

**SS3-"TOUCH-TONE®" SELECTIVE
SIGNALING SYSTEM
EQUIPMENT DESIGN REQUIREMENTS
PRIVATE SERVICE SYSTEMS**

1. GENERAL

Scope

1.01 This specification, together with the supplementary information listed herein, covers the equipment design requirements for the framework, equipment, and circuits to be used in the manufacture and installation of the SS3 TOUCH-TONE selective signaling system.

Description

1.02 The SS3 TOUCH-TONE selective signaling system employs TOUCH-TONE frequencies to provide and control signaling between stations in a private or nonprivate mode over a 4-wire private line facility. A maximum of 648 3-digit codes may be assigned to stations associated with the system. A single code may be assigned to one station (station code) or may be associated with any number of stations (group code).

1.03 The signaling and control equipment consists of various 2- by 23-inch mounting plate units equipped with hybrid integrated circuits mounted on AR-type printed wiring boards (Fig. 1 and 2). The type and number of units required depend on the kind of service (nonprivacy or privacy) and the number of codes and stations desired. (See Table A.)

1.04 A packaged arrangement which provides all the necessary SS3 and 4-wire terminating and station equipment for either a 4-station nonprivacy or privacy system is covered in J1G028.

* One J58844C-(), List 1 TOUCH-TONE calling receiver is also required for each J1G027A, L1 unit.

4. EQUIPMENT

J1G027A—AT&T Co Std—Basic Location Unit

Equipment—J1G027A-()

List 1—Assembly, equipment, and wiring for one basic location unit per SD-1G265-01, Fig. 1 and 9 (includes AR381 circuit pack).

List 2—One AR537 circuit pack required in addition to list 1 to provide nonprivacy circuits per SD-1G265-01, Fig. 2.

List 3—One AR539 circuit pack required in addition to list 1 to provide 4 code circuits per SD-1G265-01, Fig. 3.

List 4—One AR540 circuit pack required in addition to list 1 to provide 8 code circuits per SD-1G265-01, Fig. 4.

Notes

A. One J58844C-(), List 1 TOUCH-TONE calling receiver is required for each J1G027A, List 1 basic location unit.

J1G027B—AT&T Co Std—Auxiliary Code Unit

Equipment—J1G027B-()

List 1—Assembly, equipment, and wiring for one auxiliary code unit capable of providing a maximum of 16 additional code circuits when used with various combinations of lists 2 and 3.

List 2—One AR539 circuit pack required in addition to list 1 to provide 4 code circuits per SD-1G265-01, Fig. 3.

List 3—One AR540 circuit pack required in addition

to list 1 to provide 8 code circuits per SD-1D265-01, Fig. 4.

J1G027C—AT&TCo Std—Privacy Station Unit

Equipment—J1G027C()

List 1—Assembly, equipment, and wiring for one privacy station unit equipped with 4 station circuits per SD-1G265-01, Fig. 7.

List 2—One AR541 circuit pack required in addition to list 1 to provide 4 additional station circuits per SD-1G265-01, Fig. 7.

List 3—Assembly, equipment, and wiring required to provide additional power when more than 8 station circuits are used (see SD-1G265-01, X option).

Bell Telephone Laboratories, Incorporated

Dept 3232

J1G027D—AT&TCo Std—Privacy Location Unit

Equipment—J1G027D()

List 1—Assembly, equipment, and wiring for one privacy location unit per SD-1G265-01, Fig. 5 (includes one AR538 circuit pack which is mounted in the basic location unit, J1G027A).

List 2—One 227D amplifier required for privacy override per SD-1G265-01, Fig. 8.

J1G027E—AT&TCo Std—Automatic Clear Unit

Equipment—J1G027E()

List 1—Assembly, equipment, and wiring for one automatic clear unit per SD-1G265-01, Fig. 6.
