## Step 1 — Outer Shell

- Unscrew the four 6.5mm screws, using a Phillips-Head screwdriver.
  - Pry the two halves of the shell apart using a plastic opening tool.
- i** Be careful, as there will be a ribbon connecting the inner workings of the controller. It will not separate into two parts just by pulling apart the shell.

## Step 2

- Pull the ribbon cable out of the motherboard port to fully separate the two halves, using a pair of tweezers.

### Step 3 — Charging Port

- Pull the ribbon cable from the charge port, using a set of tweezers.

### Step 4

- Grip the right hand corner of the opaque white piece with a pair of tweezers, and pull it upwards to remove it.

## Step 5

- Lift the clear plastic piece up by its right hand corner.
- Pull it to the right to remove the bottom left hand corner from the groove.
- Remove the clear plastic piece. It pushes in easily.

## Step 6

- Peel off the black sticker on the charge port, using a pair of tweezers.
- Unscrew the 4.50mm screw in the center of the port chip, using a Phillips-Head screwdriver.
- Pull the charging port out with a pair of tweezers.

To reassemble your device, follow these instructions in reverse order.
