Step 1 — Keyboard

- Turn the laptop upside down and locate the ten screws holding in the plate cover.
- Remove all ten screws using a PH00 screwdriver.

Step 2

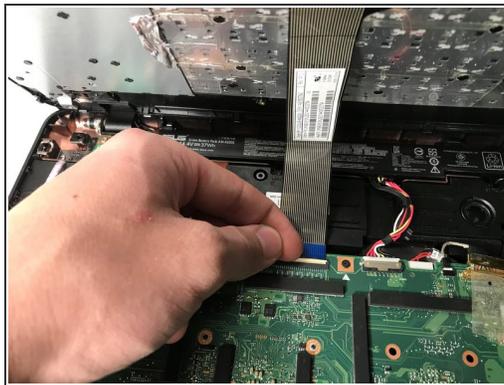

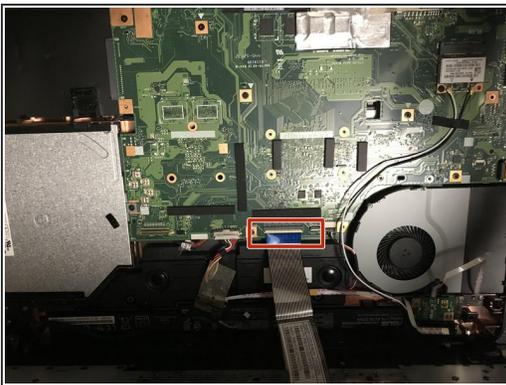

- Once the screws are out, open up the laptop and use the plastic opening tool on the keyboard and the back to pry it open.

Step 3

- Separate the keyboard from the computer to expose the inside of the computer.

Step 4

- Flip up the white connector.
- Take the blue cable out of the motherboard.

To reassemble your device, follow these instructions in reverse order.
