Your Responsibility for Your System's Security

You are responsible for the security of your system. AT&T does not warrant that this product is immune from or will prevent unauthorized use of common-carrier telecommunication services or facilities accessed through or connected to it. AT&T will not be responsible for any charges that result from such unauthorized use. Product administration to prevent unauthorized use is your responsibility and your system administrator should read all documents provided with this product to fully understand the features available that may reduce your risk of incurring charges.

Federal Communications Commission Statement

Part 15: Class A Statement. This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his or her own expense.

Part 68: Network Registration Number. This equipment is registered with the FCC in accordance with Part 68 of the FCC Rules. It is identified by FCC registration number AS593M-14695-MA-E.

LIST OF TABLES

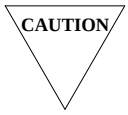
Table 3-1. R1V8 Announcement Composition (*Page 1 of 2*) 3-3

About This Document

This document describes how to customize system announcements (prompts and messages) on an AT&T AUDIX Voice Messaging System. This document should *only* be used for AUDIX systems that are running Release 1 Version 8 (R1V8) software with the *standard* announcement set, sometimes called the Streamlined User Interface.

INTENDED AUDIENCE

This document is intended for system administrators who need to customize (modify or re-record) AUDIX announcements on an AUDIX system that is running R1V8 software.



Because one AUDIX fragment (spoken word or phrase) may affect many system announcements, it is strongly recommended that system administrators obtain training or consult their AT&T representative prior to changing any system announcements (customers may be charged for this service).

HOW THIS DOCUMENT IS ORGANIZED

This document is organized as follows:

- Chapter 1, *Overview*, describes the role of announcements and fragments in creating AUDIX system prompts and messages.
- Chapter 2, *Announcement Customization Procedures*, details the steps for re-recording, changing, or deleting AUDIX system announcements and fragments.
- Chapter 3, *Post-Upgrade Procedures*, covers the steps needed to restore customized announcements and/or fragments following an upgrade to R1V8 software.
- Appendix A, *Standard Announcements*, lists the AUDIX system announcements in the standard announcement set and the fragments that compose them.
- Appendix B, *Standard Fragments*, lists the fragments in the standard announcement set.
- Appendix C, *Fragment/Announcement Cross-Reference*, presents a list of fragment numbers followed by the numbers of all system announcements that use (and would be affected by changes to) that fragment.

An index appears at the end of this document.

HOW TO USE THIS DOCUMENT

Read the overview, then follow the steps in Chapter 2 or Chapter 3 as needed. This document is intended to be used in conjunction with the *AUDIX Administration* (585-305-501) and *AUDIX Release 1 Version 8 Forms Reference* (585-305-209).

CONVENTIONS USED IN THIS DOCUMENT

The following typographic conventions are used in this document:

- Information that appears on your terminal screen (including displays, field names, prompts, and error messages) is shown in constant-width type. Information that you are to type just as it appears in the document is shown in constant-width bold type. For example:

  At the `when?` prompt, type **`now`**

- Terminal keys that you are to press are shown in boxes. For example, an instruction to press the return, carriage return, or equivalent key might appear in this document as:

  Press RETURN.

- Two or three keys that you are to press at the same time (that is, you are to hold down the first key while pressing the second key and, if appropriate, the third key as well) are enclosed together, separated by hyphens, in a curved-edge box. For example, an instruction to press and hold the ALT key while typing the letter *d* appears in this document as:

  Press ALT-d.

- Variables for which you or the system substitute a word specific to your own application are shown in italic type. For example, an error message that appears on the screen with the name of your own specific filename might appear generically in this document as:

  `Your file` *filename* `is formatted incorrectly.`

HOW TO MAKE COMMENTS ABOUT THIS DOCUMENT

While we have tried to make this document fit your needs, we are interested in your suggestions for improving it. If the reader comment card has been removed from this document, please send your comments to:

1. Overview

AUDIX system *announcements* are the voiced (spoken) prompts and messages that the AUDIX system plays for subscribers, callers, and administrators who access the AUDIX system. Announcements are made of up one or more *fragments*. A fragment is a piece of voice text consisting of an individually recorded word, phrase, or sentence.

This chapter describes how the AUDIX system combines fragments to make system announcements, and gathers the announcements into different *announcement sets* (filesystems) that may be altered by the system administrator.

ANNOUNCEMENT SETS

An *announcement set* is a filesystem that contains all the announcements (prompts and other system messages) that may be encountered by the user. Two versions of the AUDIX system announcements are available with the R1V8 software release:

- *Standard* — The default version of system announcements on R1V8 systems, sometimes called the Streamlined User Interface. This version is typically named `disk00.ana` on a new system or `ana.adat` on a generic cartridge. The standard announcements are often more concise than the traditional set and are consistent with the standard announcement set available with the DEFINITY AUDIX voice mail system.
- *Traditional* — The traditional (abbreviated) version of system announcements designed to make upgrades to the R1V8 software release as transparent as possible for subscribers accustomed to using an earlier AUDIX software release. This version is typically named `disk00.anc` on a new system or `anc.adat` on a generic cartridge. However, if an AUDIX system is upgraded to R1V8 software from an earlier release, the announcement filesystem will use the same name and disk location as the previous announcement set (for example, `disk02.anp`).

If you are using this guide, you should have the *standard* version of announcements installed on your system. To verify the standard announcements are active, record any AUDIX message and listen to the prompt. If it tells you to press (#) to approve the message (instead of (*) (#)), the standard announcement set is installed.

Announcements and Fragments

Each system announcement is identified by a number and contains up to nine system fragments consisting of a word, phrase, or sentence. Fragments are also identified by number. A single fragment or several fragments can be used to compose an announcement. Announcements determine the number and order of fragments as they will be encountered by the user.

For example, refer to Appendix A, *Standard Announcements*. It indicates that system announcement number 10 is composed of fragment number 16, ‘‘*Please enter announcement ID*’’, and fragment number 224, ‘‘*followed by the pound sign*’’.

Appendix B, *Standard Fragments*, lists the fragments in numerical order, allowing you to easily check the text of any given fragment.

Appendix C, *Fragment/Announcement Cross-Reference*, shows all the announcements in which a given fragment is used. Changing a fragment in one announcement could cause an unintentional change in another announcement if you aren’t careful.

If you decide to change your system announcements, you must be extremely careful and precise. If you make a mistake, the resulting announcements could be erroneous, and straightening out mistakes can be frustrating and time-consuming. It is strongly recommended that you do not attempt to modify any announcements without the help of your AT&T representative (you may be charged for this service).

Active and Administrative Announcement Sets

Only one announcement set can be active (accessible to users) at a time. The `system : announcement : filesystems` form shows the name of the *active* announcement set. The *active* designation means that this is the announcement set that will be heard by anyone who accesses the AUDIX system.

The `system : announcement : filesystems` form also shows whether an *administrative* announcement set has been defined. The *administrative* announcement set is the ‘‘working’’ version used to make changes. When the changes are complete, the administrator exchanges (*swaps*) the administrative announcement set with the currently active announcement set in order to hear the changes. When the administrator is satisfied with the changes, he or she copies the changes from the updated, active version to the previously active (now the new administrative) version. This last step ensures the system has two identical copies of the customized system announcements.

ANNOUNCEMENT CUSTOMIZATION PROCESS

How you customize announcements depends on the announcement and the global implication of changing its fragments:

- If the fragment or fragments you want to change are not used by any other announcement or only by announcements that you also want changed, you can simply re-record the fragments to be whatever you want using your touch-tone telephone.
- If the fragment or fragments you want to change are used by other announcements that you do *not* want to change, you can create and record new fragments to associate with just those announcements you want changed.

Either of these methods requires care, because fragments may be used by more than one system announcement. Study the tables in the appendixes before attempting to change system fragments, and use the `system : announcement : detail` form to verify which fragments make up a specific announcement before making changes.

You *cannot* make changes to the active announcement set in AUDIX R1 software; use the administrative copy to make changes. When you are satisfied with your changes (the customized announcements play correctly), you then make the administrative version the new active version so that users will hear the customized set of announcements. You should limit the number of administrative copies you create because keeping track of them may become confusing.

If you have more than one hard disk in your system, you may create the administrative filesystem on a different disk than the one containing the active announcements filesystem. Refer to the filesystem distribution guidelines in the *AUDIX System Description* manual (585-302-201) to determine the best drive on which to make your working copy (see Chapter 3, *AUDIX Software*). You may also back up either the active or administrative filesystem onto a removable cartridge disk if desired.

NOTE

If you plan to make extensive changes to the announcement sets, you may wish to create a backup copy, either on a hard disk or on a removable cartridge, *before* you begin modifying announcements.

2. Announcement Customization Procedures

The chapter describes the procedures for customizing system announcements. You can customize system announcements in the following ways:

- Re-record a fragment
- Delete a fragment
- Add a fragment

These procedures are described in this section.

If you decide to change a fragment recording or an announcement's composition, you must be extremely careful and precise. Failure to do so could jeopardize the integrity of your system. It is recommended that you do not attempt to modify any system announcements or fragments without the help of your AT&T representative (you may be charged for this service).

To Re-record a Fragment

The two announcements you will most likely want to change when you customize your AUDIX system are the default Call Answer greeting (the greeting someone hears when they are redirected to a subscriber's AUDIX mailbox) and the default Voice Mail greeting (the greeting subscribers hears when they call the AUDIX system directly). These announcement and fragment numbers are listed below.

- *Default Call Answer Greeting:* When someone calls a subscriber who is unavailable and the call is redirected to the AUDIX system, the caller hears the subscriber's personal greeting if one has been recorded. However, if a personal greeting was not recorded or is not active, the caller hears the default system greeting. This greeting begins with announcement 36, which contains only fragment number 43, *''Your call is being answered by AUDIX''*. To customize this announcement (for example, with your company name), you would just re-record fragment number 43.
- *Default Voice Mail Greeting:* When a subscriber calls the AUDIX system directly, the subscriber is greeted by fragment number 287, *Welcome to AUDIX*, and fragment number 97, *For help at any time, press *H*.* To customize this announcement (for example, with your company name), you would just re-record fragment number 287.

The procedure for re-recording a fragment is the same for any announcement, as described below:

1. Using Appendix A, *Standard Announcements*, note the fragment number(s) you want to change.
2. Using Appendix C, *Fragment/Announcement Cross-Reference*, verify that the fragment(s) are used only by announcements you expect to be affected by your changes. If too many announcements would be affected by changing a fragment, you may wish to record a *new* custom fragment instead of re-recording one (see the following *To Add a Fragment to an Announcement* section).

3. Log on to the AUDIX administration terminal.

   NOTE

   For details on using any of the following screen forms, refer to the *AUDIX Release 1 Version 8 Forms Reference* (585-305-209).

4. Use the `system : announcement : filesystems` form to determine if an administrative announcement version is mounted (available for use). If so, the name of the filesystem (such as **`disk02.ans`**) will be displayed in the `admin announcements` field. You can only make changes to an administrative (working) version of an announcement set.

   If an active administrative announcement version is mounted *and* it is the version you want to change, go to the next step. If not, do the following:

   a. If the administrative version shown on the form is not the version you want to make changes to, but you know the name of the existing filesystem that you do want to modify, type the name of the correct administrative filesystem in the `admin announcements` field and press F1 (CHANGE or RUN).

   b. If no administrative announcement set appears on the form, use the `filesystem : list` form to determine if an administrative version exists. If you find one (it may be on a different disk if your system has more than one hard disk drive), go back to the `system : announcement : filesystems` form and type the name of the administrative filesystem in the `admin announcements` field. Press F1 (CHANGE or RUN).

   c. If an administrative version does not exist, create a new filesystem using the `filesystem : detail` form; this filesystem will contain the administrative version of your customized announcements (refer to the *Create a New Administrative Version* section in Chapter 3, *Post-Upgrade Procedures*, for the complete procedure). Go back to the `system : announcement : filesystems` form and type the name of the filesystem you just created in the `admin announcements` field. Press F1 (CHANGE or RUN).

   When you are sure that the correct administrative version is mounted, go to the next step.

5. You may want to make sure that the administrative version is identical to the active version before you make announcement changes. Using the `system : announcement : filesystems` form, tab to the `copy announcements (active to admin)` field. Type an **`x`** in the field and press F1 (CHANGE or RUN). This copies the active version to the administrative version, resulting in two identical copies.

6. Use the `system : announcement : detail` form to verify that the announcement you plan to change is actually composed of the fragments you expect.

   a. Move the cursor to the `filesystem name` field and type the name of the announcement filesystem to be accessed (in this case, the administrative version).

   b. Move the cursor to the `announcement` field and type the number of the announcement containing the fragment(s) you wish to change. Press F8 (ENTER).

   c. Compare the list of fragments shown in the `composition` field with the notes you made from Steps 1 and 2. If there is a discrepancy, trust the information on the screen. (For example, a fragment may have been added to an announcement after the publication of this document.)

You should now have all the information you need to determine the impact of changing the fragment(s) in your target announcement.

7. Use the `subscriber : local` form to confirm that you have permission to access the system announcements (a `y` should appear in the `announcement control` field of your subscriber profile).

8. Using your touch-tone phone, log in to the AUDIX system.

   a. At the activity menu, press 9. (For security purposes, this option is not included in the voiced options you hear.) If you hear *''Entry not understood. Try again,''* you do not have announcement control permission.

   b. When you hear *''To record names, press 4. To play names, press 5,''* press 1 to change fragments. (For security purposes, this option is not included in the voiced options you hear.)

   c. Enter the fragment ID as prompted. For example, to change the default Call Answer greeting, you would press 4 3 #.

   d. Record the new fragment when prompted.

      For example, your new fragment might be *''This is XYZ Company.''* You can use all the normal voice mail editing capabilities on your touch-tone phone to make sure the new fragment is exactly how you want it to sound.

   e. When you are satisfied with the new fragment recording, press # to approve it.

      For example, if you re-recorded the default Call Answer greeting, instead of saying, *''Your call is being answered by AUDIX,''* the system now says (in the administrator's voice) *''This is XYZ Company.''*

9. At this point, only the administrative announcement version has this version of the re-recorded fragment. To update the currently active announcement set, go to the `system : announcement : filesystems` form and swap (exchange) the active and administrative announcement versions.

10. The announcement filesystem you modified is now the active announcement version. When you have tested it to your satisfaction, use the `system : announcement : filesystems` form again to copy the contents of the active version (your modified copy) to the administrative version (the version that was previously active) so that both versions are once again identical.

To Delete a Fragment from an Announcement

Some announcements can be modified by simply eliminating (deleting) an existing fragment from that specific announcement. For example, you could modify the default voice mail greeting (*''Welcome to AUDIX. For help at any time, press *H''*) to just say *''For help at any time, press *H''* by removing fragment number 287 (*''Welcome to AUDIX''*) from the list of fragments that compose the announcement (in this case, announcement number 240).

To delete a fragment from an announcement:

1. Using Appendix A, *Standard Announcements*, note the number of the announcement you want to change.
2. Use Steps 4 and 5 in the previous section to make sure the correct administrative announcement filesystem is mounted on the `system : announcement : filesystems` form.
3. Use the `system : announcement : detail` form to eliminate (delete) the fragment from the target announcement as follows:
   a. Move the cursor to the `filesystem name` field and type the name of the administrative filesystem.
   b. Move the cursor to the `announcement` field type the announcement number, in this case **`240`**.
   c. Press F8 (ENTER) to display and verify the fragment composition of the announcement. In this example, the fragment composition is `287,97`.
   d. Change the composition line by spacing over or deleting the characters for the unwanted fragment(s). For example, delete the characters `287,`. Press F1 (CHANGE or RUN).

   Announcement number 240 is now composed of fragment number 97 only. Future callers will hear only the phrase, *''For help at any time, press *H''*.
4. At this point, only the administrative announcement version has this change to the announcement. To update the currently active announcement set, go to the `system : announcement : filesystems` form and swap (exchange) the active and administrative announcement versions.
5. The announcement filesystem you modified is now the active announcement version. When you have tested it to your satisfaction, use the `system : announcement : filesystems` form again to copy the contents of the active version (your modified copy) to the administrative version (the version that was previously active) so that both versions are once again identical.

To Add a Fragment to an Announcement

The previous examples dealt with modifications where the fragments being changed were not used by other announcements or where the fragment itself was left intact but was eliminated from just specific announcements. If you need to change the content of a fragment for some announcements but not others, you need to either substitute an existing fragment or create a new fragment for use by the announcements you want to change and leave the old fragment intact for use by existing announcements that you do not want changed. Be very careful if you do this.

For example, announcement number 61 and announcement number 78 are the only announcements that use fragment number 87, ''*This call is experiencing difficulties.*'' If you want to change this fragment for announcement number 61 but *not* for announcement number 78, you could create a new fragment to associate with announcement number 61 instead of fragment number 87; this would leave fragment number 87 and its association with announcement number 78 intact.

To add a fragment to an announcement:

1. Using Appendix A, *Standard Announcements*, verify that the announcement(s) you intend to change use only the fragments you expect.
2. Using Appendix B, *Standard Fragments*, locate an unused fragment number, indicated by the term ''*not referenced.*'' Fragment numbers up to 999 may be used (even though the table stops at number 978).

   NOTE

   Generally, using the highest numbered fragment available minimizes the chance that future software will reference that same fragment number. For example, start with fragment number 999 and work your way backwards through the table. Write down your customized fragments in Appendix B, *Standard Fragments*, or at the back of Appendix C, *Fragment/Announcement Cross-Reference*, in order to keep a written record of your changes.

3. Follow Steps 3 through 8 in the *To Re-record a Fragment* section.
4. When the AUDIX system prompts you to enter the fragment ID (Step 8c), enter an unused number. For example, you might press 9 9 9 #.
5. Record the fragment when prompted.

   For example, your new fragment might be ''*This call is experiencing difficulties and cannot continue at this time.*'' You can use all the normal voice mail editing capabilities on your touch-tone phone to make sure the new fragment is exactly how you want it to sound.
6. When you are satisfied with the new fragment recording, press # to approve it.
7. Use the `system : announcement : detail` form to add the new fragment to the appropriate announcement.
   a. Move the cursor to the `filesystem name` field and type the name of the administrative filesystem.
   b. Move the cursor to the `announcement` field type the announcement number, in this case **61**.
   c. Press F8 (ENTER) to display the fragment composition of the announcement. In this example, the fragment composition is:

— 87: This call is experiencing difficulties.

— 236: Try again

— 109: later.

— 95: Please disconnect.

d. Rewrite the line to reflect the new composition (in this case **`999,236,109,95`**) and press F1 (CHANGE or RUN).

Announcement number 61 is now composed of the following fragments:

— 999: This call is experiencing difficulties and cannot continue at this time.

— 236: Try again

— 109: later.

— 95: Please disconnect.

Meanwhile, announcement number 78 still uses fragment number 87 as before.

8. At this point, only the administrative announcement version has this new version of the announcement and the new fragment. To update the currently active announcement set, go to the `system : announcement : filesystems` form and swap (exchange) the active and administrative announcement versions.

9. The announcement filesystem you modified is now the active announcement version. When you have tested it to your satisfaction, use the `system : announcement : filesystems` form again to copy the contents of the active version (your modified copy) to the administrative version (the version that was previously active) so that both versions are once again identical.

NOTE

Alternatively in this example, you could have created a new fragment number 999 with just the phrase *''and cannot continue at this time''* to use *in addition to* fragment number 87 instead of replacing it in announcement number 61. Either way, be careful if you make changes to announcements and fragments and be sure you have thoroughly researched the global ramifications of changes that you plan to make before you actually make them. Be sure to test your changes before copying them to the old (previously active) announcement set, because this will destroy the original version.

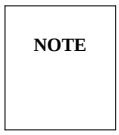
3. Post-Upgrade Procedures

The chapter describes the procedures for restoring your customized system announcements and/or fragments following an upgrade to R1V8 software.

Because of extensive changes to the announcement set in R1V8 software, you may not be able to simply copy the customized fragments from your old release into the new announcement set following an R1V8 upgrade. Follow the steps in this section to make sure your customized fragments and announcements are compatible with the new R1V8 system announcements.

Verify Customization Impact

If you upgraded to a new R1V8 announcement set, you may be able to copy some of your customized fragments into the new version. However, you must first determine that copying your existing customized fragments into the new version will not have an unintentional, adverse impact on the new announcement set. In addition, any other customization you did to announcements (such as adding, deleting, or replacing fragments) must be re-created in the new announcement set.



Because the default Call Answer and Voice Mail greetings are so often customized, fragment 43 (the default Call Answer greeting) and fragment 287 (the default Voice Mail greeting) are always the same from release to release. If these are the only fragments you customized, go on to the next section, *Create a New Administrative Version*, to begin restoring your customized fragments.

To verify the impact your customized announcements and/or fragments will have on the new announcement set, follow these steps:

1. Get the written record of your customized announcements and/or fragments. You need a list of any customized announcements (the announcement numbers and their composition) and your customized fragment numbers as well as the exact text of each customized announcement and/or fragment.
2. If you are upgrading from the R1V7 abbreviated announcement set, you can use Table 3-1, *R1V8 Announcement Composition*, as a quick-reference for checking which announcements changed in the R1V8 release. If any of the changed fragments or announcements will affect your customized announcements, make a note of them, then return to this checklist.

   If you are upgrading from an earlier release of AUDIX software or from a verbose announcement set, additional announcements and/or fragments may have changed. Go on to the next step.

3. For each of your customized announcements/fragments, compare the wording of the *uncustomized* fragments and the *unaltered* composition of the announcements in your pre-R1V8 software release to the *uncustomized* R1V8 announcements and fragments using the appendixes in this guide.

   — If the wording and composition of the *uncustomized* R1V8 announcements and fragments is the same as in your earlier release, your customized announcements and/or fragments can be used in the R1V8 set without having an adverse effect on those announcements.

   — If the wording and composition of the uncustomized R1V8 announcements and/or fragments is *not* the same, you must judge whether or not your customized wording applies to the R1V8 set. If it does, your customized announcements and/or fragments can be used in the R1V8 set. If not, the affected fragment(s) must be re-recorded or the affected announcement(s) reconstructed.

   — For either of these cases, if the cross-reference tables indicate that a given fragment is used in *more* announcements in R1V8 than it was in the previous release, you need to make sure your customized wording works in the new additional announcements as well. Otherwise, you may need to re-record that fragment or reconstruct the affected customized announcement(s).

4. After you have checked your customized fragments and announcements against the text and composition of the new announcement set:

   — If you have determined that your customized announcements/fragments are compatible with the new R1V8 announcement set, you may copy your customized fragments into the new announcement set as described in the following sections.

   — If some of your customized fragments will affect new announcements that you *don't* want to change, you can copy each affected fragment into a new (unused) fragment number in the new version (described in the *Restore Customized Fragments* section), or you can record a new customized fragment. In either case, you will then have to customize the affected announcement(s) to use the new fragment number.

   — If you have determined that your customized announcements/fragments will *not* map correctly into the new R1V8 announcement set (for example, if the new software uses your customized fragment numbers as part of its regular announcement set, or if the text of the fragment has changed), you must re-create your customized announcements and/or fragments using the steps in Chapter 2, *Announcement Customization Procedures*.

Table 3-1. R1V8 Announcement Composition (*Page 1 of 2*)

Announcement Number	R1V7 Abbreviated Composition	R1V8 Standard Composition	R1V8 Traditional Composition

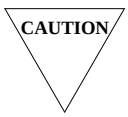
Create a New Administrative Version

Before you copy your customized announcements into the new announcement set, you should delete any old copies of administrative announcement sets remaining from the previous software release, and create a new administrative (or ‘‘working’’) version as described in this section.

1. Use the `list : volume names` form to display the names of the hard disks in your system (type **`li vo`** on the path line). Make a note of the `free space/size (blocks)` for each disk or print this screen.
2. Access the `filesystem : list` form by typing **`fi li`** on the path line (you need to display this form once for each disk volume if your system has more than one hard disk drive). Use this form to:
   a. Locate the new active announcement set filesystem; it will have the mount point `/anp`. This filesystem is typically named `ana` (type `adat`) in R1V8 standard software, but the upgrade utility does not change the name or disk location of the active announcement filesystem from the previous release. For example, the new R1V8 announcement set might be named `anp` or `cust` if that was the name of the active announcement set prior to the upgrade. Make a note of the new filesystem’s name, size, and location, or print this screen.
   b. Locate the *temporary* filesystem the upgrade utility created; it is named `temp` (type `adat`) and will be on the same disk as your new active version. This unmounted filesystem contains your customized announcement fragments.
   c. Locate any existing administrative announcement sets that contain customized announcements from the previous software release and write down their names and locations (or print each screen). The old filesystems will all have a type of `adat` and will not be mounted (the `mount point` column will be blank).
   d. Make sure enough space is available for the new administrative filesystem. Check the size of the new active announcement filesystem and compare it to the amount of free space remaining on the disk where you want the new copy to reside (see Step 1). The target volume must have sufficient space to hold another filesystem of the same block size as the original. (If you have more than one hard disk, you should place each announcement set on a separate volume to better protect against a loss of data should a hard disk problem occur.)
   e. Press CTRL-z to exit the form.
3. Go to the `filesystem : detail` form by typing **`fi de`** on the path line. Press RETURN.



Do **not** *delete the new active announcement filesystem (indicated by mount point* `/anp`*) or the* `temp` *adat filesystem created by the upgrade utility!*

   a. In the `filesystem` field, type the name of an *old* administrative announcement filesystem from the previous software release (if one exists).
   b. Type **`adat`** in the `type` field.
   c. Press F3 (DELETE) to delete the filesystem.
   d. Repeat Steps 3a through 3c to delete any additional *old* administrative announcement filesystems on your hard disk(s).

e. When you have deleted all administrative announcement filesystems from the previous release, create an empty filesystem on the desired disk that will be your *new* administrative announcement filesystem. Type a descriptive name in the `filesystem` field (such as **`disk02.cust`**), type **`adat`**, with the same size as the new active announcement filesystem (see Step 2a). Press F2 (ADD).

f. Press CTRL-z to exit the form.

4. Verify a new (empty) administrative filesystem of the correct size exists on the target volume using the `filesystem : list` form (type **`fi li`** on the path line).

Restore Customized Fragments

After you have determined which fragments you can safely copy using the steps in the *Verify Customization Impact* section, you can copy those customized fragments into your new administrative filesystem using the following procedure. If you altered the composition of any announcements (such as adding, deleting, or replacing fragments), you must also re-create those modifications in the new announcement set.

1. Go to the `system : announcement : filesystems` form by typing **`sy an f`** on the path line. Press RETURN.

   a. Type the name of the administrative filesystem you just created in the `admin announcements` field (see the previous *Create a New Administrative Version* section). Press F1 (CHANGE or RUN) to mount the new filesystem.

   b. Tab to the `copy announcements (active to admin)` field and type **`x`**. Press F1 (CHANGE or RUN). This copies the new R1V8 announcements into your administrative announcement set.

   c. Press CTRL-z to exit the form.

2. Go to the `system : announcement : detail` form by typing **`sy an de`** on the path line. Press RETURN.

   a. Type the name of the administrative announcement filesystem in the `filesystem` field (for example, **`disk02.cust`**).

   b. Tab to the `fragment` field and type the number of the first fragment you want to customize in the new administrative announcement filesystem.

   c. Tab to the `copy from filesystem` field and type the name of the *temporary* announcement filesystem created by the upgrade utility (for example, **`disk02.temp`**).

   d. Tab to the `copy from fragment` field and type the number of the fragment you wish to copy into the new set. Typically this is the same fragment number as the previous one, but you may have to copy into a different fragment number if you noticed a conflict (refer to your notes from the *Verify Customization Impact* section).

   e. Press F1 (CHANGE or RUN).

   f. Repeat this procedure for each customized fragment number that maps correctly into the new announcement set.

3. When you are finished copying fragments into the new announcement version, update the composition of your customized announcements if needed. For example, you may need to add, delete, or refer to new customized fragment numbers to have the new announcement set perform as the previous one did. To update the composition of the new announcements:

   a. Blank out any fields *except* the `filesystem name` field on the `system : announcement : detail` form.

   b. Move the cursor to the `announcement` field and type the number of the announcement whose composition you need to change. Press F8 (ENTER).

   c. Compare the list of fragments shown in the `composition` field with the notes you made in the *Verify Customization Impact* section. You may need to add, delete, or change the fragment numbers displayed in the field.

   d. Make the appropriate changes to the entries in the `composition` field and press F1 (CHANGE or RUN). Refer to the appropriate sections in Chapter 2, *Announcement Customization Procedures*, for details on adding or deleting fragments if needed.

4. When you are finished restoring your customized announcements and/or fragments, press CTRL-z to exit the `system : announcement : detail` form.

5. Go to the `system : announcement : filesystems` form by typing **`sy an f`** on the path line. Press RETURN.

   a. Tab to `swap active and admin announcements` field and type **`x`**. Press F1 (CHANGE or RUN). This makes the customized administrative announcement set the new active version.

   b. Press CTRL-z to exit the form.

6. The announcement filesystem you modified is now the new active announcement version. When you have tested it to your satisfaction, use the `system : announcement : filesystems` form again to copy the contents of the active version (your modified copy) to the administrative version (the unaltered R1V8 version that was previously active) so both versions are once again identical.

7. When you are sure your modified announcement set is working correctly, go to the `filesystem : detail` form by typing **`f d`** on the path line. Press RETURN.

   a. In the `filesystem` field, type the name of the temporary announcement filesystem (for example, **`disk02.temp`**.)

   b. Type **`adat`** in the `type` field.

   c. Press F3 (DELETE) to delete the filesystem.

   d. Press CTRL-z to exit the form.

A. Standard Announcements

This appendix lists all the announcements in the standard AUDIX system announcement set, as well as the associated fragments and their text.

Announcement	Fragment and Text	
a1	f57	accessed messages
a2	f73	You have
a3	f246	Message addressed to
a4	f336 f247	To review addressees, press star 1. To add to list,
a5	f334	When finished addressing, press pound.
a6	f160	message
a7	f18 f8	To forward with comment, press 2. To record a new message, press 4.
a8	f2	and
a9	f15	and is
a10	f16 f224	Enter announcement ID and pound sign.

A

about this document *v*
active announcement set *1-2*
add fragment to announcement *2-5*
administration
  creating a new announcement version *3-5*
  customizing system announcements *2-1*
  delete old administrative copies *3-5*
  restoring customized announcements after an upgrade *3-1*
administrative announcement set *1-2*
announcement data (adat) filesystems *1-1*
announcement sets
  active *1-2*
  administrative *1-2*
  distribution on disks *1-3*
  standard (streamlined) *1-1*
  traditional (abbreviated) *1-1*
announcements
  announcement/fragment cross-reference *C-1*
  announcement/fragment text *A-1*
  defined *1-1*
  example of use *1-1*
  restoring after an upgrade *3-1, 3-6*
  standard announcements list *A-1*

B

backing up announcement sets *1-3*

C

Call Answer
  re-recording default greeting *2-1*
  restoring customized greeting after an upgrade *3-1*
changing fragments
  default Call Answer greeting *2-1*
  default Voice Mail greeting *2-1*
cross-referenced fragment/announcement table *C-1*
customizing system announcements
customizing system announcements—*Contd*
  overview of process *1-1, 1-3*
  procedures *2-1, 3-1, 3-7*

D

delete fragment from announcement *2-4*

F

filesystems
  announcement data (adat) *1-1*
  creating a new admin version *3-5, 3-6*
  delete old administrative copies *3-5*
  finding space for the admin version *3-5*
  finding the active version *2-2, 3-5*
  finding the admin version *2-2, 3-5*
  finding the temp version *3-5*
  updating the admin version *2-3, 2-4, 2-6, 3-7*
fragments
  add to an announcement *2-5*
  defined *1-1*
  delete from announcement *2-4*
  fragment text *B-1*
  fragment/announcement cross-reference *C-1*
  re-recording *2-1*
  restoring after an upgrade *3-6*
  standard fragments list *B-1*
  verifying impact on announcement set *3-1*

G

greetings
  re-recording default system greetings *2-1*
  restoring customized greetings after an upgrade *3-1*

R

re-recording default greeting *2-1*
re-recording fragments *2-1*

restoring system announcements
post-upgrade procedures *3-1*

S

streamlined user interface
standard announcement set *1-1*

T

traditional user interface
traditional announcement set *1-1*

U

upgrades
restoring customized announcements/fragments *3-1, 3-6*
verifying customized announcement impact *3-1*

V

Voice Mail
re-recording default greeting *2-1*
restoring customized greeting after an upgrade *3-1*
