SINGLE-LINE, ELECTRONIC
PUSHBUTTON TELEPHONES WITH AUTO DIAL (FASTFONE)
REPLACEMENT PARTS

1. GENERAL

1.01 This document covers the single-line, electronic pushbutton telephones with auto dial. (See Figure 1.) An exploded-view drawing of the telephone with major assembly groups (see Figure 2) and a replacement parts list (see Table A) is included.

1.02 Whenever this section is reissued, reason for reissue will be listed in this paragraph.

1.03 For additional information on description and installation of the telephones, refer to Section 50-400-100. The circuit labels appear in Section 50-400-102. Related documents of the ITT Telephone Apparatus Practices Manual provide information on components.

1.04 The Model 2400 desk telephones are single-line, electronic pushbutton telephones with auto dial. With this feature, the station user can record 10 frequently-used numbers, up to 16 digits each. Upon request, the Model 2400 telephone will dial the recorded number automatically. The station user also can automatically redial the last-number-dialed and can predial a number before going off-hook. These telephones are anti-sidetone type units that operate efficiently over a wide range of loop resistances and line impedances.

1.05 The Model 2400 desk telephones are identified by a code number stamped in ink on the bottom of the base. Refer to Section 50-400-100 of the ITT Telephone Apparatus Practices Manual for ordering information and for an explanation of each code number.
