Step 1 — Battery

- Use a coin to rotate the battery locking screw 90 degrees clockwise.

- Lift the battery out of the computer.

Step 2 — Keyboard

- Pull the keyboard release tabs (shown in yellow) toward you and lift up on the keyboard until it pops free.

- If the keyboard does not come free, use a small flathead screwdriver to turn the keyboard locking screw (shown in orange) 180 degrees in either direction and try again.

- Flip the keyboard over, away from the screen, and rest it face-down on the trackpad area.

Step 3

- Loosen the four silver Phillips screws that secure the RAM shield.

- (i) These screws will not come out all the way. The screws are held captive to the RAM shield to prevent them from getting lost.

Step 4

- Remove the RAM shield from the computer.

- (i) The four captive screws will come out with the RAM shield.

Step 5

- Pull the keyboard cable up from the logic board, holding the cable as close to the connector as possible.

- When reassembling your iBook, make sure that you reconnect the keyboard cable before replacing the RAM shield.

To reassemble your device, follow these instructions in reverse order.
