

2007 Hyundai Sonata Cabin Air Filter Replacement

This is a repair guide to help the air circulation in a 2007 Hyundai Sonata. This repair guide is a quick and easy repair.

Written By: Maria Galindo

INTRODUCTION

Repairing a 2007 Hyundai Sonata cabin air filter will help the air flow in the car become cleaner and it may save gas for the user. It is a quick and easy repair that takes about seven different steps, and two steps to put everything back together. This repair does not include any tools, all that is needed is a new cabin air filter that can be picked up at a local auto store. It costs about \$18 to repair.

PARTS:

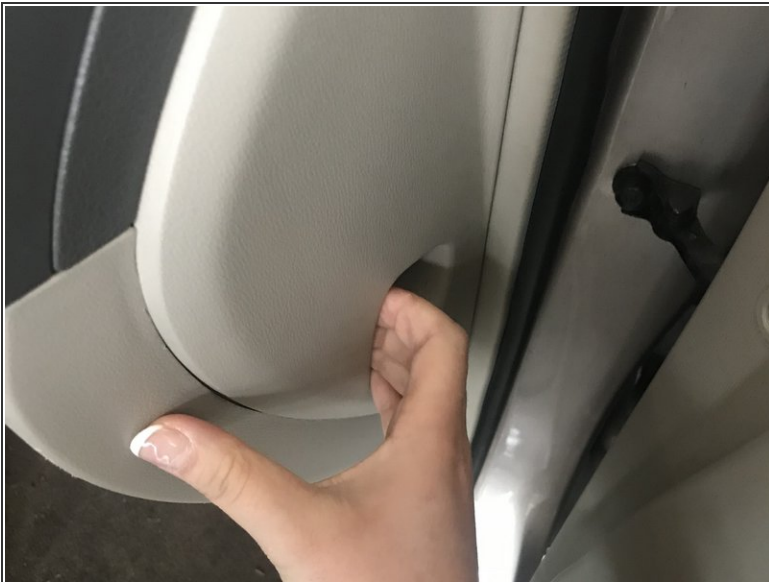

- [Cabin Air Filter](#) (1)

Step 1 — Cabin Air Filter

- Make sure the car is off and the passenger door is open.
- Locate the indent on the inner side of the door.

Step 2

- Then gently pull until you hear three clicks.

Step 3

- Open the glove box, and make sure nothing is in there.
- Next, gently push down until it comes loose from the clips on the left and right.

Step 4

- Once the glove box is loose, locate latches, on the left and right top and bottom corners, and pinch together, at the same time, to free the air filter.

Step 5

- Gently pull the air filter straight out.

Step 6

- Push the air filter in the four corners to release the old one.

Step 7

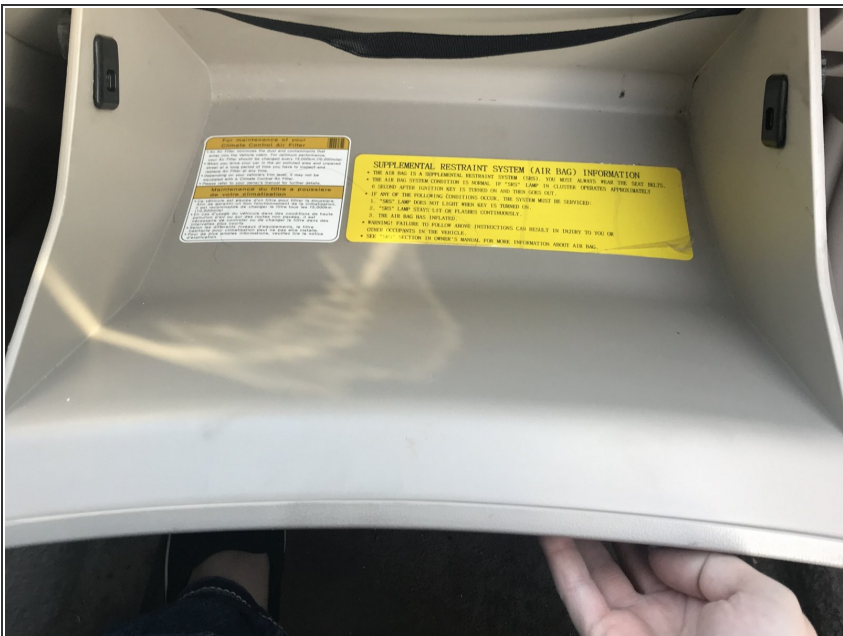

- Place the new air filter in the square and push the four corners to lock it into place.

Step 8

- Place the filter back into the correct spot until you hear two clicks.

Step 9

- Then, push the glove box back into place.

Step 10

- Next, place the dash cover, taken off in the first step, back into its location; listening for three clicks.
