IBM ThinkPad t43 RAM Replacement

In this guide, we will remove and replace the RAM from the IBM ThinkPad T43 Laptop.

Written By: aLiX pIeRRe

INTRODUCTION

Replacing or upgrading the RAM for the IBM T43 can give it a greater performance boost.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)

Step 1 — RAM

- To remove the cover, you will need to take out the single screw.

- Unscrew until the cover comes off

- Lift the cover from the edge and pull off

- ⓘ If the cover doesn't come right up and you have felt that you have unscrewed it, you can lift the cover and the screw will come off with it.

Step 2

- Place your hands on the clips and push on them outward until the RAM pops out

Step 3

- Place hands on the RAM and pull towards yourself

- For replacement, follow these steps in reverse order

- (i) Make sure that when you put in the ram that the short side is on the right

---

To reassemble your device, follow these instructions in reverse order.
