

Polar V800 Watch Band Replacement

This guide demonstrates how to replace the watch band on the Polar V800 sports watch.

Written By: Jarod Lyles

INTRODUCTION

This guide will show users how to remove and replace the watch band on the Polar V800 sports watch. If the watch band needs to be swapped for a different sized watch band or the watch band is broken or wearing out, this is the perfect guide to putting your watch back where it belongs (on your wrist!).

TOOLS:

- [Paper Clip](#) (1)
-

Step 1 — Watch Band

- Using a narrow object like a paperclip, push the pins located in the watch band in the direction of the arrow indicated on the watch.
- Completely pull out the pins.
- ⓘ It isn't necessary to remove the watch band before replacing other parts of the watch, but it may make removal of other elements of the watch more accessible and clear.
- ☑ When replacing the charging port cover, only take out the pin that is closest to the charging port cover.

Step 2

- To remove the watch band, pull each end of the watch band away from the watch frame.

To reassemble your device, follow these instructions in reverse order.
