INTRODUCTION

If the front-facing camera on your laptop is broken, this guide will teach you step-by-step on how to disassemble your laptop and replace the camera.

⚙ TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)
- Spudger (1)

Step 1 — Front Camera

- Detach and separate the screen from the keyboard by pressing the silver release button at the base of the tablet.
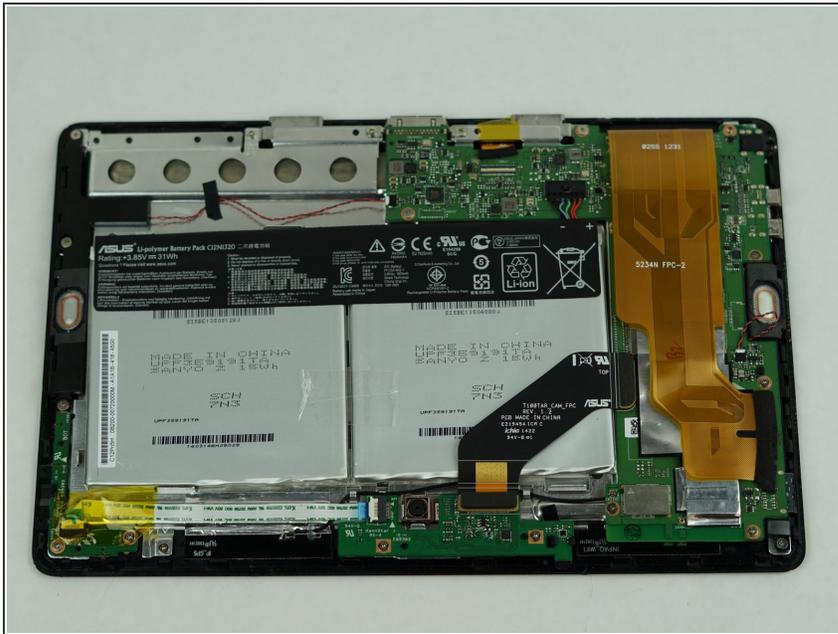

Step 2

- Take the metal spudger and insert it into the seam of the rear cover casing and gently pry upwards.

- If done correctly, you should feel the clips release.

- Ensure that all the clips are released by sliding the spudger along the four edges of the tablet.
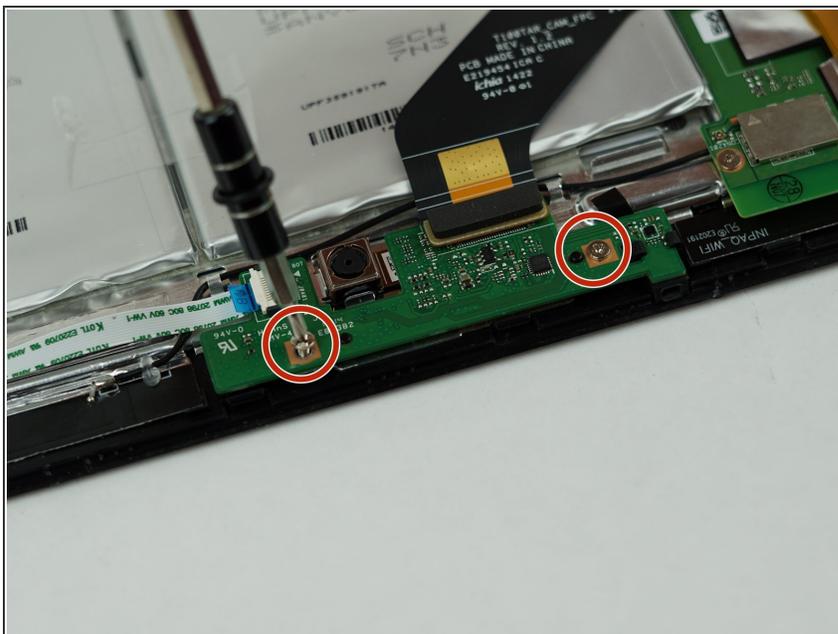

- ⚠ Do not force the clips to release. This will cause them to break, and if broken, the screen will become loose. Open the rear cover gently and with caution.
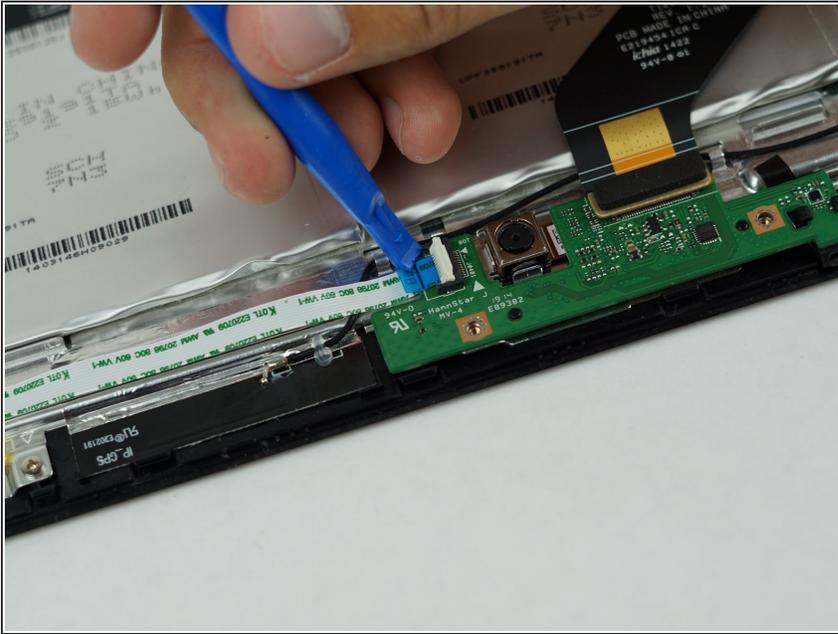

## Step 3

● Take off the rear case

Step 4

● Unscrew two 5mm screws from the camera board using a Phillips #0 Screwdriver.

Step 5

- Using a plastic opening tool, lift the white tab holding the power button cable, located on the camera board and pull out the cable strip.

Step 6

- Also using the plastic opening tool, gently lift up and remove the large black strip connecting the camera board to the motherboard.
