INTRODUCTION

If your RAM can't keep up with the demands of today's mundane and daily tasks, use this guide to remove and replace your RAM cards.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — Battery

⚠️ Turn off your laptop before starting.

● Flip the laptop over so the model stickers face the ceiling.

Step 2

● Remove the two 3.5 mm Phillips #0 screws holding the cover in place.

● Slide cover forward then carefully lift up.

Step 3

- Remove the two 5.5 mm Phillips #0 screws holding the battery in place.

Step 4

- Carefully use the Plastic Opening Tool to unplug the battery.

- Lift the battery up and out to remove.

Step 5 — RAM

- With the laptop flipped over, cover removed, and battery removed; continue by locating your RAM cards.

Step 6
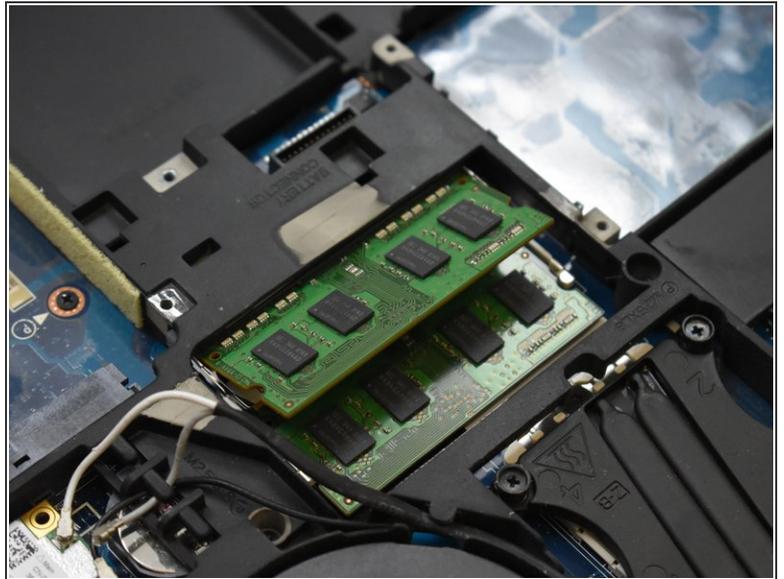

- Remove the top RAM card by pressing the tabs to the sides using the Plastic Opening Tool.

- Once the top card has popped up, carefully remove it by holding the sides and sliding it out.
