Facility Access Digroups (FADs) will be listed together in one or more segments. Each FAD number is the same as the NPC number, and is given with its test mode.

## **Denial Message**

Not applicable.

## **Autonomous Message**

Not applicable.

## Explanation Of Parameters

**TPS** - Test ports

**kk** - Total number of test ports equipped or total number of equipped non-channelized test NPCs in segment

**NPC** - Network processing circuit

**[s]abc** - The 3- or 4-digit nonhierarchical NPC number of test NPC

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DA type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |

**e** - Number of lines in message (2 through 5)

## **UTL, QRY, TSIG, NPC**

### **QUERY ANSI NPC TEST SIGNAL**

#### **Explanation Of Command**

This message queries whether a single or range of Network Processing Circuits (NPCs) are transmitting Payload or ESF data link test signals. Only ANSI (DA/TA-type) NPCs provide this capability.

The response is formatted on a module by module basis. The response indicates whether or not any Payload and/or Data Link Test Signals are currently active for each NPC in the addressed range. An NPC may have both a Payload and a Data Link Test Signal active simultaneously.

**uvmnp** - Hierarchical NPC number for beginning of NPC range

**wxkqr** - Hierarchical NPC number for end of NPC range

**uv, wx** - Unit number

**m, k** - Module number

**np, qr** - NPC number within the module

The valid values are:

DA type NPC numbers listed by unit, module, and NPC Number

Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number

Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

The range of NPCs in the denial messages will be given either as module or unit boundaries depending upon the reason for the denial.

**uvmaa** - Lowest numbered NPC in the FTM that contains NPC uvmnp

The parameter value for NPC aa is in the first position, first line of the message.

**uvmmb** - Highest numbered NPC in the FTM that contains NPC uvmnp

The parameter value for NPC bb is just before EOM.

**wxkaa** - Lowest numbered NPC in the FTM that contains NPC wxkqr

**wxkbb** - Highest numbered NPC in the FTM that contains NPC wxkqr

**pp/dd** - ANSI Payload/Data Link Test Signal Types

Values of "pp/dd" are presented in NPC order, grouped within messages by Facility Terminating Module (FTM). For FTM's in Facility Terminating Units, each row of output contains 10 values. For FTM's in DS3 Units, each row of output contains 7 values.

## Explanation Of Parameters

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**FTMI** - Facility terminating module interface

**b** - FTMI number (1 through 4)

**EQL** - Equalization

**l** - Left half shelf equalization value (first 10 Dual Digroup Circuits)

**r** - Right half shelf equalization value (second 10 Dual Digroup Circuits)

Enter a dash for an equalization value if that value is not to be changed.

Equalization option values for 255AS/24 gauge cable

| <i>l</i> | <i>Explanation</i>         |
|----------|----------------------------|
| 1        | 000 to 100 feet            |
| 2        | 100 to 200 feet            |
| 3        | 200 to 300 feet            |
| 4        | 300 to 400 feet            |
| 5        | 400 to 500 feet            |
| -        | Do not change equalization |

Equalization option values for 600 series/22 gauge cable

## Explanation Of Parameters

**WHO** - Who

With reference to the frame "Who are you?"

**uid** - Unique (frame) identifier (1 to 20 alphanumeric characters)

The uid is initialized by GRTH::FRAME.

If the uid is not initialized, no characters will appear.

**VERSN** - Version

**DACSII** - DACS II

**gg** - DACS II software release number

**pp** - DACS II software release point number

**r** - Version number of the release point

**FPKG** - Feature package

**kkttuuvv**

- Feature package identifier

| kkttuuvv | Feature                                       |
|----------|-----------------------------------------------|
| 00000001 | DS1                                           |

| 00000200 | DS0/DS1 Roll                                  |
| 00000400 | AT&T Security Warning Message                 |
| 00000800 | Nx64kbit Test Access                          |
| 00001000 | Clear 2MB/s Interface                         |
| 00002000 | TS0 to Non-TS0 Cross-connection               |
| 00004000 | 2MB/S Roll                                    |

In general a feature package identification code is a combination of several individual feature package numbers. To determine the individual features that make up a feature package it is necessary to decode the feature package identification code. This code is an eight digit hexadecimal number. Each hexadecimal number represents a four-bit binary number. Within this binary number each feature is associated with one particular bit. Consequently to determine the feature list from a feature package identification code it is necessary to convert each hexadecimal digit to its binary equivalent and look up the features in the list above. For example the feature package identification code 0000000F can be converted to the following binary number working from left to right one hex digit at a time.

0000 0000 0000 0000 0000 0000 0000 1111

This number contains eight binary numbers each representing one of the hexadecimal numbers in the feature package identification code 0000000F. The rightmost number of the code contains four features since there are four bits set to one. This would be decoded as follows using the table of features above.

|       | binary | hex | Feature                      |
|-------|--------|-----|------------------------------|
|       | 0001   | 1   | DS1                          |
|       | 0010   | 2   | CEPT                         |
|       | 0100   | 4   | Subrate                      |
|       | 1000   | 8   | Direct SLC                   |
| Total | 1111   | F   | (DS1 + CEPT + Subrate + SLC) |

## **UTL, QRY, XCSB, UNIT**

### **QUERY CROSS-CONNECT STATUS BUS**

#### **Explanation Of Command**

This command requests a check of the side switch consistency between the hardware entities and the data base. Depending on the result of the cross-connect consistency check, DACS II will respond with different outputs as specified in the following sections.

If the entities of a unit are either all consistent or all inconsistent with the data base, a single line output will be generated. The field "DB s", which indicates the active side recorded in the data base (DB), will always be shown, while the keyword "UM" (Unmatch) will be shown only if all entities of the unit are inconsistent with the data base.

**Note:** For an FTU, if some but not all of its DDCs are consistent with the data base, four output message segments will be generated. Each segment will report the side status for NPCs in one Facility Terminating Module (FTM). If all NPCs in an FTM have the same status, the segment for the FTM will have only one line; otherwise, it will be a five-line segment.

When this command is entered, the side selection configuration register on each dual digroup circuit of the facility terminating units and each multiplexer of the DS3 units is compared with the information stored in the data base. In addition, the configuration register on each cross-connect network interface or clock and control interface (CCNI/CCI) is also checked against the status of the data base.

This command can be entered to request the status of the whole frame or of a particular unit. If the status of the whole frame is requested, DACS II will output the result for each unit in ascending order from units 01 through 16. Unequipped units or digital signal processing units will not be checked and reported. If the unit number is specified on input, it must be an FTU or DS3U ; otherwise, the command will be denied.

After the unit-related results are reported, DACS II will output the result for the CCNI/CCI.

If all DDCs/MXR(s) of an FTU/DS3U are marked pass, DACS II will generate the completion output (O.55181) showing the active side indicated in the data base, that is, showing "DB s". If all of them are marked fail, the "UM" keyword will also be shown to indicate that the side selected by the entities does not match the side recorded in the data base.

For a DS3U, if all its MXRs do not have the same marking, output message O.55182 will be generated. This message will give the MXR number of the MXR(s) marked fail. MXR(s) that is (are) pested, out-of-service, or marked pass will show a dash (-) in place of the MXR number.

For an FTU, if all its DDCs do not have the same marking, output message O.55183 will be generated. This message will give the NPC number of the NPC(s) marked fail. NPCs that are pested, out-of-service, or marked pass will show dashes (---) in place of the NPC number. Since the two NPCs of a DDC will always have the same status, the two NPC numbers will either both be shown or both be represented by dashes. For the CCNIs/CCIs, if the side status for one or both packs does not agree with the data base, the key word "UM" will be output in the output message O.55184. A pack that has failed is identified by its side number whereas a pack that has passed is identified by a dash "-".

The execution of this command and the output of messages in response to its execution can be aborted by use of the ABT command.

## Explanation Of Parameters

**XCSB** - Cross-Connect Status Bus

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**[s]abc** - The 3- or 4-digit nonhierarchical FTU NPC number of the first NPC in an FTM

**[t]def** - The 3- or 4-digit nonhierarchical FTU NPC number of the last NPC in an FTM

**[s]ghi** - The 3- or 4-digit nonhierarchical odd FTU NPC number  
([s]abc through [t]def)

**[t]jkl** - The 3- or 4-digit nonhierarchical even FTU NPC number  
([t]jkl = [s]ghi + 1)

The valid values are:

If NPC numbers are expressed in three digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                    | Unit<br>2                    | Unit<br>3                    | Unit<br>4                    | Unit<br>5                    | Unit<br>6                    |
|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|------------------------------|
| <b>NPC</b><br><b>001-160</b> | <b>NPC</b><br><b>161-320</b> | <b>NPC</b><br><b>321-480</b> | <b>NPC</b><br><b>481-640</b> | <b>NPC</b><br><b>641-800</b> | <b>NPC</b><br><b>801-960</b> |

If NPC numbers are expressed in four digits, the valid values are:

DE and DS type NPC numbers listed by unit number, Unit Type FT (IFTU/FTU)

| Unit<br>1                      | Unit<br>2                      | Unit<br>3                      | Unit<br>4                      |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|

|                                |                                |                                |                                |
|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Unit<br>9                      | Unit<br>10                     | Unit<br>11                     | Unit<br>12                     |
| <b>NPC</b><br><b>1281-1440</b> | <b>NPC</b><br><b>1441-1600</b> | <b>NPC</b><br><b>1601-1760</b> | <b>NPC</b><br><b>1761-1920</b> |
| Unit<br>13                     | Unit<br>14                     | Unit<br>15                     | Unit<br>16                     |
| <b>NPC</b><br><b>1921-2080</b> | <b>NPC</b><br><b>2081-2240</b> | <b>NPC</b><br><b>2241-2400</b> | <b>NPC</b><br><b>2401-2560</b> |

**uvmnp** - Hierarchical FTU NPC number of the first NPC in an FTM  
**uvmqr** - Hierarchical FTU NPC number of the last NPC in an FTM  
**uvmhi** - Hierarchical odd FTU NPC number (uvmnp through uvmkl)  
**uvmkl** - Hierarchical even FTU NPC number (uvmkl = uvmhi + 1)

**uv** - Unit number  
**m** - Module number  
**np, qr, hi, kl**  
- NPC number

The valid values are:

DE and DS type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

**UM** - Unmatched

This keyword indicates there are entities selecting a side different from the side recorded in the database.

**DB** - Database

**s** - Cross-connect side (0 or 1)

**MXR** - Multiplexer

**a,**

...,

**g** - Multiplexer status

The assignment of multiplexers to variables a through g is shown below.

|               |                            |
|---------------|----------------------------|
| a b c d e f g | Variable                   |
| P 1 2 3 4 5 6 | Multiplexer identification |

The multiplexer identification appears if the multiplexer has failed.  
The appearance of a dash (-) in place of a multiplexer identification indicates that the particular multiplexer passed.

**CCNI** - Cross-connect network interface (NonCEF)

**CCI** - Clock and control interface (CEF)

**h** - CCNI/CCI 0 status

**j** - CCNI/CCI 1 status

The assignment of CCNIs/CCIs to variables h and j is shown below.

|     |                         |
|-----|-------------------------|
| h j | Variable                |
| 0 1 | CCNI/CCI identification |

The CCNI/CCI identification appears if the CCI has failed. The appearance of a dash in place of a CCNI/CCI identification indicates that the particular CCNI/CCI passed.

**kk** - Completion condition code (hexadecimal)

To interpret values of kk use the table of cc values below.

**cc** - Hexadecimal condition code

**cc**    *Explanation*

|           |                               |
|-----------|-------------------------------|

**cc Explanation**

## **UTL,RCY,PASSWD**

### **UTILITY, RECOVERY,PASSWORD**

#### **Explanation Of Command**

This command is used to recover the frame administrator password with the password recovery card. Upon successful completion of this command, DACS II will have copied the original frame administrator's password from the password recovery card to the data base in the RAM. To ensure proper security, the administrator should immediately change his or her password using message I.38301. See Operations and Maintenance manual for procedures.

### **Explanation Of Parameters**

---

**RCY** - Recovery

**PASSWD** - Password

**cc** - Hexadecimal condition code

**cc** *Explanation*

**64** File doesn't exist/can't be accessed

**8D** DB PMEM error OP-CL-RD-WR-SK

**DD** Password recovery card is not READ-only

**91** Can't mount or unmount password recovery card

## **UTL,SCHED,PMREPT,NPC,RI,ST,NI,LV,LOCN**

### **SCHEDULE DS1 PERFORMANCE MONITORING REPORT**

#### **Explanation Of Command**

This command schedules or cancels previously scheduled reporting of DS1 performance monitoring data. This command results in periodic reporting of performance monitoring data with the REPT::PM message. Periodic performance monitoring reporting can be suspended with the INH::PMREPT command. However, performance data continues to accumulate and can be retrieved by using the UTL::QRY,<parameter> command. The inhibit command (INH::PMREPT) retains the current schedule and reporting can be resumed with the ALW::PMREPT command.

The scheduling of a PM report will be denied if it is identical to an already existing schedule. Two schedules are said to be identical if all fields match, with the exception of the NUMBER OF INTERVAL and the START TIME fields.

This command will handle NPC addressing in the input command as follows: If only a single NPC is addressed in the input command, then either a completion START TIME fields. always deny invalid commands to specifically addressed NPCs.

If a range of NPCs are addressed and the feature applies to one or more NPCs within the range, DACS II will perform the command on the NPCs in the range that support the requested feature, but skip the NPCs which do not support the requested feature. DACS II provides a variety of line termination types which support different features and can be randomly mixed within the frame. If at least one of the NPCs in the addressed range supports the requested feature, DACS II will generate a completion response for the overall addressed range; individual denial responses will not be generated for NPCs within the range which do not support the feature. If *none* of the NPCs in the addressed range support the requested feature, DACS II will generate a range denial response.

**uvmnp** - Hierarchical starting NPC number

**wxkqr** - Hierarchical ending NPC number

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

Unit    Module NPC  
**01-16 1-4    01-40**

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

Unit        Module        NPC  
**01-16       1-6        01-28**

**RI** - Report interval

**rrrrr** - The interval between performance monitoring reports

| <i>rrrrr</i> | <i>Explanation</i>         |
|--------------|----------------------------|
| {0001-1440}M | Report interval in minutes |
| {0001-0024}H | Report interval in hours   |
| {0001-0007}D | Report interval in days    |

**ST** - Start time

**ssss** - The starting time for the performance monitoring reporting schedule.  
If the value entered for the starting time is less than (previous to)  
the current time of day on the DACS II clock, the performance monitoring  
reports will be scheduled to begin "tomorrow".

| <i>ssss</i>    | <i>Explanation</i>                |
|----------------|-----------------------------------|
| {00-23}{00-59} | Hour of day/Minute of Hour Format |
| CURT           | Current time of day               |

**NI** - Number of intervals

**nn** - The number of intervals over which performance monitoring is reported.  
If this parameter is CT, the performance monitoring schedule remains  
in effect until the schedule is canceled. A value of zero cancels any  
performance monitor reporting that was previously scheduled.

| <i>nn</i> | <i>Explanation</i>                   |
|-----------|--------------------------------------|
| 00        | Cancel a previously scheduled report |
| {01-96}   | Finite number of scheduled reports   |
| CT        | Continuous reports until canceled    |

# **parameter**

- The parameter for which reporting is being scheduled.

| <i>parameter</i> | <i>Explanation</i>                    |
|------------------|---------------------------------------|
| CVP              | Path Coding Violations                |
| CVL              | Line Coding Violations                |
| ESP              | Path Errored Seconds                  |
| ESL              | Line Errored Seconds                  |
| SESP             | Path Severely Errored Seconds         |
| SESL             | Line Severely Errored Seconds         |
| SEFS             | Path Severely Errored Framing Seconds |
| CSSP             | Path Controlled Slip Seconds          |
| UASP             | Path Unavailable Seconds              |
| ALLPAR           | All listed parameters                 |

Note that all listed parameters are valid near-end parameters. All listed parameters except line coding violations (CVL) and line severely errored seconds (SESL) are valid far-end parameters.

**LV** - Level

**|||||**

- The discriminating level for the requested parameter. This parameter is used to restrict reported output to include only values which are above/below a defined level.

| <i>     </i>           | <i>Explanation</i>                  |
|------------------------|-------------------------------------|
| {000000000-134217728}U | Discriminating Level-Up Direction   |
| {000000000-134217728}D | Discriminating Level-Down Direction |

Up - Parameters with values equal to or greater than the "discriminating level" specified are reported.

Down - Parameters with values equal to or less than the "discriminating level" specified are reported.

**LOCN** - Location

**locn** - The location being performance monitored.

| <i>locn</i> | <i>Explanation</i> |
|-------------|--------------------|
| NEND        | Near-end           |
| FEND        | Far-end            |

**AI** - Accumulation interval

**aaaaa** - The accumulation time period for the specified parameter.

*aaaaa Explanation*

15MIN Parameter count from a 15-minute accumulator

DAILY Parameter count from a daily accumulator

**TOF** - Time offset

**ttttt** - The age of the requested data registers(s) at the reporting time, measured backwards in time from the end of last completed accumulation interval to the beginning of the requested interval.

**ooooo** - If the report interval is an integral number of accumulation intervals, this parameter may be entered as a range to specify up to four historical data registers.

*tttt,ooooo Explanation*

{0-7}{00-23}{00,15,30,45,60} Day/Hour/Minute

If the value 7 is given for day, then Hour and Minute must be zero.

To produce reports that contain historical data of completed accumulation intervals, the scheduled report times (set up with "start time" and "report interval") usually coincide with the end of accumulation intervals, and the time offset must be an integral number of accumulation intervals.

A time offset value of 00000 or any value less than the accumulation interval produces a report that contains data from the current register.

The following examples illustrate the use of time offset.

Given start time = 1205  
report interval = 0001H  
number of intervals = 03  
accumulation interval = 15MIN  
time offset = 00015-00060

The first report is generated at 12:05. Each hourly report contains the four most recent 15 minute totals of the monitored parameter. The most recent accumulation interval contains data for the period beginning 15 minutes before (time offset = 00015) the most recently completed accumulation period (12 noon). That is, the accumulation interval had a beginning time of 11:45 am, and covered between 11:45 AM and 12 noon. The range of time offsets also provides 15 minute totals from the three previous quarter hours in the report. There will be a total of three reports, one hour apart. The last report will occur at 2:05.

As a second example:

Given start time = 0015  
report interval = 0015M  
number of intervals = 96  
accumulation interval = DAILY  
time offset = 00000

The first report is generated fifteen minutes after midnight. Since the time offset is 00000, the contents of the current daily accumulator are contained in the report. The data in the first report is the total accumulation over the first 15 minutes of the day. The second report is generated 15 minutes later at 12:30 AM. The second report contains the accumulation total over the first 30 minutes of the day. Subsequent reports provide the daily accumulation total, sampled every 15 minutes throughout the day. A total of 96 reports will be generated, the last one occurring at midnight.

**LK** - Link

**p[vv]** - Up to two administrative links to which the scheduled report output will be transmitted. These parameters take the form of a physical administrative link number followed by a virtual circuit number, if applicable. The user may omit these optional parameters, specify a single link, or specify two links which will both receive all output generated by this scheduled report. If these optional parameters are omitted, the scheduled report output will by default be transmitted only to the link that the schedule command was received on. At the time of report, no PM report shall be sent to a link if it is out of service, or has screening option 1 and the schedule command was not received on that link.

**q[vv]**

**cc** - Hexadecimal condition code

**cc**    *Explanation*

- 15**    NPC is unequipped
- 26**    NPC type error
- A1**    The parameter specified does not match with the NPC type
- 0F**    Frame time is not set
- 12**    First and Last NPCs are outside unit boundary
- 13**    First and Last NPCs are outside a module boundary
- 14**    OFFSET range is invalid
- 16**    Only up to 4 historical data registers are allowed
- 17**    Command did not execute for any entity specified in the command
- 18**    Exceeded limit of reports with accum. interval of 15 min. or less
- 19**    Exceeded maximum limit of PM reports
- 1A**    Report already exists
- 28**    Scheduling report could not be found
- 88**    Report interval is not an integral number of accumulation interval

## **UTL,TOD,CFA,FAC,X,PRIM,MONDAT**

### **SET DACS II SYSTEM CLOCK OR DAILY FACILITY ALARM REPORTING TIME /\* pds \*/**

#### **Explanation Of Command**

This command is used for the following purposes:

- To set the DACS II System clock
- To set the time for the daily facility alarms report.
- To set the parameters to be reported in the daily facility alarms report.

#### **SETTING THE DACS II SYSTEM CLOCK**

To set the DACS II System clock specify only the time to which the clock is to be set (TOD).

#### **SETTING THE TIME FOR THE DAILY FACILITY ALARMS REPORT**

The facility alarms report is output daily at the default time of midnight. To output the report at a different time the user must redefine midnight. This redefined midnight is sometimes referred to as "local midnight". The "local midnight" is set by jointly specifying the time of day and the parameters to be reported. Once a "local midnight" has been set the facility alarms report will be output daily at the new "midnight".

A "local midnight" can be set for a gateway frame by specifying

TOD hrminsc and either CFA or FAC X'abcdef

OR

TOD hrminsc and either CFA or PRIM X'ghij.

## SETTING THE PARAMETERS TO BE REPORTED

The parameters are set by use of the FAC keyword using the appropriate value of abcdef from the tables below.

Gateway offices require using either both or neither of the FAC and PRIM keywords since the domestic and international sides of the machine must be treated separately.

There are six common parameters. When any of the common parameters are selected, they should be enabled in both **abcdef** and **ghij**. These common parameters are listed below.

CGA or PBA  
SLIP or CSS  
ERS or ES  
SERS or SES  
CRC  
FRER

To disable all reports specify zeros for each digit in the variable abcdef.

The CGA alarms report defaults to midnight if this command is not used to alter the report time or parameters.

### Command

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**TOD** - Time of day

**hrmnsc** - Time specification

**hr** - hours (00 through 23)

**mn** - minutes (00 through 59)

**sc** - seconds (00 through 59)

When the time of day is used with the MONDAT keyword mn and sc are restricted to certain values listed in the explanation of MONDAT.

**MONDAT** - Monitored daily time

When the MONDAT keyword is entered, "hrmnsc" is used to specify the starting time for the daily accumulation interval for PA type NPCs. In this case, "mn" is limited to 00, 15, 30 or 45, and "sc" is limited to 00. The default daily monitor starting time is midnight. At midnight DACS II will report the facility alarms and the counts for all selected daily parameters for the daily interval just ended and clear all current counts and threshold crossing alarms to start a new daily interval. The report time specified with the MONDAT keyword is not applicable to other NPC types. Likewise, the midnight report time entered without the MONDAT keyword is not applicable to PA type NPCs.

**MDNT** - Midnight

This keyword is output to indicate that midnight, the default time to output facility alarm reports, has been reset to be the time indicated by TOD hrmnsc.

**Note:** If the MONDAT keyword is entered, the MDNT keyword will not be output.

**CFA** - Carrier failure alarm

This keyword, when specified with the time of day field, indicates that the daily facility report time rather than the system time of day is being reprogrammed. The daily facility report will be output at the specified time, which defaults to midnight. See below the complete description of facility monitoring alarms that may be included in the daily facility report.

**FAC** - Facility

Request that the reporting of alarms specified by abcdef be enabled. This will cause only a subset of the daily facility report to be output.

**abcdef** - Facility performance alarm reports enable (hexadecimal)

This variable represents a six-digit hexadecimal number. Each hexadecimal digit represents 4 bits and each bit corresponds to a particular facility parameter. To enable alarm reports for a facility parameter the bit corresponding to that parameter is set to 1 using the tables below. To disable the alarm report the bit is set to 0.

**Note:** In a gateway office the FAC parameter cannot be used alone but must be used with the international parameter PRIM.

The following tables should be used to set or interpret the hexadecimal values of digit identifiers a through f.

**a** - Digit identifier (Unassigned)

**b** - Digit identifier

**b** *Facility parameter alarm report enabled*

**F** DS3 ALM, SAFE, SANE  
**E** DS3 ALM, SAFE  
**D** DS3 ALM, SANE  
**C** DS3 ALM  
**B** SAFE, SANE  
**A** SAFE  
**9** SANE  
**8** Not assigned  
**7** DS3 ALM, SAFE, SANE  
**6** DS3 ALM, SAFE  
**5** DS3 ALM, SANE  
**4** DS3 ALM  
**3** SAFE, SANE  
**2** SAFE  
**1** SANE  
**0** DS3 ALM, SAFE, SANE alarm reports disabled

DS3 ALM - DS3 alarm  
SAFE - Shelf alarm far end  
SANE - Shelf alarm near end

**c** - Digit identifier (Unassigned)

**d** - Digit identifier

**d** *Facility parameter alarm report enabled*

**F** FRER, BPV

**E** FRER

**D** BPV

**C** Not assigned

**B** FRER, BPV

**A** FRER

**9** BPV

**8** Not assigned

**7** FRER, BPV

**6** FRER

**5** BPV

**4** Not assigned

**3** FRER, BPV

**2** FRER

**1** BPV

**0** FRER, BPV alarm reports disabled

FRER - Frame errors

BPV - Bipolar violations

**e** - Digit identifier

**e** *Facility parameter alarm report enabled*

**F** CRC, COFA, SERS, ERS

**E** CRC, COFA, SERS

**D** CRC, COFA, ERS

**C** CRC, COFA

**B** CRC, SERS, ERS

**A** CRC, SERS

**9** CRC, ERS

**8** CRC

**7** COFA, SERS, ERS

**6** COFA, SERS

**5** COFA, ERS

**4** COFA

**3** SERS, ERS

**2** SERS

**1** ERS

**0** CRC, COFA, SERS, ERS alarm reports disabled

CRC - Cyclic redundancy code

COFA - Change of frame alignment

SERS - Severely errored seconds

ERS - Errored seconds

**f** - Digit identifier

**f** *Facility parameter alarm report enabled*

**F** BER, SLIP, OOF, CGA, LOS

**E** BER, SLIP, OOF

**D** BER, SLIP, CGA, LOS

**C** BER, SLIP

**B** BER, OOF, CGA, LOS

**A** BER, OOF

**9** BER, CGA, LOS

**8** BER

**7** SLIP, OOF, CGA, LOS

**6** SLIP, OOF

**5** SLIP, CGA, LOS

**4** SLIP

**3** OOF, CGA, LOS

**2** OOF

**1** CGA, LOS

**0** BER, SLIP, OOF, CGA, LOS alarm reports disabled

BER - Bit error rate

SLIP - Slip

OOF - Out of frame

CGA - Carrier group alarm

LOS - Loss of signal

Some examples of the available choices for X'abcdef are shown below:

X'00000A BER and OOF alarm reporting enabled

X'000000 alarm reports disabled for all parameters

X'000001 CGA and LOS alarm reporting enabled

X'0C0511 DS3, BPV, ERS, CGA, and LOS alarm reporting enabled

**PRIM** - Primary

Request that reporting of alarms specified by ghij be enabled. This will cause only a subset of the daily facility report to be output.

**ghij** - Primary Alarm or Parameter-count reports enable (hexadecimal)

This variable is a four-digit hexadecimal number. To enable alarm or parameter-count reports for a particular facility parameter, set the appropriate bit of ghij to 1. A bit set to 0 will disable the alarm report for the particular parameter.

There are two sets of parameters for ghij.

1. PA NPC parameters

2. PB or PC NPC parameters

**Note:** In a gateway office the PRIM parameter cannot be used alone but must be used with the domestic parameter FAC.

#### PA NPC parameters

The following tables should be used to set or interpret the hexadecimal values of digit identifiers g through j.

##### g - Digit identifier

|          |                                                |
|----------|------------------------------------------------|

## **UTL,UPGRD**

---

### **UPGRADE FRAME**

#### **Explanation Of Command**

---

This message performs a database upgrade from Release 6.1 to Release 7.0. The database, MACRO and MAP files from the old Secondary Storage Subsystem (SSS) tape will be transferred onto the SMEM card inserted in the SMEM slot on CPU2.

In order for the automated upgrade procedure to successfully complete, the Main Controller (MC) must be in maintenance condition. In addition, the Secondary Storage Controller (SSC) circuit pack must be physically inserted in the slot and the tape drive must be accessible from the MC circuit pack. Initially, the command will power-up the old SSS tape drive and at completion, the SMEM card will contain the Release 6.1 database converted to Release 7.0 form.

## **Release 7.0.3 Addendum**

---

This section includes the updated and new commands applicable to the DACS II system for Release 7.0.3.

## **CHG,RT,DL,ZCS,B8ZS**

CHANGE RT or DL

### **Explanation Of Command**

This command is used to change the Line and Signaling format for all the NPCs associated with the specified RT or DL. With this command it will be possible to have the type of the NPCs associated with the RT and DL of a DGA or DGP to be different. This is not a normal condition and the types will have to match before the NPCs are restored.

### **Command**

[I.38481]

CHG:FRM xy,SEQ ww:{RT|DL} ffff,{ZCS|B8ZS}!

### **Completion Message**

DGD uvmgh {ZCS|B8ZS} DGP uvjpr {ZCS|B8ZS}  
COND cc DNY

### **Common**

---

If there is no RT or DL:

[O.33481.01]

M hh:mm:ss xy,ww n[vv] CHG {RT|DL} ffff {ZCS|B8ZS} 2 LN MSG:  
COND cc DNY

### **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

- RT** - SLC remote terminal
- DL** - Digital carrier line unit
- ffff** - Bank identification number (0000 through 9999)

### Line and Signaling Format Options

- ZCS** - Zero Code Suppression  
If this option is chosen the y value of the DSxyz  
will be set equal to 0.
- B8ZS** - Bipolar 8 Zeros Substitution  
If this option is chosen the y value of the DSxyz  
will be set equal to 2.

---

## **GRTH,UNIT,TYPE,CONN**

---

### **PROVISION A UNIT**

### **Explanation Of Command**

---

This command requests the provisioning of a DACS II unit.

For a Non-CEF frame this will result in the provisioning of all cross-connect and time slot interchange circuit packs. For a CEF frame this will result in the provisioning of the expanded time slot interchanger. When this request has completed, all circuit packs required by the subject unit to cross-connect to other equipped units have been provisioned.

The unit type is optionally specified in the **TYPE** field.

The unit type can be a facility terminating unit, a DS3 terminating unit, or a digital signal processing unit.

If the unit is a digital signal processing unit, its associated digital signal processing interface is also provisioned. If the unit is a DS3 facility terminating unit, both of its associated service and protection facility line interface packs, both sides of its formatter packs (side 0 and 1), and its protection multiplexer are also provisioned.

**Note:** DMB, TSI, and FMT circuit packs must be inserted into the inactive side of DACS II. Inserting circuit packs into the active side may result in transmission "hits."

### **Command**

---

For DACS II Non-CEF frames:  
[I.31211]

```
GRTH:FRM xy,SEQ ww:UNIT q[,TYPE utxyz]\  
[,CONN(a[,b[,c[,d[,e [,f]]]]))!]
```

For DACS II CEF frames:  
[I.31211]

GRTH:FRM xy,SEQ ww:UNIT [q]q[,TYPE utxyz]!

## Completion Message

## **Autonomous Message**

---

Not applicable.

## **Explanation Of Parameters**

---

**UNIT** - Unit

**[q]q** - Unit number (1 through 16)

**utxyz** - Unit type as submitted in the input message

**uexyz** - Type of unit already equipped as

*uexyz Explanation*

FT100 FT = Facility Terminating Unit

DP100 DP = Digital Signal Processing Unit

DT100 DT = DS3 Facility Terminating Unit

The unit type is optionally specified in the TYPE utxyz field. The unit type can be an FTxyz (Facility Terminating Unit), DTxyz (DS3 Terminating Unit), or a DPxyz (Digital Signal Processing Unit) type.

Currently, only FT100, DT100, and DP100 types are supported by DACS II.

The unit type entered must be consistent with the unit type entered for the configuration file.

If the unit is a DPxyz type, its associated DSPI (Digital Signal Processing Interface) is also provisioned.

If the unit is a DTxyz type, both of its associated Service and Protection Facility Line Interface (FLI) packs, both sides of its Formatter (FMT) packs (side 0 and 1), and its Protection Multiplexer (MXR) pack are also provisioned.

For both Non-CEF and CEF frames, if the unit type is not entered, the unit type will default to FT100.

For Non-CEF frames, the optional CONN field is used if only a partial complement of the unit's TSI circuit packs is to be provisioned. If this field is not used, all TSI circuit packs are provisioned and the unit has full connectivity with other provisioned units.

**CONN** - Connectivity

**a, b, c, d, e, f**

- Time slot interchange numbers

A partial complement of the unit's TSIs have been provisioned. (If this field is absent, all of the unit's TSIs were provisioned.)

**CCB** - Cross-connect buffer

**0q** - CCB number side 0

**1q** - CCB number side 1

0q and 1q identify the cross-connect buffer(s) provisioned. q is the unit number (see UNIT above).

**tt** - Total number of provisioned TSIs in frame (02 through 72)

**NEW** - New

**TSIS** - Time slot interchangers

**nn** - Number of TSIs provisioned by command (02 through 22)

**sft** - TSI equipped status

**s** - Service side number (0 or 1)

**f** - Equipped FROM unit number (1 through 6) if equipped  
- - Not equipped

**t** - Equipped TO unit number (1 through 6) if equipped  
- - Not equipped

**e** - Number of lines in message

Equals either 4 or 5 depending on the type of the unit provisioned.

**ETSI** - Expanded time slot interchanger

**0qq** - ETSI number side 0

**1qq** - ETSI number side 1

0qq and 1qq identify the ETSI packs provisioned by this command.  
qq is the unit number (see UNIT above).

Three dashes "---" are shown if an ETSI pack is not provisioned.

**kk** - Total number of provisioned ETSIs in frame (02 through 32)

**rr** - Unit number with the same definition as qq.

**FMT** - Formatter, sides 0 and 1 (automatically provisioned with DT100 units)

**FLI** - Facility line interface

**S** - Service FLI (automatically provisioned with DT100 units)

**FLI** - Facility line interface

**P** - Protection FLI (automatically provisioned with DT100 units)

**MXR** - Multiplexer

**P** - Protection multiplexer (automatically provisioned with DT100 units)

**EQD** - Equipped

**NSUP** - Not supported

**cc** - Hexadecimal condition code

**cc** *Explanation*

- 27** Illegal connectivity specified
- 28** Connectivity contains unequipped units
- 97** Entity can't be addressed in this configuration
- 99** Unit type (xyz) not supported
- CA** Connectivity can not be specified for CEF unit

---

## **RMV,RT,DL**

---

REMOVE RT or DL

### **Explanation Of Command**

---

This command is used to remove from service all the NPCs associated with the specified RT or DL so that the type of the NPCs can be changed using the CHG RT command I.38481. Each NPC removed will print a RMV (O.33351) message. If an NPC removal fails the error condition of the RMV NPC message(O.33351) will give the reason. This command will remove the NPCs associated with the RT or DL one at a time in the proper order. If it encounters an error removing any one of the NPCs it will not continue removing the remaining NPCs.

## **TTST,SPL,TG,NOYLW**

---

**NX64Kbit/s TWO-WAY TEST ACCESS, SPLIT**

### **Explanation Of Command**

---

This command is used to split each direction of transmission of an Nx64Kbit/s circuit that is currently under test access in monitor mode.

The optional keyword NOYLW is added to allow DACS II to disable the yellow alarm transmission while the facility is connected to a Test Group which is set to split mode via this command with NOYLW option.

**Note:** If the test-access group is connected to an unmapped Nx64Kbit/s termination, this command connects both directions of the unmapped termination to the test-access group's west bundle.

## Autonomous Message

---

Not applicable.

## Explanation Of Parameters

---

**TG** - Test-access group

**mmm** - Test-access Group number (001 through 400)

The TG is designated as in message 31421

**SPL** - Split

**NOYLW** - No Yellow Alarm Transmission

The NOYLW option is used to disable the yellow alarm transmission for the TO-end facility NPC that is in test access split mode and recognizes a Carrier Group Alarm (CGA) condition.

A command that changes the test access group from split mode to monitor mode or a command that releases the active test access group will enable the yellow alarm behavior.

**[s]abc** - 3- or 4-digit non-hierarchical FROM NPC number

**[t]ghi** - 3- or 4-digit non-hierarchical TO NPC number

If NPC numbers are expressed in three digits, the valid values are:

**uvmnp** - Hierarchical FROM NPC number

**wxkqr** - Hierarchical TO NPC number

**uv,wx** - Unit number

**m,k** - Module number

**np,qr** - NPC number within the module

The valid values are listed below:

DE type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TE NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

DA type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-4</b> | <b>01-40</b> |

TA NPC numbers listed by unit, module, and NPC Number  
Unit Type DT (DS3U)

| Unit         | Module     | NPC          |
|--------------|------------|--------------|
| <b>01-16</b> | <b>1-6</b> | <b>01-28</b> |

**ddd** - FROM Channel numbers

001 through 024

The FROM channel ddd will be '---' for circuits not involved in this test session. For unmapped TO channel(s) or a BBL without return, ddd will be '000' in the corresponding channel position(s). If TO channel is mapped to a channel 000, the circuit can only be tested as N = 1, the corresponding FROM channel ddd will be '000'.

**tc** - Trunk conditioning

For mapped circuits, <tc> will be omitted.  
For unmapped circuits, the effective <tc> will be output.

**SG** - Signaling

**g** - Signaling mode of the TG

*g*      *Explanation*

T      All channels are Transparent (TRSP)

R      One or more channels is robbed-bit or non-TRSP

**CGA** - Carrier group alarm

**PBA** - Primary block alarm

**ftb** - CGA or PBA state

f - FROM CGA or PBA state

*f Explanation*

F FROM NPC is in CGA or PBA

0 FROM NPC is not in CGA or PBA

t - TO CGA or PBA state

*t Explanation*

T TO NPC is in CGA or PBA

0 TO NPC is not in CGA or PBA

b - TG digroup CGA or PBA state

*b Explanation*

E East-bundle NPCTG in CGA or PBA

W West-bundle NPCTG in CGA or PBA

B NPCTG(s) supporting both bundles in CGA or PBA

0 NPCTG(s) not in CGA or PBA

**RDC** - Red circuit

The cross-connection tested is a red circuit.

**CUS** - Customer

The cross-connection tested is a customer-controlled circuit.

**TLA** - Terminate and leave active

**s** - Termination state of the circuit

*s Explanation*

R All channels are released

F One or more FROM channel is terminated

T One or more TO channel is terminated

B One or more of FROM and TO channels are terminated

**COND cc**

- Condition code

**cc** - Hexadecimal condition code

**cc** *Explanation*

**5A** NPC not in service or failed

**5E** invalid test access mode

## **UTL, QRY, TGS**

---

### **UTILITY QUERY TEST-ACCESS GROUP**

### **Explanation Of Command**

---

This message is used to get a listing of one or a range of Nx64Kbit/s test-access groups (TGs). To retrieve a listing of ALL test-access groups specify the maximum range (1-400).

### **Command**

---

[I.53081]

UTL:FRM xy,SEQ ww:QRY,TGS mmm[-nnn]!

### **Completion Message**

---

### **Nonhierarchical**

---

[O.53081]

## **Autonomous Message**

Not applicable.

## **Explanation Of Parameters**

**TG** - Test-access group

**mmm** - Test-access group number (001 through 400)

**nnn** - Test-access group number specifying the end of a TG range (002 through 400)

**NPCTG** - NPC (for) test group

**rrr** - NPCTG number supporting the east bundle (001 through 400)

**sss** - NPCTG number supporting the west bundle, may be same as rrr

**[s]abc**  
- 3- or 4-digit non-hierarchical NPC number designated as NPCTG rrr

**[t]def**  
- 3- or 4-digit non-hierarchical NPC number designated as NPCTG sss

If NPC numbers are expressed in three digits, the valid values are:

## **UTL, QRY, TO**

### **QUERY DESTINATION CROSS-CONNECT**

#### **Explanation Of Command**

This command requests circuit provisioning information associated with the specified To-direction termination(s). The output messages generated depend upon:

- Whether or not the termination is assigned,
- Whether or not the termination is a test port termination,
- The type of network processing circuit for this termination,
- The far-end to which the termination is mapped (if any).

For this utility command, DACS II terminations can be divided into two categories:

- Multipoint termination, which is a multipoint circuit on a real digital multipoint bridge (DMB) in the digital signaling processing unit (DSPU), or in virtual network processing circuits.
- All other terminations.

If the network processing circuit (NPC) number specified in the command is the number of a remote terminal (DL) digroup currently under protection by the protection digroup (DGP), the execution of the command will be completed and DGP with its associated NPC number appears on the output message.

For a SLC® carrier denial message, the following appears on output: the bank identification number, operation mode, and digroup A NPC number for that remote terminal.

- ddd** - Beginning range channel or conference number  
**eee** - End range channel or conference number  
**kkk** - Mid-range channel or conference number  
**lll** - Mid-range channel or conference number  
**hhh** - Typical midrange channel or conference number

Valid values are given below

Channel numbers  
001 through 024

|         |                                                             |
|---------|-------------------------------------------------------------|
| 001-047 | Odd only (SLC 96® Carrier, Mode 3, DGA)                     |
| 049-095 | Odd only (SLC 96 Carrier, Mode 3, DGC)                      |
| 001-024 | Odd and Even (SLC 96 Carrier, Mode 1, DGA)                  |
| 025-048 | Odd and Even (SLC 96 Carrier, Mode 1, DGB)                  |
| 049-072 | Odd and Even (SLC 96 Carrier, Mode 1, DGC)                  |
| 073-096 | Odd and Even (SLC 96 Carrier, Mode 1, DGD)                  |
| 001-024 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGA) |
| 025-048 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGB) |
| 049-072 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGC) |
| 073-096 | Odd and Even (SLC Series 5 Carrier, Feature Package C, DGD) |

Conference numbers  
001-500 (Virtual NPC)  
001-085 (MB NPC)

**UASGN** - Unassigned

**DCC** - Disconnect code

**tc** - Trunk conditioning

Represents the desired cross-connected signaling and insertion word applied when a failure occurs. A trunk conditioning specification consists of a combination of a signaling specification followed by an insertion word (IW) specification.

Valid values are listed below:

| <b>tc</b>                  | <i>signaling modes</i> |
|----------------------------|------------------------|
| <b>TC(ijkl,mnop) TRB</b>   | <b>2-way 4-state</b>   |
| <b>TC(ijkl,mnop) IW pq</b> | <b>2-way 4-state</b>   |
| <b>TC(----,mnop) TRB</b>   | <b>1-way 4-state</b>   |
| <b>TC(----,mnop) IW pq</b> | <b>1-way 4-state</b>   |
| <b>TC(ab,cd) TRB</b>       | <b>2-way 16-state</b>  |
| <b>TC(ab,cd) IW pq</b>     | <b>2-way 16-state</b>  |
| <b>TC(--,cd) TRB</b>       | <b>1-way 16-state</b>  |
| <b>TC(--,cd) IW pq</b>     | <b>1-way 16-state</b>  |
| <b>TRSP IW pq</b>          |                        |
| <b>TRSP TRB</b>            |                        |
| <b>TRSP</b>                |                        |

**TRB** - Trouble

**MUX** - Multiplexer out of sync

**TRSP** - Transparent

**RT** - Remote terminal

**DL** - Data link

**ffff** - SLC® remote terminal (RT) or digital carrier line unit (DCLU) bank identification number (0000 through 9999)

**MD** - Mode

**g[g]** - Mode of operation of the RT or DCLU

**g[g]** *Explanation*

- 1** SLC 96 Carrier Mode 1
- 3** SLC 96 Carrier Mode 3
- C** SLC Series 5 Carrier Feature Package C (FPC)

**AIS** - Alarm indication signal  
DS1 range cross-connection with AIS specifications

**accpoint**

- Access point under test

**accpoint**      *Explanation*

**[s]abchhh**      The multiplexed DS0B signal.

**[s]abchhh/ee**      The DS0A signal or customer ee data stream only for a DS0B signal.

**MPTM [s]abchhh/ee MJU nnnn [BRi]**

The multipoint master of the circuit [s]abchhh/ee and the leg of MJU nnnn which is under test.  
If only "MJU nnnn" is specified, the control leg of MJU nnnn is under test. If "BRi" is specified, branch i of MJU nnnn is under test.

nnnn      (0000 through 9999)

i          (1 through 4)

**DGP** - Digroup P (protection digroup, SLC carrier bank)

**[t]mno**

- The 3- or 4-digit DGP nonhierarchical NPC number

**[t]hij**

- The 3- or 4-digit DGA (digroup A) nonhierarchical NPC number

**feigh** - DGP hierarchical NPC number

**hhijj** - DGA (digroup A) hierarchical NPC number

**[t]defiii**

- Nonhierarchical FROM termination

**[t]def**          - The 3- or 4-digit nonhierarchical NPC number

Valid values are identical to those for [s]abc

**iii**      - Channel number

Valid values are identical to those for ddd

**ppqqq** - NPC type of the FROM termination

To interpret values of ppqqq see the table following mnxyz below.

**Note:** If ppqqq = MB100 or VI100,  
then FROM is a multipoint termination and TO is not.

**TYPE** - Type

**mnxyz** - NPC Type

| <b>mn</b> | <i>Explanation</i> |
|-----------|--------------------|
|-----------|--------------------|

|    |                               |
|----|-------------------------------|
| DA | FTU ANSI NPC type             |
| DE | Enhanced digroup NPC          |
| DS | SLC® terminating digroup NPC  |
| MB | Digital multipoint bridge NPC |
| TA | DS3U ANSI NPC type            |
| TE | DS3U enhanced NPC             |
| TI | DS3U interface unit NPC       |
| VI | Virtual NPC                   |

**xyz** - Multiframe, line and signaling, and channel numbering formats

DA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|            |                                               |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

**y** *Explanation*

- 0** ZCS - Zero code suppression
- 1\*** NZCS - No zero code suppression
- 2\*** B8ZS - Bipolar with 8 zero substitution
- 3** Not assigned
- 4** ZCS/DMI - Zero code suppression/DMI signaling
- 5** NZCS/DMI - No zero code suppression/DMI signaling
- 6** B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling
- 7-9** Not assigned

\* Only options 1 and 2 are applicable to DA-type clear-DS1 NPC.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).

**z** - Channel numbering format

**z** *Explanation*

- 0** D4 channel bank channel numbering
- 1** D2 channel bank channel numbering
- 2** D1D channel bank channel numbering
- 3-8** Not assigned
- 9** Unchannelized 193-bit Clear DS1 Cross-connection

DA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a DA NPC with both a valid framing format (D4, ESF, T1DM) using the x field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the z field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the DA NPC type. If an unframed Clear DS1 cross-connection is desired on an NPC in a DACS II FTU, the NPC must be provisioned as NPC type **DE9y9**.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the DA NPC type. If ZBTSI is desired on an NPC in a DACS II FTU, the NPC must be provisioned as a DE NPC type with its y option selecting ZBTSI (**DEx3z**).

DE-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                        |
|------------|-----------------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                               |
| <b>1*</b>  | NZCS - No zero code suppression                           |
| <b>2*</b>  | B8ZS - Bipolar with 8 zero substitution                   |
| <b>3†</b>  | ZBTSI - Zero-bit time-slot interchanger                   |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling             |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling         |
| <b>6</b>   | B8ZS/DMI - Bipolar with 8 zero substitution/DMI signaling |
| <b>7-9</b> | Not assigned                                              |

\* Only options 1 and 2 are applicable to DE-type clear-DS1 NPC.

† Only valid with ESF (x = 2 or 3)

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

DS-type xyz fields

**x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>               |
|------------|----------------------------------|
| <b>0</b>   | Not assigned                     |
| <b>1</b>   | D4                               |
| <b>2</b>   | ESF - Voice                      |
| <b>3</b>   | Not assigned                     |
| <b>4</b>   | Not assigned                     |
| <b>5</b>   | Not assigned                     |
| <b>6</b>   | SLC® 96 carrier Fs               |
| <b>7</b>   | SLC 5 carrier ESF with data link |
| <b>8-9</b> | Not assigned                     |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                      |
|------------|-----------------------------------------|
| <b>0</b>   | Zero code suppression (ZCS)             |
| <b>1</b>   | No zero code suppression (NZCS)         |
| <b>2</b>   | Bipolar with 8 zero substitution (B8ZS) |
| <b>3-9</b> | Not assigned                            |

**z** - Counting sequence format

| <b>z</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | SLC 96 carrier Mode III D4 counting sequence  |
| <b>1</b>   | SLC 96 carrier Mode III D1D counting sequence |
| <b>2</b>   | SLC 96 carrier Mode I D1D counting sequence   |
| <b>3</b>   | SLC Series 5 carrier D4 counting sequence     |
| <b>4-9</b> | Not assigned                                  |

MB-type xyz fields

**x** - Fixed at 1

**y** - Fixed at 0

**z** - Fixed at 0

## TA-type xyz fields

**x** - Multiframe format for the digroup

| <b>x</b>   | <i>Explanation</i>                            |
|------------|-----------------------------------------------|
| <b>0</b>   | Not assigned                                  |
| <b>1</b>   | D4                                            |
| <b>2</b>   | ESF - Voice                                   |
| <b>3</b>   | ESF - Data                                    |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24) |
| <b>5-7</b> | Not assigned                                  |
| <b>8</b>   | Ericsson Cellular format                      |
| <b>9</b>   | Not assigned                                  |

**y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TA-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDST framing).**z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering                |
| <b>1</b>   | D2 channel bank channel numbering                |
| <b>2</b>   | D1D channel bank channel numbering               |
| <b>3-8</b> | Not assigned                                     |
| <b>9</b>   | Unchannelized 193-bit Clear DS1 Cross-connection |

TA type NPCs provide Clear DS1 performance monitoring capability. This feature is enabled by provisioning a TA NPC with both a valid framing format (D4,ESF,T1DM) using the **x** field and at the same time, specifying an unchannelized Clear DS1 cross-connection using the **z** field.

The DACS II Release 4.0 unframed Clear DS1 cross-connection which provides no path performance monitoring is not supported by the TA NPC type. If an unframed Clear DS1

cross-connection is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as NPC type TE919.

Zero Byte Time Slot Interchange (ZBTSI) encoding is not supported by the TA NPC type. If ZBTSI is desired on an NPC in a DACS II DS3U, the NPC must be provisioned as a TE NPC type with its **y** option selecting ZBTSI (**TEx3z**).

#### TE-type xyz fields

##### **x** - Multiframe format

| <b>x</b>   | <i>Explanation</i>                               |
|------------|--------------------------------------------------|
| <b>0</b>   | Not assigned                                     |
| <b>1</b>   | D4                                               |
| <b>2</b>   | ESF - Voice                                      |
| <b>3</b>   | ESF - Data                                       |
| <b>4</b>   | DDST (T1DM - R bit connection via channel 24)    |
| <b>5-7</b> | Not assigned                                     |
| <b>8</b>   | Ericsson Cellular format                         |
| <b>9</b>   | No framing format, transparent (TRSP), clear-DS1 |

##### **y** - Line and signaling format

| <b>y</b>   | <i>Explanation</i>                                |
|------------|---------------------------------------------------|
| <b>0</b>   | ZCS - Zero code suppression                       |
| <b>1*</b>  | NZCS - No zero code suppression                   |
| <b>2</b>   | Not assigned                                      |
| <b>3</b>   | Not assigned                                      |
| <b>4</b>   | ZCS/DMI - Zero code suppression/DMI signaling     |
| <b>5</b>   | NZCS/DMI - No zero code suppression/DMI signaling |
| <b>6-9</b> | Not assigned                                      |

\* Only option 1 is applicable to TE-type clear-DS1 NPCs.

**Note:** DMI signaling cannot be specified in the y field if the x field is 4 (DDS framing).

##### **z** - Channel numbering format

| <b>z</b>   | <i>Explanation</i>                     |
|------------|----------------------------------------|
| <b>0</b>   | D4 channel bank channel numbering      |
| <b>1</b>   | D2 channel bank channel numbering      |
| <b>2</b>   | D1D channel bank channel numbering     |
| <b>3-8</b> | Not assigned                           |
| <b>9</b>   | No channel numbering format, clear-DS1 |

VI-type xyz fields

**x** - Fixed at 1

**y** - Fixed at 0

**z** - Fixed at 0

**e** - Number of lines in the message segment

**SECH** - Subrate establish channel

**CUS** - Customer

The circuit is a customer controlled circuit

**RDC** - Red circuit

The circuit is a red circuit

**UTST** - Under test

The circuit is under test

**ONEWAY** - One-way

The circuit is a one-way connection

**BCAST** - Broadcast

The circuit is a broadcast-type connection

**ROLL** - Roll

Bridged leg from Roll procedure

**TLA** - Terminate and leave active

**s** - Terminate and leave state

**s** *state*

**F** FROM terminated

**T** TO terminated

**B** BOTH terminated

**trnk** - Trunk type

Used only for custom E1 or T1 signaling conversion applications.

**trnk** *Explanation*

**E1DP** E1 Originated with DP Dialing  
**E1ND** E1 Originated without DP Dialing  
**T1DP** T1 Originated with DP Dialing  
**T1ND** T1 Originated without DP Dialing

**[r]adg**

- Nonhierarchical signaling conversion NPC number

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

If NPC numbers are expressed in three digits, the valid values are:

SP type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1      | Unit<br>2      | Unit<br>3      | Unit<br>4      | Unit<br>5      | Unit<br>6      |
|----------------|----------------|----------------|----------------|----------------|----------------|
| <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     | <b>NPC</b>     |
| <b>001-031</b> | <b>161-191</b> | <b>321-351</b> | <b>481-511</b> | <b>641-671</b> | <b>801-831</b> |
| <b>041-071</b> | <b>201-231</b> | <b>361-391</b> | <b>521-551</b> | <b>681-711</b> | <b>841-871</b> |
| <b>081-111</b> | <b>241-271</b> | <b>401-431</b> | <b>561-591</b> | <b>721-751</b> | <b>881-911</b> |
| <b>121-151</b> | <b>281-311</b> | <b>441-471</b> | <b>601-631</b> | <b>761-791</b> | <b>921-951</b> |

If NPC numbers are expressed in four digits, the valid values are:

SP type NPC numbers listed by unit number, Unit Type FT (FTU)

| Unit<br>1        | Unit<br>2        | Unit<br>3        | Unit<br>4        |
|------------------|------------------|------------------|------------------|
| <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       | <b>NPC</b>       |

| <b>2001-2031</b> | <b>2161-2191</b> | <b>2321-2351</b> | <b>2481-2511</b> |
| <b>2041-2071</b> | <b>2201-2231</b> | <b>2361-2391</b> | <b>2521-2551</b> |

**klafg** - Hierarchical signaling conversion NPC number

**kl** - Unit number  
**a** - Module number  
**fg** - NPC number within the module

**Note:** Only ODD NPC numbers are valid in the tables listed below. The even numbered NPC is not available for any other NPC type.

SP type NPC numbers listed by unit, module, and NPC Number  
Unit Type FT (FTU)

|              |            |              |
|--------------|------------|--------------|
| Unit         | Module     | NPC          |
| <b>01-16</b> | <b>1-4</b> | <b>01-31</b> |

**ts** - Time slot

001-064 Signaling conversion time slot numbers

**fmd** - FROM multipoint circuit mode of the connection  
**tmd** - TO multipoint circuit mode of the connection

For DMB circuits, there are four possible values for fmd and tmd:

| <b>fmd,<br/>tmd</b> | <i>Explanation</i>                                                                          |
|---------------------|---------------------------------------------------------------------------------------------|
| SYM                 | For legs of a symmetrical multipoint circuit (must be a DMB channel)                        |
| BRD                 | For nonbackbone (tributary) legs of a broadcast multipoint circuit (must be a DMB channel)  |
| BBL                 | For the backbone leg of a broadcast multipoint circuit (must be a DMB channel)              |
| LEG                 | For the end that does not terminate on the multipoint circuit (must be an FTU/DS3U channel) |

For virtual NPC circuits, there are three possible values for fmd and tmd:

| <b>fmd,<br/>tmd</b> | <i>Explanation</i>                                                                        |
|---------------------|-------------------------------------------------------------------------------------------|
| BRD                 | For nonbackbone legs of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| BBL                 | For the backbone leg of a broadcast multipoint circuit (must be a virtual NPC channel)    |
| LEG                 | For the end that does not terminate on the multipoint circuit (must be FTU/DS3U channels) |

**snn** - Incoming gain adjust parameters for the DMB NPC  
**smm** - Outgoing gain adjust parameters for the DMB NPC

**s** - Sign (+ or -)  
**nn** - Incoming gain adjust value (-90 through +88)  
**mm** - Outgoing gain adjust value (-90 through +88)

These are the parameters requested for the TO termination. Values are given in steps of two and the units are tenths of a db.

For type VI100 NPCs snn and smm will be output as "---"

The special value --- (three dashes) can be used for either snn or smm (but not both) when no change is to be made to that parameter. This feature allows changing only one of the two parameters if desired. Also, if the cross-connection was provisioned with the NTR (no transmit) option, the gain adjustment in the direction for which transmission is shut off MUST be ---.

**nn** - Noise guard setting (in dB) for the FROM/TO NPC

The following default values apply:

For Symmetrical bridges                      Default: nn = -18 db

For Polling circuits                          Default: nn = 0 db

Valid values are listed below:

**nn**

00 db

06 db

12 db

18 db

--                      (For VI100 NPCs)

**ee** - Echo suppression setting (in dB) for the FROM/TO NPC

The following default values apply:

For Symmetrical bridges                      Default: ee = -18 db

For Polling circuits                          Default: ee = 0 db

Valid values are listed below:

**ee**

00 db

06 db

12 db

18 db

--                      (For VI100 NPCs)

**spp** - Incoming gain adjust parameters for the TO DMB NPC

**sqq** - Outgoing gain adjust parameters for the FROM DMB NPC

See snn and smm above for explanation and values.

**vv** - Noise guard setting (in dB) for the FROM DMB NPC

**tt** - Noise guard setting (in dB) for the TO DMB NPC

See nn above for default values.

**vv, tt**

00 db

06 db

12 db

18 db

**ww** - Echo suppression setting (in dB) for the FROM DMB NPC  
**uu** - Echo suppression setting (in dB) for the TO DMB NPC

See ee above for default values.

**ww, uu**

00 db  
06 db  
12 db  
18 db

**NTR** - No transmit

**r** - Direction which has no transmission

**r** *Explanation*

**F** FROM  
**T** TO

**TP** - Test port

**kk** - Test port number (01 through 96)

**TG** - Test (access) group

**mmm** - Test group number (001 through 400)

**t sm** - Test mode

Values are listed below:

|               |                                               |
|---------------|-----------------------------------------------|
| <b>t sm</b>   | <i>Mode</i>                                   |
| <b>HUB</b>    | Hubbed                                        |
| <b>LPD</b>    | Looped                                        |
| <b>MON</b>    | Monitor                                       |
| <b>SPL</b>    | Split                                         |
| <b>TPR</b>    | Test Port Released                            |
| <b>TGR</b>    | Test Group Released                           |
| <b>SPLNOY</b> | Split with yellow alarm transmission disabled |

**l** - Link used to access this test port (0 if mode is released)

**vv** - Virtual circuit number of an X.25 link used to access this test port  
(01 through 16)

**p** - Channel assignment

Valid values are listed below:

| <b>p</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |                                 |
|----------|---------------------------------|
| <b>F</b> | FROM side of circuit under test |
|----------|---------------------------------|

|          |                                                           |
|----------|-----------------------------------------------------------|
| <b>H</b> | HIGH channel of hubbed test port (only for HUB test mode) |
|----------|-----------------------------------------------------------|

**q** - Channel assignment

Valid values are listed below:

| <b>q</b> | <i>Explanation</i> |
|----------|--------------------|
|----------|--------------------|

|          |                               |
|----------|-------------------------------|
| <b>T</b> | TO side of circuit under test |
|----------|-------------------------------|

|          |                                                          |
|----------|----------------------------------------------------------|
| <b>L</b> | LOW channel of hubbed Test Port (only for HUB test mode) |
|----------|----------------------------------------------------------|

**[s]ghijj**

- Nonhierarchical FROM, HIGH, or DSPP NPC number

If test access is made to a digital signal processing platform (used for signaling conversion between an E1 and a T1 NPC) then [s]ghijj is the SP100 NPC.

**[t]jklenn**

- Nonhierarchical TO, LOW, E1, or T1 NPC number

If test access is made to a digital signal processing platform (used for signaling conversion between an E1 and a T1 NPC) then [t]jklenn is the E1 or T1 NPC.

**edhfg** - Hierarchical FROM/HIGH

**opjst** - Hierarchical TO/LOW

**ed, op** - Unit number

**h, j** - Module number

**fg, st** - NPC number within module

Valid values are identical to those for uvmnp

**[s]ghi, [t]jhk**

- The 3- or 4-digit nonhierarchical NPC number

Valid values are identical to those for [s]abc.

**jjj, nnn**

- Channel or time slot number

Valid values are identical to those for ddd above.

**UEQD** - Unequipped

**RNGIE** - Range input error

**COND** - Condition

**cc** - Hexadecimal condition code

**cc Explanation**

|    |                                                             |
|----|-------------------------------------------------------------|
| 15 | NPC is unequipped                                           |
| E3 | One way unassigned channel/NPC in QRY,TO                    |
| 0B | Invalid CEPT NPC                                            |
| 62 | Invalid channel number                                      |
| 63 | NPC is a DGP                                                |
| 7F | NPC is not added                                            |
| 91 | SR NPC was specified - not allowed                          |
| F7 | Corresponding NPC for virtual channel is<br>not provisioned |
| B4 | NPC is channelized type                                     |
