

SPECIAL CONNECTIONS FOR TELEPHONE SETS AND SUBSCRIBER SETS
 USING 3-ELEMENT ELECTRON TUBES IN RINGING CIRCUIT

1.00 INTRODUCTION

This section is issued:

- To give 3-element tube connections at negative ring and tip parties of 4-party full selective and 8-party semiselective lines in step-by-step offices with Automatic Number Identification (ANI).

2.00 GENERAL

2.01 Connect R lead from 426A tube to L1 on all negative ring and tip parties at 4- and 8-party stations. This bridges the control gap of the tube across the line and prevents bell tap and possible false test for tip party.

2.02 Fig. 1 shows these tube connections using the 556-type telephone set as an example.
