## 🔧 TOOLS:

- Essential Electronics Toolkit (1)

## Step 1 — Screen

- Begin by removing the two screw covers, either by hand or the tip of a screwdriver.

## Step 2

- Then remove both screws with a Philips head screwdriver.

## Step 3

- Next use a spudger or very carefully use a flat head screwdriver to wedge between the center of the screen. You will have to go completely around the screen and release all latches keeping the two parts together.
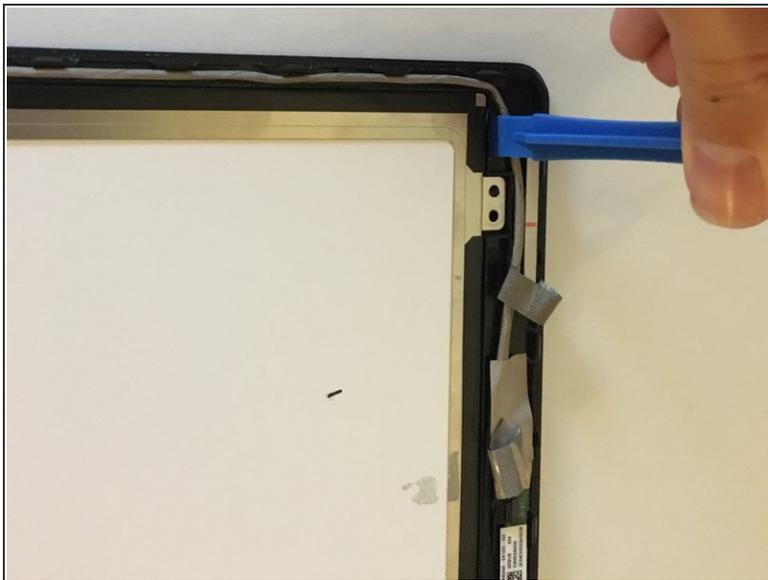

## Step 4

- The screen will split into two parts.

## Step 5

- Remove any tape that is holding the screen in place.

## Step 6

- After any tape is removed the screen needs to be lifted out. It may be a little stuck due to tape or any remaining glue.

## Step 7

- Remove the last cable attached to the screen by pulling horizontally away. Set old screen aside and follow steps in reverse to put in the new one.

To reassemble your device, follow these instructions in reverse order.
