

Before you begin...

Make sure that any existing Firewall Software/Devices are disabled and/or shutdown before beginning installation of your new D-Link DI-704P Broadband Router.

1

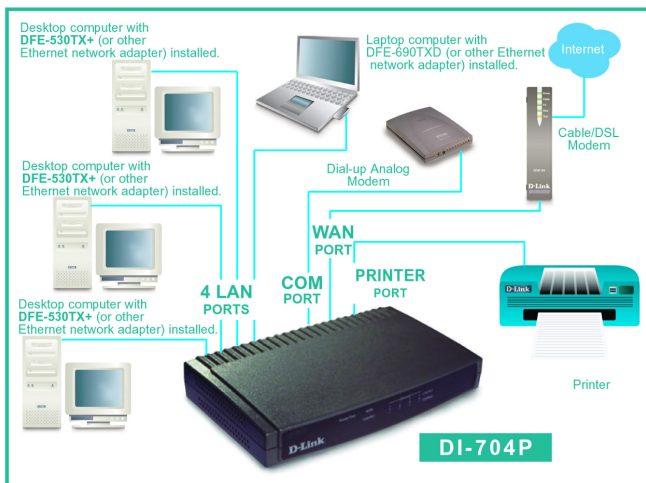

Contents of Package

- DI-704P Broadband Router with Print Server
- User's Manual
- Quick Install Guide
- Power Adapter
- CAT-5 UTP Cable
- Power Cord

2

Connecting the DI-704P Ethernet Broadband Router to your network

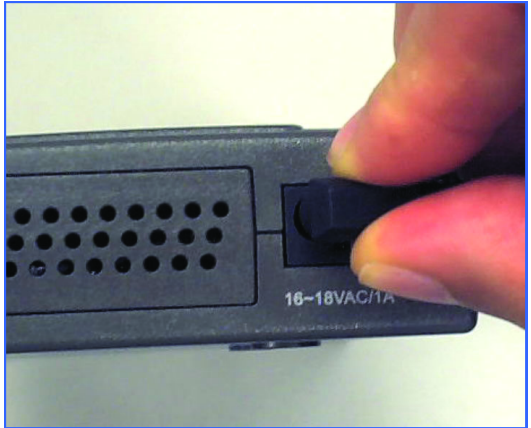

When you have completed the steps in this installation guide, your connected network may look something like this:

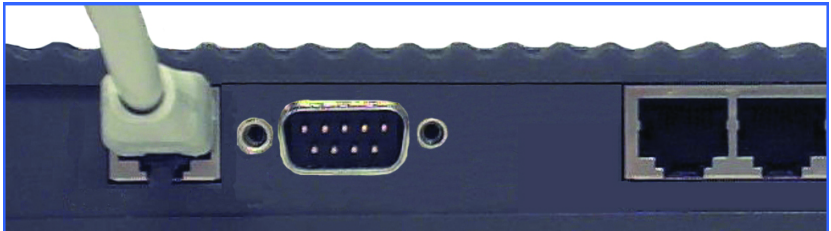

Connecting the DI-704P Ethernet Broadband Router to your network

First, plug in the **power supply** as shown. Plug the other end of the power supply into the power source. Flip the **POWER** toggle switch to the **ON** position.

(During a self-test phase, the indicator lights will flash briefly. At the end of the self-test, the M1 indicator light will flash continuously to indicate normal operation.)

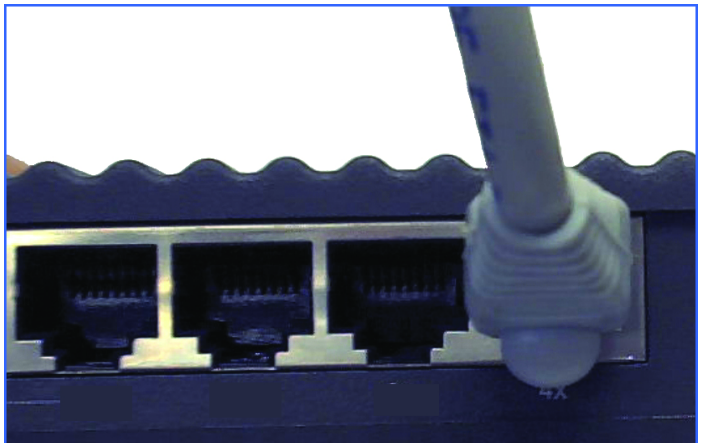

Next, connect the **WAN** port to the **Cable** or **DSL** modem using an Ethernet cable.

Using CAT5 UTP cable, connect each computer that is equipped with an Ethernet adapter to one of the **four Ethernet LAN** ports on the DI-704P.

The LED for the specific Local Ethernet Port will light up to indicate connection.

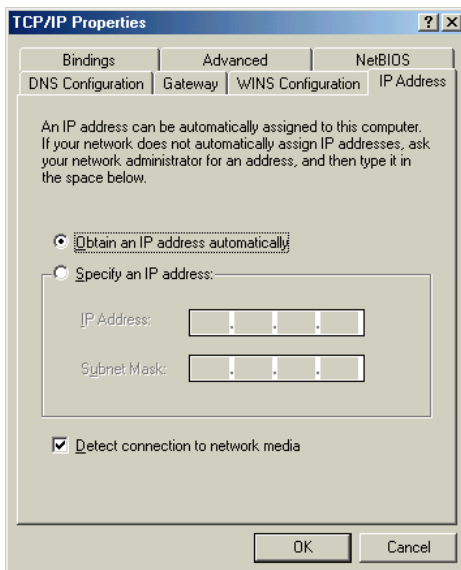

3

Checking the IP Address

Make sure that **TCP/IP** protocol has been installed in your computer.

Next, set the **TCP/IP** protocol to **“Obtain an IP Address automatically”** by doing the following:

- Go to **Start>Settings**
- Select **“Control Panel”**
- **Double-click** the **“Network”** icon
- Select the **TCP/IP** line that includes the name of your network adapter card, under the **“Configuration”** tab in the **“Network”** window
- **Click on “Properties”** in this window
- The window at the right will appear
- Select the **“IP Address”** tab as shown
- Choose **“Obtain an IP address automatically”**
- **Click “OK”**

*Note: For information on setting the IP address of your computer manually (a static IP address,) please see **Appendix A** in this guide.*

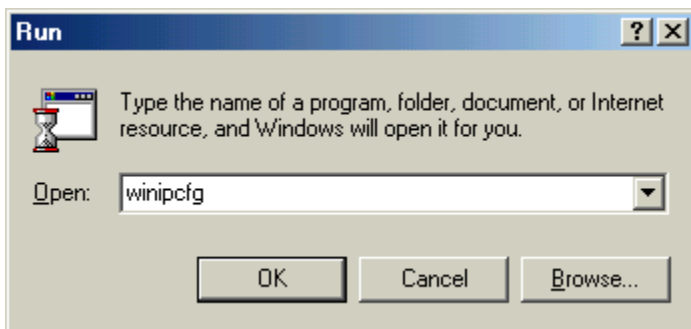

Next, find your **IP Address** by doing the following:

For Windows 98/ME:

- Go to **Start>Run**
- Type in **“winipcfg”**
- **Click “OK”**

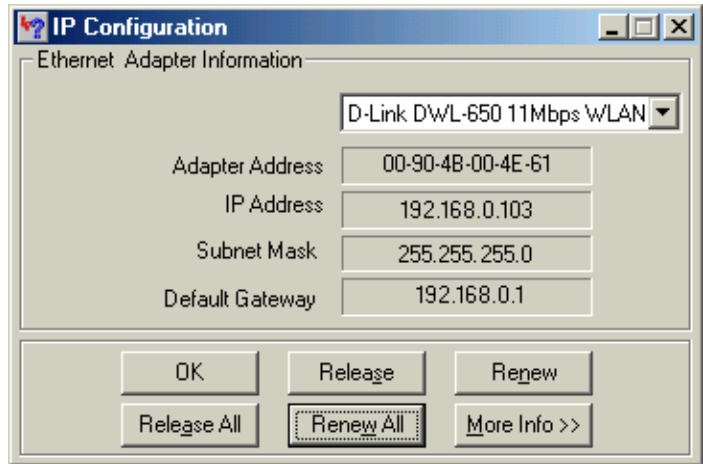

For Windows 2000:

- Go to **Start>Run**
- Type **“cmd”**
- When the prompt appears, type **“ipconfig”**
- Hit **“Enter”**
- The window displayed on the next page will appear

Checking the IP Address

- Use the “pull-down menu” on this screen to display the Ethernet card that is installed in your computer and connected to the DI-704P. The IP Address (for the Ethernet network adapter) that appears in this window must be between **192.168.0.2** and **192.168.0.254** in order to configure the DI-704P.

- If the IP Address is **not** in that range, please do the following:
Click on “Release All” and “Renew All” to obtain a “Dynamic IP Address” from the DI-704P within the range of 192.168.0.100 to 192.168.0.199.

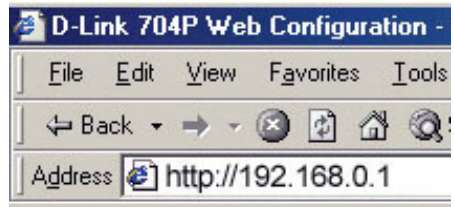

4

Configuring the DI-704P with the Web browser

Note: Please disable any proxy server setting for the web browser.

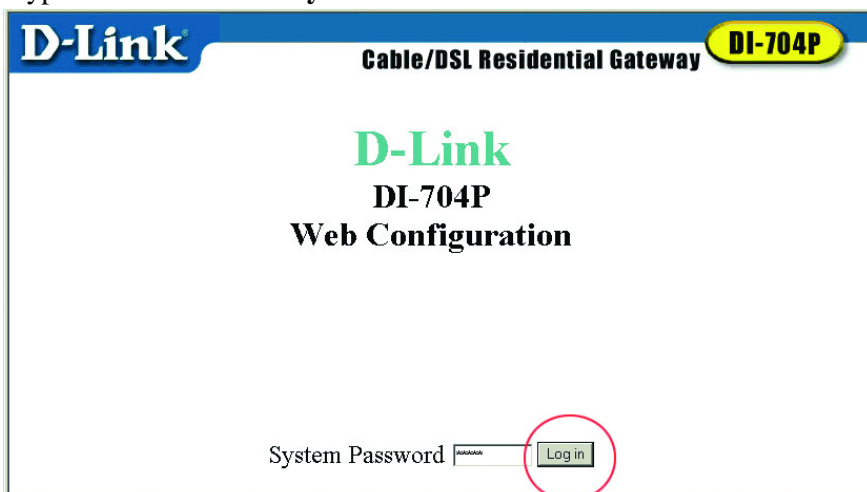

Open the web browser, and type in the DI-704P’s IP Address.

For example, type **http://192.168.0.1** into the “Location” or “Address” field.
Hit **“Enter”**

Configuring the DI-704P with the Web browser

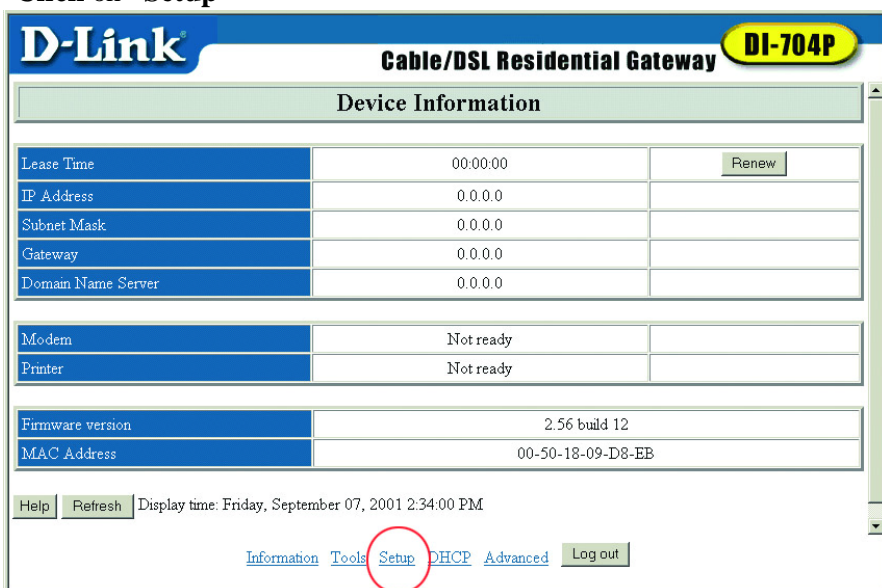

Type “admin” in the “System Password” field.

The screenshot shows the login page of the D-Link DI-704P web configuration interface. At the top, there is a blue header with the D-Link logo on the left, the text 'Cable/DSL Residential Gateway' in the center, and a yellow oval containing 'DI-704P' on the right. Below the header, the text 'D-Link DI-704P Web Configuration' is centered. At the bottom, there is a 'System Password' label followed by a text input field containing 'AAAAAA' and a 'Log in' button. The 'Log in' button is circled in red.

Click on “Log in”

Click on “Setup”

The screenshot shows the main menu of the D-Link DI-704P web configuration interface. At the top, there is a blue header with the D-Link logo on the left, the text 'Cable/DSL Residential Gateway' in the center, and a yellow oval containing 'DI-704P' on the right. Below the header, the text 'Device Information' is centered. The main content area is divided into several sections. The first section contains a table with the following data:

Lease Time	00:00:00	<input type="button" value="Renew"/>
IP Address	0.0.0.0	
Subnet Mask	0.0.0.0	
Gateway	0.0.0.0	
Domain Name Server	0.0.0.0	

The second section contains a table with the following data:

Modem	Not ready	
Printer	Not ready	

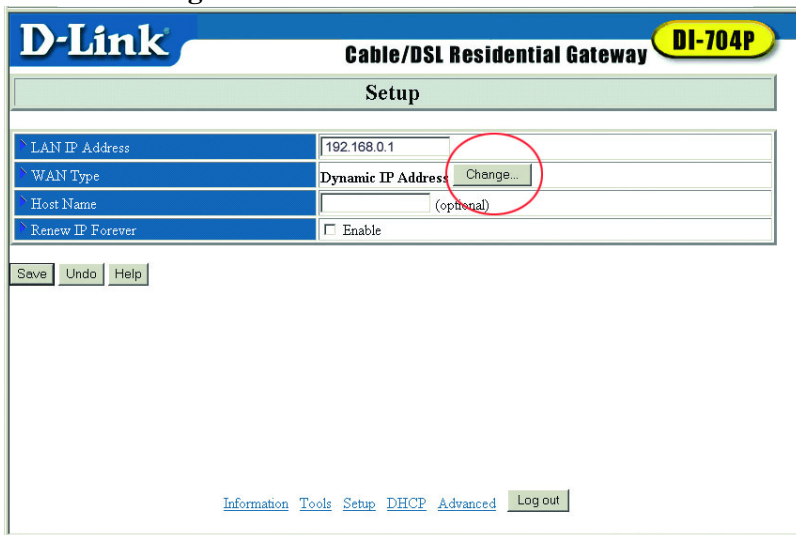

The third section contains a table with the following data:

Firmware version	2.56 build 12
MAC Address	00-50-18-09-D8-EB

At the bottom, there is a 'Help' button, a 'Refresh' button, and the text 'Display time: Friday, September 07, 2001 2:34:00 PM'. Below this, there is a navigation bar with the following links: [Information](#), [Tools](#), [Setup](#), [DHCP](#), [Advanced](#), and a 'Log out' button. The 'Setup' link is circled in red.

Configuring the DI-704P with the Web browser

Click “Change”

Click “Save.”

D-Link Cable/DSL Residential Gateway **DI-704P**

Setup

LAN IP Address	192.168.0.1
WAN Type	Dynamic IP Address <input data-bbox="636 1129 717 1155" type="button" value="Change..."/>
Host Name	@home (optional)
Renew IP Forever	<input checked="" type="checkbox"/> Enable

Enter the “**Host Name**” given to you by your cable provider (for example, “@Home.”)

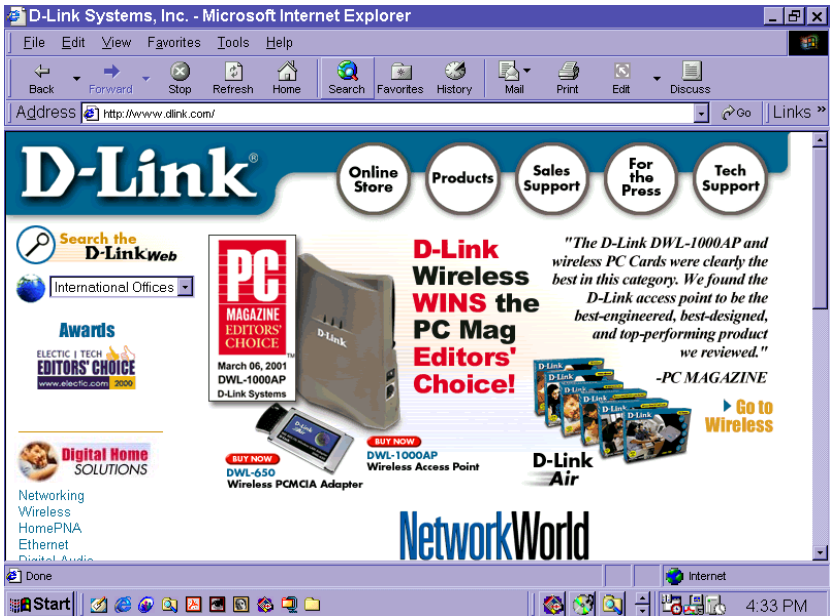

For information on configuring a back-up dial-up modem, please see the “Configuration” section of your User’s Manual.

Click “Save” after you have input the information.

Restart the computer.

5

Checking the Connection to the Internet

To check the connection, open the web browser and go to your favorite website.

If you are unable to browse, please do the following:

1. Refer to Appendix B to check your connection.
2. Use “Help” on the Main Menu.
3. Refer to the troubleshooting section in the user’s manual.

Your DI-704P Ethernet Broadband Router is now ready to use. Please proceed to the **“Print Server Installation”** instructions that follow if you plan to use the Print Server feature.

6

Print Server Installation (optional)

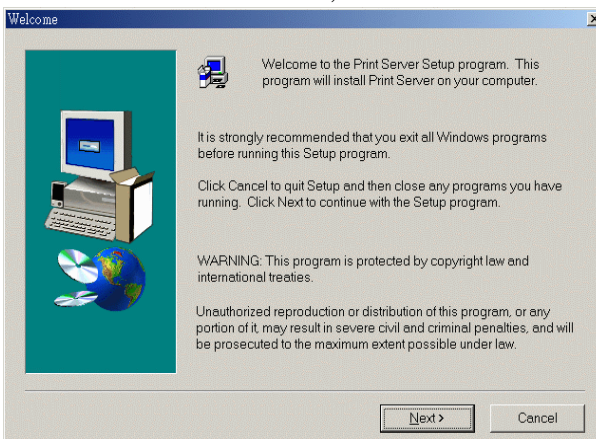

NOTE: Installing the Print Server software is only necessary if you plan to use the Print Server function of the D-Link DI-704P. If you choose to use the print server function, plug the printer cable from your printer into the printer port on the DI-704P, if you have not already done so.

Turn “ON” the computer. Insert the Print Server installation CD into the CD-ROM drive. The following screen will appear. If the CD does not automatically run, then click on “install.exe” on the CD.

Click on “Install Printer Software”

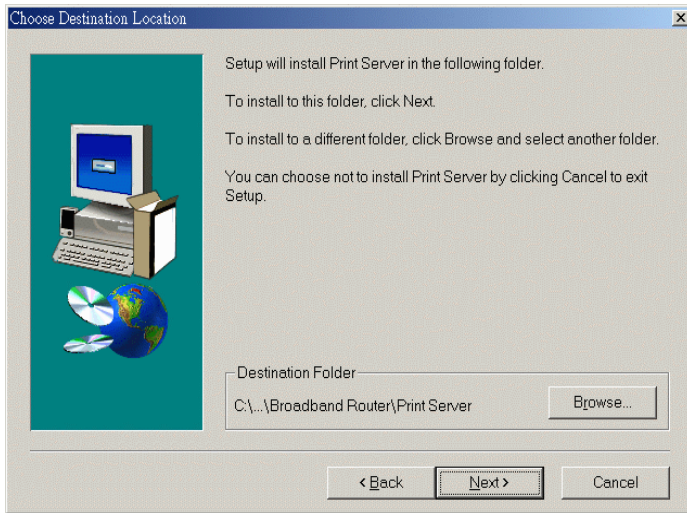

At the “Welcome” screen,

Click “Next”

Print Server Installation

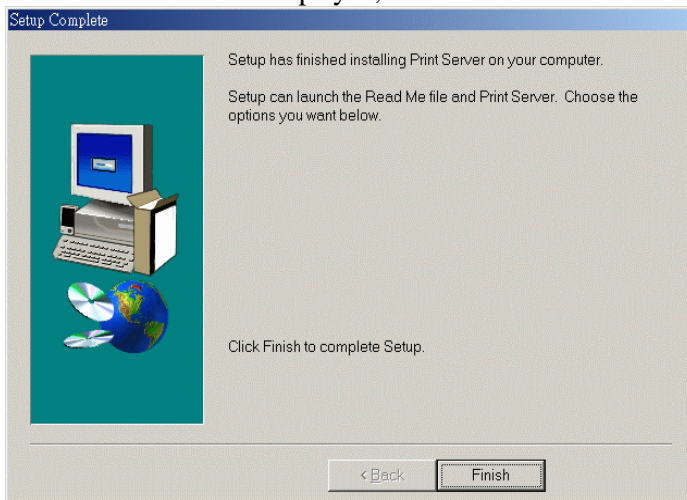

To select the default folder,

Click “Next”

Note: It is recommended that you click “Next” in the above window. However, if necessary, Click “Browse” to select an alternate folder.

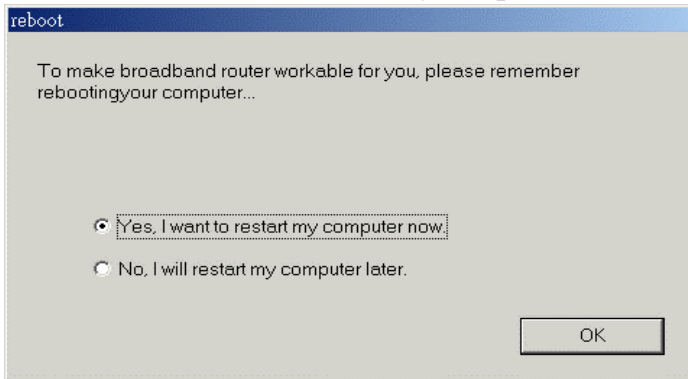

When this window is displayed,

Click “Finish,” to complete the Setup.

Print Server Installation

Select **“Yes, I want to restart my computer.”**

Click **“OK”**

After the computer has restarted, the Print Server software installation is complete.

7

Configuring Your Printer

*Note: If your printer is not installed, go to **START>SETTINGS>PRINTERS**. **Double Click** on the **“Add Printer”** icon. Follow the **“Add Printer Wizard.”** When requested to specify a port, select **“D-Link LPT Port (Print Server.)”** When setting up the printer, please use the drivers provided by the printer manufacturer. Once you have set up your printer, please continue with the configuration as follows.*

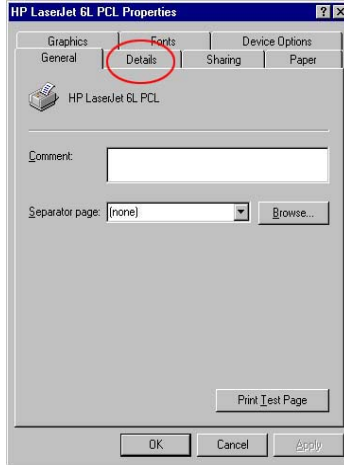

Go to **START>SETTINGS>PRINTERS**

“Right -Click” on the printer icon that corresponds to the printer you have connected to the DI-704P and select **“Properties.”**

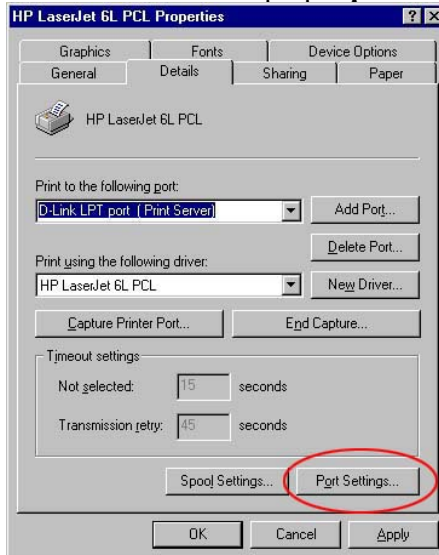

Configuring your printer

Choose the **“Details”** tab.
(In Windows 2000 or NT, choose the **“Ports”** tab.)

At the **“Add Port”** pull-down menu, choose
“D-Link LPT port (Print Server)”
Please make sure the proper **printer driver** is selected.

Click **“Port Settings.”**
(For Windows 2000/NT users: Click **“Configure Port.”**)

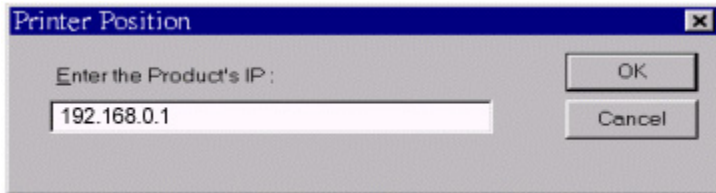

Configuring your printer

Type in the **“IP address”** of the DI-704P.

Click “OK”

In the previous window, make sure the settings are correct.

Click “OK”

You have completed configuring your printer.

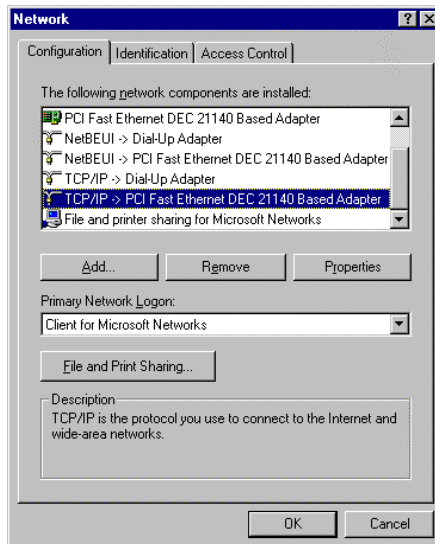

Appendix A: Assigning a Static IP Address

Go to **START>SETTINGS>CONTROL PANEL**

Double-click the **“network”** icon.

Under the **“Configuration”** tab highlight the **“TCP/IP”** line that is associated with your network adapter.

Click on **“Properties”**

Appendix A: Assigning a Static IP Address (cont.)

To manually input the IP Address, please do the following:

In the **“TCP/IP Properties”** window, under the **“IP Address”** tab, Select **“Specify an IP address.”**

The default IP Address of this product is **192.168.0.1**

Please use 192.168.0.xxx (where “xxx” is a number between 2 and 99) to input into the **“IP Address”** field. The **“Subnet Mask”** is: 255.255.255.0

Under the **“Gateway”** tab, add the IP address of the DI-704P into the **“New gateway”** field. The default address is 192.168.0.1. Click on **“Add.”**

The screenshot shows the 'TCP/IP Properties' dialog box with the 'IP Address' tab selected. The 'Specify an IP address' radio button is chosen. The IP Address field contains '192.168.0.5' and the Subnet Mask field contains '255.255.255.0'. The 'Detect connection to network media' checkbox is checked. The 'OK' and 'Cancel' buttons are at the bottom right.

TCP/IP Properties

Bindings | Advanced | NetBIOS

DNS Configuration | Gateway | WINS Configuration | **IP Address**

An IP address can be automatically assigned to this computer. If your network does not automatically assign IP addresses, ask your network administrator for an address, and then type it in the space below.

☐ Obtain an IP address automatically

☒ Specify an IP address:

IP Address: **192.168.0.5**

Subnet Mask: **255.255.255.0**

☒ Detect connection to network media

OK Cancel

Click **“OK”** to complete the process.

Appendix B: Checking Your Network Settings

From the desktop, go to

Start>Run

Type “**command**” in the box.

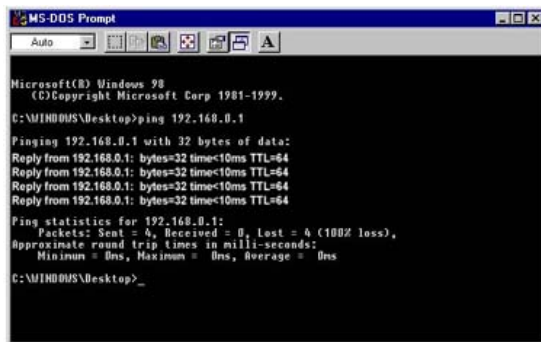

Click “**OK**”

The following MS-DOS Prompt window will appear.

Type “**ping 192.168.0.1**” after the prompt. This is the IP address of the LAN port of the Broadband Router.

Hit “**Enter**”

You have a successful connection if the window displays four replies as shown in the example.

```
