2.00 GENERAL

2.01 The 634YD or 634YDT subscriber set should be used if hand telephone set is equipped with F-type handset.

2.02 Hand telephone sets equipped with E-type handsets may be used with any of the above subscriber sets providing their use does not conflict with transmission zoning requirements.

2.03 When hand telephone sets equipped with E-type handsets are used with the 634Y or 634YT subscriber sets, the 557B or 574A receivers shall be tested and connected for proper polarity, as follows:

- After all connections have been made, remove the receiver cap and check the magnetic pull on the diaphragm. Reverse the line-wire connections on L1 and L2 of the subscriber set and recheck the magnetic pull. Restore connections of line wires to normal.
- The magnetic pull on the diaphragm should be greatest with the line wires normal. If not, make the following changes in the subscriber set.
 - a. Remove BK lead from L1 and connect to L2GN.
 - b. Remove GN cord lead from L2GN and connect to L1.

CIRCUIT DIAGRAM

3.01 When filters are required for radio-frequency suppression, equip the hand telephone sets with 61N-type filters connected as shown. Removal of the M1W cord between the Y terminal of dial and the W terminal of switchhook is required when filter is provided.
